## CONTENTS.

America the Old World .....	<i>Prof. Louis Agassiz</i> .....	373
Aphorisms, The Utility and the Futility of...	<i>Wm. R. Alger</i> .....	178
Austen, Jane.....	<i>Mrs. R. C. Waterston</i> .....	235
Axtell, Mr.....		58
Banneker, Benjamin, The Negro Astronomer	<i>M. D. Conway</i> .....	79
Betrothal by Proxy.....		420
Buckle, Mr., as a Thinker.....	<i>D. A. Wasson</i> .....	27
——, Personal Reminiscences of.....	<i>Charles Hale</i> .....	488
Call to my Country—Women, A.....	<i>Gail Hamilton</i> .....	345
Camilla's Concert.....	<i>Gail Hamilton</i> .....	756
Chasseurs-à-Pied, The.....	<i>W. J. Rose</i> .....	250
Cincinnati, The Siege of.....	<i>T. B. Read</i> .....	229
Costs, The Law of.....	<i>D. A. Wasson</i> .....	241
Dark Ways.....	<i>Harriet E. Prescott</i> .....	545
Fern Forests of the Carboniferous Period, The	<i>Prof. Louis Agassiz</i> .....	615
Gala-Days.....	<i>Gail Hamilton</i> .....	629
Ghost of Little Jacques, The.....		213
Golden Wedding.....	<i>M. D. Conway</i> .....	454
Hancock House, The, and its Founder.....	<i>Arthur Gilman</i> .....	692
Happiest Days.....	<i>Gail Hamilton</i> .....	1
Horticulture, American.....		482
Human Wheel, The, Its Spokes and Felloes.....	<i>O. W. Holmes</i> .....	567
Iron-Clad Ships and Heavy Ordnance.....	<i>Alexander L. Holley</i> .....	85
Keats's Fame, On the Vicissitudes of.....	<i>Joseph Severn</i> .....	401
Lamb's, Charles, Uncollected Writings.....	<i>J. E. Babson</i> .....	529
London Suburb, A.....	<i>Nathaniel Hawthorne</i> .....	306
Member from Foxden, The.....		730
Monitor, The Last Cruise of the.....	<i>Grenville M. Weeks, U. S. N.</i> .....	366
Mountains and their Origin.....	<i>Prof. Louis Agassiz</i> .....	747
My Friend the Watch.....	<i>George Wm. Curtis</i> .....	70
No Failure for the North.....	<i>Francis Wayland, Jr.</i> .....	500
North, Christopher.....	<i>Joseph Dana Howard</i> .....	273
Only an Irish Girl!.....		643
Paul Blecker.....	<i>Author of "Life in the Iron-Mills"</i> .....	580, 677
Pericles and President Lincoln.....	<i>Henry M. Alden</i> .....	382
Preacher's Trial, The.....	<i>C. A. Bartol</i> .....	206
Promise of the Dawn, The.....	<i>Author of "Life in the Iron-Mills"</i> .....	10
Recollections of a Gifted Woman.....	<i>Nathaniel Hawthorne</i> .....	43
Reply to the Address of the Women of England, A.....	<i>Harriet Beecher Stowe</i> .....	120
Resignation.....	<i>Author of "Recreations of a Country Parson"</i> .....	434
San Domingo, The Horrors of.....	<i>John Weiss</i> .....	289, 768
Shall we Compromise?.....	<i>D. A. Wasson</i> .....	649
Shelley.....	<i>Thornton Hunt</i> .....	184
Silurian Beach, The.....	<i>Prof. Louis Agassiz</i> .....	460
Sovereigns and Sons.....	<i>C. C. Hazewell</i> .....	145
Spasm of Sense, A.....	<i>Gail Hamilton</i> .....	407
Strathsays, The.....	<i>Harriet E. Prescott</i> .....	99
Truth, Sojourner, The Libyan Sibyl.....	<i>Harriet Beecher Stowe</i> .....	473
Under the Pear-Tree.....	<i>Mrs. Thomas Hopkinson</i> .....	162, 354
Up the Thames.....	<i>Nathaniel Hawthorne</i> .....	598
Weak Lungs, and How to Make them Strong	<i>Dio Lewis, M. D.</i> .....	657
Wet-Weather Work.....	<i>Donald G. Mitchell</i> .....	444, 719
Why Thomas was Discharged.....	<i>George Arnold</i> .....	708
Willie Wharton.....	<i>Mrs. L. Maria Child</i> .....	324

## POETRY.

After "Taps".....	<i>H. B. Sargent</i>	566
Andrew Rykman's Prayer.....	<i>John G. Whittier</i>	95
Biglow, Mr., Latest Views of.....	<i>J. R. Lowell</i>	260
Boston Hymn.....	<i>R. W. Emerson</i>	227
Cavalry Song.....	<i>E. J. Culler</i>	499
"Choose You this Day whom Ye will Serve".....	<i>O. W. Holmes</i>	238
Coralie.....	<i>F. G. Tuckerman</i>	472
Countess, The.....	<i>John G. Whittier</i>	626
East, The, and the West.....	<i>Theodore Winthrop</i>	487
E. W., To.....	<i>John G. Whittier</i>	625
Flag, The.....	<i>Mrs. Julia Ward Howe</i>	443
Give.....	<i>A. West</i>	643
In the Half-Way House.....	<i>J. R. Lowell</i>	26
Light and Dark.....	<i>John Weiss</i>	717
Lyrics of the Street.....	<i>Mrs. Julia Ward Howe</i>	119, 372
My Ship.....	<i>A. West</i>	420
Overtures from Richmond.....	<i>Prof. F. J. Child</i>	134
Proclamation, The.....	<i>John G. Whittier</i>	240
Rabbi Ben Levi, The Legend of.....	<i>H. W. Longfellow</i>	69
Sleeping Sentinel, The.....		84
Soldiers' Rally, The.....	<i>E. J. Culler</i>	134

VOL. XI.—JANUARY, 1863.—NO. LXIII.

---

HAPPIEST DAYS.

LONG ago, when you were a little boy or a little girl,—perhaps not so very long ago, either,—were you never interrupted in your play by being called in to have your face washed, your hair combed, and your soiled apron exchanged for a clean one, preparatory to an introduction to Mrs. Smith, or Dr. Jones, or Aunt Judkins, your mother's early friend? And after being ushered in to that august presence, and made to face a battery of questions which were either above or below your capacity, and which you consequently despised as trash or resented as insult, did you not, as you were gleefully vanishing, hear a soft sigh breathed out upon the air,—“Dear child, he is seeing his happiest days”? In the concrete, it was Mrs. Smith or Dr. Jones speaking of you. But going back to general principles, it was Commonplacedom expressing its opinion of childhood.

There never was a greater piece of absurdity in the world. I thought so when I was a child, and now I know it; and I desire here to brand it as at once

a platitude and a falsehood. How ever the idea gained currency that childhood is the happiest period of life, I cannot conceive. How ever, once started, it kept afloat is equally incomprehensible. I should have supposed that the experience of every sane person would have given the lie to it. I should have supposed that every soul, as it burst into flower, would have hurled off the vile imputation. I can only account for it by recurring to Lady Mary Wortley Montague's statistics, and concluding that the fools *are* three out of four in every person's acquaintance.

I for one lift up my voice emphatically against the assertion, and do affirm that I think childhood is the most mean and miserable portion of human life, and I am thankful to be well out of it. I look upon it as no better than a mitigated form of slavery. There is not a child in the land that can call his soul, or his body, or his jacket his own. A little soft lump of clay he comes into the world, and is moulded into a vessel of honor or a vessel of dishonor long before he can put in a word

about the matter. He has no voice as to his education or his training, what he shall eat, what he shall drink, or wherewithal he shall be clothed. He has to wait upon the wisdom, the whims, and often the wickedness of other people. Imagine, my six-foot friend, how you would feel to be obliged to wear your woollen mittens when you desire to bloom out in straw-colored kids, or to be buttoned into your black waistcoat when your taste leads you to select your white, or to be forced under your Kossuth hat when you had set your heart on your black beaver: yet this is what children are perpetually called on to undergo. Their wills are just as strong as ours and their tastes are stronger, yet they have to bend the one and sacrifice the other; and they do it under pressure of necessity. Their reason is not convinced; they are forced to yield to superior power; and of all disagreeable things in the world, the most disagreeable is not to have your own way. When you are grown up, you wear a print frock because you cannot afford a silk, or because a silk would be out of place,—you wear India-rubber overshoes because your polished patent-leather would be ruined by the mud; and your self-denial is amply compensated by the reflection of superior fitness or economy. But a child has no such reflection to console him. He puts on his battered, gray old shoes because you make him; he hangs up his new trousers and goes back into his detestable girl's-frock because he will be punished if he does not, and it is intolerable.

It is of no use to say that this is their discipline and is all necessary to their welfare. I maintain that that is a horrible condition of life in which such degrading *surveillance* is necessary. You may affirm that an absolute despotism is the only government fit for Dahomey, and I may not disallow it; but when you go on and say that Dahomey is the happiest country in the world, why, I refer you to Dogberry. Now the par-

ents of a child are, from the nature of the case, absolute despots. They may be wise, and gentle, and doting despots, and the chain may be satin-smooth and golden-strong; but if it be of rusty iron, parting every now and then and letting the poor prisoner violently loose, and again suddenly caught hold of, bringing him up with a jerk, galling his tender limbs and irretrievably ruining his temper,—it is all the same; there is no help for it. And really, to look around the world and see the people that are its fathers and mothers is appalling,—the narrow-minded, prejudiced, ignorant, ill-tempered, fretful, peevish, passionate, careworn, harassed men and women. Even we grown people, independent of them and capable of self-defence, have as much as we can do to keep the peace. Where is there a city, or a town, or a village, in which are no bickerings, no jealousies, no angers, no petty or swollen spites? Then fancy yourself, instead of the neighbor and occasional visitor of these poor human beings, their children, subject to their absolute control, with no power of protest against their folly, no refuge from their injustice, but living on through thick and thin right under their guns.

“Oh!” but you say, “this is a very one-sided view. You leave out entirely the natural tenderness that comes in to temper the matter. Without that, a child's situation would of course be intolerable; but the love that is born with him makes all things smooth.”

No, it does not make all things smooth. It does wonders, to be sure, but it does not make cross people pleasant, nor violent people calm, nor fretful people easy, nor obstinate people reasonable, nor foolish people wise,—that is, it may do so spasmodically, but it does not hold them to it and keep them at it. A great deal of beautiful moonshine is written about the sanctities of home and the sacraments of marriage and birth. I do not mean to say that there is no sanctity and no sacrament. Moonshine

is not nothing. It is light, — real, honest light, — just as truly as the sunshine. It is sunshine at second-hand. It illuminates, but indistinctly. It beautifies, but it does not vivify or fructify. It comes indeed from the sun, but in too roundabout a way to do the sun's work. So, if a woman is pretty nearly sanctified before she is married, wifehood and motherhood may finish the business; but there is not one man in ten thousand of the writers aforesaid who would marry a vixen, trusting to the sanctifying influences of marriage to tone her down to sweetness. A thoughtful, gentle, pure, and elevated woman, who has been accustomed to stand face to face with the eternities, will see in her child a soul. If the circumstances of her life leave her leisure and adequate repose, that soul will be to her a solemn trust, a sacred charge, for which she will give her own soul's life in pledge. But, dear me! how many such women do you suppose there are in your village? Heaven forbid that I should even appear to be depreciating woman! Do I not know too well their strength, and their virtue which is their strength? But stepping out of idyls and novels, and stepping into American kitchens, is it not true that the larger part of the mothers see in their babies, or act as if they saw, only babies? And if there are three or four or half a dozen of them, as there generally are, so much the more do they see babies whose bodies monopolize the mother's time to the disadvantage of their souls. She loves them, and she works for them day and night; but when they are ranting and ramping and quarrelling, and torturing her over-tense nerves, she forgets the infinite, and applies herself energetically to the finite, by sending Harry with a round scolding into one corner and Susy into another, with no light thrown upon the point in dispute, no principle settled as a guide in future difficulties, and little discrimination as to the relative guilt of the offenders. But there is no court of appeal before which Har-

ry and Susy can lay their case in these charming "happiest days."

Then there are parents who love their children like wild beasts. It is a passionate, blind, instinctive, unreasoning love. They have no more intelligent discernment, when an outside difficulty arises with respect to their children, than a she-bear. They wax furious over the most richly deserved punishment, if inflicted by a teacher's hand; they take the part of their child against legal authority; but, observe, this does not prevent them from laying their own hands heavily on their children. The same obstinate ignorance and narrowness that are exhibited without exist within also. Folly is folly, abroad or at home. A man does not play the fool out-doors and act the sage in the house. When the poor child becomes obnoxious, the same unreasoning rage falls upon him. The object of a ferocious love is the object of an equally ferocious anger. It is only he who loves wisely that loves well.

The manner in which children's tastes are disregarded, their feelings ignored, and their instincts violated is enough to disaffect one with childhood. They are expected to kiss all flesh that asks them to do so. They are jerked up into the laps of people whom they abhor. They say, "Yes, Ma'am," under pain of bread and water for a week, when their unerring nature prompts them to hurl out, "I won't, you hideous old fright!" They are sent out of the room whenever a fascinating bit of scandal is to be rehearsed, packed off to bed just as everybody is settled down for a charming evening, bothered about their lessons when their play is but fairly under way, and hedged and hampered on every side. It is true that all this may be for their good, but, my dear dolt, what of that? So everything is for the good of grown-up people; but does that make us contented? It is doubtless for our good in the long run that we lose our pocket-books, and break our arms, and catch a fever, and have our brothers defraud

a bank, and our houses burn down, and people steal our umbrellas, and borrow our books and never return them. In fact, we know that upon certain conditions all things work together for our good, but, notwithstanding, we find some things a great bore; and we may talk to our children of discipline and health by the hour together, and it will never be anything but an intolerable nuisance to them to be swooped off to bed by a dingy old nurse just as the people are beginning to come, and shining silk, and floating lace, and odorous, faint flowers are taking their ecstatic young souls back into the golden days of the good Haroun al Raschid.

Even in this very point lies one of the miseries of childhood, that no philosophy comes to temper their sorrow. We do not know why we are troubled, but we know that there is some good, grand reason for it. The poor little children do not know even that. They find trouble utterly inconsequent and unreasonable. The problem of evil is to them absolutely incapable of solution. We know that beyond our horizon stretches the infinite universe. We grasp only one link of a chain whose beginning and end is eternity. So we readily adjust ourselves to mystery, and are content. We apply to everything inexplicable the test of partial view, and maintain our tranquillity. We fall into the ranks, and march on, acquiescent, if not jubilant. We hear the roar of cannon and the rattle of musketry. Stalwart forms fall by our side, and brawny arms are stricken. Our own hopes bite the dust, our own hearts bury their dead; but we know that law is inexorable. Effect must follow cause, and there is no happening without causation. So, knowing ourselves to be only one small brigade of the army of the Lord, we defile through the passes of this narrow world, bearing aloft on our banner, and writing ever on our hearts, the divine consolation, "What thou knowest not now thou shalt know hereafter." This is

an unspeakable tranquillizer and comforter, of which, woe is me! the little ones know nothing. They have no underlying generalities on which to stand. Law and logic and eternity are nothing to them. They only know that it rains, and they will have to wait another week before they go a-fishing; and why could n't it have rained Friday just as well as Saturday? and it always does rain or something when I want to go anywhere,—so, there! And the frantic flood of tears comes up from outraged justice as well as from disappointed hope. It is the flimsiest of all possible arguments to say that their sorrows are trifling, to talk about their little cares and trials. These little things are great to little men and women. A pine bucket full is just as full as a hog'shead. The ant has to tug just as hard to carry a grain of corn as the Irishman does to carry a hod of bricks. You can see the bran running out of Fanny's doll's arm, or the cat putting her foot through Tom's new kite, without losing your equanimity; but their hearts feel the pang of hopeless sorrow, or foiled ambition, or bitter disappointment,—and the emotion is the thing in question, not the event that caused it.

It is an additional disadvantage to children in their troubles that they can never estimate the relations of things. They have no perspective. All things are at equal distances from the point of sight. Life presents to them neither foreground nor background, principal figure nor subordinates, but only a plain spread of canvas on which one thing stands out just as big and just as black as another. You classify your *désagrémens*. This is a mere temporary annoyance, and receives but a passing thought. This is a life-long sorrow, but it is superficial; it will drop off from you at the grave, be folded away with your cerements, and leave no scar on your spirit. This thrusts its lancet into the secret place where your soul abideth, but you know that it tortures only to heal; it is recuper-

ative, not destructive, and you will rise from it to newness of life. But when little ones see a ripple in the current of their joy, they do not know, they cannot tell, that it is only a pebble breaking softly in upon the summer flow to toss a cool spray up into the white bosom of the lilies, or to bathe the bending violets upon the green and grateful bank. It seems to them as if the whole strong tide is thrust fiercely and violently back, and hurled into a new channel, chasmed in the rough, rent granite. It is impossible to calculate the waste of grief and pathos which this incapacity causes. Fanny's doll aforesaid is left too near the fire, and waxy tears roll down her ruddy cheeks, to the utter ruin of her pretty face and her gay frock; and anon poor Fanny breaks her little heart in moans and sobs and sore lamentation. It is Rachel weeping for her children. I went on a tramp one May morning to buy a tissue-paper wreath of flowers for a little girl to wear to a May-party, where all the other little girls were expected to appear similarly crowned. After a long and weary search, I was forced to return without it. Scarcely had I pulled the bell, when I heard the quick pattering of little feet in the entry. Never in all my life shall I lose the memory of those wistful eyes that did not so much as look up to my face, but levelled themselves to my hand, and filmed with bitter disappointment to find it empty. I could see that the wreath was a very insignificant matter. I knew that every little beggar in the street had garlanded herself with sixpenny roses, and I should have preferred that my darling should be content with her own silky brown hair; but my taste availed her nothing, and the iron entered into her soul. Once a little boy, who could just stretch himself up as high as his papa's knee, climbed surreptitiously into the store-closet and upset the milk-pitcher. Terrified, he crept behind the flour-barrel, and there Nemesis found him, and he looked so charming and so guilty that two

or three others were called to come and enjoy the sight. But he, unhappy midget, did not know that he looked charming; he did not know that his guilty consciousness only made him the more interesting; he did not know that he seemed an epitome of humanity, a Lilliputian miniature of the great world; and his large, blue, solemn eyes were filled with remorse. As he stood there, silent, with his grave, utterly mournful face, he had robbed a bank, he had forged a note, he had committed a murder, he was guilty of treason. All the horror of conscience, all the shame of discovery, all the unavailing regret of a detected, atrocious, but not utterly hardened pirate tore his poor little innocent heart. Yet children are seeing their happiest days!

These people — the aforesaid three-fourths of our acquaintance — lay great stress on the fact that children are free from care, as if freedom from care were one of the beatitudes of Paradise; but I should like to know if freedom from care is any blessing to beings who don't know what care is. You who are careful and troubled about many things may dwell on it with great satisfaction, but children don't find it delightful by any means. On the contrary, they are never so happy as when they can get a little care, or cheat themselves into the belief that they have it. You can make them proud for a day by sending them on some responsible errand. If you will not place care upon them, they will make it for themselves. You shall see a whole family of dolls stricken down simultaneously with malignant measles, or a restive horse evoked from a passive parlor-chair. They are a great deal more eager to assume care than you are to throw it off. To be sure, they may be quite as eager to be rid of it after a while; but while this does not prove that care is delightful, it certainly does prove that freedom from care is not.

Now I should like, Herr Narr, to have you look at the other side for a moment: for there is a positive and a

negative pole. Children not only have their full share of misery, but they do not have their full share of happiness; at least, they miss many sources of happiness to which we have access. They have no consciousness. They have sensations, but no perceptions. We look longingly upon them, because they are so graceful, and simple, and natural, and frank, and artless; but though this may make us happy, it does not make them happy, because they don't know anything about it. It never occurs to them that they are graceful. No child is ever artless to himself. The only difference he sees between you and himself is that you are grown-up and he is little. Sometimes I think he does have a dim perception that when he is sick it is because he has eaten too much, and he must take medicine, and feed on heartless dry toast, while, when you are sick, you have the dyspepsia, and go to Europe. But the beauty and sweetness of children are entirely wasted on themselves, and their frankness is a source of infinite annoyance to each other. A man enjoys *himself*. If he is handsome, or wise, or witty, he generally knows it, and takes great satisfaction in it; but a child does not. He loses half his happiness because he does not know that he is happy. If he ever has any consciousness, it is an isolated, momentary thing, with no relation to anything antecedent or subsequent. It lays hold on nothing. Not only have they no perception of themselves, but they have no perception of anything. They never recognize an exigency. They do not salute greatness. Has not the Autocrat told us of some lady who remembered a certain momentous event in our Revolutionary War, and remembered it only by and because of the regret she experienced at leaving her doll behind, when her family was forced to fly from home? What humiliation is this! What an utter failure to appreciate the issues of life! For her there was no revolution, no upheaval of world-old theories, no struggle for freedom,

no great combat of the heroisms. All the passion and pain, the mortal throes of error, the glory of sacrifice, the victory of an idea, the triumph of right, the dawn of a new era, — all, all were hidden from her behind a lump of wax. And what was true of her is true of all her class. Having eyes, they see not; with their ears they do not hear. The din of arms, the waving of banners, the gleam of swords, fearful sights and great signs in the heavens, or the still, small voice that thrills when wind and fire and earthquake have swept by, may proclaim the coming of the Lord, and they stumble along, munching bread-and-butter. Out in the solitudes Nature speaks with her many-toned voices, and they are deaf. They have a blind sensational enjoyment, such as a squirrel or a chicken may have, but they can in no wise interpret the Mighty Mother, nor even hear her words. The ocean moans his secret to unheeding ears. The agony of the underworld finds no speech in the mountain-peaks, bare and grand. The old oaks stretch out their arms in vain. Grove whispers to grove, and the robin stops to listen, but the child plays on. He bruises the happy buttercups, he crushes the quivering anemone, and his cruel fingers are stained with the harebell's purple blood. Rippling waterfall and rolling river, the majesty of sombre woods, the wild waste of wilderness, the fairy spirits of sunshine, the sparkling wine of June, and the golden languor of October, the child passes by, and a dipper of blackberries, or a pocketful of chestnuts, fills and satisfies his horrible little soul. And in face of all this people say — there are people who *dare* to say — that childhood's are the "happiest days."

I may have been peculiarly unfortunate in my surroundings, but the children of poetry and novels were very infrequent in my day. The innocent cherubs never studied in my school-house, nor played puss-in-the-corner in our back-yard. Childhood, when I was

young, had rosy cheeks and bright eyes, as I remember, but it was also extremely given to quarrelling. It used frequently to "get mad." It made nothing of twitching away books and balls. It often pouted. Sometimes it would bite. If it wore a fine frock, it would strut. It told lies,—"whoppers" at that. It took the biggest half of the apple. It was not, as a general thing, magnanimous, but "aggravating." It may have been fun to you who looked on, but it was death to us who were in the midst.

This whole way of viewing childhood, this regretful retrospect of its vanished joys, this infatuated apotheosis of doughiness and rank unfinish, this fearful looking-for of dread old age, is low, gross, material, utterly unworthy of a sublime manhood, utterly false to Christian truth. Childhood is preëminently the animal stage of existence. The baby is a beast,—a very soft, tender, caressive beast,—a beast full of promise,—a beast with the germ of an angel,—but a beast still. A week-old baby gives no more sign of intelligence, of love, or ambition, or hope, or fear, or passion, or purpose, than a week-old monkey, and is not half so frisky and funny. In fact, it is a puling, scowling, wretched, dismal, desperate-looking animal. It is only as it grows old that the beast gives way and the angel-wings bud, and all along through infancy and childhood the beast gives way and gives way and the angel-wings bud and bud; and yet we entertain our angel so unawares that we look back regretfully to the time when the angel was in abeyance and the beast raved regnant.

The only advantage which childhood has over manhood is the absence of foreboding, and this indeed is much. A large part of our suffering is anticipatory, much of which children are spared. The present happiness is clouded for them by no shadowy possibility; but for this small indemnity shall we offset the glory of our manly years? Because their narrowness cannot take in the

contingencies that threaten peace, are they blessed above all others? Does not the same narrowness cut them off from the bright certainty that underlies all doubts and fears? If ignorance is bliss, man stands at the summit of mortal misery, and the scale of happiness is a descending one. We must go down into the ocean-depths, where, for the scintillant soul, a dim, twilight instinct lights up gelatinous lives. If childhood is indeed the happiest period, then the mysterious God-breathed breath was no boon and the Deity is cruel. Immortality were well exchanged for the blank of annihilation.

There is infinite talk of the dissipated illusions of youth, the paling of bright, young dreams. Life, it is said, turns out to be different from what was pictured. The rosy-hued morning fades away into the gray and livid evening, the black and ghastly night. In especial cases it may be so, but I do not believe it is the general experience. It surely need not be. It should not be. I have found things a great deal better than I expected. I am but one; but with all my oneness, with all that there is of me, I protest against such shallow generalities. I think they are slanderous of Him who ordained life, its processes and its vicissitudes. He never made our dreams to outstrip our realizations. Every conception, brain-born, has its execution, hand-wrought. Life is not a paltry tin cup which the child drains dry, leaving the man to go weary and hopeless, quaffing at it in vain with black, parched lips. It is a fountain ever springing. It is a great deep, which the wisest has never bounded, the grandest never fathomed.

It is not only idle, but stupid, to lament the departure of childhood's joys. It is as if something precious and valued had been forcibly torn from us, and we go sorrowing for lost treasure. But these things fall off from us naturally; we do not give them up. We are never called upon to give them up. There is no pang, no sorrow, no wrenching.

away of a part of our lives. The baby lies in his cradle and plays with his fingers and toes. There comes an hour when his fingers and toes no longer afford him amusement. He has attained to the dignity of a rattle, a whip, a ball. Has he suffered a loss? Has he not rather made a great gain? When he passed from his toys to his toys, did he do it mournfully? Does he look at his little feet and hands with a sigh for the joys that once loitered there, but are now forever gone? Does he not rather feel a little ashamed, when you remind him of those days? Does he not feel that it trenches somewhat on his dignity? Yet the regret of maturity for its past joys amounts to nothing less than this. Such regret is regret that we cannot lie in the sunshine and play with our toes,—that we are no longer but one remove, or but few removes, from the idiot. Away with such folly! Every season of life has its distinctive and appropriate enjoyments, which bud and blossom and ripen and fall off as the season glides on to its close, to be succeeded by others better and brighter. There is no consciousness of loss, for there is no loss. There is only a growing up, and out of, and beyond.

Life does turn out differently from what was anticipated. It is an infinitely higher and holier and nobler thing than our childhood fancied. The world that lay before us then was but a tinsel toy to the world which our firm feet tread. We have entered into the undiscovered land. We have explored its ways of pleasantness, its depths of dole, its mountains of difficulty, its valleys of delight, and, behold! it is very good. Storms have swept fiercely, but they swept to purify. We have heard in its thunders the Voice that woke once the echoes of the Garden. Its lightnings have riven a path for the Angel of Peace.

Manhood discovers what childhood can never divine,—that the sorrows of life are superficial, and the happinesses of life structural; and this knowledge

alone is enough to give a peace which passeth understanding.

Yes, the dreams of youth were dreams, but the waking was more glorious than they. They were only dreams,—fitful, flitting, fragmentary visions of the coming day. The shallow joys, the capricious pleasures, the wavering sunshine of infancy have deepened into virtues, graces, heroisms. We have the bold outlook of calm, self-confident courage, the strong fortitude of endurance, the imperial magnificence of self-denial. Our hearts expand with benevolence, our lives broaden with beneficence. We cease our perpetual skirmishing at the outposts, and go inward to the citadel. Down into the secret places of life we descend. Down among the beautiful ones in the cool and quiet shadows, on the sunny summer levels, we walk securely, and the hidden fountains are unsealed.

For those people who do nothing, for those to whom Christianity brings no revelation, for those who see no eternity in time, no infinity in life, for those to whom opportunity is but the handmaid of selfishness, to whom smallness is informed by no greatness, for whom the lowly is never lifted up by indwelling love to the heights of divine performance,—for them, indeed, each hurrying year may well be a King of Terrors. To pass out from the flooding light of the morning, to feel all the dewiness drunk up by the thirsty, insatiate sun, to see the shadows slowly and swiftly gathering, and no starlight to break the gloom, and no home beyond the gloom for the unhoused, startled, shivering soul,—ah! this indeed is terrible. The “confusions of a wasted youth” strew thick confusions of a dreary age. Where youth garners up only such power as beauty or strength may bestow, where youth is but the revel of physical or frivolous delight, where youth aspires only with paltry and ignoble ambitions, where youth presses the wine of life into the cup of variety, there indeed Age comes, a thrice unwelcome guest. Put

him off. Thrust him back. Weep for the early days: you have found no happiness to replace their joys. Mourn for the trifles that were innocent, since the trifles of your manhood are heavy with guilt. Fight to the last. Retreat inch by inch. With every step you lose. Every day robs you of treasure. Every hour passes you over to insignificance; and at the end stands Death. The bare and desolate decline drops suddenly into the hopeless, dreadful grave, the black and yawning grave, the foul and loathsome grave.

But why those who are Christians and not Pagans, who believe that death is not an eternal sleep, who wrest from life its uses and gather from life its beauty, — why they should dally along the road, and cling frantically to the old landmarks, and shrink fearfully from the approaching future, I cannot tell. You are getting into years. True. But you are getting out again. The bowed frame, the tottering step, the unsteady hand, the failing eye, the heavy ear, the tremulous voice, they will all be yours. The grasshopper will become a burden, and desire shall fail. The fire shall be smothered in your heart, and for passion you shall have only peace. This is not pleasant. It is never pleasant to feel the inevitable passing away of priceless possessions. If this were to be the culmination of your fate, you might indeed take up the wail for your lost youth. But this is only for a moment. The infirmities of age come gradually. Gently we are led down into the valley. Slowly, and not without a soft loveliness, the shadows lengthen. At the worst these weaknesses are but the stepping-stones in the river, passing over which you shall come to immortal vigor, immortal fire, immortal beauty. All along the western sky flames and glows the auroral light of another life. The banner of victory waves right over your dungeon of defeat. By the golden gateway of the sunseting,

“Through the dear sight of Him who walked the waves,”

you shall pass into the “cloud-land, gorgeous land,” whose splendor is unveiled only to the eyes of the Immortals. Would you loiter to your inheritance?

You are “getting into years.” Yes, but the years are getting into you, — the ripe, rich years, the genial, mellow years, the lusty, luscious years. One by one the crudities of your youth are falling off from you, — the vanity, the egotism, the isolation, the bewilderment, the uncertainty. Nearer and nearer you are approaching yourself. You are consolidating your forces. You are becoming master of the situation. Every wrong road into which you have wandered has brought you, by the knowledge of that mistake, so much closer to the truth. You no longer draw your bow at a venture, but shoot straight at the mark. Your possibilities concentrate, and your path is cleared. On the ruins of shattered plans you find your vantage-ground. Your broken hopes, your thwarted purposes, your defeated aspirations become a staff of strength with which you mount to sublimer heights. With self-possession and self-command return the possession and the command of all things. The title-deed of creation, forfeited, is reclaimed. The king has come to his own again. Earth and sea and sky pour out their largess of love. All the past crowds down to lay its treasures at your feet. Patriotism stands once more in the breach at Thermopylæ, — bears down the serried hosts of Bannockburn, — lays its calm hand in the fire, still, as if it felt the pressure of a mother’s lips, — gathers to its heart the points of opposing spears, to make a way for the avenging feet behind. All that the ages have of greatness and glory your hand may pluck, and every year adds to the purple vintage. Every year comes laden with the riches of the lives that were lavished on it. Every year brings to you softness and sweetness and strength. Every year evokes order from confusion, till all things find scope and adjustment. Every year sweeps a broader circle for

your horizon, grooves a deeper channel for your experience. Through sun and shade and shower you ripen to a large and liberal life.

Yours is the deep joy, the unspoken fervor, the sacred fury of the fight. Yours is the power to redress wrong, to defend the weak, to succor the needy, to relieve the suffering, to confound the oppressor. While vigor leaps in great tidal pulses along your veins, you stand in the thickest of the fray, and broadsword and battle-axe come crashing down through helmet and visor. When force has spent itself, you withdraw from the field, your weapons pass into younger hands, you rest under your laurels, and your works do follow you. Your badges are the scars of your honorable wounds. Your life finds its vindication in the deeds which you have wrought.

The possible to-morrow has become the secure yesterday. Above the tumult and the turbulence, above the struggle and the doubt, you sit in the serene evening, awaiting your promotion.

Come, then, O dreaded years! Your brows are awful, but not with frowns. I hear your resonant tramp far off, but it is sweet as the May-maidens' song. In your grave prophetic eyes I read a golden promise. I know that you bear in your bosom the fulness of my life. Veiled monarchs of the future, shining dim and beautiful, you shall become my vassals, swift-footed to bear my messages, swift-handed to work my will. Nourished by the nectar which you will pour in passing from your crystal cups, Death shall have no dominion over me, but I shall go on from strength to strength and from glory to glory.

---

## THE PROMISE OF THE DAWN.

### A CHRISTMAS STORY.

A WINTER'S evening. Do you know how that comes here among the edges of the mountains that fence in the great Mississippi valley? The sea-breath in the New-England States thins the air and bleaches the sky, sucks the vitality out of Nature, I fancy, to put it into the brains of the people: but here, the earth every day in the year pulses out through hill or prairie or creek a full, untamed animal life,—shakes off the snow too early in spring, in order to put forth untimed and useless blossoms, wasteful of her infinite strength. So when this winter's evening came to a lazy town bedded in the hills that skirt Western Virginia close by the Ohio, it found that the December air, fiercely as it blew the snow-clouds about the hill-tops, was instinct with a vigorous, frosty life, and that the sky above the clouds was not

wan and washed-out, as farther North, but massive, holding yet a sensuous yellow languor, the glow of unforgotten autumn days.

The very sun, quite certain of where he would soonest meet with gratitude, gave his kindest good-night smile to the great valley of the West, asleep under the snow: very kind to-night, just as calm and loving, though he knew the most plentiful harvest which the States had yielded that year was one of murdered dead, as he gave to the young, untainted world, that morning, long ago, when God blessed it, and saw that it was good. Because, you see, this was the eve of a more helpful, God-sent day than that, in spite of all the dead: Christmas eve. To-morrow Christ was coming,—whatever He may be to you,—Christ. The sun knew

that, and glowed as cheerily, steadily, on blood as water. Why, God had the world! Let them fret, and cut each other's throats, if they would. God had them: and Christ was coming. But one fancied that the earth, not quite so secure in the infinite Love that held her, had learned to doubt, in her six thousand years of hunger, and heard the tidings with a thrill of relief. Was the Helper coming? Was it the true Helper? The very hope, even, gave meaning to the tender rose-blush on the peaks of snow, to the childish sparkle on the grim rivers. They heard and understood. The whole world answered.

One man, at least, fancied so: Adam Craig, hobbling down the frozen streets of this old-fashioned town. He thought, rubbing his bony hands together, that even the wind knew that Christmas was coming, the day that Christ was born: it went shouting boisterously through the great mountain-gorges, its very uncouth soul shaken with gladness. The city itself, he fancied, had caught a new and curious beauty: this winter its mills were stopped, and it had time to clothe the steep streets in spotless snow and icicles; its windows glittered red and cheery out into the early night: it looked just as if the old burgh had done its work, and sat down, like one of its own mill-men, to enjoy the evening, with not the cleanest face in the world, to be sure, but with an honest, jolly old heart under all, beating rough and glad and full. That was Adam Craig's fancy: but his head was full of queer fancies under the rusty old brown wig: queer, maybe, yet as pure and childlike as the prophet John's: coming, you know, from the same kinship. Adam had kept his fancies to himself these forty years. A lame old chap, cobbling shoes day by day, fighting the wolf desperately from the door for the sake of orphan brothers and sisters, has not much time to put the meanings God and Nature have for his ignorant soul into words, has he? But the fancies had found utterance for themselves,

somehow: in his hatchet-shaped face, even, with its scraggy gray whiskers; in the quick, shrewd smile; in the eyes, keen eyes, but childlike, too. In the very shop out there on the creek-bank you could trace them. Adam had cobbled there these twenty years, chewing tobacco and taking snuff, (his mother's habit, that,) but the little shop was pure: people with brains behind their eyes would know that a clean and delicate soul lived there; they might have known it in other ways too, if they chose: in his gruff, sharp talk, even, full of slang and oaths; for Adam, invoke the Devil often as he might, never took the name of Christ or a woman in vain. So his foolish fancies, as he called them, cropped out. It must be so, you know: put on what creed you may, call yourself chevalier or Sambo, the speech your soul has held with God and the Devil will tell itself in every turn of your head, and jangle of your laugh: you cannot help that.

But it was Christmas eve. Adam took that in with keener enjoyment, in every frosty breath he drew. Different from any Christmas eve before: pulling off his scuffed cap to feel the full strength of the "mor'ner." Whew! how it blew! straight from the ice-fields of the Pole, he thought. So few people there were up there to be glad Christ was coming! But those filthy little dwarfs up there needed Him all the same: every man of them had a fiend tugging at his soul, like us, was lonely, wanted a God to help him, and—a wife to love him. Adam stopped short here a minute, something choking in his throat. "Jinny!" he said, under his breath, turning to some new hope in his heart, with as tender, awe-struck a touch as one lays upon a new-born infant. "Jinny!" praying silently with blurred eyes. I think Christ that moment came very near to the woman who was so greatly loved, and took her in His arms, and blessed her. Adam jogged on, trying to begin a whistle, but it ended in a miserable grunt: his heart was throbbing

under his smoke-dried skin, silly as a woman's, so light it was, and full.

"Get along, Old Dot, and carry one!" shouted the boys, sledding down the icy sidewalk.

"Yip! you young devils, you!" stopping to give them a helping shove and a cheer: loving little children always, but never as to-day.

Surely there never was such a Christmas eve before! The frozen air glistened grayly up into heaven itself, he thought; the snow-covered streets were alive, noisy, — glad into their very cellars and shanties; the sun was sorry to go away. No wonder. His heartiest ruby-gleam lingered about the white Virginia heights behind the town, and across the river quite glorified the pale stretch of the Ohio hills. Free and slave. (Adam was an Abolitionist.) Well, let that be. God's hand of power, like His sunlight, held the master and the slave in loving company. Tomorrow was the sign.

The cobbler stopped on the little swinging foot-bridge that crosses the creek in the centre of the city. The faint saffron sunset swept from the west over the distant wooded hills, the river, the stone bridge below him, whose broad gray piers painted perpetual arches on the sluggish, sea-colored water. The smoke from one or two far-off foundries hung just above it, motionless in the gray, in tattered drifts, dyed by the sun, clear drab and violet. A still picture. A bit of Venice, poor Adam thought, who never had been fifty miles out of Wheeling. The quaint American town was his world: he brought the world into it. There were relics of old Indian forts and mounds, the old times and the new. The people, too, though the cobbler only dimly saw that, were as much the deposit and accretion of all dead ages as was the coal that lay bedded in the fencing hills. Irish, Dutch, whites, blacks, Moors, old John Bull himself: you can find the dregs of every day of the world in any mill-town of the States. Adam had a dull

perception of this. Christmas eve came to all the world, coming here.

Leaning on the iron wires, while the unsteady little bridge shook under him, he watched the stunned beams of the sun urging themselves through the smoke-clouds. He thought they were like "the voice of one crying in the wilderness, 'Prepare ye the way of the Lord, make His paths straight.'" It wakened something in the man's hackneyed heart deeper even than the thought of the woman he had prayed for. A sudden vision that a great Peace held the world as did that glow of upper light: he rested in its calm. Up the street a few steps rose the walls of the old theatre, used as a prison now for captured Confederates: it was full now; he could see them looking out from behind the bars, grimy and tattered. Far to the north, on Mount Woods, the white grave-stones stood out clear in the darkening evening. His enemies, the busy streets, the very war itself, the bones and souls of the dead yonder, — the great Peace held them all. We might call them evil, but they were sent from God, and went back to God. All things were in Him.

I tell you, that when this one complete Truth got into this poor cobbler's brain, — in among its vulgar facts of North and South, and patched shoes, and to-morrow's turkey, — a great poet-insight looked out of his eyes for the minute. Saint John looked thus as he wrote that primitive natal word, "God is love." Cobblers, as well as Saint John, or the dying Herder, need great thoughts, and water from God to refresh them, believe me.

Trotting on, hardly needing his hickory stick, Adam could see the little brown shop yonder on the creek-bank. All dark: but did you ever see anything brighter than the way the light shone in the sitting-room, behind the Turkey-red curtains? Such a taste that little woman had! Two years ago the cobbler finished his life-work, he thought: he had been mother and fa-

ther both to the orphans left with him, faithful to them, choking down the hungry gnawing within for something nearer than brother or sister. Two years ago they had left him, struck out into the world for themselves.

"Then, you see," Adam used to say, "I was settlin' down into an old man; dryin' up, d' ye see? thinkin' the Lord had forgotten me, when He said to other men, 'Come, it's *your* turn now for home and lovin'.' Them young ones was dear enough, but a man has a cravin' for somethin' that's his own. But it was too late, I thought. Bitter; despisin' the Lord's eyesight; thinkin' He did n't see or care what would keep me from hell. I believed in God, like most poor men do, thinkin' Him cold-blooded, not hearin' when we cry out for work, or a wife, or child. I did n't cry. I never prayed. But look there. Do you see—*her*? Jinny?" It was to the young Baptist preacher Adam said this, when he came to make a pastoral visit to Adam's wife. "That's what He did. I'm not ashamed to pray now. I ask Him every hour to give me a tight grip on her so that I kin follow her up, and to larn me some more of His ways. That's my religious 'xperience, Sir."

The young man coughed weakly, and began questioning old Craig as to his faith in immersion. The cobbler stumped about the kitchen a minute before answering, holding himself down. His face was blood-red when he did speak, quite savage, the young speaker said afterward.

"I don't go to church, Sir. My wife does. I don't say *now*, 'Damn the churches!' or that you, an' the likes of you, an' yer Master, are all shams an' humbugs. I know Him now. He's 'live to me. So now, when I see you belie Him, an' keep men from Him with yer hundreds o' wranglin' creeds, an' that there's as much honest love of truth outside the Church as in it, I don't put yer bigotry an' foulness on Him. I on'y think there's an awful mistake:

just this: that the Church thinks it is Christ's body an' us uns is outsiders, an' we think so too, an' despise Him through you with yer stingy souls an' fights an' squabblins; not seein' that the Church is jes' an hospital, where some of the sickest of God's patients is tryin' to get cured."

The preacher never went back; spoke in a church-meeting soon after of the prevalence of Tom Paine's opinions among the lower classes. Half of our sham preachers take the vague name of "Paine" to cover all of Christ's opponents,—not ranking themselves there, of course.

Adam thought he had won a victory. "Ef you'd heard me flabbergast the parson!" he used to say, with a jealous anxiety to keep Christ out of the visible Church, to shut his eyes to the true purity in it, to the fact that the Physician was in His hospital. To-night some more infinite gospel had touched him. "Good evenin', Mr. Pitts," he said, meeting the Baptist preacher. "Happy Christmas, Sir!" catching a glance of his broken boots. "Danged ef I don't send that feller a pair of shoes unbeknownst, to-morrow! He's workin' hard, an' it's not for money."

The great Peace held even its erring Church, as Adam dully saw. The streets were darkening, but full even yet of children crowding in and out of the shops. Not a child among them was more busy or important, or keener for a laugh than Adam, with his basket on his arm and his hand in his pocket clutching the money he had to lay out. The way he had worked for that! Over-jobs, you know, done at night when Jinny and the baby were asleep. It was carrying him through splendidly, though: the basket was quite piled up with bundles: as for the turkey, had n't he been keeping that in the back-yard for weeks, stuffing it until it hardly could walk? That turkey, do you know, was the first thing Baby ever took any notice of, except the candle? Jinny was quite opposed to killing it, for that

reason, and proposed they should have ducks instead; but as old Jim Farley and Granny Simpson were invited for dinner, and had been told about the turkey, matters must stay as they were.

"Poor souls, they 'll not taste turkey agin this many a day, I 'm thinkin', Janet. When we give an entertainment, it 's allus them-like we 'll ask. That 's the Master's biddin', ye know."

But the pudding was yet to buy. He had a dirty scrap of paper on which Jinny had written down the amount. "The hand that woman writes!" He inspected it anxiously at every street-lamp. Did you ever see anything finer than that tongue, full of its rich brown juices and golden fat? or the white, crumbly suet? Jinny said veal: such a saving little body she was! but we know what a pudding ought to be. Now for the pippins for it, yellow they are, holding summer yet; and a few drops of that brandy in the window, every drop shining and warm: that 'll put a soul into it, and — He stopped before the confectioner's: just a moment, to collect himself; for this was the crowning point, this. There they were, in the great, gleaming window below: the rich Malaga raisins, bedded in their cases, cold to the lips, but within all glowing sweetness and passion; and the cool, tart little currants. If Jinny could see that window! and Baby. To be sure, Baby might n't appreciate it, but — White frosted cakes, built up like fairy palaces, and mountains of golden oranges, and the light trembling through delicate candies, purple and rose-color. "Let 's have a look, boys!" — and Adam crowded into the swarm outside.

Over the shops there was a high brick building, a concert-hall. You could hear the soft, dreamy air floating down from it, made vocal into a wordless love and pathos. Adam forgot the splendors of the window, listening; his heart throbbed full under his thin coat; it ached

with an infinite tenderness. The poor old cobbler's eyes filled with tears: he could have taken Jesus and the great world all into his arms then. How loving and pure it was, the world! Christ's footsteps were heard. The eternal stars waited above; there was not a face in the crowd about him that was not clear and joyous. These delicate, pure women fitting past him up into the lighted hall,—it made his nerves thrill into pleasure to look at them. Jesus' world! His creatures.

He put his hand into the basket, and shyly took out a bunch of flowers he had bought,—real flowers, tender, sweet-smelling little things. Would n't Jinny wonder to find them on her bureau in the morning? Their fragrance, so loving and innocent, filled the frosty air, like a breath of the purity of this Day coming. Just as he was going to put them back carefully, a hand out of the crowd caught hold of them, a dirty hand, with sores on it, and a woman thrust her face from under her blowzy bonnet into his: a young face, deadly pale, on which some awful passion had cut the lines; lips dyed scarlet with rank blood, lips, you would think, that in hell itself would utter a coarse jest.

"Give 'em to me, old cub!" she said, pulling at them. "I want 'em for a better nor you."

"Go it, Lot!" shouted the boys.

He struck her. A woman? Yes; if it had been a slimy eel standing upright, it would have been less foul a thing than this.

"Damn you!" she muttered, chafing the hurt arm. Whatever words this girl spoke came from her teeth out,—seemed to have no meaning to her.

"Let 's see, Lot."

She held out her arm, and the boy, a black one, plastered it with grime from the gutter. The others yelled with delight. Adam hurried off. A pure air? God help us! He threw the flowers into the gutter with a bitter loathing. *Her* fingers would be pol-

luted, if they touched them now. He would not tell her of this: he would cut off his hand rather than talk to her of this,—let her know such things were in the world. So pure and saintly she was, his little wife! a homely little body, but with the cleanest, most loving heart, doing her Master's will humbly. The cobbler's own veins were full of Scotch blood, as pure indignant as any knight's of the Holy Greal. He wiped his hand, as though a leper had tainted it.

Passing down Church Street, the old bell rang out the hour. All day he had fancied its tone had gathered a lighter, more delicate sweetness with every chime. The Christ-child was coming; the world held up its hands adoring; all that was needed of men was to love Him, and rejoice. Its tone was different now: there was a brutal cry of pain in the ponderous voice that shook the air,—a voice saying something to God, unintelligible to him. He thrust out the thought of that woman with a curse: he had so wanted to have a good day, to feel how great and glad the world was, and to come up close to Christ with Jinny and the baby! He did soon forget the vileness there behind, going down the streets; they were so cozy and friendly-hearted, the parlor-windows opening out red and cheerfully, as is the custom in Southern and Western towns; they said "Happy Christmas" to every passer-by. The owners, going into the houses, had a hearty word for Adam. "Well, Craig, how goes it?" or, "Fine, frosty weather, Sir." It quite heartened the cobbler. He made shoes for most of these people, and whether men are free and equal or not, any cobbler will have a reverence for the man he has shod.

So Adam trotted on, his face a little redder, and his stooped chest, especially next the basket, in quite a glow. There she was, clear out in the snow, waiting for him by the curb-stone. How she took hold of the basket, and Adam made believe she was carrying the whole

weight of it! How the fire-light struck out furiously through the Turkey-red curtains, so as to show her to him quicker!—to show him the snug coffee-colored dress, and the bits of cherry ribbon at her throat,—to show him how the fair curly hair was tucked back to leave the rosy ears bare he thought so daintily,—to show him how young she was, how faded and worn and tired-out she was, how hard the years had been,—to show him how his great love for her was thickening the thin blood with life, making a child out of the thwarted woman,—to show him—this more than all, this that his soul watched for, breathless, day and night—that she loved him, that she knew nothing better than the ignorant, loving heart, the horny hands that had taken her hungry fate to hold, and made of it a color and a fragrance. "Christmas is coming, little woman!" Of course it was. If it had not taken the whole world into its embrace yet, there it was compacted into a very glow of love and warmth and coziness in that snugnest of rooms, and in that very Jinny and Baby,—Christmas itself,—especially when he kissed her, and she blushed and laughed, the tears in her eyes, and went fussing for that queer roll of white flannel.

Adam took off his coat: he always went at the job of nursing the baby in his shirt-sleeves. The anxious sweat used to break on his forehead before he was through. He got its feet to the fire. "I 'm dead sure that much is right," he used to say. Jinny put away the bundles, wishing to herself Mrs. Perkins would happen in to see them: one did n't like to be telling what they had for dinner, but if it was known accidentally— You poets, whose brains have quite snubbed and sent to Coventry your stomachs, never could perceive how the pudding was a poem to the cobbler and his wife,—how a very actual sense of the live goodness of Jesus was in it,—how its spicy steam contained all the cordial cheer and jollity they had missed in

meaningless days of the year. Then she brought her sewing-chair, and sat down, quite idle.

"No work for to-night! I 'll teach you how to keep Christmas, Janet, woman!"

It was her first, one might say. Orphan girls that go about from house to house sewing, as Jinny had done, don't learn Christmas by heart year by year. It was a new experience: she was taking it in, one would think, to look at her, with all her might, with the earnest blue eyes, the shut-up brain behind the narrow forehead, the loving heart: a contracted tenement, that heart, by-the-by, adapted for single lodgers. She was n't quite sure that Christmas was not, after all, a relic of Papistry,—for Jinny was a thorough Protestant: a Christian, as far as she understood Him, with a keen interest in the Indian missions. "Let us begin in our own country," she said, and always prayed for the Sioux just after Adam and Baby. In fact, if we are all parts of God's temple, Jinny was a very essential, cohesive bit of mortar. Adam had a wider door for his charity: it took all the world in, he thought,—though the preachers did enter with a shove, as we know. However, this was Christmas: the word took up all common things, the fierce wind without, the clean hearth, the modest color on her cheek, the very baby, and made of them one grand, sweet poem, that sang to the man the same story the angels told eighteen centuries ago: "Glory to God in the highest, and on earth peace, good-will toward men."

Sitting there in the evenings, Adam was the talker: such a fund of anecdote he had! Jinny never could hear the same story too often. To-night there was a bit of a sigh in them: his heart was tender: about the Christmases at home, when he and Nelly were little chubs together, and hung up their stockings regularly every Christmas eve.

"Twins, Nelly an' me was, oldest of all. When I was bound to old Lowe,

it went hard, ef I could n't scratch together enough for a bit of ribbon-bow or a ring for Nell, come Christmas. She used to sell the old flour-barrels an' rags, an' have her gift all ready by my plate that mornin': never missed. I never hed a sweetheart then."

Jinny laid her hand on his knee.

"Ye 'r' glad o' that, little woman? Well, well! I did n't care for women, only Ellen. She was the only livin' thing as come near me. I gripped on to her like death, havin' only her. But she—hed more nor me."

Jinny knew the story well.

"She went away with him?" softly.

"Yes, she did. I don't blame her. She was young, unlearned. No man cared for our souls. So, when she loved him well, she thort God spoke to her. So she was tuk from me. She went away."

He patted the baby, his skinny hand all shaking. Jinny took it in hers, and, leaning over, stroked his hair.

"You've hed hard trouble, to turn it gray like this."

"No trouble like that, woman, when he left her."

"Left her! An' then she was tired of God, an' of livin', or dyin'. So as she loved him! You know, my husband. As I love you. An' he left her! What wonder *what* she did? All alone! So as she loved him still! God shut His eyes to what she did."

The yellow, shaggy face was suddenly turned from her. The voice choked.

"Did He, little woman? *You* know."

"So, when she was a-tryin' to forget, the only way she knew, God sent an angel to bring her up, an' have her soul washed clean."

Adam laughed bitterly.

"That 's not the way men told the story, child. I got there six months after: to New York, you know. I found in an old paper jes' these words: 'The woman, Ellen Myers, found dead yesterday on one of the docks, was

identified. Died of starvation and whiskey.' That was Nelly, as used to hang up her stockin' with me. Christian people read that. But nobody cried but me."

"They're tryin' to help them now at the Five Points there."

"God help them as helps others this Christmas night! But it's not for such as you to talk of the Five Points, Janet," rousing himself. "What frabbit me to talk of Nelly the night? Someways she's been beside me all day, as if she was grippin' me by the sleeve, beggin', dumb-like."

The moody frown deepened.

"The baby! See, Adam, it'll waken! Quick, man!"

And Adam, with a start, began hushing it after the fashion of a chimpanzee. The old bell rang out another hour: how genial and loving it was!

"Nine o'clock! Let me up, boys!" — and Lot Tyndal hustled them aside from the steps of the concert-hall. They made way for her: her thin, white arms could deal furious blows, they knew from experience. Besides, they had seen her, when provoked, fall in some cellar-door in a livid dead spasm. They were afraid of her. Her filthy, wet skirt flapped against her feet, as she went up; she pulled her flaunting bonnet closer over her head. There was a small room at the top of the stairs, a sort of green-room for the performers. Lot shoved the door open and went in. Madame — was there, the prima-donna, if you chose to call her so: the rankest bloom of fifty summers, in white satin and pearls: a faded dahlia. Women hinted that the fragrance of the dahlia had not been healthful in the world; but they crowded to hear her: such a wonderful contralto! The manager, a thin old man, with a hook-nose, and kindly, uncertain smile, stood by the stove, with a group of gentlemen about him. The wretch from the street went up to him, unsteadily.

"Lot's drunk," one door-keeper whispered to another.

"No; the Devil's in her, though, like a tiger, to-night."

Yet there was a certain grace and beauty in her face, as she looked at the manager, and spoke low and sudden.

"I'm not a beggar. I want money, — honest money. It's Christmas eve. They say you want a voice for the chorus, in the carols. Put me where I'll be hid, and I'll sing for you."

The manager's hand fell from his watch-chain. Storrs, a young lawyer of the place, touched his shoulder.

"Don't look so aghast, Pumphrey. Let her sing a ballad to show you. Her voice is a real curiosity."

Madame — looked dubiously across the room: her black maid had whispered to her. Lot belonged to an order she had never met face to face before: one that lives in the suburbs of hell.

"Let her sing, Pumphrey."

"If" — looking anxiously to the lady.

"Certainly," drawled that type of purity. "If it is so curious, her voice."

"Sing, then," nodding to the girl.

There was a strange fierceness under her dead, gray eye.

"Do you mean to employ me to-night?"

Her tones were low, soft, from her teeth out, as I told you. Her soul was chained, below: a young girl's soul, hardly older than your little daughter's there, who sings Sunday-school hymns for you in the evenings. Yet one fancied, if this girl's soul were let loose, it would utter a madder cry than any fiend in hell.

"Do you mean to employ me?" biting her finger-ends until they bled.

"Don't be foolish, Charlotte," whispered Storrs. "You may be thankful you're not sent to jail instead. But sing for him. He'll give you something, may-be."

She did not damn him, as he expected, stood quiet a moment, her eyelids

fallen, relaxed with an inexpressible weariness. A black porter came to throw coals into the stove: he knew "dat debbil, Lot," well: had helped drag her drunk to the lock-up a day or two before. Now, before the white folks, he drew his coat aside, loathing to touch her. She followed him with a glazed look.

"Do you see what I am?" she said to the manager.

Nothing pitiful in her voice. It was too late for that.

"He would n't touch me: I'm not fit. I want help. Give me some honest work."

She stopped and put her hand on his coat-sleeve. The child she might have been, and never was, looked from her face that moment.

"God made me, I think," she said, humbly.

The manager's thin face reddened.

"God bless my soul! what shall I do, Mr. Storrs?"

The young man's thick lip and thick-er eyelid drooped. He laughed, and whispered a word or two.

"Yes," gruffly, being reassured. "There's a policeman outside. Joe, take her out, give her in charge to him."

The negro motioned her before him with a billet of wood he held. She laughed. Her laugh had gained her the name of "Devil Lot."

"Why,"—fires that God never lighted blazing in her eyes,— "I thought you wanted me to sing! I'll sing. We'll have a hymn. It's Christmas, you know."

She staggered. Liquor, or some subtler poison, was in her veins. Then, catching by the lintel, she broke into that most deep of all adoring cries,—

"I know that my Redeemer liveth."

A strange voice. The men about her were musical critics: they listened intently. Low, uncultured, yet full, with childish grace and sparkle; but now and then a wailing breath of an unutterable pathos.

"Git out wid you," muttered the negro, who had his own religious notions, "pollutin' de name ob de Lord in yer lips!"

Lot laughed.

"Just for a joke, Joe. *My Redeemer!*"

He drove her down the stairs.

"Do you want to go to jail, Lot?" he said, more kindly. "It's orful cold out to-night."

"No. Let me go."

She went through the crowd out into the vacant street, down to the wharf, humming some street-song,—from habit, it seemed; sat down on a pile of lumber, picking the clay out of the holes in her shoes. It was dark: she did not see that a man had followed her, until his white-gloved hand touched her. The manager, his uncertain face growing red.

"Young woman" —

Lot got up, pushed off her bonnet. He looked at her.

"My God! No older than Susy," he said.

By a gas-lamp she saw his face, the trouble in it.

"Well?" biting her finger-ends again.

"I'm sorry for you, I" —

"Why?" sharply. "There's more like me. Fifteen thousand in the city of New York. I came from there."

"Not like you, child."

"Yes, like me," with a gulping noise in her throat. "I'm no better than the rest."

She sat down and began digging in the snow, holding the sullen look desperately on her face. The kind word had reached the tortured soul beneath, and it struggled madly to be free.

"Can I help you?"

No answer.

"There's something in your face makes me heart-sick. I've a little girl of your age."

She looked up quickly.

"Who are you, girl?"

She stood up again, her child's face

white, the dark river rolling close by her feet.

"I'm Lot. I always was what you see. My mother drank herself to death in the Bowery dens. I learned my trade there, slow and sure."

She stretched out her hands into the night, with a wild cry, —

"My God! I had to live!"

"What was to be done? Whose place was it to help her? he thought. He loathed to touch her. But her soul might be as pure and groping as little Susy's.

"I wish I could help you, girl," he said. "But I'm a moral man. I have to be careful of my reputation. Besides, I could n't bring you under the same roof with my child."

She was quiet now.

"I know. There's not one of those Christian women up in the town yonder 'ud take Lot into their kitchens to give her a chance to save herself from hell. Do you think I care? It's not for myself I'm sorry. It's too late."

Yet as this child, hardly a woman, gave her soul over forever, she could not keep her lips from turning white.

"There's thousands more of us. Who cares? Do preachers and them as sits in the grand churches come into our dens to teach us better?"

Pumphrey grew uneasy.

"Who taught you to sing?" he said.

The girl started. She did not answer for a minute.

"What did you say?" she said.

"Who taught you?"

Her face flushed warm and dewy; her eyes wandered away, moistened and dreamy; she curled her hair softly on her finger.

"I'd—I'd rather not speak of that," she said, low. "He's dead now. *He* called me—Lottie," looking up with a sudden, childish smile. "I was only fifteen then."

"How old are you now?"

"Four years more. But I tell you I've seen the world in that time."

It was Devil Lot looked over at the dark river now.

He turned away to go up the wharf. No help for so foul a thing as this. He dared not give it, if there were. She had sunk down with her old, sullen glare, but she rose and crept after him. Why, this was her only chance of help from all the creatures God had made!

"Let me tell you," she said, holding by a fire-plug. "It's not for myself I care. It's for Benny. That's my little brother. I've raised him. He loves me; *he don't know*. I've kept him alone allays. I don't pray, you know; but when Ben puts his white little arms about me 't nights and kisses me, some-thin' says to me, 'God loves you, Lot.' So help me God, that boy shall never know what his sister was! He's gettin' older now. I want work, before he can know. Now, will you help me?"

"How can I?"

The whole world of society spoke in the poor manager.

"I'll give you money."

Her face hardened.

"Lot, I'll be honest. There's no place for such as you. Those that have made you what you are hold good stations among us; but when a woman's once down, there's no raising her up."

"Never?"

"Never."

She stood, her fair hair pushed back from her face, her eye deadening every moment, quite quiet.

"Good bye, Lot."

The figure touched him somehow, standing alone in the night there.

"It was n't my fault at the first," she wandered. "Nobody taught me better."

"I'm not a church-member, thank God!" said Pumphrey to himself, and so washed his hands in innocency.

"Well, good bye, girl," kindly. "Try and lead a better life. I wish I could have given you work."

"It was only for Benny that I cared, Sir."

"You're sick? Or"—

"It 'll not last long, now. I only keep myself alive eating opium now and then. D' ye know? I fell by your hall to-day; had a fit, they said. It was n't a fit; it was death, Sir."

He smiled.

"Why did n't you die, then?"

"I would n't. Benny would have known then. I said,—'I will not. I must take care o' him first.' Good bye. You 'd best not be seen here."

And so she left him.

One moment she stood uncertain, being alone, looking down into the seething black water covered with ice.

"There 's one chance yet," she muttered. "It 's hard; but I 'll try,"—with a shivering sigh; and went dragging herself along the wharf, muttering still something about Benny.

As she went through the lighted streets, her step grew lighter. She lifted her head. Why, she was only a child yet, in some ways, you know; and this was Christmas-time; and it was n't easy to believe, that, with the whole world strong and glad, and the True Love coming into it, there was no chance for her. Was it? She hurried on, keeping in the shadow of the houses to escape notice, until she came to the more open streets,—the old "commons." She stopped at the entrance of an alley, going to a pump, washing her face and hands, then combing her fair, silky hair.

"I 'll try it," she said again.

Some sudden hope had brought a pink flush to her cheek and a moist brilliance to her eye. You could not help thinking, had society not made her what she was, how fresh and fair and debonair a little maiden she would have been.

"He 's my mother's brother. He 'd a kind face, though he struck me. I 'll kill him, if he strikes me agin," the dark trade-mark coming into her eyes. "But mebbe," patting her hair, "he 'll not. Just call me Charley, as Ben does: help me to be like his wife: I 'll hev a chance for heaven at last."

She turned to a big brick building and ran lightly up the stairs on the outside. It had been a cotton-factory, but was rented in tenement-rooms now. On the highest porch was one of Lot's rooms: she had two. The muslin curtain was undrawn, a red fire-light shone out. She looked in through the window, smiling. A clean, pure room: the walls she had whitewashed herself; a white cot-bed in one corner; a glowing fire, before which a little child sat on a low cricket, building a house out of blocks. A brave, honest-faced little fellow, with clear, reserved eyes, and curling golden hair. The girl, Lot, might have looked like that at his age.

"Benny!" she called, tapping on the pane.

"Yes, Charley!" instantly, coming quickly to the door.

She caught him up in her arms.

"Is my baby tired waiting for sister? I 'm finding Christmas for him, you know."

He put his arms about her neck, kissing her again and again, and laying his head down on her shoulder.

"I 'm so glad you 've come, Charley! so glad! so glad!"

"Has my boy his stocking up? Such a big boy to have his stocking up!"

He put his chubby hands over her eyes quickly, laughing.

"Don't look, Charley! don't! Benny 's played you a trick now, I tell you!" pulling her towards the fire. "Now look! Not Benny's stocking: Charley's, I guess."

The girl sat down on the cricket, holding him on her lap, playing with the blocks, as much of a child as he.

"Why, Bud! Such an awful lot of candies that stocking 'll hold!" laughing with him. "It 'll take all Kriss Kringle's sack."

"*Kriss Kringle!* Oh, Charley! I 'm too big; I 'm five years now. You can't cheat me."

The girl's very lips went white. She got up at his childish words, and put him down.

"No, I 'll not cheat you, Benny, — never, any more."

"Where are you going, Charley?"

"Just out a bit," wrapping a plain shawl about her. "To find Christmas, you know. For you — and me."

He pattered after her to the door.

"You 'll come put me to bed, Charley dear? I 'm so lonesome!"

"Yes, Bud. Kiss me. One, — two, — three times, — for God's good-luck."

He kissed her. And Lot went out into the wide, dark world, — into Christmas night, to find a friend.

She came a few minutes later to a low frame-building, painted brown: Adam Craig's house and shop. The little sitting-room had a light in it: his wife would be there with the baby. Lot knew them well, though they never had seen her. She had watched them through the window for hours in winter nights. Some damned soul might have thus looked wistfully into heaven: pitying herself, feeling more like God than the blessed within, because she knew the pain in her heart, the struggle to do right, and pitied it. She had a reason for the hungry pain in her blood when the kind-faced old cobbler passed her. She was Nelly's child. She had come West to find him.

"Never, that he should know *me!* never that! but for Benny's sake."

If Benny could have brought her to him, saying, "See, this is Charley, my Charley!" But Adam knew her by another name, — Devil Lot.

While she stood there, looking in at the window, the snow drifting on her head in the night, two passers-by halted an instant.

"Oh, father, look!" It was a young girl spoke. "Let me speak to that woman."

"What does thee mean, Maria?"

She tried to draw her hand from his arm.

"Let me go, — she 's dying, I think. Such a young, fair face! She thinks God has forgotten her. Look!"

The old Quaker hesitated.

"Not thee, Maria. Thy mother shall find her to-morrow. Thee must never speak to her. Accursed! 'Her house is the way to hell, going down to the chambers of death.'"

They passed on. Lot heard it all. God had offered the pure young girl a chance to save a soul from death; but she threw it aside. Lot did not laugh: looked after them with tearless eyes, until they were out of sight. She went to the door then. "It 's for Benny," she whispered, swallowing down the choking that made her dumb. She knocked and went in.

Jinny was alone: sitting by the fire, rocking the baby to sleep, singing some child's hymn: a simple little thing, beginning, —

"Come, let us sing of Jesus,  
Who wept our path along:  
Come, let us sing of Jesus,  
The tempted, and the strong."

Such a warm, happy flush lightened in Charley's heart at that! She did not know why; but her fear was gone. The baby, too, a white, pure little thing, was lying in the cradle, cooing softly to itself. The mother-instinct is nearest the surface in a loving woman; the girl went up quickly to it, and touched its cheek, with a smile: she could not help it.

"It 's so pretty!" she said.

Jinny's eyes glowed.

"I think so," she said, simply. "It 's my baby. Did you want me?"

Lot remembered then. She drew back, her face livid and grave.

"Yes. Do you know me? I 'm Lot Tyndal. Don't jerk your baby back! Don't! I 'll not touch it. I want to get some honest work. I 've a little brother."

There was a dead silence. Jinny's brain, I told you, was narrow, her natural heart not generous or large in its impulse; the kind of religion she learned did not provide for anomalies of work like this. (So near at hand, you know. Lot was neither a Sioux nor a Rebel.)

"I 'm Lot,"—desperately. "You know what I am. I want you to take us in, stop the boys from hooting at me on the streets, make a decent Christian woman out of me. There 's plain words. Will you do it? I 'll work for you. I 'll nurse the baby, the dear little baby."

Jinny held her child tighter to her breast, looking at the vile clothes of the wretch, the black marks which years of crime had left on her face. Don't blame Jinny. Her baby was God's gift to her: she thought of that, you know. She did not know those plain, coarse words were the last cry for help from a drowning soul, going down into depths whereof no voice has come back to tell the tale. Only Jesus. Do you know what message He carried to those "spirits in prison"?

"I dare n't do it. What would they say of me?" she faltered.

Lot did not speak. After a while she motioned to the shop. Adam was there. His wife went for him, taking the baby with her. Charley saw that, though everything looked dim to her; when Adam came in, she knew, too, that his face was angry and dark.

"It 's Christmas eve," she said.

She tried to say more, but could not.

"You must go from here!" speaking sharp, hissing. "I 've no faith in the whinin' cant of such as you. Go out, Janet. This is no place for you or the child."

He opened the street-door for Lot to go out. He had no faith in her. No shrewd, common-sense man would have had. Besides, this was his Christmas night: the beginning of his new life, when he was coming near to Christ in his happy home and great love. Was this foul worm of the gutter to crawl in and tarnish it all?

She stopped one instant on the threshold. Within was a home, a chance for heaven; out yonder in the night—what?

"You will put me out?" she said.

"I know your like. There 's no help

for such as you"; and he closed the door.

She sat down on the curb-stone. It was snowing hard. For about an hour she was there, perfectly quiet. The snow lay in warm, fleecy drifts about her: when it fell on her arm, she shook it off: it was so pure and clean, and *she*

— She could have torn her flesh from the bones, it seemed so foul to her that night. Poor Charley! If she had only known how God loved something within her, purer than the snow, which no foulness of flesh or circumstance could defile! Would you have told her, if you had been there? She only muttered, "Never," to herself now and then, "Never."

A little boy came along presently, carrying a loaf of bread under his arm,—a manly, gentle little fellow. She let Benny play with him sometimes.

"Why, Lot!" he said. "I 'll walk part of the way home with you. I 'm afraid."

She got up and took him by the hand. She could hardly speak. Tired, worn-out in body and soul; her feet had been passing for years through water colder than the river of death: but it was nearly over now.

"It 's better for Benny it should end this way," she said.

She knew how it would end.

"Rob," she said, when the boy turned to go to his own home, "you know Adam Craig? I want you to bring him to my room early to-morrow morning,—by dawn. Tell him he 'll find his sister Nelly's child there: and never to tell that child that his 'Charley' was Lot Tyndal. You 'll remember, Rob?"

"I will. Happy Christmas, Charley!"

She waited a minute, her foot on the steps leading to her room.

"Rob!" she called, weakly, "when you play with Ben, I wish you 'd call me Charley to him, and never—that other name."

"I 'll mind," the child said, looking wistfully at her.

She was alone now. How long and steep the stairs were! She crawled up slowly. At the top she took a lump of something brown from her pocket, looked at it long and steadily. Then she glanced upward.

"It's the only way to keep Benny from knowing," she said. She ate it, nearly all, then looked around, below her, with a strange intentness, as one who says good-bye. The bell tolled the hour. Unutterable pain was in its voice, — may-be dumb spirits like Lot's crying aloud to God.

"One hour nearer Christmas," said Adam Craig, uneasily. "Christ's coming would have more meaning, Janet, if this were a better world. If it was n't for these social necessities that" —

He stopped. Jinny did not answer.

Lot went into her room, roused Ben with a kiss. "His last remembrance of me shall be good and pleasant," she said. She took him on her lap, untying his shoes.

"My baby has been hunting eggs to-day in Rob's stable," shaking the hay from his stockings.

"Why, Charley! how could you know?" with wide eyes.

"So many things I know! Oh, Charley's wise! To-morrow, Bud will go see new friends, — such kind friends! Charley knows. A baby, Ben. My boy will like that: he's a big giant beside that baby. *Ben* can hold it, and touch it, and kiss it."

She looked at his pure hands with hungry eyes.

"Go on. What else but the baby?"

"Kind friends for Ben, better and kinder than Charley."

"That's not true. Where are you going, Charley? I hate the kind friends. I'll stay with you," — beginning to cry.

Her eyes sparkled, and she laughed childishly.

"Only a little way, Bud, I'm going. You watch for me, — all the time you watch for me. Some day you and I'll go out to the country, and be good children together."

What dawning of a new hope was this? She did not feel as if she lied. Some day, — it might be true. Yet the vague gleam died out of her heart, and when Ben, in his white night-gown, knelt down to say the prayer his mother had taught him, it was "Devil Lot's" dead, crime-marked face that bent over him.

"God bless Charley!" he said.

She heard that. She put him into the bed, then quietly bathed herself, filled his stocking with the candies she had bought, and lay down beside him, — her limbs growing weaker, but her brain more lifeful, vivid, intent.

"Not long now," she thought. "Love me, Benny. Kiss me good-night."

The child put his arms about her neck, and kissed her forehead.

"Charley's cold," he said. "When we are good children together, let's live in a tent. Will you, Sis? Let's make a tent now."

"Yes, dear."

She struggled up, and pinned the sheet over him to the head-board; it was a favorite fancy of Ben's.

"That's a good Charley," sleepily. "Good night. I'll watch for you all the time, all the time."

He was asleep, — did not waken even when she strained him to her heart, passionately, with a wild cry.

"Good bye, Benny." Then she lay quiet. "We might have been good children together, if only — I don't know whose fault it is," throwing her thin arms out desperately. "I wish — oh, I do wish somebody had been kind to me!"

Then the arms fell powerless, and Charley never moved again. But her soul was clear. In the slow tides of that night, it lived back, hour by hour, the life gone before. There was a skylight above her; she looked up into the great silent darkness between earth and heaven, — Devil Lot, whose soul must go out into that darkness alone. She said that. The world that had held her under its foul heel did not

loathe her as she loathed herself that night. *Lot.*

The dark hours passed, one by one. Christmas was nearer, nearer,—the bell tolled. It had no meaning for her: only woke a weak fear that she should not be dead before morning, that any living eye should be vexed by her again. Past midnight. The great darkness slowly grayed and softened. What did she wait for? The vile worm *Lot*,—who cared in earth or heaven when she died? *Then the Lord turned, and looked upon Charley.* Never yet was the soul so loathsome, the wrong so deep, that the loving Christ has not touched it once with His hands, and said, "Will you come to me?" Do you know how He came to her? how, while the unquiet earth needed Him, and the inner deeps of heaven were freshening their fairest morning light to usher in the birthday of our God, He came to find poor Charley, and, having died to save her, laid His healing hands upon her? It was in her weak, ignorant way she saw Him. While she, *Lot*, lay there corrupt, rotten in soul and body, it came to her how, long ago, *Magdalene*, more vile than *Lot*, had stood closest to Jesus. *Magdalene* loved much, and was forgiven.

So, after a while, Charley, the child that might have been, came to His feet humbly, with bitter sobs. "Lord, I'm so tired!" she said. "I'd like to try again, and be a different girl." That was all. She clung close to His hand as she went through the deep waters.

Benny, stirring in his sleep, leaned over, and kissed her lips. "So cold!" he whispered, drowsily. "God—bless—Charley!" She smiled, but her eyes were closed.

The darkness was gone: the gray vault trembled with a coming radiance; from the East, where the Son of Man was born, a faint flush touched the earth: it was the promise of the Dawn. *Lot's* foul body lay dead there with the Night: but Jesus took the child Charley in His arms, and blessed her.

Christmas evening. How still and quiet it was! The Helper had come. Not to the snow-covered old earth, falling asleep in the crimson sunset mist: it did not need Him. Not an atom of its living body, from the granite mountain to the dust on the red sea-fern, had failed to perform its work: taking time, too, to break forth in a wild luxuriance of beauty as a psalm of thanksgiving. The Holy Spirit you talk of in the churches had been in the old world since the beginning, since the day it brooded over the waters, showing itself as the spirit of Life in granite rock or red sea-fern,—as the spirit of Truth in every heroic deed, in every true word of poet or prophet,—as the spirit of Love as— Let your own hungry heart tell how. To-day it came to man as the Helper. We all saw that dimly, and showed that we were glad, in some weak way. God, looking down, saw a smile upon the faces of His people.

The fire glowed redder and cheerier in Adam's little cottage; the lamp was lighted; *Jinny* had set out a wonderful table, too. *Benny* had walked around and around it, rubbing his hands slowly in dumb ecstasy. Such oranges! and frosted cakes covered with crushed candy! Such a tree in the middle, hung with soft-burning tapers, and hidden in the branches the white figure of the loving Christ-child. That was Adam's fancy. *Benny* sat in *Jinny's* lap now, his head upon her breast. She was rocking him to sleep, singing some cheery song for him, although that baby of hers lay broad awake in the cradle, aghast and open-mouthed at his neglect. It had been just "*Benny*" all day,—*Benny* that she had followed about, uneasy lest the wind should blow through the open door on him, or the fire be too hot, or that every moment should not be full to the brim with fun and pleasure, touching his head or hand now and then with a woful tenderness, her throat choked, and her blue eyes wet, crying in her heart incessantly, "Lord, forgive me!"

"Tell me more of Charley," she said, as they sat there in the evening.

He was awake a long time after that, telling her, ending with,—

"She said, 'You watch for me, Bud, all the time.' That 's what she said. So she 'll come. She always does, when she says. Then we 're going to the country to be good children together. I 'll watch for her."

So he fell asleep, and Jinny kissed him,—looking at him an instant, her cheek growing paler.

"That is for you, Benny," she whispered to herself,— "and this," stooping to touch his lips again, "this is for Charley. Last night," she muttered, bitterly, "it would have saved her."

Old Adam sat on the side of the bed where the dead girl lay.

"Nelly's child!" he said, stroking the hand, smoothing the fair hair. All day he had said only that,— "Nelly's child!"

Very like her she was,—the little Nell who used to save her cents to buy a Christmas-gift for him, and bring it with flushed cheeks, shyly, and slip it on his plate. This child's cheeks would have flushed like hers—at a kind word; the dimpled, innocent smile lay in them,—only a kind word would have brought it to life. She was dead now, and he—he had struck her yesterday. She lay dead there with her great loving heart, her tender, childish beauty,—a harlot,— Devil Lot. No more.

The old man pushed his hair back, with shaking hands, looking up to the sky. "Lord, lay not this sin to my charge!" he said. His lips were bloodless. There

was not a street in any city where a woman like this did not stand with foul hand and gnawing heart. They came from God, and would go back to Him. To-day the Helper came; but who showed Him to them, to Nelly's child?

Old Adam took the little cold hand in his: he said something under his breath: I think it was, "Here am I, Lord, and the wife that Thou hast given," as one who had found his life's work, and took it humbly. A sworn knight in Christ's order.

Christmas-day had come,—the promise of the Dawn, sometime to broaden into the full and perfect day. At its close now, a still golden glow, like a great Peace, filled the earth and heaven, touching the dead Lot there, and the old man kneeling beside her. He fancied that it broke from behind the dark bars of cloud in the West, thinking of the old appeal, "Lift up your heads, O ye gates, and the King of Glory shall come in." Was He going in, yonder? A weary man, pale, thorn-crowned, bearing the pain and hunger of men and women vile as Lot, to lay them at His Father's feet? Was he to go with loving heart, and do likewise? Was that the meaning of Christmas-day? The quiet glow grew deeper, more restful; the bell tolled: its sound faded, solemn and low, into the quiet, as one that says in his heart, Amen.

That night, Benny, sleeping in the still twilight, stirred and smiled suddenly, as though some one had given him a happy kiss, and, half waking, cried, "Oh, Charley! Charley!"

## IN THE HALF-WAY HOUSE.

## I.

At twenty we fancied the blest Middle Ages  
 A spirited cross of romantic and grand,  
 All templars and minstrels and ladies and pages,  
 And love and adventure in Outre-Mer land ;  
 But, ah, where the youth dreamed of building a minster,  
 The man takes a pew and sits reckoning his pelf,  
 And the Graces wear fronts, the Muse thins to a spinster,  
 When Middle-Age stares from one's glass at himself !

## II.

Do you twit me with days when I had an Ideal,  
 And saw the sear future through spectacles green ?  
 Then find me some charm, while I look round and see all  
 These fat friends of forty, shall keep me nineteen ;  
 Should we go on pining for chaplets of laurel  
 Who 've paid a perruquier for mending our thatch,  
 Or, our feet swathed in baize, with our fate pick a quarrel,  
 If, instead of cheap bay-leaves, she sent a dear scratch ?

## III.

We called it our Eden, that small patent-baker,  
 When life was half moonshine and half Mary Jane ;  
 But the butcher, the baker, the candlestick-maker !—  
 Did Adam have duns and slip down a back-lane ?  
 Nay, after the Fall did the modiste keep coming  
 With last styles of fig-leaf to Madam Eve's bower ?  
 Did Jubal, or whoever taught the girls thrumming,  
 Make the Patriarchs deaf at a dollar the hour ?

## IV.

As I think what I was, I sigh, *Desunt nonnulla !*  
 Years are creditors Sheridan's self could not bilk ;  
 But then, as my boy says, " What right has a fullah  
 To ask for the cream, when himself spilled the milk ?"  
 Perhaps when you 're older, my lad, you 'll discover  
 The secret with which Auld Lang Syne there is gilt,—  
 Superstition of old man, maid, poet, and lover,—  
 That cream rises thickest on milk that was spilt !

## V.

We sailed for the moon, but, in sad disillusion,  
 Snug under Point Comfort are glad to make fast,  
 And strive (sans our glasses) to make a confusion  
 'Twixt our rind of green cheese and the moon of the past ;

Ah, Might-have-been, Could-have-been, Would-have-been ! rascals,  
 He 's a genius or fool whom ye cheat at two-score,  
 And the man whose boy-promise was likened to Pascal's  
 Is thankful at forty they don't call him bore !

## VI.

With what fumes of fame was each confident pate full !  
 How rates of insurance should rise on the Charles !  
 And which of us now would not feel wisely grateful,  
 If his rhymes sold as fast as the Emblems of Quarles ?  
 E'en if won, what 's the good of Life's medals and prizes ?  
 The rapture 's in what never was or is gone ;  
 That we missed them makes Helens of plain Ann Elizys,  
 For the goose of To-day still is Memory's swan.

## VII.

And yet who would change the old dream for new treasure ?  
 Make not youth's sourest grapes the best wine of our life ?  
 Need he reckon his date by the Almanac's measure  
 Who is twenty life-long in the eyes of his wife ?  
 Ah, Fate, should I live to be nonagenarian,  
 Let me still take Hope's frail I. O. U. s upon trust,  
 Still talk of a trip to the Islands Macarian,  
 And still climb the dream-tree for — ashes and dust !

---

 MR. BUCKLE AS A THINKER.

THE recent death of Henry Thomas Buckle calls a new attention to his published works. Pathetic it will seem to all that he should be cut off in the midst of labors so large, so assiduous and adventurous ; and there are few who will not feel inclined to make up, as it were, to his memory for this untimely interruption of his pursuits, by assigning the highest possible value to his actual performance. Additional strength will be given to these dispositions by the impressions of his personal character. This was, indeed, such as to conciliate the utmost good-will. If we except occasional touches of self-complacency, which betray, perhaps, a trifling foible, it may be said that everything is pleasing which is known concerning him. His devotion, wellnigh

heroic, to scholarly aims ; his quiet studiousness ; his filial virtue ; his genial sociability, graced by, and gracing, the self-supporting habit of his soul ; his intrepidity of intellect, matched by a beautiful boldness and openness in speech ; the absence, too, from works so incisive, of a single trace of truculence : all this will now be remembered ; and those are unamiable persons, in whom the remembrance does not breed a desire to believe him as great in thought as he was brave, as prosperous in labor as he was persevering.

But however it may be with others, certainly he who has undertaken the duties of a scholar must not yield too readily to these amiable wishes. He, as a sworn soldier of Truth, stands sacredly bound to

be as free from favor as from fear, and to follow steadily wherever the standards of his imperial mistress lead him on. And so performing his lawful service, he may bear in mind that at last the interests of Truth are those of every soul, be it of them that we number with the dead, or that are still reckoned among these that we greet as living. Let us not be petty in our kindness. Over the fresh grave of a scholar let us rise to that high and large friendliness which respects more the scope of every man's nature than the limited measure of any man's performance, and sides bravely with the soul of the departed, even though it be against his fame. Who would not choose this for himself? Who would not whisper from his grave, "My personal weaknesses let those spare who can; my work do not praise, but judge; and never think in behalf of my mortal fame to lower those stars that my spirit would look up to yet and forever"?

As a man and scholar, Mr. Buckle needs no forbearance; and men must commend him, were it only in justice to themselves. Such intellectual courage, such personal purity, such devotion to ideal aims, such a clean separation of boldness from bitterness, — in thought, no blade more trenchant, in feeling, no heart more human; — when these miss their honor and their praise, then will men have forgotten how to estimate fine qualities.

Meanwhile, as a thinker, he must be judged according to the laws of thought. Here we are to forget whether he be living or dead, and whether his personal traits were delightful or disagreeable. Here there is but one question, and that is the question of truth.

And as a thinker, I can say nothing less than that Mr. Buckle signally failed. His fundamental conceptions, upon which reposes the whole edifice of his labor, are sciolistic assumptions caught up in his youth from Auguste Comte and other one-eyed seers of modern France; his generalization, multitudinous and imposing, is often of the card-castle description, and

tumbles at the touch of an inquisitive finger; and his cobweb logic, spun chiefly out of his wishes rather than his understanding, is indeed facile and ingenious, but of a strength to hold only flies. Such, at any rate, is the judgment passed upon him in the present paper; and if it is stated roundly, the critic can be held all the better to its justification, and the more freely condemned, should these charges not be sustained.

But while in the grand topography of thought and in the larger processes of reasoning the failure of Mr. Buckle, according to the judgment here given, is complete, it is freely admitted that as a writer and man of letters he has claims not only to respect, but even to admiration. His mental fertility is remarkable, his memory marvellous, his reading immense, his mind discursive and agile, his style pellucid as water and often vigorous, while his *subordinate* conceptions are always ingenious and frequently valuable. Besides this, he is a genuine enthusiast, and sees before him that El Dorado of the understanding where golden knowledge shall lie yellow on all the hills and yellow under every footfall, — where the very peasant shall have princely wealth, and no man shall need say to another, "Give me of thy wisdom." It is this same element of romantic expectation which stretches a broad and shining margin about the spacious page of Bacon; it is this which wreathes a new fascination around the royal brow of Raleigh; it is this, in part, which makes light the bulky and antiquated tomes of Hakluyt; and the grace of it is that which we often miss in coming from ancient to modern literature. Better it is, too, than much erudition and many "proprieties" of thought; and one may note it as curious, that Mr. Buckle, seeking to disparage imagination, should have written a book whose most winning and enduring charm is the appeal to imagination it makes. Moreover, he is an enthusiast in behalf of just that which is distinctively modern: he is a white flame of precisely those heats which smoulder now in the duller breast of the

world in general; he worships at all the pet shrines; he expresses the peculiar loves and hatreds of the time. Who is so devout a believer in free speech and free trade and the let-alone policy in government, and the coming of the Millennium by steam? Who prostrates himself with such unfeigned adoration before the great god, "State-of-Society," or so mutters, for a mystic *O'm*, the word "Law"? Then how delightful it is, when he traces the whole ill of the world to just those things which we now all agree to detest, — to theological persecution, bigotry, superstition, and infidelity to Isaac Newton! In fine, the recent lessons of that great school-boy, the world, or those over which the said youth now is poring or idling or blubbering, Mr. Buckle has not only got by heart, not only recites them capitally, but believes with assurance that they are the sole lessons worth learning in any time; and all the inevitable partialities of the text-book, all the errors and *ad captandum* statements with which its truth is associated, he takes with such implicit faith, and believes in so confidently as part and parcel of our superiority to all other times, that the effect upon most of us cannot be otherwise than delectable.

Unhappily, the text-book in which he studied these fine lessons chanced to be the French edition, and, above all, the particular compilation of Auguste Comte, — Comte, the one-eyed Polyphemus of modern literature, enormous in stature and strength, but a devourer of the finer races in thought, feeding his maw upon the beautiful offspring of the highest intelligence, whom the Olympians love. Therefore it befell that our eager and credulous scholar unlearned quite as much as he learned, acquiring the wisdoms of our time in the crudest and most liberal commixture with its unwisdoms. And thus, though his house is laboriously put together, yet it is built upon the sand; and though his bark has much good timber, and is well modelled for speed, yet its keel is wholly rotten, so that whosoever puts to sea therein will sail far more swiftly to bottom than to port.

And precisely this, in lieu of all else, it is my present purpose to show: that the keel of his craft is unsound, — that his fundamental notions are fundamental falsities, such as no thinker can fall into without discredit to his powers of thought. Fortunately, he has begun by stating and arguing these; so that there can be no question either what they are, or by what considerations he is able to support them.

The foundation-timber of Mr. Buckle's work consists of three pieces, or propositions, two of which take the form of denial. First, he denies that there is in man anything of the nature of Free-Will, and attributes the belief in it to vulgar and childish ignorance. Secondly, and in support of the primary negation, he denies that there is any oracle in man's bosom, — that his spirit has any knowledge of itself or of the relationships it sustains: in other words, denies the validity of Consciousness. Thirdly and lastly, he attempts to show that all actions of individuals originate not in themselves, but result from a law working in the general and indistinguishable *lump* of society, — from laws of like nature with that which preserves the balance of the sexes; so that no man has more to do with his own deed than the mother in determining whether her child shall be male or female. By the two former statements man is stripped of all the grander prerogatives and characteristics of personality; by the last he is placed as freight, whether dead or alive it were hard to say, in the hold of the self-steering ship, "Society." These propositions and the reasons, or unreasons, by which they are supported, we will examine in order.

1. *Free-Will.* The question of free-will has at sundry times and seasons, and by champions many and furious, been disputed, till the ground about it is all beaten into blinding dust, wherein no reasonable man can now desire to cloud his eyes and clog his lungs. It is, indeed, one of the cheerful signs of our times, that there is a growing relish for clear air and open skies, a growing indisposition to mingle

in old and profitless controversies. It commonly happens in such controversies, as it undoubtedly has happened in the dispute about free-will, that both parties have been trying to pull up Life or Spirit by the roots, and make a show, *à la* Barnum, of all its secrets. The enterprise was zealously prosecuted, but would not prosper. In truth, there are strict and jealous limits to the degree in which man's mind can become an object to itself. By silent consciousness, by an action of reason and imagination sympathetic with pure inward life, man may *feel* far down into the sweet, awful depths and mysteries of his being; and the results of this inward intimation are given in the great poems, the great art and divine philosophy of all time, and in the commanding beliefs of mankind; but so soon as one begins to come to his own existence as an outsider and stranger, and attempts to bear away its secret, so soon he begins to be balked.

Mr. Buckle, however, has assumed in a summary and authoritative way to settle this question of free-will; and, without entering into the dust and suffocation of the old interminable dispute, we may follow him far enough to see whether he has thrown any light upon the matter, or has only thrown light upon his own powers as a thinker.

His direct polemic against the doctrine of Free-Will consists simply of an attempt to identify it with the notion of Chance in physics. The notion of Chance, he says, is the same with that of Free-Will; the doctrine of Necessary Connection with the dogma of Predestination. This statement has certainly an imposing air. But consider it. To assert the identity of chance and free-will is but another way of saying that pure freedom is one and the same with absolute lawlessness,—that where freedom exists, law, order, reason do not. If this be a misconception, as it surely is a total and fatal misconception, of the nature of freedom, then does the statement of our author, with all that rests upon it, fall instantly and utterly to the ground.

It is a misconception. Freedom and lawlessness are not the same. To make this finally clear, let us at once give the argument the widest possible scope; since the largest way of looking at the matter, as indeed it often happens, will prove also the nearest and simplest. In the universe as a whole Will does certainly originate, since there is, undoubtedly, origination somewhere. Freely, too, it must arise, for there is nothing behind it to bring it under constraint: indeed, all origination is by its nature free. But our philosopher tells us that wherever there is a pure and free origination of will, there is lawlessness, caprice, chance. The universe, therefore, should be a scene, not of absolute order, but of absolute disorder; and since it is not such, we have nothing for it but to say that either the logic of the universe, or that of Mr. Buckle, is very much awry.

In the universe, Will freely originates, but forever in unison with divine Reason; and the result is at once pure necessity and pure freedom: for these, if both be, as we say, absolutely *pure*, are one and the same. A coercing necessity is impure, for it is at war with that to which it applies; only a necessity in sweetest affinity with that which it governs is of the purest degree; and this is, of course, identical with the highest and divinest freedom.

And here we approach the solution of our problem, so far as it can be solved. Freedom and free-will exist only in virtue of reason, only in connection with the rational soul. In a rough account of man, and leaving out of sight all that is not strictly relevant to the present point, we discriminate in him two natures. One of these comprises the whole body of organic desires and energies, with all that *kind* of intellect by which one perceives the relation of things to his selfish wishes. By this nature, man is a selfish and intellectual animal; a polyp with arms that go round the world; a sponge with eyes and energies and delights; a cunning *ego*, to whom all outside of himself is but for a prey. But aloft over this, and constituting the second nature, into whose

kingdom one should be born as by a second birth, is the sovereign eye and soul of Reason, discerning Justice and Beauty and the Best, creating in man's bosom an ideal, redeeming him out of his littleness, bringing him into fellowship with Eternal Truth, and making him universal. Now between these two natures there is, for there must be, a mediating term, a power by which man *enacts* reason, and causes doing to accord with seeing. This is will, and it must, from its very nature, be free; for to say that it is a mere representative of the major force in desire is simply to say that it does not exist. A mediation without freedom in the mediator is something worse than the mediation of Holland between England and the United States in the dispute concerning the North-East Boundary.

So far, now, as the sovereign law and benefaction of the higher nature, through a perfect mediation of the will, descends upon the lower, so far man enters into free alliance with that which is sovereign in the universe, and is himself established in perfected freedom. The right action of free-will is, then, freedom in the making. But by this entrance into the great harmonies of the world, by this loyalty to the universal reason which alone makes one free, it must be evident that the order of the world is graced and supported rather than assailed.

But how if free-will fail of its highest function? Must not the order of the world then suffer? Not a whit. Universal Reason prevails, but in two diverse ways: she may either be felt as a mere Force or Fate, or she may be recognized and loved and obeyed as an Authority. Wherever the rational soul, her oracle, is given, there she proffers the privilege of knowing her only as a divine authority, — of free loyalty, of honorable citizenship in her domains. But to those who refuse this privilege she appears as fate; and though their honor is lost, hers is not; for the order of the world continues to be vindicated. The just and faithful citizen, who of his own election obeys the laws, illustrates in one way the order of society

and the supremacy of moral law. The villain in the penitentiary illustrates the order of society and the supremacy of moral law in quite another way. But order and law are illustrated by both, though in ways so very different. So one may refuse to make reason a free necessity in his own bosom; but then the constable of the universe speedily taps him upon the shoulder, and law is honored, though he is disgraced.

Now Mr. Buckle supposed that order in the world and in history could be obtained only by sacrificing the freedom of the individual; and that he so supposed determines his own rank as a thinker. There is no second question to be asked concerning a candidate for the degree of master in philosophy who begins by making this mistake.

But does some one, unwilling so soon to quit the point, require of me to explain *how* will can originate in man? My only answer is, I do not know. Does the questioner know *how* motion originates in the universe? It does or did originate; science is clear in assigning a progress, and therefore a beginning, to the solar system: can you find its origin in aught but the self-activity of Spirit, whose *modus operandi* no man can explain? *All* origination is inscrutable; the plummet of understanding cannot sound it; but wherefore may not one sleep as sweetly, knowing that the wondrous fact is near at hand, in the bosoms of his contemporaries and in his own being, as if it were pushed well out of sight into the depths of primeval time? To my mind, there is something thoroughly weak and ridiculous in the way that Comte and his company run away from the Absolute and Inexplicable, fearing only its nearness; like a child who is quite willing there should be bears at the North Pole, but would lie awake of nights, if he thought there were one in the nearest wood. And it is the more ridiculous because Mystery is no bear; nor can I, for one, conceive why it should not be to every man a joy to know that all the marvel which ever was in Nature is in her now, and that the divine inscrutable

processes are going on under our eyes and in them and in our hearts.

Doubtless, however, many will adhere to the logic that has satisfied them so long and so well,—that it is impossible the will should move otherwise than in obedience to motives, and that, obeying a motive, it is not free. Why should we not, then, amuse ourselves a little with these complacent motive-mongers? They profess a perfect explanation of mental action, and make it the stigma of a deeper philosophy, that it must leave somewhat in all action of the mind, and therefore in a doctrine of the will, unexplained. Let, now, these good gentlemen explain to us how a motive ever gets to be a motive. For there is precisely the same difficulty in initiating motion here as elsewhere. You look on a peach; you desire it; and you are moved by the desire to pluck or purchase it. Now it is plain that you could not desire this peach until you had perceived that it was a desirable fruit. But you could not perceive that the fruit was desirable until you had experienced desire of it. And here we are at the old, inexplicable seesaw. It must appear desirable in order to be desired; it must be desired in order to appear desirable: the perception must precede the desire, and the desire must precede the perception. These are foolish subtleties, but all the fitter for their purpose. Our motive-mongering friends should understand that they can explain no farther than their neighbors,—that by enslaving the will they only shift the difficulty, not solve it.

Anything but this shallow sciolism! More philosophical a thousand times than the knowing and facile metaphysics which makes man a thing of springs and pivots and cogs, are the notions of old religionists, which attributed human action in large part to preventing, suggesting, and efficient "grace," or those of older poets, who gave Pallas Athene for a counsellor to Odysseus, and Krishna for a teacher to the young Aryan warrior,—which represent human action, that is, as issuing in part out of the Infinite. A

thousand times more *philosophical*, as well as ten thousand times more inspiring, I say, are the metaphysics of Imagination,—of scriptures and great poems and the *live* human heart,—than the cut-and-dried sciolisms which explain you a man in five minutes, and make everything in him as obvious as the movements of a jumping-jack.

To deny, then, the existence of free-will is, in my judgment, a grave error; but to deny it on the ground of its identity with chance is more than an ordinary error, however grave; it is a poison in the blood of one's thought, conveying its vice to every part and function of the system. And herewith we pass to the next head.

2. *Consciousness*. It has been the persuasion of wise men in various ages, and is the persuasion of many, as wise, doubtless, as their neighbors, now, that the soul has a native sense of its quality and perpetual relations. By Plato this sense, in some of its aspects, was named Reminiscence; by modern speakers of English it is denoted as Consciousness. This, according to its grades and applications, is qualified as personal, moral, intellectual, or, including all its higher functions, as intuitive or spiritual. Of this high spiritual sense, this self-recognition of soul, all the master-words of the language—God, Immortality, Life, Love, Duty—are either wholly, or in all their grander suggestions, the product. Nothing, indeed, is there which confers dignity upon human life and labor, that is not primarily due to the same source. In union with popular and unconscious imagination, it generates mythology; in union with imagination and reason, it gives birth to theology and cosmogony; in union with imagination, reason, and experience, it is the source of philosophy; in union with the same, together with the artistic sense and high degrees of imaginative sympathy, it creates epic poetry and art. Its total outcome, however, may be included under the term Belief. And it results from an assumed validity of consciousness, that universal belief is always an indication of

universal truth. At the same time, since this master-power finds expression through faculties various in kind and still more various in grade of development, its outcome assumes many shapes and hues, — just as crystallized alumina becomes here ruby and there sapphire, by minute admixtures of different coloring substances.

We assume the validity of this prime source of belief. Why not? Here is a great natural product, human belief; we treat it precisely as we do other natural products; we judge, that, like these, it has its law and justification. We assume that it is to be studied as Lyell studies the earth's crust, or Agassiz its life, or Müller its languages. As our author shuns metaphysical, so do we shun metaphysical inquiries. We do not presume to go behind universal fact, and inquire whether it has any business to be fact; we simply endeavor to see it in its largest and most interior aspect, and then accept it without question.

But M. Comte made the discovery that this great product of man's spiritual nature is nothing but the spawn of his self-conceit: that it is purely gratuitous, groundless, superfluous, and therefore in the deepest possible sense lawless. Mr. Buckle follows his master, for such Comte really is. Proclaiming Law everywhere else, and, from his extreme partiality to the word, often lugging it in, as it were, by the ears, he no sooner arrives at these provinces than he instantly faces the other way, and denies all that he has before advocated. Of a quadruped he will question not a hair, of a fish not a scale; everywhere else he will accept facts and seek to coördinate them; but when he arrives at the great natural outcome and manifestation of man's spirit, then it is in an opposite way that he will not question; he simply lifts his eyebrows. The fact has no business to be there! It signifies nothing!

Why this reversal of position? First, because, if consciousness be allowed, free-will must be admitted; since the universal consciousness is that of freedom to

choose. But there is a larger reason. In accordance with his general notions, personality must be degraded, denuded, impoverished, — that so the individual may lie passive in the arms of that society whose laws he is ambitious to expound. Having robbed the soul of choice, he now deprives it of sight; having denied that it is an originating source of will, he now makes the complementary denial, that it is a like source of knowledge; having first made it helpless, he now proceeds to make it senseless. And, indeed, the two denials belong together. If it be true that the soul is helpless, pray let us have some kind drug to make it senseless also. Nature has dealt thus equally with the stone; and surely she must design a like equality in her dealings with man. Power and perceiving she will either give together, or together withhold.

But how does our author support this denial? By pointing to the great varieties in the outcome of consciousness. There is no unity, he says, in its determinations: one believes this, another that, a third somewhat different from both; and the faith that one is ready to die for, another is ready to kill him for. And true it is that the diversities of human belief are many and great; let not the fact be denied nor diminished.

But does such diversity disprove a fundamental unity? All modern science answers, No. How much of outward resemblance is there between a fish and a philosopher? Is not the difference here as wide as the widest unlikenesses in human belief? Yet Comparative Anatomy, with none to deny its right, includes philosopher and fish in one category: they both belong to the vertebrate sub-kingdom. See what vast dissimilarities are included in the unity of this vertebrate structure: creatures that swim, creep, walk, fly; creatures with two feet, with four feet, with no feet, with feet and hands, with hands only, with neither feet nor hands; creatures that live in air only, or in water only, or that die at once in water or air; creatures, in fine, more various and diverse than.

imagination, before the fact, could conceive. Yet, throughout this astonishing, inconceivable variety, science walks in steady perception of a unity extending far toward details of structure. The boor laughs, when told that the forefoot of his horse and his own hand are essentially the same member. A "Positive Philosopher" laughs, when told that through Fetichism and Lutheranism there runs a thread of unity, — that human belief has its law, and may be studied in the spirit of science. But it is more than questionable whether the laugh is on their side.\*

But our author does not quit this subject without attempting to adduce a specific instance wherein consciousness proves fallacious. Success, however, could hardly be worse; he fails to establish his point, but succeeds in discrediting either his candor or his discrimination. "Are we not," he says, "in certain circumstances, conscious of the existence of spectres and phantoms; and yet is it not generally admitted that such beings have no existence at all?" Now I should be ashamed to charge a scholar, like Mr. Buckle, with being unaware that consciousness does not apply to any matter which comes properly under the cognizance of the

\* Comte did, indeed, profess to furnish a central law of belief. It is due, he said, to the tendency of man to flatter his own personality by foisting its image upon the universe. This, however, is but one way of saying that it is wholly gratuitous, — that it has no root in the truth of the world. But universal truth and universal law are the same; and therefore that which arises without having any root in eternal verity is lawless in the deepest possible sense, — lawless not merely as being irregular in its action, but in the deeper and more terrible sense of being in the universe without belonging there. To believe, however, that any product of universal dimensions can be generated, not by the truth of the universe, but by somewhat else, is to believe in a Devil more thoroughly than the creed of any Calvinist allows. But this is quite in character. Comte was perhaps the most superstitious man of his time; superstition runs in the blood of his "philosophy"; and Mr. Buckle, in my opinion, escapes and denounces the black superstitions of ignorance only to fall into the whitened superstitions of sciolism.

senses, and that the word can be honestly used in such applications only by the last extreme of ignorant or inadvertent latitude. *Conscious* of the existence of spectres! One might as lawfully say he is "conscious" that there is a man in the moon, or that the color of his neighbor's hair is due to a dye. Mr. Buckle is undoubtedly honest. How, then, could he, in strict philosophical discussion, employ the cardinal word in a sense flagrantly and even ludicrously false, in order to carry his point? It is partly to be attributed to his controversial ardor, which is not only a heat, but a blaze, and frequently dazzles the eye of his understanding; but partly it is attributable also to an infirmity in the understanding itself. He shows, indeed, a singular combination of intellectual qualities. He has great external precision, and great inward looseness and slipperiness of mind: so that, if you follow his words, no man's thought can be clearer, no man's logic more firm and rapid in its march; but if you follow strictly the *conceptions*, the clearness vanishes, and the logic limps, nay, sprawls. It is not merely that he writes better than he thinks, though this is true of him; but the more characteristic fact is that he is a master in the forms of thought and an apprentice in the substance. Read his pages, and you will find much to admire; read under his pages, and you will find much not to admire.

It appears from the foregoing what Mr. Buckle aims to accomplish at the outset. His purpose is to effect a thorough degradation of Personality. Till this is done, he finds no clear field for the action of social law. To discrown and de-grade Personality by taking away its two grand prerogatives, — this is his preliminary labor, this is his way of procuring a site for that edifice of scientific history which he proposes to build.

But what an enormous price to pay for the purchase! If there is no kingdom for social law, if there is no place for a science of history, till man is made unroyal, till the glory is taken from his

brow, the sceptre from his right hand, and the regal hopes from his heart, till he is made a mere serf and an appanage of that ground and territory of circumstance whereon he lives and labors,—why, then a science of history means much the same with an extinction of history, an extinction of all that in history which makes it inspiring. The history of rats and mice is interesting, but not to themselves,—interesting only to man, and this because he is man; but if men are nothing but rats and mice, pray let them look for cheese, and look out for the cat, and let goose-quills and history alone.

But the truth is that Person and Society are mutually supporting facts, each weakened by any impoverishment of its reciprocal term. Whenever a *real* history of human civilization is written, they will thus appear. And Mr. Buckle, in seeking to empty one term in order to obtain room for the other, was yielding concessions, not to the pure necessities of truth, but to his own infirmity as a thinker.

Having, however, taken the crown and kingdom from Personality, our philosophical Warwick proceeds to the coronation of his favorite autoerat, Society. His final proposition, which indeed is made obscurely, and as far as possible by implication, is this:—

3. *That Society is the Real Source of Individual Action.* A proposition made obscurely, but argued strenuously, and altogether necessary for the completion of his foundation. He attempts proof by reference to the following facts:—that in a given kingdom there occur, year after year, nearly the same number of murders, suicides, and letters mailed without direction, and that marriages are more frequent when food is low and wages high, and so conversely. This is the sum total of the argument on which he relies here and throughout his work: if this proves his point, it is proven; if otherwise, otherwise.

To begin with, I admit the facts alleged. They are overstated; there is considerable departure from an exact

average: but let this pass. I will go farther, and admit, what no one has attempted to show, that an average in these common and outward matters proves the like regularity in all that men do and think and feel. This to concentrate attention upon the main question.

And the main question is, What do these regular averages signify? Do they denote the dominancy of a social fate? "Yea, yea," cry loudly the French fatalists; and "Yea, yea," respond with firm assurance Buckle & Co. in England; and "Yea," there are many to say in our own land. Even Mr. Emerson must summon his courage to confront "the terrible statistics of the French statisticians." But I live in the persuasion that these statistics are extremely innocent, and threaten no man's liberty. Let us see.

Take first the instance of forgetfulness. In the United Kingdom some millions of letters are annually mailed; and of these, one in a certain number of thousands, "making allowance," as our author innocently says, "for variation of circumstances," is found to be mailed without a superscription. Now provision for a forgetting is made in every man's individual constitution. Partly for permanent and final forgetting; in this way we get rid of vast quantities of trash, which would suffocate us, if we could not obtain riddance. Partly also for temporary forgetting; by means of which we become oblivious to everything but the matter in hand, and, by a sole concentration upon that, act intensely and efficaciously. Then, as all particular constitutions have their debilities, this provision for temporary obliviousness may become an infirmity, and in some is an habitual and chronic infirmity.

Let us now assume an individual man, and suppose ourselves able to analyze perfectly his mental condition. From his temperament, constitution, and habit, we shall then be able also to infer with precision the measure of his *liability* to lapse of memory. Place him, now, in a world by himself; give him a life of several centuries' duration; and secure him through

life from essential change of constitution. Divide, then, his life into centuries; count the instances of forgetfulness in each century; and in each century they will be found nearly the same. The Law of Probability determines this, and enables us to speak with entire confidence of a case so supposed. Here, then, is the continuous average; but it surely indicates no subjection of the individual soul to a law of society; for there is no society to impose such law,—there is only the constitution of the individual.

Now, instead of one individual, let us suppose a hundred; and let each of these be placed on a separate planet. Obtain in respect to each one the measure of his liability to infirm lapse of memory, and add these together. And now it will appear that the average outward result which one man gave in one hundred years one hundred men will give in one year. The law of probability again comes in, and, matching the irregularities of one by those of another, gives in this case, as in the former, an average result. Here, then, is Mr. Buckle's average without the existence of a society, and therefore without any action of social law. Does another syllable need to be said?

Perhaps, however, it will be objected that I redeem the individual from a fate working in the general whole of society, only to subject him to an equal fate working in his own constitution. There is undoubtedly a certain *degree* of fate expressed in each man's temperament and particular organization. But mark the difference. Mr. Buckle's social fate subjects each man totally, and in effect robs him of personality; the fate which works in his own constitution subjects him *only in that proportion which his abnormal liability bears to the total force of his mind*. One letter in ten thousand, say, is mailed without direction. Our historian of civilization infers hence that each individual is *totally* subject to a social fate. My inference is, that, on the average, each individual is *one ten-thousandth part* subject to a fate in his private constitution. There is the difference, and it does not seem to me

insignificant. Our way to the cases of crime is now somewhat more clear; for it is already established beyond cavil that the mere fact of an average, to which, without any discriminations, our philosopher appeals with such confidence, proves nothing for his purpose.

The case of murders, however, differs from the foregoing in one important particular. The persons who are detected in the commission of this crime are commonly, by their punishment, withdrawn from the number of active criminals; and consequently the average is kept up, not by the same persons, but in part by different ones. Here is, therefore, more appearance of the mediation of compulsory social law; and indeed the action of social forces in the case I am far more disposed to assert than to question. What we are to inquire, however, is not whether social forces contribute to this result, but whether they are *such* forces as supersede and annihilate individual will. Let us see.

All men are liable to collisions of passion and interest with their neighbors and contemporaries. All desire to remove the obstructions thus opposed. All would labor for this end with brute directness, that is, by lawless violence and cunning, were it not for the rational and moral elements in their nature, which suggest noble pieces of abstinence and self-restraint, thus securing a certain freedom, a certain superiority to the brute pressure of interest and impulse. These rational and moral elements are in variable counterpoise with the ruder desires,—sometimes commanding them with imperial ease, sometimes overcoming them by struggle, sometimes striving with them feebly and vainly, or even ceasing to strive.

Suppose, now, a nation of thirty millions. Of these, twenty-nine millions, let us say, are never consciously tempted to commit a felony. Why? For want of opportunity? Not at all; good men, whom the police do not watch, have more opportunities for crime than those whose character causes them to be suspected. Is it because wrathful passion, the love of money, and other incentives to aggress-

sion are unknown to them? To none are they wholly unknown. Why, then, this immunity from temptation? Simply because their choices, or characters,—for character is but structural choice,—run in favor of just and prudent courses with a tide so steady and strong as to fill all the river-beds of action, and leave no room for worse currents. In other words, the elements that make men free hold, in this respect, easy sovereignty in their souls. Below these millions, suppose nine hundred thousand who might be open to such temptation, but for the influence of good customs, which are the legacies left by good men dead, and kept in force by the influence of just men who are living. In these, the freedom-making elements still keep the throne, and preserve regal sway; but they are like sovereigns who might be dethroned, but for the countenance of more powerful neighbors. Below these, the liability to actual commission of violence begins to open; but there are, we will suppose, ninety thousand in whom it is practically suppressed by the dangers which, in civilized communities, attend upon crime. These men have that in them which *might* make them felons, but for penal laws, prisons, and the executioner. But below these are ten thousand who have a liability *in excess* of all restraining influences whatsoever; and the result of this liability, in accordance with the law of probability already mentioned, is two hundred murders in a year.\* Now here the action of fate does not *begin* until you reach the lowest ten thousand. Even here, freedom is not extinguished; the rational and moral elements that confer it are weak, but they are not necessarily dead or inoperative; for, in conjunction with lower restraints, they actually make the number of crimes not ten thousand, but two hundred. True it is, that these are partially enslaved, partially subject to fate; but they are enslaved not by any inscrutable law of society, comparable with “that which pre-

serves the balance of the sexes”; they are “taken captive by their own lusts,” as one of our philosopher’s “ignorant men” said many years ago. But above these the enslaving liability begins to disappear, and freedom soon becomes, so far as this test applies, supreme.

Thus for one year we apply a measure of the liability to crime, and obtain a result which is inexpressibly far from sustaining Mr. Buckle’s inference; since it shows that the fatal force is to all freeing forces as two hundred to thirty millions,—and shows, moreover, that this fate, instead of inclosing in its toils every man in the nation, and utterly depriving all of freedom, actually touches at all but a small number, and only diminishes, not destroys, the freedom of these. Next year we apply the same measure to nearly the same persons, in the presence of nearly the same restraints; and find, of course, the result to be nearly the same. But this result no more proves universal enslavement in the second year than it did in the first. And so of the third, fourth, or fortieth application of the measure.

But a portion of these murderers are yearly withdrawn: ought not the number of crimes to diminish? It would do so, but for that law of social propagation which is ever and everywhere active. But this law, which connects men and generations, and tends to make history a unit, is not a part of fate alone; it carries just so much fate and so much freedom as there are to be carried. It changes nothing; it is simply a vehicle, and transports freight,—precious stones or ballast stones, as the case may be. Therefore, in unveiling a single year, and seeing precisely what this fact of two hundred murders means, we find its meaning for any possible succession of years. It shows certain measures of fate working in the bosoms of certain numbers of men; but that there is a fate inhabiting society as such, and holding every man and woman in its unfeeling hand, must be proven, if at all, by other facts than these.

Mr. Buckle generalizes with marvelous facility, but often with an infatuation,

\* It may be said that this is a mere arguing by supposition. But the supposition here has respect only to the *numbers*.

or even fatuity, equally marvellous. Specious and audacious generalization is, however, a vice of thinking more attractive to most than any virtue, — above all, if it flatter their wishes and opinions. There are few to appreciate an exquisite temperance, an exquisite virgin modesty, continence, and reserve, whether in thought or art. The great masters disappoint, the great showmen dazzle, at first sight; the multitudes crave sensations and sudden effects. Even among thoughtful men, there are, in this galloping age, too many who prefer to frequent a philosophical slop-shop, where they can be fitted to a full suit in five minutes; and they willingly forgive some bagging and wrinkling, some ripping of seams and dropping-off of buttons, in consideration of promptitude in the supply. Nor is this unnatural. Ordinary travel goes by steam; does it not seem a little hard that thought should have to journey still in the ancient fashion? And so far as the mass of readers is concerned, this appetite for fast thinking and reckless generalization is a cheerful token: it is a gainful substitute for that hiding away from the blaze of intellect, that terror of large results in thought, which has harbored in the Vatican since the days of Galileo, and even in Protestant lands may sometimes be found, like the graveyard, in the neighborhood of churches. A relish for premature and extravagant generalization may be pardoned in the mass of readers; but in the writer? "It must needs be that offences come; but woe to that man by whom the offence cometh!"

Mr. Buckle finds some general book-facts, and, never trying to think down to their roots, he seizes upon their specious aspect, and thence rushes out into a generalization, which, rightly understood, sweeps Personality off the earth. Not such is the spirit of science; not such the manner of its masters. Look at Newton investigating colors. What effort for nearness, nearness, nearness to his facts! What solicitation for entrance to their households and sanctuaries! See Agassiz or Tyndale investigating the flow of

glaciers. Here is no catching at book-aspects of the matter, and launching instantly into generalization. No, these men must get within eyeshot, within hand-reach, of the facts, and know first precisely and intimately what these are. Yet the generalizations for which they were seeking a basis were trivial in comparison with those which our author hurtles out after a glance at M. Quetelet. "A continuous average of so many murders a year; then so many *must* happen; then somebody *must* commit them; then free-will is a figment, and society is the source of all action which we call individual."

Intemperate and infatuated generalization, if supported by a certain ability, is an attractive vice. Yet he who indulges in this will be sure to leave upon his brilliant and exciting pages statements that are simply ludicrous. Our philosopher furnishes an instance of this in his treatment of the matter of marriage. If wages be low and food high, marriages are less frequent; if the converse be the case, they are more frequent. What conclusion would common sense base upon this fact? Why, of course, that the number of marriages is definitely *influenced* by the ease with which sustenance is obtained. But this is a commonplace result; there is nothing in it bold, brilliant, striking; besides, it does not make man the slave of outward influences. Accordingly, Mr. Buckle generalizes from it as follows: — "Marriages, instead of having *any connection* with personal feelings, are completely controlled by the price of food and the rate of wages." He does not distinguish between a definite modifying influence and a controlling cause. His facts prove the former; he asserts the latter. Let us see how this procedure would work elsewhere. There is "a definite relation," in our author's words, between the force and direction of the winds and the rise or fall of the sea upon our coast: therefore tidal rise and fall, "instead of having any connection" with the influence of the moon, are "completely controlled" by the direction and force of

the wind! There is a definite relation" between the straightness or want of straightness in a railroad and the speed of the train: *ergo*, the speed of the train, "instead of having any connection" with the locomotive and the force of steam, is "completely controlled" by the line of the road! It is by no means difficult to philosophize after this fashion; but if we are to have many professors of such philosophy, let the mediæval cap-and-bells, by all means, be reproduced.

Again, having stated the fact of an approximation to a continuous average of suicides, and having assumed for this a cause operating in the indivisible whole of society, he goes on to say, "And the power of this larger law is so irresistible, that neither the love of life nor the fear of another world can avail anything toward even checking its operation." How, pray, does Mr. Buckle know? What shadow of a fact has he to justify this vaunting of his "larger law"? Has he ever known the love of life and the awe of another world to be suspended? Has he afterwards seen their action restored, and ascertained that in their presence and in their absence the ratio of suicides remained the same? These questions answer themselves. But when a writer who loudly professes and fully believes himself to proceed purely upon facts adventures statement so groundless, so gratuitous and reckless as this, who can pass to the next paragraph in full confidence of his intellectual rectitude? If you retain, as in this case I do retain, assurance of his moral rectitude,—of his intention to be fair,—to what conclusion can you come more charitable than this, that his partiality to his own notions is so vigorous as not only to overslaugh his sense of logical truth, but to supersede the necessity of other grounds for believing these notions and for urging them?

Only our author's first chapter has been dealt with; firstly, because in this are enunciated those radical conceptions which he afterwards argues not *to*, but *from*; and secondly, because it has been

the writer's desire, avoiding all vagrant and indecisive criticism, to have a fair grapple, and come to some clear result,—like that of a wrestler, who frankly proffers himself to throw or be thrown. It only remains to indicate, so far as may be, a comprehensive estimate of Mr. Buckle as a thinker.

And at last it must be said in plain words that he is to be regarded as an adventurer in the kingdoms of thought,—though the word must be freed from all customary flavors of charlatany and wickedness. One of the boldest and cleverest of his class; a man, too, of probity, of dignity and character, amiable, estimable; but *intellectually* an adventurer nevertheless. The grand masters in thought are those to whom the subtlest and most purely universal principles are nearest and most habitual, coming to the elucidation of all minutest matters no less than to that of the greatest,—as those forces which hold the solar system together apply themselves, as on the same level, to a mote wandering in the air; and because to these masters first principles, through all their changes of seeming, through all their ranging by analogy up and down, are never disguised, but are always near and clear and sure, they can admit the action of all modifying principles without imperilling the great stabilities of truth; so that in their thought, as in Nature, the dust-particle shall float and fly with the wind, and yet gravitation shall hold particle and world in firm, soft, imperial possession. And next to these are the inventors, guided by a fine felicity of intelligence to special discoveries and admirable combinations, often surpassing in this way the masters themselves. And then come the wise and great scholars, who learn quickly what has been discovered, and follow the masters not by sight only, as a greyhound, but by long inferences; and these also do noble work. And after these follow the broader company of useful, able, eloquent men, applying, explaining, illustrating, and preparing the way for schools and commerce and the

newspaper. Finally comes a man with a genius for boldness more than for anything else, so that he has a pleasant feeling of himself only when he gives himself the sense of being startling, novel, venturesome, and therefore goes off in his thought as in a balloon: and of such man,—being daring, ingenious, agile, and not being profound,—this will be the unfailling characteristic, that he substitutes and asserts secondary principles, which are obvious, outward, and within his reach, for primary principles, which are deep, subtle, inward, and beyond his reach; he will swing loose from the principles which are indeed prime and imperial in Nature, and will boldly assert secondary principles as fundamental: this man is the intellectual adventurer.

And this is Mr. Buckle. The first fact with regard to man is his possession of a rational soul, and consequently of that liberation of will without which, despite the existence of reason, he could not be in act a reasonable being. But the secondary fact in this connection is that man's freedom is modified by pedigree, by temperament, by influences almost numberless, and that he is included in laws, so that, if he falls away from reason, he falls into the hands of fate. And this secondary or modifying congeries of facts our author announces as primary.

The first fact with regard to the soul is that it is intelligent and vocal,—that it is not merely a subject, but also an organ, of THAT WHICH KNOWS in the universe. The modifying fact is that its voice is commonly obscure, and the language it shall use and the logic of its utterance prescribed by the accident of time, place, and other circumstances; so that it has the semblance of voices many and contradictory. And this modifying fact Mr. Buckle announces, with much assurance and complacency, as primary.

The first fact in the world of man is Personality. The secondary fact is Society,—secondary, but reciprocal, and full of import. And Mr. Buckle begins with making Personality acephalous, and ends with appending its corpse to Socie-

ty, to be galvanized into seemings of life. And if you follow him through his book, you find this inversion constantly maintained,—and find, moreover, that it is chiefly this revolutionary audacity which makes his propositions so startling and his pages to many so fascinating.

Therefore an adventurer. This is concerning *him* the primary fact. But the modifying fact is that he has the manners of a gentleman, the heart of a humanitarian, the learning of a scholar, the pen of a ready writer, the outside or *shell* of a philosophical genius, excellent admixtures of sense, and an attractive hatred of ecclesiastical and political barbarisms.

He has great surface-reach, but no inward breadth. He invariably takes the liberal side with regard to practical and popular questions; he invariably takes the illiberal side in respect to questions of philosophy. In politics and in social feeling he is cosmopolitan; in questions of pure thought he is cockney. Here he is a tyrant; he puts out the soul's eyes, and casts fetters about its feet; here he is hard, narrow, materialistic, mechanical,—or, in a word, English. For—we may turn aside to say—in philosophy no nation is so straitened, illiberal, and hard of hearing as England, except, perhaps, China. Its tympanum is sadly thickened at once with materialism and conceit; and the consequence is that a thinker there is either ignored into silence, like Wilkinson, or driven to bellow, like Carlyle, or to put rapiers and poignards into his speech, like Ruskin. Carlyle began speaking sweetly and humanly, and was heard only on this side the ocean; then he came to his bull-of-Bashan tones, and was attended to on his own side the water. It is observable, too, that, if a thinker in America goes beyond the respectable dinner-table depth, your true Englishman takes it for a personal affront, and hastens to make an ass of himself in the "Saturday Review."

Apply to Mr. Buckle any test that determines the question of pure intellectual power, and he fails to sustain it. Let us proceed to apply one.

No man is an able thinker who is without power to comprehend that law of reciprocal opposites, on which the world is built. For an example of this: the universe is indeed a *uni*-verse, a pure unit, emanating, as we think, from a spirit that is, in the words of old Hooker, "not only one, but very oneness," simple, indivisible, and therefore total in all action; and yet this universe is various, multifarious, full of special character, full even of fierce antagonisms and blazing contradictions. Infinite and Finite, Same and Diverse, Eternal and Temporary, Universal and Special,—here they are, purest opposites, yet mutual, reciprocal, necessary to each other; and he is a narrow man who cannot stand in open relations with both terms, reconciling in the depths of his life, though he can never explain, the mystery of their friendship. He who will adhere only to the universal, and makes a blur of the special, is a rhapsodist; he who can apprehend only the special, being blind and callous to the universal, is a chatterer and magpie. From these opposites we never escape; Destiny and Freedom, Rest and Motion, Individual and Society, Origination and Memory, Intuition and Observation, Soul and Body,—you meet them everywhere; and everywhere they are, without losing their character of opposites, nay, in very virtue of their opposition, playing into and supporting each other.

But, from the fact that they *are* opposites, it is always easy to catch up one, and become its partisan as against the other. It is easy in such advocacy to be plausible, forcible, affluent in words and apparent reasons; also to be bold, striking, astonishing. And yet such an advocate will never speak a word of pure truth. "He who knows half," says Goethe, "speaks much, and says nothing to the purpose; he who knows all inclines to act, and speaks seldom or late." With such partisanship and advocacy the world has been liberally, and more than liberally, supplied. Such a number of Eureka's have been shouted! So often it has been discovered that the world is no such rid-

dle, after all,—that half of it is really the whole! No doubt all this was good boy's-play once; afterwards it did to laugh at for a while; then it ceased to be even a joke, and grew a weariness and an affliction; and at length we all rejoiced when the mighty world-pedagogue of Chelsea seized his ferule, and roared, over land and sea, "Silence, babblers!"

If only Mr. Buckle had profited by the command! For, follow this writer where you will, you find him the partisan of a particular term as against its fraternal opposite. It is Fate *against* Free-Will; Society *against* the prerogatives of Personality; Man *against* Outward Nature (for he considers them only as antagonistic, one "triumphing" over the other); Intellect *against* the Moral Sense; Induction *against* Deduction and Intuition; Knowledge *against* Reverence; and so on and on to the utter weariness of one reader, if of no more. For what can be more wearying and saddening than to follow the pages of a writer who is fertile, ingenious, eloquent, rich in right feeling, in reading and courage, and yet who, in chapter after chapter of effective paragraphs, and tome after tome of powerful chapters, is merely persuading you that half is the whole? And if your duty as a scholar require you to peruse the book fully, instead of casting it aside, your mind at length fairly *aches* for the sense of poise and soundness, were it only for a single page. But no; it is always the same succession of perspicuous and vigorous sentences, all carrying flavors of important truth, and none utterly true. For the half *is* really half; but it simply is *not* the whole, be as eloquent about it as one may.

Such, then, is the estimate here given of Mr. Buckle's laborious and powerful work. Meantime, with every secondary merit which such a work *could* possess this is replete; while its faults are only such as were inseparable from the conjunction of such ambitions with such powers. He may whet and wield his blade; but he puts no poison on its edge

He may disparage reverence; but he is not himself irreverent. He may impugn the convictions that most men love; but, while withholding no syllable of dissent and reprehension, he utters not a syllable that can insult or sting. And all the while his pages teem with observations full of point, and half full of admirable sense and suggestion.

After all, we owe him thanks,—thanks, it may be, even for his errors. The popular notions of moral liberty are probably not profound, and require deepening. The grand fact that we name *Personality* is grand and of an unsounded depth only because in it *Destiny* and *Freedom* meet and become one. But the play into this of *Destiny* and *Eternal Necessity* is, in general, dimly discerned. The will is popularly pronounced free, but is thought to originate, as it were, “between one’s hat and his boots”; and so man loses all largeness of relation, and personality all grandeur. Now blisters, though ill for health, may be wholesome for disease; and doctrines of *Fate*, that empty every man of his soul, may be good as against notions of moral liberty that make one’s soul of a pin’s-head dimension. It may be well, also, that the doctrine of *Social Fate* should be preached until all are made to see that *Society* is a fact,—that it is generative,—that personal development cannot go on but by its mediation,—that the chain of spiritual interdependence cannot be broken, and that in proportion as it is weakened every bosom becomes barren. In this case also Mr. Buckle may

be medicinal. We owe him thanks also for refreshing our expectation of a science of civilization,—for affirming the venerableness of intellect, which recent teachers have undervalued,—for vindicating the uses of doubt,—and, finally, for a specimen of intellectual intrepidity of which one could wish there were less need. And withal how royally he presumes upon a welcome for candid confession of his thought! Such a presumption could be created in his soul only by a great magnanimity; and the evidence of this on his pages sheds a beauty about all his words.

But he is not an *Œdipus*. He has guessed; and the riddle awaits another comer. A science of history he has not established; the direction in which it lies he has not pointed out; and if *Hegel* and his precursors have failed to indicate such a science, the first clear step toward it remains yet to be taken. And should some majestic genius—for no other will be sufficient for the task—at length arise to lay hold upon the facts of man’s history, and exercise over them a *Newtonian* sway, he will be the last man on the planet to take his initial hint from *Auguste Comte* and the “*Positive Philosophy*.” This mud-mountain is indeed considerably heaped up, but it is a very poor *Pisgah* nevertheless; for it is a mountain in a pit, whose top does not rise to an equality with the broad common levels, far less with the high table-lands and skyward peaks and summits of intelligence.

## RECOLLECTIONS OF A GIFTED WOMAN.

FROM Leamington to Stratford-on-Avon the distance is eight or nine miles, over a road that seemed to me most beautiful. Not that I can recall any memorable peculiarities; for the country, most of the way, is a succession of the gentlest swells and subsidences, affording wide and far glimpses of campaign-scenery here and there, and sinking almost to a dead level as we draw near Stratford. Any landscape in New England, even the tamest, has a more striking outline, and besides would have its blue eyes open in those lakelets that we encounter almost from mile to mile at home, but of which the Old Country is utterly destitute; or it would smile in our faces through the medium of those way-side brooks that vanish under a low stone arch on one side of the road, and sparkle out again on the other. Neither of these pretty features is often to be found in an English scene. The charm of the latter consists in the rich verdure of the fields, in the stately way-side trees and carefully kept plantations of wood, and in the old and high cultivation that has humanized the very sods by mingling so much of man's toil and care among them. To an American there is a kind of sanctity even in an English turnip-field, when he thinks how long that small square of ground has been known and recognized as a possession, transmitted from father to son, trodden often by memorable feet, and utterly redeemed from savagery by old acquaintanceship with civilized eyes. The wildest things in England are more than half tame. The trees, for instance, whether in hedge-row, park, or what they call forest, have nothing wild about them. They are never ragged; there is a certain decorous restraint in the freest outspread of their branches, though they spread wider than any self-nurturing tree; they are tall, vigorous, bulky, with a

look of age-long life, and a promise of more years to come, all of which will bring them into closer kindred with the race of man. Somebody or other has known them from the sapling upward; and if they endure long enough, they grow to be traditionally observed and honored, and connected with the fortunes of old families, till, like Tennyson's Talking Oak, they babble with a thousand leafy tongues to ears that can understand them.

An American tree, however, if it could grow in fair competition with an English one of similar species, would probably be the more picturesque object of the two. The Warwickshire elm has not so beautiful a shape as those that overhang our village-street; and as for the redoubtable English oak, there is a certain John-Bullism in its figure, a compact rotundity of foliage, a lack of irregular and various outline, that make it look wonderfully like a gigantic cauliflower. Its leaf, too, is much smaller than that of most varieties of American oak; nor do I mean to doubt that the latter, with free leave to grow, reverent care and cultivation, and immunity from the axe, would live out its centuries as sturdily as its English brother, and prove far the nobler and more majestic specimen of a tree at the end of them. Still, however one's Yankee patriotism may struggle against the admission, it must be owned that the trees and other objects of an English landscape take hold of the observer by numberless minute tendrils, as it were, which, look as closely as we choose, we never find in an American scene. The parasitic growth is so luxuriant, that the trunk of the tree, so gray and dry in our climate, is better worth observing than the boughs and foliage; a verdant mossiness coats it all over, so that it looks almost as green as the leaves; and often, moreover, the stately stem

is clustered about, high upward, with creeping and twining shrubs, the ivy, and sometimes the mistletoe, close-clinging friends, nurtured by the moisture and never too fervid sunshine, and supporting themselves by the old tree's abundant strength. We call it a parasitical vegetation; but, if the phrase imply any reproach, it is unkind to bestow it on this beautiful affection and relationship which exist in England between one order of plants and another: the strong tree being always ready to give support to the trailing shrub, lift it to the sun, and feed it out of its own heart, if it crave such food; and the shrub, on its part, repaying its foster-father with an ample luxuriance of beauty, and adding Corinthian grace to the tree's lofty strength. No bitter winter nips these tender little sympathies, no hot sun burns the life out of them; and therefore they outlast the longevity of the oak, and, if the woodman permitted, would bury it in a green grave, when all is over.

Should there be nothing else along the road to look at, an English hedge might well suffice to occupy the eyes, and, to a depth beyond what he would suppose, the heart of an American. We often set out hedges in our own soil, but might as well set out figs or pine-apples and expect to gather fruit of them. Something grows, to be sure, which we choose to call a hedge; but it lacks the dense, luxuriant variety of vegetation that is accumulated into the English original, in which a botanist would find a thousand shrubs and gracious herbs that the hedge-maker never thought of planting there. Among them, growing wild, are many of the kindred blossoms of the very flowers which our pilgrim fathers brought from England, for the sake of their simple beauty and home-like associations, and which we have ever since been cultivating in gardens. There is not a softer trait to be found in the character of those stern men than that they should have been sensible of these flower-roots

clinging among the fibres of their rugged hearts, and have felt the necessity of bringing them over sea and making them hereditary in the new land, instead of trusting to what rarer beauty the wilderness might have in store for them.

Or, if the road-side has no hedge, the ugliest stone fence (such as, in America, would keep itself bare and unsympathizing till the end of time) is sure to be covered with the small handiwork of Nature; that careful mother lets nothing go naked there, and, if she cannot provide clothing, gives at least embroidery. No sooner is the fence built than she adopts and adorns it as a part of her original plan, treating the hard, uncomely construction as if it had all along been a favorite idea of her own. A little sprig of ivy may be seen creeping up the side of the low wall and clinging fast with its many feet to the rough surface; a tuft of grass roots itself between two of the stones, where a pinch or two of way-side dust has been moistened into nutritious soil for it; a small bunch of fern grows in another crevice; a deep, soft, verdant moss spreads itself along the top and over all the available inequalities of the fence; and where nothing else will grow, lichens stick tenaciously to the bare stones and variegate the monotonous gray with hues of yellow and red. Finally, a great deal of shrubbery clusters along the base of the stone wall, and takes away the hardness of its outline; and in due time, as the upshot of these apparently aimless or sportive touches, we recognize that the beneficent Creator of all things, working through His handmaiden whom we call Nature, has deigned to mingle a charm of divine gracefulness even with so earthly an institution as a boundary-fence. The clown who wrought at it little dreamed what fellow-laborer he had.

The English should send us photographs of portions of the trunks of trees, the tangled and various products of a hedge, and a square foot of an old wall.

They can hardly send anything else so characteristic. Their artists, especially of the later school, sometimes toil to depict such subjects, but are apt to stiffen the lithe tendrils in the process. The poets succeed better, with Tennyson at their head, and often produce ravishing effects by dint of a tender minuteness of touch, to which the genius of the soil and climate artfully impels them: for, as regards grandeur, there are loftier scenes in many countries than the best that England can show; but, for the picturesqueness of the smallest object that lies under its gentle gloom and sunshine, there is no scenery like it anywhere.

In the foregoing paragraphs I have strayed away to a long distance from the road to Stratford-on-Avon; for I remember no such stone fences as I have been speaking of in Warwickshire, nor elsewhere in England, except among the Lakes, or in Yorkshire, and the rough and hilly countries to the north of it. Hedges there were along my road, however, and broad, level fields, rustic hamlets, and cottages of ancient date,—from the roof of one of which the occupant was tearing away the thatch, and showing what an accumulation of dust, dirt, mouldiness, roots of weeds, families of mice, swallows' nests, and hordes of insects, had been deposited there since that old straw was new. Estimating its antiquity from these tokens, Shakspeare himself, in one of his morning rambles out of his native town, might have seen the thatch laid on; at all events, the cottage-walls were old enough to have known him as a guest. A few modern villas were also to be seen, and perhaps there were mansions of old gentility at no great distance, but hidden among trees; for it is a point of English pride that such houses seldom allow themselves to be visible from the high-road. In short, I recollect nothing specially remarkable along the way, nor in the immediate approach to Stratford; and yet the picture of that June morning has a glory in my

memory, owing chiefly, I believe, to the charm of the English summer-weather, the really good days of which are the most delightful that mortal man can ever hope to be favored with. Such a genial warmth! A little too warm, it might be, yet only to such a degree as to assure an American (a certainty to which he seldom attains till attuned to the customary austerity of an English summer-day) that he was quite warm enough. And after all, there was an unconquerable freshness in the atmosphere, which every little movement of a breeze shook over me like a dash of the ocean-spray. Such days need bring us no other happiness than their own light and temperature. No doubt, I could not have enjoyed it so exquisitely, except that there must be still latent in us Western wanderers (even after an absence of two centuries and more) an adaptation to the English climate which makes us sensible of a motherly kindness in its scantiest sunshine, and overflows us with delight at its more lavish smiles.

The spire of Shakspeare's church—the Church of the Holy Trinity—begins to show itself among the trees at a little distance from Stratford. Next we see the shabby old dwellings, intermixed with mean-looking houses of modern date, and the streets being quite level, you are struck and surprised by nothing so much as the tameness of the general scene; as if Shakspeare's genius were vivid enough to have wrought pictorial splendors in the town where he was born. Here and there, however, a queer edifice meets your eye, endowed with the individuality that belongs only to the domestic architecture of times gone by; the house seems to have grown out of some odd quality in its inhabitant, as a seashell is moulded from within by the character of its inmate; and having been built in a strange fashion, generations ago, it has ever since been growing stranger and queerer, as old humorists are apt to do. Here, too, (as

so often impressed me in decayed English towns,) there appeared to be a greater abundance of aged people wearing small-clothes and leaning on sticks than you could assemble on our side of the water by sounding a trumpet and proclaiming a reward for the most venerable. I tried to account for this phenomenon by several theories: as, for example, that our new towns are unwholesome for age and kill it off unseasonably; or that our old men have a subtle sense of fitness, and die of their own accord rather than live in an unseemly contrast with youth and novelty: but the secret may be, after all, that hair-dyes, false teeth, modern arts of dress, and other contrivances of a skin-deep youthfulness, have not crept into these antiquated English towns, and so people grow old without the weary necessity of seeming younger than they are.

After wandering through two or three streets, I found my way to Shakspeare's birthplace, which is almost a smaller and humbler house than any description can prepare the visitor to expect; so inevitably does an august inhabitant make his abode palatial to our imaginations, receiving his guests, indeed, in a castle in the air, until we unwisely insist on meeting him among the sordid lanes and alleys of lower earth. The portion of the edifice with which Shakspeare had anything to do is hardly large enough, in the basement, to contain the butcher's stall that one of his descendants kept, and that still remains there, windowless, with the cleaver-cuts in its hacked counter, which projects into the street under a little pent-house-roof, as if waiting for a new occupant. The upper half of the door was open, and, on my rapping at it, a young person in black made her appearance and admitted me: she was not a menial, but remarkably genteel (an American characteristic) for an English girl, and was probably the daughter of the old gentlewoman who takes care of the house. This lower

room has a pavement of gray slabs of stone, which may have been rudely squared when the house was new, but are now all cracked, broken, and disarranged in a most unaccountable way. One does not see how any ordinary usage, for whatever length of time, should have so smashed these heavy stones; it is as if an earthquake had burst up through the floor, which afterwards had been imperfectly trodden down again. The room is whitewashed and very clean, but wofully shabby and dingy, coarsely built, and such as the most poetical imagination would find it difficult to idealize. In the rear of this apartment is the kitchen, a still smaller room, of a similar rude aspect; it has a great, rough fireplace, with space for a large family under the blackened opening of the chimney, and an immense passage-way for the smoke, through which Shakspeare may have seen the blue sky by day and the stars glimmering down at him by night. It is now a dreary spot where the long-extinguished embers used to be. A glowing fire, even if it covered only a quarter part of the hearth, might still do much towards making the old kitchen cheerful; but we get a depressing idea of the stifled, poor, sombre kind of life that could have been lived in such a dwelling, where this room seems to have been the gathering-place of the family, with no breadth or scope, no good retirement, but old and young huddling together cheek by jowl. What a hardy plant was Shakspeare's genius, how fatal its development, since it could not be blighted in such an atmosphere! It only brought human nature the closer to him, and put more unctuous earth about his roots.

Thence I was ushered up-stairs to the room in which Shakspeare is supposed to have been born; though, if you peep too curiously into the matter, you may find the shadow of an ugly doubt on this, as well as most other points of his mysterious life. It is the chamber over the butcher's shop, and

is lighted by one broad window containing a great many small, irregular panes of glass. The floor is made of planks, very rudely hewn, and fitting together with little neatness; the naked beams and rafters, at the sides of the room and overhead, bear the original marks of the builder's broad-axe, with no evidence of an attempt to smooth off the job. Again we have to reconcile ourselves to the smallness of the space inclosed by these illustrious walls,—a circumstance more difficult to accept, as regards places that we have heard, read, thought, and dreamed much about, than any other disenchanting particular of a mistaken ideal. A few paces—perhaps seven or eight—take us from end to end of it. So low it is, that I could easily touch the ceiling, and might have done so without a tiptoe-stretch, had it been a good deal higher; and this humility of the chamber has tempted a vast multitude of people to write their names overhead in pencil. Every inch of the side-walls, even into the obscurest nooks and corners, is covered with a similar record; all the window-panes, moreover, are scrawled with diamond-signatures, among which is said to be that of Walter Scott; but so many persons have sought to immortalize themselves in close vicinity to his name that I really could not trace him out. Methinks it is strange that people do not strive to forget their forlorn little identities, in such situations, instead of thrusting them forward into the dazzle of a great renown, where, if noticed, they cannot but be deemed impertinent.

This room, and the entire house, so far as I saw it, are whitewashed and exceedingly clean; nor is there the aged, musty smell with which old Chester first made me acquainted, and which goes far to cure an American of his excessive predilection for antique residences. An old lady, who took charge of me up-stairs, had the manners and aspect of a gentlewoman, and talked with somewhat formidable knowledge and

appreciative intelligence about Shakespeare. Arranged on a table and in chairs were various prints, views of houses and scenes connected with Shakespeare's memory, together with editions of his works and local publications about his home and haunts, from the sale of which this respectable lady perhaps realizes a handsome profit. At any rate, I bought a good many of them, conceiving that it might be the civillest way of requiting her for her instructive conversation and the trouble she took in showing me the house. It cost me a pang (not a curmudgeonly, but a gentlemanly one) to offer a downright fee to the lady-like girl who had admitted me; but I swallowed my delicate scruples with some little difficulty, and she digested hers, so far as I could observe, with no difficulty at all. In fact, nobody need fear to hold out half a crown to any person with whom he has occasion to speak a word in England.

I should consider it unfair to quit Shakespeare's house without the frank acknowledgment that I was conscious of not the slightest emotion while viewing it, nor any quickening of the imagination. This has often happened to me in my visits to memorable places. Whatever pretty and apposite reflections I may have made upon the subject had either occurred to me before I ever saw Stratford, or have been elaborated since. It is pleasant, nevertheless, to think that I have seen the place; and I believe that I can form a more sensible and vivid idea of Shakespeare as a flesh-and-blood individual now that I have stood on the kitchen-hearth and in the birth-chamber; but I am not quite certain that this power of realization is altogether desirable in reference to a great poet. The Shakespeare whom I met there took various guises, but had not his laurel on. He was successively the roguish boy,—the youthful deer-stealer,—the comrade of players,—the too familiar friend of Davenant's mother,—the careful, thrifty, thriven man of property, who came back from London to

lend money on bond, and occupy the best house in Stratford,—the mellow, red-nosed, autumnal boon-companion of John a' Combe, who (or else the Stratford gossips belied him) met his death by tumbling into a ditch on his way home from a drinking-bout, and left his second-best bed to his poor wife. I feel, as sensibly as the reader can, what horrible impiety it is to remember these things, be they true or false. In either case, they ought to vanish out of sight on the distant ocean-line of the past, leaving a pure, white memory, even as a sail, though perhaps darkened with many stains, looks snowy white on the far horizon. But I draw a moral from these unworthy reminiscences and this embodiment of the poet, as suggested by some of the grimy actualities of his life. It is for the high interests of the world not to insist upon finding out that its greatest men are, in a certain lower sense, very much the same kind of men as the rest of us, and often a little worse; because a common mind cannot properly digest such a discovery, nor ever know the true proportion of the great man's good and evil, nor how small a part of him it was that touched our muddy or dusty earth. Thence comes moral bewilderment, and even intellectual loss, in regard to what is best of him. When Shakspeare invoked a curse on the man who should stir his bones, he perhaps meant the larger share of it for him or them who should pry into his perishing earthliness, the defects or even the merits of the character that he wore in Stratford, when he had left mankind so much to muse upon that was imperishable and divine. Heaven keep me from incurring any part of the anathema in requital for the irreverent sentences above written!

From Shakspeare's house, the next step, of course, is to visit his burial-place. The appearance of the church is most venerable and beautiful, standing amid a great green shadow of lime-trees, above which rises the spire, while

the Gothic battlements and buttresses and vast arched windows are obscurely seen through the boughs. The Avon loiters past the church-yard, an exceedingly sluggish river, which might seem to have been considering which way it should flow ever since Shakspeare left off paddling in it and gathering the large forget-me-nots that grow among its flags and water-weeds.

An old man in small-clothes was waiting at the gate; and inquiring whether I wished to go in, he preceded me to the church-porch, and rapped. I could have done it quite as effectually for myself; but, it seems, the old people of the neighborhood haunt about the church-yard, in spite of the frowns and remonstrances of the sexton, who grudges them the half-eleemosynary sixpence which they sometimes get from visitors. I was admitted into the church by a respectable-looking and intelligent man in black, the parish-clerk, I suppose, and probably holding a richer incumbency than his vicar, if all the fees which he handles remain in his own pocket. He was already exhibiting the Shakspeare monuments to two or three visitors, and several other parties came in while I was there.

The poet and his family are in possession of what may be considered the very best burial-places that the church affords. They lie in a row, right across the breadth of the chancel, the foot of each gravestone being close to the elevated floor on which the altar stands. Nearest to the side-wall, beneath Shakspeare's bust, is a slab bearing a Latin inscription addressed to his wife, and covering her remains; then his own slab, with the old anathematizing stanza upon it; then that of Thomas Nash, who married his grand-daughter; then that of Dr. Hall, the husband of his daughter Susannah; and, lastly, Susannah's own. Shakspeare's is the commonest-looking slab of all, being just such a flag-stone as Essex Street in Salem used to be paved with, when I was a boy. Moreover, unless my eyes or

recollection deceive me, there is a crack across it, as if it had already undergone some such violence as the inscription deprecates. Unlike the other monuments of the family, it bears no name, nor am I acquainted with the grounds or authority on which it is absolutely determined to be Shakspeare's; although, being in a range with those of his wife and children, it might naturally be attributed to him. But, then, why does his wife, who died afterwards, take precedence of him and occupy the place next his bust? And where are the graves of another daughter and a son, who have a better right in the family-row than Thomas Nash, his grandson-in-law? Might not one or both of them have been laid under the nameless stone? But it is dangerous trifling with Shakspeare's dust; so I forbear to meddle further with the grave, (though the prohibition makes it tempting,) and shall let whatever bones be in it rest in peace. Yet I must needs add that the inscription on the bust seems to imply that Shakspeare's grave was directly underneath it.

The poet's bust is affixed to the northern wall of the church, the base of it being about a man's height, or rather more, above the floor of the chancel. The features of this piece of sculpture are entirely unlike any portrait of Shakspeare that I have ever seen, and compel me to take down the beautiful, lofty-browed, and noble picture of him which has hitherto hung in my mental portrait-gallery. The bust cannot be said to represent a beautiful face or an eminently noble head; but it clutches firmly hold of one's sense of reality and insists upon your accepting it, if not as Shakspeare the poet, yet as the wealthy burgher of Stratford, the friend of John a' Combe, who lies yonder in the corner. I know not what the phrenologists say to the bust. The forehead is but moderately developed, and retreats somewhat, the upper part of the skull rising pyramidally; the eyes are prominent almost beyond the penthouse of

the brow; the upper lip is so long that it must have been almost a deformity, unless the sculptor artistically exaggerated its length, in consideration, that, on the pedestal, it must be foreshortened by being looked at from below. On the whole, Shakspeare must have had a singular rather than a prepossessing face; and it is wonderful how, with this bust before its eyes, the world has persisted in maintaining an erroneous notion of his appearance, allowing painters and sculptors to foist their idealized nonsense on us all, instead of the genuine man. For my part, the Shakspeare of my mind's eye is henceforth to be a personage of a ruddy English complexion, with a reasonably capacious brow, intelligent and quickly observant eyes, a nose curved slightly outward, a long, queer upper-lip, with the mouth a little unclosed beneath it, and cheeks considerably developed in the lower part and beneath the chin. But when Shakspeare was himself, (for nine-tenths of the time, according to all appearances, he was but the burgher of Stratford,) he doubtless shone through this dull mask and transfigured it into the face of an angel.

Fifteen or twenty feet behind the row of Shakspeare gravestones is the great east-window of the church, now brilliant with stained glass of recent manufacture. On one side of this window, under a sculptured arch of marble, lies a full-length marble figure of John a' Combe, clad in what I take to be a robe of municipal dignity, and holding its hands devoutly clasped. It is a sturdy English figure, with coarse features, a type of ordinary man whom we smile to see immortalized in the sculpturesque material of poets and heroes; but the prayerful attitude encourages us to believe that the old usurer may not, after all, have had that grim reception in the other world which Shakspeare's squib foreboded for him. By-the-by, till I grew somewhat familiar with Warwickshire pronunciation, I never understood that the point

of those ill-natured lines was a pun. "‘Oho!’ quoth the Devil, ‘’t is my John a’ Combe!’"—that is, "my John has come!"

Close to the poet's bust is a nameless, oblong, cubic tomb, supposed to be that of a clerical dignitary of the fourteenth century. The church has other mural monuments and altar-tombs, one or two of the latter upholding the recumbent figures of knights in armor and their dames, very eminent and worshipful personages in their day, no doubt, but doomed to appear forever intrusive and impertinent within the precincts which Shakspeare has made his own. His renown is tyrannous, and suffers nothing else to be recognized within the scope of its material presence, unless illuminated by some side-ray from himself. The clerk informed me that interments no longer take place in any part of the church. And it is better so; for methinks a person of delicate individuality, curious about his burial-place, and desirous of six feet of earth for himself alone, could never endure to lie buried near Shakspeare, but would rise up at midnight and grope his way out of the church-door, rather than sleep in the shadow of so stupendous a memory.

I should hardly have dared to add another to the innumerable descriptions of Stratford-on-Avon, if it had not seemed to me that this would form a fitting framework to some reminiscences of a very remarkable woman. Her labor, while she lived, was of a nature and purpose outwardly irreverent to the name of Shakspeare, yet, by its actual tendency, entitling her to the distinction of being that one of all his worshippers who sought, though she knew it not, to place the richest and stateliest diadem upon his brow. We Americans, at least, in the scanty annals of our literature, cannot afford to forget her high and conscientious exercise of noble faculties, which, indeed, if you look at the matter in one way, evolved only a miserable error, but,

more fairly considered, produced a result worth almost what it cost her. Her faith in her own ideas was so genuine, that, erroneous as they were, it transmuted them to gold, or, at all events, interfused a large proportion of that precious and indestructible substance among the waste material from which it can readily be sifted.

The only time I ever saw Miss Bacon was in London, where she had lodgings in Spring Street, Sussex Gardens, at the house of a grocer, a portly, middle-aged, civil, and friendly man, who, as well as his wife, appeared to feel a personal kindness towards their lodger. I was ushered up two (and I rather believe three) pair of stairs into a parlor somewhat humbly furnished, and told that Miss Bacon would come soon. There were a number of books on the table, and, looking into them, I found that every one had some reference, more or less immediate, to her Shakspearian theory,—a volume of Raleigh's "History of the World," a volume of Montaigne, a volume of Lord Bacon's letters, a volume of Shakspeare's plays; and on another table lay a large roll of manuscript, which I presume to have been a portion of her work. To be sure, there was a pocket-Bible among the books, but everything else referred to the one despotic idea that had got possession of her mind; and as it had engrossed her whole soul as well as her intellect, I have no doubt that she had established subtle connections between it and the Bible likewise. As is apt to be the case with solitary students, Miss Bacon probably read late and rose late; for I took up Montaigne (it was Hazlitt's translation) and had been reading his journey to Italy a good while before she appeared.

I had expected (the more shame for me, having no other ground of such expectation than that she was a literary woman) to see a very homely, uncouth, elderly personage, and was quite agreeably disappointed by her aspect. She was rather uncommonly tall, and had a

striking and expressive face, dark hair, dark eyes, which shone with an inward light as soon as she began to speak, and by-and-by a color came into her cheeks and made her look almost young. Not that she really was so; she must have been beyond middle-age: and there was no unkindness in coming to that conclusion, because, making allowance for years and ill-health, I could suppose her to have been handsome and exceedingly attractive once. Though wholly estranged from society, there was little or no restraint or embarrassment in her manner: lonely people are generally glad to give utterance to their pent-up ideas, and often bubble over with them as freely as children with their new-found syllables. I cannot tell how it came about, but we immediately found ourselves taking a friendly and familiar tone together, and began to talk as if we had known one another a very long while. A little preliminary correspondence had indeed smoothed the way, and we had a definite topic in the contemplated publication of her book.

She was very communicative about her theory, and would have been much more so, had I desired it; but, being conscious within myself of a sturdy unbelief, I deemed it fair and honest rather to repress than draw her out upon the subject. Unquestionably, she was a monomaniac; these overmastering ideas about the authorship of Shakspeare's plays, and the deep political philosophy concealed beneath the surface of them, had completely thrown her off her balance; but at the same time they had wonderfully developed her intellect, and made her what she could not otherwise have become. It was a very singular phenomenon: a system of philosophy growing up in this woman's mind without her volition,—contrary, in fact, to the determined resistance of her volition,—and substituting itself in the place of everything that originally grew there. To have based such a system on fancy, and unconscious-

ly elaborated it for herself, was almost as wonderful as really to have found it in the plays. But, in a certain sense, she did actually find it there. Shakspeare has surface beneath surface, to an immeasurable depth, adapted to the plummet-line of every reader; his works present many faces of truth, each with scope enough to fill a contemplative mind. Whatever you seek in him you will surely discover, provided you seek truth. There is no exhausting the various interpretation of his symbols; and a thousand years hence, a world of new readers will possess a whole library of new books, as we ourselves do, in these volumes old already. I had half a mind to suggest to Miss Bacon this explanation of her theory, but forbore, because (as I could readily perceive) she had as princely a spirit as Queen Elizabeth herself, and would at once have motioned me from the room.

I had heard, long ago, that she believed that the material evidences of her dogma as to the authorship, together with the key of the new philosophy, would be found buried in Shakspeare's grave. Recently, as I understood her, this notion had been somewhat modified, and was now accurately defined and fully developed in her mind, with a result of perfect certainty. In Lord Bacon's letters, on which she laid her finger as she spoke, she had discovered the key and clue to the whole mystery. There were definite and minute instructions how to find a will and other documents relating to the conclave of Elizabethan philosophers, which were concealed (when and by whom she did not inform me) in a hollow space in the under surface of Shakspeare's gravestone. Thus the terrible prohibition to remove the stone was accounted for. The directions, she intimated, went completely and precisely to the point, obviating all difficulties in the way of coming at the treasure, and even, if I remember right, were so contrived as to ward off any troublesome consequences likely to ensue from the interference of the par-

ish-officers. All that Miss Bacon now remained in England for—indeed, the object for which she had come hither, and which had kept her here for three years past—was to obtain possession of these material and unquestionable proofs of the authenticity of her theory.

She communicated all this strange matter in a low, quiet tone; while, on my part, I listened as quietly, and without any expression of dissent. Controversy against a faith so settled would have shut her up at once, and that, too, without in the least weakening her belief in the existence of those treasures of the tomb; and had it been possible to convince her of their intangible nature, I apprehend that there would have been nothing left for the poor enthusiast save to collapse and die. She frankly confessed that she could no longer bear the society of those who did not at least lend a certain sympathy to her views, if not fully share in them; and meeting little sympathy or none, she had now entirely secluded herself from the world. In all these years, she had seen Mrs. F. a few times, but had long ago given her up,—Carlyle once or twice, but not of late, although he had received her kindly; Mr. Buchanan, while minister in England, had once called on her, and General Campbell, our consul in London, had met her two or three times on business. With these exceptions, which she marked so scrupulously that it was perceptible what epochs they were in the monotonous passage of her days, she had lived in the profoundest solitude. She never walked out; she suffered much from ill-health; and yet, she assured me, she was perfectly happy.

I could well conceive it; for Miss Bacon imagined herself to have received (what is certainly the greatest boon ever assigned to mortals) a high mission in the world, with adequate powers for its accomplishment; and lest even these should prove insufficient, she had faith that special interpositions of Providence were forwarding her human efforts. This idea was continually com-

ing to the surface, during our interview. She believed, for example, that she had been providentially led to her lodging-house and put in relations with the good-natured grocer and his family; and, to say the truth, considering what a savage and stealthy tribe the London lodging-house keepers actually are, the honest kindness of this man and his household appeared to have been little less than miraculous. Evidently, too, she thought that Providence had brought me forward—a man somewhat connected with literature—at the critical juncture when she needed a negotiator with the booksellers; and, on my part, though little accustomed to regard myself as a divine minister, and though I might even have preferred that Providence should select some other instrument, I had no scruple in undertaking to do what I could for her. Her book, as I could see by turning it over, was a very remarkable one, and worthy of being offered to the public, which, if wise enough to appreciate it, would be thankful for what was good in it and merciful to its faults. It was founded on a prodigious error, but was built up from that foundation with a good many prodigious truths. And, at all events, whether I could aid her literary views or no, it would have been both rash and impertinent in me to attempt drawing poor Miss Bacon out of her delusions, which were the condition on which she lived in comfort and joy, and in the exercise of great intellectual power. So I left her to dream as she pleased about the treasures of Shakspeare's tombstone, and to form whatever designs might seem good to herself for obtaining possession of them. I was sensible of a lady-like feeling of propriety in Miss Bacon, and a New-England orderliness in her character, and, in spite of her bewilderment, a sturdy common-sense, which I trusted would begin to operate at the right time, and keep her from any actual extravagance. And as regarded this matter of the tombstone, so it proved.

The interview lasted above an hour, during which she flowed out freely, as to the sole auditor, capable of any degree of intelligent sympathy, whom she had met with in a very long while. Her conversation was remarkably suggestive, alluring forth one's own ideas and fantasies from the shy places where they usually haunt. She was indeed an admirable talker, considering how long she had held her tongue for lack of a listener,—pleasant, sunny and shadowy, often piquant, and giving glimpses of all a woman's various and readily changeable moods and humors; and beneath them all there ran a deep and powerful under-current of earnestness, which did not fail to produce in the listener's mind something like a temporary faith in what she herself believed so fervently. But the streets of London are not favorable to enthusiasms of this kind, nor, in fact, are they likely to flourish anywhere in the English atmosphere; so that, long before reaching Paternoster Row, I felt that it would be a difficult and doubtful matter to advocate the publication of Miss Bacon's book. Nevertheless, it did finally get published.

Months before that happened, however, Miss Bacon had taken up her residence at Stratford-on-Avon, drawn thither by the magnetism of those rich secrets which she supposed to have been hidden by Raleigh, or Bacon, or I know not whom, in Shakspeare's grave, and protected there by a curse, as pirates used to bury their gold in the guardianship of a fiend. She took a humble lodging and began to haunt the church like a ghost. But she did not condescend to any stratagem or underhand attempt to violate the grave, which, had she been capable of admitting such an idea, might possibly have been accomplished by the aid of a resurrection-man. As her first step, she made acquaintance with the clerk, and began to sound him as to the feasibility of her enterprise and his own willingness to engage in it. The clerk apparently lis-

tened with not unfavorable ears; but, as his situation (which the fees of pilgrims, more numerous than at any Catholic shrine, render lucrative) would have been forfeited by any malfeasance in office, he stipulated for liberty to consult the vicar. Miss Bacon requested to tell her own story to the reverend gentleman, and seems to have been received by him with the utmost kindness, and even to have succeeded in making a certain impression on his mind as to the desirability of the search. As their interview had been under the seal of secrecy, he asked permission to consult a friend, who, as Miss Bacon either found out or surmised, was a practitioner of the law. What the legal friend advised she did not learn; but the negotiation continued, and certainly was never broken off by an absolute refusal on the vicar's part. He, perhaps, was kindly temporizing with our poor countrywoman, whom an Englishman of ordinary mould would have sent to a lunatic-asylum at once. I cannot help fancying, however, that her familiarity with the events of Shakspeare's life, and of his death and burial, (of which she would speak as if she had been present at the edge of the grave,) and all the history, literature, and personalities of the Elizabethan age, together with the prevailing power of her own belief, and the eloquence with which she knew how to enforce it, had really gone some little way towards making a convert of the good clergyman. If so, I honor him above all the hierarchy of England.

The affair certainly looked very hopeful. However erroneously, Miss Bacon had understood from the vicar that no obstacles would be interposed to the investigation, and that he himself would sanction it with his presence. It was to take place after night-fall; and all preliminary arrangements being made, the vicar and clerk professed to wait only her word in order to set about lifting the awful stone from the sepulchre. So, at least, Miss Bacon believed; and as her bewilderment was

entirely in her own thoughts, and never disturbed her perception or accurate remembrance of external things, I see no reason to doubt it, except it be the tinge of absurdity in the fact. But, in this apparently prosperous state of things, her own convictions began to falter. A doubt stole into her mind whether she might not have mistaken the depository and mode of concealment of those historic treasures; and after once admitting the doubt, she was afraid to hazard the shock of uplifting the stone and finding nothing. She examined the surface of the gravestone, and endeavored, without stirring it, to estimate whether it were of such thickness as to be capable of containing the archives of the Elizabethan club. She went over anew the proofs, the clues, the enigmas, the pregnant sentences, which she had discovered in Bacon's letters and elsewhere, and now was frightened to perceive that they did not point so definitely to Shakspeare's tomb as she had heretofore supposed. There was an unmistakably distinct reference to a tomb, but it might be Bacon's, or Raleigh's, or Spenser's; and instead of the "Old Player," as she profanely called him, it might be either of those three illustrious dead, poet, warrior, or statesman, whose ashes, in Westminster Abbey, or the Tower burial-ground, or wherever they sleep, it was her mission to disturb.

But she continued to hover around the church, and seems to have had full freedom of entrance in the daytime, and special license, on one occasion at least, at a late hour of the night. She went thither with a dark-lantern, which could but twinkle like a glow-worm through the volume of obscurity that filled the great dusky edifice. Groping her way up the aisle and towards the chancel, she sat down on the elevated part of the pavement above Shakspeare's grave. If the divine poet really wrote the inscription there, and cared as much about the quiet of his bones as its deprecatory earnestness would im-

ply, it was time for those crumbling relics to bestir themselves under her sacrilegious feet. But they were safe. She made no attempt to disturb them; though, I believe, she looked narrowly into the crevices between Shakspeare's and the two adjacent stones, and in some way satisfied herself that her single strength would suffice to lift the former, in case of need. She threw the feeble ray of her lantern up towards the bust, but could not make it visible beneath the darkness of the vaulted roof. Had she been subject to superstitious terrors, it is impossible to conceive of a situation that could better entitle her to feel them, for, if Shakspeare's ghost would rise at any provocation, it must have shown itself then; but it is my sincere belief, that, if his figure had appeared within the scope of her dark-lantern, in his slashed doublet and gown, and with his eyes bent on her beneath the high, bald forehead, just as we see him in the bust, she would have met him fearlessly, and controverted his claims to the authorship of the plays, to his very face. She had taught herself to contemn "Lord Leicester's groom" (it was one of her disdainful epithets for the world's incomparable poet) so thoroughly, that even his disembodied spirit would hardly have found civil treatment at Miss Bacon's hands.

Her vigil, though it appears to have had no definite object, continued far into the night. Several times she heard a low movement in the aisles: a stealthy, dubious foot-fall prowling about in the darkness, now here, now there, among the pillars and ancient tombs, as if some restless inhabitant of the latter had crept forth to peep at the intruder. By-and-by the clerk made his appearance, and confessed that he had been watching her ever since she entered the church.

About this time it was that a strange sort of weariness seems to have fallen upon her: her toil was all but done, her great purpose, as she believed, on the very point of accomplishment, when

she began to regret that so stupendous a mission had been imposed on the fragility of a woman. Her faith in the new philosophy was as mighty as ever, and so was her confidence in her own adequate development of it, now about to be given to the world; yet she wished, or fancied so, that it might never have been her duty to achieve this unparalleled task, and to stagger feebly forward under her immense burden of responsibility and renown. So far as her personal concern in the matter went, she would gladly have forfeited the reward of her patient study and labor for so many years, her exile from her country and estrangement from her family and friends, her sacrifice of health and all other interests to this one pursuit, if she could only find herself free to dwell in Stratford and be forgotten. She liked the old slumberous town, and awarded the only praise that ever I knew her to bestow on Shakspeare, the individual man, by acknowledging that his taste in a residence was good, and that he knew how to choose a suitable retirement for a person of shy, but genial temperament. And at this point, I cease to possess the means of tracing her vicissitudes of feeling any farther. In consequence of some advice which I fancied it my duty to tender, as being the only confidant whom she now had in the world, I fell under Miss Bacon's most severe and passionate displeasure, and was cast off by her in the twinkling of an eye. It was a misfortune to which her friends were always particularly liable; but I think that none of them ever loved, or even respected, her most ingenuous and noble, but likewise most sensitive and tumultuous character, the less for it.

At that time her book was passing through the press. Without prejudice to her literary ability, it must be allowed that Miss Bacon was wholly unfit to prepare her own work for publication, because, among many other reasons, she was too thoroughly in earnest

to know what to leave out. Every leaf and line was sacred, for all had been written under so deep a conviction of truth as to assume, in her eyes, the aspect of inspiration. A practised book-maker, with entire control of her materials, would have shaped out a duodecimo volume full of eloquent and ingenious dissertation,—criticisms which quite take the color and pungency out of other people's critical remarks on Shakspeare,—philosophic truths which she imagined herself to have found at the roots of his conceptions, and which certainly come from no inconsiderable depth somewhere. There was a great amount of rubbish, which any competent editor would have shovelled out of the way. But Miss Bacon thrust the whole bulk of inspiration and nonsense into the press in a lump, and there tumbled out a ponderous octavo volume, which fell with a dead thump at the feet of the public, and has never been picked up. A few persons turned over one or two of the leaves, as it lay there, and essayed to kick the volume deeper into the mud; for they were the hack critics of the minor periodical press in London, than whom, I suppose, though excellent fellows in their way, there are no gentlemen in the world less sensible of any sanctity in a book, or less likely to recognize an author's heart in it, or more utterly careless about bruising, if they do recognize it. It is their trade. They could not do otherwise. I never thought of blaming them. From the scholars and critics of her own country, indeed, Miss Bacon might have looked for a worthier appreciation, because many of the best of them have higher cultivation and finer and deeper literary sensibilities than all but the very profoundest and brightest of Englishmen. But they are not a courageous body of men; they dare not think a truth that has an odor of absurdity, lest they should feel themselves bound to speak it out. If any American ever wrote a word in her behalf, Miss Bacon never knew it, nor

did I. Our journalists at once republished some of the most brutal vituperations of the English press, thus pelting their poor countrywoman with stolen mud, without even waiting to know whether the ignominy was deserved. And they never have known it, to this day, nor ever will.

The next intelligence that I had of Miss Bacon was by a letter from the mayor of Stratford-on-Avon. He was a medical man, and wrote both in his official and professional character, telling me that an American lady, who had recently published what the mayor called a "Shakspeare book," was afflicted with insanity. In a lucid interval she had referred to me, as a person who had some knowledge of her family and affairs. What she may have suffered before her intellect gave way, we had better not try to imagine. No author had ever hoped so confidently as she; none ever failed more utterly. A superstitious fancy might suggest that the anathema on Shakspeare's tombstone had fallen heavily on her head in requital of even the unaccomplished purpose of disturbing the dust beneath, and that the "Old Player" had kept so quietly in his grave, on the night of her vigil, because he foresaw how soon and terribly he would be avenged. But if that benign spirit takes any care or cognizance of such things now, he has surely requited the injustice that she sought to do him—the high justice that she really did—by a tenderness of love and pity of which only he could be capable. What matters it, though she called him by some other name? He had wrought a greater miracle on her than on all the world besides. This bewildered enthusiast had recognized a depth in the man whom she decried, which scholars, critics, and learned societies, devoted to the elucidation of his unrivalled scenes, had never imagined to exist there. She had paid him the loftiest honor that all these ages of renown have been able to accumulate upon his memory. And when, not

many months after the outward failure of her life-long object, she passed into the better world, I know not why we should hesitate to believe that the immortal poet may have met her on the threshold and led her in, reassuring her with friendly and comfortable words, and thanking her (yet with a smile of gentle humor in his eyes at the thought of certain mistaken speculations) for having interpreted him to mankind so well.

I believe that it has been the fate of this remarkable book never to have had more than a single reader. I myself am acquainted with it only in insulated chapters and scattered pages and paragraphs. But, since my return to America, a young man of genius and enthusiasm has assured me that he has positively read the book from beginning to end, and is completely a convert to its doctrines. It belongs to him, therefore, and not to me,—whom, in almost the last letter that I received from her, she declared unworthy to meddle with her work,—it belongs surely to this one individual, who has done her so much justice as to know what she wrote, to place Miss Bacon in her due position before the public and posterity.

This has been too sad a story. To lighten the recollection of it, I will think of my stroll homeward past Charlecote Park, where I beheld the most stately elms, singly, in clumps, and in groves, scattered all about in the sunniest, shadiest, sleepest fashion; so that I could not but believe in a lengthened, loitering, drowsy enjoyment which these trees must have in their existence. Diffused over slow-paced centuries, it need not be keen nor bubble into thrills and ecstasies, like the momentary delights of short-lived human beings. They were civilized trees, known to man and befriended by him for ages past. There is an indescribable difference—as I believe I have heretofore endeavored to express—between the tamed, but by no means effete (on the contrary,

the richer and more luxuriant) Nature of England, and the rude, shaggy, barbarous Nature which offers us its racier companionship in America. No less a change has been wrought among the wildest creatures that inhabit what the English call their forests. By-and-by, among those refined and venerable trees, I saw a large herd of deer, mostly reclining, but some standing in picturesque groups, while the stags threw their large antlers aloft, as if they had been taught to make themselves tributary to the scenic effect. Some were running fleetly about, vanishing from light into shadow and glancing forth again, with here and there a little fawn careering at its mother's heels. These deer are almost in the same relation to the wild, natural state of their kind that the trees of an English park hold to the rugged growth of an American forest. They have held a certain intercourse with man for immemorial years; and, most probably, the stag that Shakspeare killed was one of the progenitors of this very herd, and may himself have been a partly civilized and humanized deer, though in a less degree than these remote posterity. They are a little wilder than sheep, but they do not snuff the air at the approach of human beings, nor evince much alarm at their pretty close proximity; although, if you continue to advance, they toss their heads and take to their heels in a kind of mimic terror, or something akin to feminine skittishness, with a dim remembrance or tradition, as it were, of their having come of a wild stock. They have so long been fed and protected by man, that they must have lost many of their native instincts, and, I suppose, could not live comfortably through even an English winter without human help. One is sensible of a gentle scorn at them for such dependency, but feels none the less kindly disposed towards the half-domesticated race; and it may have been his observation of these tamer characteristics in the Charlecote herd that suggested to Shak-

spere the tender and pitiful description of a wounded stag, in "As You Like It."

At a distance of some hundreds of yards from Charlecote Hall, and almost hidden by the trees between it and the road-side, is an old brick archway and porter's lodge. In connection with this entrance there appears to have been a wall and an ancient moat, the latter of which is still visible, a shallow, grassy scoop along the base of an embankment of the lawn. About fifty yards within the gate-way stands the house, forming three sides of a square, with three gables in a row on the front and on each of the two wings; and there are several towers and turrets at the angles, together with projecting windows, antique balconies, and other quaint ornaments suitable to the half-Gothic taste in which the edifice was built. Over the gate-way is the Lucy coat-of-arms, emblazoned in its proper colors. The mansion dates from the early days of Elizabeth, and probably looked very much the same as now when Shakspeare was brought before Sir Thomas Lucy for outrages among his deer. The impression is not that of gray antiquity, but of stable and time-honored gentility, still as vital as ever.

It is a most delightful place. All about the house and domain there is a perfection of comfort and domestic taste, an amplitude of convenience, which could have been brought about only by the slow ingenuity and labor of many successive generations, intent upon adding all possible improvement to the home where years gone by and years to come give a sort of permanence to the intangible present. An American is sometimes tempted to fancy that only by this long process can real homes be produced. One man's lifetime is not enough for the accomplishment of such a work of Art and Nature, almost the greatest merely temporary one that is confided to him; too little, at any rate, — yet perhaps too long, when he is discouraged by the idea that he must

make his house warm and delightful for a miscellaneous race of successors, of whom the one thing certain is, that his own grandchildren will not be among them. Such repinings as are here suggested, however, come only from the fact, that, bred in English habits of thought, as most of us are, we have not yet modified our instincts to the necessities of our new forms of life. A lodging in a wigwam or under a tent has really as many advantages, when we come to know them, as a home beneath the roof-tree of Charlecote Hall. But, alas! our philosophers have not yet taught us to see what is best, nor have

our poets sung us what is beautifullest, in the kind of life that we must lead; and therefore we still read the old English wisdom, and harp upon the ancient strings. And thence it happens, that, when we look at a time-honored hall, it seems more possible for men who inherit such a home, than for ourselves, to lead noble and graceful lives, quietly doing good and lovely things as their daily work, and achieving deeds of simple greatness when circumstances require them. I sometimes apprehend that our institutions may perish before we shall have discovered the most precious of the possibilities which they involve.

---

## MR. AXTELL.

### PART VI.

“THE leaves of the second autumn were half-shrivelled in drawing near to the winter of their age.

“I had been to see your mother. She was ill. Mary’s death was slowly, surely bringing her own near. We had had a long talk that afternoon. Her visions of life were rare and beautiful. She was like Mrs. Wilton, the embodiment of all that is purely woman. She had wrought a solemn spell over me,—made Eternity seem near. I had been changed since that prayer on the sea-shore, fourteen months before, but now I felt a longing to go away. Earth seemed so drear,—mother was sick,—Abraham unhappy,—my father deep in the perplexing cares of his profession, mostly from home,—Mrs. Percival was dying,—the year was passing away,—and I, too, would be going; and as I went out of the house to go home, I remembered the day wherein I had waited in the viny arbor for Mary to awaken from sleep, how I had gone down to the sea to waken myself to a

light that burned before it blessed. Since then I had avoided the place, barred with so many prison-wires. Now I felt a longing to go into it. The leaves were frost-bitten. I sympathized with them. Autumn winds went sighing over their misfortunes; spirit-winds blew past me, on their way to and from the land that is and the land that is not to us. The arbor was dear with a newborn love. I went out to greet it, as one might greet a ship sailing the same great ocean, though bound to a different port. There was a something in that old vine-clad arbor that was in me. I felt its shadows coming out to meet me. They chilled a little, but I went in. I looked at the little white office, across the yard, in the corner. I thought of the face that came out that day to see me,—the face that drank up my heart in one long draught, begun across Alice dead, finished when I read that letter. The cup of my heart was empty,—*so empty* now! I looked down into it; it was fringed with stalactites,

crystallized from the poison of the glass. Oh! what did I see there? A dead, dead crater, aching for the very fire that made it what it was, crying out of its fierce void for fiery fusion. Why did our God make us so,—us, who love, knowing we should not? I knew from the beginning that Bernard McKey ought not to be cared for by me; but could I help it? Now the veil of death, I believed, hung between, and the cup of my heart might be embalmed: the last change, I thought, had come to it, and left it as I that day found.

“Chloe came around the corner, throwing her apron over her head. She looked up and down the way, as if in search of some one, went down the walk to the gate, looked as I had once seen her do at our house, taking it window by window, and finding no one, (the day seemed deserted,) she was walking back. I called to her from the arbor.

“‘I was just looking for you, Miss Lettie. I’ve got a letter here. Mistress is too sick to read it for me, and Master’s away. Would you?’

“It was addressed to Chloe. I broke the seal and opened it. It seemed a long letter. I gave a sigh at the task before me, and looked over to the end. I saw the signature: it was Bernard H. McKey. After that I saw Chloe’s troubled black face written on my vision, and felt dripping drops about my head.

“‘There, Miss Lettie, it’s all over, now. I’s so glad you’re come to! I won’t bother you with reading any more letters. It would have to be much good in it that ’ud pay me for seeing you so.’

“I was sitting in the arbor a little later, alone, reading the letter. Through the rending of the cup dew stole in; the mist was stifling. ‘Still’t was better than the death that reigned before. The contents of my life were *not* poured out beyond the earth. The thought gave me comfort. It is so sad to feel the great gate shut down across the flume of your heart! to have the stilled waters set back, never more to join those that

have escaped, gone on, to turn the wheel of Eternity! In that hour it was joy enough for me to know that he lived, even if the life was for another. I, too, had my bright portion in it.

“Chloe came back. She had forgotten the letter, when she went in to Mrs. Percival. She said ‘faintin’ must be good for me; she had n’t seen me look so fine in a many days.’

“I told Chloe that the letter had been written to me, that it was not meant for her. At first she did not comprehend; after that I felt sure that a perception of the truth dawned in her mind, she watched me so closely.

“I carried my letter home. That night I compared the two,—the one Abraham had found (where I knew not, I never questioned him) with this. They bore no resemblance: but I remembered that two years make changes in all things; they might have effected this. The signatures were unlike; the latter contained the initial H. What if they were not written by the same person? The question was too mighty for me. I was compelled to await the answer.

“Bernard would be in Redleaf in November. He named the day,—appointed the place of meeting. It was the old tower in the church-yard. I had a fancy, as you have, for the dreary dimness there. As children, we made it our temple for all the worships childhood knows. The door had long been gone; it was open to every one who chose to enter in. Before the coming of the day, I was in continual fear lest the new joy that had come into my life should trace itself visibly on my outward seeming. I took it in as the hungry do food, and tried to hide the sustenance it gave. I saw that my mother’s eyes were often upon me,—that she was trying to follow my joy to its source. One day,—it was the very one before his coming,—she came suddenly upon me when I was wrapt in my mantle of exquisite consciousness. I had gone

down to the river: you know it runs at the foot of the place. Tired of stirring up dry, dead leaves, I leaned against a tree,—one arm was around it,—and with my eyes traversing the blue of the sky, on and on, in quick, constant, flashing journeys, like fixed heat-lightning, I suddenly became conscious of a blue upon the earth, orbed in my mother's cool eyes. I don't know how I came out of the sky. She said only, 'Your thoughts harmonize with the season'; but I knew she meant much more. It was long since she had wandered so far from the house; but of late she had had my joy to trace,—my mother, to whom I could not intrust it, in all of whose nature it had no place, whose spirit mine was not formed to call out echoes from. The result of her walk to the river was a subsequent day of prostration and a nervous headache. All the morning of that November day I sat beside her in the darkened room. I bathed her head, until she said there was *too* much life in my hands, and sent for Abraham. Thus my time of release came."

A quick, involuntary smile crossed Miss Axtell's face at the memory of her first sight of Mr. McKey. I watched her now. She changed the style of her narration, taking it on quickly, in nervous periods, with electric pauses, which she did not fill as formerly.

"We met in the tower, happily without discovery. I told him of my mother's knowledge, showed him the notice of his (as I had thought) death.

"It is my cousin,' he said carelessly,—adding, with a sigh, 'poor fellow! he was to have married soon.'

"I gave him the letter, the key of all my agony.

"I remember when he wrote this,' he went on, as carelessly as if his words had all been known to me. 'You did not see him, perhaps; he was with me the first time I came to Redleaf,—was here the night he describes.'

"It was so strange that he did not ask where I obtained the letter! but he

did not. He gave me an epitome of his cousin's life and death. The two were named after an uncle; each had received the baptismal sign ere it was known that the other received the name; in after-time the Herbert was added to one.

"We sat in the window of the tower all through the short November afternoon. We saw Chloe come into the church-yard; she came to take up some roses that had blossomed in summer beside Mary's grave. We heard her knife moving about in the pebbly soil, and watched her going home. She was the only comer. In November, people never visit such places, save from necessity.

"Mr. McKey and I had discovered the passage leading from church to tower. Mary was with us then. There was a romance in keeping the secret, poetry in the knowledge that we three were sole proprietors; one was gone,—now it became only ours.

"How came *you* to know of it?" she suddenly asked.

Questioned thus, I twined my story in with hers, she listening in a rapt way, peculiarly her own. I told her of my imprisonment on the day of her visit. I confessed entirely, up to the point she had narrated. When I ended, she said,—

"You have kept this secret twenty-five days; mine has been mine eighteen years. Mr. McKey has wandered in the time over the world of civilization, coming here at every return, making only day-visits, wandering up and down familiar places, meeting people whom he knew, but who never saw him through his disguises. He met my mother twice; even her quick eyes had no ray of suspicion in them.

"Four years ago we went to Europe: father's health demanded it. There, by accident, I met Mr. McKey. Fourteen years had so changed him from the medical student in Doctor Percival's office, that, although without disguise, neither mother nor Abraham recognized him. It was in England that father

died,—there that we met Mr. McKey. It was he who, coming as a stranger, proved our best friend, whom mother and Abraham called Mr. Herbert. It was his hand lifted up for the last time my father's head just before he died. It was he who went to and fro making all needful arrangements for father's burial. At last we prepared to leave. He came to the steamer to say parting words. Mother and Abraham, with tearful eyes, thanking him for his past kindness, begged, should he ever come to America, a visit from him. When their farewells were ended, he looked around for me. I was standing apart from them; the place where my feet then were is to-day fathoms deep under iceberg-soil: it was upon the Pacific's deck. I wonder if just there where I then stood it is as cold as elsewhere,—if Ocean's self hath power to congeal the vitality of spirit."

Miss Axtell paused one moment, as if answering the question to herself. In that interval I remembered the face that only three weeks ago I had looked upon, over which Dead-Sea waves had beat in vain. After the pause, she went on:—

"I gave Mr. McKey the farewell, silent of all words. A few moments later, and we were on our homeward way, leaving a friend and a grave in England.

"After our coming home, an intense longing came to speak of Herbert,—to tell my proud mother to whom she was indebted for so many acts of kindly friendship; but often as I said, 'I will,' I yet did not. To-day I would wait for the morrow; on the morrow indecision came; and at last, when the intent was stronger than ever, when I had laid me down to sleep after an interview with Mr. McKey, solemnly promising Heaven that with the morning light I would confess all and leave the consequences with my God, in that night-time He sent forth His angel to gather in her spirit."

Miss Axtell covered her face with the

hands so long rigidly clasped about her precious package, and the very air that was in the room caught the thrill and quiver of her heart, strong to suffer, strong to love. When she again spoke, it was in low, murmurous tones.

"I wanted my mother to know what God had permitted me to be to this man, his great anchor of clinging in all storms,—how, in loving him, I had been permitted to save him. Do you think it is good," she asked,—“my story? It is n't a story of what the world calls 'happy love'; I don't think I should find it happy even now. I have come to a solemn bridge in the journey of Time. I know it must be crossed,—only how? It is high; my head is dizzied by the very thought. It has none of the ordinary protective railings; I must walk out alone, and—I cannot see the other end; it is too far, too misty. My mother's face fills up all the way; it comes out to meet me, and I do not rightly hear what she says, for my ears are filled with the roar of the life-current that frets over rocks below. I try to stay it while I listen; it only floods the way. There is time given me; there is no immediate cause for action: for this I am thankful. Mr. McKey left me at the tower on the day you heard us there. He is a surgeon in the naval service. His ship sailed last week on a three years' voyage. I shall have time to think, to decide what I ought to do; perhaps the roar will cease, and I shall hear what my mother tries to say.

"I have one great thought of torment. Abraham, what if he should die, too,—die without knowing? that I could not bear"; and the face, still looking toward Zoar, lifted up itself from the little City of Refuge, and looked into the face of Anna Percival. "Poor Abraham!" she said, "he has suffered, perhaps even more than I. He will hear *you*. Will you tell him this for me? Tell him all; and when you tell how Mary came to die, give him this,"—and she handed to me the very package I had twice journeyed with,—

"it will prove to him the truth of what I say."

I hesitated to take that which she proffered.

"You must not disappoint me," she said. "I have spent happy hours since you went away, in the belief that Providence sent you here to me in the greatness of my need. I cannot tell Abraham; I could not bear the joy that will, that must come, when he lays down the burden of his crime,—for, oh! it will be at the feet of Bernard McKey. You will not refuse me this?" she pleaded.

Anna Percival, in the silence of that upper room where so much of life had come to her, sat at Miss Axtell's side, and thought of the dream that came one Sunday morning to her, sleeping, and out of the memory of it came tolling down to her heart the words then spoken, and, taught by them, she answered Miss Axtell's pleading by an "I will."

"Good little comfort-giver!" Miss Lettie said; and she left the package, containing the precious jewel, in my hands.

Bewildered by the story, filled with sorrow for sufferers passed away from the great, suffering earth, aching for those that still were in the void of misery, I arose to go. "It was near to mid-day; Aaron and Sophie would wait dinner for me," I said to Miss Lettie's pleading for another hour. Ere I went, the conventionalities that signalled our meeting were repeated, and, wrapped in the web and woof Miss Axtell had woven, I went down the staircase and through the wide hall and out of the solemn old house, wondering if ever again Anna Percival would cross its entrance-porch. Kino heard the noise of the closing of the door, and came around the corner to see who it might be. I stayed a moment to say a few comforting words to the dog. Kino saw me safely outside of the gate by way of gratitude. I walked on toward the parsonage.

Redleaf seemed very silent, almost

deserted. I met none of the villagers in my homeward walk. "It will be ten minutes yet ere Sophie and Aaron will, waiting, say, 'I wonder why Anna does not come,'" I thought, as I drew near, and my fingers held the tower-key. I had not been there since the Sunday morning memorable to me through all coming time. I lifted the fastening to the church-yard, and went in. My sister Mary lay in this church-yard now. I had until this day known only sister Sophie, and in my heart I thanked Miss Axtell for her story. I went in to look at Mary's grave. A sweet perfume filled the inclosure; it came to me through the branching evergreens; it was from Mary's grave, covered with the pale pink flowers of the trailing-arbutus. I knew that Abraham Axtell had brought them hither. I gathered one, the least of the precious fragments. I knew that Mary, out of heaven seeing me, would call it no sacrifice, and with it went to my tower.

Spring fingers had gathered up the leaves of snow, winter's growth, from in among the crevices of stone. I noticed this as I went in. The great stone was over the passage-opening, just where Mr. Axtell had dropped it, lest Aaron should see. Something said to me that my love for the tower was gone, that never more would I care to come to it; and I think the voice was speaking truly, everything did seem so changed. The time moss was only common moss to me, the old rocks might be a part of *any* mountain now. I had caught up all the romance, all the poetry, which is mystery, of the tower, and henceforth I might leave it to stand guard over the shore of the Sea of Death, white with marble foam. I went up to the very window whence I had taken the brown plaid bit of woman's wear. I looked out from where I had seen the dying day go down. I heard the sound, from the open door of the parsonage, of Sophie's voice, humming of contentment; I saw the little lady come and look down the village-street for me; I saw her

part those bands of softly purplish hair, with fingers idly waiting the while she stood looking for me. I looked up at the window, down at the floor, down through the winding way of stair, where once I had trembling gone, and, with a farewell softly spoken, I left my churchyard tower with open door and key in the lock. Henceforth it was not mine. I left it with the hope that some other loving soul would take up my devotion, and wait and watch as I had done.

Aaron chanced at dinner-time to let fall his eyes on the door, swinging in the wind. Turning, he looked at me. I, divining the questioning intent of his eyes, answered,—

"It is I, Aaron. I 've left the key in the door. I resign ownership of the tower."

The grave minister looked pleased. Sophie said,—

"Oh, I am so glad, you *are* growing rational, Anna!"—and Anna Percival did not tell these two that she had emptied the tower of all its mystery, and thrown the cup afloat on the future.

Aaron and Sophie were doomed to wonder why I came to Redleaf. Sophie begged my longer stay; Aaron thought, with his direct, practical way of looking at all things, save Sophie, that I "had better not have come at all, if only to stay during the day-journey of the sun."

The stars were there to see, when I bade good-bye to Chloe at the parsonage, and went forth burdened with many messages for Jeffy. Aaron and Sophie went with me to the place of landing. It was past Miss Axtell's house. Only one light was visible; that shone from Miss Lettie's room. Aaron said,—

"I saw Mr. Axtell this morning. He was going across the country, he said."

No one asked him "Where?" and he said no more.

We were late at the steamboat. I had just time to bid a hasty farewell, and hear a plank-man say, "Better

hurry, Miss, if you 're going on," and in another minute I was at sea.

I had so much to think of, I knew it would be impossible for sleep to come to me; and so I went on deck to watch the twinkling lights of Redleaf and the stars up above, whilst my busy brain should plan a way to keep my promise to Miss Axtell. I could not break up her fancied security; I could not deprive her of the "time to think" before crossing the great bridge, by telling her of the stranger sick in Doctor Percival's house, and so I let her dream on. It might be many weeks, nay, months, ere Mr. McKey would recover, hence there was no need that she should know; by that time she would be quite strong again.

Once on deck, and well wrapped from the March sea-breeze, blowing its latest breath over the sea, I took a seat near a large party who seemed lovers of the ocean, they sat so quietly and so long.

My face was turned away from all on deck. I heard footsteps going, coming, to and fro, until these steps came into my reverie. I wished to turn and see the owner, but, fearing that the charm would vanish, I kept my eyes steadily seaward. I scarcely know the time, it may have been an hour, that thus I had sat, when once again the footsteps drew near. The owner paused an instant in passing me. I fancied some zephyr of emotion made his footsteps falter a little. Nothing more came. He walked, as before, and once, when I was certain that all the deck lay between my eyes and him who so often had drawn near, I turned to look. I saw only a gentleman far down the boat, wrapped in an ordinary travelling-shawl. Neither form nor walk was, I thought, familiar, and I lost my interest.

I began to dream of other things,—of the going home, and should I find Mr. McKey improved during my absence? The party near me began to talk; it was pleasant to hear soft home

words spoken by them,—it gave me, alone as I was, a sense of protection.

When the owner of the footsteps again came near, I scarcely noticed it. I had reason to do so a moment later. Instead of going straight on, as before, the gentleman stopped an instant,—then, with a strong gesture of excitement, stepped quite near to me, and saying hurriedly, as one does in sudden emergencies, “I beg your pardon, Madam,” he bent to look at the railing of the guard, just beside me. It so happened that a boat-light illumined a little space just there, and that within it lay a hand whose glove I had a few moments before removed, to put back some stray hairs the sea-breeze had brought from their proper place. No sooner did I divine his intent than I took my hand from off the railing. The gentleman looked up suddenly; he was quite near then, and no more light than that the stars gave was needful for me. I saw Mr. Axtell, and Mr. Axtell must have seen Miss Percival, for he said,—

“This is a great surprise. I did not hear of your being in Redleaf, Miss Anna.”

“Why should you, when I have only been there one day?”

“Did you see my sister?” he asked.

“I was with her during the morning,” I said.

“And she was as usual?”

“Better, I thought.”

“I trust so, for I have not been home since morning. I received a letter, as I came through the village, from your father, desiring to see me, and I had time only to send a message to Lettie. I hope Doctor Percival is well?”

“Oh, yes,—else I should not be here.”

I had gloved my hand again during these words of recognition. Mr. Axtell noticed it, and asked to see a ring that had attracted his attention.

“Excuse me,” I said,—“it is one of

my father’s gifts to me,—I cannot take it off,—it is a simple ring, Mr. Axtell”; and I held it out for him to see.

“I knew it!” he exclaimed; “there could not be two alike; years have not changed its lustre. Mary wore it first on the day we were engaged.”

“Was it your gift to her, Mr. Axtell?”

He answered, “Yes”; and I, drawing it off, handed it to him, saying, “It should have been returned to you long ago.”

“No, no,” he said, quite solemnly, “it is in better keeping”; and he took the tiny circlet of gold, and looked a moment at it, with its shining cluster of brilliants, then gave it back to me.

“Have you no claim upon this?” I asked.

“On the ring? Oh, no,—none.”

I put back with gladness the gift my father gave.

My time had come. The opportunity was most mysteriously given me to redeem the promise made in the morning to Miss Lettie. I began, quite timidly at first, to say that I had a message for Mr. Axtell, one from his sister,—that I was to tell him of events whose occurrence he never knew. He listened quietly, and I went on, commencing at the afternoon of my imprisonment in the tower. I told every word that I had heard from Miss Axtell,—no more. I trembled, it is true, when I came to the death of Alice, and the new life that came to his elder sister. I came at last to Mary. I told it all, the night when he came home, the very words he had spoken to his sister I repeated in his ears, and he was quiet, with a quietness Axtells know. I took out the package and opened it, saying,—

“Your sister bade me give this to you.”

The careful folds were unwrapped, and within a box lay only a silver cup. Mr. Axtell took it into his hands, turned it to the light, and read on it the name of my sister. I said to him,—

“Look on the inside.”

He did. It was the fatal cup from which Mary Percival drank the death-drops. Poisonous crystals lay in its depth. I told him so. I told him how Bernard McKey, driven to despair, had made the fatal mistake.

I thought to have seen the sunlight of joy go up his face. I looked for the glance whose coming his sister so dreaded; but it came not. My story gave no joy to this strange man. He asked a few questions only, tending to illumine points that my statement had left in uncertainty, and then, when my last words were said, he rose up, and, standing before me, very lowly pronounced these words:—

“Until to-night, Abraham Axtell never knew the weight of his guilt. He must work out his punishment.”

“How can you, Mr. Axtell? Heaven hath appointed forgiveness for the repentant.”

“And freedom from punishment, Miss Percival, is that, too, promised?”

“Strength to bear is freely offered in forgiveness.”

“May it come to me! In all God’s earth to-night there dwells not one more needy of Heaven’s mercy.”

“Mary forgives you,” I said.

“Bernard McKey, whom I have made most miserable, Lettie’s life-long suffering, is there any atonement that I can offer to them?”

“Yes, Mr. Axtell”; and I, too, arose, for the party had gone whilst I was telling my story.

“Will you name it?”

“Give unto the two a brother’s love. Good night, Mr. Axtell.”

“I will,” said a deep, solemn voice close beside me. I turned, and Mr. Axtell was gone. I heard footsteps all that night upon deck. They sounded like those that came and stood beside me hours before.

Day was scarcely breaking when we came to land in New York. I waited for the carriage to come from home. Mr. Axtell, was it he who came, with whitened hair, to ask for Miss Percival,

to know if he could offer her any service? What a night of agony he must have lived through! He saw my look of astonishment, and said,—

“It is but the beginning of my punishment.”

Ere I had answered Mr. Axtell’s question, my father appeared. He had come for me so early on this March morning,—or was it to meet Mr. Axtell? He said more, in words, to him than to his child. It was several years since my father had met Mr. Axtell, therefore he did not note the change last night had wrought. As I looked at him, during our homeward drive, I repented not having said words of comfort, not telling him that I believed Bernard McKey was at that hour in my father’s house; but I had not exceeded my instructions, by one word I had not gone beyond Miss Lettie’s story. Until Mr. McKey chose to reveal himself, he must exist as a stranger.

Jeffy reported the “hospital man” as “behaving just like other people.” Jeffy evidently regretted, with all the intensity of his Ethiopian nature, the subsiding of the delirium.

Not long after our arrival home, father went, with Mr. Axtell, into his own room, where, with closed doors, the two remained through half the morning. What could my father have to say to the “incomprehensible man,” his daughter Anna asked herself; but no answer breathed through mahogany, as several times she passed near. All was silent in there to other ears than those inside.

At last I heard the door open, and footsteps along the hall. “Surely,” I thought, “they are going the way to Mr. McKey’s room.” I was right. They went in. What transpired in there I may never know, but this much was revealed to me: there came thence two faces whereon was written the loveliness of the mercy extended to erring man. My father looked, like all who feel intensely, older than he did in the morning, and yet withal happier. Mr.

Axtell went away without seeing me. Father made apology for him by saying that it was important that he should return home immediately, and asked "could I make ready to receive some visitors the following day?"

"Who, papa?" I asked.

"Mr. Axtell and his sister."

Mr. McKey was able that evening to cross the room, and sit beside the fire. I went in to inquire concerning his comfort. Papa was away. Mr. Axtell must have told him something of me, for I had not been long there, when he, turning his large, luminous eyes from the coals, into which he had been peering, said, —

"Do you know the sweetness of reconciliation, young lady? If not, get angry with some one immediately."

"I never had an enemy in my life, Mr. McKey," I replied.

He started a little at the name, and only a little, and he questioned, —

"Where did you learn the name you give to me?"

"From Miss Axtell, yesterday."

Question and answer succeeded, until I had told him half the story that I knew. I might have said more, but father's coming in interrupted me.

"I expect our visitors by the day-boat," papa said to me the day following. The carriage went for them. I watched its coming from afar down the street. I knew the expression of honest Yest's hat out of all the street-throng. The carriage came laden. I saw faces other than the Axtells', even Aaron's and Sophie's.

What glad visitors they were, Aaron and Sophie! and what a surprise to them to see Miss Axtell there! I took off her wrappings, drew an easy-chair, made her sit in it, and she actually looked quite comfortable, outside of the solemn old house. "She had endured the journey well," she said. Abraham was so anxious that she should come that she would not refuse his request. "Abraham has forgiven me," she whispered, as I bent over her to adjust some

stray folds, — "forgiven me for all my years of silent deceit."

I shook my head a little at the word; speak I could not, for the minister's wife was not deaf.

Aaron called her away a moment later.

"It was deceit, Miss Percival," Miss Axtell said, so soon as she found our two selves alone. "I could not well avoid it; if I were tried again, I might repeat the sin; but, thank Heaven, two such trials never come into a single life. I sometimes wish Bernard were not at sea, that he were here to know my release and his forgiveness; it will be so sweet to feel that no longer I have the sin to bear of concealing his wrong."

I knew from this that Miss Axtell did not know of Mr. McKey's presence in the house; but she ought to know. What if a sound from his voice should chance to come down the passage-way, as I often had heard it? I watched the doors painfully, to see that not one was left open a hair's-breadth, until the time Miss Axtell went up to her own room. Talking rapidly, giving her no time to speak, I went on with her. Safely ignorant, I had her at last where ears of mortals could not intrude. Then I said, —

"We all of us are become wonderful story-tellers. Now it comes to pass that I have a little story to tell; my time is come at last"; and, watching every muscle of her face, and all the little veins of feeling that I had learned so well, I began.

Carefully I let in the light, until, without a shock, Miss Axtell learned that the room below contained Bernard McKey.

"They did not understand me," she said, "or they would not have brought me here thus."

After a long, long lull, Miss Axtell thanked me for telling her alone, where no one else could see how the knowledge played around her heart. Dear Miss Axtell, sitting there, in my father's house, only last March, with a

holy joy stealing up, in spite of her endeavor to hide it from my eyes even, and suffusing her white face with warm, rosy tints, dear Miss Axtell, I hoped your day-dawn drawing near.

Miss Axtell said "she hated to have other people see her feel"; she asked "would I manage it for her, that no one should be nigh when she met Mr. McKey?"

It was that very evening that papa, calling Sophie and me into his room, told us a little of the former history of the people in his house.

"I want you to help me, children," he said; "ladies manage such things better than we men know how to."

I said, close to papa's astonished hearing, "I know all about it; just let me take care of this mission"; and he appointed me diplomate on the occasion.

Sophie was strangely disconcerted; she had such fearsome awe of the Axtells, "she could n't think of interfering," she said, "unless to make gruel or some condiment."

I coaxed Miss Lettie to have her tea in her own room: she certainly did not look like going down. Under pretext of having the care of her, I seated sister Sophie at my station, and thus I had the house, outside of the tea-room, under my control.

"Come down now; don't lose time," I said to Miss Axtell, running up to her, half breathless from my haste.

"What for? What is it?" she said.

"Papa is anticipating some grand effort in the managerial line from me, regarding two people in his house, and I don't choose to manage at all. Mr. McKey is waiting to see you. I knocked to see, as I came up, and all the family are at tea."

I went down with her. There was no trembling, only a stately calm in her manner, as she drew near.

I knocked. Mr. McKey answered, "Come in," in his low, musical, variant tones. I turned the knob; the door opened. A moment later, I stood alone within the hall. I walked up and down,

a true sentinel on true duty, that no enemy might draw near to hear the treaty of true peace which I knew was being written out by the Recording Angel for these two souls. They must have had a pleasant family-talk in the tea-room, they stayed so long.

At last I heard footsteps coming. I told Miss Lettie, thinking that she would leave; but no, she said "she would stay awhile"; and so, later on, the two were sitting there in quietness of joy, when my father came up to see his patient. Mr. Axtell was with him. They went in; indifferent words were spoken,—until, was it Abraham Axtell that I saw as I kept up my walking in the hall? What mysterious change had come to transfigure his face so that I scarcely believed the evidence of my own eyes? He came to the door and said, "Will you come in, Miss Percival?" I obeyed his request. He closed the door, and turned the key.

"In the presence of those against whom he had sinned he would confess his fault," were his first words; and he went on, he of whom *they* had asked a pardon, and drew a fiery picture of all that he had done, of the murder that he had doubly committed, for he had made another soul to bear his sin.

It was terrible to hear him accuse himself. It was touching to see this proud Axtell begging forgiveness. He offered the fatal cup to my father,—

"Therein lies the evidence of my murder. It was I who killed your daughter, Doctor Percival. Although no court on earth condemns me, the Judge of all the Earth holds me responsible for her death."

Doctor Percival tried to reason with him, said words of comfort, but he heeded them not: they might as well have fallen on the vacant air.

"Blessings be upon you two! if, out of suffering, God will send joy, it will be yours," Mr. Axtell said; and he offered his hand to Mr. McKey and his sister, as one does when taking farewell.

He went from them to my father, and offered his hand doubtfully, as if afraid it might be refused.

Papa took it in both his own. An instant later Mr. Axtell came to me. Surely he had no forgiveness to ask of Anna Percival. No; he only said, and I am certain that no one heard, save me, "I thank God that He has not let me shadow *your* life. Farewell!"

He left the room. We all looked, one at another, in that dim astonishment which is never expressed in words. Papa broke the spell by putting on fresh coals.

Miss Lettie said, "Poor Abraham!" and yet she looked so happy, so as I had never seen her yet!

A few moments later Jeffy came rushing in, his eyes dilate with amazement.

"The gentleman is gone," he said, "gone entirely."

It was even so. Mr. Axtell had gone, no one knew whither. It was late at night, when a letter came for Doctor Percival by a special messenger.

I never saw it. I only know that in it Mr. Axtell explained his intention of absence, and wrote, for his sister's sake, to make arrangements for her future. She was to return to Redleaf, at such time as she chose to go hence, with Mr. McKey; and to Aaron's and Sophie's care Mr. Axtell committed her.

Papa gave the letter to Miss Lettie. She read it in silence, and her face was immovable. I could divine nothing from it.

Last March! how long the time seems! Scarce six months have gone since I gave the record, and now the summer is dying.

I thought Miss Axtell would have ventured out on the bridge, far and high, ere now; but no, she says "the time is not yet,—that she will wait until Abraham comes home"; and Bernard McKey is content.

The solemn old house is closed. No longer Katie opens the door and Kino looks around the corner. Kino died, perhaps of grief: such deaths have been.

Miss Axtell has put off the old Dead-Sea-wave face. She has just put a calm, beautiful, happy one in at my door, to ask Anna Percival "why she sits and writes, when the last days of summer are drawing nigh?" Miss Axtell stays with me, and a great contentment sings to those who have ears to hear through all her life. If only Mr. Axtell would come home! Why does he stay away so long, and take such a dreary line of travel, where old earth is seamed *in memoriam* of man's rebellion? I'll send to him the althea-bud, when next his sister writes.

The leaves are fallen now. Winter is almost come. There is no need that I should send out the althea-fragment. Mr. Axtell wrote to me. Last night I received these words only,—and yet what need I more?

"God hath given me peace. I am coming home."

## THE LEGEND OF RABBI BEN LEVI.

RABBI BEN LEVI, on the Sabbath, read  
 A volume of the Law, in which it said,  
 "No man shall look upon my face and live."  
 And as he read, he prayed that God would give  
 His faithful servant grace with mortal eye  
 To look upon His face and yet not die.

Then fell a sudden shadow on the page,  
 And lifting up his eyes, grown dim with age,  
 He saw the Angel of Death before him stand,  
 Holding a naked sword in his right hand.  
 Rabbi Ben Levi was a righteous man,  
 Yet through his veins a chill of terror ran,  
 With trembling voice he said, "What wilt thou here?"  
 The Angel answered, "Lo! the time draws near  
 When thou must die; yet first, by God's decree,  
 Whate'er thou askest shall be granted thee."  
 Replied the Rabbi, "Let these living eyes  
 First look upon my place in Paradise."

Then said the Angel, "Come with me and look."  
 Rabbi Ben Levi closed the sacred book,  
 And rising, and uplifting his gray head,  
 "Give me thy sword," he to the Angel said,  
 "Lest thou shouldst fall upon me by the way."  
 The Angel smiled and hastened to obey,  
 Then led him forth to the Celestial Town,  
 And set him on the wall, whence gazing down,  
 Rabbi Ben Levi, with his living eyes,  
 Might look upon his place in Paradise.

Then straight into the city of the Lord  
 The Rabbi leaped with the Death Angel's sword,  
 And through the streets there swept a sudden breath  
 Of something there unknown, which men call death.  
 Meanwhile the Angel stayed without, and cried,  
 "Come back!" To which the Rabbi's voice replied,  
 "No! in the name of God, whom I adore,  
 I swear that hence I will depart no more!"

Then all the Angels cried, "O Holy One,  
 See what the son of Levi here has done!  
 The kingdom of Heaven he takes by violence,  
 And in Thy name refuses to go hence!"  
 The Lord replied, "My Angels, be not wroth;  
 Did e'er the son of Levi break his oath?  
 Let him remain; for he with mortal eye  
 Shall look upon my face and yet not die."

Beyond the outer wall the Angel of Death  
 Heard the great voice, and said, with panting breath,  
 "Give back the sword, and let me go my way."  
 Whereat the Rabbi paused and answered, "Nay!  
 Anguish enough already has it caused  
 Among the sons of men!" And while he paused,  
 He heard the awful mandate of the Lord  
 Resounding through the air, "Give back the sword!"

The Rabbi bowed his head in silent prayer;  
 Then said he to the dreadful Angel, "Swear,  
 No human eye shall look on it again;  
 But when thou takest away the souls of men,  
 Thyself unseen and with an unseen sword  
 Thou wilt perform the bidding of the Lord."

The Angel took the sword again, and swore,  
 And walks on earth unseen forevermore.

---

### MY FRIEND THE WATCH.

For two years I have had a most faithful, intimate, and useful friend, whom I have constantly worn next my heart. I do not know him for a Spiritualist, but by some mysterious sympathy he hears the incessant, ghostly foot-falls of Time, and repeats them accurately to my ear. While I wake he tells me how Time is passing. While I sleep he is still marking his steps, so that sometimes I have a feeling of awe, as if my mysterious friend were counting my own life away. Then again I am sure that in the faint, persistent monotone of his voice I hear the singing of the old mower's inevitable scythe. The Imagination contemplates this friend of mine with wonder. But Science sees him holding the hand of a captain in his ship at sea, or of a conductor in a train on shore, and honors in him the friend of civilization.

His native place is Waltham, in Massachusetts, and he invited me but a few days since to accompany him in a little visit thither. I cheerfully assented, and we took the cars in Boston, at the Wor-

cester Depot, and after passing a range of unsavory back-yards and ill-favored houses, and winding beneath streets and by the side of kennels, we emerged upon the broad meadows and marshes from which rise in the distance the Roxbury and Brookline hills. The whole region is covered with bright, wooden houses. The villages have a pert, thrifty, contented air, which no suburbs in the world surpass. If the houses are very white and a village looks like a camp, it is because the instinct of the inhabitants assures them that they may strike their tents to-morrow and move Westward or elsewhere to a greater prosperity. In older countries the stained and ancient stone houses are symbols of the inflexible state of society to which they belong. The dwellers are anchored to that condition. There is no "Westward ho" for them. Like father, like son. The hod-carrier's son carries hods. Even the headsmen's office is hereditary.

"Yes, yes," hummed my friend, in his patient, persistent monotone, "the

American citizen is an aërial plant. He has no roots. There is no wrenching, when he changes place. If there were, how could he overrun the continent in time? He must carry lighter weight than Cæsar's soldiers. What has he to do with old houses? His very inventions would make his house intolerable to him, in twenty or thirty years."

"But we are going at this very moment to see your ancestral halls, are we not?" I modestly inquired.

"Yes," he replied; "but they are not ten years old, and every year changes them."

By this time we were gliding through the gardens of Brookline and Brighton, which have been afflicted of late years with the Mansard epidemic. It has swept the whole region. Scarcely a house has escaped. Even the newest are touched,—sometimes only upon the extremities or outbuildings, but more frequently they are covered all over with the Mansard.

"That affection of the house-top," whispered I to my friend, "was originally derived from the dome of the Invalides, and has raged now for a century and a half."

"Yes," replied my companion, gravely, "we are not very fastidious in our importations."

He went on murmuring to himself as usual. Then he resumed more audibly,—

"I suppose that most people, upon looking at me, would take me for a foreigner. But you know how peculiarly native American I am. I am indeed only a watch, and," added my modest friend, glancing at the gold chain which hung from my waistcoat button-hole to the pocket, "if you will pardon my melancholy joke, I am for putting Americans only upon guard."

This military expression suddenly sent my thoughts elsewhere; and for some time the rattling of the cars sounded in my ears like another rattling, and the gentle Charles River was to my eyes the historic Rapidan or Rappahannock.

"Don't you think," unobtrusively ticked my watch, "that the exhortation to encourage home-industry has a peculiar force just now? I mean nothing personal; and I hope you will not think me too forward or fast."

"I have never had reason to think so," I answered; "and I am so used to look upon your candid face to know exactly what the hour is, that I shall be very much obliged, if you will tell me the time of day in this matter also; unless, indeed, you should find the jar of the cars too much for you, and prefer to stop before you talk."

"If I stopped, I certainly could not talk," my watch answered; "and did you ever know me to stop on account of any jar?"

I hastened to exculpate myself from any intention of unkind insinuation, and my watch ticked steadily on.

"If your mill turns only by a stream that flows to you through your neighbor's grounds, your neighbor has your flour at his mercy. You can grind your grist when he chooses, not when you will."

I nodded. My watch ticked on,—

"When you live on a marsh where the tide may suddenly rise house-high without warning, if you are a wise man, you will keep a boat always moored at the door."

"I certainly will," responded I, with energy.

"Very well. Every nation lives on that marsh which is called War. While war is possible,—that is to say, in any year this side of the Millennium,—there is but one sure means of safety, and that is actual independence. At this moment England is the most striking illustration of this truth. She is the most instructive warning to us, because she is the least independent and the most hated nation in the world. England and France and the United States are the three great maritime powers. We all know how much love is lost just now between England and ourselves. How is it with her ancient enemy across the

Channel? The answer is contained in the reported remark of Louis Napoleon: 'Why do the English try to provoke a war with me? They know, if I should declare war against England, that there is not an old woman in France who would not sell her last shift to furnish me with means to carry it on.' Great Britain is at this moment under the most enormous bonds to keep the peace. They are the bonds of vital dependence upon the rest of the world. — Shall I stop?" asked my watch.

"No, no; lose no time; go regularly on," answered I.

"Very well; while England sneers and rages at us, let us be warned by her. She lives by her looms; but her looms and her laborers are fed from abroad. Therefore she lies at the mercy of her enemies, and she takes care never to make friends. She snarls and shows her teeth at us. She sees us desperately fighting, and yet she can neither spring nor bite. It is the moment most favorable for her to strike, but she cannot improve it. She hopes and prays for the ruin of our government, seeing, that, if it falls from internal disease, and not from a foreign blow, her most threatening political and commercial rival is overthrown. And she does not shrink from those hopes and prayers, although she knows that the result she so ardently desires will be the establishment by military power of a huge slave-empire, a counter-civilization to that of Christianity. Fear of her life makes England false and timid. Her dependence upon other nations has compelled her to abdicate her position as the head of Saxon civilization, which is the gradual enlarging of liberty as the only permanent security of universal international prosperity and peace. Indeed, it is not denied that the tone of British opinion in regard to human slavery is radically changed. That change is the measure of the timidity and sophistication, the moral deterioration inevitably produced in any people by the consciousness of its dependence

for the means of labor and life upon other nations. The crack of the plantation-whip scares Washington no longer, but it pierces the heart of Westminster with terror.

"See how utterly mean and mortifying is her attitude toward us. John Bull looks across the highway of the world into his neighbor's house. 'D'ye see,' he mutters, 'that man chastising his son in his house yonder? Let's play that they are not related, and ask him what he means by assaulting an innocent passenger.' Then he turns to the rest of the people in the street, who know exactly how virtuous and mild John Bull is in his own family-relations, who have watched his tender forbearance with his eldest son Erin, and his long-suffering suavity with his youngest son India, and says to them, — 'To a moral citizen of the world it is very shocking to see such an insolent attack upon a peaceable person. That man is an intolerable bully. If he were smaller, I'd step over and kick him.' — Do you feel drowsy?" asked my watch.

"I was never more awake," I answered; "but you seem to me, — although, when I look at you and think of Waltham, it is the most natural thing in the world, — yet you do seem hard upon Old England, Mother England, spite of all."

"Ah!" ticked my American watch, "not even I would for a moment seem to be unjust to all that is manly and noble and friendly in England and among Englishmen. There are two nations there, as Disraeli had already said in one sense, when Gasparin said it in another. There is the sound old stock from which flowers the finest modern civilization. From that come the sweetness, the candor, the perception and sympathy of men like Mill and Cairnes and Bright. From that springs all the nobler thought of England. It is to that thought, to that spirit of lofty humanity and pure justice, that Garibaldi appeals in his address to the English people from his prison, — an appeal

which seems utterly ludicrous, if you think of it as addressed to the historic John Bull, but which is perfectly intelligible and appropriate, if you remember that Sir Philip Sidney was an Englishman as well as George IV., and that John Stuart Mill is no less English than Lord Palmerston or Russell. It is with that spirit that American civilization is truly harmonious. But there is the other, merely trading, short-sighted, selfish spirit, which is typified by the coarse John Bull of the pictures, and which has touched almost to a frenzy of despair Carlyle in the "Latter-Day Pamphlets" and Tennyson in "Maud." That is the dominant England of the hour. That is the England which lives at the mercy of rivals. And that is the England which, consequently, with feverish haste, proclaims equal belligerence between the leaders of an insurrection for the extension and fortification of slavery and the nation which defends its existence against them. That is the England whose prime-minister alleges that a friendly power has authorized an insult, while at the very moment in which he speaks he carries in his pocket the express disclaimer of that power. That is the England which incessantly taunts and reviles and belies a kindred people, whose sole fault is that they were too slow to believe their brothers parricides, and who were credulous enough to suppose that England loved not only the profit, but the principle, of Liberty under Law."

"It is very sad; but it certainly seems so," said I.

"Seems, my dear friend? nay, it is," ticked my watch, persistently. "It is the inevitable penalty of national deterioration which any people must pay that in its haste to be rich forgets to secure its actual independence. Thus Richard Cobden, the most sagacious of English statesmen, is the most unflinching apostle of peace, because he knows that England has put it out of her power to go to war. I saw you reading his late argument against a blockade. Did you

reflect that it was really an argument against war? 'How absurd,' he cries, 'that a commercial nation, which lives by imports and exports, paying for the one by the other, should, by shutting up ports in which it wishes to buy and sell, cut its own hands and feet off, and so bleed to death!' 'In a commercial nation,' says the orator, 'the system of blockade is mere suicide.'

"But a blockade may be clearly as effective a means of warfare as a cannonade. If you can cut off your enemy from all that he gives and all that he gets from without, you have taken the first great step in war. Unless he can supply himself, he must presently surrender or perish. For war is brute force. It is a process of terrible compulsion. 'Do this,' says War, 'or you shall burn, and starve, and hunger, and be shot, and die.'

"The point to be settled between the two combatants is, which can stand starving and shooting longest. If one of them depends for his food upon the sale to others of what he makes, and depends for what he makes upon what he can get from others, it is easy enough to see, that, if the other is self-supporting, his victory is sure, if he have only the means to cut off supplies. England is at the mercy of a skilful and effective blockade. No wonder her shrewdest statesman implores her to see it.

"My dear John Bull," says Cobden, 'an honorable member of your Parliament, a miller and grain-merchant, estimates that the food imported into England between September of last year and June of this year was equal to the sustenance of between three and four millions of people for a twelve-month; and his remark to me was, that, if that food had not been brought from America, all the money in Lombard Street could not have purchased it elsewhere, because elsewhere it did not exist.'

"That is the position of a nation with the hand of another upon its throat.—Do I tire you?" ticked my watch.

"Not at all. I am listening intently, and trying to see what you are coming to," I answered.

"We are coming, and very rapidly, to West Newton and the Waltham Watch-Factory," ticked my companion.

"I hope so. It was where I understood you to invite me to go," said I.

"Courage, my friend! Before we get to the factory, let us understand the reason of it. Let me finish showing you why I have a national pride in my ancestral halls, and why I think that the American flag floats over that building as appropriately as over Fort Adams or Monroe."

"I have always trusted you implicitly," I answered.

"Well, then, England is a nation whose mill grinds at the will of a neighbor. Is it wonderful that so sagacious a statesman as Cobden says that the blockade is a terrible thing for a commercial people? Take the estimate of his authority, and imagine the supply of food from this country into England stopped, and the bumptious little island necklaced with Monitors to cut off the Continental supply. Do we not hold one of her hands with our grain, and the other with our cotton? The grain she gets, but the cotton is substantially stopped; what is the consequence? Listen to Mr. Cobden. The case, he says, 'is so grave, so alarming, and presents itself to those who reflect upon what may be the state of things six months hence in such a hideous aspect, that it is apt to beget thoughts of some violent remedy.' He computes that by Christmas the Government must come to the aid of the pauper operatives, of whom there are now seven hundred and fifty thousand, a number which will then have increased to nearly a million.

"Of all nations, then, the industrial example of England is to be avoided by every sensible people. She has been willing to wear chains, because they were gold. But the pre-Millennial

nations must be able to stand alone; and we at this moment know more than ever that we must work out our own national salvation, not only without aid, which we had no reason to ask, but without sympathy, which we had every honorable right to expect. But, to be a truly independent people, we must practically prove our self-sufficiency; and at this moment patriotism shows itself not only in defending the nation against the Rebellion, but in the heartiest encouragement of every art and manufacture for which our opportunities and capacities fit us."

My watch here ticked so loudly and defiantly that I feared some neighboring passenger might have a Frodsham or Jurgensen in his pocket and feel insulted.

"A nation like ours," steadily ticked my watch, "seated upon a continent from sea to sea, with so propitious a variety of climate and with such imperial resources of every kind, if it brought all its powers to bear upon its productions and opportunities, would be absolutely invincible, because entirely independent. It need not, therefore, sit a cynic recluse on the Western sea. It need not, therefore, deny nor delay the dawn of the Millennial day, which the poet beheld, when

'The war-drum throbbed no longer, and the battle-flags were furled,

In the Parliament of man, the Federation of the world.'

"Tick, tick, tick," urged my watch. But I made no reply.

"Why, then," it continued, "do we consent to look longer to Europe for any of the essential conveniences of life? Why are our clothes not made of American cloth or of American silk? Why are our railroads not laid with American iron? Yes, and why, — pardon me, but we are very near Waltham, — why is our time not told by American watches? Tea and coffee, doubtless, we cannot grow, nor do lemons and bananas ripen in our sun. But has not the time come when every

heartly American will say, 'All that I can get here which is good enough and cheap enough for the purpose, I will not look for elsewhere; and all that I can do to develop every resource and possibility, I will do with all my heart?'

"I do not wish to dampen your enthusiasm," answered I, "but I remember a story of that friend of Southern liberty and author of the Fugitive-Slave Bill, Mason of Virginia. He appeared in the Senate during the Secession winter, in a suit of Southern-made clothes. The wool was grown and spun and woven in Virginia, and Mason wore it to show that Virginia unassisted could clothe her children. But a shrewder man than Mason quietly turned up the buttons on the Secession coat and showed upon them the stamp of a Connecticut factory."

"Have you ever found me unreasonable?" ticked my friend. "Have you ever seen even my hand tremble, as it pointed out to you so many hours in which you have been earnestly interested? I am not excited even by my own existence, and I claim nothing extravagant. There will always be some things that we may not be able to make advantageously. Absolute independence of the rest of the world is no more possible than desirable. But everything which tends to increase instead of diminishing a vital dependence is nationally dangerous. I think, if you will consider me attentively, you will agree that I ought to know that trade is everywhere controlled by positive laws; nor will any wise watch expect them to be long or willingly disregarded by the most enthusiastic patriotism. Knowing that, we do not need to go far to discover why so many important conveniences are still made for us by foreign hands. The immense and compact population of Europe compels a marvellous division of labor, whereby the detail of work is more perfected, and it also forces a low rate of wages, with which in a new country sparsely peopled like ours the manufacture of the same wares can scarcely

compete. This is the great practical difficulty; but it can be obviated in two ways. If a people assume that the fostering of its own manufactures is a cardinal necessity, it can secure that result either by the coarse process of compulsory duties upon all foreign importations, or by developing the ingenuity and skill which will so cheapen the manufacture itself as to make up the difference of outlay in wages.

"Then, if the work is as well done and as cheaply furnished" — ticked my watch, a little proudly and triumphantly.

"Then it needs only to be known, to be universally and heartily welcomed," said I. "Patriotism and the laws of trade will coincide, and there will be no excuse for depending longer upon the foreign supply."

"But the fact must be made known," ticked my watch, thoughtfully.

"It certainly must," I answered.

"Well, it is a fact that a man can get a better watch more cheaply, if he buys an American instead of a foreign one."

Friendship and gratitude inspired my reply.

"I will put my mouth to the 'Atlantic Trumpet,' — I mean 'Monthly,' — and blow a blast."

"That is not necessary; but as we are very near the station at West Newton where we leave the railroad, and as I have endeavored to show you the national importance of doing everything for ourselves that we reasonably can, you will probably interest your hearers more, if you give them a little description of your visit to my birth-place. Excuse me, but I have watched you pretty constantly for two years, and, if you will be governed by me, as you have generally been during that time, you will not undertake any very elaborate mechanical description, but say a few words merely of what you are going to see."

This sensible advice was but another proof of the accuracy of my watch.

While it was yet ticking, the train stopped at West Newton, and we stepped out upon the platform. The station nearest to the Watch-Factory is that at Waltham upon the Fitchburg Railroad; but by taking the Worcester cars to West Newton, you secure a pleasant drive of a mile or two across the country. If you can also secure, as my watch took care to do for me, the company of the resident manager of the factory, the drive is entirely pleasant and the talk full of value.

We import about five millions of dollars' worth of watches every year, mainly from England and Switzerland through France, and then pay about as much more to get them to go. Of course inquisitive Yankee ingenuity long ago asked the question, Why should we do it? If anything is to be made, why should not we make it better than anybody in the world? The answer was very evident,—because we could not compete with the skilled and poorly paid labor of Europe. But during the last war with England the question became as emphatic as it is now, and a practical answer was given in the excellent watches made at Worcester in Massachusetts, and at Hartford in Connecticut.

But these were merely prophetic protests. The best watches in use were Swiss. Four-fifths of the work in making them was done by hand in separate workshops, subject of course to the skill, temper, and conscience of the workmen. The various parts of each were then sent in to the finisher. Every watch was thus a separate and individual work. There could be no absolute precision in the parts of different watches even of the same general model; and only the best works of the best finishers were the best watches. The purchase of a watch became almost as uncertain as that of a horse, and many of the dealers might be called watch-jockeys as justly as horse-dealers horse-jockeys.

A. L. Dennison, of Maine, seems to

have been the first who conceived American watch-making as a manufacture that could hold its own against European competition. It was clear enough that to put raw and well-paid American labor into the field against European skill and low wages, with no other protection than four per cent., which was then the tariff, was folly. But why not apply the same principle to making watches that Eli Whitney applied to making fire-arms, and put machinery to do the work of men, thereby saving wages and securing uniform excellence of work? There was no reason whatever, provided you could make the machinery. Mr. Dennison supplied the idea; who would supply the means of working it out? He was an enthusiast, of course,—visionary, probably; for in all inventors the imagination must be so powerful that it will sometimes disturb the conditions essential to the practical experiment; but he interested others until the necessary tools began to appear, and enough capital being willing to try the chances, the experiment of making American watches by machinery began in Roxbury in the year 1850. After various fortunes, the manufacture passed from the original hands into those of the present company, which is incorporated by the State of Massachusetts.

“Do you think,” whispered I to my watch, as I listened to these facts, “that the experiment is still doubtful?”

My companion ticked so indignantly that my friend the manager evidently suspected what question I had asked, and he answered at once,—

“The experiment is already perfectly successful. We have had our critical moments, but”——

“But now,” proudly ticked my watch, “now we have weathered the Cape Horn of adversity and doubt, and ride secure upon the deep Pacific sea of prosperity and certainty. You had better blow a note like that through your Atlantic Bugle. Set your tune high, and play it up loud and lively.”

"It seems to me," answered I, "that the tune plays itself. There is no need of puffing at the instrument."

While my watch was thus pleasantly jesting, we had passed through a low pine wood and come out upon the banks of the Charles River. Just before us, upon the very edge of a river-basin, was a low two-story building full of windows, and beyond, over the trees, were spires. They were the steeples of Waltham, and the many-windowed building was the factory of the American Watch Company. It stands upon a private road opened by the Company in a domain of about seventy acres belonging to them. The building thus secures quiet and freedom from dust, which are essential conditions of so delicate and exquisite a manufacture.

The counting-room, which you enter first, is cheerful and elegant. A new building, which the Company is adding to the factory, will give them part of the ampler room the manufacture now demands; and within the last few months the Company has absorbed the machinery and labor of a rival company at Nashua, which was formed of some of the graduate workmen of Waltham, but which was not successful. Every room in the factory is full of light. The benches of polished cherry, the length of all of them together being about three-quarters of a mile, are ranged along the sides of the rooms, from the windows in which the prospect is rural and peaceful. There is a low hum, but no loud roar or jar in the building. There is no unpleasant smell, and all the processes are so neat and exquisite that an air of elegance pervades the whole.

The first impression, upon hearing that a watch is made by machinery, is, that it must be rather coarse and clumsy. No machine so cunning as the human hand, we are fond of saying. But, if you will look at this gauge, for instance, and then at any of these dainty and delicate machines upon the benches, miniature lathes of steel, and contrivances which combine the skill of in-

numerable exquisite fingers upon single points, you will feel at once, that, when the machinery itself is so almost poetic and sensitive, the result of its work must be correspondingly perfect.

My friend — not the watch, but the watchmaker — said quietly, "By your leave," and, pulling a single hair from my head, touched it to a fine gauge, which indicated exactly the thickness of the hair. It was a test of the twenty-five hundredth part of an inch. But there are also gauges graduated to the ten-thousandth part of an inch. Here is a workman making screws. Can you just see them? That hardly visible point exuding from the almost imperceptible hole is one of them. A hundred and fifty thousand of them make a pound. The wire costs a dollar; the screws are worth nine hundred and fifty dollars. The magic touch of the machine makes that wire nine hundred and fifty times more valuable. The operator sets them in regular rows upon a thin plate. When the plate is full, it is passed to another machine, which cuts the little groove upon the top of each, — and of course exactly in the same spot. Every one of those hundred and fifty thousand screws in every pound is accurately the same as every other, and any and all of them, in this pound or any pound, any one of the millions or ten millions of this size, will fit precisely every hole made for this sized screw in every plate of every watch made in the factory. They are kept in little glass phials, like those in which the homœopathic doctors keep their pellets.

The fineness and variety of the machinery are so amazing, so beautiful, — there is such an exquisite combination of form and movement, — such sensitive teeth and fingers and wheels and points of steel, — such fairy knives of sapphire, with which King Oberon the First might have been beheaded, had he insisted upon levying dew-taxes upon primroses without the authority of his elves, — such smooth cylinders, and flying points so rapidly revolving that they seem per-

fectly still,—such dainty oscillations of parts with the air of intelligent consciousness of movement,—that a machinery so extensive in details, so complex, so harmonious, at length entirely magnetizes you with wonder and delight, and you are firmly persuaded that you behold the magnified parts of a huge brain in the very act of thinking out watches.

In various rooms, by various machines, the work of perfecting the parts from the first blank form cut out of Connecticut brass goes on. Shades of size are adjusted by the friction of whirling cylinders coated with diamond dust. A flying steel point touched with diamond paste pierces the heart of the “jewels.” Wheels rimmed with brass wisps hum steadily, as they frost the plates with sparkling gold. Shavings of metal peel off, as other edges turn, so impalpably fine that five thousand must be laid side by side to make an inch. But there is no dust, no unseemly noise. All is cheerful and airy, the faces of the workers most of all. You pass on from point to point, from room to room. Every machine is a day’s study and a life’s admiration, if you could only tarry. No wonder the director says to me, as we move on, that his whole consciousness is possessed by the elaborate works he superintends.

He opens a door, while we speak, and you would not be in the least surprised, in the exalted condition to which the wonderful spectacle has brought you, to hear him say, “In this room we keep the Equator.” In fact, as the door opens, and the gush of hot air breathes out upon your excited brain, it seems to you as if it undoubtedly were the back-door to—the Tropics. It is the dial-room, in which the enamel is set. The porcelain is made in London. It is reduced to a paste in this room, and fused upon thin copper plates at white heat. When cooled, it is ground off smoothly, then baked to acquire a smooth glaze. It is then ready for painting with the figures.

When all the pieces of the watch-movement are thus prepared, they are gathered in sets, and carried to the putting-up room, where each part is thoroughly tested and regulated. The pieces move in processions of boxes, each part by itself; and each watch, when put together, is as good as every other. In an old English lever-watch there are between eight and nine hundred pieces. In the American there are but about a hundred and twenty parts. My friend the director says, that, if you put a single American against a single European watch, the foreign may vary a second less in a certain time; but if you will put fifty or a hundred native against the same number of foreign watches, the native group will be uniformly more accurate. In the case of two watches of exactly the same excellence, the regulator of one may be adjusted to the precise point, while that of the other may imperceptibly vary from that point. But that is a chance. The true test is in a number.

“If now we add,” ticked the faithful friend in my pocket, “that watch-movements of a similar grade without the cases are produced here at half the cost of the foreign, does n’t it seem to you that we have Lancashire and Warwickshire in England and Locle and La Chaux de Fond in Switzerland upon the hip?”

“It certainly does,” I answered,—for what else could I say?

Five different sizes of watches are made at Waltham. The latest is the Lady’s Watch, for which no parent or lover need longer go to Geneva. And the affectionate pride with which the manager took up one of the finest specimens of the work and turned it round for me to see was that of a parent showing a precious child.

While westrolled through every room, the workers were not less interesting to see than the work. There are now about three hundred and fifty of them, of whom nearly a third are women. Scarcely twenty are foreigners, and

they are not employed upon the finest work. Of course, as the machinery is peculiar to this factory, the workers must be specially instructed. The foremen are not only overseers, but teachers; and I do not often feel myself to

be in a more intelligent and valuable society than that which surrounded me, a wondering, staring, smiling, inquiring, utterly unskilful body in the ancestral halls of my tried friend and trusty counsellor, The American Watch.

---

### BENJAMIN BANNEKER, THE NEGRO ASTRONOMER.

IN these days, when strong interests, embodied in fierce parties, are clashing, one recalls the French proverb of those who make so much noise that you cannot hear God thunder. It does not take much noise to drown the notes of a violin; but go to the hill a fourth of a mile off, and the noises shall die away at its base, whilst the music shall be heard. Those who can remove themselves away from and above the plane of party-din can hear God's modulated thunder in the midst of it, uttering ever a "certain tune and measured music." And such can hear now the great voice at the sepulchre's door of a race, saying, Come forth! This war is utterly inexplicable except as the historic method of delivering the African race in America from slavery, and this nation from the crime and curse inevitably linked therewith in the counsels of God, which are the laws of Nature. If the friends of freedom in the Government do not understand this, it is plain enough that the myrmidons of slavery throughout the land understand it. And hence it is that we are witnessing their unremitting efforts to exasperate the prejudices of the vulgar against the negro, and to prove degradation and slavery to be his normal condition. They point to his figure as sculptured on ancient monuments, bearing chains, and claim that his enslavement is lawful, as immemorial custom; but as well point to the brass collars on our Saxon forefathers' necks to prove *their* en-

slavement lawful. The fact that slavery belonged to a patriarchal age is the very reason why it is impracticable in a republican age,—as its special guardians in this country seem to have discovered. But this question is now scarcely actual. The South, by its first blow against the Union and the Constitution, whose neutrality toward it was its last and only protection from the spirit of the age, did, like the simple fisherman, unseal the casket in which the Afreet had been so long dwarfed. He is now escaping. Thus far, indeed, he is so much escaped force; for he might be bearing our burdens for us, if we only rubbed up the lamp which the genie obeys. But whether we shall do this or not, it is very certain that he is now emerging from the sea and the casket, and into it will descend no more. Henceforth the negro is to take his place in the family of races; and no studies can be more suitable to our times than those which recognize his special capacity.

The questions raised by military exigencies have brought before the public the many interesting facts drawn from the history of Hayti and from our own Revolution, showing the heroism of the negro, though we doubt whether they can surpass the stories of Tatnall, Small, and others, which have led a high European authority to observe that in this war no individual heroism among the whites has equalled that of the blacks. But the forthcoming social

questions concerning the negro will be even more exciting than the military. What are we to expect from the unsealed Afreet, — good or evil? It was whilst studying in this direction that I came upon the few facts which relate to Benjamin Banneker, — facts which, though not difficult of access, are scarcely known beyond the district in Maryland where, on the spot where he was born, his unadorned grave receives now and then a visit from some pilgrim of his own race who has found out the nobleness which Jefferson recognized and Condorcet admired.

Benjamin Banneker was born in Baltimore County, near the village of Elliott's Mills, in the year 1732. There was not a drop of the white man's blood in his veins. His father was born in Africa, and his mother's parents were both natives of Africa. What genius he had, then, must be credited to that race. Benjamin's mother was a remarkable woman, and of a remarkable family. Her name was Morton, before marriage, and a nephew of hers, Greenbury Morton, was gifted with a lively and impetuous eloquence which made its mark in his neighborhood. Of him it is related that he once came to a certain election-precinct in Baltimore County to deposit his vote; for, prior to the year 1809, negroes with certain property-qualifications voted in Maryland. It was in this year, in which the law restricting the right of voting to free whites was passed, that Morton, who had not heard of its passage, came to the polls. When his vote was refused, Morton in a state of excitement took his stand on a door-step, and was immediately surrounded by the crowd, whom he addressed in a strain of passionate and prophetic eloquence which bore all hearts and minds with him. He warned them that the new law was a step backward from the standard which their fathers had raised in the Declaration, and which they had hoped would soon be realized in universal freedom; that that step, unless retraced, would

end in bitter and remorseless revolutions. The crowd was held in breathless attention, and none were found to favor the new law.

This man, we have said, was the nephew of Benjamin's mother. She was a woman of remarkable energy, and after she was seventy years of age was accustomed to run down the chickens she wished to catch. Her husband was a slave when she married him, but it was a very small part of her life's task to purchase his freedom. Together they soon bought a farm of one hundred acres, which we find conveyed by Richard Gist to Robert Bannaky, (as the name was then spelt,) and Benjamin Bannaky, his son, (then five years old,) on the tenth of March, 1737, for the consideration of seven thousand pounds of tobacco. The region in which Benjamin was born was almost a wilderness; for in 1732 Elkridge Landing was of more importance than Baltimore; and even in 1754 this city consisted only of some twenty poor houses straggling on the hills to the right of Jones's Falls. The residence of the Bannekers was ten miles into the wilderness from these.

It was under these unpromising circumstances that little Benjamin grew up, his destiny being apparently nothing more than to work on the little farm beside his poor and ignorant parents. When he was approaching manhood, he went, in the intervals of toil, to an obscure and remote country-school; for, until the cotton-gin made negroes too valuable on the animal side for the human side to be allowed anything so perilous as education, there were to be found here and there in the South fountains whereat even negroes might slake their thirst for learning. At this school Benjamin acquired a knowledge of reading and writing, and advanced in arithmetic as far as "Double Position." Beyond these rudiments he was entirely his own teacher. After leaving school he had to labor constantly for his own support; but he

lost nothing of what he had acquired. It is a frequent remark that up to a certain point the negroes learn even more rapidly than white children under the same teaching, but that afterward, in the higher branches, they are slow, and, some maintain, incapable. Young Banneker had no books at all, but in the midst of his labor he so improved upon and evolved what he had gained in arithmetic that his intelligence became a matter of general observation. He was such an acute observer of the natural world, and had so diligently observed the signs of the times in society, that it is very doubtful whether at forty years of age this African had his superior in Maryland.

Perhaps the first wonder amongst his comparatively illiterate neighbors was excited, when, about the thirtieth year of his age, Benjamin made a clock. It is probable that this was the first clock of which every portion was made in America; it is certain that it was as purely his own invention as if none had ever been made before. He had seen a watch, but never a clock, such an article not being within fifty miles of him. The watch was his model. He was a long time at work on the clock,—his chief difficulty, as he used often to relate, being to make the hour, minute, and second hands correspond in their motion. But at last the work was completed, and raised the admiration for Banneker to quite a high pitch among his few neighbors.

The making of the clock proved to be of great importance in assisting the young man to fulfil his destiny. It attracted the attention of the Ellicott family, who had just begun a settlement at Ellicott's Mills. They were well-educated men, with much mechanical knowledge, and some of them Quakers. They sought out the ingenious negro, and he could not have fallen into better hands. It was in 1787 that Benjamin received from Mr. George Ellicott Mayer's "Tables," Ferguson's "Astronomy," and Leadbetter's "Lunar Tables." Along

with these, some astronomical instruments, also, were given him. Mr. Ellicott, prevented from telling Benjamin anything concerning the use of the instruments for some time after they were given, went over to repair this omission one day, but found that the negro had discovered all about them and was already quite independent of instruction. From this time astronomy became the great object of Banneker's life, and in its study he almost disappeared from the sight of his neighbors. He was unmarried, and lived alone in the cabin and on the farm which he had inherited from his parents. He had still to labor for his living; but he so simplified his wants as to be enabled to devote the greater portion of his time to astronomical studies. He slept much during the day, that he might the more devotedly observe at night the heavenly bodies whose laws he was slowly, but surely, mastering.

And now he began to have a taste of that persecution to which every genius under similar circumstances is subject. He was no longer seen in the field, where formerly his constancy had gained him a reputation for industry, and some who called at his cabin during the day-time found him asleep; so he began to be spoken of as a lazy fellow, who would come to no good, and whose age would disappoint the promise of his youth. There was a time when this so excited his neighbors against him that he had serious fears of disturbance. A memorandum in his hand-writing, dated December 18, 1790, states:—

"—— informed me that —— stole my horse and great-coat, and that the said —— intended to murder me when opportunity presented. —— gave me a caution to let no one come into my house after dark."

The names were originally written in full; but they were afterward carefully cancelled, as though Banneker had reflected that it was wrong to leave on record an unauthenticated assertion against an individual, which, if untrue,

might prejudice him by the mere fact that it had been made.

Very soon after the possession of the books already mentioned, Banneker determined to compile an almanac, that being the most familiar use that occurred to him of the information he had acquired. To make an almanac was a very different thing then from what it would be now, when there is an abundance of accurate tables and rules. Banneker had no aid whatever from men or tables; and Mr. George Elicott, who procured some tables and took them to him, states that he had advanced far in the preparation of the logarithms necessary for his purpose. A memorandum in his calculations at this time thus corrects an error in Ferguson's Astronomy:—

"It appears to me that the wisest men may at times be in error: for instance, Dr. Ferguson informs us, that, when the sun is within  $12^\circ$  of either node at the time of full, the moon will be eclipsed; but I find, that, according to his method of projecting a lunar eclipse, there will be none by the above elements, and yet the sun is within  $11^\circ 46' 11''$  of the moon's ascending node. But the moon being in her apogee prevents the appearance of this eclipse."

Another memorandum makes the following corrections:—

"Errors that ought to be corrected in my Astronomical Tables are these:— 2d vol. Leadbetter, p. 204, when  $\frac{1}{2}$  anomaly is  $4^\circ 30'$ , the equation  $3^\circ 30' 41''$  ought to have been  $3^\circ 28' 41''$ . In  $\S$  equation, p. 155, the logarithm of his distance from  $\odot$  ought to have been 6 in the second place from the index, instead of 7, that is, from the time that his anomaly is  $3^\circ 24'$  until it is  $4^\circ 0'$ ."

Both Ferguson and Leadbetter would have been amazed, had they been informed that their elaborate works had been reviewed and corrected by a negro in the then unheard-of valley of the Patapsco.

The first almanac prepared by Banneker for publication was for the year

1792. By this time his acquirements had become generally known, and amongst those who were attracted by them was James McHenry, Esq. Mr. McHenry wrote to Goddard and Angell, then the almanac-publishers of Baltimore, and procured the publication of this work, which contained, from the pen of Mr. McHenry, a brief notice of Banneker. In their editorial notice Goddard and Angell say, "They feel gratified in the opportunity of presenting to the public through their press what must be considered as an extraordinary effort of genius,—a complete and accurate Ephemeris for the year 1792, calculated by a sable son of Africa," etc. And they further say that "they flatter themselves that a philanthropic public, in this enlightened era, will be induced to give their patronage and support to this work, not only on account of its intrinsic merits, (it having met the approbation of several of the most distinguished astronomers of America, particularly the celebrated Mr. Rittenhouse,) but from similar motives to those which induced the editors to give this calculation the preference, the ardent desire of drawing modest merit from obscurity, and controverting the long-established illiberal prejudice against the blacks."

Banneker was himself entirely conscious of the bearings of his case upon the position of his people; and though remarkable for an habitual modesty, he solemnly claimed that his works had earned respect for the African race. In this spirit he wrote to Thomas Jefferson, then Secretary of State under Washington, transmitting a manuscript copy of his almanac. The letter is a fervent appeal for the down-trodden negro, and a protest against the injustice and inconsistency of the United States toward that color. Mr. Jefferson's reply is as follows:—

"Philadelphia, Pa., August 30, 1791.

"SIR,—I thank you sincerely for your letter of the 19th instant, and for

the almanac it contained. Nobody wishes more than I do to see such proofs as you exhibit, that Nature has given to our black brethren talents equal to those of the other colors of men, and that the appearance of a want of them is owing only to the degraded condition of their existence both in Africa and America. I can add with truth that no one wishes more ardently to see a good system commenced for raising the condition both of their body and mind to what it ought to be, as fast as the imbecility of their present existence, and other circumstances which cannot be neglected, will admit. I have taken the liberty of sending your almanac to Monsieur de Condorcet, Secretary of the Academy of Sciences at Paris, and Member of the Philanthropic Society, because I considered it a document to which your whole color had a right for their justification against the doubts which have been entertained of them.

"I am, with great esteem, Sir,

"Your most obedient serv't,

"THO. JEFFERSON."

When his first almanac was published, Banneker was fifty-nine years of age, and had received tokens of respect from all the scientific men of the country. The commissioners appointed after the adoption of the Constitution in 1789 to run the lines of the District of Columbia invited the presence and assistance of Banneker, and treated him as an equal. They invited him to take a seat at their table; but he declined, and requested a separate table.

Banneker continued to calculate and publish almanacs until the year 1802. Besides numerous valuable astronomical and mathematical notes found amongst his papers are observations of passing events, showing that he had the mind of a philosopher. For instance:—

"27th Aug. 1797. Standing at my door, I heard the discharge of a gun, and in four or five seconds of time the small shot came rattling about me, one or two of which struck the house; which

plainly demonstrates that the velocity of sound is greater than that of a cannon-bullet."

"23d Dec. 1790. About 3 o'clock A. M., I heard a sound and felt a shock like unto heavy thunder. I went out, but could not observe any cloud. I therefore conclude it must be a great earthquake in some part of the globe."

In April, 1800, he writes:—

"The first great locust year that I can remember was 1749. I was then about seventeen years of age, when thousands of them came creeping up the trees. I imagined they came to destroy the fruit of the earth, and would occasion a famine in the land. I therefore began to destroy them, but soon saw that my labor was in vain. Again, in the year 1766, seventeen years after their first appearance, they made a second. I then, being about thirty-four years of age, had more sense than to endeavor to destroy them, knowing they were not so pernicious to the fruit as I had imagined. Again, in the year 1783, which was seventeen years later, they made their third appearance to me; and they may be expected again in 1800. The female has a sting in her tail as sharp and hard as a thorn, with which she perforates the branches of trees, and in the holes lays eggs. The branch soon dies and falls. Then the egg, by some occult cause, immerses a great depth into the earth, and there continues for the space of seventeen years, as aforesaid."

The following is worthy of Pliny:—

"In the month of January, 1797, on a pleasant day for the season, I observed my honey-bees to be out of their hives, and they seemed to be very busy, excepting one hive. Upon examination, I found all the bees had evacuated this hive, and left not a drop behind them. On the 9th of February ensuing, I killed the neighboring hives of bees, and found a great quantity of honey, considering the season,—which I imagine the stronger had taken from the weaker, and the weaker had pur-

sued them to their home, resolved to be benefited by their labor, or die in the contest."

Mr. Benjamin H. Ellicott, who was a true friend of Banneker, and collected from various sources all the facts concerning him, wrote in a letter as follows:—

"During the whole of his long life he lived respectably and much esteemed by all who became acquainted with him, but more especially by those who could fully appreciate his genius and the extent of his acquirements. Although his mode of life was regular and extremely retired,—living alone, having never married, cooking his own victuals and washing his own clothes, and scarcely ever being absent from home,—yet there was nothing misanthropic in his character; for a gentleman who knew him thus speaks of him: 'I recollect him well. He was a brave-looking, pleasant man, with something very noble in his appearance. His mind was evidently much engrossed in his calculations; but he was glad to receive the visits which we often paid him.' Another writes: 'When I was a boy I became very much interested in him, as his manners were those of a perfect gentleman: kind, generous, hospitable, humane, dignified, and pleasing, abounding in information on all the various

subjects and incidents of the day, very modest and unassuming, and delighting in society at his own house. I have seen him frequently. His head was covered with a thick suit of white hair, which gave him a very dignified and venerable appearance. His dress was uniformly of superfine drab broadcloth, made in the old style of a plain coat, with straight collar and long waistcoat, and a broad-brimmed hat. His color was not jet-black, but decidedly negro. In size and personal appearance, the statue of Franklin at the library in Philadelphia, as seen from the street, is a perfect likeness of him. Go to his house when you would, either by day or night, there was constantly standing in the middle of the floor a large table covered with books and papers. As he was an eminent mathematician, he was constantly in correspondence with other mathematicians in this country, with whom there was an interchange of questions of difficult solution.'"

Banneker died in the year 1804, beloved and respected by all who knew him. Though no monument marks the spot where he was born and lived a true and high life and was buried, yet history must record that the most original scientific intellect which the South has yet produced was that of the pure African, Benjamin Banneker.

---

### THE SLEEPING SENTINEL.

WHEN the great Theban, in his midnight tramp,  
A sleeping guard beside the postern saw,  
He slew him on the instant, that the camp  
Might read in blood a soldier's swerveless law.

"Blame not your General!"—pointing to the slain,—  
The wise, severe Epaminondas said,—  
"I was not cruel, comrades, for 't is plain  
I only left him, as I found him, dead!"

## IRON-CLAD SHIPS AND HEAVY ORDNANCE.

THE new system of naval warfare which characterizes the age was proposed by John Stevens of Hoboken during the War of 1812, recommended by Paixhans in 1821, made the subject of official and private experiment here and in Europe during the last ten years especially, subjected to practical test at Kinburn in 1855, recognized then by France and England in the commencement of iron-clad fleets, first practised by the United States Government in the capture of Fort Henry, and at last established and inaugurated not only in fact, but in the principle and direction of progress, by the memorable action of the ninth of March, 1862, in the destruction of the wooden sailing-frigates Cumberland and Congress by the steam-ram Merrimack, and the final discomfiture of that powerful and heavily armed victor by the turreted, iron, two-gun Monitor.

The consideration of iron-clad vessels involves that of armor, ordnance, projectiles, and naval architecture.

## ARMOR.

*Material.* In 1861, the British iron-plate committee fired with 68-pounders at many varieties of iron, cast-steel and puddled-steel plates, and combinations of hard and soft metals. The steel was too brittle, and crumbled, and the targets were injured in proportion to their hardness. An obvious conclusion from all subsequent firing at thick iron plates was, that, to avoid cracking on the one hand, and punching on the other, wrought-iron armor should resemble copper more than steel, except that it should be elastic, although not necessarily of the highest tensile strength. Copper, however, proved much too soft. The experiments of Mr. E. A. Stevens of Hoboken, with thick plates, confirm this conclusion. But for lam-

inated armor, (several thicknesses of thin plates,) harder and stronger iron offers greater resistance to shot, and steel crumbles less than when it is thicker. The value of hard surfaces on inclined armor will be alluded to.

*Solid and Laminated Armor compared.*

*Backing.* European experimenters set out upon the principle that the resistance of plates is nearly as the square of their thickness, — for example, that two 2-inch plates are but half as strong as one 4-inch plate; and the English, at least, have never subjected it to more than one valuable test. During the last year, a 6-inch target, composed of  $\frac{5}{8}$ -inch boiler-plates, with a  $1\frac{1}{2}$ -inch plate in front, and held together by alternate rivets and screws 8 inches apart, was completely punched; and a 10-inch target, similarly constructed, was greatly bulged and broken at the back by the 68-pounder (8 inch) smooth-bore especially, and the 100-pounder rifle at 200 yards, — guns that do not greatly injure the best solid  $4\frac{1}{2}$ -inch plates at the same range. On the contrary, a 124-pounder (10 inch) round-shot, having about the same penetrating power, as calculated by the ordinary rule, fired by Mr. Stevens in 1854, but slightly indented, and did not break at the back, a  $6\frac{3}{8}$ -inch target similarly composed. All the experiments of Mr. Stevens go to show the superiority of laminated armor. Within a few months, official American experiments have confirmed this theory, although the practice in the construction of ships is divided. The Roanoke's plates are solid; those of the Monitor class are laminated. Solid plates, generally  $4\frac{1}{2}$  inches thick and backed by 18 inches of teak, are exclusively used in Europe. Now the resistance of plates to punching in a machine is directly as the sheared area, that is to say, as the depth and the diameter of the hole. But, the argument is, in

this case, and in the case of laminated armor, the hole is cylindrical, while in the case of a thick armor-plate it is conical, — about the size of the shot, in front, and very much larger in the rear, — so that the sheared or fractured area is much greater. Again, forged plates, although made with innumerable welds from scrap which cannot be homogeneous, are, as compared with rolled plates made with few welds from equally good material, notoriously stronger, because the laminæ composing the latter are not thoroughly welded to each other, and they are therefore a series of thin plates. On the whole, the facts are not complete enough to warrant a conclusion. It is probable that the heavy English machinery produces better-worked thick plates than have been tested in America, and that American iron, which is well worked in the *thin* plate used for laminated armor, is better than English iron; while the comparatively high velocities of shot used in England are more trying to thin plates, and the comparatively heavy shot in America prove most destructive to solid plates. So that there is as yet no common ground of comparison. The cost of laminated armor is less than half that of solid plates. Thin plates, breaking joints, and bolted to or through the backing, form a continuous girder and add vastly to the strength of a vessel, while solid blocks add no such strength, but are a source of strain and weakness. In the experiments mentioned, there was no wooden backing behind the armor. It is hardly possible, — in fact, it is nowhere urged, — that elastic wooden backing prevents injury to the armor in any considerable degree. Indeed, the English experiments of 1861 prove that a rigid backing of masonry — in other words, more armor — increases the endurance of the plates struck. Elastic backing, however, deadens the blow upon the structure behind it, and catches the iron splinters; it is, therefore, indispensable in ships.

*Vertical and Inclined Armor.* In England, in 1860, a target composed of 4½

inch plates backed with wood and set at 38° from the horizon was injured about one-half as much by round 68-pounder shot as vertical plates of the same thickness would have been. In 1861, a 3½ plate at 45° was more injured by elongated 100-pounder shot than a 4½ vertical plate, both plates having the same backing and the weights of iron being equal for the same vertical height. When set at practicable angles, inclined armor does not glance flat-fronted projectiles. Its greater cost, and especially the waste of room it occasions in a ship, are practically considered in England to be fatal objections. The result of Mr. Stevens's experiments is, substantially, that a given thickness of iron, measured on the line of fire, offers about equal resistance to shot, whether it is vertical or inclined. Flat-fronted or punch shot will be glanced by armor set at about 12° from the horizon. A hard surface on the armor increases this effect; and to this end, experiments with Franklinite are in progress. The inconvenience of inclined armor, especially in sea-going vessels, although its weight is better situated than that of vertical armor, is likely to limit its use generally.

*Fastening Armor.* A series of thin plates not only strengthen the whole vessel, but fasten each other. All methods of giving continuity to thick plates, such as tonguing and grooving, besides being very costly, have proved too weak to stand shot, and are generally abandoned. The *fastenings* must therefore be stronger, as each plate depends solely on its own; and the resistance of plates must be decreased, either by more or larger bolt-holes. The working of the thick plates of the European vessels Warrior and La Gloire, in a sea-way, is an acknowledged defect. There are various practicable plans of fastening bolts to the backs of plates, and of holding plates between angle-irons, to avoid boring them through. It is believed that plates will ultimately be welded. Boiler-joints have been welded rapidly and

uniformly by means of light furnaces moving along the joint, blowing a jet of flame upon it, and closely followed by hammers to close it up. The surfaces do not oxidize when enveloped in flame, and the weld is likely to be as strong as the solid plate. Large plates prove stronger than small plates of equally good material. English  $4\frac{1}{2}$ -inch armor-plates are generally  $3\frac{1}{2}$  feet wide and 12 to 24 feet long. American  $4\frac{1}{2}$ -inch plates are from 2 to 3 feet wide and rarely exceed 12 feet in length. Armor composed of light bars, like that of the Galena, is very defective, as each bar, deriving little strength from those adjacent, offers only the resistance of its own small section. The cheapness of such armor, however, and the facility with which it can be attached, may compensate for the greater amount required, when weight is not objectionable. The 14-inch and 10-inch targets, constructed, without backing, on this principle, and tested in England in 1859 and 1860, were little damaged by 68- and 100-pounders.

The necessary thickness of armor is simply a question of powder, and will be further referred to under the heads of Ordnance and Naval Architecture.

#### ORDNANCE AND PROJECTILES.

*Condition of Greatest Effect.* It is a well-settled rule, that the penetration of projectiles is proportionate directly to their weight and diameter, and to the square of their velocity. For example, the  $10\frac{1}{2}$ -inch Armstrong 150-pound shot, thrown by 50 pounds of powder at 1,770 feet per second, has nearly twice the destructive effect upon striking, and four times as much upon passing its whole diameter through armor, as the 15-inch 425-pound shot driven by the same powder at 800 feet. The American theory is, that very heavy shot, at necessarily low velocities, with a given strain on the gun, will do more damage by racking and straining the whole structure than lighter and faster

shot which merely penetrate. This is not yet sufficiently tested. The late remarkable experiments in England—firing 130- and 150-pound Whitworth steel shells, holding 3 to 5 pounds of powder, from a 7-inch Armstrong gun, with 23 to 27 pounds of powder, through the Warrior target, and bursting them in and beyond the backing—certainly show that large calibres are not indispensable in fighting iron-clads. A destructive blow requires a *heavy charge of powder*; which brings us to

*The Strain and Structure of Guns, and Cartridges.* The problem is, 1st, to construct a gun which will stand the heaviest charge; 2d, to reduce the strain on the gun without reducing the velocity of the shot. It is probable that powder-gas, from the excessive suddenness of its generation, exerts a percussive as well as a statical pressure, thus requiring great elasticity and a certain degree of hardness in the gun-metal, as well as high tensile strength. Cast-iron and bronze are obviously inadequate. Solid wrought-iron forgings are not all that could be desired in respect of elasticity and hardness, but their chief defect is want of homogeneity, due to the crude process of puddling, and to their numerous and indispensable welds. Low cast-steel, besides being elastic, hard, tenacious, and homogeneous, has the crowning advantage of being produced in large masses without flaw or weld. Krupp, of Prussia, casts ingots of above 20 tons' weight, and has forged a cast-steel cannon of 9 inches bore. One of these ingots, in the Great Exhibition, measured 44 inches in diameter, and was uniform and fine-grained throughout. His great success is chiefly due to the use of manganian iron, (which, however, is inferior to the Franklinite of New Jersey, because it contains no zinc,) and to skill in heating the metal, and to the use of heavy hammers. His heaviest hammer weighs 40 tons, falls 12 feet, and strikes a blow which does not draw the surface like a light hammer, but compresses the

whole mass to the core. Krupp is now introducing the Bessemer process for producing ingots of any size at about the cost of wrought-iron. These and other makes of low-steel have endured extraordinary tests in the form of small guns and other structures subject to concussion and strain; and both the theory and all the evidence that we have promise its superiority for gun-metal. But another element of resistance is required in guns with thick walls. The explosion of the powder is so instantaneous that the exterior parts of the metal do not have time to act before the inner parts are strained beyond endurance. In order to bring all parts of a great mass of metal into simultaneous tension, Blakely and others have hooped an inner tube with rings having a successively higher initial tension. The inner tube is therefore under compression, and the outer ring under a considerable tension, when the gun is at rest, but all parts are strained simultaneously and alike when the gun is under pressure. The Parrott and Whitworth cannon are constructed on this principle, and there has been some practice in winding tubes with square steel wire to secure the most uniform gradation of tension at the least cost. There is some difficulty as yet in fastening the wire and giving the gun proper longitudinal strength. Mr. Wiard, of New York, makes an ingenious argument to show that large cannon burst from the expansion of the inner part of the gun by the heat of frequent successive explosions. In this he is sustained to some extent by Mr. Mallet, of Dublin. The greater the enlargement of the inner layer of metal, the less valuable is the above principle of initial tension. In fact, placing the inner part of the gun in initial tension and the outer part in compression would better resist the effect of internal heat. But Mr. Wiard believes that the *longitudinal* expansion of the inner stratum of the gun is the principal source of strain. A gun made of annular tubes meets this part of the

difficulty; for, if the inner tube is excessively heated, it can elongate and slip a little within those surrounding it, without disturbing them. In fact, the inner tube of the Armstrong gun is sometimes turned within the others by the inertia of the rifled projectile. On the whole, then, hooping an inner steel tube with successively tighter steel rings, or, what is better, tubes, is the probable direction of improvement in heavy ordnance. An inner tube of iron, cast hollow on Rodman's plan, so as to avoid an inherent rupturing strain, and hooped with low-steel without welds, would be cheaper and very strong. An obvious conclusion is, that perfect elasticity in the metal would successfully meet all the foregoing causes of rupture.

In America, where guns made entirely of cast-iron, and undoubtedly the best in the world for horizontal shell-firing, are persisted in, though hardly adequate to the heavy charges demanded by iron-clad warfare, the necessity of decreasing the strain on the gun without greatly reducing the velocity of the shot has become imperative. It would be impossible even to recapitulate the conflicting arguments of the experts on this subject, within the limits of this paper. It does appear from recent experiments, however, that this result can be accomplished by compressing the powder, so that, we will suppose, it burns slowly and overcomes the inertia of the shot before the whole mass is ignited; and also by leaving an air-space around the cartridge, into which the gases probably expand while the inertia of the shot is being overcome, thus avoiding the excessive blow upon the walls of the gun during the first instant of the explosion. Whatever the cause may be, the result is of the highest importance, not only as to cast-iron guns, but as to all ordnance, and warrants the most earnest and thorough investigation. The principles of the Armstrong gun differ in some degree from all those mentioned, and will be better referred to under the head of

*Heavy Ordnance Described.* The Armstrong gun is thus fabricated. A long bar of iron, say 3 by 4 inches in section, is wound into a close coil about 2 feet long and of the required diameter, — say 18 inches. This is set upon end at a welding heat under a steam-hammer and “upset” into a tube which is then recessed in a lathe on the ends so as to fit into other tubes. Two tubes set end to end are heated to welding, squeezed together by a heavy screw passing through them, and then hammered lightly on the outside without a mandrel. Other short tubes are similarly added. Five tubes of different lengths and diameters are turned and bored and shrunk over one another, without successively increasing tension, however, to form a gun. The breech-end of the second tube from the bore is forged solid so that its grain will run parallel with the bore and give the gun longitudinal strength. Both the wedge and the screw breech-loading apparatus are employed on guns of 7 inches bore (110-pounders) and under. It will thus be seen that the defects of large solid forgings are avoided; that the iron may be well worked before it is formed into a gun; and that its greatest strength is in the direction of the greatest strain; and on the other hand, that the gun is weak longitudinally and excessively costly, (the 7-inch gun costs \$4,000, and the 10½-inch, \$9,000,) and that the material, although strong and pretty trustworthy in the shape of bars, has insufficient elasticity and hardness. Still, it is a formidable gun, especially when relieved of the weak and complex breech-loading apparatus, and used with a better system of rifling and projectiles than Armstrong’s. The 110-pounder Armstrong rifle has 99½ inches length and 7 inches diameter of bore, 27 inches maximum diameter, and weighs 4½ tons. The “300-pounder” smooth-bore has 11 feet length and 10½ inches diameter of bore, 38 inches maximum diameter, and weighs 10½ tons. The Mersey Iron-Works guns are of wrought-iron, and

are forged solid like steamboat-shafts, or hollow by laying up staves into the form of a barrel and welding layers of curved plates upon them until the whole mass is united. But few of these guns have been fabricated. The most remarkable of them are, 1st, the Horsfall smooth-bore, of 13 inches bore, 44 inches maximum diameter, and 24 tons weight, — price, \$12,500; 2d, the “Alfred” rifle, in the recent Exhibition, of 10 inches bore, — price, \$5,000; 3d, the 12-inch smooth-bore in the Brooklyn Navy-Yard, which, though very light, has fired a double 224-pound shot with 45 pounds of powder: if properly hooped, it would make the most formidable gun in America. Blakely has constructed for Russia two 13-inch smooth-bore guns, 15 feet long and 47 inches maximum diameter, of cast-iron hooped with steel: price, \$10,000 each. He has also fabricated many others of large calibre, on the principles before mentioned. The 15-inch Rodman smooth-bore cast-iron gun is of 48 inches maximum diameter, 15 feet 10 inches long, and weighs 25 tons. The cost of such guns is about \$6,000. The Dahlgren 15-inch guns on the Monitors are about four feet shorter.

*Results of Heavy Ordnance.* The 10½-inch Armstrong gun sent a round 150-pound shot, with 50 pounds of powder, through a 5½-inch solid plate and its 9-inch teak backing and ¾-inch iron lining, at 200 yards, and one out of four shots with the same charge through the Warrior target, namely, a 4½-inch solid plate, 18-inch backing, and ¾-inch lining. The Horsfall 13-inch gun sent a round 270-pound shot, with 74 pounds of powder, entirely through the Warrior target at 200 yards, making an irregular hole about 2 feet in diameter. The same charge at 800 yards did not make a clean breach. The Whitworth shell burst in the backing of the same target has been referred to. Experiments on the effect of the 15-inch gun are now in progress. Its hollow 375-pound shot (3-inch walls) was broken without do-

ing serious damage to 10½-inch laminated armor backed with 18 inches of oak. The comparative test of solid and laminated armor has already been mentioned. The best 4½-inch solid plates, well backed, are practically proof against the guns of English iron-clads, namely, 68-pounder smooth-bores and Armstrong 110-pounder rifles, the service charge of each being 16 pounds.

*Rifling and Projectiles.* The spherical shot, presenting a larger area to the action of the powder, for a given weight, than the elongated rifle-shot, has a higher initial velocity with a given charge; and all the power applied to it is converted into velocity, while a part of the power applied to the rifle-shot is employed in spinning it on its axis. But, as compared with the rifle-shot, at long ranges, it quickly loses, 1st, velocity, because it presents a larger area to the resisting air; 2d, penetration, because it has to force a larger hole through the armor; and 3d, accuracy, because the spinning of the rifle-shot constantly shifts from side to side any inaccuracy of weight it may have on either side of its centre, so that it has no time to deviate in either direction. Practically, however, iron-clad warfare must be at close quarters, because it is almost impossible to aim any gun situated on a movable ship's deck so that it will hit a rapidly moving object at a distance. It is believed by some authorities that elongated shot can be sufficiently well balanced to be projected accurately from smooth-bores; still, it is stated by Whitworth and others that a spinning motion is necessary to keep an elongated shot on end while passing through armor. On the whole, so far as penetrating armor is concerned, the theory and practice favor the spherical shot. But a more destructive effect than mere penetration has been alluded to,—the bursting of a shell within the backing of an iron-clad vessel. This can be accomplished only by an elongated missile with a solid head for making the hole and a hollow rear for holding the bursting charge. The

rifle-shot used in America, and the Armstrong and some other European shot, are covered with soft metal, which in muzzle-loaders is expanded by the explosion so as to fill the grooves of the gun, and in breech-loaders is planed by the lands of the gun to fit the rifling,—all of which is wasteful of power. Whitworth employs a solid iron or steel projectile dressed by machinery beforehand to fit the rifling. But as the bore of his gun is hexagonal, the greater part of the power employed to spin the shot tends directly to burst the gun. Captain Scott, R. N., employs a solid projectile dressed to fit by machinery; but the surfaces of the lands upon which the shot presses are radial to the bore, so that the rotation of the shot tends, not to split the gun, but simply to rotate it in the opposite direction.

*Mounting Heavy Ordnance,* so that it may be rapidly manœuvred on ship-board and protected from the enemy's shot, has been the subject of so much ingenious experiment and invention, that in a brief paper it can only be alluded to in connection with the following subject:—

#### THE STRUCTURE OF WAR-VESSELS.

*Size.* To attain high speed and carry heavy armor and armament, war-vessels must be of large dimensions. By doubling all the lineal dimensions of a vessel of given form, her capacity is increased eight fold, that is to say, she can carry eight times as much weight of engines, boilers, armor, and guns. Meanwhile her resistance is only quadrupled; so that to propel each ton of her weight requires but half the power necessary to propel each ton of the weight of a vessel of half the dimensions. High speed is probably quite as important as invulnerability. Light armor is a complete protection against the most destructive shells, and the old wooden frigates could stand a long battle with solid shot. But without superior speed, the most invulnerable and

heavily armed vessel could neither keep within effective range of her enemy, nor run her down as a ram, nor retreat when overpowered. And a very fast vessel can almost certainly run past forts, as they are ordinarily situated, at some distance from the channel, without being hit. Indeed, the difficulty of hitting a moving object with heavy cannon is so great that slow wooden ships do not hesitate to encounter forts and to reduce them, for a moving ship can be so manœuvred as to hit a stationary fort.

The disadvantages of large ships are, first, great draught. Although draught need not be increased in the same degree as length, a stable and seaworthy model cannot be very shallow or flat-bottomed. Hence the harbors in which very large vessels can manœuvre are few, and there must be a light-draught class of vessels to encounter enemies of light draught, although they cannot be expected to cope very successfully with fast and heavy vessels. Second, a given sum expended exclusively in large vessels concentrates coast-defences upon a few points, while, if it is devoted to a greater number, consisting partly of small vessels, the line of defences is made more continuous and complete.

*System of Protection.* But the effectiveness of war-vessels need not depend solely upon their size. First, twice or thrice the power may be obtained, with the same weight of boilers and machinery, and with considerable economy, by carrying very much higher steam, employing simple surface-condensers, and maintaining a high rate of combustion and vaporization, in accordance with the best commercial-marine practice. Second, *the battery may be reduced in extent*, and the armor thus increased rather than diminished in thickness, with a given buoyancy. At the same time, *the fewer guns may be made available in all directions and more rapidly worked*, so that, on the whole, a small ship thus improved will be a match in every respect for a large ship as ordi-

narily constructed. Working the guns in small revolving turrets, as by Ericsson's or by Coles's plan, and loading and cooling them by steam-power, and taking up their recoil by springs in a short space, as by Stevens's plan, are improvements in this direction. The plan of elevating a gun above a shot-proof deck at the moment of aiming and firing, and dropping it for loading or protection by means of hydraulic cylinders, and the plan of placing a gun upon the top of the armor-clad portion of the ship, covering it with a shot-proof hood, and loading it from below, and the plan of a rotating battery, in which one gun is in a position to fire while the others attached to the same revolving frame are loading,—all these obviously feasible plans have the advantages of avoiding port-holes in the inhabited and vital parts of the vessel, of rendering the possible bursting of a gun comparatively harmless to the crew and ship, and of rapid manœuvring, as compared with the turret system, besides all the advantages of the turret as compared with the casemate or old-fashioned broadside system. The necessity of fighting at close quarters has been remarked. At close quarters, musket-balls, grape, and shells can be accurately thrown into ordinary port-holes, which removes the necessity of smashing any other holes in the armor.

Protection at, and extending several feet below the water-line, is obviously indispensable around the battery of a vessel. It is valuable at other points, but not indispensable, provided the vessel has numerous horizontal and vertical bulkheads to prevent too great a loss of buoyancy when the vessel is seriously damaged between wind and water. Harbor-craft may be very low on the water, so that only a little height of protection is required. But it is generally supposed that sea-going vessels must be high out of water. Mr. Ericsson's practice, however, is to the contrary; and it may turn out that a low vessel, over which the sea makes a clean breach, can be

made sufficiently buoyant on his plan. If high sides are necessary, the plan of Mr. Lungley, of London, may be adopted, — a streak of protection at the water-line, and another forming the side of the battery at the top of the structure, with an intermediate unprotected space. A shot-proof deck at the water-line, and the necessary shot-proof passages leading from the parts below water to the battery, would of course be necessary.

Considering the many expedients for vastly increasing the thickness of armor, the idea, somewhat widely expressed, especially in England, that, in view of the exploits of Armstrong, Clay, and Whitworth, iron-protection must be abandoned, is at least premature. The manner in which the various principles of construction have thus far been carried out will be noticed in a brief

*Description of Prominent Iron-Clad Vessels.* CLASS I. Classified with reference to the protection, the dimensions of the English Warrior and Black Prince are, length 380 feet, beam 58 feet, depth 33 feet, measurement 6,038 tons. Their armor (previously described) extends from the upper deck down to 5 feet below water, throughout 200 feet of the length amidships. Vertical shot-proof bulkheads joining the side armor form a box or casemate in the middle of the vessel, in which the 26 casemate-guns, mostly 68-pounder smooth-bores, are situated and fired through port-holes in the ordinary manner. Their speed on trial is about 14 knots, — at sea, about 12. The Defence and Resistance, of 275 feet length and 3,668 tons, and carrying 14 casemate-guns, are similarly constructed, though their speed is slow. All these vessels are built entirely of iron.

CLASS II. This differs from the first mentioned in having protection all around at the water-line. The New Ironsides, (American,) of 3,250 tons, 240 feet length, 58½ feet beam, 28½ feet depth, and 15 feet draught, and built of wood, has 4½-inch solid armor with 2 feet

backing, extending from the upper deck down to 4 feet below water, with vertical bulkheads like the Warrior, making a casemate 170 feet long, in which there are sixteen 11-inch smooth-bores and two 200-pounder Parrott rifles. A streak of armor, 4 feet below water and 3 feet above, runs from this forward and aft entirely around the vessel. Her speed is 8 knots. The Stevens Battery, (American,) 6,000 tons, constructed of iron and nearly completed, is 420 feet long, 53 feet wide, and 28 feet deep from the top of the casemate, and is iron-clad from end to end along the water-line. As proposed to the last Congress, the central casemate was to be about 120 feet long on the top, its sides being inclined 27½ degrees from the horizon, and composed of 6¾ inches of iron, 14 inches of locust backing, and a half-inch iron lining. Upon the top of it, and to be loaded and manœuvred from within it, were to be five 15-inch smooth-bores and two 10-inch rifled guns clad with armor. The actual horse-power of this ship being above 8,000, her speed would be much higher than that of any other war-vessel. Congress, declining to make an appropriation to complete this vessel, made it over to Mr. Stevens, who had already borne a considerable portion of its cost, and who intends to finish it at his own expense, and is now experimenting to still further perfect his designs. The Achilles (English) now building of iron, about the size of the Warrior, and of 6,039 tons, with a casemate 200 feet long holding 26 guns, belongs to this class. The Enterprise, 180 feet length, 990 tons, 4 casemate-guns, and the Favorite, 220 feet length, 2,168 tons, 8 casemate-guns, are building in England on the same plan. The Solferino and Magenta, (French,) built of wood, and a little longer than the Royal Oak, (see Class III.,) are iron-clad all round up to the main deck, and have two 13-gun casemates above it.

CLASS III. The Minotaur, Agincourt, and Northumberland, 6,621 tons, and 390 feet length, resembling, but

somewhat larger than the Warrior, in all their proportions, and now on the stocks in England, are built of iron, and are to have 5½-inch armor and 9-inch backing extending through their whole length from the upper deck to 5 feet below water, forming a casemate from stem to stern, to hold 40 broadside-guns. Five vessels of the Royal-Oak class, 4,055 tons, building in England, 277 feet long and 58½ feet wide, are of wood, being partially constructed frigates adapted to the new service, and are iron-clad throughout their length and height to 5 feet below water. They are to carry thirty-two 68-pounders. The Hector and Valiant, 4,063 tons, and 275 feet long, are English iron vessels not yet finished. They are completely protected, and carry 30 casemate-guns. All the above vessels are to carry two or more Armstrong swivel-guns fore and aft. Four vessels of La Gloire class, (French,) 255 feet long and built of wood, resembling the Royal Oak, carry 34 guns, and are completely clad in 4½-inch solid armor. Ten French vessels, of a little larger dimensions, are similarly constructed. The Galena (American) is of this class as to extent of protection. The quality of her armor has been referred to.

**CLASS IV. *Ships with Revolving Turrets.*** The Roanoke, (American,) a razed wooden frigate of 4,500 tons, is 265 feet long, 52½ feet wide, and 32 feet deep, and will draw about 21 feet, and have a speed of 8 to 9 knots. This and all the vessels to be referred to in this class are iron-clad from end to end, and from the upper deck to 4 or 5 feet below the water-line. The Roanoke's plates (solid) are 4½ inches thick, except at the ends, where they are 3½, and are backed with 30 inches of oak. She has three turrets upon her main-deck, each 21 feet in diameter inside, 9 feet high, and composed of 11 thicknesses of 1-inch plates. Her armament is six 15-inch guns, two in each turret. Of the Monitors, which are all constructed of

iron, two now building are to be sea-going and very fast, and are to act as rams, like several of the other vessels described. One of these, the Puritan, is 340 feet long, 52 feet wide, and 22 feet deep, and will draw 20 feet. The armor of her hull, 10½ inches thick, composed mostly of 1-inch plates and 3 feet of oak backing, projects beyond her sides by the amount of its thickness, and overhangs, forming a solid ram 16 feet long at the bow. The whole upper structure also overhangs the stern, and protects the screw and rudder. This vessel will carry two turrets, 28 feet in diameter inside, 9 feet high, and 2 feet thick, composed of 1-inch plates. Each turret contains two 15-inch guns. The other vessel, the Dictator, is similarly constructed, except that it has one turret, two guns, and 320 feet length. The upper (shot-proof) deck of these vessels is 2 feet out of water. The 18 smaller Ericsson vessels, several of which are ready for service, are 18 inches out of water, of light draught, and about 200 by 45 feet. Their side-armor, laminated, is 5 inches thick, upon 3 feet of oak. They have one turret, like those of the Roanoke, and carry one 15-inch gun and one 11-inch smooth-bore, or a 200-pounder rifle. The original Monitor is 174 by 44½ feet, with 5-inch side-armor, and a turret 8 inches thick, 20 feet in diameter inside, and armed with two 11-inch guns. These vessels of Ericsson's design are each in fact two vessels: a lower iron hull containing boilers and machinery, and an upper scow overhanging the ends and sides, forming the platform for the turret, and carrying the armor. The Onondaga, now constructing, is an iron vessel of 222 feet length, 48 feet beam, and 13 feet depth, with 4½-inch solid armor having no backing, and without the overhanging top-works of the Monitors. She has two turrets, like those of the Roanoke, and four 15-inch guns. Nearly all the vessels of Class IV. are without spars, and have a pilot-house about 6 feet in diameter and 6 feet high on the top of one of the turrets.

The English Royal Sovereign, 3,765 tons and 330 feet length, and the Prince Albert, 2,529 tons and the same length, are razeed wooden vessels. The former carries 5, and the latter 6 of Captain Coles's turrets with inclined sides, each turret designed for two 110-pounder breech-loading Armstrong guns. The class of iron vessels constructing to carry two of Coles's turrets are 175 feet long, having 42 feet beam, 24 feet depth, 17 feet draught, and 990 tons displacement. All these English vessels are much higher out of water than Ericsson's.

Besides these classes, there is the variety of iron-clad vessels called turtles, from their shape, — among them, the Keokuk (Whitney Battery) 159½ feet long, with two stationary 11-inch gun turrets, — and a class of Western river vessels of very light draught and some peculiarities of construction. The latter resemble the Stevens Battery in the shape and position of their armor, but carry their guns within their casemates.

The Stevens Battery, the Onondaga, and the Keokuk have independent screw-propellers, which will enable them to turn on their own centres and to manœuvre much more rapidly and effectively in action than vessels which, having but one propeller, cannot change their direction without changing their position, and are obliged to make a long circuit to change it at all. This subject is beginning to receive in Europe the attention which it merits.

#### CONCLUSIONS.

THE direction of immediate improvement in ordnance for iron-clad warfare appears to be the abandonment of cast-iron, except as a barrel to be strength-

ened by steel; binding an inner tube with low-steel hoops having a successively increasing initial tension; and the use of spherical shot at excessive velocities by means of high charges of powder in bores of moderate diameters. The rifling of some guns is important, not so much to secure range or accuracy, as to fire elongated shells through armor.

The direction of improvement in iron-clad vessels appears to be the concentration of armor at a few points and the protection of the remainder of the vessel from the entrance of *water* by a streak of armor at the water-line and numerous bulkheads, etc., in distinction from necessarily thin and inefficient plating over all; high speed without great increase of weight of the driving parts, by means of improved engines and boilers and high pressure; the production of tenacious iron in large, thick, homogeneous masses; and the rapid manœuvring of heavy ordnance by machinery.

In justice to himself, the writer deems it proper to state, that within the limits of a magazine-article it has been impossible to enter into the details, or even to give an outline, of all the facts which have led him to the foregoing conclusions. In a more extended work about to be published by Van Nostrand, of New York, he has endeavored, by presenting a detailed account of English and American experiments, a description and numerous illustrations, derived mostly from personal observation, of all classes of ordnance and armor and their fabrication, and of iron-clad vessels and their machinery, and a *résumé* of the best professional opinions, to add something at least usefully suggestive to the general knowledge on this subject.

## ANDREW RYKMAN'S PRAYER.

ANDREW RYKMAN 's dead and gone :  
 You can see his leaning slate  
 In the graveyard, and thereon  
 Read his name and date.

*"Trust is truer than our fears,"*  
 Runs the legend through the moss,  
*"Gain is not in added years,*  
*Nor in death is loss."*

Still the feet that thither trod,  
 All the friendly eyes are dim ;  
 Only Nature, now, and God  
 Have a care for him.

There the dews of quiet fall,  
 Singing birds and soft winds stray :  
 Shall the tender Heart of All  
 Be less kind than they ?

What he was and what he is  
 They who ask may haply find,  
 If they read this prayer of his  
 Which he left behind.

---

Pardon, Lord, the lips that dare  
 Shape in words a mortal's prayer !  
 Prayer, that, when my day is done,  
 And I see its setting sun,  
 Shorn and beamless, cold and dim,  
 Sink beneath the horizon's rim, —  
 When this ball of rock and clay  
 Crumbles from my feet away,  
 And the solid shores of sense  
 Melt into the vague immense,  
 Father ! I may come to Thee  
 Even with the beggar's plea,  
 As the poorest of Thy poor,  
 With my needs, and nothing more.

Not as one who seeks his home  
 With a step assured I come ;  
 Still behind the tread I hear  
 Of my life-companion, Fear ;  
 Still a shadow deep and vast  
 From my westering feet is cast,  
 Wavering, doubtful, undefined,  
 Never shapen nor outlined :

From myself the fear has grown,  
 And the shadow is my own.  
 Well I know that all things move  
 To the spheral rhythm of love, —  
 That to Thee, O Lord of all !  
 Nothing can of chance befall :  
 Child and seraph, mote and star,  
 Well Thou knowest what we are ;  
 Through Thy vast creative plan  
 Looking, from the worm to man,  
 There is pity in Thine eyes,  
 But no hatred nor surprise.  
 Not in blind caprice of will,  
 Not in cunning sleight of skill,  
 Not for show of power, was wrought  
 Nature's marvel in Thy thought.  
 Never careless hand and vain  
 Smites these chords of joy and pain ;  
 No immortal selfishness  
 Plays the game of curse and bless :  
 Heaven and earth are witnesses  
 That Thy glory goodness is.  
 Not for sport of mind and force  
 Hast Thou made Thy universe,  
 But as atmosphere and zone  
 Of Thy loving heart alone.  
 Man, who walketh in a show,  
 Sees before him, to and fro,  
 Shadow and illusion go ;  
 All things flow and fluctuate,  
 Now contract and now dilate.  
 In the welter of this sea,  
 Nothing stable is but Thee ;  
 In this whirl of swooning trance,  
 Thou alone art permanence ;  
 All without Thee only seems,  
 All beside is choice of dreams.  
 Never yet in darkest mood  
 Doubted I that Thou wast good,  
 Nor mistook my will for fate,  
 Pain of sin for heavenly hate, —  
 Never dreamed the gates of pearl  
 Rise from out the burning marl,  
 Or that good can only live  
 Of the bad conservative,  
 And through counterpoise of hell  
 Heaven alone be possible.

For myself alone I doubt ;  
 All is well, I know, without ;  
 I alone the beauty mar,  
 I alone the music jar.

Yet, with hands by evil stained,  
And an ear by discord pained,  
I am groping for the keys  
Of the heavenly harmonies ;  
Still within my heart I bear  
Love for all things good and fair.  
Hand of want or soul in pain  
Has not sought my door in vain  
I have kept my fealty good  
To the human brotherhood ;  
Scarcely have I asked in prayer  
That which others might not share.  
I, who hear with secret shame  
Praise that paineth more than blame,  
Rich alone in favors lent,  
Virtuous by accident,  
Doubtful where I fain would rest,  
Frailest where I seem the best,  
Only strong for lack of test,—  
What am I, that I should press  
Special pleas of selfishness,  
Coolly mounting into heaven  
On my neighbor unforgiven ?  
Ne'er to me, howe'er disguised,  
Comes a saint unrecognized ;  
Never fails my heart to greet  
Noble deed with warmer beat ;  
Halt and maimed, I own not less  
All the grace of holiness ;  
Nor, through shame or self-distrust,  
Less I love the pure and just.  
Thou, O Elder Brother ! who  
In Thy flesh our trial knew,  
Thou, who hast been touched by these  
Our most sad infirmities,  
Thou alone the gulf canst span  
In the dual heart of man,  
And between the soul and sense  
Reconcile all difference,  
Change the dream of me and mine  
For the truth of Thee and Thine,  
And, through chaos, doubt, and strife,  
Interfuse Thy calm of life.  
Haply, thus by Thee renewed,  
In Thy borrowed goodness good,  
Some sweet morning yet in God's  
Dim, æonian periods,  
Joyful I shall wake to see  
Those I love who rest in Thee,  
And to them in Thee allied  
Shall my soul be satisfied.

Scarcely Hope hath shaped for me  
 What the future life may be.  
 Other lips may well be bold;  
 Like the publican of old,  
 I can only urge the plea,  
 "Lord, be merciful to me!"  
 Nothing of desert I claim,  
 Unto me belongeth shame.  
 Not for me the crowns of gold,  
 Palms, and harpings manifold;  
 Not for erring eye and feet  
 Jasper wall and golden street.  
 What Thou wilt, O Father, give!  
 All is gain that I receive.  
 If my voice I may not raise  
 In the elders' song of praise,  
 If I may not, sin-defiled,  
 Claim my birthright as a child,  
 Suffer it that I to Thee  
 As an hired servant be;  
 Let the lowliest task be mine,  
 Grateful, so the work be Thine;  
 Let me find the humblest place  
 In the shadow of Thy grace:  
 Blest to me were any spot  
 Where temptation whispers not.  
 If there be some weaker one,  
 Give me strength to help him on;  
 If a blinder soul there be,  
 Grant that I his guide may be.  
 Make my mortal dreams come true  
 With the work I fain would do;  
 Clothe with life the weak intent,  
 Let me be the thing I meant;  
 Let me find in Thy employ  
 Peace that dearer is than joy;  
 Out of self to love be led  
 And to heaven acclimated,  
 Until all things sweet and good  
 Seem my natural habitude.

---

So we read the prayer of him  
 Who, with John of Labadie,  
 Trod, of old, the oozy rim  
 Of the Zuyder Zee.

Thus did Andrew Rykman pray.  
 Are we wiser, better grown,  
 That we may not, in our day,  
 Make his prayer our own?

## THE STRATHSAYS.

MRS. STRATHSAY sat in her broad bower-window, looking down the harbor. A brave great window it was, and I mind me how, many a dark summer's night, we two leaned over its edge and watched the soft flow of the River of the Cross, where its shadowy tide came up and lapped the stone foundations of that old house by the water-side,—I and Angus. Under us the rowers slipped the wherries and the yawls; in the channel the rafts floated down a slow freight from the sweet and savage pine-forests, and the fire they carried on their breasts, and the flames of their pitch-knots, threw out strange shadows of the steering raftsmen, and a wild bandrol of smoke flaring and streaming on the night behind them;—and yet away far up on the yonder side, beneath the hanging alders and the cedar-trees, the gundalows dropped down, great laden barges; and perhaps a lantern, hung high in the stern of some huge East-Indiaman at the wharves of the other town quite across the stream, showed us all its tracery and spires, dim webs of shadow stretched and woven against the solemn ground of the starlit sky, and taught us the limit of the shores. Ah, all things were sweet to us then! we were little but children,—Angus and I. And it's not children we are now, small 's the pity! The joys of childhood are good, I trow; but who would exchange for them the proud, glad pulse of full womanhood?—not I. I mind me, too, that in those days the great world of which I used to hear them speak always seemed to me lying across the river, and over the fields and the hills, and away down and out by the skirts of the mystical sea; and on the morning when I set sail for Edinboro', I felt to be forever drawing nigher its skurry and bustle, its sins and pleasures and commotions.

We had no father,—Margray, or Effie, or Mary Strathsay, or I. He had

brought his wife out from their home in Scotland to St. Anne's in the Provinces, and had died or ever I was born,—and I was the last of the weans. A high, keen spirit was his wife; she did not bend or break; a stroke that would have beggared another took no crumb from her cloth; she let the right in warehouses and wharves lie by, and lie by, and each year it paid her sterling income. None ever saw tear in those proud eyes of hers, when they brought in her husband dead, or when they carried him out; but every day at noon she went up into her own room, and whether she slept or whether she waked the two hours in that darkened place, there was not so much as a fly that sang in the pane to tell.

She was a fair, stately woman, taller than any of her girls, and with half the mind to hate them all because they were none of them a son. More or less the three were like her, lofty brows and shining hair and skin like morning light, the lave of them,—but as for me, I was my father's child. There 's a portrait of him now, hangs on the chimney-pier: a slight man, and not tall,—the dark hair waves away on either side the low, clear brow,—the eyes deep-set, and large and dark and starry,—a carmine just flushing beneath the olive of the cheek,—the fine firm mouth just breaking into smiles; and I remember that that morning when I set sail for Edinboro', as I turned away from gazing on that face, and saw myself glinting like a painted ghost in the long dim mirror beside me, I said it indeed, and proudly, that I was my father's own child.

So she kissed us, Effie and me. Perhaps mine lingered the longer, for the color in my cheek was deeper tinct than Scotch, it was the wild bit of Southern blood that had run in her fove's veins; when she looked at me, I gave her

back hot phases of her passionate youth again, — so perhaps mine was the kiss that left the deeper dint.

Margray, and Mary Strathsay, had been back three years from school, and the one was just married, — and if she left her heart out of the bargain, what was that to me? — and the other was to reign at home awhile ere the fated Prince should come, and Effie and myself were to go over seas and take their old desks in the famous school at Edinboro'. The mother knew that she must marry her girls well, and we two younglings were sadly in Queen Mary Strathsay's way. Yes, Mrs. Strathsay lived for nought but the making of great matches for her girls; the grandees of the Provinces to-day sat down at her board and to-morrow were to pay her tribute, scot and lot; four great weddings she meant should one by one light up her hearth and leave it lonely with the ashes there. But of them all she counted on the last, the best, the noblest for Alice, — that was I.

Old Johnny Graeme was the partner in what had been my father's house, and for fifteen years it had gone prospering as never house did yet, and making Mrs. Strathsay bitterer; and Johnny Graeme, a little wizened warlock, had never once stopped work long enough to play at play and reckon his untold gold.

Just for that summer, too, some ships of the royal fleet anchored there off Campobello, and the Honorable Charles Seavern, third son of an Earl, and professional at his cups, swung them at his will, and made holiday meanwhile among the gay and willing folk of all the little towns around.

There was another yet, a youth growing up to fine estates away off beyond Halifax. His father sat in the Queen's own Parliament for the Colonies, had bent to the knightly accolade, and a change of ministry or of residence might any day create Sir Brenton peer; his mother had been Mrs. Strathsay's dearest friend: — this child who off and on for half his life had made her house his

home and Alice his companion, while in the hearts of both children Mrs. Strathsay had cautiously planted and nursed the seed, — a winning boy, a noble lad, a lordly man.

If Margray had not married old Johnny Graeme, it would have broken Mrs. Strathsay's will; the will was strong; she did, she married him. If Mary, with her white moonsheen of beauty, did not bewitch the senses of Captain Seavern, it would break Mrs. Strathsay's pride; and few things were stronger than Mrs. Strathsay's pride, — unless 't were Mary's own. If Effie — but that's nothing to the purpose. If Alice did not become the bride of Angus Ingestre, it would break Mrs. Strathsay's heart. God forgive me! but I bethought me once that her heart was the weakest member in all her body.

So she kissed us, as I say, and we slid down the ten miles of river, and went sailing past the busy islands and over the broad deeps and out of the day and into the night, and then two little orphans cried themselves to sleep with their arms about each other's necks. After all, it was not much like my picture of the great world, this lonely sea, this plunging up from billow on to billow, this burrowing down in the heart of green-gloomed hollows, this rocking and creaking and straining, this buoyant bounding over the crests, — yet the freedom, the monotony, the wild career of the winds fired me; it set my blood a-tingle; I liked it. And then I thought of Angus, rocked to sleep each night, as he was now, in his ocean-cradle. But once at school, and the world was round me; it hummed up from the streets, it boomed down from the spires. I became a part of it, and so forgot it. To Effie there were ever stealing rumors of yet a world beyond, of courts and coronets, of satin shimmer and glitter of gems, but they glanced off from me, — and other than thus I have never yet found that great world that used to lie over the river.

We had been at school a happy while,

and but for constant letters, and for the brief visit of Mrs. Strathsay, who had journeyed over the Atlantic for one last look at sweet home-things, and to see how all went with us, and then had flitted back again,—but for that, home would have seemed the veriest dream that ever buzzed in an idle brain: would so have seemed to other maidens, not to us, for the fibres of the Strathsay heart were threads that never wore thin or parted. Two twelvemonths more, and we should cross the sea ourselves at last; and wearying now of school a bit, all our visions centred in St. Anne's, and the merry doings, the goings and comings, that we heard of there; and it seemed to me as if home were to be the beginning of life, as erst it had seemed that in school we should find the world.

It was the vacation of the long summer term; there was packing and padlocking to go each on her way, and the long dormitories rang with shrill clamor. They all had a nest to seek. Effie was already gone away with her chief crony, whose lady-mother, a distant kinswoman of our own, fancied the girl's fair countenance. I was to join them in a week or two,—not yet, because I had wished to send home the screens painted on white velvet, and they wanted yet a sennight's work, and I knew Mrs. Strathsay would be proud of them before the crackle of the autumn fires. The maids ran hither and yon, and the bells pealed, and the knocker clashed, and the coaches rolled away over the stone pave of the court-yard, and there was embracing and jesting and crying, when suddenly all the pleasant hubbub stood still, for Miss Dunreddin was in the hall, and her page behind her, and she beckoned me from my post aloft on a foot-board, summoning the deserters before me and awarding them future expiations, amidst all manner of jeering and jinking and laughter.

A gentleman from the Provinces to see me in the little parlor: he had

brought us letters from home, and after Miss Dunreddin had broken the seals she judged we might have them, and I was at liberty for an hour, and meantime Angus Ingestre awaited me. Angus! I sprang down the stairs, my cheeks aglow, my heart on my lips, and only paused, finger on lock, wondering and hesitating and fearing, till the door was flung open, and I drawn in with two hands shut fast on my own, and two eyes—great blue Ingestre eyes—looking down on me from the face so far above: for he towered like a Philistine.

"And is it Angus?" I cried. For how was I to know the boy I had left in a midshipman's jacket, in this mainmast of a man, undress-uniform and all?

"I've no need to ask, Is it Alice?" he answered. "The same little peach of a chin!"

"Nay, but, Angus,—'t will never do,—and I all but grown up!"

"Not my little maid any longer, then?"

But so trembling and glad was I to see him, that I dared no more words, for I saw the tears glistening in my eyelashes and blinding me with their dazzling flashes.

So he took me to a seat, and sat beside me, and waited a minute; and after that waiting it was harder to speak than it had been before, and every thought went clean out of my head, and every word, and I stared at my hands till I seemed to see clear through them the pattern of my dress, and at the last I looked up, and there he had been bending forward and scanning me all the while; and then Angus laughed, and caught up my hand and pretended to search it narrowly.

"Ah, yes, indeed," said he, "she is reading the future in her palm, reading it backward, and finding out what this Angus Ingestre has to do with her fate!"

"Nay, but," — said I, and then held fast again.

"Here's a young woman that's keen to hear of her home, of her sisters, of Queen Mary Strathsay, and of Margray's little Graeme!"

"What do I care for Johnny Graeme? the little old man!"

"What, indeed? And you'll not be home a day and night before you'll be tossing and hushing him, and the moon'll not be too good for him to have, should he cry for it!"

"Johnny Graeme?"

"No. Angus Graeme!"

"Oh!—Margray has a son? Why did n't you tell me before?"

"When you were so eager to know!"

"It's all in my letters, I suppose. But Margray has a son, and she's named it for you, and her husband let her?"

"'Deed, he was n't asked."

"Why not?"

"Come, child, read your letters."

"Nay, I've but a half-hour more with you; that was the second quarter struck; I'll read them when you're gone.—*Why not?*"

"Johnny Graeme is dead."

That sobered me a thought.

"And Margray?" I asked.

"Poor Margray,—she feels very badly."

"You don't mean to say" —

"That she cared for him? But I do."

"Now, Angus Ingestre, I *heard* Margray tell her mother she'd liefer work on the roads with a chain and ball than marry him! It's all you men know of women. Love Johnny Graeme! Oh, poor man, rest his soul! I'm sore sorry for him. He's gone where there's no gold to make, unless they smelt it there; and I'm not sure but they do,—sinsyne one can see all the evil it's the root of, and all the woe it works,—and he bought Margray, you know he did, Angus!"

"It's little Alice talking so of her dead brother!"

"He's no brother of mine; I never took him, if Margray did. Brother indeed! there's none such,—unless it's

you, Angus!" And there all the blood flew into my cheeks, and they burned like two fires, and I was fain to clap my palms upon them.

"No," said Angus. "I'm not your brother, Ailie darling, and never wish to be,—but" —

"And Margray?" I questioned, quickly,—the good Lord alone knew why. "Poor Margray! tell me of her. Perhaps she misses him; he was not, after all, so curst as Willy Scott. Belike he spoke her kindly."

"Always," said Angus, gnawing in his lip a moment ere the word. "And the child changed him, Mary Strathsay says. But perhaps you're right; Margray makes little moan."

"She was aye a quiet lass. Poor Johnny!—I'm getting curst myself. Well, it's all in my letters. But you, Angus dear, how came you here?"

"I? My father came to London; and being off on leave from my three years' cruise, I please myself in passing my holiday, and spend the last month of it in Edinboro', before rejoining the ship."

All my moors and heather passed like a glamour. The green-wood shaws would be there another year,—Angus was here to-day. I cast about me, and knew that Miss Dunreddin would speed away to take her pleasure, and there'd be none left but the governess and the painting-mistress, with a boarder or two like myself,—and as for the twain, I could wind them round my thumb.

"Oh, Angus," I said, breathlessly, "there's Arthur's Seat, and the palaces, and the galleries and gardens,—it'll be quite as good as the moors; there'll be no Miss Dunreddin, and you can stay here all the leelang simmer's day!"

He smiled, as he answered,—

"And I suppose those scarlet signals at the fore signify" —

"Nothing!"

"Fast colors, I see."

"It's my father's own color, and I'm proud of it,—barring the telltale trouble."

"You're proud," said he, absently, standing up to go, "that you are the only one of them all that heirs him?"

"Not quite. It's the olive in my father's cheek that darkened his wife's yellow curls into Mary Strathsay's chestnut ones. And she's like me in more than that, gin she does n't sell hersel' for siller and gowd."

"I'll tell you what. Mrs. Strathsay is over-particular in speech. She'll have none of the broad Highland tongue about her. It's a daily struggle that she has, not to strike Nurse Nannie dumb, since she has infected you all with her dialect. A word in time. Now I must go. To-morrow night I'll come and take you to the play, Miss Dunreddin or no Miss Dunreddin. But sing to me first. It's a weary while since I used to hear that voice crooning itself to sleep across the hall with little songs."

So I sang the song he chose, "My love, she's but a lassie yet"; and he took the bunch of bluebells from my braids, and was gone.

The next night Angus was as good as his word. Miss Dunreddin was already off on her pleasuring, he took the gray little governess for duenna, and a blither three never sat out a tragedy, or laughed over wine and oysters in the midst of a garden with its flowers and fountains afterwards. 'T was a long day since the poor little woman had known such merrymaking; and as for me, this playhouse, this mimicry of life, was a new sphere. We went again and again, — sometimes the painting-mistress, too; then she and the governess fell behind, and Angus and I walked at our will. Other times we wandered through the gay streets, or we went up on the hill and sat out the sunsets, and we strolled through the two towns, high and low. The days sped, the long shine of the summer days, and, oh, my soul was growing in them like a weed in the sun!

It never entered my happy little thoughts all this time that what was

my delight might yet be Angus's dole; for, surely, a school-girl is so interesting to no one else as herself, while she continually comes upon all the fresh problems in her nature. So, when a day passed that I heard no step in the hall, no cheery voice rousing the sleepy echoes with my name, I was restless enough. Monday, Tuesday, — no Angus. I ought to have thought whether or no he had found some of his fine friends, and if they had no right to a fragment of his time; yet I was but a child. The third day dawned and passed, and at length, sitting there among the evening shadows in the long class-room, a little glumly, the doors clanged as of old, a loud, laughing sentence was tossed up to the little gray governess at the stair-head, then, three steps at a time, he had mounted, and was within, — and what with my heart in my throat and its bewildered beating, I could not utter a word. I but sprang to the window and made as if I had been amusing myself there: I would have no Angus Ingestre be thinking that he was all the world to me, and I nought to him.

"A little ruffled," said he, at the saucy shake of my head. "Well, I sha'n't tell you where I've been. I've the right to go into the country for a day, have I not? What is it to Alice Strathsay how often I go to Loch Rea? There's something Effie begged me to get you!" And he set down a big box on the table.

So, then, he had been to see Effie. It was fair enough, and yet I could n't help the jealous pang. I would n't turn my head, though I did wonder what was in the big box, but, holding out my hand backward, I said, —

"Well, it's no odds where you've been, so long's you're here now. Come and lean out of the window by me, — it's old times, — and see the grand ladies roll by in their coaches, some to the opera, some to the balls."

"Why should I watch the grand ladies roll by, when there's one so very

much grander beside me," he said, laughing, but coming. And so we stood together there and gazed down on the pretty sight, the beautiful women borne along below in the light of the lamps, with their velvets, their plumes, and their jewels, and we made little histories for them all, as they passed.

"They are only the ugly sisters," said Angus, at length. "But here is the true Cinderella waiting for her godmother. Throw your cape over your hair, Ailie dear; the dew falls, and you 'll be taking cold. There, it's the godmother herself, and you 'll confess it, on seeing what miracles can be worked with this little magic-lantern of yours. Come!" and he proceeded to open the box.

But I waited a minute still; it was seldom the sumptuous coaches rolled through this by-way which they had taken to-night in their gay procession, since the pavers had left the broad street beyond blocked up for the nonce, and I liked to glimpse this little opening into a life just beyond my sphere.

"You are shivering in your thin frock at the window, Miss Strathsay," said the little gray governess.

"Come here, Ailie, and hold the candle," said Angus. "Effie has great schemes of terror with this in the dormitories, o' nights. There!" and he whirled the lighted match out of the window.

Just then I turned, the little flame fell on my muslin sleeve, — a cloud of smoke, a flash, a flare, the cape round my face soared in blaze, it seemed that I was wrapt in fire!

Angus caught me on the instant, crushed the burning things with his fingers, had his coat round me, had all drenched in the water that the governess had raced after, and then I knew no more.

So the women put me to bed, while Angus brought the surgeon; then they forbade him the room, and attended to my wants; but all night long he paced the halls and heard my moans, and by

daybreak I was stupefied. He waited a week, but they would not suffer him to see me, and then his leave of absence had expired.

One night I woke; I felt that the room was darkly rich with the starlighted gloom, but I could see nothing, for all the soft, cool linen folds; and lying there half-conscious for a time, I seemed to feel some presence in the door-way there.

"Angus, is that you?" I asked.

"Oh, Ailie darling!" he cried, and came forward and fell on his knees by my side, and covered my hands with his tears.

"Poor Angus!" I said, in my muffled way, and I tried half to rise, and I was drawing away a hand that I might dash the tears off his face.

Then of a sudden it came over me in one great torrid flush, and I fell back without a word.

But at the moment, the little gray governess came in again from her errand, and he went. 'T was no use his waiting, though he lingered still a day or two in hopes to see me; but my head was still on my pillow. His time was more than up, he must to the ship, so he left me store of messages and flowers and glass-bred grapes, and was off.

Time wore away, I got about again, and all was as before, long ere the girls came back, or Miss Dunreddin. I went near no moors, I looked no more out of my window, I only sat on the stool by my bedside and kept my face hid in the valances; and the little gray governess would sit beside me and cheer me, and tell me it was not so bad when all was said, and beauty was but little worth, and years would efface much, that my hair was still as dark and soft, my eyes as shining, my — But all to what use? Where had flown the old Strathsay red from my cheek, where that smooth polish of brow, where — I, who had aye been the flower of the race, the pride of the name, could not now bide to brook my own glance in the glass.

But the worst of it all would be, I thought, — not recking the worse to come, — when the girls flocked back. How I dreaded it, how I sought to escape their mock and go home, poor fool! but the little gray governess saw them all first, I must believe, for there was not a quip or a look askance, and they treated me as bairns treat a lamb that has tint its mother. And so seeing I had lost my fair skin; I put myself to gain other things in its place, and worked hard at my stents, at my music, my books. I grew accustomed to things, and would forget there had been a change, and, being young, failed to miss the being bonny; and if I did not miss it, who should? and they all were so kind, that the last year of school was the happiest of the whole. Thus the time drew near my eighteenth summer, and Miss Dunreddin had heard of a ship bound our way from Glasgow, and we were to leave the town with all its rare old histories, and speed through nights and days of seafaring to St. Anne's by the water-side, to the old stone house with its windows overhanging the River of the Cross.

So the old brig slid lazily up the river, beneath the high and beauteous banks, and as between the puffs of wind we lay there in the mid-channel, the mate, — a dark, hawk-eyed man, at whom Effie liked well to toss a merry mock, and with whom, sometimes stealing up, she would pace the deck in hours of fair weather, — a man whose face was like a rock that once was smitten with sunshine, never since, — a sad man, with a wrathful lip even when he spoke us fair, — the mate handed me his glass and bade me look, while he went to the side and bent over there with Effie, gazing down into the sun-brown, idle current. And I pointed it, — and surely that was the old stone gable in its woodbines, — and surely, as we crept nearer, the broad bower-window opened before me, — and surely a lady sat there, a haughty woman with the

clustered curls on her temple, her needle poised above the lace-work in the frame, and she gazing dreamily out, out at the water, the woods, the one ship wafting slowly up, — shrouds that had been filled with the airs of half a hemisphere, hull that had ere now been soaked in spicy suns and summers, — and all the glad tears gushed over my eyes and darkened me from seeing. So, as I said, Mrs. Strathsay sat in her broad bower-window looking down the harbor, and a ship was coming up, and Effie and I stood on its deck, our hearts full of yearning. Mine was, at least, I know. And I could but snatch the glass up, every breathing, as we went, and look, and drop it, for it seemed as if I must fly to what it brought so near, must fly to fling my arms about the fair neck bending there, to feel the caressing finger, to have that kiss imprint my cheek once more, — so seldom her lips touched us!

They lowered us down in boats at last, the captain going ashore with us, the porters following with our luggage. The great hall-door below stood open, and the familiar servants were there to give us greeting, and we stayed but for a hand's-shake, except that my old nurse, where she caught it, wet my shawl with her sudden weeping, so that Effie had run up the stairs before me, and was in the drawing-room and was folded in the tender grasp, and had first received the welcome. A moment after, and I was among them. Mrs. Strathsay stood there under the chandelier in the sunshine, with all its showering rainbow-drops, — so straight and stately she, so superb and splendid, — her arms held out, — and I ran forward, and paused, for my veil had blown over my face, to throw it back and away, — and, with the breath, her shining blue eyes opened and filled with fire, her proud lips twisted themselves in pain, she struck her two hands together, crying out, "My God! how horrible!" and fainted.

Mrs. Strathsay was my mother. I

might have fallen, too,—I might have died, it seems to me, with the sudden snap my heart gave,—but all in a word I felt Mary Strathsay's soft curls brushing about my face, and she drew it upon her white bosom, and covered the poor thing with her kisses. Margray was bending over my mother, with the hartshorn in her hands, and I think—the Lord forgive her!—she allowed her the whole benefit of its battery, for in a minute or two Mrs. Strathsay rose, a little feeble, wavered an instant, then warned us all away and walked slowly and heavily from the place, up the stairs, and the door of her own room banged behind her and hasped like the bolt of a dungeon.

I drank the glass of wine Mary brought me, and tried hard not to sadden them, and to be a woman.

“Poor thing!” said Margray, when she 'd taken off my bonnet and looked at the fashion of my frock, “but you 're sorely altered. Never fret,—it 's worth no tear; she counted much on your likely looks, though,—you never told us the accident took them.”

“I thought you 'd know, Margray.”

“Oh, for sure, there 's many escapes.—And this is grenadine? I 'd rather have the old mohair.—Well, well, give a man luck and throw him into the sea; happen you 'll do better than us all. If my mother cannot marry you as she 'd choose, you 'll come to less grief, I doubt.” And Margray heaved a little sigh, and ran to tumble up her two-year-old from his rose-lined basket.

I went home with Margray that night; I could n't bear to sleep in the little white bed that was mine when a happy child, and with every star that rose I felt a year the older; and on the morrow, when I came home, my mother was still in the same taking, so I went back again and whiled the day off as I could; and it was not so hard, for Mary Strathsay came over, and Effie, and there was so much to tell, and so much to ask, and Effie had all along been so full of some grand company

she had met that last year in Edinboro', that the dinner-bells rang ere we thought of lunch; but still a weight lay on me like a crime on conscience. But by the next dawning I judged 't was best that I should gather courage and settle things as they were to be. Margray's grounds joined our own, and I snatched up the babe, a great white Scotch bairn, and went along with him in my arms under the dripping orchard-boughs, where still the soft glooms lingered in the early morn. And just ere I reached the wicket, a heavy step on the garden-walk beyond made my heart plunge, and I came face to face with my mother. My tongue clove to the roof of my mouth, I did not dare glance up, yet I felt her eyes upon me as if she searched some spot fit for her fine lips, and presently her hand was on my head, and the kiss had fallen on my hair, and then she gathered me into her arms, and her tears rained down and anointed my face like chrism. And I just let the wondering wean slip to the grass, and I threw my arms about her and cried, “Oh, mother, mother, forgive me, and love me just a little!” It was but a breathing; then I remembered the child at my feet, and raised him, and smiled back on Mrs. Strathsay, and went on with a lighter heart to set my chests and drawers straight.

The days slipped into weeks, and they were busy, one and all, ordering Effie's wardrobe; for, however much I took the lead, she was the elder and was to be brought out. My mother never meant to bring *me* out, I think,—she could not endure the making of parade, and the hearing the Thomsons and Lindsays laugh at it all, when 't was but for such a flecked face,—she meant I should slip into life as I could. We had had the seamstresses, and when they were gone sometimes Mrs. Strathsay came and sat among us with her work;—she never pricked finger with fell or hem, but the heaviest task she took was the weaving of the white leaf-wreaths in and out the lace-web before

her there,—and as we stitched, we talked, and she lent a word how best an old breadth could be turned, another gown refitted,—for we had to consider such things, with all our outside show of establishment.

Margray came running through the garden that afternoon, and up where we sat, and over her arm was fluttering no end of gay skirts and ribbons.

“I saved this pink muslin—it’s real Indian, lascar lawn, fine as cobweb—for you, Alice,” she said. “It’s not right to leave it to the moths,—but you’ll never need it now. It shall be Effie’s, and she’ll look like a rose-bud in it,—with her yellow locks floating.”

“Yes,” said I.

“You’ll not be wanting such bright things now, child; you’ll best wear grays, and white, and black.”

“Indeed, then, I sha’n’t,” I said. “If I’m no longer lovely myself, I’ll be decked out in braw clothes, that I may please the eye one way or another.”

“No use, child,” sighed my mother ’twixt her teeth, and not meaning for me to hear.

“So would I, Ailie,” said Mary Strathsay, quickly. “There’s much in fine fibres and soft shades that gives one the womanly idea. You’re the best shape among us all, my light lissomeness, and your gowns shall fit it rarely. Nay, Margray, let Alice have the pink.”

“Be still, Mary Strathsay!” said my mother. “Alice will wear white this summer; ’t is most suitable. She has white slips and to spare.”

“But in the winter?” urged the other. “’T will be sad for the child, and we all so bright. There’s my pearl silk,—I’m fairly tired of it,—and with a cherry waist-piece”——

“You lose breath,” said my mother, coldly and half vexed.

So Mary Strathsay bit her lip and kept the peace.

“Whisht now, child, your turn will come,” said Margray, unfolding a little bodice of purple velvet, with its droop of snowy Mechlin. “One must cut the

coat according to the cloth. That’s for Effie,—gayly my heart’s beat under you,” laying it down and patting it on one side, lovingly. “There, if white’s the order of the day, white let it be,—and let Mrs. Strathsay say her most, she cannot make other color of this, and she shall not say me nay. That’s for Alice.” And she flung all the silvery silk and blonde lace about me.

“Child, you’ll sparkle!” whispered Mary Strathsay in my ear, hastening to get the glittering apparel aside, lest my mother should gainsay us.

But Mrs. Strathsay did not throw us a glance.

“You’re ill-pleased, Effie,” said Margray; for our little beauty, finding herself so suddenly the pet, had learned to toss her head in pretty saucy ways.

“Not a speck!” Effie answered up. “’T was high time,—I was thinking.”

Margray laughed, and took her chin ’twixt thumb and finger, and tried to look under the wilful lids that drooped above the blue light in her eyes.

“You’re aye a faithful pet, and I like you clannish. Stand by them that stands by you, my poor man used to say. You shall put on as fine a gown, and finer, of my providing, the day you’re wedded.”

“I’ll gie ye veil o’ siller lace,  
And troth ye wi’ a ring;  
Sae bid the blushes to your face,  
My ain wee thing!”

sang Mary.

“I want none of your silver lace,” said Effie, laughing lightly, and we little dreamed of the girl’s thought. “I’ll have that web my mother has wrought with myrtle-leaf and -blossom.”

“And ’t was begun for me,” said Mary, arching her brows, and before she thought.

“You,—graceless girl!” said my mother. “It’s no bridal veil will ever cross your curls!”

“Surely, mother, we’ve said too much,—you’ll overlook old scores.”

"'T is hard forgetting, when a perverse child puts the hand to her own hurt."

"No hurt to me. You would not have had me take a man at his word when he recked not what he said."

"Tsh! Tsh! Charles Seavern would have married you. And with the two brothers gone, he's an earl now, — and you flung him off. Tsh!"

"I never saw the time, mother, solemnly as I've told you, when his right hand knew what his left hand did, — what with his champagne-suppers, your Burgundy, and Johnny Graeme's Jamaica. He'd have been sorely shocked to wake up sober in his earldom some fine morning and find a countess beside him ready-made to his hand."

"You spared him!" said my mother. And in a minute she added, softwise, "Ay, were that all!"

"Ah," said Mary, "but I'll take the next one that asks me, if it's only to save myself the taunts at home! You thought you were winning to a soft nest, children, where there were nought but larks and thrushes and maybe nightingales, — and we're all cuckoos."

"'Cuckoo! cuckoo! sweet voice of Spring,  
Without you sad the year had been,  
The vocal heavens your welcome ring,  
The hedge-rows ope and take you in,  
Cuckoo! cuckoo!"

"'Cuckoo! cuckoo! O viewless sprite,  
Your song enchants the sighing South,  
It woos the wild-flower to the light,  
And curls the smile round my love's  
mouth,  
Cuckoo! cuckoo!'"

"Have done your claver, Mary!" cried Margray. "One cannot hear herself think, for the din of your twittering! — I'll cut the sleeve over crosswise, I think," — and, heedless, she herself commenced humming, in an undertone, "'Cuckoo! cuckoo!' — There! you've driven mother out!"

Mary laughed.

"When I'm married, Ailie," she

whispered, "I'll sing from morn till night, and you shall sit and hear me, without Margray's glowering at us, or my mother so much as saying, 'Why do you so?'"

For all the time the song had been purling from her smiling lips, Mrs. Strathsay's eyes were laid, a weight like lead, on me, and then she had risen as if it hurt her, and walked to the door.

"Or when you've a house of your own," added Mary, "we will sing together there."

"Oh, Mary!" said I, like the child I was, forgetting the rest, "when I'm married, you will come and live with me?"

"You!" said my mother, stepping through the door and throwing the words over her shoulder as she went, not exactly for my ears, but as if the bubbling in her heart must have some vent: "And who is it would take such a fright?"

"My mother's fair daft," said Margray, looking after her with a perplexed gaze, and dropping her scissors. "Surely, Mary, you should n't tease her as you do. She's worn more in these four weeks than in as many years. You're a fickle changeling!"

But Mary rose and sped after my mother, with her tripping foot; and in a minute she came back laughing and breathless.

"You put my heart in my mouth, Mistress Graeme," she said. "And all for nothing. My mother's just ordering the cream to be whipped. Well, little one, what now?"

"It's just this dress of Margray's, — mother's right, — 't will never do for me; I'll wear shadows. But 't will not need the altering of a hair for you, Mary, and you shall take it."

"I think I see myself," said Mary Strathsay, "wearing the dress Margray married Graeme in!" For Margray had gone out to my mother in her turn.

"Then it's yours, Effie. I'll none of it!"

"I'm finely fitted out, then, with the

robe here and the veil there! bridal or burial, toss up a copper and which shall it be?" said Effie, looking upward, and playing with her spools like a juggler's oranges. And here Margray came back.

She sat in silence a minute or two, turning her work this way and that, and then burst forth, —

"I'd not stand in your shoes for much, Alice Strathsay!" she cried, "that's certain. My mother's in a rare passion, and here's Sir Angus home!"

"Sir Who?" said Effie, puzzled; "it was just Mr. Ingestre two years ago."

"Well, it's been Sir Angus a twelve-month now and more, — ever since old Sir Brenton went, and he went with a stroke."

"Yes," said Mary, "it was when Angus arrived in London from Edinboro', the day before joining his ship."

"And why did n't we ever hear of it?"

"I don't just remember, Effie dear," replied Margray, meditatively, "unless 't were—it must have been—that those were the letters lost when the Atlantis went down."

"Poor gentleman!" said Mary. "It was one night when there was a division in the House, and it divided his soul from his body, — for they found him sitting mute as marble, and looking at their follies and strifes with eyes whose vision reached over and saw God."

"For shame, Mary Strathsay, to speak lightly of what gave Angus such grief!"

"Is that lightly?" she said, smoothing my hair with her pretty pink palms till it caught in the ring she wore. "Never mind what I say, girlie; it's as like to be one word as the other. But I grieved for him. He's deep and quiet; a sorrow sinks and underlies all that's over, in the lad."

"Hear her!" said Margray; "one would fancy the six feet of the Ingestre stature were but a pocket-piece! The lad! Well, he'll put no pieces in our pockets, I doubt," (Margray had ever an eye to the main chance,) "and it's that angers my mother."

"Hush, Margray!" I heard Mary say, for I had risen and stolen forth. "Thou 'lt make the child hate us all. Were we savages, we had said less. You know, girl, that our mother loved our father's face in her, and counted the days ere seeing it once more; and having lost it, she is like one bewildered. 'T will all come right. Let the poor body alone, — and do not hurt the child's heart so. We're right careless."

I had hung on tiptoe, accounting it no meanness, and I saw Margray stare.

"Well," she murmured, "something may be done yet. 'T will go hard, if by hook or crook Mrs. Strathsay do not have that title stick among us"; and then, to make an end of words, she began chattering anent biases and gores, the lace on Mary Campbell's frill, the feather on Mary Dalhousie's bonnet, — and I left them.

I ran over to Margray's, and finding the boy awake, I dismissed his nurses the place, and stayed and played with him and took the charge till long past the dinner-hour, and Margray came home at length, and then, when I had sung the child asleep again, for the night, and Margray had shown me all the contents of her presses, the bells were ringing nine from across the river, and I ran back as I came, and up and into my little bed, and my heart was fit to break, and I cried till the sound of the sobs checked me into silence. Suddenly I felt a hand fumbling down the coverlid, and 't was Nannie, my old nurse, and her arm was laid heavily across me.

"Dinna greet," she whispered, "dinna greet and dull your een that are brighter noo than a' the jauds can show, — the bonny blink o' them! They sha' na flout and fleer, the feckless queans, the hissies wha 'll threep to stan' i' your auld shoon ae day! Dinna greet, lass, dinna!"

But I rose on my arm, and stared about me in all the white moonlight of the vacant place, and hearkened to the voices and laughter rippling up the great staircase, — for there were gallants in

belike,—and made as if I had been crying out in my sleep.

“Oh, Nurse Nannie, is it you?” I said.

“Ay, me, Miss Ailie darling!”

“Sure I dream so deeply. I ’m all as oppressed with nightmare.”

But with that she brushed my hair, and tenderly bathed my face in the bay-water, and fastened on my cap, and, sighing, tucked the coverlid round my shoulder, and away down without a word.

The next day was my mother’s dinner-party. She was in a quandary about me, I saw, and to save words I offered to go over again and stay with the little Graeme. So it came to pass, one time being precedent of another, that in all the merrymakings I had small share, and spent the greater part of those bright days in Margray’s nursery with the boy, or out-doors in the lone hay-fields or among the shrubberies; for he waxed large and glad, and clung to me as my own. And to all kind Mary Strathsay’s pleas and words I but begged off as favors done to me, and I was liker to grow sullen than smiling with all the stour.

Why, I wonder, do the servants of a house know so much better than the house itself the nearest concerns of shadowy futures? One night the nurse paused above my bed and guarded the light with her hand.

“Let your heart lap,” she said. “Sir Angus rides this way the morrow.”

Ah, what was that to me? I just doubled the pillow over eyes and ears to shut out sight and hearing. And so on the morrow I kept well out of the way, till all at once Mrs. Strathsay stumbled over me and bade me, as there would be dancing in the evening, to don my ruffled frock and be ready to play the measures. I mind me how, when I stood before the glass and secured the knot in my sash, and saw by the faint light my loosened hair falling in a shadow round me and the quillings of the jaconet, that I thought to myself how it was like a white moss-rose, till of a sud-

den Nannie held the candle higher and let my face on me,—and I bade her bind up my hair again in the close plaits best befitting me. And I crept down and sat in the shade of the window-curtains, whiles looking out at the soft moony night, whiles in at the flowery lighted room. I’d heard Angus’s coming, early in the afternoon, and had heard him, too, or e’er half the cordial compliments were said, demand little Alice; and they told him I was over and away at Margray’s, and in a thought the hall-doors clashed behind him and his heels were ringing up the street, and directly he hastened home again, through the gardens this time, and saw no sign of me;—but now my heart beat so thickly, when I thought of him passing me in the dance, that, could I sit there still, I feared ’t would of itself betray me, and that warned me to question if the hour were not ready for the dances, and I rose and stole to the piano and sat awaiting my mother’s word. But scarcely was I there when one came quietly behind me, and a head bent and almost swept my shoulder; then he stood with folded arms.

“And how long shall I wait for your greeting? Have you no welcome for me, Ailie?”

“Yes, indeed, Sir Angus,” I replied; but I did not turn my head, for as yet he saw only the back of me, fair and graceful perchance, as when he liked it.

He checked himself in some word.

“Well, then,” he said, “give it me, tell it me, look it me!”

I rose from my seat and shifted the piece of music before me,—turned and gazed into his eyes one long breathing-space, then I let the lids fall,—waited a minute so,—and turned back ere my lip should be all in a quiver,—but not till his head bent once more, and a kiss had fallen on those lids and lain there cool and soft as a pearl,—a pearl that seemed to sink and penetrate and melt inwardly and dissolve and fill my brain with a white blinding light of joy. ’T was but a brief bit of the great eternities;

— and then I found my fingers playing I knew not how, and heard the dancers' feet falling to the tune of I knew not what.

While I played there, Margray sat beside me, for the merriment was without now, on the polished oak-floor of the hall, and they being few but familiars who had the freedom of the house, (and among whom I had had no need but to slip with a nod and smile ere gaining my seat,) she took out her needle and set a stitch or two, more, perhaps, to cover her being there at all than for any need of industry; for Margray loved company, and her year of widowhood being not yet doubled, and my mother unwilling that she should entertain or go out, she made the most of that at our house; for Mrs. Strathsay had due regard of decency, — forbye she deemed it but a bad lookout for her girls, if the one of them danced on her good-man's grave.

"I doubt will Sir Angus bide here," said Margray at length; for though all his boyhood she had called him by every diminutive his name could bear, the title was a sweet morsel in her unaccustomed mouth, and she kept rolling it now under her tongue. "Mrs. Strathsay besought him, but his traps and his man were at the inn. Sir Angus is not the lad he was, — a young man wants his freedom, my mother should remember."

And as her murmur continued, my thoughts came about me. They were like birds in the hall; and all their voices and laughter rising above the jingle of the keys, I doubted was he so sorry for me, after all. Then the dancing broke, I found, though I still played on, and it was some frolicsome game of forfeits, and Angus was chasing Effie, and with her light step and her flying laugh it was like the wind following a rose-flake. Anon he ceased, and stood silent and stater than Mrs. Strathsay's self, looking on.

"See Sir Angus now," said Margray, bending forward at the pictures shifting through the door-way. "He'd do for the

Colossus at what-you-may-call-it; and there's our Effie, she minds me of a yellow-bird, hanging on his arm and talking: I wonder if that's what my mother means, — I wonder will my mother compass it. See Mary Strathsay there! She's white and fine, I'll warrant; see her move like a swan on the waters! Ay, she's a lovesome lass, — and Helmar thought so, too."

"What are you saying of Mary Strathsay? Who *don't* think she's a lovesome lass?"

"Helmar don't *now*, — I'll dare be sworn."

"Helmar?"

"Hush, now! don't get that maggot agait again. My mother'd ban us both, should her ears side this way."

"What is it you mean, Margray dear?"

"Sure you've heard of Helmar, child?"

Yes, indeed, had I. The descendant of a bold Spanish buccaneer who came northwardly with his godless spoil, when all his raids upon West-Indian seas were done, and whose name had perhaps suffered a corruption at our Provincial lips. A man — this Helmar of to-day — about whom more strange tales were told than of the bloody buccaneer himself. That the walls of his house were ceiled with jewels, shedding their accumulated lustre of years so that never candle need shine in the place, was well known. That the spell-bound souls of all those on his red-handed ancestor's roll were fain to keep watch and ward over their once treasures, by night and noon, white-sheeted and faint in the glare of the sun, wan in the moon, blacker shadows in the starless dark, found belief. And there were those who had seen his seraglio; — but few, indeed, had seen him, — a lonely man, in fact, who lived aloof and apart, shunned and shunning, tainted by the curse of his birth.

"Oh, yes," I said, "of Helmar away down the bay; but the mate of our brig was named Helmar, too."

Margray's ivory stiletto punched a red eyelet in her finger.

"Oh, belike it was the same!" she cried, so loud that I had half to drown it in the pedal. "He 's taken to following the sea, they say."

"What had Helmar to do with our Mary, Margray?"

"What had he to do with her?" answered Margray in under-voice. "He fell in love with her!"

"That 's not so strange."

"Then I'll tell you what 's stranger, and open your eyes a wee. She fell in love with him."

"Our Mary? Then why did n't she marry him?"

"Marry Helmar?"

"Yes. If my mother wants gold, there it is for her."

"He 's the child of pirates; there 's blood on his gold; he poured it out before my mother, and she told him so. He 's the making of a pirate himself. Oh, you 've never heard, I see. Well, since I 'm in for it,—but you 'll never breathe it?—and it 's not worth while darkening Effie with it, let alone she 's so giddy my mother 'd know I 'd been giving it mouth,—perhaps I ought n't,—but there!—poor Mary! He used to hang about the place, having seen her once when she came round from Windsor in a schooner, and it was a storm,—may-happen he saved her life in it. And after, Mary 'd meet him at church, and in the garden, and on the river; 't was by pure chance on her part, and he was forever in the way. Then my mother, innocent of it all, went to Edinboro', as you know, and I was married and out of the reach, and Mary kept the house those two months with Mrs. March of the Hill for dowager,—her husband was in the States that summer,—and Mrs. March is no more nor less than cracked,—and no wonder he should make bold to visit the house. My mother 'd been home but a day and night, 's you may say, when in walks my gentleman,—who but he?—fine as a noble of the Court, and Mary presents him

to Mrs. Strathsay as Mr. Helmar of the Bay. Oh, but Mrs. Strathsay was in a stound. And he began by requesting her daughter's hand. And that brake the bonds,—and she dashed out scorners of wrath. Helmar's eyes flashed only once, then he kept them on the ground, and he heard her through. 'T was the second summer Seavern's fleet was at the harbor's mouth there, and a ship of war lay anchored a mile down-river,—many 's the dance we had on its deck!—and Captain Seavern of late was in the house night and morn,—for when he found Mary offish, he fairly lay siege to her, and my mother behind him,—and there was Helmar sleeping out the nights in his dew-drenched boat at the garden's foot, or lying wakeful and rising and falling with the tide under her window, and my mother forever hearing the boat-chains clank and stir. She 's had the staple wrenched out of the wall now,—'t was just below the big bower-window, you remember. And when Mary utterly refused Seavern, Seavern swore he 'd wheel his ship round and raze the house to its foundations: he was—drunk—you see. And Mary laughed in his face. And my mother beset her,—I think she went on her knees to her,—she led her a dreadful life," said Margray, shivering; "and the end of it all was, that Mary promised to give up Helmar, would my mother drop the suit of Seavern. And at that, Helmar burst in: he was like one wild, and he conjured Mary,—but she sat there stone-still, looking through him with the eyes in her white, deadly face, as though she 'd never seen him, and answering no word, as if she were deaf to sound of his voice henceforth; and he rose and glared down on my mother, who stood there with her white throat up, proud and defiant as a stag at bay,—and he vowed he 'd darken her day, for she had taken the light out of his life. And Angus was by: he 'd sided with Helmar till then; but at the threat, he took the other by the shoulder and led him to

the door, with a blue blaze in those Ingestre eyes, and Helmar never resisted, but fell down on his face on the stones and shuddered with sobs, and we heard them into the night, but with morning he was gone."

"Oh! And Mary?"

"'Deed, I don't think she cares. She's never mentioned his name. D' you mind that ring of rubies she wears, like drops of blood all round the hoop? 'T was his. She shifted it to the left hand, I saw. It was broken once, — and what do you think she did? She put a blow-pipe at the candle-flame, and, holding it up in tiny pincers, soldered the two ends together without taking it off her finger, — and it burning in to the bone! Strathsay grit. It's on her white wedding-finger. The scar's there, too. — St! Where's your music? You've not played a note these five minutes. Whisht! here comes my mother!"

How was Helmar to darken my mother's day, I could n't but think, as I began to toss off the tune again. And poor Mary, — there were more scars than I carried, in the house. But while I turned the thoughts over, Angus came for me to dance, and Margray, he said, should play, and my mother signed consent, and so I went.

But 't was a heavy heart I carried to and fro, as I remembered what I'd heard, and perhaps it colored everything else with gloom. Why was Angus holding my hand as we glided? why was I by his side as we stood? and as he spoke, why was I so dazzled with delight at the sound that I could not gather the sense? Oh, why, but that I loved him, and that his noble compassion would make him the same to me at first as ever, — slowly, slowly, slowly lowering, while he turned to Effie or some other fair-faced lass? Ah, it seemed to me then in a rebellious heart that my lot was bitter. And fearful that my sorrow would abroad, I broke into a desperation of gayety till my mother's hand was on my arm. But all the

while, Angus had been by, perplexed shadows creeping over his brow; — and in fresh terror lest my hidden woe should rise and look him in the face, all my mother's pride itself shivered through me, and I turned my shoulder on him with a haughty, pettish chill.

So after that first evening the days and nights went by, went by on leaden wings; for I wanted the thing over, it seemed I could n't wait, I desired my destiny to be accomplished and done with. Angus was ever there when occasion granted, — for there were drives and sails and rambles to lead him off; and though he 'd urge, I would not join them, not even at my mother's bidding, — she had taught me to have a strange shrinking from all careless eyes; — and then, moreover, there were dinners and balls, and them he must needs attend, seeing they were given for him, — and I fancy here that my mother half repented her decree concerning the time when I should enter society, or, rather, should *not*, — yet she never knew how to take step in recedure.

But what made it hardest of all was a word of Margray's one day as I sat over at her house hushing the little Graeme, who was sore vexed with the rash, and his mother was busy plaiting ribbons and muslins for Effie, — Effie, who seemed all at once to be blossoming out of her slight girlhood into the perfect rose of the woman that Mary Strathsay was already, and about her nothing lingering rathe or raw, but everywhere a sweet and ripe maturity. And Margray said, —

"Now, Alice, tell me, why are you so curt with Angus? Did he start when he saw you first?"

"Nay, I scarcely think so, Margray; he knew about it, you know. '*Sleep, baby, sleep, in slumber deep, and smile across thy dreaming*'" —

"'Deed, he did n't! He told me so himself. He said he 'd been ever fancying you fresh and fair as the day he left you, — and his heart cracked when you turned upon him."

"Poor Angus, then,—he never showed it. '*Hush, baby, hush*'" —

"He said he 'd have died first!"

"Then perhaps he never meant for you to tell me, Margray."

"Oh, what odds? He said,—I 'll tell you what else he said,—you 're a kind, patient heart, and there 's no need for you to fret,—he said, as he 'd done you such injury, were there even no other consideration, he should deem it his duty to repair it, so far as possible, both by the offer of his hand, and, should it be accepted, by tender faithfulness for life."

"Oh, Margray! did Angus say that? Oh, how chanced he to? Oh, how dared he?"

"They 're not his very words, believe; but that 's the way I sensed them. How came he? Why,—you see,—I 'm not content with my mother's slow way of things,—that 's just the truth!—it 's like the season's adding grain on grain of sunshine or of rain in ripening her fruit,—it 's oftenest the quick blow strikes home; and so I just went picking out what I wanted to know for myself."

"Oh, Margray,—I suppose,—what *did* he think?"

"Think? He did n't stop to think; he was mighty glad to meet somebody to speak to. You may just thank your stars that you have such a lover, child!"

"I 've got no lover!" I wailed, breaking out in crying above the babe. "Oh, why was I born? I 'm like to die! I wish I were under the sods this day!"

"Oh, goodness me!" exclaimed Margray, in a terror. "What 's possessed the girl? And I thinking to please her so! Whisht now, Ailie girl,—there, dear, be still,—there, now, wipe away the tears; you 're weak and nervous, I believe,—you 'd best take a blue-pill to-night. There 's the boy awake, and none but you can hush him off. It 's odd, though, what a liking he 's taken to his Aunt Ailie!"

And so she kept on, diverting me, for Margray had some vague idea that my

crying would bring my mother; and she 'd not have her know of her talk with Angus, for the world;—marriage after marriage would not lighten the rod of iron that Mrs. Strathsay held over her girls' lives, I ween.

And now, having no need to be gay, I indulged my fancy and was sad; and the more Angus made as if he would draw near, the more I turned him off, as scale-armor turns a glancing blade. Yet there had been times when, seeming as if he would let things go my own gate, he had come and sat beside me in the house, or joined his horse's bridle to mine in the woods, and syllables slipped into sentences, and the hours flew winged as we talked; and warmed into forgetfulness, all the sweet side of me—if such there be—came out and sunned itself. And then I would remember me and needs must wear the ice again, as some dancing, glancing, limpid brook should sheathe itself in impenetrable crystals. And all those hours—for seldom were the moments when against my will I was compelled to gladness—I became more and more alone; for Effie being the soul of the festivities,—since Mary Strathsay oftenest stood cold and proudly by, wax-white and like a statue on the wall,—and all the world looking on at what they deemed to be no less than Angus's courtship, I saw little of her except I rose on my arm to watch her smiling sleep deep in the night. And she was heartsome as the lark's song up the blue lift, and of late was never to be found in those two hours when my mother kept her room at mid-day, and was over-fond of long afternoon strolls down the river-bank or away in the woods by herself. Once I fancied to see another walking with her there out in the hay-fields beyond, walking with her in the sunshine, bending above her, perhaps an arm about her, but the leafy shadows trembled between us and darkened them out of sight. And something possessed me to think that the dear girl cared for my Angus. Had I been ever

so ready to believe my own heart's desire, how could I but stifle it at that? It seemed as if the iron spikes of trouble were thrust from solid bars of fate woven this way and that across me, till with the last and newest complication I grew to knowing no more where to turn than the toad beneath the harrow.

So the weeks went by. Angus had gone home on his affairs, — for he had long left the navy, — but was presently to return to us. It was the sweet September weather: mild the mellow sunshine, — but dour the days to me!

There was company in the house that evening, and I went down another way; for the sound of their lirting and laughing was but din in my ears. I passed Mary Strathsay, as I left my room; she had escaped a moment from below, had set the casement wide in the upper hall, and was walking feverishly to and fro, her arms folded, her dress blowing about her: she 'll often do the same in her white wrapper now, at dead of dark in any stormy night: she could not find sufficient air to breathe, and something set her heart on fire, some influence oppressed her with unrest and longing, some instinct, some unconscious prescience, made her all astir. I passed her and went down, and I hid myself in the arbor, quite overgrown with wild, rank vines of late summer, and listened to a little night-bird pouring out his complaining heart.

While I sat, I heard the muffled sound of horses' feet prancing in the flagged court-yard, — for the house fronted on the street, one end overhanging the river, the back and the north side lost in the gardens that stretched up to Margray's grounds one way and down to the water's brink the other, so the stroke of their impatient hoofs reached me but faintly; yet I knew 't was Angus and Mr. March of the Hill, whom Angus had written us he was to visit. And then the voices within shook into a chorus of happy welcome, the strain of one who sang came fuller on the breeze, the lights seemed to burn clearer, the very flow-

ers of the garden blew a sweeter breath about me.

'T was nought but my own perversity that hindered me from joining the glee, that severed me from all the happiness; but I chose rather to be miserable in my solitude, and I turned my back upon it, and went along and climbed the steps and sat on the broad garden-wall, and looked down into the clear, dark water ever slipping by, and took the fragrance of the night, and heard the chime of the chordant sailors as they heaved the anchor of some ship a furlong down the stream, — voices breathing out of the dusky distance, rich and deep. And looking at the little boat tethered there beneath, I mind that I bethought me then how likely 't would be for one in too great haste to unlock the water-gate of the garden, climbing these very steps, and letting herself down by the branch of this old dipping willow here, how likely 't would be for one, should the boat but slip from under, how likely 't would be for one to sink in the two fathom of tide, — dress or scarf but tangling in the roots of the great tree reaching out hungrily through the dark, transparent depth below, — how likely to drown or e'er a hand could raise her! And I mind, when thinking of the cool, embracing flow, the drawing, desiring, tender current, the swift, soft, rushing death, I placed my own hand on the willow-branch, and drew back, stung as if by conscience that I trifled thus with a gift so sacred as life.

Then I went stealing up the alleys again, beginning to be half afraid, for they seemed to me full of something strange, unusual sound, rustling motion, — whether it were a waving bough, a dropping o'er-ripe pear, a footstep on adjacent walks. Nay, indeed, I saw now! I leaned against the beach-bole there, all wrapt in shade, and looked at them where they inadvertently stood in the full gleam of the lighted windows: 't was Angus, and 't was Effie. He spoke, — a low, earnest pleading, —

I could not hear a word, or I had fled, — then he stooped, and his lips had touched her brow. Oh, had he but struck me! less had been the blow, less the smart! — the blow, though all along I had awaited it. Ah, I remembered another kiss, one that had sunk into my brain as a pearl would sink in the sea, that when my heart had been saddest I had but just to shut my eyes and feel again falling soft and warm on my lids, lingering, loving, interpenetrating my soul with its glow; — and this, oh, 't was like a blade cleaving that same brain with swift, sharp flash! I flew into the house, but Effie was almost there before me, — and on my way, falling, gliffed in the gloom, against something, I snatched me back with a dim feeling that 't was Angus, and yet Angus had followed Effie in. I slipped among the folk and sat down somewhere at length like as if stunned.

It was question of passing the time, that went round; for, though all their words fell dead on my ear at the moment, it was in character that afterward I could recall, reilluminate, and read; and one was for games, and one for charades, and one for another thing; — and I sat silent and dazed through it all. Finally they fell to travesty scenes from history, each assuming a name and supporting it by his own wits, but it all passed before my dulled senses like the phantasmagoria of a troubled dream; and that tiring, there was a kind of dissolving views managed by artful ebb and flow of light, pictures at whose ending the Rose of May was lost in Francesca, who, waxing and waning in her turn, faded into Astarte, and went out in a shudder of darkness, — and the three were Effie. But ere the views were done, ere those three visions, when Effie ran away to dress her part, I after her and up into our room, vaguely, but as if needs must.

"I've good news for you," said she, without looking, and twisting her long, bright hair. "I was with Angus but now in the garden. He can bear it no

longer, and he touched my brow with his lips that I promised to urge his cause; for he loves you, he loves you, Alice! Am I not kind to think of it now? Ah, if you knew all!"

She had already donned the gown of silvery silk and blonde, and was winding round her head the long web of lace loosened from my mother's broidery-frame. She turned and took me by the two shoulders, and looked into my face with eyes of azure flame.

"I am wild with gladness!" she said. "Kiss me, girl, quick! there 's no time to spare. Kiss me on the cheek, — not the lip, not the lip, — *he* kissed me there! Kiss me the cheek, — one, and the other! So, brow, cheeks, mouth, and your kisses all have signed me with the sign of the cross. Oh, girl, I am wild with joy!"

She spoke swift and high, held me by the two shoulders with a clasp like steel, suddenly shook me loose, and was down and away.

I followed her again, as by habit, — but more slowly: I was trying to distil her words. I stood then in the door of a little ante-room opening into the drawing-room and looking on the courtyard, and gazed thence at those three pictures, as if it were all a delirament, till out of them Effie stepped in person, and danced, trilling to herself, through the groups, flashing, sparkling, flickering, and disappeared. Oh, but Mrs. Strathsay's eyes gleamed in a proud pleasure after her!

Hoofs were clattering again below in the yard, for Angus was to ride back with Mr. March. Some one came my way, — I shrank through the door-way, shivering from top to toe, — it was Angus searching for his cap; and it was so long since I had suffered him to exchange a word with me! I know not what change was wrought in my bewildered lineaments, what light was in my glance; but, seeing me, all that sedate sadness that weighed upon his manner fell aside, he hastily strode toward me, took my hands as he was wont,

and drew me in, gazing the while down my dazzled, happy eyes till they fell.

"Ay, lass," said he then, laughing gleefully as any boy, and catching both of my hands again that I had drawn away. "I've a puzzle of my own to show thee, — a charade of two syllables, — a tiny thing, and yet it holds my world! See, the first!"

He had led me to the mirror and stationed me there alone. I liked not to look, but I did.

"Why, Angus," I said, "it's I."

"Well done! and go to the head. It's you indeed. But what else, Allie darling? Nay, I'll tell you, then. The first syllable — just to suit my fancy — shall be bride, shall it not?"

"Bride," I murmured.

"And there behold the last syllable!" taking a step aside to the window, and throwing wide the blind.

I looked down the dark, but there was nought except the servant in the light of the hanging lamp, holding the curbs of the two horses that leaped and reared with nervous limbs and fiery eyes behind him.

"Is it horses? — steeds? — oh, bridles!"

"But thou'rt a very dunce! The last syllable is groom."

"Oh!"

"Now you shall see the embodiment of the whole word"; and with the step he was before the glass again. "Look!" he said; "look from under my arm, — you are just as high as my heart!"

"Why, that's you, Angus," — and a gleam was dawning on me.

"Of course it is, little stupid! No less. And it's bridegroom too, and never bridegroom but with this bride!" And he had turned upon me and was taking me into his arms.

"Oh, Angus!" I cried, — "can you love me with no place on my face to kiss?"

But he found a place.

"Can I help loving you?" he said, — "Oh, Allie, I do! I do! — when all my years you have been my dream, my

hope, my delight, when my life is yours, when you are my very self!"

And I clung to him for answer, hiding all my troubled joy in his breast.

Then, while he still held me so, silent and tender, close-folding, — there rose a great murmur through the rooms, and all the people surged up to one end, and Margray burst in upon us, calling him. He drew me forth among them all, his arm around my waist, and they opened a lane for us to the window giving into the garden, and every eye was bent there on a ghastly forehead, a grim white face, a terrible face, pressed against the glass, and glaring in with awful eyes!

"By Heaven, it is Helmar!" cried Angus, fire leaping up his brow; — but Mary Strathsay touched him to stone with a fling of her white finger, and went like a ghost herself and opened the casement, as the other signed for her to do. He never gave her glance or word, but stepped past her straight to my mother, and laid the white, shining, dripping bundle that he bore — the trilling hushed, the sparkle quenched, so flaccid, so limp, so awfully still — at her feet.

"I never loved the girl," he said, hoarsely. "Yet to-night she would have fled with me. It was my revenge, Mrs. Strathsay! She found her own death from a careless foot, the eager haste of an arm, the breaking branch of your willow-tree. Woman! woman!" he cried, shaking his long white hand before her face, "you took the light out of my life, and I swore to darken your days!"

Mrs. Strathsay fell forward on the body with a long, low moan. He faced about and slid through us all, ere Angus could lay hand on him, — his eye on Mary Strathsay. There was no love on her face, no expectancy, no passion, but she flung herself between the two, — between Angus following and Helmar going, for he disdained to fly, — then shut and clasped the window, guarded it beneath one hand, and held Angus

with her eye, white, silent, deathly, no joy, no woe, only a kind of bitter triumph in achieving that escape. And it was as if Satan had stalked among us there.

'T was no use pursuit;— the ship that I had heard weighing anchor was reached ere then and winging down the river. And from that hour to this we have never set eyes on Helmar.

Well, at midsummer of the next year Angus married me. We were very quiet, and I wore the white slip in which he showed me myself in the glass as a bride,— for we would not cast aside our crapes so soon, and Mary wears hers to this day. From morn till night my poor mother used only to sit and moan, and all her yellow hair was white as driving snow. I could not leave her, so Angus rented his estates and came and lived with us. 'T is different now;— Mrs. Strathsay goes about as of old, and sees there be no speck on the buttery-shelves, that the sirup of her lucent plums be clear as the light strained through carbuncles, her honeycombs unbroken, her bread like manna, and no followers about her maids. And Mrs. Strathsay has her wish at length;— there 's a son in the house, a son of her own choosing, (for she had ever small regard for the poor little Graeme,)— none knew how she had wished it, save by the warmth with which she hailed it, — and she is bringing him up in the way he should go. She 's aye softer than she was, she does not lay her moulding finger on him too heavily;— if she did, I doubt but we should have to win away to our home. Dear body! all her sunshine has come out! He has my father's name, and when sleep's white finger has veiled his bonnie eyes, and

she sits by him, grand and stately still, but humming low ditties that I never heard her sing before, I verily believe that she fancies him to be my father's child.

And still in the nights of clear dark we lean from the broad bower-window and watch the river flowing by, the rafts swimming down with breath of wood-scents and wild life, the small boats rocking on the tide, revivifying our childhood with the strength of our richer years, heart so locked in heart that we have no need of words,— Angus and I. And often, as we lean so, over the beautiful silence of lapping ripple and dipping oar there floats a voice rising and falling in slow throbs of tune;— it is Mary Strathsay singing some old, sanctified chant, and her soul seems to soar with her voice, and both would be lost in heaven but for the tender human sympathies that draw her back to our side again. For we have grown to be a glad and peaceful family at length; 't is only on rare seasons that the old wound rankles. We none of us speak of Effie, lest it involve the mention of Helmar; we none of us speak of Helmar, lest, with the word, a shining, desolate, woful phantom flit like the wraith of Effie before us. But I think that Mary Strathsay lives now in the dream of hereafter, in the dream that some day, perchance when all her white beauty is gone and her hair folded in silver, a dark, sad man will come off the seas, worn with the weather and with weight of sorrow and pain, and lay himself down at her feet to die. And shrived by sorrow and pain, and by prayer, he shall be lifted in her arms, shall rest on her bosom, and her soul shall forth with his into the great unknown.

## LYRICS OF THE STREET.

## IV.

## THE FINE LADY.

HER heart is set on folly,  
 An amber gathering straws ;  
 She courts each poor occurrence,  
 Heeds not the heavenly laws.  
 Pity her !

She has a little beauty,  
 And she flaunts it in the day,  
 While the selfish wrinkles, spreading,  
 Steal all its charm away.  
 Pity her !

She has a little money,  
 And she flings it everywhere ;  
 'T is a gewgaw on her bosom,  
 'T is a tinsel in her hair.  
 Pity her !

She has a little feeling,  
 She spreads a foolish net  
 That snares her own weak footsteps,  
 Not his for whom 't is set.  
 Pity her !

Ye harmless household drudges,  
 Your draggled daily wear  
 And horny palms of labor  
 A softer heart may bear.  
 Pity her !

Ye steadfast ones, whose burthens  
 Weigh valorous shoulders down,  
 With hands that cannot idle,  
 And brows that will not frown,  
 Pity her !

Ye saints, whose thoughts are folded  
 As graciously to rest  
 As a dove's stainless pinions  
 Upon her guileless breast,  
 Pity her !

But most, ye helpful angels  
 That send distress and work,  
 Hot task and sweating forehead,  
 To heal man's idle irk,  
 Pity her !

## A REPLY

TO "THE AFFECTIONATE AND CHRISTIAN ADDRESS OF MANY THOUSANDS OF WOMEN OF GREAT BRITAIN AND IRELAND TO THEIR SISTERS THE WOMEN OF THE UNITED STATES OF AMERICA."

 E. PALMERSTON (*Viscountess Palmerston*).

*and others.*

SISTERS,—More than eight years ago you sent to us in America a document with the above heading. It is as follows:—

"A common origin, a common faith, and, we sincerely believe, a common cause, urge us, at the present moment, to address you on the subject of that system of negro slavery which still prevails so extensively, and, even under kindly disposed masters, with such frightful results, in many of the vast regions of the Western world.

"We will not dwell on the ordinary topics,—on the progress of civilization, on the advance of freedom everywhere,

on the rights and requirements of the nineteenth century; but we appeal to you very seriously to reflect and to ask counsel of God how far such a state of things is in accordance with His Holy Word, the inalienable rights of immortal souls, and the pure and merciful spirit of the Christian religion. We do not shut our eyes to the difficulties, nay, the dangers, that might beset the immediate abolition of that long-established system. We see and admit the necessity of preparation for so great an event; but, in speaking of indispensable preliminaries, we cannot be silent on those laws of your country which, in direct contravention of God's own law,

'instituted in the time of man's innocence,' deny in effect to the slave the sanctity of marriage, with all its joys, rights, and obligations; which separate, at the will of the master, the wife from the husband and the children from the parents. Nor can we be silent on that awful system which either by statute or by custom interdicts to any race of man or any portion of the human family education in the truths of the gospel and the ordinances of Christianity. A remedy applied to these two evils alone would commence the amelioration of their sad condition. We appeal to you, then, as sisters, as wives, and as mothers, to raise your voices to your fellow-citizens and your prayers to God for the removal of this affliction and disgrace from the Christian world.

"We do not say these things in a spirit of self-complacency, as though our nation were free from the guilt it perceives in others.

"We acknowledge with grief and shame our heavy share in this great sin. We acknowledge that our forefathers introduced, nay, compelled the adoption of slavery in those mighty colonies. We humbly confess it before Almighty God; and it is because we so deeply feel and so unfeignedly avow our own complicity, that we now venture to implore your aid to wipe away our common crime and our common dishonor."

This address, splendidly illuminated on vellum, was sent to our shores at the head of twenty-six folio volumes, containing considerably more than half a million of signatures of British women. It was forwarded to me with a letter from a British nobleman now occupying one of the highest official positions in England, with a request on behalf of these ladies that it should be in any possible way presented to the attention of my countrywomen.

This memorial, as it now stands in its solid oaken case, with its heavy folios, each bearing on its back the im-

print of the American eagle, forms a most unique library, a singular monument of an international expression of a moral idea.

No right-thinking person can find aught to be objected against the substance or the form of this memorial. It is temperate, just, and kindly, and on the high ground of Christian equality, where it places itself, may be regarded as a perfectly proper expression of sentiment, as between blood-relations and equals in two different nations.

The signatures to this appeal are not the least remarkable part of it; for, beginning at the very steps of the throne, they go down to the names of women in the very humblest conditions in life, and represent all that Great Britain possesses, not only of highest and wisest, but of plain, homely common sense and good feeling. Names of wives of cabinet-ministers appear on the same page with the names of wives of humble laborers,—names of duchesses and countesses, of wives of generals, ambassadors, savans, and men of letters, mingled with names traced in trembling characters by hands evidently unused to hold the pen and stiffened by lowly toil. Nay, so deep and expansive was the feeling, that British subjects in foreign lands had their representation. Among the signatures are those of foreign residents from Paris to Jerusalem. Autographs so diverse, and collected from sources so various, have seldom been found in juxtaposition. They remain at this day a silent witness of a most singular tide of feeling which at that time swept over the British community, and *made* for itself an expression, even at the risk of offending the sensibilities of an equal and powerful nation.

No reply to that address, in any such tangible and monumental form, has ever been possible. It was impossible to canvass our vast territories with the zealous and indefatigable industry with which England was canvassed for signatures. In America,

those possessed of the spirit which led to this efficient action had no leisure for it. All their time and energies were already absorbed in direct efforts to remove the great evil concerning which the minds of their English sisters had been newly aroused, and their only answer was the silent continuance of these efforts.

From the Slaveholding States, however, as was to be expected, came a flood of indignant recrimination and rebuke. No one act, perhaps, ever produced more frantic irritation or called out more unsparing abuse. It came with the whole united weight of the British aristocracy and commonalty on the most diseased and sensitive part of our national life; and it stimulated that fierce excitement which was working before and has worked since till it has broken out into open war.

The time has come, however, when such an astonishing page has been turned in the anti-slavery history of America, that the women of our country, feeling that the great anti-slavery work to which their English sisters exhorted them is almost done, may properly and naturally feel moved to reply to their appeal, and lay before them the history of what has occurred since the receipt of their affectionate and Christian address.

Your address reached us just as a great moral conflict was coming to its intensest point.

The agitation kept up by the anti-slavery portion of America, by England, and by the general sentiment of humanity in Europe, had made the situation of the slaveholding aristocracy intolerable. As one of them at the time expressed it, they felt themselves under the ban of the civilized world. Two courses only were open to them: to abandon slave institutions, the sources of their wealth and political power, or to assert them with such an overwhelming national force as to compel the respect and assent of mankind. They chose the latter.

To this end they determined to seize on and control all the resources of the Federal Government, and to spread their institutions through new States and Territories until the balance of power should fall into their hands and they should be able to force slavery into all the Free States.

A leading Southern senator boasted that he would yet call the roll of his slaves on Bunker Hill; and, for a while, the political successes of the Slave Power were such as to suggest to New England that this was no impossible event.

They repealed the Missouri Compromise, which had hitherto stood, like the Chinese wall, between our Northwestern Territories and the irruptions of slaveholding barbarians.

Then came the struggle between Freedom and Slavery in the new Territory, — the battle for Kansas and Nebraska, fought with fire and sword and blood, where a race of men, of whom John Brown was the immortal type, acted over again the courage, the perseverance, and the military religious ardor of the old Covenanters of Scotland, and, like them, redeemed the Ark of Liberty at the price of their own blood and blood dearer than their own.

The time of the Presidential canvass which elected Mr. Lincoln was the crisis of this great battle. The conflict had become narrowed down to the one point of the extension of slave-territory. If the slaveholders could get States enough, they could control and rule; if they were outnumbered by Free States, their institutions, by the very law of their nature, would die of suffocation. Therefore, Fugitive-Slave Law, District of Columbia, Inter-State Slave-Trade, and what not, were all thrown out of sight for a grand rally on this vital point. A President was elected pledged to opposition to this one thing alone, — a man known to be in favor of the Fugitive-Slave Law and other so-called compromises of the Constitution, but honest and faithful in

his determination on this one subject. That this was indeed the vital point was shown by the result. The moment Lincoln's election was ascertained, the slaveholders resolved to destroy the Union they could no longer control.

They met and organized a Confederacy which they openly declared to be the first republic founded on the right and determination of the white man to enslave the black man, and, spreading their banners, declared themselves to the Christian world of the nineteenth century as a nation organized with the full purpose and intent of perpetuating slavery.

But in the course of the struggle that followed, it became important for the new Confederation to secure the assistance of foreign powers, and infinite pains were then taken to blind and bewilder the mind of England as to the real issues of the conflict in America.

It has been often and earnestly asserted that slavery had nothing to do with this conflict; that it was a mere struggle for power; that the only object was to restore the Union as it was, with all its abuses. It is to be admitted that expressions have proceeded from the National Administration which naturally gave rise to misapprehension, and therefore we beg to speak to you on this subject more fully.

And, first, the declaration of the Confederate States themselves is proof enough, that, whatever may be declared on the other side, the maintenance of slavery is regarded by them as the vital object of their movement.

We ask your attention under this head to the declaration of their Vice-President, Stephens, in that remarkable speech delivered on the 21st of March, 1861, at Savannah, Georgia, wherein he declares the object and purposes of the new Confederacy. It is one of the most extraordinary papers which our century has produced. I quote from the *verbatim* report in the Savannah "Republican" of the address as it was delivered in the Athenæum of that city,

on which occasion, says the newspaper from which I copy, "Mr. Stephens took his seat amid a burst of enthusiasm and applause, such as the Athenæum has never had displayed within its walls, within 'the recollection of the oldest inhabitant.'"

"Last, not least, the new Constitution has put at rest *forever* all the agitating questions relating to our peculiar institution, — African Slavery as it exists among us, the proper *status* of the negro in our form of civilization. *This was the immediate cause of the late rupture and present revolution.* Jefferson, in his forecast, had anticipated this, as the 'rock upon which the old Union would split.' He was right. What was conjecture with him is now a realized fact. But whether he fully comprehended the great truth upon which that rock *stood* and *stands* may be doubted. *The prevailing ideas entertained by him and most of the leading statesmen at the time of the formation of the old Constitution were that the enslavement of the African was in violation of the laws of Nature, that it was wrong in principle, socially, morally, and politically.* It was an evil they knew not well how to deal with; but the general opinion of the men of that day was, that, somehow or other, in the order of Providence, the institution would be evanescent, and pass away. This idea, though not incorporated in the Constitution, was the prevailing idea at the time. The Constitution, it is true, secured every essential guaranty to the institution, while it should last; and hence no argument can be justly used against the Constitutional guaranties thus secured, because of the common sentiment of the day. *Those ideas, however, were fundamentally wrong. They rested upon the assumption of the equality of races. This was an error.* It was a sandy foundation; and the idea of a government built upon it — when 'the storm came and the wind blew, it fell.'

"Our new government is founded up-

*on exactly the opposite ideas: its foundations are laid, its corner-stone rests, upon the great truth that the negro is not equal to the white man; that slavery, subordination to the superior race, is his natural and moral condition. (Applause.) This our new government is the first, in the history of the world, based upon this great physical, philosophical, and moral truth.*

“This truth has been slow in the process of its development, like all other truths in the various departments of science. It is so even amongst us. Many who hear me, perhaps, can recollect well that this truth was not generally admitted, even within their day. The errors of the past generation still clung to many as late as twenty years ago. Those at the North who still cling to these errors with a zeal above knowledge we justly denominate fanatics. All fanaticism springs from an aberration of the mind, from a defect in reasoning. It is a species of insanity. One of the most striking characteristics of insanity, in many instances, is forming correct conclusions from fancied or erroneous premises. So with the *anti-slavery* fanatics: their conclusions are right, if their premises are. They assume that the negro is equal, and hence conclude that he is entitled to equal privileges and rights with the white man. If their premises were correct, their conclusions would be logical and just; but their premises being wrong, their whole argument fails.

“In the conflict thus far, success has been on our side complete, throughout the length and breadth of the Confederate States. It is upon this, as I have stated, our social fabric is firmly planted; and I cannot permit myself to doubt the ultimate success of a full recognition of this principle throughout the civilized and enlightened world.

“As I have stated, the truth of this principle may be slow in development, as all truths are, and ever have been, in the various branches of science. It was so with the principles announced by

Galileo; it was so with Adam Smith and his principles of political economy; it was so with Harvey in his theory of the circulation of the blood. It is said that not a single one of the medical profession, at the time of the announcement of the truths made by him, admitted them; now they are universally acknowledged. May we not, therefore, look with confidence to the ultimate universal acknowledgment of the truths upon which our system rests? It is the first government ever instituted upon principles in strict conformity to Nature and the ordination of Providence in furnishing the material of human society. Many governments have been founded upon the principles of certain classes; but the classes thus enslaved were of the same race and in violation of the laws of Nature. Our system commits no such violation of Nature’s laws. The negro, by Nature, or by the curse against Canaan, is fitted for that condition which he occupies in our system. The architect, in the construction of buildings, lays the foundation with the proper material, — the granite; then comes the brick or marble. The substratum of our society is made of the material fitted by Nature for it; and by experience we know that it is best not only for the superior, but the inferior race, that it should be so. It is indeed in conformity with the Creator. It is not safe for us to inquire into the wisdom of His ordinances, or to question them. For His own purposes He has made one race to differ from another, as one star differeth from another in glory. The great objects of humanity are best attained, when conformed to His laws and decrees in the formation of government as well as in all things else. Our Confederacy is founded on a strict conformity with those laws. *This stone, which was rejected by the first builders, has become the chief stone of the corner in our new edifice!*”

Thus far the declarations of the slaveholding Confederacy.

On the other hand, the declarations of the President and the Republican party, as to their intention to restore "the Union as it was," require an explanation. It is the doctrine of the Republican party, that Freedom is national and Slavery sectional; that the Constitution of the United States was designed for the promotion of liberty, and not of slavery; that its framers contemplated the gradual abolition of slavery; and that in the hands of an anti-slavery majority it could be so wielded as peaceably to extinguish this great evil.

They reasoned thus. Slavery ruins land, and requires fresh territory for profitable working. Slavery increases a dangerous population, and requires an expansion of this population for safety. Slavery, then, being hemmed in by impassable limits, emancipation in each State becomes a necessity.

By restoring the Union as it was the Republican party meant the Union in the sense contemplated by the original framers of it, who, as has been admitted by Stephens, in his speech just quoted, were from principle opposed to slavery. It was, then, restoring a *status* in which, by the inevitable operation of natural laws, peaceful emancipation would become a certainty.

In the mean while, during the past year, the Republican Administration, with all the unwonted care of organizing an army and navy, and conducting military operations on an immense scale, have proceeded to demonstrate the feasibility of overthrowing slavery by purely Constitutional measures. To this end they have instituted a series of movements which have made this year more fruitful in anti-slavery triumphs than any other since the emancipation of the British West Indies.

The District of Columbia, as belonging strictly to the National Government, and to no separate State, has furnished a fruitful subject of remonstrance from British Christians with America. We have abolished slavery

there, and thus wiped out the only blot of territorial responsibility on our escutcheon.

By another act, equally grand in principle, and far more important in its results, slavery is forever excluded from the Territories of the United States.

By another act, America has consummated the long-delayed treaty with Great Britain for the suppression of the slave-trade. In ports whence slave-vessels formerly sailed with the connivance of the port-officers the Administration has placed men who stand up to their duty, and for the first time in our history the slave-trader is convicted and hung as a pirate. This abominable secret traffic has been wholly demolished by the energy of the Federal Government.

Lastly, and more significant still, the United States Government has in its highest official capacity taken distinct anti-slavery ground, and presented to the country a plan of peaceable emancipation with suitable compensation. This noble-spirited and generous offer has been urged on the Slaveholding States by the Chief Executive with an earnestness and sincerity of which history in after-times will make honorable account in recording the events of Mr. Lincoln's administration.

Now, when a President and Administration who have done all these things declare their intention of restoring "*the Union as it was*," ought not the world fairly to interpret their words by their actions and their avowed principles? Is it not *necessary* to infer that they mean by it the Union as it was in the intent of its anti-slavery framers, under which, by the exercise of normal Constitutional powers, slavery should be peaceably abolished?

We are aware that this theory of the Constitution has been disputed by certain Abolitionists; but it is conceded, as you have seen, by the Secessionists. Whether it be a just theory or not is, however, nothing to our purpose at present. We only assert that such is

the professed belief of the present Administration of the United States, and such are the acts by which they have illustrated their belief.

But this is but half the story of the anti-slavery triumphs of this year. We have shown you what has been done for freedom by the simple use of the ordinary Constitutional forces of the Union. We are now to show you what has been done to the same end by the Constitutional war-power of the nation.

By this power it has been this year decreed that every slave of a Rebel who reaches the lines of our army becomes a free man; that all slaves found deserted by their masters become free men; that every slave employed in any service for the United States thereby obtains his liberty; and that every slave employed against the United States in any capacity obtains his liberty: and lest the army should contain officers disposed to remand slaves to their masters, the power of judging and delivering up slaves is denied to army-officers, and all such acts are made penal.

By this act, the Fugitive-Slave Law is for all present purposes practically repealed. With this understanding and provision, wherever our armies march, they carry liberty with them. For be it remembered that our army is almost entirely a volunteer one, and that the most zealous and ardent volunteers are those who have been for years fighting with tongue and pen the Abolition battle. So marked is the character of our soldiers in this respect, that they are now familiarly designated in the official military despatches of the Confederate States as "The Abolitionists." Conceive the results, when an army, so empowered by national law, marches through a slave-territory. One regiment alone has to our certain knowledge liberated two thousand slaves during the past year, and this regiment is but one out of hundreds. We beg to lay before you some details given by

an eye-witness of what has recently been done in this respect in the Department of the South.

*"On Board Steamer from Fortress Monroe to Baltimore, Nov. 14, 1862.*

"Events of no ordinary interest have just occurred in the Department of the South. The negro troops have been tested, and, to their great joy, though not contrary to their own expectations, they have triumphed, not only over enemies armed with muskets and swords, but over what the black man dreads most, sharp and cruel prejudices.

"General Saxton, on the 28th of October, sent the captured steamer Darlington, Captain Crandell, down the coast of Georgia, and to Fernandina, Florida, to obtain recruits for the First Regiment South-Carolina Volunteers. Lieutenant-Colonel O. T. Beard, of the Forty-Eighth New-York Volunteers, was given the command of the expedition. In addition to obtaining recruits, the condition and wants of the recent refugees from slavery along the coast were to be looked into, and, if occasion should offer, it was permitted to 'feel the enemy.' At St. Simond's, Georgia, Captain Trowbridge, with thirty-five men of the 'Hunter Regiment of First South-Carolina Volunteers,' who had been stationed there for three months, together with twenty-seven more men, were received on board. With this company of sixty-two men the Darlington proceeded to Fernandina.

"On arriving, a meeting of the colored men was called to obtain enlistments. The large church was crowded. After addresses had been made by the writer and Colonel Beard, one hundred men volunteered at once, and the number soon reached about one hundred and twenty-five. Such, however, were the demands of Fort Clinch and the Quartermaster's Department for laborers, that Colonel Rich, commanding the fort, consented to only twenty-five men leaving. This was a sad disappoint-

ment, and one which some determined not to bear. The twenty-five men were carefully selected from among those not employed either on the fort or in the Quartermaster's Department, and put on board. Amid the farewells and benedictions of hundreds of their friends on shore they took their departure, to prove the truth or falsity of the charge, 'The black man can never fight.' On calling the roll, a few miles from port, it was found our twenty-five men had increased to fifty-four. Determined not to be foiled in their purpose of being soldiers, it was found that thirty men had quietly found their way on board just at break of day, and had concealed themselves in the hold of the ship. When asked why they did so, their reply was, —

"Oh, we want to fight for our liberty, and for de liberty of our wives and children."

"But would you dare to face your old masters?"

"Oh, yes, yes! why, we would fight to de death to get our families," was the quick response.

"No one doubted their sincerity. Muskets were soon in their hands, and no time was lost in drilling them. Our steamer, a very frail one, had been barricaded around the bow and stern, and also provided with two twelve-pounder Parrott guns. These guns had to be worked by black men, under the direction of the captain of the steamer. Our fighting men numbered only about one hundred and ten, and fifty of them were raw recruits. The expedition was not a very formidable one, still all seemed to have an unusual degree of confidence as to its success.

"November 6. The women and children (about fifty) taken from St. Simond's on the day previous were now landed for safety in St. Catharine's, as a more hazardous work was to be undertaken. Much of the night was spent in getting wood for the steamer, killing beeves, and cooking meats, rice, and

corn, for our women and children on shore, and for the troops. The men needed no 'driver's lash' to incite them to labor. Sleep and rest were almost unwelcome, for they were preparing to go up Sapelo River, along whose banks, on the beautiful plantations, were their fathers, mothers, brothers, sisters, wives, and children. Weeks and months before, some of the men had left those loved ones, with a promise to return, 'if de good Lord jis open de way.'

"At five o'clock on Friday morning, November 7, we were under way. Captain Budd, of the gun-boat Potomska, had kindly promised the evening before to accompany us past the most dangerous places. On reaching his station in Sapelo Sound, we found him in readiness. Our little fleet, led by the Potomska, and followed by the Darlington, sailed proudly up the winding Sapelo, now through marshes, and then past large and beautiful plantations. It was very affecting to see our soldiers watching intensely the colored forms on land, one saying, in the agony of deepest anxiety, 'Oh, Mas'r, my wife and chillen lib dere,' and another singing out, 'Dere, dere my brodder,' or 'my sister.' The earnest longings of their poor, anguish-riven hearts for landings, and then the sad, inexpressible regrets as the steamer passed, must be imagined, — they cannot be described.

"The first landing was made at a picket-station on Charles Hopkins's plantation. The enemy was driven back; a few guns and a sword only captured. The Potomska came to anchorage, for lack of sufficient water, a few miles above, at Reuben King's plantation. Here we witnessed a rich scene. Some fifty negroes appeared on the banks, about thirty rods distant from their master's house, and some distance from the Darlington. They gazed upon us with intense feelings, alternately turning their eyes toward their master, who was watching them from his piazza, and toward our steamer, which, as yet, had given them no assurances of land-

ing. The moment she headed to the shore, their doubts were dispersed, and they gave us such a welcome as angels would be satisfied with. Some few women were so filled with joy, that they ran, leaped, clapped their hands, and cried, 'Glory to God! Glory to God!'

"After relieving the old planter of twenty thousand dollars' worth of humanity, that is, fifty-two slaves, and the leather of his tannery, we reëmbarked. Our boats were sent once and again, however, to the shore for men, who, having heard the steam-whistle, came in greatest haste from distant plantations.

"As the *Potomska* could go no farther, Captain Budd kindly offered to accompany us with one gun's crew. We were glad to have his company and the services of the crew, as we had only one gun's crew of colored men. Above us was a bend in the river, and a high bluff covered with thick woods. There we apprehended danger, for the Rebels had had ample time to collect their forces. The men were carefully posted, fully instructed as to their duties and dangers by Colonel Beard. Our Parrotts were manned, and everything was in readiness. No sooner were we within rifle-shot than the enemy opened upon us a heavy fire from behind the bank and trees, and also from the tops of the trees. Our speed being slow and the river's bend quite large, we were within range of the enemy's guns for some time. How well our troops bore themselves will be seen by Captain Budd's testimony.

"Our next landing was made at Daniel McDonald's plantation. His extensive and valuable salt-works were demolished, and he himself taken prisoner. By documents captured, it was ascertained that he was a Rebel of the worst kind. We took only a few of his slaves, as he drove back into the woods about ninety of them just before our arrival. One fine-looking man came hobbling down on a crutch. McDonald

had shot off one of his legs some eighteen months before. The next plantation had some five hundred slaves on it; several of our troops had come from it, and also had relatives there, but the lateness of the hour and the dangerous points to be passed on our return admonished us to retreat.

"Our next attack was expected at the bluff. The enemy had improved the time since we parted from them in gathering reinforcements. Colonel Beard prepared the men for a warm fire. While everything was in readiness, and the steamer dropping down hard upon the enemy, the writer passed around among the men, who were waiting coolly for the moment of attack, and asked them if they found their courage failing. 'Oh, no, Mas'r, our trust be in de Lord. We only want fair chance at 'em,' was the unanimous cry.

"Most people have doubted the courage of negroes, and their ability to stand a warm fire of the enemy. The engagements of this day were not an open-field fight, to be sure, but the circumstances were peculiar. They were taken by surprise, the enemy concealed, his force not known, and some of the troops had been enlisted only two days. Captain Budd, a brave and experienced officer, and eye-witness of both engagements, has kindly given his opinion, which we are sure will vindicate the policy, as well as justness, of arming the colored man for his own freedom at least.

"*United States Steamer Potomska,*

"*Sapelo River, Ga., Nov. 7, 1862.*

"SIR,—It gives me pleasure to testify to the admirable conduct of the negro troops (First S. C. Volunteers) under the command of Lieutenant-Colonel Beard, Forty-Eighth New-York Volunteers, during this day's operations. They behaved splendidly under the warm and galling fire we were exposed to in the two skirmishes with the enemy. I did not see a man flinch, contrary to my expectations.

"One of them, particularly, came under my notice, who, although badly wounded in

the face, continued to load and fire, in the coolest manner imaginable:

“Every one of them acted like veterans.

“Very respectfully,

“WILLIAM BUDD,

“Acting-Lieutenant Commanding Potomska.

“To the Rev. M. French, Chaplain, U. S. A.’

“On reaching his ship, Captain Budd led our retreat. It had been agreed, after full consultation on the subject, that, in our descent down the river, it was best to burn the buildings of Captain Hopkins and Colonel Brailsford. Both of these places were strong picket-stations, particularly the latter. Brailsford had been down with a small force a few days before our arrival at St. Catharine’s, and shot one of our contrabands, wounded mortally, as was supposed, another, and carried off four women and three men. He had also whipped to death, three weeks before, a slave for attempting to make his escape. We had on board Sam Miller, a former slave, who had received over three hundred lashes for refusing to inform on a few of his fellows who had escaped.

“On passing among the men, as we were leaving the scenes of action, I inquired if they had grown any to-day. Many simultaneously exclaimed, — “Oh, yes, Massa, we have grown three inches!” Sam said, — “I feel a heap more of a man!”

“With the lurid flames still lighting up all the region behind, and the bright rays of the smiling moon before them, they formed a circle on the lower deck, and around the hatchway leading to the hold, where were the women and children captured during the day, and on bended knees they offered up sincere and heartfelt thanksgivings to Almighty God for the mercies of the day. Such fervent prayers for the President, for the hearing of his Proclamation by all in bonds, and for the ending of the war and slavery, were seldom, if ever, heard before. About one hour was spent in singing and prayer. Those

waters surely never echoed with such sounds before.

“Our steamer left Beaufort without a soldier, and returned, after an absence of twelve days, with one hundred and fifty-six fighting colored men, some of whom dropped the hoe, took a musket, and were at once soldiers, ready to fight for the freedom of others.”

It is conceded on all sides, that, wherever our armies have had occupancy, there slavery has been practically abolished. The fact was recognized by President Lincoln in his last appeal to the loyal Slave States to consummate emancipation.

Another noticeable act of our Government in behalf of Liberty is the official provision it makes for the wants of the thousands of helpless human beings thus thrown upon our care. Taxed with the burden of an immense war, with the care of thousands of sick and wounded, the United States Government has cheerfully voted rations for helpless slaves, no less than wages to the helpful ones. The United States Government pays teachers to instruct them, and overseers to guide their industrial efforts. A free-labor experiment is already in successful operation among the beautiful sea-islands in the neighborhood of Beaufort, which, even under most disadvantageous circumstances, is fast demonstrating how much more efficiently men will work from hope and liberty than from fear and constraint. Thus, even amid the roar of cannon and the confusion of war, cotton-planting, as a free-labor institution, is beginning its infant life, to grow hereafter to a glorious manhood.

Lastly, the great, decisive measure of the war has appeared, — *The President’s Proclamation of Emancipation*.

This also has been much misunderstood and misrepresented in England. It has been said to mean virtually this: — Be loyal, and you shall keep

your slaves; rebel, and they shall be free.

But let us remember what we have just seen of the purpose and meaning of the Union to which the rebellious States are invited back. It is to a Union which has abolished slavery in the District of Columbia, and interdicted slavery in the Territories, — which vigorously represses the slave-trade, and hangs the convicted slaver as a pirate, — which necessitates emancipation by denying expansion to slavery, and facilitates it by the offer of compensation. Any Slaveholding States which should return to such a Union might fairly be supposed to return with the purpose of peaceable emancipation. The President's Proclamation simply means this: — Come in, and emancipate peaceably with compensation; stay out, and I emancipate, nor will I protect you from the consequences.

That continuance in the Union is thus understood is already made manifest by the votes of Missouri and Delaware in the recent elections. Both of these States have given strong majorities for emancipation. Missouri, long tending towards emancipation, has already planted herself firmly on the great rock of Freedom, and thrown out her bold and eloquent appeal to the Free States of the North for aid in overcoming the difficulties of her position. Other States will soon follow; nor is it too much to hope that before a new year has gone far in its course the sacred fire of freedom will have flashed along the whole line of the Border States responsive to the generous proposition of the President and Congress, and that universal emancipation will have become a fixed fact in the American Union.

Will our sisters in England feel no heart-beat at that event? Is it not one of the predicted voices of the latter day, saying under the whole heavens, "It is done: the kingdoms of this world are become the kingdoms of our Lord, and of His Christ"?

And now, Sisters of England, in this solemn, expectant hour, let us speak to you of one thing which fills our hearts with pain and solicitude.

It is an unaccountable fact, and one which we entreat you seriously to ponder, that the party which has brought the cause of Freedom thus far on its way, during the past eventful year, has found little or no support in England. Sadder than this, the party which makes Slavery the chief corner-stone of its edifice finds in England its strongest defenders.

The voices that have spoken for us who contend for Liberty have been few and scattering. God forbid that we should forget those few noble voices, so sadly exceptional in the general outcry against us! They are, alas, too few to be easily forgotten. False statements have blinded the minds of your community, and turned the most generous sentiments of the British heart against us. The North are fighting for supremacy and the South for independence, has been the voice. Independence? for what? to do what? To prove the doctrine that all men are *not* equal. To establish the doctrine that the white may enslave the negro.

It is natural to sympathize with people who are fighting for their rights; but if these prove to be the right of selling children by the pound and trading in husbands and wives as merchantable articles, should not Englishmen think twice before giving their sympathy? A pirate-ship on the high seas is fighting for *independence!* Let us be consistent.

It has been said that we have been over-sensitive, thin-skinned. It is one inconvenient attendant of love and respect, that they do induce sensitiveness. A brother or father turning against one in the hour of trouble, a friend sleeping in the Gethsemane of our mortal anguish, does not always find us armed with divine patience. We loved England; we respected, revered her; we were bound to her by ties of blood and

race. Alas! must all these declarations be written in the past tense?

But that we may not be thought to have over-estimated the popular tide against us, we shall express our sense of it in the words of an English writer, one of the noble few who have spoken the truth on our side. Referring to England's position on this question, he says:—

“What is the meaning of this? Why does the English nation, which has made itself memorable to all time as the destroyer of negro slavery, which has shrunk from no sacrifices to free its own character from that odious stain, and to close all the countries of the world against the slave-merchant,—why is it that the nation which is at the head of Abolitionism, not only feels no sympathy with those who are fighting against the slaveholding conspiracy, but actually desires its success? Why is the general voice of our press, the general sentiment of our people bitterly reproachful to the North, while for the South, the aggressors in the war, we have either mild apologies or direct and downright encouragement,—and this not only from the Tory and anti-Democratic camp, but from Liberals, or *soi-disant* such?”

“This strange perversion of feeling prevails nowhere else. The public of France, and of the Continent generally, at all events the Liberal part of it, saw at once on which side were justice and moral principle, and gave its sympathies consistently and steadily to the North. Why is England an exception?”

In the beginning of our struggle, the voices that reached us across the water said, “If we were only sure you were fighting for the abolition of slavery, we should not dare to say whither our sympathies for your cause might not carry us.”

Such, as we heard, were the words of the honored and religious nobleman who draughted this very letter which you signed and sent us, and to which we are now replying.

When these words reached us, we

said, “We can wait; our friends in England will soon see whither this conflict is tending.” A year and a half have passed; step after step has been taken for Liberty; chain after chain has fallen, till the march of our armies is choked and clogged by the glad flocking of emancipated slaves; the day of final emancipation is set; the Border States begin to move in voluntary consent; universal freedom for all dawns like the sun in the distant horizon: and still no voice from England. No voice? Yes, we have heard on the high seas the voice of a war-steamer, built for a man-stealing Confederacy with English gold in an English dockyard, going out of an English harbor, manned by English sailors, with the full knowledge of English Government-officers, in defiance of the Queen's proclamation of neutrality. So far has English sympathy overflowed. We have heard of other steamers, iron-clad, designed to furnish to a Slavery-defending Confederacy their only lack,—a navy for the high seas. We have heard that the British Evangelical Alliance refuses to express sympathy with the liberating party, when requested to do so by the French Evangelical Alliance. We find in English religious newspapers all those sad degrees in the downward sliding scale of defending and apologizing for slaveholders and slaveholding with which we have so many years contended in our own country. We find the President's Proclamation of Emancipation spoken of in those papers only as an incitement to servile insurrection. Nay, more,—we find in your papers, from thoughtful men, the admission of the rapid decline of anti-slavery sentiments in England. Witness the following:—

“The Rev. Mr. Maurice, Principal of the Working-Men's College, Great Ormond Street, delivered the first general lecture of the term on Saturday evening, and took for his subject the state of English feeling on the Slavery question. He said, a few days ago, in a conversation on the American war,

that some gentlemen connected with the College had confessed to a change in their sympathies in the matter. On the outbreak of the war, they had been strong sympathizers with the Government and the Northern States, but gradually they had drifted until they found themselves desiring the success of the seceded States, and all but free from their anti-slavery feelings and tendencies. These confessions elicited strong expressions of indignation from a gentleman present, who had lectured in the College on the war in Kansas. He (Mr. Maurice) felt inclined to share in the indignation expressed; but since, he could not help feeling that this change was very general in England."

Alas, then, England! is it so? In this day of great deeds and great heroisms, this solemn hour when the Mighty Redeemer is coming to break every yoke, do we hear such voices from England?

This very day the writer of this has been present at a solemn religious festival in the national capital, given at the home of a portion of those fugitive slaves who have fled to our lines for protection, — who, under the shadow of our flag, find sympathy and succor. The national day of thanksgiving was there kept by over a thousand redeemed slaves, and for whom Christian charity had spread an ample repast. Our Sisters, we wish *you* could have witnessed the scene. We wish you could have heard the prayer of a blind old negro, called among his fellows John the Baptist, when in touching broken English he poured forth his thanksgivings. We wish you could have heard the sound of that strange rhythmical chant which is now forbidden to be sung on Southern plantations, — the psalm of this modern exodus, — which combines the barbaric fire of the Marseillaise with the religious fervor of the old Hebrew prophet.

"Oh, go down, Moses,  
'Way down into Egypt's land!

Tell King Pharaoh  
To let my people go!  
Stand away dere,  
Stand away dere,  
And let my people go!

"Oh, Pharaoh said he would go 'cross!  
Let my people go!  
Oh, Pharaoh and his hosts were lost!  
Let my people go!  
You may hinder me here,  
But ye can't up dere!  
Let my people go!

"Oh, Moses, stretch your hand across!  
Let my people go!  
And don't get lost in de wilderness!  
Let my people go!  
He sits in de heavens  
And answers prayers.  
Let my people go!"

As we were leaving, an aged woman came and lifted up her hands in blessing. "Bressed be de Lord dat brought me to see dis first happy day of my life! Bressed be de Lord!" In all England is there no Amen?

We have been shocked and saddened by the question asked in an association of Congregational ministers in England, the very blood-relations of the liberty-loving Puritans, — "Why does not the North let the South go?"

What! give up the point of emancipation for these four million slaves? Turn our backs on them, and leave them to their fate? What! leave our white brothers to run a career of oppression and robbery, that, as sure as there is a God that ruleth in the armies of heaven, will bring down a day of wrath and doom?

Is it any advantage to people to be educated in man-stealing as a principle, to be taught systematically to rob the laborer of his wages, and to tread on the necks of weaker races? Who among you would wish your sons to become slave-planters, slave-merchants, slave-dealers? And shall we leave our brethren to this fate? Better a generation should die on the battle-field, that their children may grow up in liberty and justice. Yes, our sons must die, their sons must die. We

give ours freely; they die to redeem the very brothers that slay them; they give their blood in expiation of this great sin, begun by you in England, perpetuated by us in America, and for which God in this great day of judgment is making inquisition in blood.

In a recent battle fell a Secession colonel, the last remaining son of his mother, and she a widow. That mother had sold eleven children of an old slave-mother, her servant. That servant went to her and said,—“Missis, we even now. You sold all my children. God took all yourn. Not one to bury either of us. *Now, I forgive you.*”

In another battle fell the only son of another widow. Young, beautiful, heroic, brought up by his mother in the sacred doctrines of human liberty, he gave his life an offering as to a holy cause. He died. No slave-woman came to tell *his* mother of God's justice, for many slaves have reason to call her blessed.

Now we ask you, Would you change places with that Southern mother? Would you not think it a great misfortune for a son or daughter to be brought into such a system?—a worse one to become so perverted as to defend it? Remember, then, that wishing success to this slavery-establishing effort is only wishing to the sons and daughters of the South all the curses that God has written against oppression. *Mark our words!* If we succeed, the children of these very men who are now fighting us will rise up to call us blessed. Just as surely as there is a God who governs in the world, so surely all the laws of national prosperity follow in the train of equity; and if we succeed, we shall have delivered the children's children of our misguided brethren from the wages of sin, which is always and everywhere death.

And now, Sisters of England, think it not strange, if we bring back the words of your letter, not in bitterness, but in deepest sadness, and lay them

down at your door. We say to you,—Sisters, you have spoken well; we have heard you; we have heeded; we have striven in the cause, even unto death. We have sealed our devotion by desolate hearth and darkened homestead,—by the blood of sons, husbands, and brothers. In many of our dwellings the very light of our lives has gone out; and yet we accept the life-long darkness as our own part in this great and awful expiation, by which the bonds of wickedness shall be loosed, and abiding peace established on the foundation of righteousness. Sisters, what have *you* done, and what do you mean to do?

In view of the decline of the noble anti-slavery fire in England, in view of all the facts and admissions recited from your own papers, we beg leave in solemn sadness to return to you your own words:—

“A common origin, a common faith, and, we sincerely believe, a common cause, urge us, at the present moment, to address you on the subject” of that fearful encouragement and support which is being afforded by England to a slaveholding Confederacy.

“We will not dwell on the ordinary topics,—on the progress of civilization, on the advance of freedom everywhere, on the rights and requirements of the nineteenth century; but we appeal to you very seriously to reflect and to ask counsel of God how far such a state of things is in accordance with His Holy Word, the inalienable rights of immortal souls, and the pure and merciful spirit of the Christian religion.

“We appeal to you, as sisters, as wives, and as mothers, to raise your voices to your fellow-citizens, and your prayers to God for the removal of this affliction and disgrace from the Christian world.”

In behalf of many thousands of American women,

HARRIET BEECHER STOWE.

WASHINGTON, November 27, 1862.

## THE SOLDIERS' RALLY.

On, rally round the banner, boys, now Freedom's chosen sign!  
 See where amid the clouds of war its new-born glories shine!  
 The despot's doom, the slave's dear hope, we bear it on the foe!  
 God's voice rings down the brightening path! Say, brothers, will ye go?

"My father fought at Donelson; he hailed at dawn of day  
 That flag full-blown upon the walls, and proudly passed away."  
 "My brother fell on Newbern's shore; he bared his radiant head,  
 And shouted, 'On! the day is won!' leaped forward, and was dead."  
 "My chosen friend of all the world hears not the bugle-call;  
 A bullet pierced his loyal heart by Richmond's fatal wall."  
 But seize the hallowed swords they dropped, with blood yet moist and red!  
 Fill up the thinned, immortal ranks, and follow where they led!  
 For right is might, and truth is God, and He upholds our cause,  
 The grand old cause our fathers loved, — Freedom and Equal Laws!

"My mother's hair is thin and white; she looked me in the face,  
 She clasped me to her heart, and said, 'Go, take thy brother's place!'"  
 "My sister kissed her sweet farewell; her maiden cheeks were wet;  
 Around my neck her arms she threw; I feel the pressure yet."  
 "My wife sits by the cradle's side and keeps our little home,  
 Or asks the baby on her knee, 'When will thy father come?'"  
 Oh, woman's faith and man's stout arm shall right the ancient wrong!  
 So farewell, mother, sister, wife! God keep you brave and strong!  
 The whizzing shell may burst in fire, the shrieking bullet fly,  
 The heavens and earth may mingle grief, the gallant soldier die;  
 But while a haughty Rebel stands, no peace! for peace is war.  
 The land that is not worth our death is not worth living for!

Then rally round the banner, boys! Its triumph draweth nigh!  
 See where above the clouds of war its seamless glories fly!  
 Peace, hovering o'er the bristling van, waves palm and laurel fair,  
 And Victory binds the rescued stars in Freedom's golden hair!

## OVERTURES FROM RICHMOND.

## A NEW LILLIBURLERO.

"WELL, Uncle Sam," says Jefferson D.,

Lilliburlero, old Uncle Sam,

"You 'll have to join my Confed'racy,"

Lilliburlero, old Uncle Sam.

"Lero, lero, that don't appear O, that don't appear," says old Uncle Sam,

"Lero, lero, filibustero, that don't appear," says old Uncle Sam.

“ So, Uncle Sam, just lay down your arms,”  
Lilliburlero, etc.,

“ Then you shall hear my reas'nable terms,”  
Lilliburlero, etc.

“ Lero, lero, I 'd like to hear O, I 'd like to hear,” says old Uncle Sam,

“ Lero, lero, filibustero, I 'd like to hear,” says old Uncle Sam.

“ First, you must own I 've beat you in fight,”  
Lilliburlero, etc.,

“ Then, that I always have been in the right,”  
Lilliburlero, etc.

“ Lero, lero, rather severe O, rather severe,” says old Uncle Sam,

“ Lero, lero, filibustero, rather severe,” says old Uncle Sam.

“ Then, you must pay my national debts,”  
Lilliburlero, etc.,

“ No questions asked about my assets,”  
Lilliburlero, etc.

“ Lero, lero, that 's very dear O, that 's very dear,” says old Uncle Sam,

“ Lero, lero, filibustero, that 's very dear,” says old Uncle Sam.

“ Also, some few I. O. U.s and bets,”  
Lilliburlero, etc.,

‘ Mine, and Bob Toombs', and Slidell's, and Rhett's,”  
Lilliburlero, etc.

“ Lero, lero, that leaves me zero, that leaves me zero,” says Uncle Sam,

“ Lero, lero, filibustero, that leaves me zero,” says Uncle Sam.

“ And, by the way, one little thing more,”  
Lilliburlero, etc.,

“ You 're to refund the costs of the war,”  
Lilliburlero, etc.

“ Lero, lero, just what I fear O, just what I fear,” says old Uncle Sam,

“ Lero, lero, filibustero, just what I fear,” says old Uncle Sam.

“ Next, you must own our Cavalier blood !”  
Lilliburlero, etc.,

“ And that your Puritans sprang from the mud !”  
Lilliburlero, etc.

“ Lero, lero, that mud is clear O, that mud is clear,” says old Uncle Sam,

“ Lero, lero, filibustero, that mud is clear,” says old Uncle Sam.

“ Slavery 's, of course, the chief corner-stone,”  
Lilliburlero, etc.,

“ Of our NEW CIV-IL-I-ZA-TI-ON !”  
Lilliburlero, etc.

“ Lero, lero, that 's quite sincere O, that 's quite sincere,” says old Uncle Sam,

“ Lero, lero, filibustero, that 's quite sincere,” says old Uncle Sam.

“ You 'll understand, my recreant tool,”  
Lilliburlero, etc.,

“ You 're to submit, and we are to rule,”

Lilliburlero, etc.

"Lero, lero, are n't you a hero! are n't you a hero!" says Uncle Sam,

"Lero, lero, filibustero, are n't you a hero!" says Uncle Sam.

"If to these terms you fully consent,"

Lilliburlero, etc.,

"I'll be Perpetual King-President,"

Lilliburlero, etc.

"Lero, lero, take your sombrero, off to your swamps!" says old Uncle Sam,

"Lero, lero, filibustero, cut, double-quick!" says old Uncle Sam.

## REVIEWS AND LITERARY NOTICES.

*Titan: A Romance.* From the German of Jean Paul Friedrich Richter. Translated by CHARLES T. BROOKS. In Two Volumes. Boston: Ticknor and Fields.

JEAN PAUL first became one of the notabilities of German literature after he had published "*Hesperus*," a novel which contains the originals of the characters that reappear under different names in "*Titan*." His previous popularity did not penetrate far within the circle of scholars and thinkers, and never knocked at the charmed threshold of the Weimar set, whose taste was controlled by Goethe and Schiller. But "*Hesperus*" made a great noise, and these warders of the German Valhalla were obliged to open the door just a crack, in order to reconnoitre the pretentious arrival. Goethe first called the attention of Schiller to the book, sending him a copy while he was at Jena, in 1795. Schiller recognized at once its power and geniality, but was disposed to regard it as a literary oddity, whose grotesque build and want of finish rather depreciated the rich cargo,—at least, did not bring it handsomely into port. The first book of "*Wilhelm Meister*" had appeared the year before, and that was more acceptable to Schiller, who had cooled off after writing his "*Robbers*," and was looking out for the true theory of poetry and art. He and Goethe concluded that "*Hesperus*" was worth liking, though it was a great pity the author had not better taste; he ought to come up and live with them, in an æsthetic atmos-

phere, where he could find and admire his superiors, and have his great crude gems ground down to brilliant facets. Schiller said it was the book of a lonely and isolated man. It was, indeed.

But it was a book which represented, far more profoundly and healthily than Schiller's "*Robbers*," that revolt of men of genius against every species of finical prescription, in literature and society, which ushered in the new age of Germany. And it expresses with uncalculating sincerity all the natural emotions which a century of pedantry and Gallic affectation had been crowding out of books and men. It was a charge at the point of the pen upon the dapper flunkies who were keeping the door of the German future; the brawny breast, breathing deep with the struggle, and pouring out great volumes of feeling, burst through the restraints of the time. He cleared a place, and called all men to stand close to his beating heart, and almost furiously pressed them there, that they might feel what a thing friendship was and the ideal life of the soul. And as he held them, his face grew broad and deep with humor; men looked into it and saw themselves, all the real good and the absurdly conventional which they had, and there was a great jubilation at the genial sight. And it was as if a lot of porters followed him, overloaded with quaint and curious knowledge gathered from books of travel, of medicine, of history, metaphysics, and biography, which they dumped without much concert, but just as

it happened, in the very middle of a fine emotion, and all through his jovial speech. What an irruption it was!—as if by a tilt of the planet the climate had changed suddenly, and palm-trees, oranges, the sugarcane, the grotesque dragon-tree, and all the woods of rich and curious grain, stood in the temperate and meagre soil.

Schiller met Jean Paul in the spring of 1796. In writing to Goethe about their interviews, he says,—“I have told you nothing yet about Hesperus. I found him on the whole such as I expected, just as odd as if he had fallen from the moon, full of good-will, and very eager to see things that are outside of him, but he lacks the organ by which one sees”; and in a letter of a later date he doubts whether Richter will ever sympathize with their way of handling the great subjects of Man and Nature.

The reader can find the first interviews which Richter had with Goethe and Schiller in Lewes's “Life of Goethe,” Vol. II. p. 269. Of Goethe, Richter said, “By heaven! we shall love each other!” and of Schiller, “He is full of acumen, but without love.” The German public, which loves Richter, has reversed his first impression. And indeed Richter himself, though he could not get along with Schiller, learned that Goethe's loving capacity, which he thought he saw break out with fire while Goethe read a poem to him, was only the passion of an artistic nature which impregnates its own products.

Richter's love was very different. It was a sympathy with men and women of all conditions, fed secretly the while that his shaggy genius was struggling with poverty and apparently unfavorable circumstances. He was always a child, yearning to feel the arms of some affection around him, very susceptible to the moods of other people, yet testing them by a humorous sincerity. All the books which he devoured in his desultory rage for knowledge turned into nourishment for an imagination that was destined chiefly to interpret a very lofty moral sense and a very democratic feeling. And whenever his humor caught an edge in the easterly moments of his mind, it was never sharpened against humanity, and made nothing tender bleed. Now and then we know he has a caustic thing or two to say

about women; but it is lunar-caustic for a wart.

Goethe did not like this indiscriminate and democratic temper. The sly remarks of Richter upon the Transparencies and Well-born and Excellencies of his time, with their faded taste and dreary mandarin-life varied by loose morals and contempt for the invisible, could not have suited the man whose best friend was a real Duke, as it happened, one of Nature's noblemen, one whose wife, the Duchess Sophia, afterwards held Bonaparte so tranquilly at bay upon her palace-steps. Goethe had, too, a bureaucratic vein in him; he spoke well of dignities, and carefully stepped through the cumbrous minuet of court-life without impinging upon a single Serene or Well-born bunyon. Mirabeau himself would have elbowed his way through furbelows and court-rapiers more forbearingly than Richter. It was not possible to make this genius plastic, in the æsthetic sense which legislated at Weimar. Besides, Goethe could not look at Nature as Richter did. To such a grand observer Richter must have appeared like a sunset-smitten girl.

An American ought to value Richter's books for the causes which made them repulsive to all social and literary cliques. The exquisite art, and the wise, clear mind of Goethe need not come into contrast, to disable us from giving Richter the reception which alone he would value or command. Nor is it necessary to deny that the frequent intercalations and suspensions of his narrative, racy and suggestive as they are, and overflowing with feeling, will fret a modern reader who is always “on time,” like an express-man, and is quite as regardless of what may be expressed.

“Titan” is not a novel in the way that Charles Reade's, or Eugene Sue's, or Victor Hugo's books are novels. The nearest English model, in the matter of style and quaint presuming on the reader's patience, is Sterne. But if one wishes to see how Richter is *not* sentimental, in spite of his incessant and un-American emotion, let him read Sterne, and hasten then to be embraced by Richter's unsophisticated feeling, which is none the less refreshing because it is so exuberant and has such a habit of pursuing all his characters. And where else, in any language, is Nature so

worshipped, and so rapturously chased with glowing words, as some young Daphne by some fiery boy ?

Neither are there any characters in this novel, in the sense of marked idiosyncrasies, or of the subtle development of an individual. Sometimes Richter's men and women are only the lay-figures upon which he piles and adjusts his gorgeous cloth-of-gold and figured damask. But Siebenkäs and his wife, in "Flower-, Fruit-, and Thorn-Pieces," are characters, quite as much as any of Balzac's nice *genre* men and women, and on a higher plane. Richter uses his persons of both sexes principally to express the conditions of his feeling ; they are cockles, alternately dry and sparkling, underneath his mighty ebb and flow.

On one point we doubt if the American mind will understand Richter. He believed in a love that one man might have for another man, which as little corresponds to the average idea of friendship as the anti-slavery sentiment of the "People's party" corresponds to Mr. Garrison's. In this respect Richter creates an ideal and interfuses it with all his natural ardor, which a German can understand better than the men of any other nation, for in him is the tendency that Richter seeks to set forth by his passionate imagination. Orestes and Pylades, David and Jonathan, and the other famous loves of men, are suspected by the calculating breeds of people. Brother Jonathan seldom finds his David, and he doubtless thinks the Canon ought to have transferred that Scriptural friendship into the Apocrypha. We shall sniff at the highly colored intercourse of Richter's men, for it is often more than we can do to really love a woman. We shall pronounce the relation affected, and the expression of it turgid, even nauseous. But there is a genuine noble pulse in the German heart, which beats to the rhythm of two men's heroic attachment, and can expand till all the blood that flows through Richter's style is welcomed and propelled by it. Still, we think that the unexpressed friendship may also stand justified before the ideal.

The reader must be content to meet this stout and fervent man as he is, not expecting that his genius will consult our tastes or prejudices, or that his head will stoop at all for the sake of our company. Then

beneath his dense paragraphs and through his rambling pages his humility will greet us, and fraternal regards draw us irresistibly to him. He is a man for a people's reading, notwithstanding all the involutions of style and thought which might suggest a different judgment. He certainly does not write like Cobbett or Franklin, nor has he the thin, clear polish of the popular historian. Yet his shrewdness and tenderness will touch all simple-minded men ; and twenty Cobbetts, or people's writers, sharply rubbed together, could never light the flame of his imperial imagination, for it is a kind of sunshine, sometimes hot enough, but broad, impartial, and quickening, wherever there is something that waits to grow.

And scarcely one man in a century appears so highly gifted with that wonderful quality for which we have no better name than Humor. His humor is the conciliation that takes place between love and knowledge. The two tendencies create the bold and graceful orbit on which his well-balanced books revolve. With one alone, his impetuosity would hasten to quench itself in the molten centre ; and with the other alone, he would fly cynically beyond the reach of heat. This reconciling humor sometimes shakes his book with Olympic laughter, as if the postprandial nectar circulated in pools of cups, into which all incompatibilities fall and are drowned. You drink this recasting of the planet's joys and sorrows, contempt and contradictions, while it is yet fluent and bubbling to the lip. There are all the selfish men, and petulant, intriguing women in it, all their weaknesses, and the ill-humor of their times. But the draught lights up the brain with an anticipation of some future solution of these discords, or perhaps we may say, intoxicates us with the serene tolerance which the Creative Mind must have for all His little ones. Is not humor a finite mood of that Impartiality whose sun rises upon the evil and the good, whose smile becomes the laughter of these denser skies ?

It is plain from what we have said that the task of translating this novel must be full of difficulties. There are strange words, allusions drawn from foreign books that are now a hundred years old or more and never seen in libraries ; the figurative style makes half the sentences in a page seem strange at first, they invite consider-

ation, and do not feebly surrender to a smooth consecutive English. Just as you think you are at the bottom of a paragraph and are on the point of stepping on the floor, he stops you with another stair, or lets you through: in other words, you are never safe from a whimsical allusion or a twist in the thought. The narrative extends no thread which you may take in one hand as you poke along: it frequently disappears altogether, and it seems as if you had another book with its vocabulary and style.

It is not too high praise to say that Mr. Brooks has overcome all these difficulties without the sacrifice of a single characteristic of Richter's genius. We have the sense and passion unmutated. The translation is accurate, and also bold. By the comparison of a few test-passages with the original, Mr. Brooks's adroit and patient labor appears clearly. We desire to pay him the meed of our respect and gratitude. Few readers of "Titan" will appreciate the toil which has secured them this new sensation of becoming intimate with "Jean Paul the Only." It is new, because, notwithstanding several books of Jean Paul have been already translated, "Titan" is the most vigorous and exhaustive book he wrote. He poured his whole fiery and romantic soul into it. It may be said that all the fine and humane elements of the revolutionary period in which he lived appear in this book,—the religious feeling, the horror of sensuality, the hatred of every kind of cant, the struggle for definite knowledge out of a confusing whirl of man's generous sentiments all broken loose, the tendency to worship duty and justice, and the Titanic extravagance of a "lusthood," both of youth and emotion, which threatens, in Alexander's temper, to appropriate the world. All this is admirably expressed in the Promethean title of the book. We do not think that it can be profitably read, or with an intelligent respect for its great author, unless we recall the period, the state of politics, religion, domestic life, the new German age of thought which was rising, with ferment, amid uncouth gambolling shapes of jovial horn-blowing fellows, from the waves. He is the divinity who owns a whole herd of them. As we sit to read, let the same light fall on the page in which it was composed, and there will appear upon it the genius which is con-

finied to no age or clime, and addresses every heart.

*The Works of Rufus Choate, with a Memoir of his Life.* By SAMUEL GILMAN BROWN, Professor in Dartmouth College. In Two Volumes. Boston: Little, Brown, & Co.

In estimating the claims of any biographical work we must bear in mind the difficulties of the subject, the advantages which the writer enjoys, and the disadvantages under which he labors. The life, genius, and character of Mr. Choate present a stimulating, but not an easy task to him who essays to delineate them. We have read of a man who had taught his dog to bite out of a piece of bread a profile likeness of Voltaire; it was not more difficult to draw a caricature of Mr. Choate, but to paint him as he was requires a nice pencil and a discriminating touch. The salient traits were easily recognized by all. The general public saw in him a man who flung himself into his cases with the fervor and passion of a mountain-torrent, whose eloquence was exuberant and sometimes extravagant, who said quaint and brilliant things with a very grave countenance, and whose handwriting was picturesquely illegible. We verily believe that Mr. Choate's peculiar handwriting was as well known to his townsmen and neighbors, was as frequent a topic of observation and comment, as any of the traits of his mind and character. We need hardly add that this popular image which was called Mr. Choate resembled the real man about as much as a sign-post daub of General Washington resembles the head by Sturt. The skill of the true artist is shown in catching and transferring to the canvas the delicate distinctions which make a difference between faces which have a general similarity. No man had more need of this fine discrimination in order to have justice done him than Mr. Choate; for there was no man who would have been more imperfectly known, had he been known only by those prominent and obvious characteristics which all the world could see. He was a great and successful lawyer, but his original taste was for literature rather than law. Few men were more before the public than he, and

yet he loved privacy more than publicity. He had acquaintances numberless, and facile and gracious manners, but his heart was open to very few. His eloquence was luxuriant and efflorescent, but he was also a close and compact reasoner. He had a vein of playful exaggeration in his common speech, but his temperament was earnest, impassioned, almost melancholy. The more nearly one knew Mr. Choate, the more cause had he to correct superficial impressions.

Professor Brown has many qualifications for the task which was devolved upon him. He knew, loved, and admired Mr. Choate. A graduate and professor of Dartmouth College, the son of a former president, he caught a larger portion of the light thrown back upon the college by the genius and fame of her brilliant son. A good scholar himself, he is competent to appreciate the ripe scholarship of Mr. Choate, and his love of letters. His style is clear, simple, and manly. He has, too, the moral qualities needed in a man who undertakes to write the biography of an eminent man recently deceased, who has left children, relatives, friends, acquaintances, and rivals, — the tact, the instinct, the judgment which teaches what to say and what to leave unsaid, and refuses to admit the public into those inner chambers of the mind and heart where the public has no right to go. But he has one disqualification: he is not a lawyer, and no one but a lawyer can take the full gauge and dimensions of what Mr. Choate was and did. For Mr. Choate, various as were his intellectual tastes, wide as was the range of his intellectual curiosity, made all things else secondary and subservient to legal studies and professional aspirations. To the law he gave his mind and life, and all that he did outside of the law was done in those breathing-spaces and intermissions of professional labor in which most lawyers in large practice are content to do nothing.

But Professor Brown's biography is satisfactory in all respects, even in the delineations of the professional character of Mr. Choate, where, if anywhere, we should have looked for imperfect comprehension. The members of the bar may rest assured that justice has been done to the legal claims and merits of one of whom they were so justly proud; and the public may

be assured that the traits of Mr. Choate's character, the qualities of his mind, — his great and conspicuous powers, as well as his lighter graces and finer gifts, — have been set down with taste, feeling, judgment, and discrimination. This seems but measured language, and yet we mean it for generous praise; bearing always in mind the difficulties of the subject, and, as Professor Brown has happily said in his preface, that "the traits of Mr. Choate's character were so peculiar, its lights and shades so delicate, various, and evanescent." We confess that we sat down to read the biography not without a little uneasiness, not without a flutter of apprehension. But all feeling of this kind was soon dissipated as we went on, and there came in its place a grateful sense of the grace, skill, and taste which Professor Brown had shown in his delineation, and the faithful portrait he had produced. And one secret of this success is to be found in the fact that he had no other object or purpose than to do justice to his subject. He is entirely free from self-reference. There is not in the remotest corner of his mind a wish to magnify his office and draw attention from the theme of the biography to the biographer himself. He permits himself no digressions, he obtrudes no needless reflections, enters into no profitless discussions: he is content to unfold the panorama of Mr. Choate's life, and do little more than point out the scenes and passages as they pass before the spectator's eye.

It was not an eventful life; it was, indeed, the reverse. It was a life passed in the constant and assiduous practice of the law. We do not forget his brief term of service in the House of Representatives, and his longer period in the Senate; but these were but episodes. They were trusts reluctantly assumed and gladly laid aside; for he was one of those exceptional Americans who have no love of political distinction or public office. A lawyer's life leaves little to be recorded; the triumphs of the bar are proverbially ephemeral, and lawyers themselves are willing to forget the cases they have tried and the verdicts they have won. Had Mr. Choate been merely and exclusively a lawyer, the story of his life could have been told in half a dozen pages; but though he was a great lawyer and advo-

cate, he was something more: he was an orator, a scholar, and a patriot. He had no taste for public life, as we have just said; but he had the deepest interest in public subjects, loved his country with a fervid love, had read much and thought much upon questions of politics and government. Busy as he always was in his profession, his mind, discursive, sleepless, always thirsting for knowledge, was never content to walk along the beaten highway of the law, but was ever wandering into the flowery fields of poetry and philosophy on the right hand and the left. These volumes show how untiring was his industry, how various were his attainments, how accurate was his knowledge, how healthy and catholic were his intellectual tastes. The only thing for which he had no taste was repose; the only thing which he could not do was to rest. When we see what his manner of life was, how for so many years the nightly vigil succeeded the daily toil, how the bow was always strung, how much he studied and wrote outside of his profession, even while bearing the burden and anxiety of an immense practice, we can only wonder that he lived so long.

The whole of the second volume and a full half of the first are occupied with Mr. Choate's own productions, mainly speeches and lectures. Many of these have been published before, but some of them appear in print for the first time. Mr. Choate's peculiar characteristics of style and manner — his exuberance of language, his full flow of thought, his redundancy of epithet, his long-drawn sentences, stretching on through clause after clause before the orbit of his thought had begun to turn and enter upon itself — are well known. We cannot say that the contents of these volumes will add to the high reputation which Mr. Choate already enjoys as a brilliant writer, an eloquent speaker, a patriotic statesman; but we can and do say that the glimpses we herein get of his purely human qualities — of that inner life which belongs to every man simply as man — all add to the interest which already clings to his name, by showing him in a light and in relations of which the public who hung with delight upon his lips knew little or nothing. He had long been one of the celebrities of the city; his face and form were

familiar to his towns-people, and all strangers were anxious to see and hear him: but, though he moved and acted in public, he dwelt apart. His orbit embraced the three points of the court-room, his office, and his home, — and no more. He had no need of society, of amusement, of sympathy, of companionship. We are free to say that we think it was a defect in his nature, at least a mistake in his life, that he did not cultivate his friendships more. Few men of his eminence have ever lived so long and written so few letters. But his diaries and journals, now for the first time given to the light, show us the inner man and the inner life. Here he communed with himself. Here he intrusted his thoughts, his hopes, his dreams, his aspirations to the safe confidence of his note-book. No portions of the two volumes are to us of more interest than these diaries and journals. They bear the stamp of perfect sincerity. They show us how high his standard was, how little he was satisfied with anything he had done, how deep and strong were his love of knowledge and his love of beauty, how every step of progress was made a starting-point for a new advance. And from these, and other indications which these volumes contain, we can learn how modest he was, how gentle and courteous, how full of playfulness and graceful wit, how unprejudiced, how imbued with reverence for things high and sacred, how penetrated with delicate tact and sensitive propriety. He nursed no displeasures; he cultivated no antipathies; he was free from dark suspicions, sullen resentments, and smouldering hates; he put no venom upon his blade.

The life and labors of a man like Mr. Choate present many points on which it would be easy to dwell with more or less of fulness, but we can only touch upon one or two. We have always thought him especially remarkable for the felicity with which the elements in him were so mingled that the bright gift was not accompanied by the usually attendant shadow. All would admit, for instance, that his temperament was the temperament of genius. The strings of an Æolian harp are not more responsive to the caressing wind than were the fibres of his frame sensitive to the influence of beauty. His organization was delicate, nervous, and im-

passioned. The grandeur and loveliness of Nature, fine poetry, stirring eloquence, music under certain forms and conditions, affected him to an extent to which men are rarely susceptible. And yet with all these "robes and singing garlands" of genius about him, he was entirely free from the irritability which usually accompanies genius. His temper was as sweet as his organization was sensitive. The life of a lawyer in great practice is very trying to the spirit, but no one ever saw Mr. Choate discomposed or ruffled, and the sharp contentions of the most protracted and hotly contested trial never extorted from him a testy remark, a peevish exclamation, a wounding reflection. He never wasted any of his nervous energy in scolding, fretting, or worrying. Such invincible and inevitable sweetness of temper would have made the most commonplace man attractive: we need not say what a charm it gave to such powers and accomplishments as those of Mr. Choate.

So, too, there is the old, traditional commonplace about genius being one thing and application another, and their being in necessary antagonism to each other. But Mr. Choate was a man of genius, at least in its popular and generally received sense. The glance of his mind was as rapid as the lightning; he learned almost by intuition; his fancy was brilliant, discursive, and untiring; his perceptions were both quick and correct: if there ever were a man who could have dispensed with the painful acquisitions of labor, and been content with the spontaneous growth of an uncultivated soil, that man was Mr. Choate. And yet who ever worked harder than he? what plodding chronicler, what prosaic Dryasdust ever went through a greater amount of drudgery than he? His very industry had the intense and impassioned character which belonged to his whole temperament and organization. He toiled with a fiery earnestness and a concentration of purpose which burned into the very heart of the subject he was investigating. The audience that hung with delight upon one of his addresses to the jury, at the close of a long and exciting trial, in which the wit and eloquence and poetry seemed to be the inspiration of the moment,—electric sparks which the mind's own rapid motion generated,—thought as little of the patient industry with which all

had been elaborated as they who admire an exquisite ball-dress, that seems a part of the lovely form which it adorns, think of the pale weaver's loom and the poor seamstress's needle. We have known brilliant men; we have known laborious men; but we have never known any man in whom the two elements were met in such combination as Mr. Choate.

But we must pause. We are insensibly going beyond our limits. We are forgetting the biography and recalling Mr. Choate himself, a theme too fruitful for a literary notice. We conclude, then, with an expression of thanks to Professor Brown for the entirely satisfactory manner in which he has performed a task of no common difficulty. The friends of Mr. Choate will find in these volumes not only ample, but new matter, to justify the admiration which he awakened; and to those who did not know him they will show how just was his title to their admiration.

*The Story of the Guard, a Chronicle of the War.* By JESSIE BENTON FRÉMONT.  
16mo. Boston: Ticknor and Fields.

THE subject, the authorship, and the style of this book combine to secure for it the immediate attention of American readers. In our own case, this attention has deepened into hearty interest and sympathy; and we are so confident that such will be the result in every mind, that we the more cheerfully resign ourselves to the necessity which renders a full and fair review of this little book an impossible thing for us. Let us briefly call to notice some of its peculiar excellences, and indicate the line of thought which we think its sympathetic critic will follow.

Certainly no worthier subject could be chosen than the deeds of that brave young Guard, which was at first the target for so many slanders, and at last the centre of heartiest love and pride to all the North. Its short and brilliant career lacks nothing which chivalry and romance could lend, to render it the brightest passage in the history of the war. It is but a few days since Frémont's Virginia Body-Guard—now that of General Sigel—made a bold dash into Fredericksburg, rivalling the glory of their predecessors; but, though every

one of Frémont's campaigns should boast a Body-Guard, and every Guard immortalize a new Springfield, the crown of crowns will always rest on the gallant little major and his dauntless few whose high enthusiasm broke the spell of universal disaster, sounding the bugle-notes of victory through the dreary silence of national despair.

General Frémont's practice in the West was invariably to educate his raw troops in the presence of an enemy. Whether this was of choice or of necessity we do not pretend to say; but the fact remains, that the tide of war was turned back upon our enemies by an army composed of men who had but just taken up their weapons. We once had the pleasure of hearing General Frémont explain the system which he pursued with this army; and we remember being struck with the fact that he laid great stress on *constant skirmishing*, as the means of acquiring a habit of victory. We cannot enlarge here upon this interesting topic. We design only to adduce the circumstance, that the charge at Springfield concluded a series of five fights within a single week, every one of which resulted in triumph to our arms with the exception of that at Fredericktown. They were slight affairs; but, as Frémont so well says, "Little victories form a habit of victory."

The charge of the Guard we shall not eulogize. It is beyond the praise of words. It is wonderful that Major Zagonyi should have been able in so few days to bring into such splendid discipline a body of new recruits. The Prairie Scouts (who seem to have been a band of brave men under a dashing young leader) had not the perfect training which carried the Guard through a murderous fire, to form and charge in the very camp of the enemy. They plunged into the woods, and commenced a straggling bush-fight, as they were skilled to do. Worthy of praise in themselves, (and they have earned it often and received it freely,) the Scouts on this occasion serve to heighten the effect of that grand combination of impulse and obedience which makes the perfect soldier.

We cannot but add a word or two (leaving many points of interest untouched) upon the manner in which Mrs. Frémont has treated her subject. It is novel, but not ineffective. Zagonyi tells much of the story in his own words; and we are sure

that it loses nothing of vividness from his terse and vigorous, though not always strictly grammatical language. "Zagonyi's English," says some one who has heard it, "is like wood-carving."

The letters of the General himself form one of the most interesting features of the book. We would only remark, in this connection, the wide difference between the General's style and that of his wife. Mrs. Frémont is a true woman, and has written a true woman's book. The General is a true man, and his words are manly words. Her style is full, free, vivid, with plenty of dashes and postscripts, — the vehicle of much genius and many noble thoughts; but in itself no style, or a careless and imperfect one. The Pathfinder writes as good English prose as any man living. We cannot be mistaken. The hand that penned the "Story of the Guard" could not hold the pen of the Proclamation or the Farewell Address, or the narrative of the Rocky-Mountain Expedition. Nevertheless, it has done well. Let its work lie on our tables and dwell in our hearts with the "Idyls of the King," — the *Æolian* memories of a chivalry departed blending with the voices of the nobler knighthood of our time.

*Seven Little People and their Friends.* New York: A. F. Randolph.

THIS is a charming book for the holidays. Not that it requires such a temporary occasion to give it interest, elevated as it is by its inherent excellence above that class of books which may be said almost entirely to depend upon such factitious accidents for whatever of success they may reasonably hope to obtain. It is, irrespective of time or occasion, a genuine story-book, adapted particularly to children between the ages of six and sixteen years, yet not, as is usually the case in books for children, confined to these narrow limits in either direction; since there is somewhat for any child that can be supposed to have an interest in narrative, and a great deal for every man who has genius, according to Coleridge's well-known definition of genius, — namely, that it is the power of childhood carried forward into the developments of manhood. This is saying, indeed, quite as much as could

be said for the general features of the book, and more than could be said for any other child's book, excepting alone Hans Andersen's inimitable stories.

Speaking of the book as compared with the works of Hans Andersen, it is more consciously a work of art, in an intellectual sense; it is more complicated in incident, or rather, we should say, in the working-up of the incident, whether that be an advantage for it or not. In almost every instance, Hans Andersen's stories could be told apart from the book,—indeed, it is true that many of them were thus told to children, whom the Danish storyteller casually met, before they were committed to writing; and they were written, we imagine, very much as they were told. The seven stories of which this book is made up, on the other hand, could none of them be told naturally, and yet preserve every artistic feature which belongs to them, as they are written. As there is more of intellectual consciousness in their development, giving them more finish and greater multiformity as products of art, so also there is more depth of idea in their design. The writer is evidently not satisfied with simple narrative; the *movement* of his stories is more important in his eye than *incident*, and to the former there must have been considerable sacrifice of the latter,—that is, much of the incident which might have been given in a simple narrative has been left out, because it would mar the formal design.

From what has been said it will be evident that the book is not one of those designed to affect the reader mainly through a scrupulous conscience, or indeed dis-

tingtively through conscience at all. It appeals to the imagination preëminently, and through that to the will. It is the greatest merit of the book, that it is designed for the culture and development of the imagination in children,—a faculty almost entirely neglected, or, what is worse, oftentimes despotically crushed and thwarted in children.

In "The Three Wishes" is developed for the child the mystery of work and of worship; but it is all accomplished through incidents appealing wholly to imagination, and with beautiful art. "The Little Castaways"—really a deliberate farce, "taking off," the stories of similar incident written for older folk—is yet, in itself, for the child much more than that which is thus "taken off" ever could be for the older and more romantic reader. "The Rock-Elephant" is full of humor and imaginative pathos. "A Faëry Surprise-Party" is as delicate as are Jack Frost's pencillings, through which all the events of the story curiously move. "New-Year's Day in the Garden" has equal delicacy, and even greater beauty.

In all the stories there is a humanizing of all elements introduced, even the most material. We are assured that the author's efforts will meet with success. Children, certainly, and all those especially interested in children, will hail the book with delight. It is finely illustrated by F. A. Chapman, who, it is evident, has spared no pains to render it attractive. The engravings, be it said in their favor, are not too directly suggestive, as is generally the case, but, from their delicate insinuations, particularly beautiful.

THE  
ATLANTIC MONTHLY.

A MAGAZINE OF LITERATURE, ART, AND POLITICS.

---

VOL. XI.—FEBRUARY, 1863.—NO. LXIV.

---

SOVEREIGNS AND SONS.

THE sudden death of Prince Albert caused profound regret, and the Royal Family of Britain had the sincere sympathies of the civilized world on that sad occasion. The Prince Consort was a man of brilliant talents, and those talents he had cultivated with true German thoroughness. His knowledge was extensive, various, and accurate. There was no affectation in his regard for literature, art, and science; for he felt toward them all as it was natural that an educated gentleman of decided abilities, and who had strongly pronounced intellectual tastes, should feel. Though he could not be said to hold any official position, his place in the British Empire was one of the highest that could be held by a person not born to the sceptre. His knowledge of affairs, and the confidence that was placed in him by the sovereign, made it impossible that he should not be a man of much influence, no matter whether he was recognized by the Constitution or not. As the director of the education of the princes and princesses, his children, his character and ideas are likely to be felt hereafter, when

those personages shall have become the occupants of high and responsible stations. The next English sovereign will be pretty much what he was made by his father; and it is no light thing to have had the formation of a mind that may be made to act, with more or less directness, on the condition of two hundred millions of people.

We know it is the custom to speak of the Government of England as if there were no other powerful institution in that Empire than the House of Commons; and that very arrogant gentleman, Mr. John Arthur Roebuck, has told us, in his usual style, that the crown is a word, and nothing more. "The crown!" exclaimed the member for Sheffield, in 1858,— "the crown! it is the House of Commons!" Theoretically Mr. Roebuck is right, and the British practice conforms to the theory, whenever the reigning prince is content to receive the theory, and to act upon it: but all must depend upon that prince's character; and should a British sovereign resolve to rule as well as to reign, he might give the House of Commons much trouble, in which the whole Empire would

share. The House of Commons was never stronger than it was in the latter part of 1760. For more than seventy years it had been the first institution in the State, and for forty-six years the interest of the sovereign had been to maintain its supremacy. The king was a cipher. Yet a new king had but to appear to change everything. George III. ascended the throne with the determination not to be the slave of any minister, himself the slave of Parliament; and from the day that he became king to the day that the decline of his faculties enforced his retirement, his personal power was everywhere felt, and his personal character everywhere impressed itself on the British world, and to no ordinary extent on other countries. George III. was not a great man, and it has been argued that his mind was never really sound; and yet of all men who then lived, and far more than either Washington or Napoleon, he gave direction and color and tone to all public events, and to not a little of private life, and much of his work will have everlasting endurance. He did not supersede the House of Commons, but he would not be the simple vizier of that many-headed sultan, which for the most part became his humble tool. Yet he was not a popular sovereign until he had long occupied the throne, and had perpetrated deeds that should have destroyed the greatest popularity that sovereign ever possessed. It was not until after the overthrow of the Fox-and-North Coalition that he found himself popular, and so he remained unto the end. The change that he wrought, and the power that he wielded in the State, — a power as arbitrary as that of Louis XV., — were the fruits of his personal character, and that character was the consequence of the peculiar education which he had received.

Lord Brougham tells us that George III. "was impressed with a lofty feeling of his prerogative, and a firm determination to maintain, perhaps extend it. At all events, he was resolved not to be a mere name or a cipher in public affairs; and whether

from a sense of the obligations imposed upon him by his station, or from a desire to enjoy all its powers and privileges, he certainly, while his reason remained entire, but especially during the earlier period of his reign, interfered in the affairs of government more than any prince who ever sat upon the throne of this country since our monarchy was distinctly admitted to be a limited one, and its executive functions were distributed among responsible ministers. The correspondence which he carried on with his confidential servants during the ten most critical years of his life lies before us, and it proves that his attention was ever awake to all the occurrences of the government. Not a step was taken in foreign, colonial, or domestic affairs, that he did not form his opinion upon it, and exercise his influence over it. The instructions to ambassadors, the orders to governors, the movements of forces, down to the marching of a single battalion, in the districts of this country, the appointment to all offices in Church and State, not only the giving away of judgeships, bishoprics, regiments, but the subordinate promotions, lay and clerical, — all these form the topics of his letters; on all his opinion is pronounced decisively; in all his will is declared peremptorily. In one letter he decides the appointment of a Scotch puisne judge; in another the march of a troop from Buckinghamshire into Yorkshire; in a third the nomination to the Deanery of Westminster; in a fourth he says, that, 'if Adam, the architect, succeeds Worsley at the Board of Works, he shall think Chambers ill used.' For the greater affairs of State it is well known how substantially he insisted upon being the king *de facto* as well as *de jure*. The American War, the long exclusion of the Liberal party, the French Revolution, the Catholic question, are all sad monuments of his real power."

This is a true picture of George III., and why it should be supposed that no descendant of that monarch will ever be able to make himself potently felt in the government of his Empire we are at a loss

to understand. The exact part of that monarch would not be repeated, the world having changed so much as to render such repetition impossible; but the end at which George III. aimed, and which he largely accomplished for himself, that end being the vindication of the monarchical element in the British polity, might be undertaken by one of his great-grandsons with every reason to expect success. The means employed would have to be different from those which George III. made use of, but that would prove nothing against the project itself. The men who followed Cromwell to the Long Parliament and the men who followed Bonaparte into the Council of Five Hundred were differently clothed and armed, but the pikemen of the future Protector were engaged in the same kind of work that was afterward done by the grenadiers of the future Emperor. The one set of men had never heard of the bayonet, and the other set had faith in nothing but the bayonet, believing it to be as "holy" as M. Michelet asserts it to be. The pikemen were the most pious of men, and could have eaten an Atheist with relish, after having roasted him. The grenadiers were Atheists, and cared no more for Christianity than for Mahometanism, their chief having testified his regard for the latter, and consequently his contempt for both, only the year before, in Egypt. Yet both detachments were successfully employed in doing the same thing, and that was the clearing away of what was regarded as legislative rubbish, in order that military monarchies might be erected on the cleared ground. In each instance there was the element of violence actively at work, and it makes no possible difference that the English Commons went out because they did not care to come to push of pike, and that the French Representatives departed rather than risk the consequence of a bayonet-charge. So if the Prince of Wales should see fit to tread in the footsteps of his great-grandfather, he would have very different instruments from those "king's friends" whose existence and actions were so fatal to minis-

ters in the early part of those days when George III. was king.

It is a common remark, that the institutions of England have been so far reformed in a democratic direction, that no monarch could ever expect to become powerful in that country. We think the observation unphilosophical; and it is because the old aristocratical system of England received a heavy blow in 1832 that we believe a king of that country could make himself a ruler in fact as well as in theory. Between a king and an aristocracy there never can be anything like a sincere attachment, unless the king be content to be recognized as the first member of the patrician order, to be *primus inter pares* in strict good faith, an agent of his class, but not the sovereign of his kingdom. Kings generally prefer new men to men of established position and old descent. They have a fondness for low-born favorites, who are not only cleverer than most aristocrats will condescend to be, but who recognize a chief in a monarch, and enable him to feel and to enjoy his superiority when in their company. The hostility that prevails between the peer and the *parvenu* is the most natural thing in the world, and is no more to be wondered at than that between the hare and the hound. In earlier times the peerage had the best of it, and could hang up the *parvenus* with wonderful despatch,—as witness the fate of Cochrane and his associates, favorites of the third James of Scotland, who swung in the wind over Lauder Bridge. In later times brains and intelligence tell in and on the world, and the peers, having no longer pit and gallows for the punishment of presumptuous plebeians who dare to get between them and the regal sunshine, must be content to see those plebeians basking in the royal rays, if they are not capable of outdoing them in those arts that ever have been found most useful in the advancement of the interest of courtiers. Hanging and heading have gone mostly out of date, or the peer would be in more danger than the upstart.

The Reform Bill has made it much

easier for a king of Great Britain to become a ruler than it was for George III. to carry his point over the old aristocracy, for it has created a class of voters who could be easily won over to the aid of a king engaged in a project that should not injure them, while its success should reduce the power of the aristocracy. The father of the Reform Bill made a strange mistake as to the character of that measure. "I hope," said the old Tory and Pittite, Lord Sidmouth, to him, "God will forgive you on account of this bill: I don't think I can." "Mark my words," was Earl Grey's answer,—"within two years you will find that we have become unpopular for having brought forward the most aristocratic measure that ever was proposed in Parliament." The great Whig statesman was but half right. The Whigs became unpopular within the time named, but it was for very different reasons from that assigned by Earl Grey in advance for their fall in the people's favor. The Reform Bill, instead of proving an aristocratic measure, has wellnigh rendered aristocratical government impossible in England; and as a democracy in that country is as much out of the question as a well-ordered monarchy is in America, a return to a true regal government would seem to be the only course left for England, if she desires to have a strong government. When the Duke of Wellington, seeing the breaking up of the old system because of the triumph of the Whig measure, asked the question, "How is the King's government to be carried on?" he meant, "How will it be possible to maintain the old aristocratical system of party-government?"

Since the grand organic change that was effected thirty years ago, there has been no strong and stable government in England. Lord Grey went out of office because he could not keep his party together. The King, under the spurring of his wife, made an effort to play the part of his father in 1783, with Peel for Pitt, and was beaten. Peel was flogged, and Lord Melbourne became Pre-

mier again; and though he held office six years, he never had a working majority in the Commons, nor a majority of any kind in the Peers. The largest majorities that he could command in the lower House would have been considered something like very weak support in the ante-Reform times, and would have caused the ministers of those times to resign themselves to resignation. When the Tories came back to power, in 1841, with about one hundred majority in the Commons, they thought they were secure for a decade at least; but in a few months they found they were not secure of even their own chief; and in five years they were compelled to abandon protection, and to consent to the death and burial of their own party, which was denied even the honor of embalmment, young Conservatism being nothing but old Toryism, and therefore it was beyond even the power of spices to prolong its decay. It had rotted of the potato-rot, and the League's powerful breath blew it over. The Whigs returned to office, but not to power, the Russell Government proving a most ridiculous concern, and living through only five years of rickety rule. A spasmodic Tory Government, that discarded Tory principles, endured for less than a year, not even the vigorous intellect of the Earl of Derby, seconded though it was by the genius of Disraeli, being sufficient to insure it a longer term of existence. Then came the Aberdeen Ministry, a regular coalition concern, a no-party government, and necessarily so, because all parties but the extreme Tories were represented in it, and were engaged in neutralizing each other. How could there be a party government, or, indeed, for long a government of any kind, by a ministry in which were such men as Aberdeen and Russell, Palmerston and Grahame, Gladstone and Clarendon, all pigging together in the same truckle-bed, to use Mr. Burke's figure concerning the mixture that was called the Chatham Ministry? The coalition went to pieces on the Russian rock, having managed the war much worse than any American

Administration ever mismanaged one. The Palmerston Government followed, and has existed ever since, deducting the fifteen months that the second Derby-Disraeli Ministry lasted; but the Palmerston Ministry has seldom had a majority in Parliament, and has lived, partly through the forbearance of its foes, partly through the support of men who are neither its friends nor its enemies, and partly through the personal popularity of its vigorous old chief, who is as lively at seventy-eight as he was at forty-five, when he was a Canningite. Ministries now maintain themselves because men do not know what might happen, if they were to be dismissed; and this has been the political state of England for more than a quarter of a century, with no indications of a change so long as the government shall remain purely Parliamentary in its character, Parliament meaning the House of Commons. There is no party in the United Kingdom capable of electing a strong majority to the House of Commons, and hence a strong government is impossible so long as that body shall control the country. With the removal of Lord Palmerston something like anarchy might be expected, there being no man but him who is competent to keep the Commons in order without the aid of a predominating party. The tendency has been for some time to lean upon individuals, at the same time that the number of individuals possessed of influence of the requisite character has greatly diminished. Sir Robert Peel, had he lived, would have been all that Lord Palmerston is, and more, and would have been more acceptable to the middle class than is the Irish peer.

The state of things that is thus presented, and which must become every year of a more pronounced character, is one that would be highly favorable to the exertions of a prince who should seek to make himself felt as the wielder of the sceptre, and who should exert himself to rise from the presidency of an aristocratical corporation, which is all that a British monarch now is, to the place of king of a great and free people. A prince with talent,

and with a hold on the affection of his nominal subjects, might confer the blessing of strong government on Britain, and rule over the first of empires, instead of being a mere doge, or, as Napoleon coarsely had it, a pig to fatten at the public expense. The time would appear to be near at hand when England shall be the scene of a new struggle for power, with the aristocracy on the one side, and the sovereign and most of the people on the other. A nation like England cannot exist long with weakness organized for its government, and there is nothing in the condition of Parliament or of parties that allows us to suppose that from them strength could proceed, any more than that grapes could be gathered from thorns or figs from thistles. A monarch who should effect the change indicated might be called a usurper, and certainly would be a revolutionist; but, as Mommsen says, "Any revolution or any usurpation is justified before the bar of history by exclusive ability to govern,"—and government is what most nations now stand most in need of. The reason why George III.'s conduct is generally condemned is, that he was a clumsy creature, and that he made a bad use of the power which he monopolized, or sought to monopolize, his whole course being unrelieved by a single trait of genius, or even of that tact which is the genius of small minds.

It has been charged upon the princes of the House of Hanover that they are given to quarrelling, and that between sovereign and heir-apparent there has never been good-will, while they have on several occasions disgusted the world by the vehemence of their hatred for each other. That George I. hated his heir is well known; and George II. hated his son Frederick with far more intensity than he himself had been hated by his own father. The Memoirs of Lord Hervey show the state of feeling that existed in the English royal family during the first third of the reign of George II., and the spectacle is hideous beyond parallel; and for many years longer, until Frederick's death,

there was no abatement of paternal and filial hate. George III. was disgusted with his eldest son's personal conduct and political principles, as well he might be; for while the father was a model of decorum, and a bitter Tory, the son was a profligate, and a Whig,—and the King probably found it harder to forgive the Whig than the profligate. The Prince cared no more for Whig principles than he did for his marriage-vows, but affected them as a means of annoying his father, whose Toryism was of proof. He, as a man, toasted the buff and blue, when that meant support of Washington and his associates, for the same reason that, as a boy, he had cheered for Wilkes and Liberty,—because it was the readiest way of annoying his father; but he ever deserted the Whigs when his aid and countenance could have been useful to them. George IV. had no child with whom to quarrel, but while Prince Regent he did his worst to make his daughter unhappy, as we find established in Miss Knight's *Memoirs*. The good-natured and kind-hearted William IV. had no legitimate children, but he was strongly attached to the Fitzclarences, who were borne to him by Mrs. Jordan. Indeed, monarchs have often been as full of love for their offspring born out of wedlock as of hate for their children born in that holy state. Being men, they must love something, and what so natural as that they should love their natural children, whose helpless condition appeals so strongly to all their better feelings, and who never can become their rivals?

Queen Victoria is the first sovereign of the House of Hanover who, having children, has not pained the world by quarrelling with them. A model sovereign, she has not allowed an infirmity supposed to be peculiar to her illustrious House to control her clear and just mind, so that her career as a mother is as pleasing as her career as a sovereign is splendid. About the time of the death of Prince Albert, a leading British journal published some articles in which it was insinuated, not asserted, that there had

been trouble in the Royal Family, and that that quarrelling between parent and child which had been so common in that family in former times was about to be exhibited again. It was even said that domestic peace was an impossibility in the House of Hanover, which was but an indorsement of Earl Granville's remark, in George II.'s reign. "This family," said that eccentric peer, "always has quarrelled, and always will quarrel, from generation to generation"; and he did not live to see the ill feeling that existed between George III. and his eldest son.

There is no reason for saying that the Hanover family is more quarrelsome than most other royal lines; and the domestic dissensions of great houses are more noted than those of lesser houses only because kings and nobles are so placed as to live in sight of the world. When a king falls out with his eldest son, the entertainment is one to which all men go as spectators, and historians consider it to be the first of their duties to give full details of that entertainment. Since the Hanoverians have reigned over the English, the world has been a writing and a reading world, and nothing has more interested writers and readers than the dissensions of sovereigns and their sons. If we extend our observation to those days when German sovereigns were unthought of in England, we shall find that kings and princes did not always agree; and if we go farther, and scan the histories of other royal houses, we shall learn that it is not in Britain alone that the wearers of crowns have looked with aversion upon their heirs, and have had sons who have loved them so well and truly as to wish to witness their promotion to heavenly crowns. The Hanoverian monarchs of England, and their sons, have shared only the common lot of those who reign and those who wish to reign.

The Norman kings of England did not always live on good terms with their sons. William the Conqueror had a very quarrelsome family. His children quarrelled with one another, and the King quarrelled with his wife. The oldest son of William

and Matilda was Robert, afterward Duke of Normandy,—and a very trying time this young man caused his father to have; while the mother favored the son, probably out of revenge for the beatings she had received, with fists and bridles, from her royal husband, who used to swear “By the Splendor of God!”—his favorite oath, and one that has as much merit as can belong to any piece of blasphemy,—that he never would be governed by a woman. The father and son went to war, and they actually met in battle, when the son ran the old gentleman through the arm with his lance, and dropped him out of the saddle with the utmost dexterity. This was the first time that the Conqueror was ever conquered, and perhaps it was not altogether without complacency that “the governor” saw what a clever fellow his eldest son was with his tools. At the time of William’s death Robert was on bad terms with him, and is believed to have been bearing arms against him. Henry I. lost his sons before he could well quarrel with them, the wreck of the White Ship causing the death of his heir-apparent, and also of his natural son Richard. He compensated for this omission by quarrelling with his daughter Matilda, and with her husband, Geoffrey of Anjou. He made war on his brother Robert, took from him the Duchy of Normandy, and shut him up for life; but the story, long believed, that he put out Robert’s eyes, has been called in question by modern writers. King Stephen, who bought his breeches at so low a figure, had a falling-out with his son Eustace, when he and Henry Plantagenet sought to restore peace to England, and nothing but Eustace’s death made a settlement possible. William Rufus, the Red King, who was the second of the Norman sovereigns of England, had no legitimate children, for he was never married. He was a jolly bachelor, and as such he has had the honor of having his history written by one of the ablest literary ladies of our time, Miss Agnes Strickland. He was the only king of England, who arrived at years of indiscretion, who did not marry. The

other bachelor kings were Edward V. and Edward VI., whose united ages were short of thirty years. His character does not tend to make the single state of man respected. “Never did a ruler die less regretted than William Rufus,” says Dr. Lappenberg, “although still young, being little above forty, not a usurper, and successful in his undertakings. He was never married, and, besides the crafty and officious tools of his power, was surrounded only by a few Normans of quality, and harlots. In his last struggle with the clergy, the most shameless rapacity is especially prominent, and so glaring, that, notwithstanding some exaggerations and errors that may be pointed out in the Chronicles, he still appears in the same light. Effeminacy, drunkenness, gluttony, dissoluteness, and unnatural crimes were the distinguishing characteristics of his court. He was himself an example of incontinence.” This is a nice character to travel with down the page of history. He quarrelled with his brothers, and with his uncle, and kept up the family character in an exceedingly satisfactory manner, considering that he was unmarried. The statement that he was slain by Walter Tirel, accidentally, in the New Forest, is now disregarded. Our theory of his death is, that he fell a victim to the ambition of his brother, Henry I., who succeeded him, and who certainly had good information as to his fall, and made good use of it, like a sensible fellow.

Of all the royal races of the Middle Ages, no one stands out more boldly on the historic page than the Plantagenets, who ruled over England from 1154 to 1485, the line of descent being frequently broken, and family quarrels constantly occurring. They were a bold and an able race, and if they had possessed a closer resemblance to the Hapsburgs, they would have become masters of Western Europe; but their quarrelsome disposition more than undid all that they could effect through the exercise of their talents. On the female side they were descended from the Conqueror; and, as we have

seen, the Conqueror's family was one in which sons rebelled against the fathers, and brother fought with brother. Matilda, daughter of Henry I., became the wife of Geoffrey, Count of Anjou, and from their union came Henry II., first of the royal Plantagenets. Now the Angevine Plantagenets were "a hard set," as we should say in these days. Dissensions were common enough in the family, and they descended to the offspring of Geoffrey and Matilda, being in fact intensified by the elevation of the House to a throne. Henry II. married Eleanor of Aquitaine, one of the greatest matches of those days, a marriage which has had great effect on modern history. The Aquitanian House was as little distinguished for the practice of the moral virtues as were the lines of Anjou and Normandy. One of the Countesses of Anjou was reported to be a demon, which probably meant only that her husband had caught a Tartar in marrying her; but the story was enough to satisfy the credulous people of those times, who, very naturally, considering their conduct, believed that the Devil was constant in his attention to their affairs. It was to this lady that Richard Cœur de Lion referred, when he said, speaking of the family contentions, "Is it to be wondered at, that, coming from such a source, we live ill with one another? What comes from the Devil must to the Devil return." With such an origin on his father's side, crossing the fierce character of his mother, Henry II. thought he could not do better than marry Eleanor, whose origin was almost as bad as his own. Her grandfather had been a "fast man" in his youth and middle life, and it was not until he had got nigh to seventy that he began to think that it was time to repent. He had taken Eleanor's grandmother from her husband, and a pious priest had said to them, "Nothing good will be born to you," which prediction the event justified. The old gentleman resigned his rich dominions, supposed to be the best in Europe, to his grand-daughter, and she married Louis VII., King of France, and accompanied him in the crusade that he was

so foolish as to take part in. She had women-warriors, who did their cause immense mischief; and unless she has been greatly scandalized, she made her husband fit for heaven in a manner approved neither by the law nor the gospel. The Provençal ladies had no prejudices against Saracens. After her return to Europe, she got herself divorced from Louis, and married Henry Plantagenet, who was much her junior, she having previously been the mistress of his father. It was a *mariage de convenance*, and, as is sometimes the case with such marriages, it turned out very inconveniently for both parties to it. It was not unfruitful, but all the fruit it produced was bad, and to the husband and father that fruit became the bitterest of bitter ashes. No romancer would have dared to bring about such a series of unions as led to the creation of Plantagenet royalty, and to so much misery as well as greatness. There is no exaggeration in Michelet's lively picture of the Plantagenets. "In this family," he says, "it was a succession of bloody wars and treacherous treaties. Once, when King Henry had met his sons in a conference, their soldiers drew upon him. This conduct was traditionary in the two Houses of Anjou and Normandy. More than once had the children of William the Conqueror and Henry II. pointed their swords against their father's breast. Fulk had placed his foot on the neck of his vanquished son. The jealous Eleanor, with the passion and vindictiveness of her Southern blood, encouraged her sons' disobedience, and trained them to parricide. These youths, in whose veins mingled the blood of so many different races, — Norman, Saxon, and Aquitanian, — seemed to entertain, over and above the violence of the Fults of Anjou and the Williams of England, all the opposing hatreds and discords of those races. They never knew whether they were from the South or the North: they only knew that they hated one another, and their father worse than all. They could not trace back their ancestry, without finding, at each descent, or rape, or incest, or parricide,

side." Henry II. quarrelled with all his sons, and they all did him all the mischief they could, under the advice and direction of their excellent mother, whom Henry imprisoned. A priest once sought to effect a reconciliation between Henry and his son Geoffrey. He went to the Prince with a crucifix in his hand, and entreated him not to imitate Absalom.

"What!" exclaimed the Prince, "would you have me renounce my birthright?"

"God forbid!" answered the holy man; "I wish you to do nothing to your own injury."

"You do not understand my words," said Geoffrey; "it is our family fate not to love one another. 'T is our inheritance; and not one of us will ever forego it."

That must have been a pleasant family to marry into! When the King's eldest son, Henry, died, regretting his sins against his father, that father durst not visit him, fearing treachery; and the immediate occasion of the King's death was the discovery of the hostility of his son John, who, being the worst of his children, was, of course, the best-beloved of them all. The story was, that, when Richard entered the Abbey of Fontevraud, in which his father's body lay, the corpse bled profusely, which was held to indicate that the new king was his father's murderer. Richard was very penitent, as his elder brother Henry had been, on his death-bed. They were very sorrowful, were those Plantagenet princes, when they had been guilty of atrocious acts, and when it was too late for their repentance to have any practical effect.

Richard I. had no children, and so he could not get up a perfect family-quarrel, though he and his brother John were enemies. He died at forty-two, and but a few years after his marriage with Berengaria of Navarre, an English queen who never was in England. When on his death-bed, Richard was advised by the Bishop of Rouen to repent, and to separate himself from his children. "I have no children," the King answered. But the good priest told him that he had children,

and that they were avarice, luxury, and pride. "True," said Richard, who was a humorist,— "and I leave my avarice to the Cistercians, my luxury to the Gray Friars, and my pride to the Templars." History has fewer sharper sayings than this, every word of which told like a cloth-yard shaft sent against a naked bosom. Richard certainly never quarrelled with the children whom he thus left to his friends.

King John did not live long enough to illustrate the family character by fighting with his children. When he died, in 1216, his eldest son, Henry III., was but nine years old, and even a Plantagenet could not well fall out with a son of that immature age. However, John did his best to make his mark on his time. If he could not quarrel with his children, because of their tender years, he, with a sense of duty that cannot be too highly praised, devoted his venom to his wife. He was pleased to suspect her of being as regardless of marriage-vows as he had been himself, and so he hanged her supposed lover over her bed, with two others, who were suspected of being their accomplices. The Queen was imprisoned. On their being reconciled, he stinted her wardrobe, a refinement of cruelty that was aggravated by his monstrous expenditure on his own ugly person. Queen Isabella was very handsome, and perhaps John was of the opinion of some modern husbands, who think that dress extinguishes beauty as much as it inflames bills. Having no children to torment, John turned his disagreeable attentions to his nephew, Arthur, Duke of Brittany, who, according to modern ideas, was the lawful King of England. The end was the end of Arthur. How he was disposed of is not exactly known, but, judging from John's character and known actions, we incline to agree with those writers who say that the uncle slew the nephew with his own royal hand. He never could deny himself an attainable luxury, and to him the murder of a youthful relative must have been a rich treat, and have created for him a new sensation, something like the

new pleasure for which the Persian king offered a great reward. Besides, all uncles are notoriously bad, and seem, indeed, to have been made only for the misery of their nephews and nieces, of whose commands they are most reprehensibly negligent. We mean to write a book, one of these days, for the express purpose of showing what a mistake it was to allow any such relationship to exist, and tracing all the evil that ever has afflicted humanity to the innate wickedness of uncles, and requiring their extirpation. We err, then, on the safe side, in supposing that John despatched Arthur himself,—not to say, that, when you require that a delicate piece of work should be done, you must do it with your own hand, or you may be disappointed. John did the utmost that he could do to keep up the discredit of the family; for, when a man has no son to whip and to curse, he should not be severely censured for having done no more than to kill his nephew. Men of large and charitable minds will take all the circumstances of John's case into the account, and not allow their judgment of his conduct to be harsh. What better can a man do than his worst?

Henry III. appears to have managed to live without quarrelling with his children; but then he was a poor creature, and even was so unkingly, and so little like what a Plantagenet should have been, that he actually disliked war! He might with absolute propriety have worn the lowly broom-corn from which his family-name was taken, while it was a sweeping satire on almost all others who bore it. His heir, Edward I., was a king of "high stomach," and as a prince he stood stoutly by his father in the baronial wars. He, too, though the father of sixteen children, dispensed with family dissensions, thus showing that "The more, the merrier," is a true saying. Edward II. came to grief from having a bad wife, Isabella of France, who made use of his son against him. That son was Edward III., who became king in his father's lifetime, and whose marriage with Philippa of Hainault is one of the best-known facts

of history, not only because it was an uncommonly happy marriage, but that it had remarkable consequences. This royal couple got along very happily with their children; but the ambition of their fourth son, the Duke of Lancaster, troubled the last days of the King, and prepared the way for great woes in the next century. The King was governed by Lancaster, and the Black Prince, who was then in a dying state, was at the head of what would now be called the Opposition, as if he foresaw what evils his brother's ambition would be the means of bringing upon his son.

Richard II., son of the Black Prince, had no children, though he was twice married. He was dethroned, the rebels being headed by his cousin, Henry of Lancaster, who became Henry IV. Thus was brought about that change in the course of descent which John of Gaunt seems to have aimed at, but which he died just too soon to see effected. It was a violent change, and one which had its origin in a family quarrel, added to political dissatisfaction. Had the revolutionists wished merely to set aside a bad king, they would have called the House of Mortimer to the throne, the chief member of that House being the next heir, as descended from the Duke of Clarence, elder brother of the Duke of Lancaster; but more was meant than a political revolution, and so the line of Clarence was passed over, and its right to the crown treated with neglect, to be brought forward in bloody fashion in after-days. In fact, the Englishmen who made Henry of Lancaster king prepared the way for that long and terrible struggle which took place in the fifteenth century, and which was, its consequences as well as its course considered, the greatest civil war that has ever afflicted Christendom. The movement that led to the elevation of Henry of Bolingbroke to the throne, though not precisely a palace-revolution, resembles a revolution of that kind more than anything else with which it can be compared; and it was as emphatic a departure from the principle of hereditary right as can

be found in history. So much was this the case, that liberals in politics mostly place their historical sympathies with the party of the Red Rose, for no other reason, than that the House of Lancaster's possession of the throne testified to the triumph of revolutionary principles; for that House was jealous of its power and cruel in the exercise of it, and was so far from being friendly to the people, that it derived its main support from the aristocracy, and was the ally of the Church in the harsh work of exterminating the Lollards. The House of York, on the other hand, while it had, to use modern words, the legitimate right to the throne, was a popular House, and represented and embodied whatever there was then existing in politics that could be identified with the idea of progress.

The character of the troubles that existed between Henry IV. and his eldest son and successor, Shakspeare's Prince Hal, is involved in much obscurity. It used to be taken for granted that the poet's Prince was an historical character, but that is no longer the case, — Falstaff's royal associate being now regarded in the same light in which Falstaff himself is regarded. The one is a poetic creation, and so is the other. Prince Henry was neither a robber nor a rowdy, but from his early youth a much graver character than most men are in advanced life. He had great faults, but they were not such as are made to appear in the pages of the player. The hero of Agincourt was a mean fellow, — a tyrant, a persecutor, a false friend and a cruel enemy, and the wager of most unjust wars; but he was not the "fast" youth that he has been generally drawn. He had neither the good nor the bad qualities that belong to young gentlemen who do not live on terms with their papas. He was of a grave and sad temperament, and much more of a Puritan than a Cavalier. It is a little singular that Shakspeare should have given portraits so utterly false of the most unpopular of the kings of the York family, and of the

most popular of the kings of the rival house, — of Richard III., that is, and of the fifth Henry of Lancaster. Neither portrait has any resemblance to the original, a point concerning which the poet probably never troubled himself, as his sole purpose was to make good acting plays. Had it been necessary to that end to make Richard walk on three legs, or Henry on one leg, no doubt he would have done so, — just as Monk Lewis said he would have made Lady Angela blue, in his "Castle Spectre," if by such painting he could have made the play more effective. Prince Henry was a very precocious youth, and had the management of great affairs when he was but a child, and when it would have been better for his soul's and his body's health, had he been engaged in acting as an esquire of some good knight, and subjected to rigid discipline. The jealousy that his father felt was the natural consequence of the popularity of the Prince, who was young, and had highly distinguished himself in both field and council, was not a usurper, and was not held responsible for any of the unpopular acts done by the Government of his father. They were at variance not long before Henry IV.'s death, but little is known as to the nature of their quarrels. The crown scene, in which the Prince helps himself to the crown while his father is yet alive, is taken by Shakspeare from Monstrelet, who is supposed to have invented all that he narrates in order to weaken the claim of the English monarch to the French throne. If Henry IV., when dying, could declare that he had no right to the crown of England, on what could Henry V. base his claim to that of France?

Henry V. died before his only son, Henry VI., had completed his first year; and Henry VI. was early separated from his only son, Edward of Lancaster, the same who was slain while flying from the field of Tewkesbury, at the age of eighteen. There was, therefore, no opportunity for quarrels between English kings and their sons for the sixty years that followed the death of Henry IV.; but there

was much quarrelling, and some murdering, in the royal family, in those years,—brothers and other relatives being fierce rivals, even unto death, and zealous even unto slaying of one another. It would be hard to say of what crime those Plantagenets were not guilty.\* Edward IV., with whom began the brief ascendancy of the House of York, died at forty-one, after killing his brother of Clarence, his eldest son being but twelve years old. He had no opportunity to have troubles with his boys, and he loved women too well to fall out with his daughters, the eldest of whom was but just turned of seventeen. The history of Edward IV. is admirably calculated to furnish matter for a sermon on the visitation of the sins of parents on their children. He had talent enough to have made himself master of Western Europe, but he followed a life of debauchery, by which he was cut off in his prime, leaving a large number of young children to encounter the worst of fortunes. Both of his sons disappeared, whether murdered by Richard III. or Henry VII. no one can say; and his daughters had in part to depend upon that bastard slip of the Red-Rose line, Henry VII., for the means to enable them to live as gentlewomen,—all but the eldest, whom Henry took to wife as a point of policy, which her father would have considered the greatest misfortune of all those that befell his offspring. Richard III.'s only legitimate son died a mere boy.

The Tudors came to the English throne in 1485. There was no want of domestic

\* It has been said of the Plantagenets that they "never shed the blood of a woman." This is nonsense, as we could, time and space permitting, show by the citation of numerous facts, but we shall here mention only one. King John had a noble woman shut up with her son, and starved to death. Perhaps that was not shedding her blood, but it was something worse. Before English statesmen and orators and writers take all the harlotry of Secessia under their kind care and championship, it would be well for them to read up their own country's history, and see how abominably women have been used in England for a thousand years, from queens to queans.

quarrelling with them. Arthur, Henry VII.'s eldest son, died young, but left a widow, Catharine of Aragon, whom the King treated badly; and he appears to have been jealous of the Prince of Wales, afterward Henry VIII., but died too soon to allow of that jealousy's blooming into quarrels. According to some authorities, the Prince thought of seizing the crown, on the ground that it belonged to him in right of his mother, Elizabeth Plantagenet, who was unquestionably the legitimate heir. Henry VIII. himself, who would have made a splendid tyrant over a son who should have reached to man's estate,—an absolute model in that way to all after-sovereigns,—was denied by fortune an opportunity to round and perfect his character as a domestic despot. Only one of his legitimate sons lived even to boyhood, Edward VI., and Henry died when the heir-apparent was in his tenth year. Of his illegitimate son, the Duke of Richmond, Henry was extravagantly fond, and at one time thought of making him heir-apparent, which might have been done, for the English dread of a succession war was then at its height. Richmond died in his seventeenth year. Having no sons of a tormentable age, Henry made his daughters as unhappy as he could make them by the harsh exercise of paternal authority, and bastardized them both, in order to clear the way to the throne for his son. Edward VI. died a bachelor, in his sixteenth year, so that we can say nothing of him as a parent; but he treated his sister Mary with much harshness, and exhibited on various occasions a disposition to have things his own way that would have delighted his father, provided it had been directed against anybody but that severe old gentleman himself. Mary I. was the best sovereign of her line, domestically considered; but then she had neither son nor daughter with whom to quarrel, and the difficulties she had with her half-sister, Elizabeth, like the differences between the Archangel Michael and the Fallen Angel, were purely political in their char-

acter. We do not think that she would have done much injustice, if she had made Elizabeth's Tower-dungeon the half-way house to the scaffold. But though political, the half-sisterly dissensions between these ladies serve to keep Mary I. within the rules of the royal houses to which she belonged. Mary, dying of the loss of Calais and the want of children, was succeeded by Elizabeth, who, being a maiden queen, had no issue with whom to make issue concerning things political or personal. But observe how basely she treated her relatives, those poor girls, the Greys, Catharine and Mary, sisters of poor Lady Jane, whose fair and clever head Mary I. had taken off. The barren Queen, too jealous to share her power with a husband, hated marriage with all "the sour malevolence of antiquated virginity," and was down upon the Lady Catharine and the Lady Mary because they chose to become wives. Then she imprisoned her cousin, Mary Stuart, for nineteen years, and finally had her butchered under an approach to the forms of law, and in total violation of its spirit. She, too, kept within the royal rules, and made herself as great a pest as possible to her relatives.

The English throne passed to the House of Stuart in 1603, and, after a lapse of six-and-fifty years, England had a sovereign with sons and daughters, the first since the death of Henry VIII. at the beginning of 1547. There was little opportunity for family dissensions in the days of most of the Stuarts, as either political troubles of the most serious nature absorbed the attention of kings and princes, or the reigning monarchs had no legitimate children. The open quarrel between Charles I. and the Parliament began before his eldest son had completed his eleventh year; and after that quarrel had increased to war, and it was evident that the sword alone could decide the issue, the King parted with his son forever. They had no opportunity to become rivals, and to fall out. There is so much that can be said against Charles I. with truth, that it is pleasing — as are

most novelties — to be able to mention something to his credit. Instead of being jealous of his son, or desiring to keep him in ignorance of affairs, he early determined to train him to business. According to Clarendon, he said that he wished to "unboy him." Therefore he conferred high military offices upon him before he had completed his fifteenth year; and sent him to the West of England, to be the nominal head of the Western Association. Charles II. had no legitimate children, and so he could not have any quarrels with a Prince of Wales. He was fond of his numerous bastards, and, like an affectionate royal father, provided handsomely for them at the public expense. What more could a father do, situated as that father was, and always in want of his people's money? Some of them were not his sons, — Monmouth, the best beloved of them all, being the son of Robert Sidney, a brother of the renowned Algernon, a fact that partially excuses the harsh conduct of James II. toward his nominal nephew. James II. had no legitimate son until the last year of his reign; but his two eldest daughters treated him far worse than any sovereign of the Hanoverian line was ever used by a son. They were most respectable women, and their deficiency in piety has worked well for the world; but it must ever be repugnant to humanity to regard the conduct of Mary and Anne with respect. No wonder that people called Mary the modern Tullia. Mary II. died young, and childless; and Queen Anne, though a most prolific wife, and but fifty-one at her death, survived all her children. Anne believed that her children's deaths were sent in punishment of her unfilial conduct; and she would have restored her nephew, the Pretender, to the British throne, but that the Jacobites were the silliest political creatures that ever triumphed in the how-not-to-do-it business, and could not even hold their mouths open for the rich and ripened fruit to drop into them.

The first of the English Stuarts, James I., is suspected of having allowed his jeal-

ousy of his eldest son, the renowned Prince Henry, to carry him to the extent of child-murder. The Stuarts are called the Fated Line, and it is certain that none of their number, from Robert II. — who got the Scottish throne in virtue of his veins containing a portion of the blood of the Bruce, and so regalized the family, which, like the Bruces, was of Norman origin, and originally Fitzalan by name — to Charles Edward, and the Cardinal York, who died but yesterday, as it were, but had a wonderful run of bad luck. They had capital cards, but they knew not how to play them. With them, to play was to lose, and the most fortunate of their number were those kings who played as little as they could, such as James I. and Charles II. Those who lost the most were those who played the hardest, as Charles I. and his second son, James II. Yet the family was a clever one, with strong traits, both of character and talent, that ought to have made it the most successful of ruling races, and would have made it so, if its chiefs could have learned to march with the times. They had to contend, in Scotland, with one of the fiercest and most unprincipled aristocracies that ever tried the patience and traversed the purposes of monarchs who really aimed at the good government of their people; and the idiosyncrasy contracted during more than two centuries of Scottish rule clung to the family after it went to England, and found itself living under altogether a different state of things. What was virtue in Scotland became vice in England; and the ultra-monarchists, who came into existence not long after James I. succeeded to Elizabeth, helped to spoil the Stuarts. Both James and his successor were dominated by Scotch traditions, and supposed that they were contending with men who had the same end in view that had been regarded by the Douglasses, the Hamiltons, the Ruthvens, the Lindsays, and others of the old Scotch baronage. What helped to deceive them was this, — that their opponents in England, like the opponents of their ancestors in Scotland, were aris-

toocrats; and they supposed, that, as aristocratical movements in their Northern kingdom had always been subversive of order and peace, the same kind of movements would produce similar results in their Southern kingdom. They could not understand that one aristocracy may differ much from another, and that, while in Scotland the interest of the people, or rather of the whole nation, required the exaltation of the kingly power, in England it was that exaltation which was most to be feared. Sufficient allowance has not been made for the Stuarts in this respect, little regard being paid to the effect of the family's long training at home, which had rendered hostility to the nobility second nature to it. Had the Stuarts been the supporters of liberal ideas in England, their conduct would have given the lie to every known principle of human action. As their distrust of aristocracy rendered them despotically disposed, because the Scotch aristocracy had been the most lawless of mankind, so did they become attached to the Church of England because of the tyranny they had seen displayed by the Church of Scotland, the most illiberal ecclesiastical body, in those times, that men had ever seen, borne with, or suffered from. James I. and his grandson Charles II. had their whole conduct colored, and dyed in the wool, too, by their recollections of the odious treatment to which they had been subjected by a harsh and intolerant clergy. They had not the magnanimity to overlook, in the day of their power, what they had suffered in the day of their weakness.

James I. undoubtedly disliked his eldest son, and was jealous of him; but it is by no means clear that he killed him, or caused him to be killed. He used to say of him, "What! will he bury me alive?" He ordered that the court should not go into mourning for Henry, a circumstance that makes in his favor, as murderers are apt to affect all kinds of hypocrisy in regard to their victims, and to weep in weeds very copiously. Yet his conduct may have been a refinement of hypocri-

sy, and, though a coward in the common acceptance of the word, James had much of that peculiar kind of hardness which enables its possessor to treat commonly received ideas with contempt. His conduct in "The Great Oyer of Poisoning" was most extraordinary, it must be allowed, and is not reconcilable with innocence; but it does not follow that the guilt which the great criminals in that business could have established as against James related only to the death of Henry. It bore harder upon the King than even that crime could have borne, and must have concerned his conduct in matters that are peculiarly shocking to the ears of Northern peoples, though Southern races have ears that are less delicate. It was in Somerset's power to explain James's conduct respecting some things that puzzled his contemporaries, and which have continued to puzzle their descendants; but the explanation would have ruined the monarch in the estimation of even the most vicious portion of his subjects, and probably would have given an impetus to the growing power of the Puritans that might have led to their ascendancy thirty years earlier than it came to pass in the reign of his son. James was capable of almost any crime or baseness; but in the matter of poisoning his eldest son he is entitled to the Scotch verdict of *Not Proven*.

Whether James killed his son or not, it is certain that the Prince's death was a matter of extreme importance. Henry was one of those characters who are capable of giving history a twist that shall last forever. He had a fondness for active life, was very partial to military pursuits, and was friendly to those opinions which the bigoted chiefs of Austria and Bavaria were soon to combine to suppress. Henry would have come to the throne in 1625, had he lived, and there seems no reason to doubt that he would have anticipated the part which Gustavus Adolphus played a few years later. He would have made himself the champion of Protestantism, and not the less readily because his sister, the Electress-Palatine and Winter-

Queen of Bohemia, would have been benefited by his successes in war. Bohemia might have become the permanent possession of the Palatine, and Protestantism have maintained its hold on Southern Germany, had Henry lived and reigned, and had his conduct as a king justified the hopes and expectations that were created by his conduct as a prince. The House of Austria would in that case have had a very different career from that which it has had since 1625, when Ferdinand II. was preparing so much evil for the future of Europe. Had Henry returned from Continental triumphs at the head of a great and an attached army, what could have prevented him from establishing arbitrary power in his insular dominions? His brother failed to make himself absolute, because he had no army, and was personally unpopular; but Henry would have had an army, and one, too, that would have stood high in English estimation, because of what it had done for the English name and the Protestant religion in Germany, — and Henry himself would have been popular, as a successful military man is sure to be in any country. Pym and Hampden would have found him a very different man to deal with from his foolish brother, who had all the love of despotism that man can have, but little of that kind of ability which enables a sovereign to reign despotically. Charles I. had no military capacity or taste, or he would have taken part in the Thirty Years' War, and in that way, and through the assistance of his army, have accomplished his domestic purpose. His tyranny was of a hard, iron character, unrelieved by a single ray of glory, but aggravated by much disgrace from the ill working of his foreign policy; so that it was well calculated to create the resistance which it encountered, and by which it was shivered to pieces. Henry would have gone to work in a different way, and, like Cromwell, would have given England glory, while taking from her freedom. There is nothing that the wearer of a crown cannot do, provided

that crown is encircled with laurel. But the Stuarts seldom produced a man of military talent, which was a fortunate thing for their subjects, who would have lost their right to boast of their Constitutional polity, had Charles I. or James II. been a good soldier. We Americans, too, would have had a very different sort of annals to write, if the Stuarts, who have given so many names to American places, had known how to use that sword which they were so fond of handling.

The royal families of England did by no means monopolize the share of domestic dissensions set apart for kings. The House of Stuart, even before it ascended the English throne, and when it reigned over only poor, but stout Scotland, was anything but famous for the love of its fathers for their sons, or for its sons' love for their fathers; and dissensions were common in the royal family. Robert III., second king of the line, had great grief with his eldest son, the Duke of Rothsay; and the King's brother, the Duke of Albany, did much to increase the evil that had been caused by the loose life of the heir-apparent. The end was, that Rothsay was imprisoned, and then murdered by his uncle. Scott has used the details of this court-tragedy in his "Fair Maid of Perth," one of the best of his later novels, most of the incidents in which are strictly historical. James I. was murdered while he was yet young, and James II. lost his life at twenty-nine; but James III. lost both throne and life in a war that was waged against him in the name of his son, who became king in consequence of his father's defeat and death. When James IV. fell at Flodden, because he fought like a brave fool, and not like a skilful general, he left a son who was not three years old; and that son, James V., when he died, left a daughter, the hapless Mary Stuart, who was but a week old. There was not much room for quarrelling in either of these cases. Mary Stuart's son, then an infant, was made the head of the party that dethroned his mother, and forced her into that

long exile that terminated in her murder by Elizabeth of England. Mary's quarrels with her husband, Darnley, were of so bitter a character as to create the belief that she caused him to be murdered, — a belief that is as common now as it was in the sixteenth century, though the Marian Controversy has been going on for wellnigh three hundred years, and it has been distinctly proved by a host of clever writers and skilful logicians that it was impossible for her to have had anything to do with that summary act of divorce.

Several of the sovereigns of Continental Europe have had great troubles with their children, and these children have often had very disobedient fathers. In France, the Dauphin, afterward Louis XI., could not always keep on good terms with his father, Charles VII., who has the reputation of having restored the French monarchy, after the English had all but subverted it, Charles at one time being derisively called King of Bourges. Nothing annoyed Louis so much as being compelled to run away before the army which his father was leading against him. He would, he declared, have stayed and fought, but that he had not even half so many men as composed the royal force. He would have killed his father as readily as he killed his brother in after-days, — if he did kill his brother, of which there is some doubt, of which he should have the benefit. As was but natural, he was jealous of his son, though he died when that prince was thirteen. Owing to various causes, however, there have been fewer quarrels between French kings and their eldest sons than between English kings and their eldest sons. Few French monarchs have been succeeded by their sons during the last three hundred years, — but two, in fact, namely, Louis XIII., who followed his father, Henry IV., and Louis XIV., who succeeded to Louis XIII., his father. It is two hundred and twenty years since a father was succeeded by a son in France, — a circumstance that Napoleon III. should lay to heart, and not be too sure that the Prince Im-

perial is to become Napoleon IV. There seems to be something fatal about the French purple, which has a strange tendency to spread itself, and to settle upon shoulders that could not have counted upon experiencing its weight and its warmth. Sometimes it is hung up for the time, and becomes dusty, while republicans take a turn at governing, though seldom with success. There were troubles in the families of Louis XIV., who was too heartless, selfish, and unfeeling not to be that worst kind of king, the domestic tyrant. He tyrannized over even his mistresses.

Philip II., the greatest monarch of modern times, — perhaps the greatest of all time, the extent and diversity of his dominions considered, and the ability of the races over which he ruled taken into the account, — was under the painful necessity of putting his eldest son, Don Carlos, in close confinement, from which he never came forth until he was brought out feet foremost, the presumption being that he had been put to death by his father's orders. Carlos has been made a hero of romance, but a more worthless character never lived. On his death-bed Philip II. was compelled to see how little his son Philip, who succeeded him, cared for his feelings and wishes. Peter the Great put to death his son Alexis; and Frederick William I. of Prussia came very near taking the life of that son of his who afterward became Frederick the Great.

Jealousy is so common a feeling in Oriental royal houses, that it is hardly allowable to quote anything from their history; but we may be permitted to allude to the effect of one instance of paternal hate in the Ottoman family at the time of its utmost greatness. Solyman the Magnifi-

cent was jealous of his eldest son, Mustapha, who is represented by all writers on the Turkish history of those times as a remarkably superior man, and who, had he lived, would have been a mighty foe to Christendom. This son the Sultan caused to be put to death, and there are few incidents of a more tragical cast than those which accompanied Mustapha's murder. They might be turned to great use by an historical romancer, who would find matters all made to his hand. The effect of this murder was to substitute for the succession that miserable drunkard, Selim II., who was utterly unable to lead the Turks in those wars that were absolutely essential to their existence as a dominant people. "With him," says Ranke, "begins the series of those inactive Sultans, in whose dubious character we may trace one main cause of the decay of the Ottoman fortunes." Solyman's hatred of his able son was a good thing for Christendom; for, if Mustapha had lived, and become Sultan, the War of Cyprus — that contest in which occurred the Battle of Lepanto — might have had a different termination, and the Osmanlis have been successful invaders of both Spain and Italy. It was a most fortunate circumstance for Europe, that, while it was engaged in carrying on civil wars and wars of religion, the Turks should have had for their chiefs men incapable of carrying on that work of war and conquest through which alone it was possible for those Mussulmans to maintain their position in Europe; and that they were thus favored was owing to the causeless jealousy felt by Sultan Solyman for the son who most resembled himself: and Solyman was the greatest of his line, which some say ended with him.

## UNDER THE PEAR-TREE.

## IN TWO PARTS.

## PART I.

## CHAPTER I.

ONE Sunday morning, long ago, a girl stood in her bed-room, lingeringly occupied with the last touches of her toilet.

A string of beads, made of pure gold and as large as peas, lay before her. They had been her mother's, — given to her when the distracted state of American currency made a wedding-present of the precious metal as welcome as it was valuable. Three several times, under circumstances of great pecuniary urgency, had the beads sufficed, one by one, to restore the family to comfort, — to pay the expenses of a journey, to buy seed-grain, and to make out the payment of a yoke of oxen. Afterwards, when peace and plenty came to be housemates in the land, the gold beads were redeemed, and the necklace, dearer than ever, encircled the neck of the only daughter.

The only daughter took them up, and clasped them round her throat with a decisive snap. But the crowning graces remained in the shape of two other ornaments that lay in a small China box. It had a head on the cover, beautifully painted, of some queen, — perhaps of the Empress Josephine, the girl thought. The hat had great ostrich-feathers, that seemed proper to royalty, and it was a pretty face.

In the box lay a pin and ring. On the back of the pin was braided hair, and letters curiously intertwined. The young girl slipped the ring on her own finger once more, and smiled. Then she took it off, with a sigh that had no pain in it, and looked at the name engraved inside, — *DORCAS FOX*.

Whoever saw this name in the town records would naturally image to himself the town tailoress or nurse, or somebody's single sister who had been wise

too long, — somebody tall, a little bent, and bony, — somebody weather-beaten and determined-looking, with a sharp, shrewd glance of a gray eye that said you could not possibly get the better of her and so need not try, — somebody who goes out unattended and fearless at night; for, as she very properly observes, "Who'd want to speak to *me*?"

This might have described the original owner of the pin and ring, who had died years before, and left the ornaments for her namesake and niece, when she was too young to remember or care for her, but not the niece herself. She was young, blooming, twenty-two, and the belle of the country-village where she dwelt.

The bed-room where the girl stood and meditated, after her fashion, was six feet by ten in dimensions, and the oval mirror before which she stood was six inches by ten. It was a genuine relic of the Mayflower, and had been brought over, together with the great chest in the entry, by the grand-grand-grandmother of all the Foxes. If anybody were disposed to be skeptical on this point, Colonel Fox had only to point to the iron clamp at the end, by which it had been confined to the deck; that would have produced conviction, if he had declared it came out of the Ark. This was a queer-looking little mirror, in which the young Dorcas saw her round face reflected: framed in black oak, delicately carved, and cut on the edge with a slant that gave the plate an appearance of being an inch thick.

Sixty years ago there were not many mirrors in country-towns in New England; and in Colonel Fox's house this and one more sufficed for the family-reflections. In the "square room," a modern long looking-glass, framed in ma-

hogany, and surmounted by the American emblem of triumph, was the astonishment of the neighbors, — and in Walton those were many, though the population was small.

Dorcas looked wistfully and wishingly at the oval pin; but with no more notion of what she was looking at than the child who gazes into the heavens on a winter night. When she looked into the oval mirror, no dream of the centuries through which it had received on its surface fair and suffering faces, grave, noble, self-sacrificing men, and scenes of trial deep and agonizing, — no dream of the past disturbed the serene unconsciousness of her gaze. She looked at the large pearls that formed the long oval pin, and at the exquisite allegorical painting, which, in the quaint fashion of the time of its execution, was colored with the "ground hair" of the beloved; so materializing sentiment, and, as it were, getting as near as possible to the very heart's blood. Yet the old gold, the elaborate execution of the quaint classical device, and the fanciful arrangement of the braided hair interwoven with twisted gold letters, all told no tales to the observer, whose unawakened nature, indeed, asked no questions.

The little room, so small that in these days a College of Physicians would at once condemn it, as a cradle of disease and death, had nevertheless for twenty years been the nightly abode of as perfect a piece of health as the country produced. Whatever might be wanting in height and space was amply made up in inevitable and involuntary ventilation. Health walked in at the wide cracks around the little window-frame, peeped about in all directions with the snowflakes in winter and the ready breezes in summer, and settled itself permanently on the fresh cheeks and lips of the light sleeper and early riser.

Beside the white-covered cot there stood a straight-backed, list-seated oaken chair, a mahogany chest of drawers that reached from floor to ceiling, and a little three-legged light-stand. Everything was

covered with white, and the room was fragrant with the lavender and dried rose-leaves with which every drawer was scrupulously perfumed. There was no toilet-table, for Dorcas had use neither for perfumes nor ointment. No Kalydons and no Glycerines came within the category of her healthful experience. Alert and graceful, she neither burnt her fingers nor cut her hands, and had need therefore of no soothing salves or sirups; and as she did not totter in scrimped shoes or tight laces, and so did not fall and break her bones, she had no need even of that modern necessity in all well-regulated families, "Prepared Glue." There was no medicine-chest in Colonel Fox's house. Healthy, occupied, active, and wise — but not too wise — was Dorcas Fox.

It is no proof that Dorcas was a beauty, that she looked often in the little mirror. Ugliness is quite as anxious as beauty on that point, and is even oftener found gazing with sad solicitude at itself, if haply there may be found some mollifying or mitigating circumstance, either in outline or expression. But Dorcas's face pleased herself and everybody else.

A certain freedom and ease, the result partly of a symmetrical form, and partly of conscious good-looks, gave the grace of movement to Dorcas which attracted all eyes. Almost every one has a sense of harmony, and old and young loved to watch the musical motion of Dorcas Fox, whatever she might be doing, — whether she queened it at the "Thanksgiving Ball," and from heel-and-toe, pigeon-wing, or mazy double-shuffle, evolved the finest and subtlest intricacies of muscle, or whether, on the Sabbath, walking behind her parents to meeting, she married the movement to the solemnity of the day, and, as it were, walked in long metre.

She always was in Hallelujah metre to the Blacks, Whites, Grays, Greens, and Browns that color so largely every New-England community; and the youths who were wont to form the crowd that invariably settled at the corner of the meeting-house waited only till Dorcas

Fox went up the "broad-oil" to express open-mouthed admiration. After her fashion, she was as much wondered at as the Duchess of Hamilton in her time, and with much more reason, since Dorcas was composed of real roses and lilies.

On Sunday, though the Puritanic doctrine prevailed, as far as doctrine can, of not speaking week-day thoughts, or having them, if they would keep away, yet inevitably, among the younger portion of the flock, the day of "meeting" was one of more than religious importance; and many lads and lasses who were never attracted by Father Boardman's eloquent sedatives still made it a point to be regular in their attendance at meeting twice on every Sunday. From far and near came open one-horse wagons, piled high with weekly shaven and dressed humanity, — young and old with solemn and demure faces, with brown-ribboned queues, and garments of domestic making. Fresh, strong, tall girls of five feet ten, dressed in straw bonnets of their own handiwork, and sometimes with scarlet cardinals lightly flung over their shoulders, sprang over the wagon-thills to the ground. Now and then the more remote dwellers came on horseback, each Jack with his Gill on a pillion behind, and holding him with a proper and dignified embrace.

Hard-handed youths, with bright, determined faces, — men nursed in block-houses, born in forts, — men who had raised their corn when the loaded gun went every step with the hoe and the plough, — such men, of whom the Revolution had been made, who could say nothing, and do everything, stood in a crowd around the meeting-house door. There was some excitement in meeting each other, though there was very little, if anything, to say. There was time enough in those days. Progress was n't in such a hurry as now. Inventions came calmly along, once in a man's life, and not, as now, each heel-trodden by that of his neighbor, tripping up and passing it, in the speed of the breathless race.

The sun itself seemed to shine with a calmer and silenter radiance over the broad, leisurely land.

Time enough, bless you! and the Sunday, any way, is *so long*!

This Sunday morning, at ten o'clock, Dorcas has already been up and dressed six hours. Everything having the remotest connection with domestic duties has been finished and laid aside long ago, and she has devoted the last two hours to solitary meditations, mostly of the kind already mentioned.

In the great oven, since last night, has lain the Sunday supper of baked pork-and-beans, Indian-pudding, and brown bread, all the better the longer they bake, and all unfailing in their character of excellence. In the square room, in the green arm-chair, sits the Colonel, fast asleep.

Four hours ago, he fumed and fretted about barn and cow-house, breakfasted, and had family-prayers. Since then, he has donned his Sabbath array, both mental and bodily. Mentally, having dismissed the cares of the week, he has strictly united himself with his body, and gone to sleep. Bodily, he appears in a suit of hemlock-dyed, with Matherman buttons, knee- and shoe-buckles of silver. His gray hair is neatly composed in a queue, his full cheeks rest on his portly chest, and the outward visibly harmonizes with the inward man. He sleeps soundly now, purposing faithfully to keep awake during the three-and-twenty heads of the minister's discourse. If he finds it too much for him, he means to stand, as he often does. Sometimes he partakes freely of the aromatic stimulants carried by his wife and daughter as bouquets. The southernwood wakes him, and the green seeds of the caraway get him well along through the sermon.

Mrs. Fox steps softly in, rustling in the same black taffeta she always wears, and the same black silk bonnet, — worn just fifty-two days in a year, and carefully pinned and boxed away for all the other three hundred and thirteen.

As fashions did not come to Walton

oftener than once in ten years, it followed that apparel among the young people were very much the expression of individual taste, while among the elders it was wont to assume the cast now irreverently designated by "fossil remains." And, really, it did not much matter. Whatever our country-grandmothers were admired and esteemed for, be sure it was not dress.

As the clock pointed to half-past ten, the door opened quickly, and Dorcas stood on the threshold, like a summer breeze that has stopped one moment its fluttering, and hovers fresh, sweet, and sunny in the morning air. The breath of her presence, if indeed it were not association, roused old Colonel Fox from his sleep. He glanced at her, took the ready arm of his wife, looked again at the clock, and passed out over the flat door-stone with his cocked hat and cane, as became an invalid soldier and a gentleman. Behind them, hymn-book in hand and with downcast eyes, walked Dorcas. Not a word passed between the parents and their only daughter. On Sunday, people were not to think their own thoughts. And familiarity between parents and children, never allowed even on week-days, would have been unpardonable unfitness on the Sabbath.

They reached the church-door just as the minister, with his white wig shedding powder on his venerable back, passed up the broad-aisle. A perfectly decorous throng of the loiterers followed, and the pews rapidly filled. The Colonel and his wife, being persons of consequence, took their way with suitable dignity and deliberation. In the three who turned, about half-way up the broad-aisle, into a square pew, a physiognomist would have seen at one glance the characteristic features of each mind. In the Colonel, choleric, fresh, and warm-hearted, a good lover, and not very good hater. In his wife, "a chronicler of small-beer," with a perfectly negative expression. One might guess she did no harm, and fear she did no good,—that she saved the hire of an upper servant,—that she was an invet-

erate sewer and cleaner, and would leave the world in time with an epitaph.

On the third figure and face the physiognomist might dwell longer,—but that rather because youth, hope, and inexperience had refused to make any of the life-marks that tell stories in faces. There was abundant room for imagination and prophecy.

A figure not too tall, but full of wavy lines,—two dark-blue eyes, whose full under-lids gave an expression of arch sweetness to the glance,—a delicate complexion of roses and lilies, as suggestive of fading as of blossoming,—features small, and not at all of the Greek pattern,—and the rather large head and slightly developed bust, typical of American rural beauty.

To this summary of youthful charms would be at once added the grace of motion before spoken of, which made Dorcas Fox a favorite with all the young men in Walton, and which gave her a reputation of beauty which in strictness she did not deserve. A little habitual ill-health, and the glamour is gone, with the roses and lilies and the music of motion. In our climate of fierce extremes, both field- and garden-flowers speedily wilt and chill. Dorcas herself had been a thousand times told she was the very picture of her mother at her age. And just to look now at Mrs. Colonel Fox!

A tall young man stood on the door-steps of the meeting-house, as Dorcas went demurely behind her parents in at the open door. He looked at her with a quick, inquiring glance from his keen Yankee eyes, which she answered with an almost imperceptible nod of her graceful head. She dropped her eyes, and passed on. This young man was Henry Mowers, and he owned the Mowers farm. He was a very good, sensible fellow, and had "kept company," as the country-phrase is, with Dorcas Fox for the last few weeks, having, indeed, had his eye on her ever since the New-Year's sleigh-ride and ball.

After Dorcas had reached her seat in

the pew, and adjusted her spotless Sunday chintz and the ribbon that confined her jaunty gypsy-hat over her sunny hair, she raised her eyes carelessly to a pew in a side-aisle. The Dorrs generally occupied it alone; but sometimes Swan Day, when he was n't in the choir, sat there too.

Swan Day, or, as he might better have been called, Night Raven, kept the country-store in Walton. One naturally thought of afternoon rather than morning at seeing his olive complexion, dark eyes, and thick-clustering black curls. Such romance as was to be had in Walton, without the aid of a circulating library, certainly gathered about Swan Day. An orphan, born of a Creole mother and a British sergeant, he had been left early to his own resources. He had found them sufficient thus far, in a cordial neighborhood like Walton, when industry and temperance were cardinal virtues not carried to excess; and he was rather a favorite among the young women.

The peculiar languor and richness of his complexion, — the dark eyes, soft as an Indian girl's, — the mouth, melting and red as the grapes where under a tropical sun his foreign mother had lain, and, gathering them ripe, had dropped them lazily into his baby mouth: these were new and strange features in the Saxon community where he had accidentally been left on the death of his father, who was shot at Saratoga. The mother lingered awhile, and then dropped away, leaving Swan to thrive in the bracing air in which she had shivered to death.

Many Sundays before this, Swan had looked at Colonel Fox's pew, and, looking, loved.

Dorcas looked occasionally.

All the time, while the minister preached, she twiddled her caraway-stems, sometimes biting a seed in two very softly between her little teeth, and keeping, on the whole, an appearance of exemplary devoutness. When Father Boardman reached "sixthly," she raised her eyes, and saw Henry Mowers looking straight

at her. Then she dropped her eyelids at once, sniffed delicately at her bouquet of southernwood, and, gaining strength from its pungency, applied herself to staring once more at the great pine pulpit, where, like a very old sparrow on the house-top, Father Boardman denounced and anathematized at leisure all who did not think as he did. By degrees, all the eyes in Dorcas's neighborhood that had been any length of time in the world were dozing and closing with the full leave of the spirit. Finally, when Father Boardman entered on the "improvement," Dorcas, who had not heard a word, looked again in the direction of the Dorr pew. Henry Mowers had succumbed to Morpheus half an hour before. Still there flamed on the deep, bewitching eyes of Day; and as all the rest in her neighborhood had gone to sleep, and the young girl had really nothing specially to keep herself awake with, she looked up, too, and then down, and then rosily, and timidly, and consciously, and then at him once more. By that time she blushed again, and a smile was just beginning to wake from its sleep in the corner of her mouth, when a rush, a rising, and a general clatter and banging of pew-seats announced the blessed news of suspended instruction.

In the fashion of sixty years ago, the congregation waited reverently, until the pastor walked down the broad-aisle and out at the door, before a soul stirred. Then the men followed, and last of all the women. In the crowd, there were frequent opportunities for whispered words, all the sweeter for the stealing; and in the crowd, after he had seen Henry Mowers jump into the wagon and drive off his three sisters half a mile to their home, and after seeing Jenny Post ride off on a pillion behind her old brother, as in the gone-by days when wide roads and wagons were not, Swan sauntered carelessly towards Dorcas, and said, in a tone too low for her parents to hear, but very distinctly, —

"I must see you to-morrow night."

"I can't," was the murmured reply.

"For the last time, Dorcas! come down to the old pear-tree to-morrow, before sunset," he whispered, imploringly.

He was wise to turn suddenly away before her parents could hear him touching on secular subjects, and before she could herself get up any new objection. Her objections, truly, were very faint and few, and, being tossed about awhile, finally settled out of sight. Henry would, she knew, come to his weekly wooing as soon as the setting sun proclaimed the Sabbath-day over. After that time she was safe. She could slip down the orchard to the pear-tree, and hear what was the important word, and what Swan meant by "the last."

Eight or ten persons, who lived at a distance from "meeting," were in the habit of partaking the hospitality of Colonel Fox, of a Sunday, as the hour's intermission gave them no opportunity to return to their distant homes. After the Puritan fashion, unlike enough to the present, families were restricted on Sunday to two meals, and those were provided with a Jewish regard to the fourth commandment. All labor was scrupulously anticipated or postponed, but such hospitality as consisted with the strict observance of the Sabbath was at the service of their friends.

On coming in at the door of the square room, with its sanded floor, its old desk, its spare bed in the corner, and its cherry table with wavy outlines, which had belonged to Colonel Fox's mother, Dorcas found the cloth already laid, and the bonnets and cardinals of half a dozen old friends on the bed.

In five minutes, early apples, old cider, and a plate of raised doughnuts, flanked by plates of mince- and apple-pie, rewarded the patience and piety of the company. Colonel Fox, solemnly, and as if he were quite accustomed to it, poured from a jug into large tumblers that held at least a pint, dropped three large lumps of loaf-sugar, filled the glass with water, grated some nutmeg on the top, and bade his guests refresh themselves with toddy, unless they preferred flip: if they did,

they had only to say so: the poker was hot.

They all ate and drank, and by that time the bell rang again; and then they all went again. And if they heard Father Boardman at all, it was with utterly composed minds, when he told them it was their duty to be contented, even should their condemnation be eternally decreed, since it must, of course, be for the good of the whole, and for the glory of God. Hopkinsianism was in fashion then, and the minds of men in many parts of the country had accepted the logic of its founder, negatived as it was, in its practical application, by the sweetness of his Christian benevolence and his large humanity. Then the toddy helped them to swallow many doctrines that in our cold-water days are sharply and defiantly contested. The head is much clearer; whether hearts are better is doubtful.

After supper, and while yet the sun lingered smilingly over the Great Meadows and on the hills, behind which he sank, Dorcas, who had meanwhile adorned herself with Aunt Dorcas's bequest, broke the long silence, by whispering so low that her father's sleep should not be disturbed,—

"Mother, do you set much by this pin?"

"Of course I do, child! 'T was your Aunt Dorcas's," said Mrs. Fox, "your father's own sister."

"Yes, I know it, mother; but how did she come by it?"

All these years, and this was the first time Dorcas had asked the question! She colored a little, too, as if some secret thought or story were busy about her heart, as she looked at the ring.

"Well,—it was a man she 'xpected to 'a' hed. They was to 'a' ben merried, an' he was to 'a' gi'n up v'yagin'. But he was cast away, an' she never heerd nothin' about neither him nor the ship. He was waitin' to git means, an' he did, privateerin' an' so; but I 'xpect he was drowned," concluded Mrs. Fox, in a suitably plaintive tone.

And that was Aunt Dorcas's story.

## CHAPTER II.

If anybody is curious to know why there should be mystery or secrecy connected with Swan Day's meeting with Dorcas, or why they should meet under a pear-tree, instead of her father's roof-tree, in a rational way, it might be a sufficient answer, that there never was and never will be anything direct and straightforward about Cupid or his doings. But the real and more important reason was, that Colonel Fox did not like Swan, and had said, in so many words, that "he would n't have Swan Day a-hangin' round, no *how!*—that he was a poor kind of a shote,—that he wished both him and his clutter well out o' town,—and that he need n't think to make swans out of his geese, no *time!*"

In the first and last sentence, Colonel Fox indicated the ground of his dislike to the handsome young store-keeper, and his dread that Swan's eyes would somehow interfere with his own cherished plans of a union between the Fox and Mower farms. Whatever Colonel Fox determined on was done or to be done. He had anticipated the French proverb; and the "impossibility" made not the slightest difference. Therefore Dorcas had no notion of disobedience in her head, permanently. She solaced herself by the occasional luxury of departure from set rules, and she intended to depart in that way to-morrow,—for just five minutes,—just to hear what that foolish fellow wanted of her; and what could it be? and why was it the last time?—would he give her up?

Dorcas pondered the matter while the sun still crowned the heights, and glanced at her sleeping father in silence. Why should Colonel Fox dislike Swan so very much because he was a Britisher? All that was done with, long ago, and why not be peaceable? Just then her father drew the breath sharply between his teeth, as if in pain. It was the old wound, that had never been healed since the Battle of Bennington. He had lain on the ground,—Dorcas had often heard

him tell the tale,—and had striven to slake his deathly thirst with the blood that he scooped up in the hollow of his hand from the ground about him. So terrible was the carnage where he lay. "A d—d Britisher had shot him,—another had driven his horse over him, and afterwards, while he lay half-dead, had tried to rob him!" Would he ever forget it? He would have continued, on the contrary, to fire and hack till the present day, but for the wound in his knee, which had disabled him for life, long before a peace was patched up with the mother-country. So he had retired to Walton, and before Continental money had depreciated more than half had bought acres by the thousand, and become generalissimo of flocks and herds. Through the admiration of his townsmen for his wounds, he rapidly and easily attained the rank of Colonel, without the discomfort of fighting for it; and from his excellent sense and the executive ability induced by military habits, became, in turn, justice of the peace, deacon of the church, town-clerk, and manager-general of Walton.

Nobody—that is to say, nobody in the family—spoke, when Colonel Fox was in the house, unless first spoken to,—not even Dorcas. Such were the domestic tactics of the last century, and Colonel Fox held fast to old notions.

The social ones were far more liberal,—so very liberal, indeed, so very free and easy, in the rural districts especially, that only a knowledge of the primitive conditions under which such manners grew up could possibly reconcile with them any impressions of purity and discretion. In hearing of manners, therefore, it is always necessary to remember that the children of country Puritans are and were wholly different *in the grain* from Paris or London society of the same period,—as different, for example, as the Goddess of Reason from our first mother, though at first glance one might think those two similar. New-England parents had the utmost confidence in their daughters, and almost no restraint was laid on social intercourse. Their personal dignity and

propriety were presupposed, as matters of course. Religion and virtue needed only to point, not to restrain.

The Colonel, on his part, took little heed of Dorcas's movements in the way of balls and sleigh-rides. Content that her face showed health and enjoyment, he never thought or cared what passed in her mind. If only the hay-crop proved abundant, and the Davis lot yielded well,—if neither wheat got the blight, nor sheep the rot,—if it were better to buy Buckhorn for milk, or sell the Calico-Trotter,—these thoughts so filled his soul that there was very little room to let in any nonsense about Dorcas, only “to have Swan Day shet up before he begins,” for, as he often said, “he would n't give the snap of his thumb for as many Swan Days as could stand between this and Jerusalem!”

She had met him twice before, and both times rather accidentally, as she supposed, under the pear-tree,—both times, when she went to the well for water. He had drawn the water, and had talked some with his tongue, but more, far more, with his eyes of Oriental depth and fascination. Dorcas thought and meant no harm in meeting Swan. Even if her nature had been more wakened and conscious,—even if she had had either the habit or the power of analyzing her own sensations,—even if she had seen her soul from without, as she certainly did not within,—she would have recoiled from the thought of deliberate coquetry.

In the nature even of a coquette there is not necessarily either cruelty or hardness. It cannot be a fine nature, and must be deficient in the tact which appreciates the feelings of another, and the sympathy that shrinks from injuring them. It may be called selfishness, which is another term for thoughtlessness or want of consideration or perception, but it is not deliberate selfishness. This last is often found with fine perceptions and intuitive tact. It is rather a natural obtuseness, a want of thought on the subject. Such persons remember and connect their own sensations with the object, thinking little

or nothing of the feelings they may themselves excite by the heedlessness of their manner.

If Dorcas had once thought of the value of the hearts she played with, and as it were tossed from hand to hand,—if she had even weighed one against another, she might have had some sorrow in grieving either. But having no standard of delicacy and tenderness in her own nature by which to judge theirs, Dorcas cannot be accused of intentional injustice, which is generally understood by coquetry. On the contrary, if she had been able to express her emotions,—

“How happy could I be with either!”

would have done so. Dorcas was very young in experience.

In those days of freedom there was no such word as “engaged”; least of all, did the parties concerned violate all their own notions of decorum by “announcing an engagement.” The lists were free to all to enter, and the bravest won the day. After weeks and months of shy “company-keeping,” it was “expected it would be a match” by the keen-sighted or deeply interested. Sometimes the dissolution of an engagement was mentioned as “a shame! after keeping company so many years, and she had got all her quilts made and everything!” But best of all was for the parties to be married outright, by a justice of the peace, without a word of public warning, and then to enjoy the pleasure of outwitting the neighbors, and coming down like a thunder-clap on a social sunshine unsuspecting of banns, which had been published on some three literally public days, but when nobody was hearing. That was something worth doing, and very much worth remembering!

The sun set. The Sabbath was done. The Colonel heaved a sigh of relief. The Colonel's wife took her knitting-work; and the Colonel's daughter looked up with a shy smile at Henry Mowers fastening his horse by the corn-barn. It was time Sunday was over, indeed! Such a long supper! but it must end

sometime! — and then prayers, and then Dorcas had amused herself with Bel and the Dragon and Tobit awhile. All would not do, and the family had been obliged to resort to the sweet restorer for the last ten minutes. Now they could think their own thoughts in peace, and talk of what interested them, — cattle, people, and the like. Poor Dorcas! what with Father Boardman's preaching, and the Westminster Catechism, she associated religion with all that was dull and inexplicable, though she did not doubt it was good in case of dying. In the Nature and life that surrounded her she had not seen God, but a refuge from Him. In the crimson floods of sunshine, in the brilliant moon-rise, or the pulsating stars of a winter night, she found a sort of guilty relief from the dulness of what she supposed was Revelation. But she never thought of questioning or doubting any teachings, in the pulpit or out. A woman cannot, like a man, fight a subject down. Her intellect shrinks from being tossed and pierced on the pricks of doctrine. She is gentle and cowardly. She sets the matter aside, and is contented to wait till she dies to find out. But the men in Walton were all theologians, and sharp at polemics. In the bar-room the spirit of liberty thrived, which was crushed in the pulpit. In that small New-England town, where, like a great white sheep, Father Boardman now led his docile flock to the fold, whoever looked long enough would see many new folds and many new shepherds. Every shape of religious thinking will have its exponent, and the widest liberty be claimed and enjoyed. Though he slept through Father Boardman's sermons, it is doubtful if Henry Mowers did not in his dreams lay the corner-stone of the new meeting-house on the hill.

Monday, and the hurly-burly of washing over. Dorcas had nearly finished her "stent" on the little wheel. As she sat by the open door, diligently trotting her foot, and softly pulling the last flax from her distaff, her glance went hastily

and often towards the setting sun. She could see beyond the sloping orchard, no longer loaded with fruit, the Great Meadows, extending along the banks of the Connecticut. She could see on the eastern side great white mountains, that went modestly by the name of hills, and that came in after-years to draw pilgrims from the ends of the earth. They were white-capped and solemn-looking, and girdled by majestic forests; while the Green Mountains, that lay along the horizon, not so high as "the Hills," were crowned with verdure to the very top, and flaming with autumn dyes. As far as the eye reached, beyond the immediate view rose an immense solitude of forest that had lasted through centuries.

Dorcas's eyes rested and roamed alternately over these massive natural features. She felt dimly in her heart the effect of the solemn aspect of these great wastes, — these sublime possibilities, concealed and waiting for the energy of man to discover them. A melancholy, sweet and soft, composed partly of the effect of the view, and partly of the languor of the Indian-summer weather, diffused itself over her. She accused herself of various sins, — of levity, vanity, and not knowing her own mind. Soon, however, feeling her unskillfulness to steer, she abandoned the bark, and left it to drift. She must see Swan Day.

"And as to Henry!" — here Dorcas set back the little wheel, — "and as to Henry!" — and here Dorcas threw her apron over her face, — "why, what harm is there? I'm only going to see what he wants."

Under the apron rippled and rushed a thousand warm blushes, that contradicted every word Dorcas said to herself. They made her remember how, only the evening before, Henry had said words to her, which, although she pretended not to understand him, had made her heart beat proudly and tenderly; and how she had thought whoever was chosen to be Henry's wife would be a happy woman! How many times had he said, as they stood parting on the stoop, how sorry

he was to go, and she, like Juliet, had whispered, 't was "not yet day"! Yes, of course Henry Mowers would be her husband, and she would tell Swan Day so, if— if—— But then, perhaps, there was no such nonsense in Swan's head, after all.

Why could not the gypsy be satisfied with her almost angelic happiness? But no. She shivered a little as the sun went down, and exchanged her working-dress of petticoat and short-gown for something warmer.

Because Cely Temple was cutting apples and pumpkins, and stringing them across the kitchen and pantry to dry, and because black Dinah was making the "bean-porridge" for supper, it came to pass that the daughter of the house was called on to lay the table. Dorcas bit her lip, as she hastily did the duty, and postponed the pleasure.

The laboring-season is nearly over, the eight hired men reduced to two, and the family-table is spread in the kitchen. How is the table spread for supper in the house of Colonel Fox, one of the richest farmers in Walton?

This is the way.

Dorcas brushes a scrap from the long table, scoured as white as snow, but puts no linen on it. On the buttery-shelves, a set of pewter rivals silver in brightness, but Dorcas does not touch them. She places a brown rye-and-Indian loaf, of the size of a half-peck, in the centre of the table,— a pan of milk, with the cream stirred in,— brown earthen bowls, with bright pewter spoons by the dozen,— a delicious cheese, whole, and the table is ready. When Dinah appears, with her bright Madras turban, and says she is ready to dish the "bean-porridge, nine days old," Dorcas tells her she is going down beyond the cider-mill, to bring up the yarn, and, throwing a handkerchief over her head, is out of sight before Dinah has finished blowing the tin horn that summons to supper.

In five minutes, she was beyond the cider-mill, beyond the well, and standing

under the old pear-tree. Behind her, hiding her from the house, is the corn-barn, stuffed and laden with the heavy harvest of maize and wheat, and the cider-mill, where twenty bushels of apples lie uncrushed on the ground, ready for the morrow's fate. A long row of barrels already filled from the foaming vat stand ready to be taken to the Colonel's own cellar, for the Colonel's own drinking, and as far as one can see in one direction is the Colonel's own land. The heiress of all would still be sought for herself.

Dorcas stood in the departing light, and leaned against the pear-tree. Not yet come? A flush went up to her forehead, as, dropping her handkerchief, she raised her hand to her eyes and glanced hastily about her. Her chestnut curls were fastened with a blue ribbon on the side of her head, and the floating ends fell on her shoulder.

This was the one departure from the severe simplicity of her dress, for neither bright-hued calicoes nor muslins found their way to Walton. Once in a long while, a print, at five times the present prices, was introduced into the social circles of Walton by an occasional peddler, or possibly by the adventurous spirit of Swan Day. But these were rare instances.

Flannel of domestic manufacture, pressed till you could almost see your face in it, stood instead of the French woollen fabric of modern days. It left the jimp little waist as round and definite as the eye could ask, while the full flow of the skirt exposed the neat foot, deftly incased in stout Jefferson shoes. A plaited lawn, technically termed a "modesty-piece," was folded over the bosom, and concealed all but the upper part of the throat. Above that rose a face full of delicacy and healthy sweetness. Eyes full of sparkles, and dimples all about the cheeks, chin, and rather large mouth. Youth, and the radiance of a happy, unconscious nature, of the capabilities or possibilities of which she was as ignorant as the robin on the branch above her,

whose evening song had just closed, and who has just shut his coquettish eyes.

A minute more, and Swan sprang over the stone wall, and with three steps was standing by her. He stood still and looked at her, drawing deep breaths of haste and agitation.

Dorcas spoke first.

"You wanted to see me. What is the matter?"

"Nothing, — but — you know I've got home."

"Why, yes, that is clear," answered Dorcas, mischievously, and entirely easy herself, now that she saw Swan's cheeks aflame, and his voice choking so he could not speak.

"We might as well go towards the house, if that is all," added she, gathering in her hand some skeins of yarn that had been spread out to whiten.

Swan caught the yarn and threw it away with an impatient jerk. Then he took both of Dorcas's hands in his, holding them with a fierce grasp that made her almost scream.

"You know I can't go near the house."

"Yes, I know," said Dorcas, half frightened at his manner. "When did you get back from Boston?"

"Saturday night. And I am going again to-morrow. And then — Dorcas — I shall stay."

"Stay?"

"Stay, — till you tell me to come back, maybe!"

"Why, where are you going, Swan?"

"To China, Dorcas."

"I want to know!" exclaimed she.

"Just it, — and no two ways about it. Sold out to Sawtell. Now you have it, Dorcas!"

This curt and abrupt dialogue needed no more words. The rest was made out fully by the bright color on each face, the sparkling interest on the bent brow of Dorcas, and the deep, mellow voice, full of tenderness and hope, mixed with stern decision, on the part of Swan Day.

No wonder Dorcas's eyes had a glamour over them as she listened and looked. What did she see? A slight, erect

figure, with Napoleonic features, animated with admiration and sensibility; emotion glorifying the rich, deep eyes, and making them look in the twilight like stars; and over all, the indefinable ease that comes from knowledge of the world, however small that world may be.

Swan had little gift of language. The foregoing short dialogue is a specimen of his ability in that way. But looks are a refinement on speech, and say what words never can say.

"You see, Dorcas, I'm going out for the Perkins with Orrin Tileston. We each put in five hundred, and have our share of the profits."

"But to China! that's right under our feet! You'll never come back!" murmured the girl.

"Do you ever want I should? Dorcas, if I come back rich, shall you be glad? It will be all for you, — dear!" the last word low and timidly.

The mist went over her eyes again. A vision of Solomon in all his glory swept across her. Even to Walton had spread rumors of the immense fortunes acquired in the China and India trade, and the gold of Cathay seemed to shimmer over the form before her, so strong, so able to contend with, and compel, if need were, Fortune.

As to Swan, he looked over the river of Time that separated him from love and happiness, and saw his idol and ideal standing on the farther bank, dressed in purple and fine linen, with jewels of his own adorning. Like Bunyan's "shining ones," she seemed to him far lifted out of the range of ordinary thought and expression, into the regions of inspired song. Now that he was really going to the East, the image of Dorcas in his heart took on itself, with a graceful readiness, the gold of Ophir, the pomps of Palmyra, and the shining glories of Zion. He longed to "crown her with rose-buds, to fill her with costly wine and ointments," — to pour over her the measureless bounty of his love, from the cornucopia of Fortune.

“Dorcas,” said he, — and his words showed how inadequately thoughts can be represented, — “Dorcas, I know your father thinks nothing at all of me now; *but*, supposing I come back in two years, with — with — say five thousand dollars! — then, Dorcas!”

The bright, soft eyes looked pleadingly at her.

Truly, in those days of simplicity and scant earnings, five thousand dollars did seem likely to be an overwhelming temptation to the owner of the Fox farm.

“But, — Swan!” said the blushing girl, releasing herself from his grasp, and stepping back.

“Yes, Dorcas! — yes! — once! — only once!”

He came between her and the image of Henry Mowers; he was going away; she might never see him again. A vague sentiment, composed of pleasure, pity, admiration, and ambition, but having the semblance only of timidity in her rosy face and downcast eyes, made her yield her shrinking form, for one moment, to his trembling and passionate caress, and the next, she ran as swiftly as a deer to the house.

Swan’s eyes followed her. With his feet, he dared not. His bounding heart half-choked him with pleasant pain. All he had not said, — all he had meant to say to Dorcas, of his well-laid plans, his good-luck, his hopes, — all he had meant to entreat of her constancy, for in the infrequent communications between the two countries there was no hope of a correspondence, — all he had meant to say to her of his fervent love, of his anguish at separation, of the joy of reunion, and that his love would leave him only with his life, — if he could only have told her! But then he never would or could have put it all into words, if Dorcas had stayed with him under the pear-tree till the next morning.

He thought of the Colonel’s pride, and how it would come down, at the sight of Swan Day returning to Walton with five thousand dollars in his coat-pocket, and

mounted, perhaps, on an elephant! If he had held a foremost social position in Walton, even while selling tape and mop-sticks, molasses and rum, at the country-store, what might not be the impression on the public mind at seeing the glittering plumage of this “bird let loose from Eastern skies, when hastening fondly home”? There was much balm for wounded pride to be gathered in this Oriental project.

Swan collected his energies and his clothes, finished his remaining last words and duties, and took his seat with the mail-carrier, who had the only public conveyance at that period from the town of Walton to the town of Boston. His parents were dead; his immediate relatives were scattered already in different States; and he left Walton with his heart full of one image, that of Dorcas Fox.

### CHAPTER III.

“THEY du say Swan Day’s gun off for good!” said Cely Temple, as she returned from the store, with a Dutch-oven in her hand, which she had purchased, — “an’ to th’ East Injees!”

“I want to know!” rejoined Mrs. Fox.

“I know some ’ll be sorry!” continued Cely, while Dorcas diligently stirred a five-pail kettle of apple-sauce, that hung stewing over the low fire.

Mrs. Fox looked up quickly at her daughter, but Dorcas continued quietly stirring, and without turning round.

“Mahala Dorr, I guess,” said she.

“Wall, M’hala ’ll be, an’ so ’ll others,” answered Cely, prudently. “But I expect likely Swan ’ll do well, ef he don’t die. They say the atemuspere is pison there! — especially for dark-complected folks.”

To this hopeful remark Mrs. Fox rejoined, that “old Miss Day come herself from a warm country, and ’t was likely her son would settle there for good, and enjoy his health there better than what he would here.”

“He ’ll look out well for Number One,

anyhow!" said Cely, lifting the lid of the Dutch-oven from the fire.

Dorcas shot an angry glance at the apple-sauce.

Nothing further passed on the subject, and Dorcas somehow felt, as she stirred, as if Swan were already a long, long way off, — as if the ship had sailed, and would stay sailed, like an enchanted ship, hovering on the horizon, and never come near enough for the passengers to be distinguished, — or else, maybe, go up into the clouds, and rest there with all its masts and spars distinct against the rose-mist, as she had read of once in a book of travels, — or, perhaps, even be inverted, and stand there on its head, as it were, always: but everything must be upside down, of course, in China. Already the thought of Swan Day had mingled with the mists of the past. The outline became indefinite, and softened into a golden splendor, that belonged no more to her, but was essentially of another hemisphere. He had by this time cut loose from home and country. Whether a hundred, or a hundred thousand miles, it mattered not. Since she could not grasp the idea, the distance was as good as infinite to her.

This, you see, is not exactly coquetry. But events drifted her.

When supper was over, and Dinah had gone to sleep, and Cely to visit the neighbors, as usual, Dorcas shyly approached the subject which occupied her thoughts, by getting the little box of jewelry, and looking at it. Her mother called her from the kitchen, out of which the bedroom opened.

"Does mother want me?" asked Dorcas, turning round, with the box in her hand.

"No, no matter," answered the mother; and, possibly with an intuitive feeling of what was in her daughter's thought, she went into the bed-room, and looked with her at the pin and ring of Aunt Dorcas.

"Was it — was it a long time, mother, — I mean, before he came back?" said Dorcas.

"Who? Captain Waterhouse? Bless you! they was as good as merried for ten year, an' he was goin' all the time, an' then, jest at the last minute, to be 'racked! It 's 'most always so, when people goes to sea," added she, in a plaintive tone.

Dorcas meditated; she looked wistfully at her mother.

"It 's a pretty pin, — dreadful pretty round the edge."

"Yes, 't is! I expect likely them 's di'mon's. 'T was made over in foreign parts. He was goin' to bring his picter, too, from there. But he 's lost and gone! Your Aunt Dorcas never had no more suitors after that, and she kind o' gin in, and never had no sperits."

Dorcas's eyes filled, and she closed the box.

Henry Mowers would not come to the Fox farm till the next Sunday night. That was as much settled as the new moon. So Dorcas had the whole week to herself, to be thoroughly unhappy in, — all the more so, a thousand times more so, for being utterly incapable of saying or seeing why. An instinctive delicacy kept her from showing to any of the family that she was even depressed; and her voice was heard steadily warbling one of Wesley's hymns, or "Wolfe's Address to his Army," in clear, brilliant tones, that rang up-stairs and down. The general impression of distance and water associated her absent lover with all that was heroic and romantic in song; for of novels she knew nothing, — the Colonel's library being limited, in the imaginative line, to a torn copy of the "Iliad," which had been left at the house by a travelling cobbler.

However, romance is before all rules, and shapes its own adventures. The beauty of Swan Day, which, dark and slight as it was, gleamed with a power for Dorcas's eye and heart before which Buonarotti's would have been only pale stone forever, — that beauty dwelt in her imagination and memory, as only first romantic impressions can. Distance canonized him, enthroned him, glorified him. And when she thought of his setting forth

so boldly, so bravely, to tread the wide water, to tempt the hot sun, the foreign exposure, the perpetual dangers of heathen countries, for her unworthy sake, all that was tenderest, most grateful, in her now first wakened nature, rose up in distressful tumult, and agitated the depths that are in all women's souls.

If there had been anybody to whom she could confide the sad wrenching of her spirit, any one who would have cleared her vision, and taught her to look on "this picture and on this," she might not have been so puzzled between her two Hyperions. But as it was, it was a sorrowful struggle. One had the advantage of distance and imagination, — one of presence, and of the magnetism of eye and lip.

"I am a wicked, wicked girl!" said she, as she stood before the glass, and loosened the locks that fell like sunshine over her shoulders. But this confession, with true New-England reticence, was uttered only to one listener, — herself.

Then she recalled, for it was Monday night once more, the frank and noble nature of Henry: how he had not asked her to promise him, but seemed to take for granted her truth and faith; how he had looked so fondly, so clearly into her eyes, not for what he might find there, but to show the transparent goodness and sincerity of his own; and how he had told her of all his plans and hopes, of his wish and her father's intention that they should be married that very fall; how little he had said of his own overflowing affection, only that "he had never thought of anybody else." Dorcas only felt, without putting the sense into language, that in this life-boat there was safety. But then had she not sent her heart on a venture in the other, — that other which even now was tossing on the waves of a future, full-freighted with hope, and faith in her truth?

She opened the little box again, and looked at the ring and painted pin. How sorrowfully she looked at them now, seen through tears of conscious experience!

How mournful seemed the ground hair, and the tints woven of so many broken hopes, sad thoughts, and wrecked expectations! the hair, kissed so many times in the weary years of waiting, and then wept over in the drearier desolation, when the sight could only bring thoughts of the salt waves dashing amongst it in the deep sea! What a life that had been of poor Aunt Dorcas! Then came across her busy thought the words of her mother, — "It's 'most always so!"

Swan sailed very far away, in these tearful reveries, and took hope and life with him.

When the next Sunday evening came, and the next, and the next, — and when Dorcas had ceased to say, blushing and smiling, — "Don't, Henry! you know I should make such a poor kind of a wife for you! and your mother would n't think anything of me!" — and when Henry had had an offer to go to Western New York, where there were nobody knew how many beautiful girls, all waiting to pounce on the tall, fine-looking young farmer, — when Colonel Fox forgot he was a deacon, and swore that Dorcas was undeserving of such a happy lot as was offered to her, — when the tears, and the reveries, and the pictures of far-away lands, and the hopes that might wither with long years of waiting, were all merged and effaced in the healthy happiness of the present, — Dorcas dried her tears, and applied herself diligently to building up her flaxen *trousseau*, and smothered in her heart the image of dark and brilliant beauty that had for a time occupied it.

"She waited — a long time! — years — and years!" murmured Dorcas, sorrowfully, as she looked at the pin and ring, which in her mind were associated strongly with only one person, — and that one hereafter to be dead to her. As soon as events clearly defined her duties, Dorcas had no further questions with herself. If the box had been Pandora's, not the less resolutely would she have shut it forever, and so crushed the hope that it could never have leaped out.

So, with choking tears, and throbbing pulses, she followed many brilliant fancies and hopes to their last resting-place. Henceforth her path was open and clear, her duties defined, and with daily occu-

pation of hand and thought she strove to displace all that had ever made her other than the cheerful and busy Dorcas. For the last time, she closed and put away the box.

---

### THRENODY.

[Among the unprinted papers of the author of "Charles Auchester" and "Counterparts" was found this poem, addressed to a father on the death of a favorite son, whose noble disposition and intellectual gifts were all enlisted on the side of suffering humanity.]

O MOURNER by the ever-mourning deep,  
 Full as the sea of tears! imperial heart,  
 King in thy sorrow over all who weep!  
 O wrestler with the darkness set apart

In clouds of woe whose lightnings are the throb  
 Of thy fast-flashing pulses! pause to hear  
 The lullabies of many an alien sob,  
 A storm of alien sighs,—so far! so near!

Oh that our vigils with thy gentle dead  
 Could charm thee from thy night-long agonies,  
 Could steep thy brain in slumber mild, and shed  
 Elysian dreams upon thy closing eyes!

In vain! all vain!—'t is yet the feast of tears;  
 Sorrow for sorrow is the only spell;  
 Nor wanders yet to melt in unspent years  
 The wringing murmur of our fresh farewell!

Thousands bereft strew wide the ashes dim;  
 Rich hearts, poor hands, the lovely, the unlearned,  
 Bemoan the angel of the age in him,  
 A star unto its starlight strength returned.

The City of Delights hath lost its gem,  
 The Sea the changeful glance so like its own,  
 Genius the darling of her diadem,  
 Whose smile made moonlight round her awful throne.

Those elfin steps their music moves no more  
 Beneath light domes to tune the festal train,  
 Nor at the moony eves along the shore  
 To brim with fairy forms that wizard brain.

Cold rocks, wild winds, and ever-changing waves,  
Sad rains that fret the sea and drown the day,  
We hail, — well pleased that stricken Autumn raves,  
Though not with Winter shall our griefs decay.

On lurid mornings, when the lustrous sea  
Is violet-shadowed from the warm blue air,  
When the dark grasses brighten over thee,  
And the winged sunbeams flutter golden there, —

Then to the wild green slope, thy chosen rest,  
The blossoms of our spirits we will bring,  
(Again a babe upon thy mother's breast,  
An infant seed of the eternal Spring,) —

Thoughts bright and dark as violets in their dew,  
Unfading memories of a smile more sweet  
Than perfume of pale roses, hopes that strew  
Ethereal lilies on those silent feet.

The ghost of Pain haunts not that garden-land  
Where Passion's phantom is so softly laid;  
But Charity beside that earth doth stand,  
Most lovely left of all, thy sister-shade.

Her baby-loves like trembling snowdrops lean  
Above thy calm hands and thy quiet head,  
When morn is fair, or noonday's glory keen  
Or the white star-fire glistens on thy bed.

Her eyes of heaven upon thy slumbers brood,  
Her watch is o'er thy pillow, and her breath  
Tells every breeze that stirs thy solitude  
How thou didst earn that rest on earth called Death, —

Earned in such quickening youth and brilliant years!  
For us too early, not too soon for thee! —  
So may we rest, when Death shall dry our tears,  
Till everlasting Morning makes us free!

## THE UTILITY AND THE FUTILITY OF APHORISMS.

THE best aphorisms are pointed expressions of the results of observation, experience, and reflection. They are portable wisdom, the quintessential extracts of thought and feeling. They furnish the largest amount of intellectual stimulus and nutriment in the smallest compass. About every weak point in human nature, or vicious spot in human life, there is deposited a crystallization of warning and protective proverbs. For instance, with what relishing force such sayings as the following touch the evil resident in indolence and delay!—"An unemployed mind is the Devil's workshop"; "The industrious tortoise wins the race from the lagging eagle"; "When God says, To-day, the Devil says, To-morrow." In like manner, another cluster of adages depict the certainty of the detection and punishment of crime:—"Murder will out"; "Justice has feet of wool, but hands of iron"; "God's mills grind slow, but they grind sure." So in relation to every marked exposure of our life, there will be found in the records of the common thought of mankind a set of deprecating aphorisms.

The laconic compactness of these utterances, their constant applicability, the pungent patness with which they hit some fact of experience, principle of human nature, or phenomenon of life, the ease with which their racy sense may be apprehended and remembered, give them a powerful charm for the popular fancy. Accordingly, a multitude of proverbs are afloat in the writings and in the mouths of every civilized people. Groups of national proverbs exist in most of the languages of the world, each family of apothegms revealing the chief traits of the people who gave them birth. In these collective expressions of national mind, we can recognize—if so incomplete a characterization may be ventured—the indrawn meditateness of the Hindu, the fiery imagination of the Arab,

the devout and prudential understanding of the Hebrew, the æsthetic subtilty of the Greek, the legal breadth and sensual recklessness of the Roman, the martial frenzy of the Goth, the chivalric and dark pride of the Spaniard, the treacherous blood of the Italian, the mercurial vanity of the Frenchman, the blunt realism of the Englishman.

It is obvious enough that the masses of moral statements or standing exhortations composing the aphorisms of a language cannot mix in the daily minds of men without deep cause and effect. It will be worth our while to inquire into the bearings of this matter; for, though many a gatherer has carried his basket through these diamond districts of the mind, we do not remember that any one has sharply examined the value of the treasures so often displayed, set forth the methods of their influence and its qualifications, and determined the respective limits of their use and their worthlessness. Undertaking this task, we must, in the outset, divide aphorisms into the two classes of proverbs and maxims, plebeian perceptions and aristocratic conclusions, moral axioms and philosophic rules. This distinction may easily be made clear, and will prove useful.

Popular proverbs are national, or cosmopolitan, and they are anonymous,—rising from among the multitude, and floating on their breath. They are generalizations of the average observation of a people. Undoubtedly, as a general thing, each one was first struck out by some superior mind. But usually this happened so early that the name of the author is lost. Proverbs—as the etymology hints—are words held before the common mind, words in front of the public. Wise maxims, on the contrary, are individual, may more commonly be traced to their origin in the writings of some renowned author, and are more limited in their audience. They are the results

of comprehensive insight, the ripened products of searching meditation, the weighty utterances of weighty minds. The proverb, "A burnt child dreads the fire," flies over all climes and alights on every tongue. The maxim, "All true life begins with renunciation," appeals to comparatively few, and tarries only in prepared and thoughtful minds. Proverbs are often mere statements of facts, barren truisms, too obvious to instruct our thought, affect our feeling, or in any way change our conduct, though the accuracy with which the arrow is shot fixes our attention. Notice a few examples of this sort:—"A friend in need is a friend indeed"; "Many a little makes a mickle"; "Anger is a brief madness"; "It is an ill wind that blows nobody any good." Such affirmations are too general and obvious to be provocative awakeners of original reflection, sentiment, or will. Maxims, on the other hand, instead of being general descriptions or condensed common-places, are usually definite directions, discriminative exhortations. Notice such specimens as these:—"Take care of the pence, and the pounds will take care of themselves"; "When angry, count ten before you speak"; "Do the duty nearest your hand, and the next will already have grown clearer"; "Remember that a thing begun is half done." Proverbs, then, are results of observation, often affirmations of quite evident facts, as, "Necessity is the mother of invention," or, "Who follows the river will arrive at the sea." Maxims, in distinction, are results of reflection. They are experience generalized into rules for the guidance of action, as, "Think twice before you speak once," or, "Train up a child in the way he should go, and when he is old he will not depart from it." Proverbs are statical; maxims are dynamic. Those are wisdom embalmed; these wisdom vitalized. The former are literary fodder; the latter are literary pemmican.

The commonest application of proverbs is as mental economics, *substitutes for thought*. They are constantly employed

by the ordinary sort of persons as provisions to avoid spiritual exertion, artifices to dispose of a matter with the smallest amount of intellectual trouble, as when one ends a controversy with the adage, "Least said, soonest mended." The majority of people desire to get along with the least possible expenditure of thinking. To many a hard-headed laborer, five minutes of girded and continuous thinking are more exhaustive than a whole day of muscular toil. No fact is more familiar than that illiterate minds are furnished with an abundance of trite sayings which they readily cite on all occasions. They thus hit, or at least fancy they hit, the principle which applies to the exigency, without the trouble of extemporaneously thinking it out for themselves on the spot. Such saws as, "The pot must not call the kettle black," "One swallow does not make a Spring," "Nought is never in danger," "Out of sight, out of mind," often give employment to an otherwise freightless tongue, and serve as excusing makeshifts for a mind incompetent, from ignorance, indolence, or fatigue, to discharge the duty of furnishing its own thought and expression for the occasion.

Proverbs are more frequently used as *explanations* than as *guides* of conduct, as the reason why we *have* acted in a certain manner than as a reason why we *should* act so. "Look before you leap," is usually said *after* we have leaped. When a miserly man refuses to give anything in behalf of some distant object, his refusal is not prompted by the remembrance of the proverb, "Charity begins at home"; but the stingy propensity first stirs in the man and actuates him, and then he expresses his motive, or evades the true issue, by quoting the selfish old saw ever ready at his hand. In such cases the axiom is not the forerunning cause of the action, but its justifying explanation. Sometimes, undeniably, an applicable proverb coming to mind does influence a man and decide his conduct. Coming at the right moment, in the wavering of his will, it suggests the princi-

ple which determines him, lends the needful balance of impulse for which he waited. An old proverb, indorsed by the usage of generations, strikes on the ear like a voice falling from the heights of antiquity; it is clothed with a kind of authority. Doubtless many a poor boy has received a sound flogging which he would have escaped, had not his father happened to recall the somewhat cruel and questionable aphorism of Solomon, currently abbreviated into "Spare the rod and spoil the child." When Charles IX. was hesitating as to the enactment of the Saint Bartholomew Massacre, his bigoted mother, infuriated with sectarian hate, whispered in his ear, "Clemency is sometimes cruelty, and cruelty clemency,"—and the fatal decree was sealed. But such instances are exceptional, and partly deceptive, too. Man is usually governed by his own passions, his own circumstances, or his own reason, not by any verbal propositions. And when an apt and timely adage seems to determine him, it is, for the most part, because it acts upon responsive feelings præexistent in him and already struggling to express themselves. And thus, upon the whole, it is to be concluded that proverbs are the children of Epimetheus, or afterthought, rather than of Prometheus, or forethought. They are rather products than producers,—intellectual forms rather than intellectual forces. The prevalent notion of their influence is a huge and singular error. One of our wisest authors, himself a great aphorist, says,—"*Proverbs are the sanctuaries of the intuitions.*" But the intuitions, for the very reason that they are intuitive, need no advisory guidance, and admit of no verbal help.

But when we turn from the aphoristic proverbs of the people to the aphoristic maxims of the wise, a deep distinction and contrast confront us. These, so far from being evasions of effort or substitutes for thought, are direct stimulants to thought, provocative summonses to more earnest mental application. Seneca says, "Wouldst thou subject all things to thyself? Subject thyself to reason." A

modern writer says, "They are not kings who have thrones, but they who know how to govern." Now any one meeting these maxims, if they have any effect on him, will be set a-thinking to discover the principle contained in them. He will feel that there is a profound significance in them; and his curiosity will be awakened, his intellect fired, to find out the grounds and bearings of the law they denote. In this way the words of the wise are goads to prick and urge the faculties of inferior minds. Pointed expressions of the experience of the sovereign masters of life and the world impel feebler and less agile natures to follow the tracks of light and emulate the choice examples set before them, with swifter movements and with richer results than they could ever have attained, if not thus encouraged. Proverbial axioms flourish copiously in the idiomatic ground and vernacular climate of unlearned, undisciplined, unreflective minds, as thistles on the highway where every ass may gather them. But precious maxims, those "short sentences drawn from a long experience," as Cervantes calls them, are found mostly in the writings of the greatest geniuses, Solomon, Aristotle, Shakspeare, Bacon, Goethe, Richter, Emerson: and they appeal comparatively but to a select class of minds, kindred in some degree to those that originated them.

To appreciate and use correctly a valuable maxim requires a genius, a vital appropriating exercise of mind, closely allied to that which first created it. In order to secure genuine profit here, the disciple must for himself repeat the processes of the teacher, reach the same conclusion, see the same truth. Wisdom cannot be mechanically taken, but must be spiritually assimilated,—cannot be put on as a coat or hat, used as a hammer or a sling, but must be intelligently grasped, digested, and organized into the mental structure and habits. The truth of this is at once so palpable and so important that it has found embodiment in numerous proverbs known to almost every one: "An ounce of mother-wit is

worth a pound of school-wit"; "A pennyweight of your own wit is worth a ton of other people's"; "Who cannot work out his salvation by heart will never do it by book."

For the reason just indicated, we think the common estimate of the actual influence of even the costliest preceptive sayings is monstrously exaggerated. That an aphorism should really be of use, it must virtually be reproduced by the faculties of your own soul. But the mental energy and acquirement which thus re-create it in a great degree supersede the necessity of it, render it an expression not of a guidance you need from without, but of an insight and force already working within. Your character determines what maxims you will select or create far more than the maxims you choose or make determine what your character will be. Herbart says, "Characters with ruling plans are energetic; characters with ruling maxims are virtuous." This is true, since a continuous plan subsidizes the forces that would without it run to waste, and a deliberately chosen authority girds and guides the soul from perilous dallying and dissipation. Nevertheless, it is not so much that characters are energetic or virtuous because they have ruling plans or maxims as it is that they have ruling plans or maxims because they are energetic or virtuous. Say to a penurious, hard, grumpy man, "It is more blessed to give than to receive." Will you thus make him liberal, sympathetic, affable? No, his character will neutralize your precept, as vinegar receiving the sunshine into its bosom becomes more sour. Some persons seem to imagine that a wise maxim is a sort of fairy's wand, one touch of which will transform the loaded panniers of a donkey into the fiery wings of a Pegasus. Surely, it is a great error. Trench says, with an amusing *naïveté*, "There is scarcely a mistake which in the course of our lives we have committed, but some proverb, *had we known and attended to its lesson*, might have saved us from it." The two comprehensive con-

ditions, "had we known and attended to its lesson," are discharging conductors, that empty the sentence of all proper meaning, and leave only a rank of hollow words behind. He might as well say, "Had we never been tempted, we had never fallen, — had we possessed all wisdom, we had never committed an error." The best maxim that ever was made cannot directly impart or create knowledge or virtue or spiritual force. It can only give a voice to those qualities where they already exist, and so set in motion a strengthening interchange of action and reaction. Though a fool's mouth be stuffed with proverbs, he still remains as much a fool as before. He is past preaching to who does not care to mend. As the brave Schiller affirms, "Heaven and earth fight in vain against a dunce." Eternal contact with nutritious wisdom can teach no lesson, nor profit at all one who has not a coöperative and assimilative mind. The anchor is always in the sea, but it never learns to swim. Philosophic precepts address the reason; but the springs of motive and regeneration are in the sentiments. To attempt the reformation of a bad man by means of fine aphorisms is as hopeless as to bombard a fortress with diamonds, or to strive to exhilarate the brain by pelting the forehead with grapes.

And yet, notwithstanding these large limitations and abatements, it is not to be denied that both proverbs and maxims, when habitually recalled, generally have some effect, often are strongly influential, and may, by a faithful observance of the conditions, be made extremely efficacious. What, then, are the conditions of deriving profit from the contemplation of aphorisms? How can we make their futility end, their utility begin? The first, ever indispensable condition is fresh discrimination. There are false, cynical, mean, devilish aphorisms, as well as sound and worthy ones. Each style of character, kind and grade of experience breathes itself out in corresponding expressions. "Self is the man"; "Look out for Number One"; "Devil take the hindmost";

"One for me is as good as two for you"; "Every man has his price"; "Draw the snake from its hole by another man's hand"; "Vengeance is a feast fit for the gods." The fact that such infernal sentiments are proverbs must be no excuse for not trampling them out of sight with disgust and scorn. Discrimination is needed not only to reject bad sayings, but also to correct incomplete or extravagant ones. The maxim, "Never judge by appearances," must be modified, because in reality appearances are all that we have to judge from. Its true rendering is, "Judge cautiously, for appearances are often deceptive." A proverb is almost always partial, presenting one aspect of the matter, — or excessive, making no allowance for exceptions. Here independent insight is requisite, that we may not err. As a general thing, aphorisms are particular truths put into forms of universality, and they must be severely scrutinized, lest a mere characteristic of the individual be mistaken for a normal faculty of the race. For instance, it is said, "A reconciled friend is an enemy in disguise." Not always, by any means; it depends greatly on the character of the man. "Forewarned is forearmed." Generally this is true, but not invariably; as sometimes a man, by being forewarned of danger, is unnerved with terror, and undone. So the two maxims, "Never abandon a certainty for an uncertainty," "Nothing venture, nothing have," destroy each other. Whether you shall give up the one bird in the hand and try for the two in the bush depends on the relative worth of the one and the two, and the probabilities of success in the trial. No abstract maxim can help solve that problem: it requires living intelligence. To follow a foreign rule empirically will often be to fare as the monkey fared, who, undertaking to shave, as he had seen his master do, gashed his face and paws. Fearful incisions of the soul will he get who accepts unqualifyingly the class of impulsive proverbs with their enormously overdrawn inferences: such as that of David, when he said in his

haste, "All men are liars"; or that of Moore, when he said in his song, "The world is all a fleeting show, for man's illusion given"; or that maxim of Schopenhauer, so full of deadly misanthropy and melancholy that one would gladly turn his back on a world in which he believed such a rule necessary, "Love no one, hate no one, is the first half of all worldly wisdom; say nothing, believe nothing, is the other half."

The first condition of a profitable use of maxims being a thorough mastery of the rule proposed, with its limits, the next condition is an accurate self-knowledge. Know yourself, your weaknesses, your aptitudes, your exposures, your gifts and strength, in order that you may know what to seek or avoid, what to cherish or spurn, what to spur or curb, what to fortify or assail. For example, if your head is made of butter, it is clear that it will not do for you to be a baker. If you are a coward, you must not volunteer to lead a forlorn hope. The advantage of self-knowledge is that it enables us to prescribe for ourselves the contemplation of such principles and motives as we need. If our thought is narrow and our fancy cold, we should study the maxims that instruct, — as, "Joys are wings, sorrows are spurs." If our heart is faint and our will weak, we should study the maxims that inspire, — as, "The reward of a thing well done is to have done it." The instructive maxim opens a vista of truth to the intellect, as when Goethe said, "A man need not be an architect in order to live in a house." The inspiring maxim strikes a martial chord in the soul, as when Alexander said to his Greeks, shrinking at the sight of the multitudinous host of Persians, "One butcher does not fear many sheep." The evil of self-ignorance is, that it permits men to choose as their favorite and guiding maxims those adages which express and foster their already rampant propensities, leaving their drooping deficiencies to pine and cramp in neglect. The miser pampers his avarice by repeating a hundred times a day, "A penny saved is a penny gained": as if that

were the maxim *he* needed! The spend-thrift comforts and confirms himself in his prodigality by saying, "God loveth a cheerful giver": as if that were not precisely the saying he ought never to recall! Audacity and arrogance constantly say to themselves, "Be bold, be bold, and evermore be bold." Timidity and distrust are ever whispering, "Be not too bold." Thus what would be one man's meat proves another man's poison; whereas, were it rightly distributed, both would be nourished into healthy development. The over-reckless should restrain himself by remembering that "Fools rush in where angels fear to tread." The over-cautious should animate himself with the reflection that "The coward dies a thousand deaths, the brave man only one." A man who, with deep self-knowledge, carefully chooses and perseveringly applies maxims adapted to check his excess and arouse his defect may derive unspeakable profit from them.

To do this with full success, however, he must have a discriminating knowledge of the circumstances as well as of the rule, and of himself. "Circumstances alter cases." What applies happily in one exigency may be perfectly absurd or ruinous in a different situation. The mule, loaded with salt, waded through a brook, and, as the salt melted, the burden grew light. The ass, loaded with wool, tried the same experiment; but the wool, saturated with water, was twice as heavy as before. So the Satyr, in *Æsop's* fable, asked the man coming in from the cold, "Why he blew on his fingers?" and was told, "To warm them." Soon after he asked, "Why he blew in his soup?" and was told, "To cool it." Whereupon he rushed on the man with a club and slew him as a liar. The ramifications of truth in varying emergencies are infinitely subtle and complicated, and often demand the very nicest care in distinguishing. Good advice, when empirically taken and rashly followed, is as an eye in the hand, sure to be put out the first thing on trying to use it. "Advice costs nothing and is good for nothing," it is often said. But

that depends on the quality of the advice, on the circumstances, and on what kind of persons impart and receive the counsel. Advice given with earnestness and wisdom, and applied with docility and discrimination, may cost a great deal and be invaluable. Competence and aptness, or folly and heedlessness, make a world of difference. The great difficulty in regard to the fruitfulness of advice is the universal readiness to impart, the usual unwillingness to accept it. We give advice by the bucket, take it by the grain. For these reasons the world is yet surfeited with precept and starving for example: and the applicability is by no means exhausted of the fable of *Brabrius*, who tells how when an old crab said to her child, "Awkward one, walk not so crookedly!" he replied, "Mother, walk you straight, I will watch and follow." Verbal wisdom would direct us; exemplified wisdom draws us.

The first danger, then, from aphorisms is, that they may enable us to evade, instead of helping us to fulfil, the duty of meeting and solving for ourselves each mental exigency as it arises. In such a case, educative discipline and growth are forfeited. The other danger from them is, that they may be applied mechanically, without a just understanding of them, and thus that grievous mistakes may be made. Their genuine use is to excite our own minds to master the principles which their authors have set forth in them. Fresh honesty of personal thought, aspiration, and patience, is the spiritual talisman wherewith alone we can vivify truisms into truths, and transmute noble maxims into flesh and blood, nay, into immortal mind. The master-thinkers aid us to do this by the quickening power of their suggestions,—the great critic not only giving his readers direction, but also helping them to eyesight.

To traverse the works of some authors is like going through a carefully arranged herbarium, where every specimen is lifeless, shrivelled, dusty, crumbling to the touch. The writings of genuine men of genius are like a conservatory, where ev-

ery plant of thought and sentiment, whether indigenous or exotic, is alive, full of bloom and fragrance, the sap at work in its veins. Verbal statements which are petrifications of wisdom can neither stimulate nor nourish; but verbal statements which are vital concentrations of wisdom do both. He has learned one of the most important lessons in human life who understands adequately the difference be-

tween formal perception and organic experience, contrasting the futility of detached and deathly proverbs with the utility of nutritious and electrical maxims. A mechanical teacher crowds the ear with mummified precepts and exhortations; an inspired teacher brings surcharged examples and rules into contact with the mind. The distinction is world-wide and inexhaustible.

## SHELLEY.

BY ONE WHO KNEW HIM.

IF photography had existed during the lifetime of Shelley, it alone would have sufficed to correct many a misconception of his character founded upon imperfect portraiture; and even the most boyish recollections of him, matter-of-fact as they are, may help to solve the problem upon which many minds have been engaged without yet having finished the work. For Shelley still remains before the world misconceived because misdescribed; and if society is gradually clearing its ideas of the man, it is not only because the preconceptions of that multitudinous authority are themselves gradually drifting away, but also because substantial facts are slowly coming into view. Their development has been hindered by obstacles which will be understood when I have proceeded a little farther, and even within the compass of this brief sketch I hope that I shall be able to make readers on both sides of the Atlantic work their own way a little closer to the truth.

Shelley is still regarded by the majority, either as a victim of persecution, or a rebel against authority, or both,—his friends probably inclining to hold him up as a philosopher-patriot, whose resistance to intellectual oppres-

sion placed him in the condition of a martyr and robbed him of his fair share of life. My own earliest memory presents him very much in that aspect. I first recall him pale and slender, worn with anxiety, openly alluding to the marks of premature age in his own aspect, bursting with aspirations against tyranny of all kinds, and yielding to fits of dreadful despondency under sufferings inflicted by the dignitaries of the land at the instance of his own family. The circumstances by which he was surrounded contributed to this guise of martyrdom.

My own earliest recollections began in prison, where my father\* was incarcerated for critical remarks which at the present day would scarcely attract attention, and which were put forth in no impulse of personal hostility, but under the strongest sense of duty, with the desire to vindicate the constitutional freedom of England against the perverted control of faction and the influences of a corrupt court. At that time my father was accounted a man prone to mutiny against "the powers that be," although his political opinions belonged to a class which would now be regarded as too moderate for pop-

\* Leigh Hunt.

ular liberalism. He has been censured for literary affectation and for personal improvidence, but only by those who do not understand the real elements of his character. The leading ideas of his mind were, first, earnest duty to his country at any cost to himself; next, the sacrifice of any ordinary consideration to personal affection and friendship; and lastly, the cultivation of "the ideal," especially as it is developed in imaginative literature. His life was passed in an absolute devotion to these three principles. A one-sided frankness has blazoned to the world the sacrifices which he accepted from friends, but has whispered nothing of the more than commensurate sacrifices made on his side; and the simplicity that rendered him the creature of the library in which he lived entered into the expression of all his thoughts and feelings.

Although I can remember some of the most eminent men who visited us in prison, Shelley I cannot; but I can well recall my father's description of the young stranger who came to him breathing the classic thoughts of college, ardent with aspirations for the emancipation of man from intellectual slavery, and endowed by Nature with an aspect truly "angelic."

In the interval before his next visit to us, Shelley had passed through the first serious passion of his youth, had married Harriet Westbrooke, had become the father of two children, and had thus to all appearance secured the transmission of the estates strictly entailed with the baronetcy,—but had also been exiled from his family-home, as well as from college, for his revolutionary and infidel principles, had gone through a course of domestic disappointment, had separated from his wife, and was threatened with the removal of his children, on the ground of the impious and "immoral" training to which they were destined under his guardianship. He came to our house for support and consolation; he found in it a home for his intellect as well as for his feelings, and he was

as strictly a part of the family as any of our blood-relations, for he came and went at pleasure. I can remember that I performed his bidding equally with that of my father; and as to personal deference or regard, the only distinction which my memory can discover is, that I found in Shelley a companion whom I better understood, and whose country rambles I was more pleased to share. For this there were many reasons, and amongst them that Shelley entered more unreservedly into the sports and even the thoughts of children. I had probably awakened interest in him, not only because I was my father's eldest child, but still more because I had already begun to read with great avidity, and with an especial sense of imaginative wonders and horrors; and, familiarized with the conversation amongst literary men, I had really been able to understand something of his position, insomuch that no doubt he saw the intense interest I took in himself and his sufferings.

The emotions that he underwent were but too manifest in the unconcealed anxiety and the eager recital of newly awakened hopes, with intervals of the deepest depression. He suffered also from physical causes, which I then only in part understood. This suffering was traced to the attack made upon him at Tanyralt, in Wales, when, on the night of February the 26th, 1813, some man who had been prowling about the house in which he lived first fired at him through the window, and then entered the room, escaping when the man-servant was called in by the tumult and the screams of Mrs. Shelley. The whole incident has been doubted, — why, I can hardly understand, unless the reason is that some of the conjectures in which Mrs. Shelley indulged were over-imaginative. She mentions by name a political opponent who had said that "he would drive them out of the country." My own weak recollections point to reasons more personal. But what I do know is, that Shelley himself ascribed the injury

from which he suffered to a pressure of the assassin's knee upon him in the struggle. The complaint was of long standing; the attacks were alarmingly severe, and the seizure very sudden. I can remember one day at Hampstead: it was soon after breakfast, and Shelley sat reading, when he suddenly threw up his book and hands, and fell back, the chair sliding sharply from under him, and he poured forth shrieks, loud and continuous, stamping his feet madly on the ground. My father rushed to him, and, while the women looked out for the usual remedies of cold water and hand-rubbing, applied a strong pressure to his side, kneading it with his hands; and the patient seemed gradually to be relieved by that process. This happened about the time when he was most anxious for the result of the trial which was to deprive him of his children. In the intervals he sought relief in reading, in conversation, — which especially turned upon classic literature, — in freedom of thought and action, and in play with the children of the house. I can remember well one day when we were both for some long time engaged in gambols, broken off by my terror at his screwing up his long and curling hair into a horn, and approaching me with rampant paws and frightful gestures as some imaginative monster.

It was at this time that the incident happened which has been mentioned by my father. A poor woman had been attending her son before a criminal court in London. As they were returning home at night, fatigue and anxiety so overcame her that she fell on the ground in convulsions, where she was found by Shelley. He appealed to a very opulent person, who lived on the top of the hill, asking admission for the woman into the house, or the use of the carriage, which had just set the family down at the door. The stranger was repulsed with the cold remark that impostors swarmed everywhere, and that his own conduct was "extraordinary." The

good Samaritan, whom the Christian would not help, warned the uncharitable man that such treatment of the poor is sometimes chastised by hard treatment of the rich in days of trouble; and I heard Shelley describe the manner in which the gentleman retreated into his mansion, exclaiming, "God bless me, Sir! dear me, Sir!" In the account of the occurrence given by my father, he has omitted to mention that Shelley and the woman's son, who had already carried her a considerable way up the main hill of Hampstead, brought her on from the inhospitable mansion to our house in their arms; and I believe, that, the son's strength failing, for some way down the hill into the Vale of Health Shelley carried her on his back. I cannot help contrasting this action of the wanderer with the careful self-regard of another friend who often came to see us, though I do not remember that any of us were ever inside his doors. He was, I believe, for some time actually a pensioner on Shelley's generosity, though he ultimately rose to be comparatively wealthy. One night, when he had been visiting us, he was in trouble because no person had been sent from a tavern at the top of the hill to light him up the pathway across the heath. That same self-caring gentleman afterwards became one of the apologists who most powerfully contributed to mislead public opinion in regard to his benefactor.

Shelley often called me for a long ramble on the heath, or into regions which I then thought far distant; and I went with him rather than with my father, because he walked faster, and talked with me while he walked, instead of being lost in his own thoughts and conversing only at intervals. A love of wandering seemed to possess him in the most literal sense; his rambles appeared to be without design, or any limit but my fatigue; and when I was "done up," he carried me home in his arms, on his shoulder, or pickback. Our communion was not always concord;

as I have intimated, he took a pleasure in frightening me, though I never really lost my confidence in his protection, if he would only drop the fantastic aspects that he delighted to assume. Sometimes, but much more rarely, he teased me with exasperating banter; and, inheriting from some of my progenitors a vindictive temper, I once retaliated severely. We were in the sitting-room with my father and some others, while I was tortured. The chancery-suit was just then approaching its most critical point, and, to inflict the cruellest stroke I could think of, I looked him in the face, and expressed a hope that he would be beaten in the trial and have his children taken from him. I was sitting on his knee, and as I spoke, he let himself fall listlessly back in his chair, without attempting to conceal the shock I had given him. But presently he folded his arms round me and kissed me; and I perfectly understood that he saw how sorry I was, and was as anxious as I was to be friends again. It was not very long after that we were playing with paper boats on the pond in the Vale of Health, watching the way in which the wind carried some of them over, or swamped most of them before they had surmounted many billows; and Shelley then playfully said how much he should like it, if we could get into one of the boats and be shipwrecked, — it was a death he should like better than any other.

After the death of Harriet, Shelley's life entirely changed; and I think I shall be able to show in the sequel that the change was far greater than any of his biographers, except perhaps one who was most likely to know, have acknowledged. Conventional form and Shelley are almost incompatible ideas; as his admirable wife has said of him, "He lived to idealize reality, — to ally the love of abstract truth, and adoration of abstract good, with the living sympathies. And long as he did this without injury to others, he had the reverse of any respect for the dictates of ortho-

doxy or convention." As soon, therefore, as the obstacle to a second marriage was removed, he and Mary Wollstonecraft Godwin were regularly joined in matrimony, and retired to Great Marlow, in Buckinghamshire. A brief year Shelley passed in the position of a country-gentleman on a small scale. His abode was a rough house in the village, with a garden at the back and nothing beyond but the country. Close to the house there was a small pleasure-ground, with a mound at the farther end of the lawn slightly inclosing the view. Behind the mound there was a kitchen-garden, not unintermixed with flowers and ornamental vegetation; and farther still was a piece of ground traversed by a lane deeply excavated in the chalk soil. At that time Shelley had a thousand a year allowed to him by his father; but although he was in no respect the unreckoning, wasteful person that many have represented him to be, such a sum must have been insufficient for the mode in which he lived. His family comprised himself, Mary, William their eldest son, and Claire Claremont, — the daughter of Godwin's second wife, and therefore the half-sister of Mary Shelley, — a girl of great ability, strong feelings, lively temper, and, though not regularly handsome, of brilliant appearance. They kept three servants, if not a fourth assistant: a cook; Élise, a Swiss *gouvernante* for the child; and Harry, a man who did the work of gardener and man-servant in general. He kept something like open house; for while I was there with my father and mother, there also came, for a short time, several other friends, some of whom stopped for more than a passing visit. He played the Lord Bountiful among his humbler neighbors, not only helping them with money or money's-worth, but also advising them in sickness; for he had made some study of medicine, in part, I suspect, to be the more useful.

I have already intimated that he had assisted certain of his companions;

and I am convinced that these circumstances contributed to the resolution which Shelley formed to leave England for Italy in the year 1818, although he then ascribed his doing so to the score of health, — or rather, as he said, of life. He then believed himself to be laboring under a tendency to consumption, not without medical warnings to that effect, although there were strong reasons for doubting the validity of the belief, which was based upon less precise grounds before the introduction of auscultation and the careful examinations of our day. It was, however, characteristic of Shelley to rest his actions upon the dominant motive; so that, if several inducements operated to the same end, he absolutely discarded the minor considerations, and acted solely upon the grand one. I can well remember, that, when other persons urged upon him cumulative reasons for any course of action, whether in politics, or morality, or trifling personal matters of the day, he indignantly cast aside all such makeweights, and insisted upon the one sufficient motive. I mention this the more explicitly because the opposite course is the most common, and some who did not sympathize with his concentration of purpose afterwards imputed the suppression of all but one, out of several apparent motives, to reserve, or even to a want of candor. The accusation was first made by some of Shelley's false friends, — creatures who gathered round him to get what they could, and afterwards made a market of their connection, to his disadvantage. But I was shocked to find a sanction for the notion under the hand of one of Shelley's first and most faithful friends, and I discovered it, too, when death had barred me from the opportunity of controverting the mistake. It was easily accounted for. The writer to whom I allude was himself a person whose scrupulous conscience and strong mistrust of his own judgment, unless supported on every side, induced him to accumulate and to avow as many motives as possible

for each single act. He could scarcely understand or believe the existence of a mind which, although powerful and comprehensive in its grasp, should nevertheless deliberately set aside all motives but one, and actually proceed upon that exclusive ground without regard to the others.

Both Shelley and his friends seem to have underrated his strength, and one little incident will illustrate my meaning. He kept no horse or carriage; but in accordance with his ruling passion he had a boat on the river of sufficient size to carry a numerous party. It was made both for sailing and rowing; and I can remember being one of an expedition which went some distance up the Thames, when Shelley himself towed the boat on the return home, while I walked by his side. His health had very much improved with the change that had taken place in his mode of life, his more settled condition, and the abatement of anxiety, with the absolute removal of some of its causes. I am well aware that he *had* suffered severely, and that he continued to be haunted by certain recollections, partly real and partly imaginative, which pursued him like an Orestes. He frequently talked on such subjects; but it has always appeared to me that those who have reported what he said have been guilty of a singular confusion in their interpretations. As I proceed, you will find that certain facts in his life have never yet been distinctly related, and I have a strong reason for believing that some circumstances of which I became accidentally aware were never disclosed at all, except to Mary; while in her writings I can trace allusions to them, that remind me of passages in ancient authors, — in Ovid, for instance, — which would have been absolutely unintelligible, except for accidental references. In spite, however, of the rude trials to which his constitution had been subjected, and of new symptoms supposed to indicate pulmonary weakness, there was a marked improvement in his

aspect since he had visited London. He still had that ultra-youthful figure that partook the traits of the hobbledehoy, arrived at man's stature, but not yet possessing the full manly proportions. His extremities were large, his limbs long, his face small, and his thorax very partially developed, especially in girth. An habitual eagerness of mood, thrusting forward his face, made him stoop, with sunken chest and rounded shoulders; and this was even more apparent in the easy costume of the country than in London dress. But in his countenance there was life instead of weariness; melancholy more often yielded to alternations of bright thoughts; and paleness had given way to a certain freshness of color, with something like roses in the cheeks. Notwithstanding the sense of weakness in the chest, which attacked him on any sudden effort, his power of exertion was considerable. Once, returning from a long excursion, and entering the house by the back way, up a precipitous, though not perpendicular bank, the women of the party had to be helped; and Shelley was the most active in rendering that assistance. While others were content to accomplish the feat for one, he, I think, helped three up the bank, sliding in a half-sitting posture when he returned to fetch a new charge. I well remember his shooting past me in a cloud of chalk-dust, as I was slowly climbing up. He had a fit of panting after it, but he made light of the exertion. I can also recollect, that, although he frequently preferred to steer rather than to put forth his strength, yet, if it were necessary, he would take an oar, and could stick to his seat for any time against any force of current or of wind, not only without complaining, but without being compelled to give in until the set task was accomplished, though it should involve some miles of hard pulling. These facts indicate the amount of "grit" that lay under the outward appearance of weakness and excitable nerves.

Shelley's fulness of vitality did not at that time seem to be shared by the partner of his life. Mary's intellectual powers had already been manifested. He must to some extent have known the force of her affection, and the tenderness of her nature; but it is remarkable that her youth was not the period of her greatest beauty, and certainly at that date she did not do justice to herself either in her aspect or in the tone of her conversation. She was singularly pale. With a figure that needed to be set off, she was careless in her dress; and the decision of purpose which ultimately gained her the playful title of "Wilful Woman" then appeared, at least in society, principally in the negative form, — her temper being easily crossed, and her resentments taking a somewhat querulous and peevish tone. Both of the pair were still young, and their ideas of education were adverse to the received doctrines of the day, rather than substantive; and their own principles in this matter were exemplified somewhat perversely by little William. Even at that early age the child called forth frequent and poignant remonstrances from his *gouvernante*, and occasionally drew perplexed exclamations or desponding looks from his father, who took the child's little perversities seriously to heart, and sometimes vented his embarrassment in generalized remarks on human nature.

Some years elapsed between the night when I saw Shelley pack up his pistols — which he allowed me to examine — for his departure for the South, and the moment when, after our own arrival in Italy, my attention was again called to his presence by the shrill sound of his voice, as he rushed into my father's arms, which he did with an impetuosity and a fervor scarcely to be imagined by any who did not know the intensity of his feelings and the deep nature of his affection for that friend. I remember his crying out that he was "so *inexpressibly* delighted! — you cannot

think how *inexpressibly* happy it makes me!"

The history of Shelley's brief visit to Pisa has been related by many, and is, I believe, told in his published letters; but it appears to me that those who have recounted it have in some respects fallen short. Excepting Mary Shelley, the best-informed spoke too soon after the event. Shelley's own letters are slightly misleading, from a very intelligible cause. After he had encouraged, if he did not suggest, the enterprise of "The Liberal,"—and I believe it would be nearly impossible for any one of the three men interested in that venture to ascertain exactly who was its author,—his mind misgave him. He knew my father's necessities and his childish capacities for business. With a keen sense of the power displayed in "Don Juan," and even in more melodramatic works, Shelley had acquired a full knowledge of the singularly licentious training from which Byron had then scarcely emerged, and of the vacillating caprice which enfeebled all his actions. His own ability to grapple with practical affairs was very great; but he himself had scarcely formed a sufficient estimate of it. Determined to maintain a thorough equality and freedom with the noble bard in their social relations, he shrank from any position which might raise in Byron's jealous and unstable mind the idea that he was under pressure; yet he was anxious to prevent disappointment for Leigh Hunt. He dreaded failure, and resolved that he would do his best to prevent it; and yet again he scarcely anticipated success.

As early as the end of 1818, he described the way in which Byron spent his life, after he had been partly exiled, partly emancipated from the ordinary restraints of society. At that time, "the Italian women were the most contemptible of all who existed under the moon,—an ordinary Englishman could not approach them"; "but," writes Shelley, "Lord Byron is familiar with the lowest

sort of these women,—the people his *gondolieri* pick up in the streets." Byron's curiosity, indeed, tempted him to learn something of vice in its most revolting aspects. "He has," writes Shelley, "a certain degree of candor, while you talk to him, but unfortunately it does not outlast your departure." I am sure that before 1821 Byron had risen in his friend's estimation, or the "Liberal" scheme would never have been contemplated; and there were excellent reasons for the change. It is only by degrees that men have learned to appreciate at once the extraordinary nature and force of Byron's genius and the equally monstrous and marvellous nature of the evil training by which he was "dragged up." In the midst of extravagant license he gained experiences which might have extinguished his mind, but which, as they did not have that effect, added to his resources. In the process some of his personal qualities as a companion suffered severely. Very few grown men have been so extravagantly sensitive to personal approbation; and he was anxious to conciliate the liking of all who approached him, however foreign to his own set, however humble, or however insignificant. He was as mistrustful as a greedy child. He could be extravagant, but he was not open-handed; and yet he would give up what he coveted for himself, if he were urged by those whose esteem he desired to win. Now, of all persons who came near him, Shelley was the one that combined the greatest number of qualities calculated to influence a creature like Byron. He was of gentle blood; he was as resolute as he was able to maintain what is popularly called an independent position; he was truly sincere; and his way of life displayed a purity which Byron admired, though he fell from it so lamentably. On the other hand, Shelley was at odds with society on the very same questions of morals; he possessed all the philosophy for understanding the complicated perplexities of aberrant genius; did act-

ually make allowances for Byron; estimated his powers more accurately, and therefore more highly, than any other person who came near him; and thus commanded at once his sympathies, his ambition, and his confidence. Everybody knows that in the interval between 1818 and the date of his death at Missolonghi, Byron's discipline of life had undergone a marked and beneficial change, and many agencies have been mentioned as contributing to that result, but I am sure that no one was so all-sufficient as the personal association with Shelley. Nothing of this is gainsaid by the fact that the greater part of this improvement was displayed after Shelley's death. Change of scene, intercourse with others, opportunities for acting upon his new principles, all helped, together, probably, with the graver sense of counsel bequeathed by the friend whom he had lost. Certain it is that Byron never mentioned Shelley in my hearing without a peculiarly emphatic manner. I know that to more than one person he performed acts of kindness and friendly aid as tributes to the memory of Shelley; and if any action were urged upon him as worthy of his own genius and dignity, nothing clenched the appeal like the name of Shelley. But if you will for a moment compare the characters of the two men, — if you will contrast the large self-sacrifice of the one with the self-indulgence of the other, the independence of the one with the craving of the other for approval, the absolute trust in human hope and goodness of Shelley with the *blasé* cynicism of Byron, I think two conclusions must instantly strike you, — first, that Shelley must have possessed almost unequalled power of influence over those who surrounded him, and, secondly, that Byron himself must have been a much better man, or possessing much more in common with Shelley than society or some of his most intellectual companions at all imagined. Part of the facts bearing upon the subject have come out since the death of both. My

own attention was drawn to the point by the striking discord between the way in which other people speak of their relations and the manner of Shelley and Byron towards each other, and especially Byron's way in speaking of Shelley. It is not probable that Shelley formed to himself any such idea of his own power; yet you will find hints at it in his letters, you will see curious traces of it in the letters of others, and nothing else will fully explain the change in Byron's life. Moreover, it reconciles the apparent inconsistencies of Shelley's reservations in talking about Byron with his manifest and practical confidence in the result of their joint working.

When I met Shelley again in Italy, it was easy to see that a grand change had come over his appearance and condition. The Southern climate had suited him, and the boat which caused his death had in the mean while been instrumental in developing his life. His retirement from painful personal conflict had given him greater ease; intercourse with Mary had made his life better; and, not to overlook one important fact, he had *grown* since he left England. For physiologists attest the truth, that growth continues throughout human existence, even until after decay begins; and Shelley's constitution was of that kind — strong in some of its developments, slow in others — which needed longer time than many to arrive at its full proportions. For instance, in the interval since I had seen him his chest had manifestly become of a larger girth. I am speaking only upon distant recollection; but I should judge it to have been three or four inches larger round, or perhaps more. His voice was stronger, his manner more confident and downright, and, although not less emphatic, yet decidedly less impulsively changeful. I can recall his reading from an ancient author, translating as he went, a passage about the making of the first man; and I remember it from the subject and from the easy

flow of his translation, but chiefly from the air of strength and cheerfulness which I noticed in his voice and manner. In nothing, however, does Shelley appear to me to have been so misdescribed as in the outward man,—partly, as usual, from overstatement of peculiarities, and partly because each artist has painted the portrait from his own favorite view. Many, through exaggeration, or imperfect knowledge, have equally misconstrued his moral character, and have omitted to report the real conduct of his understanding as he advanced towards “the middle of the way of life.”

From the story of his life after I first saw him, as well as from many things that I have heard him say of his family, and the strange recollections that he had of home, it is easy to understand the general tenor of his early life. Through some caprice in genealogical chemistry, in Percy the Shelley race struck out an entirely new idea: an apparent caprice in the sequence of houses that has often been noticed. For how often may we observe that the union of the most remarkable intellects produces a *tertium quid* which is the reverse of an equivalent to the combined totals, representing only a fraction of their qualities, and that fraction in its negative aspect; while, on the other hand, rivulets of blood which have gained for themselves no name upon earth may combine to form a river illustrious to the whole world. In the latter case, not an unusual effect is that those who are charged with the infancy of the new type in the family are incompetent to their duty; and accordingly Shelley was regarded merely as “a strange boy,” wayward, mutinous, and to be severely chastised into obedience. It has been said that he attracted no particular notice at school; but this is not true. At Eton his resentment of tyrannical authority displayed itself not only against the masters, but against the privileges of young patricians. He refused to be “fag”; and on one occa-

sion he so braved the youthful public-opinion, that, on being dared to the act by the surrounding boys, he pinned a companion’s hand to the table with a fork. According to my recollection, the immediate provocative was that he was dared to do it; but the incident arose out of his resistance to the seniors amongst the scholars and to the customs of the school. It was evident that the masters had their eye upon him. Such a youth, with a command of language that was a born faculty and not simply acquired, *must* have attracted very positive attention on the part of the teachers; but it was certain, that, with the tendencies of those days, they would have thought it discreet to say as little as possible about the slender mutineer. It is equally well known, that, notwithstanding his youth, religious opinions caused his expulsion from college; and when we turn to the earliest of his writings which assumed anything like a complete shape, we discover at once the nature of those powers which could not have been overlooked,—we detect the genius, the revolutionary ideas, and the extraordinary command which he had acquired over the subject-matter of much that is taught in schools and colleges. Amid the orthodox reaction that followed upon the French Revolution, he was struck with the excesses to which despotic power could be carried. He read history with sympathies for the natural impulses and aspirations of the race, as opposed to the small circles which comprise established authorities. He looked upon knowledge as the means of serving, not enslaving the race. And therefore, while he excused the crimes of the Revolution, on the score of the ignorance in which the people had been kept, their sufferings, and the natural revulsion against such painful down-treading, he regarded the counter acts of authority as a treachery to wisdom itself. He says,—

“Hath Nature’s soul,  
That formed this world so beautiful . . .

And filled the meanest worm that crawls in  
 dust  
 With spirit, thought, and love, on Man  
 alone,  
 Partial in causeless malice, wantonly  
 Heaped ruin, vice, and slavery?  
 Nature?—no!  
 Kings, priests, and statesmen blast the hu-  
 man flower  
 Even in its tender bud; their influence darts  
 Like subtle poison through the bloodless  
 veins  
 Of desolate society.”

The pretension of authority to speak with a supernatural warrant provoked him to deny the warrant itself, or the sources from which it was said to emanate.

“Is there a God?—ay, an almighty God,  
 And vengeful as almighty? Once his voice  
 Was heard on earth; earth shuddered at the  
 sound,  
 The fiery-visaged firmament expressed  
 Abhorrence, and the grave of Nature yawned  
 To swallow all the dauntless and the good  
 That dared to hurl defiance at his throne,  
 Girt as it was with power. None but slaves  
 Survived,—cold-blooded slaves, who did  
 the work  
 Of tyrannous omnipotence.”

To these superstitious and ambitious pretensions he traced the corruption which disorganized society, leading it down even to the very worst immoralities.

“All things are sold: the very light of heaven  
 Is venal. . . .  
 Those duties which heart of human love  
 Should urge him to perform instinctively  
 Are bought and sold as in a public mart.  
 . . . . .  
 Even love is sold; the solace of all woe  
 Is turned to deadliest agony, old age  
 Shivers in selfish beauty’s loathing arms,  
 And youth’s corrupted impulses prepare  
 A life of horror from the blighting bane  
 Of commerce; whilst the pestilence that  
 springs  
 From unenjoying sensualism has filled  
 All human life with hydra-headed woes.”

“Shelley,” says Mary, in her note on the poem, “was eighteen when he wrote ‘Queen Mab.’ He never published it. When it was written, he had come to the decision that he was too

young to be a judge of controversies.” The wife-editor refers to a series of articles published in the “New Monthly Magazine” for 1832 by a fellow-collegian, a warm friend of Shelley’s, touching upon his school-life, and describing the state of his mind at college. The worst of all these biographical sketches of remarkable men is, that delicacy, discretion, or some other euphemistically named form of hesitancy, induces writers to suppress the incidents which supply the very angles of the form they want to delineate; and it is especially so in Shelley’s case. I am sure, that, if Mary, or my father, or any of those with whom Shelley conversed most thoroughly, had related some of the more extravagant incidents of his early life exactly as they occurred, we should better understand the tenor of his thought,—and we should also have the most valuable complement to that part of his intellectual progress which stands in contrast with the earlier portion. Now, as I have said, at school Shelley was a more practical and impracticable mutineer than his friends have generally allowed. They have been anxious to soften his “faults”; and the consequence is, that we miss the force of the boy’s logic and the vigor of his Catonian experiments.

Again, accident has made me aware of facts which give me to understand, that, in passing through the usual curriculum of a college life in all its paths, Shelley did not go scathless,—but that, in the tampering with venal pleasures, his health was seriously, and not transiently, injured. The effect was far greater on his mind than on his body; and the intellectual being greater than the physical power, the healthy reaction was greater. But that reaction was also, especially in early youth, principally marked by horror and antagonism. Conscientious, far beyond even the ordinary maximum amongst ordinary men, he felt bound to denounce the mischief from which he saw others suffer more severely than himself, since in them there was no such reaction. I

have no doubt that he himself would have spoken even plainer language, though to me his language is perfectly transparent, if he had not been restrained by a superstitious notion of his own, that the true escape from the pestilent and abhorrent brutalities which he detected around him in "real" life is found in "the ideal" form of thought and language. Ardent and romantic, he was eager to discover beauty "beneath" every natural aspect. Of all men living, I am the one most bound to be aware of the inconsistency; but you will see it reconciled a little later.

Shelley left college prone "to fall in love,"—having already, indeed, gone through some very slight experiences of that process. In his wanderings, in a humble position which conciliated rather than repelled him, he met with Harriet Westbrooke, a very comely, pleasing, and simple type of girlhood. She was at some disadvantage, under some kind of domestic oppression; so she served at once as an object for his disengaged affection, and a subject for his liberating theories, and as a substratum for the idealizing process upon which he constructed a fictitious creation of Harriet Westbrooke. His dreams bearing but a faint and controversial resemblance to the Harriet Westbrooke of daily life, the fictitious image prevented him from knowing her, until the reality broke through the poetical vision only to shock him by its inferiority or repulsiveness. As to the poor girl herself, she never had the capacity for learning to know him. In the sequel she proved to be the not unwilling slave of a petty domestic intrigue,—oppression from which he would have rescued her. Married life enabled him to discover that she was the reverse of the being that he had fancied. They were first married in Scotland in 1811. Shelley made acquaintance with the Godwins in 1812, before his eldest child was born. I am not sure whether he was acquainted with Mary at that time; but some circumstances which I cannot

verify make me doubt it. Harriet's daughter was born early in the summer of 1813, and it was before the close of that year that the couple began to disagree. The wife was evidently under the dominion of a relative whose influence was injurious to her. I do not find a hint of any imputation upon what is usually called her "fidelity"; but the relative manifestly desired to show her power over both. It is probable that at an early day Shelley's disposition to see "sermons in stones and good in everything" made him think better of that interloping lady than she deserved,—and that consequently he not only gave her encouragement, but committed himself to something which, to Harriet's mind, justified her deference for ill-considered advice. It is very likely that she was counselled to extend her power over Shelley in a manner which her own simple nature would not have suggested; but, being as foolish as it was cunning and vulgar, such conduct could have no result but that of repelling a man like Shelley. That he acquired a detestation of the relative is a certain fact. He must have been expecting a second child when he formally remarried Harriet in England on the twenty-fourth of March, 1814; and that ceremony has been mentioned by several writers to prove the most opposite conclusions,—that Shelley was devoted to his first wife, and that he behaved to her with the basest hypocrisy. It proves nothing but his desire to place the hereditary rights of the second child, who might be a boy, beyond doubt; and the precaution was justified by the event. Before the close of the same year Harriet returned to her father's house, and there she gave birth to a son, Charles, who would have inherited the baronetcy, if he had not died in 1826, after his father's death. The parting took place about the twenty-fourth of June, 1814; and at the same time Shelley wrote a poem, of which fragments are given in the recently published "Relics." The verse shows, first, that Shelley was suf-

fering severely from the chronic conflict which he had undergone, and, secondly, that he had found some novel comfort in the intercourse with Mary.

"To sit and curb the soul's mute rage,  
Which preys upon itself alone;  
To curse the life which is the cage  
Of fettered grief that dares not groan,  
Hiding from many a careless eye  
The scorn'd load of agony.

"Upon my heart thy accents sweet  
Of peace and pity fell like dew  
On flowers half dead. . . .

"We are not happy, sweet! our state  
Is strange and full of doubt and fear;  
More need of words that ill abate;—  
Reserve or censure come not near  
Our sacred friendship, lest there be  
No solace left for thee and me."

It is obvious that considerably after the date of this poem, Harriet remained in amicable correspondence with Shelley; and not only so, but, while she altogether abstained from opposing his new connection, she was actually on friendly terms with Mary. It is easy to understand how a limited nature like Harriet's should be worn out by the exaction and impracticability of one like Shelley; for to her most impracticable would seem his lofty and ideal requirements. On the other hand, it is evident that Shelley regarded the unfortunate girl with feelings of deep commiseration; and I know that he not only pitied her, but felt strong compunctions for the share which his own mistaken conduct at the beginning, even more than at the end, had had in drawing her aside from what would have been her natural course in ordinary life. Mary, I believe, clearly understood the whole case, and felt nothing but compassion for one who was a "victim to circumstances."

The sequel has been alluded to in several publications, but so obscurely as to be more than unintelligible; for the reader is led to conclusions the reverse of the fact. In the "Memorials," at page 65, the subject is barely touched upon. I take the whole passage.

"Towards the close of 1813, estrangements, which for some time had been slowly growing between Mr. and Mrs. Shelley, came to a crisis. Separation ensued; and Mrs. Shelley returned to her father's house. Here she gave birth to her second child,—a son, who died in 1826.

"The occurrences of this painful epoch in Shelley's life, and the causes which led to them, I am spared from relating. In Mary Shelley's own words:—'This is not the time to relate the truth; and I should reject any coloring of the truth.'

"Of those remaining who were intimate with Shelley at this time, each has given us a different version of this sad event, colored by his own views and personal feelings. Evidently, Shelley confided to none of these friends. We, who bear his name and are of his family, have in our possession papers written by his own hand, which, in after-years, may make the story of his life complete, and which few now living, except Shelley's own children, have ever perused.

"One mistake which has gone forth to the world we feel ourselves called upon positively to contradict. Harriet's death has sometimes been ascribed to Shelley. This is entirely false. There was no immediate connection whatever between her tragic end and any conduct on the part of her husband."

At the end of the "Relics" is a memorandum entitled, "Harriet Shelley and Mr. Thomas Love Peacock." Mr. Peacock had been writing in "Fraser's Magazine" a series of articles on Shelley; in "Macmillan's Magazine" for June, 1860, was an article by Mr. Richard Garnet, entitled, "Shelley in Pall Mall"; to this Mr. Peacock replied in "Percy Bysshe Shelley: Supplementary Notice"; and Mr. Garnet rejoined in the new little volume which he has edited. The main purpose of this last notice is, to show that Mr. Peacock was not accurate in his chronology or in his

interpretation of the severance between Shelley and Harriet. Alluding either to the discretion which prevented Shelley from making a confidant of Mr. Peacock, or to his grief occasioned by the fate of Harriet, the writer refers to "the proof which exists in a series of letters written by Shelley at this very time to one in whom he had confidence, and at present in possession of his family," and then proceeds thus:—"Nothing more beautiful or characteristic ever proceeded from his pen; and they afford the most unequivocal testimony of the grief and horror occasioned by the tragical incident to which they bear reference. Yet self-reproach formed no element of his sorrow, in the midst of which he could proudly say, '——, ——,' (mentioning two dry, unbiassed men of business), 'every one, does me full justice, bears testimony to the uprightness and liberality of my conduct to her.'"

In the "Memorials" and the "Relics" there is no further allusion to the circumstances which preceded Harriet's suicide; but it appears to me very desirable that the whole story should be brought out much more distinctly, and I can at least show why I say so. The correspondence in question took place in the middle of December, 1816. Shelley was married to Mary about a fortnight later; and in the most emphatic terms he alluded not only to the solace which he derived from the conversation of his host, but to the manner in which my father spoke of Mary. My own recollection goes back to the period, and I have already testified to the state of Shelley's mind. He was just then instituting the process to recover the children, and he caught at an opinion that had been expressed, that, in the event of his again becoming contracted in marriage, there would be no longer any pretence to deprive him of the children.

Let me for a moment pause on this incident, as it establishes two facts of some interest. In the first place, it

shows some of the grounds of the very strong and unalterable friendship which subsisted between my father and Mary,—a friendship which stood the test of many vicissitudes, and even of some differences of opinion; both persons being very sensitive in feeling, quick in temper, thoroughly outspoken, and obstinately tenacious of their own convictions. Secondly, it corroborates what I have said with regard to the community of spirit that Shelley found in his real wife,—the woman who became the companion of his fortunes, of his thoughts, of his sufferings, and of his hopes. It will be seen, that, even before marriage with his second wife, he was counting upon Mary's help in preventing his separation from the two children already born to him. She was a woman uniting intellectual faculties with strong ambitions of affection as well as intellect; and esteem thus substantially shown, at that early age, by two such men as Percy Shelley and Leigh Hunt, must have conveyed the deepest gratification.

Throughout these communications Shelley evinced the strong pity that he felt for the unhappy being whom he had known. Circumstances had come to his knowledge which had thrown considerable light upon his relations with Harriet. There can be no doubt that one member of the family had hoped to derive gain from the connection with himself, as a person of rank and property. There seems also reason to suppose, that, about the same time, Harriet's father, an aged man, became so ill that his death might be regarded as approaching, and he had something to leave. Poor, foolish Harriet had undoubtedly formed an attachment to Shelley, whom she had been allowed to marry; but she had then suffered herself to become a tool in the hands of others, and the fact accounted for the idle way in which she importuned him to do things repugnant to his feelings and convictions. She thus exasperated his temper, and lost her own; they quar-

relled, in the ordinary conjugal sense, and, from all I have learned, I am induced to guess, that, when she left him, it was not only in the indulgence of self-will, but also in the vain hope that her retreating would induce him to follow her, perhaps in a more obedient spirit. She sought refuge in her father's house, where she might have expected kindness; but, as the old man bent towards the grave, with rapid loss of faculties, he became more severe in his treatment of the poor woman; and she was driven from the paternal roof. This Shelley did not know at the time; nor did he until afterwards learn the process by which she arrived at her fate. Too late she became aware how fatal to her interests had been the intrigues of which she had been the passive instrument; and I suspect that she was debarred from seeking forgiveness and help partly by false shame, and partly by the terrible adaptability of weak natures to the condition of the society in which they find themselves. I have said that there is not a trace of evidence or a whisper of scandal against her before her voluntary departure from Shelley, and I have indicated the most probable motives of that step; but subsequently she forfeited her claim to a return, even in the eye of the law. Shelley had information which made him believe that she fell even to the depth of actual prostitution. If she left him, it would appear that she herself was deserted in turn by a man in a very humble grade of life; and it was in consequence of this desertion that she killed herself.

The change in his personal aspect that showed itself at Marlow appeared also in his writings,—the most typical of his works for this period being naturally the most complete that issued from his pen, the "Revolt of Islam." We find there identically the same doctrine that there is in "Queen Mab,"—a systematic abhorrence of the servility which renders man captive to power, denunciation of the love of gain which

blinds his insight and destroys his energy, of the prostitution of religious faith, and, above all, of the slavery of womanhood. But by this time the doctrine has become more distinct in its expression, and far more powerful in its utterance.

"Man seeks for gold in mines, that he may weave

A lasting chain for his own slavery;  
In fear and restless care that he may live,  
He toils for others, who must ever be  
The joyless thralls of like captivity;  
He murders, for his chiefs delight in ruin;  
He builds the altar, that its idol's fee  
May be his very blood; he is pursuing,  
O blind and willing wretch! his own obscure undoing.

"Woman!—she is his slave, she has become  
A thing I weep to speak,—the child of scorn,

The outcast of a desolated home.  
Falsehood and fear and toil, like waves,  
have worn  
Channels upon her cheek, which smiles  
adorn,  
As calm decks the false ocean. Well ye know

What woman is; for none of woman born  
Can choose but drain the bitter dregs of woe,  
Which ever from the oppressed to the oppressors flow."

The indignation against the revolting subjugation of womanhood comes out still more distinctly in the preceding canto, where Cythna relates the horrors to which she was subjected.

"One was she among many there, the thralls  
Of the cold tyrant's cruel lust: and they  
Laughed mournfully in those polluted halls;  
But she was calm and sad, musing away  
On loftiest enterprise, till on a day

She told me what a loathsome agony  
Is that when selfishness mocks love's delight,

Foul as in dreams' most fearful imagery  
To dally with the mowing dead;—that night

All torture, fear, or horror made seem light  
Which the soul dreams or knows."

The poet bears testimony to the spiritual power which rules throughout Nature; the monster recovering his dignity while he is under the higher influence.

"Even when he saw her wondrous loveliness,  
One moment to great Nature's sacred power  
He bent and was no longer passionless;  
But when he bade her to his secret bower  
Be borne a loveless victim, and she tore  
Her locks in agony, and her words of flame  
And mightier looks availed not, then he  
bore

Again his load of slavery, and became  
A king, a heartless beast, a pageant and a  
name.

. . . . "When the day  
Shone on her awful frenzy, from the sight,  
Where like a spirit in fleshly chains she lay  
Struggling, aghast and pale the tyrant fled  
away.

"Her madness was a beam of light, a power  
Which dawned through the rent soul; and  
words it gave,

Gestures and looks, such as in whirlwinds  
bore

Which might not be withstood."

The doctrine involved in this passage is very clear, and it marks a decided progress since the days of "Queen Mab." It will be observed that Shelley's mind had become familiarized with the idea of a spirit ruling throughout Nature, obedience to which constitutes human power. Most remarkable is the passage in which the tyrant recovers his faculties through his subjection to this spirit; because it indicates Shelley's faithful adherence to the universal, though oft obscurely formed belief, that the ability to receive influence is the most exalted faculty to which human nature can attain, while the exercise of an arbitrary power centring in self is not only debasing, but is an actual destroyer of human faculty.

There can be no doubt that he had profited greatly in his moral condition, as well as in his bodily health, by the greater tranquillity which he enjoyed in the society of Mary, and also by the sympathy which gave full play to his ideas, instead of diverting and disappointing them. She was, indeed, herself a woman of extraordinary power, of heart as well as head. Many circumstances conspired to conceal some of her natural faculties. She lost her mother very young; her father — speak-

ing with great diffidence, from a very slight and imperfect knowledge — appeared to me a harsh and ungenial man. She inherited from him her thin voice, but not the steel-edged sharpness of his own; and she inherited, not from him, but from her mother, a largeness of heart that entered proportionately into the working of her mind. She had a masculine capacity for study; for, though I suspect her early schooling was irregular, she remained a student all her life, and by painstaking industry made herself acquainted with any subject that she had to handle. Her command of history and her imaginative power are shown in such books as "Valperga" and "Castruccio"; but the daring originality of her mind comes out most distinctly in her earliest published work, "Frankenstein." Its leading idea has been ascribed to her husband, but, I am sure, unduly; and the vividness with which she has brought out the monstrous tale in all its horror, but without coarse or revolting incidents, is a proof of the genius which she inherited alike from both her parents. It is clear, also, that the society of Shelley was to her a great school, which she did not appreciate to the full until most calamitously it was taken away; and yet, of course, she could not fail to learn the greater part of what it had become to her. This again showed itself even in her appearance, after she had spent some years in Italy; for, while she had grown far more comely than she was in her mere youth, she had acquired a deeper insight into many subjects that interested Shelley, and some others; and she had learned to express the force of natural affection, which she was born to feel, but which had somehow been stunted and suppressed in her youth. In the preface to the collected edition of his works, she says: "I have the liveliest recollection of all that was done and said during the period of my knowing him. Every impression is as clear as if stamped yesterday, and I have no apprehension of any mistake in my statements, as far as

they go. In other respects I am, indeed, incompetent; but I feel the importance of the task, and regard it as my most sacred duty. I endeavor to fulfil it in a manner he would himself approve; and hope in this publication to lay the first stone of a monument due to Shelley's genius, his sufferings, and his virtues." And in the postscript, written in November, 1839, she says: "At my request, the publisher has restored the omitted passages of 'Queen Mab.' I now present this edition as a complete collection of my husband's poetical works, and I do not foresee that I can hereafter add to or take away a word or line." So writes the wife-editor; and then "The Poetical Works of Percy Bysshe Shelley" begin with a dedication to Harriet, restored to its place by Mary. While the biographers of Shelley are chargeable with suppression, the most straightforward and frank of all of them is Mary, who, although not insensible to the passion of jealousy, and carrying with her the painful sense of a life-opportunity not fully used, thus writes the name of Harriet the first on her husband's monument, while she has nobly abstained from telling those things that other persons should have supplied to the narrative. I have heard her accused of an over-anxiety to be admired; and something of the sort was discernible in society: it was a weakness as venial as it was purely superficial. Away from society, she was as truthful and simple a woman as I have ever met,—was as faithful a friend as the world has produced,—using that unreserved directness towards those whom she regarded with affection which is the very crowning glory of friendly intercourse. I suspect that these qualities came out in their greatest force after her calamity; for many things which she said in her regret, and passages in Shelley's own poetry, make me doubt whether little habits of temper, and possibly of a refined and exacting coquettishness, had not prevented him from acquiring so full a

knowledge of her as she had of him. This was natural for many reasons, and especially two. Shelley had not the opportunity of retrospectively studying her character, and his mind was by nature more constructed than hers was to be preoccupied. If the reader desires a portrait of Mary, he has one in the well-known antique bust sometimes called "Isis" and sometimes "Clytie": a woman's head and shoulders rising from a lotus-flower. It is most probably the portrait of a Roman lady, in some degree more elongated and "classic" than Mary; but, on the other hand, it falls short of her, for it gives no idea of her tall and intellectual forehead, nor has it any trace of the bright, animated, and sweet expression that so often lighted up her face.

Attention has often been concentrated on the passage in "Epipsychidion" which appears to relate Shelley's experiences from earliest youth until he met with the noble and unfortunate "Lady Emilia V., now imprisoned in the convent of —," whose own words form the motto to the poem, and a key to the sympathy which the writer felt for her:—"The loving soul launches itself out of the created, and creates in the infinite a world all its own, far different from this dark and fearful abysm." The passage begins,—

"There was à being whom my spirit oft  
Met on its visioned wanderings, far aloft,  
In the clear golden prime of my youth's  
dawn."

And this being was the worshipped object of Shelley's adoring aspirations in extreme youth; but it passed by him as a vision, though—

"And as a man with mighty loss dismayed,  
I would have followed, though the grave  
between  
Yawned like a gulf whose spectres are  
unseen:  
When a voice said,— 'O thou of hearts the  
weakest,  
The phantom is beside thee whom thou  
seekest.'  
Then I,— 'Where?' The world's echo an-  
swered, 'Where'!"

She ever remained the veiled divinity of thoughts that worshipped her, while he went forth into the world with hope and fear,—

“Into the wintry forest of our life;  
And struggling through its error with vain strife,  
And stumbling in my weakness and my haste,  
And half bewildered by new forms, I passed  
Seeking among those untaught foresters  
If I could find one form resembling hers  
In which she might have masked herself  
from me.”

The passage grows more and more intelligible. Hitherto he has been simply a dreamy seeker; but now, at last, he thinks that Fate has answered his questioning exclamation, “Where?”

“There, one whose voice was venomed melody  
Sat by a well, under the nightshade bowers:  
The breath of her false mouth was like faint flowers;  
Her touch was as electric poison; flame  
Out of her looks into my vitals came;  
And from her living cheeks and bosom flew  
A killing air which pierced like honey-dew  
Into the core of my green heart, and lay  
Upon its leaves,—until, as hair grown gray  
O'er a young brow, they hid its unblown prime  
With ruins of unseasonable time.”

This is a plain and only too intelligible reference to the college experiences to which I have alluded. The youth for the moment thought that he had encountered her whom he was seeking, but, instead of the Florimel, he found her venal, hideous, and fatal *simulacrum*; and he indicates even the material consequences to himself in his injured aspect and hair touched with gray. He continues his search.

“In many mortal forms I rashly sought  
The shadow of that idol of my thought:  
And some were fair,—but beauty dies away;  
Others were wise,—but honeyed words betray;  
And one was true,—oh! why not true to me?  
Then, as a hunted deer that could not flee,  
I turned upon my thoughts and stood at bay.”

“Oh! why not true to me?” has been taken by some very few who were cognizant of the facts as constituting an imputation on the one whom he first married; but I am convinced that the interpretation is wrong, although the surmise on which that interpretation is based was partly correct. Nothing is more evident than the fact that Harriet possessed rather an unusual degree of ability, but enormously less than Shelley desired in the being whom he sought, and equally less than his idealizing estimate originally ascribed to her. It is also plain, from her own letters, that she courted his approval in a way far too common with the wives of the artist-tribe, and perhaps with most wives: not being exactly what he wished her to be, and lacking the faculties to become so, she tried to seem it. The desire was partly sincere, partly an affectation, as we discern in such little trifles as her suddenly using the word “thou” in a letter to Hookham where she had previously been using the ordinary colloquial “you.” That she was not quite ingenuous we also detect in the fast-and-loose conduct which enabled her, while affecting to become what Shelley deemed her to be, also to play into the hands of very inferior people, who must sometimes have counselled her against him behind his back; and this, I am sure, is what he means by “Oh! why not true to me?” though he may include in the question a fervent regret for the fate which attended her wandering from him. “Then like a hunted deer he turned upon his thoughts and stood at bay,” until

“The cold day  
Trembled, for pity of my strife and pain,  
When, like a noonday dawn, there shone  
again  
Deliverance. One stood on my path who  
seemed  
As like the glorious shape that I had dreamed  
As is the Moon, whose changes ever run  
Into themselves, to the eternal Sun.”

“The cold chaste moon” fails to satisfy the longing of his soul. “At her

silver voice came death and life"; hope and despondency, expectation from her noble qualities, disappointment at the failure of response, were feelings that sprang from the exaggerations of his ideal longings.

"What storms then shook the ocean of my sleep,  
Blotting that Moon whose pale and waning lips  
Then shrank as in the sickness of eclipse!"

The whole passage is worth perusing; and again wrong interpretation has been given to this portion of his writing. I am still more firmly convinced that in the other case, when he says, "The planet of that hour was quenched," he alludes to nothing more than the partial failure of his own ideal requirements. At length into the obscure forest came

"The vision I had sought through grief and shame.

I stood and felt the dawn of my long night  
Was penetrating me with living light:  
I knew it was the vision veiled from me  
So many years, — that it was Emily."

To grasp the entire meaning of this autobiographical episode, we must remember the extent to which Shelley idealizes. "More popular poets clothe the ideal with familiar and sensible imagery; Shelley loved to idealize the real, — to gift the mechanism of the material universe with a soul and a voice, and to bestow such also on the most delicate and abstract emotions and thoughts of the mind. Sophocles was his great master in this species of imagery." The heroine of the "Epipsychidion" is an imagination; a creature, like Raphael's Galatea, copied from no living model, but from "*una certa idea*"; a thing originally created by himself, and suggested only by the living portrait, as each one of the admired had previously suggested its ideal counterpart. Emilia, then, was the bride of a dream, and, in the indulgence of disappointed longing for a fuller satisfaction of his soul, Shelley mournfully contrasts this

vision, who had so eloquently responded to his idealizing through her convent-bars, with Mary, whose stubborn, independent realism had checked and daunted him.

But the last year of Shelley's life had involved a very considerable progress in the formation of his intellectual character. The "Prometheus Unbound," perhaps at once the most characteristic and the most perfect of all his works, is identical in spirit and tendency even with the earliest, "Queen Mab"; but a re-perusal of it in comparison with the other writings, even the "Revolt of Islam," will show a more distinct presentment of the original ideas, coupled with a much more measured suggestion for acting on them, and a far less bitter allusion to the obstacles; while the charity and love are more all-embracing and apparent than ever. Imperfect as it is for dramatic representation, shortcoming even in the power to trace the working of emotions and ideas in utterly diverse characters, the "Cenci" does indicate a stronger aptitude for sympathy with other creatures on their own terms than any other of the poet's writings. He had, therefore, sobered in judgment, without declining in his inborn genius; but, on the contrary, with a clearer sense of the limits placed upon individual action, he had gained strength; and I feel certain that a corresponding change had taken place in his perception of the true import and value of characters unlike his own. The last few months of his life at Lerici had very materially contributed to this change. Although I cannot recall any distinct statement to that effect by Mary Shelley, her conversation had left that impression on me; it is also suggested by the way in which he himself spoke of it, and is fully confirmed by the tone of the letters addressed to her from Pisa.

All who have attempted to portray Shelley, either intellectually or physically, have done so from some appreciable, almost personal point of view.

When many eyes see one object, it presents itself in as many different aspects, and the description given by each bears often a slight resemblance to that of others. So it has been with Shelley. The artistic portraits of him have happened to be particularly imperfect. I remember seeing a miniature by an amateur friend which actually suggested a form broad and square. The ordinarily received miniature is like almost all of its tribe, and resembles Shelley about as much as a lady in a book of fashions resembles real women; and it constitutes evidence all the more detrimental and misleading, since it appears to give as well as to receive a color of verisimilitude from the usual written description, which represents Shelley as "feminine," "almost girlish," "ideal," "angelic," and so forth. The accounts of him by firmer hands are still cramped by the individuality of the authorship.

His school-friend, Hogg, is a gentleman of independent property; Shelley detected the sensitiveness of his nature; and I know that the man has been capable of truly generous conduct. How is it, then, that he has written such utterly unintelligible stuff, and has descended to such evasions as to insert initials, lest people should detect amongst Shelley's correspondents a most admirable friend, who happened, it is supposed, to be of plebeian origin? Mr. Thomas Jefferson Hogg, I surmise, was conscious, somewhat early in life, that his better qualities were not fully appreciated; and his love of ease, his wit, his perception of the ludicrous, made him take refuge in cynicism until he learned almost to forget the origin of the real meaning of the things he talked about. His account of Shelley is like a figure seen through fantastically distorting panes of glass.

Thomas Love Peacock, again, is a man to whose extraordinary powers Shelley did full justice. He has worked through a long official career without losing his very peculiar dry wit; but a dry wit was not the man exactly

to discern the form of Shelley's mind, or to portray it with accuracy and distinctness.

Few men knew the poet better than my father; but a mind checked by "over-refinement," excessive conscientiousness, and an irresistible tendency to find out niceties of difference,—a mind, in short, like that of Hamlet, cultivated rather than corrected by the trials of life, was scarcely suited to comprehend the strong instincts, indomitable will, and complete unity of idea which distinguished Shelley. Accordingly we have from my father a very doubtful portrait, seldom advancing beyond details, which are at once exaggerated and explained away by qualifications.

Byron, I suspect, through the natural strength of his perceptive power, was likely to have formed a better design; but the two were separated soon after he had begun to learn that such a man as Shelley might be found on the same earth with himself.

One or two others that have written have been mere tourists or acquaintances. Unquestionably the companion who knew him best of all was Mary; and although she lacked the power of distinct, positive, and absolute portraiture, her writings will be found to contain, together with his own, the best materials for forming an estimate of his natural character.

The real man was reconcilable with all these descriptions. His traits suggested everything that has been said of him; but his aspect, conformation, and personal qualities contained more than any one has ascribed to him, and more indeed than all put together. A few plain matters-of-fact will make this intelligible. Shelley was a tall man,—nearly, if not quite, five feet ten in height. He was peculiarly slender, and, as I have said already, his chest had palpably enlarged after the usual growing period. He retained the same kind of straitness in the perpendicular outline on each side of him; his

shoulders were the reverse of broad, but yet they were not sloping, and a certain squareness in them was naturally incompatible with anything feminine in his appearance. To his last days he still suffered his chest to collapse; but it was less a stoop than a peculiar mode of holding the head and shoulders, — the face thrown a little forward, and the shoulders slightly elevated; though the whole attitude below the shoulders, when standing, was unusually upright, and had the appearance of lighthness and activity. I have mentioned that bodily vigor which he could display; and from his action when I last saw him, as well as from Mary's account, it is evident that he had not abandoned his exercises, but the reverse. He had an oval face and delicate features, not unlike those given to him in the well-known miniature. His forehead was high. His fine, dark brown hair, when not cut close, disposed itself in playful and very beautiful curls over his brows and round the back of his neck. He had brown eyes, with a color in his cheek "like a girl's"; but as he grew older, his complexion bronzed. So far the reality agrees with the current descriptions; nevertheless they omit material facts. The outline of the features and face possessed a firmness and *hardness* entirely inconsistent with a feminine character. The outline was sharp and firm; the markings distinct, and indicating an energetic *physique*. The outline of the bone was distinctly perceptible at the temples, on the bridge of the nose, at the back portion of the cheeks, and in the jaw, and the artist could trace the principal muscles of the face. The beard also, although the reverse of strong, was clearly marked, especially about the chin. Thus, although the general aspect was peculiarly slight, youthful, and delicate, yet, when you looked to "the points" of the animal, you saw well enough the indications of a masculine vigor, in many respects far above the average. And what I say of the physical aspect of course bears

upon the countenance. That changed with every feeling. It usually looked earnest, — when joyful, was singularly bright and animated, like that of a gay young girl, — when saddened, had an aspect of sorrow peculiarly touching, and sometimes it fell into a listless weariness still more mournful; but for the most part there was a look of active movement, promptitude, vigor, and decision, which bespoke a manly, and even a commanding character.

The general tendency that all who approached Shelley displayed to yield to his dictate is a practical testimony to these qualities; for his earnestness was apt to take a tone of command so generous, so free, so simple, as to be utterly devoid of offence, and yet to constitute him a sort of tyrant over all who came within his reach.

The weakness ascribed to Shelley's voice was equally taken from exceptional instances, and the account of it usually suggests the idea that he spoke in a falsetto which might almost be mistaken for the "shriek" of a harsh-toned woman. Nothing could be more unlike the reality. The voice was indeed quite peculiar, and I do not know where any parallel to it is likely to be found unless in Lancashire. Shelley had no ear for music, — the words that he wrote for existing airs being, strangely enough, inappropriate in rhythm and even in cadence; and though he had a manifest relish for music and often talked of it, I do not remember that I ever heard him sing even the briefest snatch. I cannot tell, therefore, what was the "register" of his singing voice; but his speaking voice unquestionably was then of a high natural counter-tenor. I should say that he usually spoke at a pitch somewhere about the D natural above the base line; but it was in no respect a falsetto. It was a natural chest-voice, not powerful, but telling, musical, and expressive. In reading aloud, the strain was peculiarly clear, and had a sustained, song-like quality, which came out more strongly when,

as he often did, he recited verse. When he called out in pain, — a very rare occurrence, — or sometimes in comic playfulness, you might hear the “shrillness” of which people talk; but it was only because the organ was forced beyond the ordinary effort. His usual speech was clear, and yet with a breath in it, with an especially distinct articulation, a soft, vibrating tone, emphatic, pleasant, and persuasive.

It seems to me that these physical characteristics forcibly illustrate the moral and intellectual genius of the man. The impulsiveness which has been ascribed to him is a wrong expression; for it is usually interpreted to mean the action of sudden motives waywardly, capriciously, or at least intermittingly working; whereas the character which Shelley so constantly displayed was an overbearing strength of conviction and feeling, a species of audacious, but chivalrous readiness to act upon conviction as promptly as possible, and, above all, a zealous disposition to say out all that was in his mind. It is better expressed by the word which

some satirist put into the mouth of Coleridge, speaking of himself, and, instead of impulsiveness, it should have been called an “utterancy,” coupled with decision and promptitude of action. The physical development of the man with the progress of time may be traced in the advancement of his writings. The physical qualities which are equally to be found in his poetry and prose were quite as manifest in his aspect, and not less so in his conduct of affairs. It must be remembered that his life terminated long before he had arrived half-way, “*nel mezzo del cammin di nostra vita,*” when more than one other great intellect has been but commencing its true work. I believe, that, if Shelley had lived, he would himself have been the most potent and useful commentator on his own writings, in the production of other and more complete works. But meanwhile the true measure of his genius is to be found in the influence which he has had, not only over those who have proclaimed their debt to him, but over numbers who have mistrusted and even denounced him.

---

### THE TEST.

“FAREWELL awhile, my bonnie darling!  
 One long, close kiss, and I depart:  
 I hear the angry trumpet snarling,  
 The drum-beat tingles at my heart.”

Behind him, softest flutes were breathing  
 Across the vale their sweet recall;  
 Before him burst the battle, seething  
 In flame beneath its thunder-pall.

All sights and sounds to stay invited;  
 The meadows tossed their foam of flowers;  
 The lingering Day beheld, delighted,  
 The dances of his amorous Hours.

He paused: again the fond temptation  
 Assailed his heart, so firm before,

And tender dreams, of Love's creation,  
Persuaded from the peaceful shore.

"But no!" he sternly cried; "I follow  
The trumpet, not the shepherd's reed:  
Let idlers pipe in pastoral hollow, —  
Be mine the sword, and mine the deed!"

"Farewell to Love!" he murmured, sighing:  
"Perchance I lose what most is dear;  
But better there, struck down and dying,  
Than be a man and wanton here!"

He went where battle's voice was loudest;  
He pressed where danger nearest came;  
His hand advanced, among the proudest,  
Their banner through the lines of flame.

And there, when wearied Carnage faltered,  
He, foremost of the fallen, lay,  
While Night looked down with brow unaltered,  
And breathed the battle's dust away.

There lying, sore from wounds untended,  
A vision crossed the starry gleam:  
The girl he loved beside him bended,  
And kissed him in his fever-dream.

"Oh, love!" she cried, "you fled, to find me;  
I left with you the daisied vale;  
I turned from flutes that wailed behind me,  
To hear your trumpet's distant hail.

"Your tender vows, your peaceful kisses,  
They scarce outlived the moment's breath;  
But now we clasp immortal blisses  
Of passion proved on brinks of Death!"

"No fate henceforward shall estrange her  
Who finds a heart more brave than fond;  
For Love, forsook this side of danger,  
Waits for the man who goes beyond!"

## THE PREACHER'S TRIAL.

SITTING in my New-England study, as do so many of my tribe, to peruse the "Atlantic," I wonder whether, like its namesake, hospitable to many persons and things, it will for once let me write as well as read, and launch from my own calling a theme on its bosom. Our cloth has been worn so long in the world, I doubt how far it may suit with new fashions in fine company-parlors; but, seeing room is so cordially made for some of my brethren, as the Reverend Mr. Wilbur and "The Country Parson," to keep up the dignity of the profession, I am emboldened to come for a day with what the editorial piety may accept, "rejected article" as it might be elsewhere.

The pulpit has lost something of its old sacredness in the general mind. There is little popular superstition to endure its former dictation. No exclusive incarnate theocracy in any particular persons is left. Leviticus and the Hebrew priesthood are gone. Church, ministry, and Sabbath are the regular targets taken out by our moral riflemen and archers, though so seldom to hit fair in the centre, that we may find ourselves, like spectators at the match, respecting the old targets more than we do the shots. Yet homilies and exhorters are thought fair game. I have even heard splendid lecturers whose wit ran so low or who were so pushed for matter as to talk of what divinity-students wear round their necks, which seems a superficial consideration. The anciently venerated desk has two sharp enemies, the radical and the conservative, aiming their artillery from opposite sides, putting it somewhat in the position of the poor fish who is in danger from diverse classes of its fellow-creatures, one in the air and one in the water, and knows not whether to dive or rise to the surface, till it can conclude which is the more pleasant exit from life, to be hawked at or swallowed outright.

While, however, critics and reformers

fail to furnish a fit substitute for the sermon, and the finest essays show not only Bacon's "dry light," but a very cold one too, and the wit and humor of the lyceum fall short of any mark in the conscience of mankind, and philanthropy uses stabbing often instead of surgery, a clerical institution, on whose basis direct admonition can be administered by individuals without egotism or impertinence, maintains an indefeasible claim. Indeed, as was fancied of the innocent in the ordeal by fire, or like the children from the furnace, it comes out the other side of all censure, with some odor of sanctity yet on its unsinged robes and new power in higher quarters in its hands. Defective, indeed, it is. If some of its organs could speak a little more in their natural voice, and could, moreover, wash off the deformity of this Indian war-paint of high-wrought rhetoric, — if they could use a little more of the colloquial earnestness of the street and table in their style, instead of those freaks of eloquence which, among all our associations, there ought to be a society to put down, — they would more honor their vocation, and effect its purpose of saving human souls. Let us not be so loud-mouthed, or bluster as we do. Our declamation will have to hush its barbarian noise some time. Nothing but conversation will be left in heaven; and it were well, could we have on earth sober and thoughtful assemblies, at blood-warmth instead of fever-heat, rather than those over-crowded halls from which *hundreds go away unable to obtain admission.*

But the present design is a plea for justice, not a fresh charge. The pulpit is to teach religion in application to life. But when we reflect what life is, how deep in the soul, how wide in the world, how complicated and delicate in its affairs and ties, — and when we consider what religion is, the whole truth of heaven respecting all the operations of earth, — a kindly judgment is required for un-

avoidable short-comings and ministerial mistakes. With different ages, sexes, experiences, states of mind, degrees of intelligence and impressibility in a congregation, it is a rare felicity for a sermon to reach all its members with equal impressiveness or acceptance. Who ever heard a uniform estimate of any discourse? There seems almost a curse upon the preacher's office from its very greatness, so that it is never finished, and no portion of it can be done perfectly well and secure against all objection. If he try to unfold the deep things of the Spirit, and bring his best thoughts, which he would not throw away, before his audience, though in language clearer than many a chapter of Paul's Epistles, *some* will call the topic obscure, and complain that their children cannot understand it, quoting, perhaps, the old sentence, that all truth necessary to salvation is so plain that he who runs may read, and the way-faring man, though a fool, cannot err therein, and commending superficial homilies on other tongues to censure whatever is profound from his. But should the poor occupant of the desk venture to emulate this eulogized sonorous exhortation, exerting himself to come down to the ignorant and the young, there will be *some* to stigmatize that, too, as a sort of trifling and disrespect to mature minds. He has by a senior now and then been blamed for excessive attention to the lambs of his flock, and annoyed with the menace to stay away, if they were especially to be noticed. If a visitation of special grace or an exaltation of physical strength make the mortal incumbent happy in his exposition, so that he is listened to with edification and delight, it is, by *some*, not passed over to his credit at the ebb-tide of his power. Half the time the house is not half full, as though the institution which all order to be conducted nobody but he is bound to shoulder. If the preacher labor to express the mysterious relationship between God and Christ, the divine and human nature, he will be considered by *some* a sectarian, controversialist, or heretic. If he un-

fold what is above all denominational disputes, he will be fortunate to escape accusations of transcendentalism, pantheism, spiritualism. If, lucky man, he go scot-free of such indictment, a last stunning stroke, in the gantlet he runs, will be sure to fetch him up, in the vague and unanswerable imputation of being *very peculiar in his views*. If he insist on the miracles as literal facts, he will be laughed at as old-fashioned in one pew; if he slight them, he will be mourned over as unsound in the next. Men grumble at taxes and tolls: alas! nobody is stopped at so many gates and questioned in so many ways as he. If he take in hand the tender matter of consoling stricken hearts, the ecstasy of his visions will not save his topic from being regarded by some as painful, and by others as a mere shining of the moon. He will receive special requests not to harrow up the feelings he only meant to bind up in balm. He may be informed of an aversion, more or less extensive, to naming the *grave* or *coffin* and what it contains, though he only puts one foot by pall or bier to plant the other in paradise. If he turn the everlasting verities he is intrusted with to events transpiring on the public stage, though he never sided with any party in his life, and has no more committed himself to men than did his Master, *some* will be grieved at his *preaching politics*. His head has throbbled, his heart ached, his eyes were hot and wet once before he uttered himself; but he must suffer and weep worse afterwards, because he went too far for one man and not far enough for another. He is told, one day, that he is too severe on seceders, and the next, ironically, that, with such merciful sentiments towards them, he ought always to wear a cravat completely white. One man is amused at his sermon, and another thinks the same is sad. He will be asked if he cannot give a little less of one thing or more of another, as though he were a dealer in wares or an exhibiter of curious documents for a price, and could take an article from this or that shelf, or a paper

from any one of a hundred pigeon-holes, when, if he be a servant of the Lord and organ of the Holy Ghost, he has no choice and is shut up to his errand,—necessity is laid upon him, woe is unto him if he deliver it not, but, like another Jonah, flee to Tarshish when the Lord tells him to go to Nineveh and cry against its wickedness; and he feels through every nerve that truth is not a thing to be carried round as merchandise or peddled out at all to suit particular tastes, to retain old friends or win new ones, hard as it may go, to the anguish of his soul, to lose the good-will of those he loves, and whose distrust is a chronic pang, though they come to love him again all the more for what he has suffered and said. But if, passing by discussions of general interest, and exposing himself to the hint of being behind the times, he grapple with the sins immediately about him, board the false customs of society and trade, and strike with the sword of the Lord at private vices and family faults, he will be blamed as very *personal*, and be apprised of his insults to those of whom in his delivery he never thought, as he may never preach *at* anybody, or even to anybody, in his most direct thrusting, more than to himself, reaching others only through his own wounded heart. Meantime, some of his ecclesiastical constituents will suspect him, in his local ethics, of leniency to wide-spread corruption; and professed philanthropists will brand him as a trimmer and coward, recreant, fawning, and dumb,—the term *spaniel* having been flung at one of the best men and most conscientious ministers that ever lived, simply because he could not vituperate as harshly as some of his neighbors. Some would have him remember only those in bonds; others say they cannot endure from him even the word *slavery*. Blessed, if, from all these troubles, he can, for solace, and with a sense of its significance, bethink himself of Christ's saying to his disciples, "Woe unto you, when all men shall speak well of you!" Thrice blessed, if he have an assurance within of having striven to be faithful,

and in that inward certificate possess the peace which passeth understanding!

I intend not, by my simple story, which has in it no fiction, to add to the lamentations of the old prophet, nor will allow Jeremiah to represent all my mood. It is perfectly fit the laity should criticize the clergy. The minister,—who is he but one of the people, set apart to particular functions, open to a judgment on the manner of their discharge, from which no sacred mission or supposed apostolic succession can exempt, the Apostles having been subject to it themselves? Under their robes and ordinances, in high-raised desks, priest and bishop are but men, after all. Ministers should be grateful for all the folk's frankness. Only let the criticism be considerate and fair; and in order to its becoming so, let us ascertain the perfect model of their calling. Did not their Master give it, when he said, "The field is the world"? If so, then to everything in the world must the pulpit apply the moral law. What department of it shall be excused? *Politics*,—because it embraces rival schools in the same worshipping body, and no disinterested justice in alluding to its principles can be expected from a preacher, or because whoever disagrees with his opinions must be silent, there being on Sunday and in the sanctuary no decency allowed of debate or reply, and therefore whatever concerns the civil welfare and salvation of the community is out of the watchman's beat now, though God so expressly bade him warn the city of old? *Commerce*,—because a minister understands nothing of the elements and necessities of business, and must blunder in pointing to banks and shops or any transactions of the street, though an old preacher, called Solomon, in his Proverbs refers so sharply to the buyer and the seller? *Pleasure*,—because the servant of the Lord cannot be supposed to sympathize with, but only to denounce, amusement which poor tired humanity employs for its recreation, though Miriam's smiting of her timbrel, which still rings from the borders of the raging Red Sea, and David's

dancing in a linen ephod with all his might before the Lord, when the ark on a new cart came into the city, were a sort of refreshment of triumphant sport? *The social circle*, — because of course he cannot go to parties or comprehend the play of feeling in which the natural affections run to and fro, and should rather be at home reading his Bible, turning over his Concordance, and writing his sermon, letting senate and dance, market and exchange, opera and theatre, fights and negotiations go to the winds, so he only comes duly with his *exegesis* Sunday morning to his place? In short, is the minister's concern and call of God only, with certain imposing formalities and pre-arranged dogmas, to greet in their Sunday-clothes his friends who have laid aside their pursuits and delights with the gay garments or working-dress of the week, never reminding them of what, during the six days, they have heard or where they have been? "No!" let him say; "if this is to be a minister, no minister can I be!" For what is left of the field the Lord sends the minister into? It is cut up and fenced off into countless divisions, to every one of which some earthly agent or interest brings a title-deed. The minister finds the land of the world, like some vast tract of uncivilized territory, seized by wild squatters, owned and settled by other parties, and, as a famous political-economist said in another connection, there is no cover at Nature's table for him. As with the soldier in the play, whose wars were over, *his* "occupation's gone."

What is the minister, then? A ghost, or a figure like some in the shop-window, all made up of dead cloth and color into an appearance of life? Verily, he comes almost to that. But no such shape, no spectre from extinct animation of thousands of years ago, like the geologist's skeletons reconstructed from lifeless strata of the earth, can answer the vital purposes of the revelation from God. Of no pompous or abstract ritual administration did the Son of God set an example. He had a parable for the stew-

ard living when *He* did; He called King Herod, then reigning, *a fox*, and the Scribes and Pharisees hypocrites; He declared the prerogatives of His Father beyond Cæsar's; He maintained a responsibility of human beings coextensive with the stage and inseparable from the smallest trifle of their existence. He did not limit His marvellous tongue to antiquities and traditions. He used the mustard-seed in the field and the leaven in the lump for His everlasting designs. His finger was stretched out to the cruel stones of self-righteousness flying through the air, and phylacteries of dissimulation worn on the walk. He was so *political*, He would have saved Jerusalem and Judea from Roman ruin, and wept because He could not, with almost the only tears mentioned of His. Those who teach in His name should copy after His pattern.

"*Confine yourselves to the old first Gospel, preach Christianity, early Christianity*," we ministers are often told. But what is Christianity, early or late, and what does the Gospel mean, but a rule of holy living in every circumstance now? Grief and offence may come, as Jesus says they must; misapplications and complaints, which are almost always misapprehensions, may be made; but are not these better than indifference and death? No doubt there is a prudence, and still more an impartial candor and equity, in treating every matter, but no beauty in timid flight from any matter there is to treat. The clergyman, like every man, speaks at his peril, and is as accountable as any one for what he says. He ought justly and tenderly to remember the diverse tenets represented among his auditors, to side with no sect as such, to give no individual by his indorsement a mean advantage over any other, nor any one a handle of private persecution by his open anathema. Moreover, he should abstain from that particularity in secular themes which so easily wanders from all sight of spiritual law amid regions of uncertainty and speculative conjecture. He should shun explorations less fit for prophets than for

experts. He should lay his finger on no details in which questions of right and wrong are not plainly involved. He must be public-spirited; he cannot be more concerned for his country and his race, that righteousness and liberty and love may prevail, than divine seers have ever been, as their books of record show; but, if he becomes a mere diplomatist, financier, secretary-of-state, or military general, in his counsels or his tone, he evacuates his own position, flees as a craven from his post, and assumes that of other men. Yet it is an extreme still worse for him to resort to lifeless generalities of doctrine and duty, producing as little effect as comes from electric batteries or telegraphic wires when no magnetic current is established and no object reached. What section of the world should evade or defy the law of God?

O preachers, beware of your sentimental descent on the worth of goodness, the goodness of being good, and the sinfulness of sin, without specifying either! It is a blank cartridge, or one of treacherous sand instead of powder, or a spiked gun, only whose priming explodes without noise or execution. Let nobody dodge the sure direction of that better than lead or iron shot with which from you the conscience is pierced and iniquity slain. Suffer not the statesman to withdraw his policy, nor the broker his funds, nor the captain the cause he fights for, from the sentence of divine truth on the good or evil in all the acts of men.

The preacher, however, as he pronounces or reports that sentence, must never forget the bond he is under in his own temper to the spirit of impartial love. Whatever is vindictive vitiates his announcement all the more that he cannot be rebuked for it, as he ought to be, on the spot. Only let not the hearers mistake earnestness for vindictiveness. If kindly and with intense serenity he communicates what he has struggled long and hard to attain, then for their own sake, if not for his, they should beware of visiting him either with silent distrust or open reproach. He, just like them, must stand

or fall according to his fidelity to the oracles of God. Only, once more, let him and let the Church comprehend that those oracles are not summed up in any laborious expounding of verbal texts. "The letter killeth," unless itself enlivened through the immediate Providence.

To be true to God, the preacher must be true to his time, as the Prophets, Jesus, and the Apostles were to theirs. The pulpit dies of its dignity, when it creeps into the exhausted receiver of foregone conclusions, and has nothing to say but of Adam and Pharaoh, Jew and Gentile, Palestine and Tyre so far away. Its decorum of being inoffensive to others is suicidal for itself. It is the sleep of death for all. As the inductive philosopher took all knowledge for his province, it must take all life. We have, indeed, a glorious and venerable charter of inestimable worth in our map of the religious history of mankind through centuries that are gone. We must study the true meaning of the Bible, *the book* and chief collection of the records of faith, precious above all for the immortal image and photograph, in so many a shifting light and various expression, of the transcendent form of divinity through manhood in Him to be ever reverently and lovingly named, Jesus Christ. But there is a spirit in man. "The word of God," says an Apostle, "is not bound"; nor can it be wholly bound up. The Holy Spirit of God that first descended never died, and never ceased to act on the human soul. The day of miracles is not past,—or, if none precisely like those of Jesus are still wrought, miracles of grace, the principal workings of the supernatural, of which external prodigies are the lowest species, are performed abundantly in the living breast. Jesus Himself, after all the sufficient and summary grandeur of His instructions, assures His followers of the Spirit that would come to lead them, beyond whatsoever He had said, into all truth. In that dispensation of the Spirit we live. Its sphere endures through all change, impregnable. It is "buildd far from accident." No progress of earthly science can threat or hurt

its eternal proportions. It is the supreme knowledge, and to whoever enters it a whisper comes whose only response is the confession of our noble hymn, —

“True science is to read Thy name.”

Much is said of a contradictory relation of science to faith. But the statement is a misnomer. True faith is the highest science, even the knowledge of God. Putting fishes or birds, shells or flowers, stones or stars, in a circle or a row is a lower science than the sublime intercommunication of the soul by prayer and love with its Father. Mere physical, without spiritual science, has no bottom to hold anything, and no foundation of peace. The king of science is not the naturalist as such, but the saint conversing with Divinity, — not so much Humboldt or La Place as Fénelon or Luther. So far as the progress of outward science saps accredited writings, they must give way, or rather any false conceptions of Nature they imply must yield, leaving whatever spirituality there is in them untouched. But this is from no essential contradiction between science and religious faith. What faith or religion is there in believing the world was made in six days? Less than in calculating, with Agassiz, by the coral reefs of Florida, that to make one bit of it took more than sixty thousand years. Religious faith, what is it? It is the trembling transport with which the soul hearkens and gives itself up to God, in sympathy with all likewise entranced souls. But from such consecrated listening to the voice of Deity, fresh in our bosom or echoed from without by those He has inspired, we verify the rule already affirmed, and fetch advice and command for all the affairs of life. It is emphatically the minister's duty thus to join the vision to the fact, that they may strike through and through one another. Certainly, so the true minister's speech should run. Let him stand up and boldly say, or always imply, “I so construe it; and if the *Church* interpret it otherwise, the *Church* is no place for me. If the *world* will accept no such method, the world is no

place for me. I see not why I was born, or what with *Church* or world I have to do. From *Church* and world I should beg leave to retire, trusting that God's Universe, somewhere beyond this dingy spot, is true to the persuasion of His mind. I must apply religion universally to life, or not at all. If, when my country is in peril, I cannot bring her to the altar and ask that she may be lifted up in the arms of a common supplication, — if, in the terrible game of honesty with political corruption, when ‘*Check*’ is said to the adverse power, I cannot wish and pray that ‘*Check-mate*’ may follow, — when some huge evil, sorely wounded, in its fierce throes spreads destruction about, as the dying monster in Northern seas casts up boat-loads of dying men who fall bruised and bleeding among the fragments into the waves with the threshing of its angry tail, if then I cannot hope that the struggle may be short, and the ship of the Republic gather back her crew from prevailing in the conflict to sail prosperous with all her rich cargo of truth and freedom on the voyage over the sea of Time, — if no sound of the news-boy's cry must mix with the echoes of solemn courts, and no reflection of wasting fires in which life and treasure melt can flash through their windows, and no deeds of manly heroism or womanly patriotism are to have applause before God and Christ in the temple, — if nothing but some preëxisting scheme of salvation, distinct from all living activity, must absorb the mind, — then I totally misunderstand and am quite out of my place. Then let me go. It is high time I were away. I have stayed too long already.” Such should be the speech of the minister, knowing he is not tempted to be a partisan, and is possessed with but an over-kind sensibility to dread any ruffling of others' feelings or discord with those that are dear.

In the first year of a young minister's service, Dr. Channing besought him to let no possible independence of parochial support relax his industry: a needless caution to one not constituted to feel seductions of sloth, in whom active ener-

gy is no merit, and who can have no motive but the people's good. What else is there for him to seek? There is no by-and open, and no virtue in a devotedness there is no lure to forego. There is no position he can covet, as politicians are said to bid for the Presidency. But one thing is indispensable: he must tell what he thinks; he is strong only in his convictions; the sacrifice of them he cannot make; it were but his debility, if he did; and the treasury of all the fortunes of the richest parish were no more than a cipher to purchase it from any one who, quick as he may be to human kindness, may have a more tremulous rapture for the approbation of God.

After all, to his profession and parish the preacher is in debt. Exquisite rewards his work yields. If controversy arise on some point with his friends, there may, after a while, be no remnant of hard feeling,—as there are heavy cannonades, and no bit of wadding picked up. Those who have striven with or defamed may come to cherish him all the more for their alienation. Those who could not hear him, or, when they heard, thought him too long, or what they heard did not like, may own with him, out of their discontent, closer and sweeter bonds. His business is expansive in its nature. The seasons of human life in broad representation are always before him. How many moral springs and summers, autumns and winters he sees, till he can hardly tell whether his musing on this curious existence be memory or hope, retrospect of earth or prospect of heaven! and he begins to think the spiritual world abolishes distinctions of spheres and times, as parents, that were his lambs, bring their babes to his arms, and, even in the flesh, his mortal passing into eternal vision, he beholds, as in vivid dreaming, other parents leading their children on other shores, unseen, though hard by. Where, after a score or two of years, is his church? He has several congregations,—one within the ded-

icated walls, one of emigrants whom his fancy instead of the bell assembles, and a third of elders and little ones gone back through the shadow of mystery whence they came. In what abides of the flock nothing remains as it was. Wondrous transformations show maturity or decline in the very forms that, to his also changing eye and hand, once wore soft cheeks and silken locks. In his experience, miracle is less than creation and lower than truth. He cannot credit Memory's ever losing her seat, he has such things to remember. The best thereof can never be written down, published, uttered by orators, or blown from the trumpet of Fame, whose "brave instrument" must put up with a meaner message and inferior breath. Out of his affections are born his beliefs; earth is the cradle of his expectancy and persuasion of heaven; and not otherwise than through the glass of his experience could he have sight of a sphere of ineffable glory for better growth than Nature here affords in all her gardens and fields.

So let the preacher stand by his order. But let him be just, also, to the constituency from which it springs. Hearty and cheerful, though obscure worker, let him be. Let him fling his weaver's shuttle still, daily while he lives, through the crossing party-colored threads of human life, till, in his factory too, beauty flows from confusion, contradiction ends in harmony, and the blows with which each one has been stricken form the perfect pattern from all. There is a unity which all faithful labor, through whatever jars, consults and creates. Of all criticisms the resultant is truth; be the conflicts what they may, the issue shall be peace; and one music of affection is yet angelically to flow from the many divided notes of human life. Who is the *minister*, then? No ordained functionary alone, but every man or woman that has lived and served, loved and lamented, and now, for such ends, suffers and hopes.

## THE GHOST OF LITTLE JACQUES.

How quiet the saloon was, that morning, as I groped my way through the little white tables, the light chairs, and the dimness of early dawn to the windows. It was my business to open the windows every morning, finding my way down as best I could; for it was not permitted to light the gas at that hour, and no candles were allowed, lest they should soil the furniture. This morning the glass dome which brightened the ceiling, and helped to lighten the saloon, was of very little effect, so cloudy and dusk was the sky. The high houses which shut in the strip of garden on all sides reflected not a ray of light. A chill struck through me, as I passed along the marble pavement; a saloon-dampness, empty, vault-like, hung about the fireless, sunless place; and the splashing of the fountain which dripped into the marble basin beyond—dropping, dropping, incessantly—struck upon my ear like water trickling down the side of a cave.

It had never occurred to me to think the place lonely or dreary before, or to demur at this morning operation of opening it for the day; a tawdry, gilded, showy hall, it had seemed to me quite a grand affair, compared with those in which I had hitherto found employment. Now I shuddered and shivered, and felt the task, always regarded as a compliment to my honesty, to be indeed hard and heavy enough.

It might have been—yet I was not a coward—that the little coffin in that little room at the end of the saloon had something to do with this uneasiness. On each side of that narrow room (which opened upon a long hall leading to the front of the building) were the small windows looking out upon the garden, which I always unbolted first. I say I do not know that this presence of death had anything to do with my trepidation. The death of a child was no

very solemn or very uncommon thing in my master's family. He had many children, and, when death thinned their ranks, took the loss like a philosopher,—as he was,—a French philosopher. He philosophized that his utmost exertions could not do much more for the child than bequeath to him just such a life as he led, and a share in just such a saloon as he owned; and therefore, if a priest and a coffin insured the little innocent admission into heaven without any extra charge, he would not betray such lack of wisdom as to demur at the proposition. Therefore, very quietly, since I had been in his employ, (about a twelvemonth,) three of his children, one by one, had been brought down to that little room at the end of the saloon, and thence through the long hall, through the crowded street out to some unheard-of burying-ground, where a pot of flowers and a painted cross supplied the place of a head-stone. The shop was not shut up on these occasions: that would have been an unnecessary interference with the comfort of customers, and loss of time and money. The necessity of providing for his little living family had quite disenthralled Monsieur C—from any weakly sentimentality in regard to his little dead family.

So I do not know why I shuddered, being also myself somewhat of a philosopher,—of such cool philosophy as grows out inevitably from the hard and stony strata of an overworked life. The sleeper within was certainly better cared for now than he ever had been in life. Monsieur's purse afforded no holiday-dress but a shroud; three of these in requisition within so short a time quite scantied the wardrobe of the other children. Little Jacques had always been a somewhat restless and unhappy baby, longing for fresh air, and a change which he never got; it seemed

likely, so far as the child's promise was concerned, that the "great change" was his only chance of variety, and the very best thing that could have happened to him.

And yet, after all, there was something about his death which individualized it, and hung a certain sadness over its occurrence that does not often belong to the death of children, or at least had not marked the departure of his two stout little brothers. Scarlet-fever and croup and measles are such every-day, red-winged, mottled angels, that no one is appalled at their presence; they take off the little sufferer in such vigorous fashion, clutch him with so hearty a grip, that one is compelled to open the door, let them out, and feel relieved when the exit is made. It is only when some dim-eyed, white-robed shape, scarcely seen, scarcely felt, steps softly in and steals away the little troublesome bundle of life with solemn eye and hushed lip, that we have time to pause, to look, to grieve.

This little Jacques, when I came to his father's house, was a rampant, noisy, cunning child, with the vivacity of French and American blood mingling in his veins, and filling him with strongest tendencies to mischief, and prompting elfish feats of activity. He was not by any means a fascinating child,—in fact, no children ever fascinated me,—but this little fellow was rather disagreeable, a wonder to his father, a horror to his mother, and a great annoyance generally; we were all rather cross with him, and he was universally put down, thrust aside, and ordered out of the way.

This was the state of affairs when I came. It was little Jacques, with a high forehead, white, tightly curling hair, and mischief-full blue eye, who made himself translator of all imaginable inquisitorial French phrases for my benefit,—who questioned, and tormented, and made faces at me,—who pulled my apron, disappeared with my carpet-bag, and placed a generous slice of molasses-

candy upon the seat of my chair, when I sat down to rest myself.

Little Jacques ardently loved a sly fishing-expedition on the edge of the marble fountain-basin, and had lured one or two unthinking gold-fish to destruction with fly and a crooked pin. He would sit perched up there at an odd chance, when his father was away, and he dared venture into the saloon,—his little bare feet twinkling against the water, his plump figure curled up into the minutest size, but ready for a spring and a dart up-stairs at the shortest notice of danger. This piscatory propensity had been severely punished by both Monsieur and Madame C——, who could not afford to encourage such an expensive Izaak Walton; but there was no managing the child. He seemed to possess an impish capability of eluding detection and angry denunciations. To be sure, circumstances were against any very strict guard being kept over the youngster. Madame C—— was a very weak woman, a very weak woman indeed,—she declared that such was the case,—a nervous, dispirited woman, whom everything troubled, who could not bear the noise and tramp of life, and altogether sank under it. Destiny had had no mercy on her weakness, however, and had left her to get along with an innumerable family of children, a philosophic husband, who took all her troubles coolly, and a constant demand for her services either in the shop or at the cradle. She could not, therefore, have patience with the incessant anxiety which little Jacques excited by his pranks.

One day Madame C—— had gone out for a walk, leaving the children locked in a room above, five of them, two younger and two older than Jacques; and these together had been in a state of riotous insurrection the whole morning. Little Jacques was not of a disposition to submit to ignominious imprisonment, when human ingenuity could devise means of escape; while his brothers were running wild together, he so-

berly hunted up another key, screwed and scraped and got it into the key-hole ; it turned, and he was out.

Half an hour afterwards, his mother, returning, caught the unfortunate fugitive contemplatively perched on the edge of the fountain-basin. In such a frenzy of anger as only unreasonable people are subject to, she caught the child, shivering with terror, and thrust him into the water. The gold-fish splashed and swirled, and the water streamed over the sides of the basin. It was only an instant's work ; snatching up the forlorn fisher, she shook him unmercifully, and set him upon the floor, dripping and breathless. I saw nothing of them until night. His mother had then recovered her usual peevishness, weakness, and inefficiency ; the ebullition of energy had entirely subsided. I was curious to know whether the summary punishment had had any effect upon Jacques ; but he was asleep, as soundly as usual after a day's hard frolic.

My curiosity was likely to be gratified to satiety. A strange change came over the little fellow after this. To one accustomed to his apish activity, and to being annoyed by it, there was something plaintive in the fact of having got rid of that trouble. The child was silent, mopish, "good," as his mother said, congratulating herself on the effect of her summary visitation upon the offender.

When, however, a month passed without any return of the evil propensities, this continued quiescence grew to be something ghostly, and, to people who had only their own hands to depend on for a living, a subject of anxiety and alarm : it was expensive to clothe and feed a child who promised but little service in future.

"The *enfant* will never come to anything," said Monsieur ; "we could better have spared him than Jean."

To which his wife shook her head, and solemnly assented.

The '*enfant*,' however, gave no signs of taking the hint. Day after day his

little ministerial head and flaxen curls were visible over the top of his old-fashioned arm-chair, and day after day his food was demanded, and his appetite was as good as ever.

Watching the child, whose blue eyes, now the mischief was out of them, grew utterly vacant of expression, I unaccountably to myself came to feel an uncomfortable interest in, a morbid sympathy with him,—an uneasy, unhappy sympathy, more physical than mental.

No fault could have been found with the motherly carefulness and attention of Madame C——. It was charmingly polite and French. But the sight of her preparing the child's food, or coaxing him with unaccustomed delicacies and *bonbons*, grew to be utterly distasteful,—an infliction so nervously annoying that I could not overcome it. A secret antipathy which I had nourished against Madame seemed to be germinating ; every action of hers irritated me, every sound of her sharp, yet well-modulated voice gave me a tremor. The truth was, that plunge into the water, taking place so unexpectedly in my presence, had startled and upset me almost as completely as if it had befallen myself. A hard-working woman had no business with such nerves. I knew that, and tried to annihilate them ; but the more I cut them down, the more they bled. The thing was a mere trifle,—the fountain-basin was shallow, the water healthy,—nothing could be more healthy than bathing,—and, at any rate, it was no affair of mine. Yet my mind in some unhealthy mood aggravated the circumstances, and colored everything with its own dark hue.

I could not give up my place, of course not ; I was not likely to get so good a situation anywhere else ; I could not risk it ; and yet the servitude of horror under which I was held for a few weeks was almost enough to reconcile one to starvation. Only that I was kept busy in the shop most of the time, and had little leisure to observe the course of affairs, or to be in Madame's society, I

should have given warning, — foolishly enough, — for there was not a tangible thing of which I had to complain. But a shapeless suspicion which for some days had been brooding in my mind was taking form, too dim for me to dare to recognize it, but real enough to make me feel a miserable fascination to the house while little Jacques still lived, a magnetic, uncomfortable necessity for my presence, as though it were in some sort a protection against an impending evil.

Such suspicion I did not, of course, presume to name, scarcely presumed to think, it seemed so like an unnatural monstrosity of my own mind. But when, one morning, the child died, holding in his hands the *bonbons* his mother had given him, and Madame C——, all agitation and frenzy and weeping, still contrived to extract them from the tightly closed, tiny fists, and threw them into the grate, I felt a horrid thrill like the effect of the last scene in a tragedy. *I knew that the bonbons were poisoned.*

So that is the reason I shuddered as I passed through the saloon.

Throwing open the window, a dim light flickered through, and a sickly ray fell upon the fountain. It shivered upon the dripping marble column in its centre, and struck with an icy hue the water in the basin below. The fountain was not in my range of vision from the window; but I often turned to look at it as I opened the shutters, thinking it a pretty sight when the drops sparkled in the misty light against the background of the otherwise darkened room. It pleased my imagination to watch the effect produced by a little more or a little less opening of the shutters, — a nonsensical morning play-spell, which quite enlivened me for the sedate occupations of the day. It was, however, not imagination now which whispered to me that there was something else to look at beside the jet of water and the shadowy play of light. Stooping down upon the fountain-brink, absorbed in contemplating the gold-fish

swimming below, and with its naked little feet touching the water's edge, a tiny figure sat. My first thought (the first thoughts of fear are never reasonable) was, that some child from up-stairs had stolen down unawares, (as children are quite as fond as grown folks of forbidden pleasures,) to amuse itself with the water. But the children were not risen yet, and the saloon was too utterly dark and dismal at that hour to tempt the bravest of them. Second thoughts reminded me of that certainty, and I looked again. The figure raised its head from its drooping posture, and gazed vacantly, out of a pair of dim blue eyes, at me. The eyes were the eyes of little Jacques.

I do not know how I should have been so utterly overcome, but I started up in terror as I felt the dreamy phantom-gaze fixed upon me, raising my hands wildly above my head. The hammer which I held in my hand to drive back the bolts of the shutters flew from my grasp and struck the great mirror, — the new mirror which had just been bought, and was not yet hung up. All the savings of a year were shivered to fragments in an instant. My horror at this catastrophe recalled my presence of mind; for I was a poor woman, dependent for my bread on the family. Poor women cannot afford to have fancies; some prompt reality always startles them out of dream or superstition. My superstition fled in dismay as I stooped over the fragments of the looking-glass. What should I do? Where should I hide myself? I involuntarily took hold of the mirror with the instinctive intention of turning it to the wall. It was very heavy; I could scarcely lift it. Pausing a moment, and looking forward at its shattered face in utter anguish of despair, I saw again, repeated in a hundred jagged splinters, up and down in zigzag confusion, in demoniac omnipresence, the uncanny eye, the spectral shape, which had so appalled me. The little phantom had arisen, its slim finger was outstretched,

— it beckoned, slowly beckoned, as, growing indistinct, it receded farther and farther out from the saloon towards the shop.

The fascination of a spell was upon me; I turned and followed the retreating figure. The shutters of the show-window were not yet taken down, but thin lines of light filtered through them, — light enough to see that the apparition made its way to a forbidden spot slyly haunted by the little boy in his days of mischief, — a certain shelf where a box of some peculiar sort of expensive confections was kept. I had seen his mother, with unwonted generosity, give the child a handful of these a day or two before his death. I could go no farther. A mighty fear fell upon me, a dimness of vision and a terrible faintness; for that child-phantom, gliding on before, stopped like a retribution at that very spot, and, raising its little hand, pointed to that very box, glancing upward with its solemn eye, as, rising slowly in the air, it grew indistinct, its outlines fading into darkness, and disappeared.

I did not fall or faint, however; I hastened out to the saloon again. The door of the little room where the coffin stood was open, and Madame C——, stepping out, looked vaguely about her.

“Madame! Madame!” I cried, “oh, I have seen — I have seen a terrible sight!”

Madame’s face grew white, very white. She grasped me harshly by the arm.

“What *are* you talking about, you crazy woman? You are getting quite wild, I think. Do you imagine you can hide your guilt in that way?” and she shook me with a savage fierceness that made my very bones ache. “This is carrying it with a high hand, to be sure, to flatter yourself that such wilful carelessness will not be discovered. Do you suppose,” she cried, pointing to the fragments of glass, “that *my* nerves could feel a crash like that, and I not come down to see what had happened?”

She spoke so volubly, and kept so firm a grip of my arm, that I could not get breath to utter a word of self-defence, — indeed, what defence could I make? Yet I should say, from my mistress’s singular manner, that *she* had seen that vision too, so wild were her eyes, so haggard her face.

Little Jacques was buried. His attentive parents enjoyed a carriage-ride, with his miniature coffin between them, quite as well as if the little fellow had accompanied them alive and full of mischief.

Outside matters, as Monsieur said, being now off his mind, he could attend to business again.

The mirror belonged to “business.” I had been writhing under that knowledge all the morning of their absence.

Monsieur took the sight of his despoiled glass as calmly as Diogenes might have viewed a similar disaster from his tub. Monsieur’s philosophy was grounded upon common sense. He knew that the frame was valuable. He knew also that I had saved enough to pay for the accident. I knew it, too, and was well aware that he would exact payment to the uttermost farthing. Monsieur, therefore, was quite cool. He laughed loudly at Madame’s excitement, and the feverish account she gave of my fright, my deceitfulness, and pretending to see what nobody else saw.

“Little Jacques!” I heard him exclaim, as I entered the room, shrugging his shoulders with such a contemptuously good-natured sneer as only a Frenchman can manufacture; and raising both his hands derisively, he went off with vivacity to his business.

In the morning I left. Monsieur endeavored to persuade me to stay. But my business there was finished. I was quite as cool as Monsieur, — in fact, a little chilly. I was determined to go. Madame was determined also; we could no longer get along together; each hated and feared the other; and Madame C—— having used overnight what influence she possessed to bring her hus-

band to see the necessity of my departure, his objections were not very difficult to remove.

I could not afford to be out of work, that was true, and it might take me a long time to get it; but I was tired to death, and glad of any excuse for a little rest. What, after all, if I did lie by for a little while? there was not much pleasure or profit either way.

I should not grow rich by my work; I could not grow much poorer by being idle. The past year, which I had spent in the service of Monsieur and Madame C——, had been one of constant annoyance and irritating variety of employment. I had grown fretful in the constant hurry and drive, and the baneful atmosphere of Madame's peevishness. Body and soul cried out for a season of release, which never in all my life of service had I thought of before.

I had my desire now. I had put away my bondage. I had ceased my unprofitable labor. The rest I had so long craved was at hand. I might take a jubilee, a siesta, if I pleased, of half a year, and nobody be the wiser. I was responsible to nobody. Nobody had any demands upon my time or exertion. Free! I stood in a vacuum; no rush of air, no tempest or whirlpool stirred its infinite profundity. At length I was at peace, — a peace which seemed likely to last as long as my slim purse held out; for employment was not easy to obtain. Did I enjoy it? Did I lap myself in the long-desired repose in thankful quiescence of spirit? Perhaps, — I cannot tell; restlessness had become a chronic disease with me. I felt like a ship drifted from its moorings: the winds and the tides were pleasant; the ocean was at lull; but the ship rocked aimless and unsteady upon the waters. The heavy weights of life and activity so suddenly withdrawn left a painful lightness akin to emptiness. The broken chains trailed noisily after me. The time hung heavily which I had so long prayed for. Long years of monotonous servitude had made a very

machine of me. I could only rust in inaction. Some other power, to rack and grind and urge me on, was necessary to my very existence.

So it happened, that, at last, my holiday having spun out to the end of my means, I left the city, and engaged work at very low wages in a country-village. The situation and the remuneration were not in the least calculated to stimulate ambition or avarice; and I remained obscurely housed, incessantly busy, and coarsely clothed and fed, in this place, for two years. They were not long years either. I had no hard taskmaster, however hard my task, no uneasy, unexplainable apprehensions, no moody forebodings of evil, no troublesome children to distress me. At the end of that time I heard of a better situation, and returned to the city.

I had been engaged about a twelvemonth in my new place, a very pleasant little shop, though the pay was less and the work harder than I had had with Monsieur C——, when, one morning, standing at the shop-window, I saw that gentleman pass: very brisk, very spruce, very plump he looked. Glancing in, (I flatter myself that a show-window arranged as I could arrange it would attract any one's eye,) he espied me. A speedy recognition and a long conversation were the result. It was early morning, and we had the store to ourselves. Monsieur was very friendly. His business was very good. Poor Madame! he wished she could have lived to see it; but she was gone, poor soul! out of a world of trouble. And Monsieur plaintively fixed his eyes on the black crape upon his hat. The unhappy exit took place a few months after my departure. The children had gone to one or another relative. Monsieur was all alone; he had been away since then himself, had been doing as well as a bereaved man could do, and, having saved a snug little sum, had returned to buy out the old stand, and reëstablish himself in the old place.

No one was with him; he wished he could get a good hand to superintend the concern, now his own hands were so full. It would be a good situation for somebody. In short, Monsieur came again and again, until, as I was poor and lonely, and had almost overworked myself just to keep soul and body together, whose union, after all, was of no importance to any one save myself, and as I was quite glad to find some one else who was interested in the preservation of the partnership, I consented to be his wife. It was a very sensible and philosophic arrangement for both of us. We could make more money together than apart, and were stout and well able to help each other, if only well taken care of. So we settled the business, and settled ourselves as partners in the saloon.

Three years had passed, and we were in the old place still. We had been very busy that day. Many orders to fill, many customers to wait upon. Monsieur, completely worn out, was sound asleep on the sofa up-stairs. It was late; I was very much fatigued, as I descended, according to my usual custom, to see that everything was safe about the house and shop. The place was all shut and empty; the lights were all out. A cushioned lounge in one corner of the saloon — *my* saloon now — attracted my weary limbs, and I threw myself upon it, setting the lamp upon a marble table by its side. With a complacent sense of rest settling upon me, I drowsily looked about at the dim magnificence of loneliness which surrounded me. The night-lamp made more shadow than shine; but even by its obscured rays one who had known the old place would have been struck with the wonderful improvement we had made. So I thought. It was almost like a palace, gilded, and mirrored, and hung with silken curtains. Monsieur and I had thriven together, had worked hard and saved much these many years to produce the change. But the

change had been, as everything we effected was, well considered, and had proved very profitable in the end. Better reception-rooms brought better customers; higher prices a higher class of patronage. It was very pleasant, lying there, to reflect that we were actually succeeding in the world; and a pleasant and quiet mood fell upon me, as, hopeful of the future, I looked back at the past. I thought of my old days in that saloon; I thought of little Jacques. Little Jacques was still a thought of some horror to me, and I generally avoided any allusion to him. But tonight, in this subdued and contemplative mood, I even let the little phantom glide into my reverie without being startled. I even speculated on the old theme which had so haunted me. I wondered whether my suspicions had been correct, and whether — whether Madame C — was guilty of sending her little son before her into the other world. So thinking, — I might have been almost dreaming, — a slight rustle in the shop aroused me. I was not alarmed; my nerves are now much healthier, and I wisely make a point of not getting them unstrung by violent movements, or unaccustomed feats of activity, when anything astonishing happens. I therefore lifted my head calmly and looked about, — it might be a mouse. The noise ceased that instant, as if the intruder were aware of being observed. Mice sometimes have this instinct. We had some valuable new confections, which I had no desire should be disposed of by such customers. So, taking up my lamp, and peering cautiously about me, I proceeded to the shop. The light flickered, — flickered on something tall and white, — something white and shadowy, standing erect, and shrinking aside, behind the counter. My heart stood still; a sepulchral chill came over me. My old self, trembling, angry, foreboding, stepped suddenly within the niche whence the self-confident, full-grown, sensible woman had vanished utterly. For an instant,

I felt like a ghost myself. It seemed natural that ghosts, if such there were, should spy me out, and appall my heart with their presence. For there, in that old, haunted spot, where long years ago the spectre of little Jacques had lifted its menacing finger, stood the form of Marie, Madame C——. I knew it well; shuddering and shivering myself, more like an intruder than one intruded upon, I laid my hand upon the chill marble counter for support. It was no creation of imagination; the figure laid its hand also upon the marble, and, stretching over its gaunt neck, stood and peered into my eyes.

“Madame C——! Madame C——!” I cried; “what in the name of God would you have of me?”

“Nothing,” she answered, — “nothing of you, — and nothing in the name of God. Oh, you need not shudder at me, — Christine C——! I know *you* well enough. You have n’t got over your old tricks yet. I ’m no ghost, though. Mayhap you ’d rather I ’d be, for all your nerves, eh?” — and she shook her head in the old vengeful, threatening way.

It was true enough. What evil atmosphere surrounded me? What fell snare environed me? I looked about like a hunted animal brought to bay, — like a robber suddenly entrapped in the midst of his ill-gotten gains. For this was no dead woman, but a living vengeance, more terrible than death, brought to my very door. Some unseen power, it seemed, full of evil influence, full of malignant justice, stretched its long arms through my life, and would not let me by any means escape to peace, to rest. A direful vision of horrible struggles yet to come — of want, despair, disgrace in reservation — sickened my soul.

“I will call — I will call,” said I, gasping, — “I will call Monsieur C——; he” —

“Don’t, don’t, I beg of you!” she cried, catching me by the sleeve, with a sardonic laugh; low, whispering, full

of direful meaning, it stealthily echoed through the saloon. “Don’t disturb the good man. He sleeps so soundly after his well-spent days! *He* does n’t have any bad dreams, I fancy, — rid of such a troublesome, vicious wife, — a wife who harassed her husband to death, and murdered her little boy, — he sleeps sound, does n’t he? And yet — I declare, in the name of God, Christine C——,” — and she lifted up her bony finger like an avenging fate, — “*he did it!*”

I had been endeavoring to calm myself while this woman of spectral face and form stared at me with her maniac eye across the counter. I had succeeded. At any rate, this was a tangible horror, and could be grappled with; it was not beyond human reach, a shadowy retribution from the invisible world. To face the circumstances, however repulsive, is less depressing than to await in suspense the coming of their footsteps, and the descent of that blow we know they will inflict. I had always found that policy best which was bravest. I remembered this now. Dropping my high tone, and soothing my excited features, I beckoned the woman and gave her a chair; I took a chair myself, wrapping a shawl close about me to repress the shivering I could not yet overcome, and I and that woman, returned from the grave, as it seemed to me, sat calmly down in business-fashion, and held a long conversation.

Madame C—— had loved her husband with that sort of respectful, awe-filled affection which lower natures experience towards those which are a grade above them. She had loved her children, too, although they were her torment. Her inability to manage or keep them in order fretted and irritated her excessively. Monsieur, as a philosopher, could not understand the anomaly, that a woman who was perpetually unhappy and ill-tempered, while her children, young, buoyant, and mischievous, were about her, should sympathize with and

care for them when sick. He could not understand her conscience-stricken misery when little Jacques drooped after her severity towards him. Monsieur was a kind husband, however, and a wise man in many things. He had studied much in his youth, chiefly medical works, of which he had quite a collection. He could not understand the whimsical nervousness of women, but, when so slight a thing as a child's illness appeared to be the cause of it, could unhesitatingly undertake to remove the difficulty. He had prescribed attentively for the two children who died before Jacques, thereby rendering them comfortable and quiet, and saving quite an item in the doctor's bill.

When little Jacques fell ill, and Madame fretted incessantly about his loss of vigor and vivacity, Monsieur, with fatherly kindness, undertook, in the midst of his pressing business, to give the child his medicine, which had to be most carefully prepared. Sometimes the powders were disguised in *bonbons*, the more agreeably to dose the patient little fellow; these were prepared with Monsieur's own fatherly hands, and during his absence were once in a while left for Madame to administer. Madame had great faith in these medicines, — great faith in her husband's skill; but the child's disease was obstinate, very; no progress could be discovered. It was a comforting thought, at least, that, if his recovery was beyond possibility, something had been done to soothe his pain and quiet the vexed spirit in its bitter struggle with dissolution. Yes, the medicines were certainly very quieting, — so quieting, so death-like in their influence, — she could not tell how a suspicion (perhaps the strange expression of the child's eye, when they were administered) glided into her imagination (having so great a reverence for her husband, it took no place in her mind for an instant, — it was merely a spectral, haunting shadow) that these things were getting the child no better, — that they were not medicine for keeping

him here, but for helping him away. This suspicion, breathing its baleful breath across her mind, weak, vacillating, incapable of energetic action, had rendered her miserable, morose, irritable, more so than ever before. Yet little Jacques in his last hour hankered for the medicine, and craved feverishly the delicate powder, the sweet confection, his father prepared for him.

While inwardly brooding over this unnamed terror, and covering before this shapeless thought which loomed in the darkness of her mental gloom, an idea entered her mind that I, too, was suspicious that something was going wrong, — that I was watching, — waiting the evil to come. The child died. Her fear for him was utterly superseded by fear for her husband. What if I should find him out and betray him? The anxiety occasioned by this possibility made her hate me. The agony of her little one's departure, the fear of some dire discovery, the consciousness of guilt near enough of vicinage almost to seem her own, combined to nearly distract her mind, and it seemed like a joyful relief when I departed. The sudden release from that constant pressure of fear (she knew I could do nothing against them without money, credit, or friends) made her ill for a time, quite ill, she said. She knew not what was done for her during this sickness, — who nursed her, or who gave her medicine. But one morning, on waking from what seemed a long sleep, in which she had dreamed strangely and talked wildly, she beheld Monsieur, smiling kindly, standing beside her bed with a vial and a spoon in his hand.

"It is a cordial, my dear, which will strengthen and bring you round again very soon. You need a sedative, — something to allay fever and excitement."

"Is it little Jacques's medicine?"

"Quite similar, my dear, — not the powders, — the liquid. Equally soothing to the nerves, and promotive of sleep."

She turned her face away. She had slept long enough. She thanked Monsieur, not daring to look up, but capriciously refused to touch little Jacques's medicine.

"And Monsieur," she said, "Monsieur was very angry. He said I was a disobedient wife, who did not wish to get well, but desired to be a constant expense and trouble to her husband.

"And so, Christine C——, I trembled and shook, and let fall words I never meant to have uttered to Monsieur, and I said he had killed the child, and wished to kill me, that he might marry Mademoiselle Christine. I did not say any more that day. In the morning, Monsieur and I discoursed together again. I declared I would get well and go away. Oh! Monsieur knew well I would not betray him. He was willing, very willing to consent to my departure. He cared for me well, and gave me much money; and I went away to my old aunt, who lived in Paris. I have been dead,—I have died to Monsieur. I should never have returned, but that my good aunt is gone. When I buried her,—shut her kind eyes, and wrapped her so snugly in her shroud,—I thought it a horrible thing to be living without a soul to care for me, or comfort me, or even to wrap me up as I did her when the time was come. I felt then a thirsty spirit rising within me to see my old place where I had comfort and shelter long ago, and to see my children. I have been to see them: they are in B——; they did not know me there. I did not tell them who I was. I have been faithful to my promise. I tell no one but you, Christine C——, who have stepped into my place, and stolen away my home. A prettier home you have made of it for a prettier wife; but it's the old place yet, with the old stain upon it."

Wishing to consider a moment what I should do, half paralyzed, like one who is stricken with death, I left that other ME, (for was she not also my husband's wife?) apparently exhausted, ly-

ing upon the sofa, and went wearily upstairs, with heavy steps, like one whose life has suddenly become a weight to him. What, indeed, *should* I do? Starvation and misery stared me in the face. If I left the house, casting its guilt and its comfort behind me, where could I go? I could do nothing, earn nothing now. My reputation, now that we were so long established, would be entirely gone. And if I left all for which I had labored so hard, for another to enjoy, would that better the matter? Great God! would *anything* help me? Before me in terrific vision rose a dim vista of future ruin, of ineffectual years writhing in the inescapable power of the law, of long trial, of horrible suspense, of garish publicity, of my name handed from mouth to mouth, a forlorn, duped, degraded thing, whose blighted life was a theme of newspaper comment and cavil. These thoughts swept over me as a tempest sweeps over the young tree whose roots are not firm in the soil, whose writhing and wrestling are impotent to defend it from certain destruction. There was no one I loved especially, no one I cared for anxiously, to relieve the bitter thoughts which centred in myself alone.

Monsieur awoke as I was sitting thus, in ineffectual effort to compose myself. Seeing me sitting near him, still dressed, the door open, and the light burning, he inquired what was the matter. I had something below requiring his attention, I said, and, taking up the lamp, ushered him down-stairs. My chaotic thoughts were beginning to settle themselves,—to form a nucleus about the first circumstance that thrust itself definitely before them. That poor wretch waiting below,—that forsaken, abject, dishonored wife,—I would confront him with her, and charge him with his guilt. Opening the saloon-door, I stepped in before him. The lamp which I had left upon the stand was out, and the slender thread of light which fell from the one in my hand, sweeping across the gloom, rested upon the deserted sofa. The

saloon was empty; no trace, no sign could be discovered of any human being. The hush, the solemnity of night brooded over the place. Monsieur mockingly, but unsteadily, inquired what child's game I was playing,—he was too tired to be fooled with. He spoke hotly and quickly, as he never had spoken to me before,—like one who has long been ill at ease, and deems a slight circumstance portentous.

So I turned upon him, with all the bitterness in my heart rising to my tongue. I told him the story. I charged him with the guilt. He listened in silence; marble-like he stood with folded arms, and heard the conclusion of the whole matter. When I was silent, he strode up to me, and, stooping, peered into my face steadily. His teeth were clenched, his eyes shot fire; otherwise he was calm, quite composed. He said, quietly,—

“Would you blame me for making an angel out of an idiot?”

Monsieur's philosophy was too subtle for me. GUILTY seemed a coarse word to apply to so fine a nature.

He denied having attempted to injure his wife in any way.

“Women are all fools,” he said; “they are all alike,—go just as they are led, and do just as they are taught. They cannot think for themselves. They have no ideas of justice but just what the law furnishes them with. It was silly to complain; it argued a narrow mind to condemn merely because the laws condemn. In that case all should be acquitted whom the laws acquit,—did we ever do this? Would his darling Jacques, happy, angelic, condemn his parent for releasing him from the drudgery of life? Was it not better to play on a golden harp than to be a confectioner? Were not all men, in fact, more or less slayers of their brothers? Was I not myself guilty in attributing to Madame a deed in my eyes worthy of death, and of which she was innocent? It was only those whose courage induced them to venture a little farther who re-

ceived condemnation. In some way or other, every soul is wearing out and overtasking somebody else's soul, and shortening somebody's days. A man who should throw his child into the water, in order to save him from being burned to death, would not be arraigned for the fierce choice. Little Jacques, if he had lived, would have lingered in misery and imbecility. Was a lingering death of torture to be preferred by a tender-hearted woman to one more rapid and less painful, where the certainty of death left only such preference? Ah, well! it was consolation that his little son was safe from all vicissitude, whatever might befall his devoted father!” and Monsieur wiped his eyes, and drew out a little miniature he always carried in his bosom. It was the portrait of little Jacques.

Well, as I have said, Monsieur was a philosopher, and I was a philosopher; and yet I must have been a woman incapable of reason, incapable of comprehending an argument; for the thought of this thing, and of being in the presence of a man capable of such a deed, made me uneasy, restless, unhappy, as though I were in some sort a partaker of the crime. I could not sleep; I was haunted with horrific dreams; and when, in a few days, among the “accidents” the death of an unknown woman was recorded, whose body had drifted ashore at night, and I recognized by the description poor, unknown, uncared-for Madame C——, a wild fever burned in my veins, a frenzy of anguish akin to remorse, as if I had wronged the dead, and sent her drifting, helpless, out to the unknown world. A pitiable soul, who preferred misery for her portion, rather than betray the man she loved, or become partaker of his crime, had crept back, after years of self-imposed absence, with death in her heart, to see the old place and the new wife,—and how had I received her? With horror and shuddering, as though she were some guilty thing, to be held at arm's-length. Not as one woman, gen-

erous, forgiving, hoping for mercy hereafter, should receive another, however erring. It was a sad boon, perhaps, she had endowed me with; yet it was all she prized and cherished.

With a nobleness of magnanimity, a passionate self-sacrifice, which none but a woman could be capable of, Madame C—— had divested herself of all peculiarities of clothing by which she could be identified. It was only by recognizing the features, and a singular scar upon the forehead, that I knew it was herself. She was buried by stranger hands, however; we dared not come forward to claim her.

The excitement attendant on this miserable death, and the circumstances which preceded it, laid me, for the first time in my life, upon a sick-bed. I was unconscious for many weeks of anything save intolerable pain and intolerable heat. A fiery agony of fever leaped in my veins, and scorched up my life-blood. I believe Monsieur cared for me, and nursed me attentively during this illness.

The fever left me; exhausted, spent, my life shrunken up within me, my energy burned out, a puny, spiritless remnant of the strong woman who lay down upon that couch, I lay despondent, vacant of all interest in the world hitherto so exciting to me. I had not seen Monsieur since this apparent commencement of recovery. A great, good-natured nurse kept watch over me, and fed me with spiritless dainties, tasteless, unsatisfying.

One day, when my senses began to settle a little, and things began to take shape again, I asked for Monsieur. He came and stood at my bedside.

"Christine," said he, "you have no faith in my power of making angels. I have not made one of you. Being divided in our theories, we will divide our earthly goods. We will part. Should you as a woman deem it your duty to inform against me, I shall not think it wrong. I shall bear it as a philosopher. You have no proof, you

can substantiate nothing; but it may be a satisfaction. I do not understand women; therefore I cannot tell."

"Monsieur," I answered, "leave it to God to fill His heaven as He thinks best. He has not invited your assistance; neither has He invited me to avenge Him. Since He does not punish, dare I invade His prerogative?"

And we did not part.

We will live together in peace, we said, and the past shall be utterly forgotten; shall not a whole lifetime of unwavering rectitude atone for this one crime?

I accepted my fate, — weakly, in the dread of poverty, in the horror of disgrace, shrinking within myself with the secret thrust upon me. I said we are all the makers of our own destiny, and there is nothing supernatural in life. If this course is best and wisest in my judgment, nothing evil will come of it. I said this, ignorant of the mystery of existence, and inexperienced in that subtle power which penetrates all the windings and turnings of humanity, searching out hidden things, — the Purifier, and the Avenger, allotting to each one his portion of bitterness, his inexorable punishment. "We will live together in peace": it was the thought of a sudden moment of fervor, which overleaped the dreary length of life, and assumed to compass the repentance of a whole existence in a single day.

But destiny holds always in store its retribution. God suffers no dropped stitches in the web of His universe, and the smallest truth evaded, the least wretch neglected, will surely be picked up again in the unending circle that is winding its certain thread around all beings, connecting by invisible links the most insignificant chances with the most significant events.

When I said we will be one, we will endure together, I thought that so, in my enduring strength, I could bear up whatever burden came. I know not how, by what invisible process, the load which I had lifted to my shoulders

grew into leaden heaviness, — heavy, heavy, like the weight of some dead soul resting its lifeless shape upon my living spirit, till I staggered under the unbearable presence. I had doomed myself to stand side by side, to work hand in hand with guilt, to feel hourly the dread lest in some moment of frenzy engendered by the dumb anguish within me I might betray the secret whose rust was eating into my soul, and shriek out my misery in the ears of all men.

Monsieur, seeing me grow thin and pale, declared that I must have a change, I must go somewhere, to the sea-shore. To the sea-shore! No, I would not go to the sea-shore, or to any other shore; a stranded vessel, I could not struggle from the place of shipwreck.

Monsieur grew vexed and anxious, when I stubbornly shook my head. And when week after week I still refused, he grew strangely uneasy. I had better go; if I would not go alone, he would go with me, shut up the shop, and take a holiday.

I considered the matter that day. The project was a wild one; at this busiest season of the year, it would be an injury to our business. And what might the neighbors say? It might lead them to unpleasant suspicions. We were not popular among them. No, it would not do.

I explained this to Monsieur very calmly at the supper-table. His face was pale and quiet as usual. He did not interrupt me. When I concluded, he rose as if he would go out, but turning back suddenly and striking the table with his clenched fist, —

“God!” he exclaimed. “Woman would you see me die like a dog? The neighbors! for all I know, they have got me at their finger-ends now, — the vile rabble! That old hag, Madame Justine, at the ribbon-shop below, — some demon possessed her to look out that night when SHE came crawling home. She noted her well with her greedy eyes; some one so like my dear

first wife, she told me. There is mischief and death in her eyes. She knows or guesses too much.”

“What can she guess?” I asked; “she has only lately come into the neighborhood.”

In answer to this, Monsieur informed me that she professed to have been an old friend of his wife’s, who, in times gone by, half bewildered with her troubles, had probably dropped many unguarded words in this woman’s presence. Madame C—— had died (to her old home) while this woman was away on a visit. “Ah!” she said, “she had her misgivings many a time. Did the same doctor attend Madame C—— who prescribed for little Jacques? He ought to be hung, then. Ah, well, if all men had their deserts, she knew many things that would hang some folks who looked all fair and square, and held their guilty heads higher than their neighbors.”

“Well?” I said.

“Well! — you women are so virtuous, you have no mercy, Madame. Go, hang — go, drown the wretch who comes under the malediction of the ladies! Oh, there is nothing too hard for him! And this one owed me a grudge lately about a mistake, — a little mistake I made in an account with her, and would not alter because I thought it all right.”

The preparations were going on silently and steadily that night. I would go anywhere now, anything would I do, to escape the fate whose stealthy footsteps were tracking us out. Well I knew, that, once in the power of the law, its firm grasp would wrest every secret from the deepest depths where it was hidden. Once out of the city, we could readily take flight, if immediate danger threatened.

The doors were all closed; the trunks stood corded in the hall. I was downstairs, getting the silver together. Monsieur was in his room, packing up his medicine-chest. There was no weakness in my nerves now, no trembling in my limbs. I was determined. While

thus engaged, pausing a moment amid the light tinkle of the silver spoons, I thought I heard footsteps in the saloon above. Softly ascending the stairs, I met Monsieur at the door. He had come down under the same impression, that some one was walking in the saloon, still holding in his hand the tiny cup in which he measured his medicines. It was full, and Monsieur carried it very carefully, as, opening the door, he looked cautiously about. Nothing stirred; all was silent as death; and walking forward toward the fountain, he straightened himself up, and his white face flushed as he said in a whisper, —

“Christine, everything is ready. We are safe yet; we shall escape. Once away, we will never return to this doomed place, let what will come of it. Yes, I am certain that we shall escape!”

Monsieur took a step forward as he said this, and stood transfixed. The light shook which he held in his hand, as if a strong wind had passed over it; his eye quailed; his cheek blanched to ghastly whiteness. I thought that undue excitement had brought on a fainting-fit of some kind, and was stooping to dip my hands in the water and bathe his forehead, when I saw, distinctly, like a white mist in the darkness, a visible shape sitting solemn upon the basin-edge; the room was very dim, and the falling spray fell over the shape like a weeping-willow, yet my eyes discerned it clearly. Oh, it was no dream that I had dreamed in my young days long ago! That little figure was no stranger to my vision, no stranger to the changeless waterfall. Did Monsieur see it also? He stood close beside the fountain now, with his face towards the spectre. The tiny cup in his hand fell

from the loosened fingers down into the water; a lonely gold-fish, swimming there, turned over on its golden side and floated motionless upon the surface.

I scarcely noticed this, for, at the time, I heard the knob of the shop-door turn quickly, and the door was shaken violently. It was probably the night-watchman going his rounds; but, in my alarm and excitement, I thought we were betrayed. I stepped swiftly to the door, and pushed an extra bolt inside.

“Monsieur!” I cried, under my breath, “hide! hide yourself! Quick! in the name of Heaven!”

But he did not answer, and, hastening to his side, I saw the faint outlines of that shadowy visitant growing indistinct and disappearing. As it vanished, Monsieur turned deliberately toward me; his eyes were clear, the faintness was over; his voice was grave and steady, as he said, —

“Christine! I have seen it. It is the warning of death. There is no future and no escape for me. The retribution is at hand,”—and stooping swiftly down, he lifted the tiny cup brimming to his lips. “Go you,” he said, huskily, “to the sea-shore. I have an errand elsewhere.”

In the morning came the officers of justice; my dim eyes saw them, my ears heard unshrinking their stern voices demanding Monsieur C——. I did not answer; I pointed vaguely forward; and forward they marched, with a heavy tramp, to where the one whom they were seeking lay prone upon the marble floor, his head hanging nervelessly down over the water. He had been arrested by a Higher Power. Monsieur C—— was dead.

## BOSTON HYMN.

THE word of the Lord by night  
To the watching Pilgrims came,  
As they sat by the sea-side,  
And filled their hearts with flame.

God said,— I am tired of kings,  
I suffer them no more ;  
Up to my ear the morning brings  
The outrage of the poor.

Think ye I made this ball  
A field of havoc and war,  
Where tyrants great and tyrants small  
Might harry the weak and poor ?

My angel,— his name is Freedom,  
Choose him to be your king ;  
He shall cut pathways east and west,  
And fend you with his wing.

Lo ! I uncover the land  
Which I hid of old time in the West,  
As the sculptor uncovers his statue,  
When he has wrought his best.

I show Columbia, of the rocks  
Which dip their foot in the seas  
And soar to the air-borne flocks  
Of clouds, and the boreal fleece.

I will divide my goods,  
Call in the wretch and slave :  
None shall rule but the humble,  
And none but Toil shall have.

I will have never a noble,  
No lineage counted great :  
Fishers and choppers and ploughmen  
Shall constitute a State.

Go, cut down trees in the forest,  
And trim the straightest boughs ;  
Cut down trees in the forest,  
And build me a wooden house.

Call the people together,  
The young men and the sires,  
The digger in the harvest-field,  
Hireling, and him that hires.

And here in a pine state-house  
They shall choose men to rule  
In every needful faculty,  
In church, and state, and school.

Lo, now ! if these poor men  
Can govern the land and sea,  
And make just laws below the sun,  
As planets faithful be.

And ye shall succor men ;  
'T is nobleness to serve ;  
Help them who cannot help again ;  
Beware from right to swerve.

I break your bonds and masterships,  
And I unchain the slave :  
Free be his heart and hand henceforth,  
As wind and wandering wave.

I cause from every creature  
His proper good to flow :  
So much as he is and doeth,  
So much he shall bestow.

But, laying his hands on another  
To coin his labor and sweat,  
He goes in pawn to his victim  
For eternal years in debt.

Pay ransom to the owner,  
And fill the bag to the brim.  
Who is the owner ? The slave is owner,  
And ever was. Pay him.

O North ! give him beauty for rags,  
And honor, O South ! for his shame ;  
Nevada ! coin thy golden crags  
With Freedom's image and name.

Up ! and the dusky race  
That sat in darkness long, —  
Be swift their feet as antelopes,  
And as behemoth strong.

Come, East, and West, and North,  
By races, as snow-flakes,  
And carry my purpose forth,  
Which neither halts nor shakes.

My will fulfilled shall be,  
For, in daylight or in dark,  
My thunderbolt has eyes to see  
His way home to the mark.

## THE SIEGE OF CINCINNATI.

THE live man of the old Revolution, the daring Hotspur of those troublous days, was Anthony Wayne. The live man to-day of the great Northwest is Lewis Wallace. With all the chivalric dash of the stormer of Stony Point, he has a cooler head, with a capacity for larger plans, and the steady nerve to execute whatever he conceives. When a difficulty rises in his path, the difficulty, no matter what its proportions, moves aside; he does not. When a river like the Ohio at Cincinnati intervenes between him and his field of operations, there is a sudden sound of saws and hammers at sunset, and the next morning beholds the magic spectacle of a great pontoon-bridge stretching between the shores of Freedom and Slavery, its planks resounding to the heavy tread of almost endless regiments and army-wagons. Is a city like Cincinnati menaced by a hungry foe, striding on by forced marches, that foe sees his path suddenly blocked by ten miles of fortifications thoroughly manned and armed, and he finds it prudent, even with his twenty thousand veterans, to retreat faster than he came, strewing the road with whatever articles impede his haste. Some few incidents in the career of such a man, since he has taken the field, ought not to be uninteresting to those for whom he has fought so bravely; and we believe his services, when known, will be appreciated, otherwise we will come under the old ban against Republics, that they are ungrateful.

While returning from New York at the expiration of a short leave of absence, the first asked for since the beginning of the war, General Wallace was persuaded by Governor Morton to stump the State of Indiana in favor of voluntary enlistments, which at that time were progressing slowly. Wallace went to work in all earnestness. His idea was to obtain command of the new

levies, drill them, and take them to the field; and this idea was circulated throughout the State. The result was, enlisting increased rapidly; the ardor for it rose shortly into a fever, and has not yet abated. Regiments are still forming, shedding additional lustre upon the name of patriotic Indiana.

General Wallace was thus engaged when the news was received from Morgan of the invasion of Kentucky by Kirby Smith. All eyes turned at once to Governor Morton, many of whose regiments were now ready to take the field, if they only had officers to lead them. Wallace came promptly to the Governor's assistance, and offered to take command of a regiment for the crisis. His offer was accepted, and he was sent to New Albany, where the Sixty-Sixth Indiana was in camp. In twelve hours he mustered it, paid its bounty money, clothed and armed it, and marched it to Louisville. Brigadier-General Boyle was in command of Kentucky. Wallace, who is a Major-General, reported to him at the above-named city, and a peculiar scene occurred.

"General Boyle," said Wallace, "I report to you the Sixty-Sixth Indiana Regiment."

"Who commands it?" asked the General.

"I have that honor, Sir," was the reply.

"You want orders, I suppose?"

"Certainly."

"It is a difficult matter for me," said Boyle. "I have no right to order you."

"That difficulty is easily solved," Wallace replied, with characteristic promptness. "I come to report to you as a Colonel. I come to take orders as such."

General Boyle consulted with his Adjutant-General, and the result was a request that General Wallace would

proceed to Lexington with his command. Here was exhibited the ready, self-sacrificing spirit of a true patriot: he did not stand and wait until he could find the position to which his high rank entitled him, but stepped into the place where he could best and quickest serve his country in her hour of peril.

While Wallace was still at the railway-station, he received an order from General Boyle, putting him in command of all the forces in Lexington. Here was a golden opportunity for our young commander. What higher honor could be coveted than to relieve the brave Morgan, pent up as he was with his little army in the mountain-gorges of the Cumberland? The idea fired the soul of Wallace, and he pushed on to Lexington. But here he was sadly disappointed. He found the forces waiting there inadequate to the task: instead of an army, there were only three regiments. He telegraphed for more troops. Indiana and Ohio responded promptly and nobly. In three days he received and brigaded nine regiments and started them toward the Gap.

No one but an experienced soldier, one who has indeed tried it, can conceive of the labor involved in such an undertaking. The material in his hands was, to say the best of it, magnificently *raw*. Officers, from colonels to corporals, brave though they might be as lions, knew literally nothing of military affairs. The men had not learned even to load their guns. Companies had to be led, like little children, by the hand as it were, into their places in line of battle. There was no cavalry, no artillery. It happened, however, that guns, horses, and supplies intended for Morgan at the Gap were in depot at Lexington. Then Wallace began to catch a glimpse of dawn through the dark tangle of the wilderness. Some kind of order, prompt and immediate, must be forced out of this chaos; and it came, for the master-spirit was there to arrange and compel. He mounted sev-

eral hundred men, giving them rifles instead of sabres. He manned new guns, procuring harness and ammunition for them from Louisville. Where there were no caissons, he supplied wagons. But his regiments were not his sole reliance; he is a believer in riflemen, a fighting class of which Kentucky was full. These he summoned to his assistance, and was met by a ready and hearty response: they came trooping to him by hundreds. Among others, Garrett Davis, United States Senator, led a company of Home-Guards to Lexington. In this way General Wallace composed, or rather improvised a little army, and all without help, his regular staff being absent, mostly in Memphis.

"Kentucky has not been herself in this war," exclaimed General Wallace; "she must be aroused; and I propose to do it thoroughly."

"How will you do it?" asked a skeptic.

"Easily enough, Sir. Kentucky has a host of great names. Kentuckians believe in great names. It is to this tune that the traitors have carried them to the field against us. I will take with me to the field all the men living, old and young, who have made those names great. Buckner took the young Crittendens and Clays; by Heaven, I'll take their fathers!"

"But they can't march."

"I'll haul them, then."

"They can be of no service in that way."

"But the magic of their names!" exclaimed Wallace. "What will the young Kentuckians say, when they hear John J. Crittenden, Leslie Combs, Robert Breckenridge, Tom Clay, Garrett Davis, Judge Goodloe, and fathers of that kind, are going down to battle with me?"

The skeptics held their peace.

General Wallace now constituted a volunteer staff. Wadsworth, M. C. from Maysville district, was his adjutant-general. Brand, Gratz, Goodloe, and young Tom Clay were his aids. Old

Tom Clay, John J. Crittenden, Leslie Combs, Judge Goodloe, Garrett Davis, were all prepared and going, when General Wallace was suddenly relieved of his command by General Nelson.

Without instituting any comparison between these two generals, it is enough to say that the supersession of Wallace by Nelson at that moment was most unfortunate and untimely, as the sequel proved, fraught as it was with disastrous consequences. The circumstances were these.

Scott's Rebel cavalry had whipped Metcalf's regiment of Loyalists at Big Hill, some twelve or fifteen miles beyond Richmond, Kentucky, and followed them to within four miles of that town, where they were stopped by Lenck's brigade of infantry. The affair was reported to Wallace, with the number and situation of the enemy. He at once took prompt measures to meet the exigence of the situation. He could throw Lenck's and Clay's brigades upon the Rebel front; the brigade at Nicholasville could take them in flank by crossing the Kentucky River at Tait's Ford; while, by uniting Clay Smith's command with that of Jacob, then *en route* for Nicholasville, he could plant seventeen hundred cavalry in their rear between Big Hill and Mount Vernon.

The enemy at this time were at least twenty miles in advance of their supports, and a night's march would have readily placed the several forces mentioned in position to attack them by daylight. This was Wallace's plan,—simple, feasible, and soldier-like. All his orders were given. A supply-train with extra ammunition and abundant rations was in line on the road to Richmond. Clay's brigade was drawn up ready to move, and General Wallace's horse was saddled. He was writing a last order in reference to the city of Lexington in his absence, and directing the officer left in charge to forward regiments to him at Richmond as fast as they should arrive, when General

Nelson came and instantly took the command. Fifteen minutes more and General Wallace would have been on the road to Richmond to superintend the execution of his plan of attack. The supersession was, of course, a bitter disappointment; yet he never grumbled or demurred in the least, but, like a true soldier who knows his duty, offered that evening to serve his successor in any capacity, a generosity which General Nelson declined. The well-conceived plan which Wallace had matured failed for the simple reason, that, instead of marching to execute it that night, as common sense would seem to have dictated, Nelson did not leave Lexington until the next day at one o'clock; and at daylight, when the attack was to have been made, the Rebel leader, Scott, discovered his danger, and wisely retreated, finding nobody in his rear. The result was, Nelson went to Richmond and was defeated. It is possible that the same result might have followed Wallace; but by those competent to judge it is thought otherwise.

He had a plan adapted to the troops he was leading, who, although very raw, would have been invincible behind breastworks, as American troops have always shown themselves to be. Wallace never intended arraying these inexperienced men in the open field against the veteran troops of the Rebels. Neither did he intend they should dig. He had collected large quantities of trenching tools, and was rapidly assembling a corps of negroes, nearly five hundred of whom he had already in waiting in Morgan's factory, all prepared to follow his column, armed with spades and picks. In Madison County he intended getting at least five hundred more. "I will march," he said, "like Cæsar in Gaul, and intrench my camp every night. If I am attacked at any time in too great numbers, I can drop back to my nearest works, and wait for reinforcements." Such was his plan, and those who know him believe firmly that he could have

been at the Cumberland Gap in time not only to succor our little army there, but to have prevented the destruction and evacuation of that very important post.

Wallace, finding himself thus suddenly superseded, his plans ignored, and his voluntary service bluffly refused, left Lexington for Cincinnati. While there the Battle of Richmond was fought, the disastrous results of which are still too fresh in the public mind to require repeating. Nelson, who did not arrive upon the field until the day was about lost, and only in time to use his sword against his own men in a fruitless endeavor to rally them, received a flesh-wound, and hastened back the same night to Cincinnati, leaving many dead and wounded on the field, and thousands of our brave boys prisoners to be paroled by the Rebels. These are simple matters of record, and are not here set down in any spirit of prejudice, or to throw a shadow upon the memory of the misguided, unfortunate, but courageous Nelson.

At this juncture General Wallace was again ordered to Lexington, this time by General Wright, a general whose gentlemanly bearing in all capacities makes him an ornament to the American army. Wallace was ordered thither to resume command of the forces; but on arriving at Paris, the order was countermanded, and he was sent back to take charge of the city of Cincinnati. Shrewdly suspecting that our forces would evacuate Lexington, he hastened to his new post. General Wright was at that time in Louisville. On his way back, Wallace was asked by one of his aids, —

“Do you believe the enemy will come to Cincinnati?”

“Yes,” was the reply. “Kirby Smith will first go to Frankfort. He must have that place, if possible, for the political effect it will have. If he gets it, he will surely come to Cincinnati. He is an idiot, if he does not. Here is the material of war, — goods, groceries, salt,

supplies, machinery, etc., — enough to restock the whole bogus Confederacy.”

“What are you going to do? You have nothing to defend the city with.”

“I will show you,” was the reply.

Within the first half-hour after his arrival in Cincinnati, General Wallace wrote and sent to the daily papers the following proclamation, which fully and clearly develops his whole plan.

#### “PROCLAMATION.

“The undersigned, by order of Major-General Wright, assumes command of Cincinnati, Covington, and Newport.

“It is but fair to inform the citizens, that an active, daring, and powerful enemy threatens them with every consequence of war; yet the cities must be defended, and their inhabitants must assist in the preparation.

“Patriotism, duty, honor, self-preservation, call them to the labor, and it must be performed equally by all classes.

“First. All business must be suspended at nine o'clock to-day. Every business-house must be closed.

“Second. Under the direction of the Mayor, the citizens must, within an hour after the suspension of business, (ten o'clock, A. M.,) assemble in convenient public places ready for orders. As soon as possible they will then be assigned to their work.

“This labor ought to be that of love, and the undersigned trusts and believes it will be so. Anyhow, it must be done.

“The willing shall be properly credited; the unwilling promptly visited. The principle adopted is, Citizens for the labor, soldiers for the battle.

“Third. The ferry-boats will cease plying the river after four o'clock, A. M., until further orders.

“Martial law is hereby proclaimed in the three cities; but until they can be relieved by the military, the injunctions of this proclamation will be executed by the police.

“LEWIS WALLACE,

“Maj.-Gen'l Commanding.”

Could anything be bolder and more to the purpose? It placed Cincinnati under martial law. It totally suspended business, and sent every citizen, without distinction, to the ranks or into the trenches. "Citizens for labor, soldiers for battle," was the principle underlying the whole plan,—a motto by which he reached every able-bodied man in the metropolis, and united the energies of forty thousand people,—a motto original with himself, and for which he should have the credit.

Imagine the astonishment that seized the city, when, in the morning, this bold proclamation was read,—a city unused to the din of war and its impediments. As yet there was no word of an advance of the enemy in the direction of Cincinnati. It was a question whether they would come or not. Thousands did not believe in the impending danger; yet the proclamation was obeyed to the letter, and this, too, when there was not a regiment to enforce it. The secret is easy of comprehension: it was the universal confidence reposed in the man who issued the order; and he was equally confident, not only in his own judgment, but in the people with whom he had to deal.

"If the enemy should not come after all this fuss," said one of the General's friends, "you will be ruined."

"Very well," he replied; "but they will come. And if they do not, it will be because this same fuss has caused them to think better of it."

The ten days ensuing will be forever memorable in the annals of the city of Cincinnati. The cheerful alacrity with which the people rose *en masse* to swell the ranks and crowd into the trenches was a sight worth seeing, and being seen could not readily be forgotten.

Here were the representatives of all nations and classes. The sturdy German, the lithe and gay-hearted Irishman, went shoulder to shoulder in defence of their adopted country. The man of money, the man of law, the merchant, the artist, and the artisan swelled the

lines hastening to the scene of action, armed either with musket, pick, or spade. Added to these was seen Dickson's long and dusky brigade of colored men, cheerfully wending their way to labor on the fortifications, evidently holding it their especial right to put whatever impediments they could in the northward path of those whom they considered their own peculiar foe. But the pleasantest and most picturesque sight of those remarkable days was the almost endless stream of sturdy men who rushed to the rescue from the rural districts of the State. These were known as the "Squirrel-Hunters." They came in files numbering thousands upon thousands, in all kinds of costumes, and armed with all kinds of fire-arms, but chiefly the deadly rifle, which they knew so well how to use. Old men, middle-aged men, young men, and often mere boys, like the "minute-men" of the old Revolution, they left the plough in the furrow, the flail on the half-threshed sheaves, the unfinished iron upon the anvil,—in short, dropped all their peculiar avocations, and with their leathern pouches full of bullets and their ox-horns full of powder, poured into the city by every highway and by-way in such numbers that it seemed as if the whole State of Ohio were peopled only with hunters, and that the spirit of Daniel Boone stood upon the hills opposite the town beckoning them into Kentucky. The pontoon-bridge, which had been begun and completed between sundown and sundown, groaned day and night with the perpetual stream of life all setting southward. In three days there were ten miles of intrenchments lining the hills, making a semicircle from the river above the city to the banks of the river below; and these were thickly manned from end to end, and made terrible to the astonished enemy by black and frowning cannon. General Heath, with his twenty thousand Rebel veterans, flushed with their late success at Richmond, drew up before these formidable preparations, and

deemed it prudent to take the matter into serious consideration before making the attack.

Our men were eagerly awaiting their approach, thousands in rifle-pits and tens of thousands along the whole line of the fortifications, while our scouts and pickets were skirmishing with their outposts in the plains in front. Should the foe make a sudden dash and carry any point of our lines, it was thought by some that nothing would prevent them from entering Cincinnati.

But for this also provision was made. The river about the city, above and below, was well protected by a flotilla of gun-boats improvised from the swarm of steamers which lay at the wharves. A storm of shot and shell, such as they had not dreamed of, would have played upon their advancing columns, while our regiments, pouring down from the fortifications, would have fallen upon their rear. The shrewd leaders of the Rebel army were probably kept well posted by traitors within our own lines in regard to the reception prepared for them, and, taking advantage of the darkness of night and the violence of a thunder-storm, made a hasty and ruinous retreat. Wallace was anxious to follow them, and was confident of success, but was overruled by those higher in authority.

The address which he now published to the citizens of Cincinnati, Covington, and Newport was manly and well-deserved. He said, —

“For the present, at least, the enemy has fallen back, and your cities are safe. It is the time for acknowledgments. I beg leave to make you mine. When I assumed command, there was nothing to defend you with, except a few half-finished works and some dismounted guns; yet I was confident. The energies of a great city are boundless; they have only to be aroused, united, and directed. You were appealed to. The answer will never be forgotten. Paris may have seen some-

thing like it in her revolutionary days, but the cities of America never did. Be proud that you have given them an example so splendid. The most commercial of people, you submitted to a total suspension of business, and without a murmur adopted my principle, ‘Citizens for labor, soldiers for battle.’ In coming times, strangers viewing the works on the hills of Newport and Covington will ask, ‘Who built these intrenchments?’ You can answer, ‘We built them.’ If they ask, ‘Who guarded them?’ you can reply, ‘We helped in thousands.’ If they inquire the result, your answer will be, ‘The enemy came and looked at them, and stole away in the night.’ You have won much honor. Keep your organizations ready to win more. Hereafter be always prepared to defend yourselves.

“LEWIS WALLACE,

“Maj.-Gen’l.”

It can safely be claimed for our young General, that he was the moving spirit which inspired and directed the people, and thereby saved Cincinnati and the surrounding cities, and, in the very face of Heath and his victorious horde from Richmond, organized a new and formidable army. That the citizens fully indorsed this was well exemplified on the occasion of his leading back into the metropolis a number of her volunteer regiments when the danger was over. They lined the streets, crowded the doors and windows, and filled the air with shouts of applause, in honor of the great work he had done.

In writing this notice of Wallace and the siege, we have had no intention to overlook the services of his co-laborers, especially those rendered to the West by the gallant Wright, who holds command of the department. The writer has attempted to give what came directly under his own observation, and what he believes to be the core of the matter, and consequently most interesting to the public.

## JANE AUSTEN.

IN the old Cathedral of Winchester stand the tombs of kings, with dates stretching back to William Rufus and Canute; here, too, are the marble effigies of queens and noble ladies, of crusaders and warriors, of priests and bishops. But our pilgrimage led us to a slab of black marble set into the pavement of the north aisle, and there, under the grand old arches, we read the name of Jane Austen. Many-colored as the light which streams through painted windows, came the memories which floated in our soul as we read the simple inscription: happy hours, gladdened by her genius, weary hours, soothed by her touch; the honored and the wise who first placed her volumes in our hand; the beloved ones who had lingered over her pages, the voices of our distant home, associated with every familiar story.

The personal history of Jane Austen belongs to the close of the last and the beginning of the present century. Her father through forty years was rector of a parish in the South of England. Mr. Austen was a man of great taste in all literary matters; from him his daughter inherited many of her gifts. He probably guided her early education and influenced the direction of her genius. Her life was passed chiefly in the country. Bath, then a fashionable watering-place, with occasional glimpses of London, must have afforded all the intercourse which she held with what is called "the world." Her travels were limited to excursions in the vicinity of her father's residence. Those were days of post-chaises and sedan-chairs, when the rush of the locomotive was unknown. Steam, that genie of the vapor, was yet a little household elf, singing pleasant tunes by the evening fire, at quiet hearthstones; it has since expanded into a mighty giant, whose influences are no longer

domestic. The circles of fashion are changed also. Those were the days of country-dances and India muslins; the beaux and belles of "the upper rooms" at Bath knew not the whirl of the waltz, nor the ceaseless involvements of "the German." Yet the measures of love and jealousy, of hope and fear, to which their hearts beat time, would be recognized to-night in every ballroom. Infinite sameness, infinite variety, are not more apparent in the outward than in the inward world, and the work of that writer will alone be lasting who recognizes and embodies this eternal law of the great Author.

Jane Austen possessed in a remarkable degree this rare intuition. The following passage is found in Sir Walter Scott's journal, under date of the fourteenth of March, 1826:—"Read again, and for the third time at least, Miss Austen's finely written novel of 'Pride and Prejudice.' That young lady had a talent for describing the involvements and feelings and characters of ordinary life, which is to me the most wonderful I ever met with. The Big Bow-wow strain I can do myself like any now going; but the exquisite touch which renders ordinary commonplace things and characters interesting from truth of the description and the sentiment is denied to me." This is high praise, but it is something more when we recur to the time at which Sir Walter writes this paragraph. It is amid the dreary entries in his journal of 1826, many of which make our hearts ache and our eyes overflow. He read the pages of Jane Austen on the fourteenth of March, and on the fifteenth he writes, "This morning I leave 39 Castle Street for the last time." It was something to have written a book sought for by him at such a moment. Even at Malta, in December, 1831, when the pressure of disease, as

well as of misfortune, was upon him, Sir Walter was often found with a volume of Miss Austen in his hand, and said to a friend, "There is a finishing-off in some of her scenes that is really quite above everybody else."

Jane Austen's life-world presented such a limited experience that it is marvellous where she could have found the models from which she studied such a variety of forms. It is only another proof that the secret lies in the genius which seizes, not in the material which is seized. We have been told by one who knew her well, that Miss Austen never intentionally drew portraits from individuals, and avoided, if possible, all sketches that could be recognized. But she was so faithful to Nature, that many of her acquaintance, whose characters had never entered her mind, were much offended, and could not be persuaded that they or their friends had not been depicted in some of her less attractive personages: a feeling which we have frequently shared; for, as the touches of her pencil brought out the light and shades very quietly, we have been startled to recognize our own portrait come gradually out on the canvas, especially since we are not equal to the courage of Cromwell, who said, "Paint me as I am."

In the "Autobiography of Sir Egerton Brydges" we find the following passage: it is characteristic of the man:—

"I remember Jane Austen, the novelist, a little child. Her mother was a Miss Leigh, whose paternal grandmother was a sister of the first Duke of Chandos. Mr. Austen was of a Kentish family, of which several branches have been settled in the Weald, and some are still remaining there. When I knew Jane Austen, I never suspected she was an authoress; but my eyes told me that she was fair and handsome, slight and elegant, with cheeks a little too full. The last time, I think, I saw her was at Ramsgate, in 1803; perhaps she was then about twenty-seven years old. Even then I did not know that

she was addicted to literary composition."

We can readily suppose that the spheres of Jane Austen and Sir Egerton could not be very congenial; and it does not appear that he was ever tempted from the contemplation of his own performances, to read her "literary compositions." A letter from Robert Southey to Sir Egerton shows that the latter had not quite forgotten her. Southey writes, under the date of Keswick, April, 1830:—

"You mention Miss Austen; her novels are more true to Nature, and have (for my sympathies) passages of finer feeling than any others of this age. She was a person of whom I have heard so much, and think so highly, that I regret not having seen her, or ever had an opportunity of testifying to her the respect which I felt for her."

A pleasant anecdote, told to us on good authority in England, is illustrative of Miss Austen's power over various minds. A party of distinguished literary men met at a country-seat; among them was Macaulay, and, we believe, Hallam; at all events, they were men of high reputation. While discussing the merits of various authors, it was proposed that each should write down the name of that work of fiction which had given him the greatest pleasure. Much surprise and amusement followed; for, on opening the slips of paper, *seven* bore the name of "Mansfield Park,"—a coincidence of opinion most rare, and a tribute to an author unsurpassed.

Had we been of that party at the English country-house, we should have written, "The *last* novel by Miss Austen which we have read"; yet, forced to a selection, we should have named "Persuasion." But we withdraw our private preference, and, yielding to the decision of seven wise men, place "Mansfield Park" at the head of the list, and leave it there without further comment.

"Persuasion" was her latest work,

and bears the impress of a matured mind and perfected style. The language of Miss Austen is, in all her pages, drawn from the "wells of English undefiled." Concise and clear, simple and vigorous, no word can be omitted that she puts down, and none can be added to heighten the effect of her sentences. In "Persuasion" there are passages whose depth and tenderness, welling up from deep fountains of feeling, impress us with the conviction that the angel of sorrow or suffering had troubled the waters, yet had left in them a healing influence, which is felt rather than revealed. Of all the heroines we have known through a long and somewhat varied experience, there is not one whose life-companionship we should so desire to secure as that of Anne Elliot. Ah! could she also forgive our faults and bear with our weaknesses, while we were animated by her sweet and noble example, existence would be, under any aspect, a blessing. This felicity was reserved for Captain Wentworth. Happy man! In "Persuasion" we also find the subtle Mr. Elliot. Here, as with Mr. Crawford in "Mansfield Park," Miss Austen deals dexterously with the character of a man of the world, and uses a nicer discernment than is often found in the writings of women, even those who assume masculine names.

"Emma" we know to have been a favorite with the author. "I have drawn a character full of faults," said she, "nevertheless I like her." In Emma's company we meet Mr. Knightley, Harriet Smith, and Frank Churchill. We sit beside good old Mr. Woodhouse, and please him by tasting his gruel. We walk through Highbury, we are patronized by Mrs. Elton, listen forbearingly to the indefatigable Miss Bates, and take an early walk to the post-office with Jane Fairfax. Once we found ourselves actually on "Box Hill," but it did not seem half so real as when we "explored" there with the party from Highbury.

"Pride and Prejudice" is piquant in style and masterly in portraiture. We make perhaps too many disagreeable acquaintances to enjoy ourselves entirely; yet who would forego Mr. Collins, or forget Lady Catherine de Bourgh, though each in their way is more stupid and odious than any one but Miss Austen could induce us to endure. Mr. Darcy's character is ably given; a very difficult one to sustain under all the circumstances in which he is placed. It is no small tribute to the power of the author to concede that she has so managed the workings of his real nature as to make it possible, and even probable, that a high-born, high-bred Englishman of Mr. Darcy's stamp could become the son-in-law of Mrs. Bennet. The scene of Darcy's declaration of love to Elizabeth, at the Hunsford Parsonage, is one of the most remarkable passages in Miss Austen's writings, and, indeed, we remember nothing equal to it among the many writers of fiction who have endeavored to describe that culminating point of human destiny.

"Northanger Abbey" is written in a fine vein of irony, called forth, in some degree, by the romantic school of Mrs. Radcliffe and her imitators. We doubt whether Miss Austen was not over-wise with regard to these romances. Though born after the Radcliffe era, we well remember shivering through the "Mysteries of Udolpho" with as quaking a heart as beat in the bosom of Catherine Morland. If Miss Austen was not equally impressed by the power of these romances, we rejoice that they were written, as with them we should have lost "Northanger Abbey." For ourselves, we spent one very rainy day in the streets of Bath, looking up every nook and corner familiar in the adventures of Catherine, and time, not faith, failed, for a visit to Northanger itself. Bath was also sanctified by the presence of Anne Elliot. Our inn, the "White Hart," (made classic by the adventures of various well-remembered characters,) was hallowed by exquisite

memories which connected one of the rooms (we faithfully believed it was our apartment) with the conversation of Anne Elliot and Captain Harville, as they stood by the window, while Captain Wentworth listened and wrote. In vain did we gaze at the windows of Camden Place. No Anne Elliot appeared.

"Sense and Sensibility" was the first novel published by Miss Austen. It is marked by her peculiar genius, though it may be wanting in the nicer finish which experience gave to her later writings.

The Earl of Carlisle, when Lord Morpeth, wrote a poem for some now forgotten annual, entitled "The Lady and the Novel." The following lines occur among the verses:—

"Or is it thou, all-perfect Austen? here  
 Let one poor wreath adorn thy early bier,  
 That scarce allowed thy modest worth to  
 claim  
 The living portion of thy honest fame:  
 Oh, Mrs. Bennet, Mrs. Norris, too,  
 While Memory survives, she 'll dream of  
 you;  
 And Mr. Woodhouse, with abstemious lip,  
 Must thin, but not too thin, the gruel sip;  
 Miss Bates, our idol, though the village  
 bore,  
 And Mrs. Elton, ardent to explore;  
 While the clear style flows on without pre-  
 tence,  
 With unstained purity, and unmatched  
 sense."

If the Earl of Carlisle, in whose veins flows "the blood of all the Howards," is willing to acknowledge so many of our friends, who are anything but aristocratic, our republican soul shrinks not from the confession that we should like to accompany good-natured Mrs. Jennings in her hospitable carriage, (so useful to our young ladies of sense and sensibility,) witness the happiness of Elinor at the parsonage, and the reward of Colonel Brandon at the manor-house of Delaford, and share with Mrs. Jennings all the charms of the mulberry-tree and the yew arbor.

An article on "Recent Novels," in "Fraser's Magazine" for December, 1847, written by Mr. G. H. Lewes, con-

tains the following paragraphs:—"What we most heartily enjoy and applaud is truth in the delineations of life and character. . . . To make our meaning precise, we would say that Fielding and Miss Austen are the greatest novelists in our language. . . . We would rather have written 'Pride and Prejudice,' or 'Tom Jones,' than any of the 'Waverley Novels.' . . . Miss Austen has been called a prose Shakspeare,—and among others, by Macaulay. In spite of the sense of incongruity which besets us in the words *prose* Shakspeare, we confess the greatness of Miss Austen, her marvellous dramatic power, seems, more than anything in Scott, akin to Shakspeare."

The conclusion of this article is devoted to a review of 'Jane Eyre,' and led to the correspondence between Miss Brontë and Mr. Lewes which will be found in the memoir of her life. In these letters it is apparent that Mr. Lewes wishes Miss Brontë to read and to enjoy Miss Austen's works, as he does himself. Mr. Lewes is disappointed, and felt, doubtless, what all true lovers of Jane Austen have experienced, a surprise to find how obtuse otherwise clever people sometimes are. In this instance, however, we think Mr. Lewes expected what was impossible. Charlotte Brontë could not harmonize with Jane Austen. The luminous and familiar star which comes forth into the quiet evening sky when the sun sets amid the amber light of an autumn evening, and the comet which started into sight, unheralded and unnamed, and flamed across the midnight sky, have no affinity, except in the Divine Mind, whence both originate.

The notice of Miss Austen, by Macaulay, to which Mr. Lewes alludes, must be, we presume, the passage which occurs in Macaulay's article on Madame D'Arblay, in the "Edinburgh Review," for January, 1843. We do not find the phrase, "prose Shakspeare," but the meaning is the same; we give the passage as it stands before us:—

“Shakspeare has neither equal nor second; but among writers who, in the point we have noticed, have approached nearest the manner of the great master, we have no hesitation in placing Jane Austen, as a woman of whom England is justly proud. She has given us a multitude of characters, all, in a certain sense, commonplace, all such as we meet every day. Yet they are all as perfectly discriminated from each other as if they were the most eccentric of human beings. There are, for example, four clergymen, none of whom we should be surprised to find in any parsonage in the kingdom,—Mr. Edward Ferrars, Mr. Henry Tilney, Mr. Edward Bertram, and Mr. Elton. They are all specimens of the upper part of the middle class. They have been all liberally educated. They all lie under the restraints of the same sacred profession. They are all young. They are all in love. Not any one of them has any hobby-horse, to use the phrase of Sterne. Not one has any ruling passion, such as we read in Pope. Who would not have expected them to be insipid likenesses of each other? No such thing. Harpagon is not more unlike Jourdain, Joseph Surface is not more unlike Sir Lucius O’Trigger, than every one of Miss Austen’s young divines to all his reverend brethren. And almost all this is done by touches so delicate that they elude analysis, that they defy the powers of description, and that we know them to exist only by the general effect to which they have contributed.”

Dr. Whately, the Archbishop of Dublin, in the “Quarterly Review,” 1821, sums up his estimate of Miss Austen with these words: “The Eastern monarch who proclaimed a reward to him who should discover a new pleasure would have deserved well of mankind, had he stipulated it should be blameless. Those again who delight in the study of human nature may improve in the knowledge of it, and in the profitable application of that knowledge, by

the perusal of such fictions. Miss Austen introduces very little of what is technically called religion into her books, yet that must be a blinded soul which does not recognize the vital essence, everywhere present in her pages, of a deep and enlightened piety.

There are but few descriptions of scenery in her novels. The figures of the piece are her care; and if she draws in a tree, a hill, or a manor-house, it is always in the background. This fact did not arise from any want of appreciation for the glories or the beauties of the outward creation, for we know that the pencil was as often in her hand as the pen. It was that unity of purpose, ever present to her mind, which never allowed her to swerve from the actual into the ideal, nor even to yield to tempting descriptions of Nature which might be near, and yet aside from the main object of her narrative. Her creations are living people, not masks behind which the author soliloquizes or lectures. These novels are impersonal; Miss Austen never herself appears; and if she ever had a lover, we cannot decide whom he resembled among the many masculine portraits she has drawn.

Very much has been said in her praise, and we, in this brief article, have summoned together witnesses to the extent of her powers, which are fit and not few. Yet we are aware that to a class of readers Miss Austen’s novels must ever remain sealed books. So be it. While the English language is read, the world will always be provided with souls who can enjoy the rare excellence of that rich legacy left to them by her genius.

Once in our lifetime we spent three delicious days in the Isle of Wight, and then crossed the water to Portsmouth. After taking a turn on the ramparts in memory of Fanny Price, and looking upon the harbor whence the Thrush went out, we drove over Portsdown Hill to visit the surviving member of that household which called Jane Austen their own.

We had been preceded by a letter, introducing us to Admiral Austen as fervent admirers of his sister's genius, and were received by him with a gentle courtesy most winning to our heart.

In the finely-cut features of the brother, who retained at eighty years of age much of the early beauty of his youth, we fancied we must see a resemblance to his sister, of whom there exists no portrait.

It was delightful to us to hear him speak of "Jane," and to be brought so near the actual in her daily life. Of his sister's fame as a writer the Admiral spoke understandingly, but reservedly.

We found the old Admiral safely moored in that most delightful of havens, a quiet English country-home, with the beauty of Nature around the mansion, and the beauty of domestic love and happiness beneath its hospitable roof.

There we spent a summer day, and the passing hours seemed like the pages over which we had often lingered, written by her hand whose influence had guided us to those she loved. That day, with all its associations, has become a sacred memory, and links us to the sphere where dwells that soul whose gift of genius has rendered immortal the name of Jane Austen.

---

### THE PROCLAMATION.

"I order and declare that all persons held as slaves in the said designated States and parts of States are and hereafter shall be free, . . . and I hereby enjoin upon the people so declared to be free to abstain from all violence, unless in necessary self-defence."

ABRAHAM LINCOLN.

SAINT PATRICK, slave to Milcho of the herds  
Of Ballymena, sleeping, heard these words:  
"Arise, and flee  
Out from the land of bondage, and be free!"

Glad as a soul in pain, who hears from heaven  
The angels singing of his sins forgiven,  
And, wondering, sees  
His prison opening to their golden keys,

He rose a man who laid him down a slave,  
Shook from his locks the ashes of the grave,  
And outward trod  
Into the glorious liberty of God.

He cast the symbols of his shame away;  
And passing where the sleeping Milcho lay,  
Though back and limb  
Smarted with wrong, he prayed, "God pardon him!"

So went he forth: but in God's time he came  
To light on Uilline's hills a holy flame;

And, dying, gave  
The land a saint that lost him as a slave.

O dark, sad millions, patiently and dumb  
Waiting for God, your hour, at last, has come,  
And freedom's song  
Breaks the long silence of your night of wrong!

Arise and flee! shake off the vile restraint  
Of ages! but, like Ballymena's saint,  
The oppressor spare,  
Heap only on his head the coals of prayer!

Go forth, like him! like him, return again,  
To bless the land whereon in bitter pain  
Ye toiled at first,  
And heal with freedom what your slavery cursed!

### THE LAW OF COSTS.

OUR nation is now paying the price, not only of its vice, but also of its virtue, — not alone of its evil doing, but of its noble and admirable doing as well. It has of late been a customary cry with a certain class, that those who cherish freedom and advocate social justice are the proper authors of the present war. No doubt there is in this allegation an ungracious kind of truth; that is, had the nation been destitute of a political faith and of moral feeling, there would have been no contest. But were one lying ill of yellow-fever or small-pox, there would be the same sort of lying truth in the statement, that the *life* in him, which alone resists the disease, is really its cause; since to yellow-fever, or to any malady, dead bodies are not subject. There is no preventive of disease so effectual as death itself, — no place so impregnable to pestilence as the grave. So, had the vitality gone out of the nation's heart, had that lamp of love for freedom and justice and of homage to the being of man, which once burned in its bosom so bright-

ly, already sunk into death-flicker and extinction, then in the sordid and icy dark that would remain there could be no war of like nature with this that today gives the land its woful baptism of blood and tears. Oh, no! there would have been peace — *and* putrefaction: peace, but without its sweetness, and death, but without its hopes.

In one important sense, however, this war — hateful and horrible though it be — is the price which the nation must pay for its ideas and its magnanimity. If you take a clear initial step toward any great end, you thereby assume a debt to destiny the pursuit and completion of your action; and should you fail to meet this debt, it will not fail to meet you, though now in the shape of retribution and with a biting edge. The seaman who has signed shipping-papers owes a voyage, and must either sail or suffer. The nation which has recognized absolute rights of man, and in their name assumed to shed blood, has taken upon itself the burden of a high destination, and must bear it, if not willingly,

reluctantly, if not in joy and honor, then in shame and weeping.

Our nation, by the early nobility of its faith and action, assumed such a debt to destiny, and now must pay it. It needed not to come in this shape: there need have been no horror of carnage,—no feast of vultures, and carnival offends,—no weeping of Rachel, mourning for her children, and refusing to be comforted, because they are not. There was required only a magnanimity in proceeding to sustain that of our beginning,—only a sympathy broad enough to take our little planet and all her human tribes in its arms, deep enough to go beneath the skin in which men differ, to the heart's blood in which they agree,—only pains and patience, faith and forbearance,—only a national obedience to that profound precept of Christianity which prescribes service to him that would be greatest, making the knowledge of the wise due to the ignorant, and the strength of the strong due to the weak. The costs of freedom would have been paid in the patient lifting up of a degraded race from the slough of servitude; and the nation would at the same time have avoided that slough of lava and fire wherein it is now engulfed.

It was not to be so. History is coarse; it gets on by gross feeding and fevers, not by delicacy of temperance and wisdom of regimen. Our debt was to be paid, not in a pure form, but mixed with the costs of unbelief, cowardice, avarice. Yet primarily it is the cost, not of meanness, but of magnanimity, that we are now paying,—not of a base skepticism, but of a noble faith. For, in truth, normal qualities and actions involve costs no less than vicious and abnormal. Such is the law of the world; and it is this law of the costs of worthiness, of knowledge and nobility, of all memorable being and doing, that I now desire to set forth. Having obtained the scope and power of the law, having considered it also as applying to individuals, we may proceed to exhibit

its bearing upon the present struggle of our Republic.

The general statement is this,—that whatever has a worth has also a cost. "The law of the universe," says a wise thinker, "is, Pay and take." If you desire silks of the mercer or supplies at the grocery, you, of course, pay money. Is it a harvest from the field that you seek? Tillage must be paid. Would you have the river toil in production of cloths for your raiment? Only pay the due modicum of knowledge, labor, and skill, and you shall bind its hand to your water-wheels, and turn all its prone strength into pliant service. Or perhaps you wish the comforts of a household. By payment of the due bearing of its burdens, you may hope to obtain it,—surely not otherwise. Do you ask that this house may be a true home, a treasury for wealth of the heart, a little heaven? Once more the word is *pay*,—pay your own heart's unselfish love, pay a generous trustfulness, a pure sympathy, a tender consideration, and a sweet firm-heartedness withal. And so, wherever there is a gaining, there is a warning,—wherever a well-being, a well-doing,—wherever a preciousness, a price of possession; and he who scants the payment stints the purchase; and he that will proffer nothing shall profit nothing; but he that freely and wisely gives shall receive as freely.

But these *desiderata* which I have named are all prices either of ordinary use, of comfort, or felicity; and it is generally understood that happiness is costly: but virtue? Virtue, so far from costing anything, is often supposed to be itself a price that you pay for happiness. It is told us that we shall be rewarded for our virtue; what moralistic commonplace is more common than this? But rewarded for your virtue you are not to be; you are to pay for it; at least, payment made, rather than received, is the principal fact. He who is honest for reward is a knave without reward. He who asks pay for telling truth has truth only on his tongue and

a double lie in his heart. Do you think that the true artist strives to paint well that he may get money for his work? Or rather, is not his desire to pay money, to pay anything in reason, for the sake of excellence in his art? And, indeed, what is worthier than Worth? What fitter, therefore, to be paid for? And that payment is made, even under penal forms, every one may see. For what did Raleigh give his lofty head? For the privilege of being Raleigh, of being a man of great heart and a statesman of great mind, with a King James, a burlesque of all sovereignty, on the throne. For what did Socrates quaff the poison? For the privilege of that divine sincerity and penetration which characterized his life. For what did Kepler endure the last straits of poverty, his children crying for bread, while his own heart was pierced with their wailing? For the privilege—in his own noble words—“of reading God’s thoughts after Him,”—God’s thoughts written in stellar signs on the scroll of the skies. And Cicero and Thomas Cromwell, John Huss and John Knox, John Rogers and John Brown, and many another, high and low, famed and forgotten, must they not all make, as it were, penal payment for the privilege of being true men, truest among true? And again I say, that, if one knows something worthier than Worth, something more excellent than Excellence, then only does he know something fitter than they to be paid for.

Payment *may* assume a penal form: do not think this its only form. And to take the law at once out of the limitations which these examples suggest, let me show you that it is a law of healthy and unlamenting Nature. Look at the scale of existence, and you will see that for every step of advance in that scale payment is required. The animal is higher than the vegetable; the animal, accordingly, is subject to the sense of pain, the vegetable not; and among animals the pain may be keener as the organization is nobler.

The susceptibility not only to pain, but to vital injury, observes the same gradation. A little girdling kills an oak; but some low fungus may be cut and troubled and trampled *ad libitum*, and it will not perish; and along the shores, farmers year after year pluck sea-weed from the rocks, and year after year it springs again lively as ever. Among the lowest orders of animals you shall find a creature that, if you cut it in two, straightway duplicates its existence and floats away twice as happy as before; but of the prick of a bodkin or the sting of a bee the noblest of men may die.

In the animal body the organs make a draft from the general vigors of the system just in proportion to their dignity. The eye,—what an expensive boarder at the gastric tables is that! Considerable provinces of the brain have to be made over to its exclusive use; and it will be remembered that a single ounce of delicate, sensitive brain, full of mysterious and marvellous powers, requires more vital support than many pounds of common muscle. The powers of the eye are great; it has a right to cost much, and it does cost. Also we observe that in this organ there is the exceeding susceptibility to injury, which, as we have observed, invariably accompanies powers of a lofty grade.

Noble senses cost much; noble susceptibilities cost vastly more. Compare oxen with men in respect to the amount of feeling and nervous wear and tear which they severally experience. The ox enjoys grass and sleep; he feels hunger and weariness, and he is wounded by that which goes through his hide. But upon the nerve of the man what an incessant thousandfold play! Out of the eyes of the passers-by pleasures and pains are rained upon him; a word, a look, a tone thrills his every fibre; the touch of a hand warms or chills the very marrow in his bones. Anticipation and memory, hope and regret, love and hate, ideal joy and sorrow and shame, ah, what troops of visitants are ever present with his soul, each and

all, whether welcome guests or unwelcome, to be nourished from the resources of his bosom! And out of this high sensibility of man must come what innumerable stabs of quick agony, what slow, gasping hours of grief and pain, that to the cattle upon the hills are utterly unknown! But do you envy the ox his bovine peace? It is precisely that which makes him an ox. It is due to nothing but his insensibility, — by no means, as I take occasion to assure those poets who laud outward Nature and inferior creatures to the disparagement of man, — by no means due to composure and philosophy. The ox is no great hero, after all, for he will bellow at a thousandth part the sense of pain which from a Spartan child wrings no tear nor cry.

Yes, it is precisely this sensibility which makes man human. Were he incapable of ideal joy and sorrow, he, too, were brute. It is through this delicacy of conscious relationship, it is through this openness to the finest impressions, that he can become an organ of supernal intelligence, that he is capable of social and celestial inspirations. High spiritual sensibility is the central condition of a noble and admirable life; it is the hinge on which turn and open to man the gates of his highest glory and purest peace. Yet for this he must pay away all that induration of brutes and boors which sheds off so many a wasting excitement and stinging chagrin, as the feathers of the water-fowl shed rain.

In entering, therefore, upon any noble course of life, any generous and brave pursuit of excellence, understand, that, so far as ordinary coin is concerned, you are rather to pay, than to be paid, for your superiorities. Understand that the pursuit of excellence must indeed be brave to be prosperous, — that is, it is always in some way opposed and imperilled. Understand, that, with every step of spiritual elevation which you attain, some part of your audience and companionship will be left behind.

Understand, that, if you carry lofty principles and philosophic intelligence into camps, these possessions will in general not be passed to your credit, but will be charged against you; and you must surpass your inferiors in their own kinds of virtue to regain what of popular regard these cost you. Understand, that, if you have a reverence for theoretical and absolute truth, less of common fortune will come to you in answer to equal business and professional ability than to those who do care for money, and do not care for truth. Are you a physician? Let me tell you that there is a possible excellence in your profession which will rather limit than increase your practice; yet that very excellence you must strive to attain, for your soul's life is concerned in your doing so. Are you a lawyer? Know that there is a depth and delicacy in the sense of justice, which will sometimes send clients from your office, and sometimes tie your tongue at the bar; yet, as you would preserve the majesty of your manhood, strive just for that unprofitable sense of justice, — unprofitable only because infinitely, rather than finitely, profitable. In a stormy and critical time, when much is ending and much beginning, and a great land is heaving and quivering with commingled agonies of dissolution and throes of new birth, are you a statesman of earnestness and insight, with your eye on the cardinal question of your epoch, its answer clearly in your heart, and your will irrevocably set to give it due enunciation and emphasis? Expect calumny and affected contempt from the base; expect alienation and misconstruction and undervaluing on the part of some who are honorable. Are you a woman rich in high aims, in noble sympathies and thrilling sensibilities, and, as must ever be the case with such, not too rich in a meet companionship? Expect loneliness, and wear it as a grace upon your brow; it is your laurel. Are you a true artist or thinker? Expect to go beyond popular ap-

preciation; go beyond it, or the highest appreciation you will not deserve. In fine, for all excellence expect and seek to pay.

No one ever held this law more steadily in view than Jesus; and when ardent young people came to him proposing pupilage, he was wont at once to bring it before their eyes. It was on such an occasion that he uttered the words, so simple and intense that they thrill to the touch like the string of a harp, "The foxes have holes, and the birds of the air have nests; but the Son of Man hath not where to lay his head." Of like suggestion his question of the king going to war, who first sitteth down and consulteth whether he be able, and of the man about to build a house, who begins by counting the cost.

The cost, — question of this must arise; question of this must on all sides either be honestly met or dishonestly eluded. For observe, that attempt to escape payment for the purest values, no less than for the grossest, is dishonest. If one seek to compass possession of ordinary goods without compensation, we at once apply the opprobrious term of *theft* or *fraud*. Why does the same sort of attempt cease to be fraudulent when it is carried up to a higher degree and applied to possessions more precious? If he that evades the revenue law of the State be guilty of fraud, what of him who would import Nature's goods and pay no duties? For Nature has her own system of impost, and permits no smuggling. There was a tax on truth ere there was one on tea or on silver plate. Character, genius, high parts in history are all assessed upon. Nature lets out her houses and lands on liberal terms; but resorts to distraint, if her dues be not forthcoming. Be sure, therefore, that little success and little honor will wait upon any would-be thiefing from God. He who attempts to purloin on this high scale has set all the wit of the universe at work to thwart him, and will certainly be worsted sorely in the end.

The moment, therefore, that any man is found engaged in this business, how to estimate him is clear. Daniel O'Connell tried the experiment of being an heroic patriot and making money by it. It is conceded by his friends that he applied to his private uses, to sustaining the magnificence of his household, the rent-moneys sweated from the foreheads of Irish peasants. But, they say, he had sacrificed many ambitions in taking up the rôle of a patriot; and he felt entitled to revenues as liberal as any indulgence of them could have procured him! The apology puts his case beyond all apology. He who — to employ the old phraseology — seeks to exact the same bribe of God that he might have obtained from the Devil is always the Devil's servant, no matter whose livery he wears. Had one often to apply the good word *patriot* to such men, it would soon blister his mouth. I find, in fact, no vice so bad as this spurious virtue, no sinners so unsavory as these mock saints.

To nations, also, this comprehensive law applies. Would you have a noble and orderly freedom? Buy it, and it is yours. "Liberty or death," cried eloquent Henry; and the speech is recited as bold and peculiar; but, by an enduring ordinance of Nature, the people that does not in its heart of hearts say, "Liberty or death," cannot have liberty. Many of us had learned to fancy that the stern tenure by which ancient communities held their civilization was now become an obsolete fact, and that without peril or sacrifice we might forever appropriate all that blesses nations; but by the iron throat of this war Providence is thundering down upon us the unalterable law, that man shall hold no ideal possession longer than he places all his lower treasures at its command.

But there was a special form of cost, invited by the virtue of our national existence; and it is this in particular that we are now paying, — paying it, I am sorry to say, in the form of retri-

bution because the nation declined to meet it otherwise. But the peculiarity of the case is, as has been affirmed, that it was chiefly the virtue and nobility of the nation which created this debt at the outset.

And now what is the peculiar virtue and glory of this nation? Why, that its national existence is based upon a recognition of the absolute rights and duties of humanity. Theoretically this is our basis; practically there is a commixture; much of this cosmopolitan faith is mingled with much of confined self-regard. But the theoretical fact is the one here in point: since the question now is not of the national unfaith or infidelity, but of the national faith. And beyond a question, the real faith of the nation, so far as it has one, is represented by its formal declaration, made sacred by the shedding of blood. Our belief really is not in the special right or privilege of Americans, but in the prerogative of man. This prerogative we may have succeeded well or ill in stating and interpreting; the fact, that our appeal is to this, alone concerns us here.

Now this national attitude, so far as history informs me, is unprecedented. The true-born son of Albion, save as an exceptional culture enlarges his soul, believes religiously that God is an Englishman, and that the interests of England precede those of the universe. When, therefore, he sees anything done which depletes the pocket of England, it affects him with a sense of infidelity in those to whom this loss is due. England professes to have a *national* religion; she has, and in a deeper sense than is commonly meant.

We will not disparage England overmuch; she has done good service in history. We will not boast of ourselves; the actual politics of this country have been, in no small part, base and infidel to a degree that is simply sickening. Nevertheless, it remains true that the fundamental idea of the State here represents a new phase of

human history. Every European nationality had taken shape and character while yet our globe was not known to be a globe, while before the eyes of all lookers land and sea faded away into darkness and mystery; and it was not possible that common human sympathy should take into its arms a world of which it could not conceive. But a national spirit was here generated when the ocean had been crossed, when the earth had been rounded, when, too, Newton had, as it were, circumnavigated the solar system, — when, therefore, there could be, and must be, a new recognition of humanity. Our country, again, was peopled from the minorities of Europe, from those whom the spirit of the new time had touched, and taken away their content with old institutions, — a population restless, uncertain, yeasty, chaotic, it might be, full of the rawness of new conditions, mean and magnanimous by turns, as such people are wont, but all leavened more or less with a sentiment new in history, — all leavened with a kind of whole-world feeling, a sense of the oneness of humanity, and, as derived from this, a sense of absolute rights of man, of prerogatives belonging to human nature as such.

The truth of all this has been brought under suspicion by the flatulent oratory of our Fourth-of-July; but truth it remains. Our nation did enunciate a grand idea never equally felt by any other. Our nation has said, and said with the sword in its right hand, "Every man born into this world has the right from God to make the most and best of his existence, and society is established only to further and guard this sacred right." We thus established a new scale of justice; we raised a demand for the individual which had not been so made before. Freedom and order were made one; both were identified with justice, simple, broad, equal, universal justice. The American idea, then, what is it? *The identification of politics with justice*, this it is. With

justice, and this, too, not on a scale of conventional usage, but on the scale of natural right. That, as I read, is the American idea, — making politics moral by their unity with natural justice, justice world-old and world-wide.

This conception — obscurely seen and felt, and mixed with the inevitable amount of folly and self-seeking, yet, after all, this conception — our nation dared to stand up and announce, and to consecrate it by the shedding of blood, calling God and all good men to witness. The deed was grand; the hearts of men everywhere were more or less its accomplices; all the tides of history ran in its favor; kings, forgetting themselves into virtue and generosity, lent it good wishes or even good arms; it was successful; and on its primary success waited such prosperities as the world has seldom seen.

But, because the deed was noble, great costs must needs attend it, attend it long. And first of all the cost of *applying our principle within our own borders*. For, when a place had been obtained for us among nations, we looked down, and, lo! at our feet the African — in chains. A benighted and submissive race, down-trodden and despised from of old, a race of outcasts, of Pariahs, covered with the shame of servitude, and held by the claim of that terrible talisman, the word *property*, — here it crouched at our feet, lifting its hands, imploring. Yes, America, here is your task now; never flinch nor hesitate, never begin to question now; thrust your right hand deep into your heart's treasury, bring forth its costliest, purest justice, and lay its immeasurable bounty into this sable palm, bind its blessing on this degraded brow. Ah, but America did falter and question. "How can I?" it said. "This is a Negro, a Negro! Besides, he is PROPERTY!" And so America looked up, determined to ignore the kneeling form. With pious blasphemy it said, "He is here providentially; God in His own good time will dispose of him"; as if God's

hour for a good effect were not the earliest hour at which courage and labor can bring it about, not the latest to which indolence and infidelity can postpone it. Then it looked away across oceans to other continents, and began again the chant, "Man is man; natural right is sacred forever; and of politics the sole basis is universal justice." Joyfully it sang for a while, but soon there began to come up the clank of chains mingling with its chant, and the groans of oppressed men and violated women, and prayers to Heaven for another justice than this; and then the words of its chant grew bitter in the mouth of our nation, and a sickness came in its heart, and an evil blush mounted and stood on its brow; and at length a devil spoke in its bosom and said, "The negro has no rights that a white man is bound to respect"; and ere the words were fairly uttered, their meaning, as was indeed inevitable, changed to this, — "A Northern 'mud-sill' has no rights that a Southern gentleman is bound to respect"; and soon guns were heard booming about Sumter, and a new chapter in our history and in the world's history began.

Our nation refused allegiance to its own principles, refused to pay the lawful costs of its virtue and nobility; therefore it is sued in the courts of destiny, and the case is this day on trial.

The case is plain, the logic clear. Natural right is sacred, or it is not. If it is, the negro is lawfully free; if it is not, you may be lawfully a slave. Just how all this stands in the Constitution of the United States I do not presume to say. Other heads, whose business it is, must attend to that. Every man to his vocation. I speak from the stand-point of philosophy, not of politics; I attend to the logic of history, the logic of destiny, according to which, of course, final judgment will be rendered. It is not exactly to be supposed that the statute of any nation makes grass green, or establishes the relationship between cause and ef-

fect. The laws of the world are considerably older than our calendar, and therefore date yet more considerably beyond the year 1789. And by the laws of the world, by the eternal relationship between cause and effect, it stands enacted beyond repeal, and graven upon somewhat more durable than marble or brass, that the destiny of this nation for more than one century to come hinges upon its justice to that outcast race, — outcast, but not henceforth to be cast out by us, save to the utter casting down of ourselves. Once it might have been otherwise; now we have made it so. Justice to the African is salvation to the white man upon this continent. Oh, my America, you must not, cannot, shall not be blind to this fact! America, deeper in my love and higher in my esteem than ever before, newly illustrated in worth, newly proven to be capable still, in some directions, of exceeding magnanimity, open your eyes that your feet may have guidance, now when there is such need! Open your eyes to see, that, if you deliberately deny justice and human recognition to one innocent soul in all your borders, you stab at your own existence; for, in violating the unity of humanity, you break the principle that makes you a nation and alive. Give justice to black and white, recognize man as man; or the constituting idea, the vital faith, the crystallizing principle of the nation perishes, and the whole disintegrates, falls into dust.

I invite the attention of conservative men to the fact that in this due paying of costs lies the true conservation. I invite them to observe, that, as every living body has a principle which makes it alive, makes it a unit, harmonizing the action of its members, — as every crystal has a unitary law, which commands the arrangement of its particles, the number and arrangement of its faces and angles, — so it is with every orderly or living state. To this also there is a central, clarifying, unifying faith. Without this you may collect

hordes into the brief, brutal empire of a Chingis Khan or Tamerlane; but you can have no firm, free, orderly, inspiring national life.

Whenever and wherever in history this central condition of national existence has been destroyed, there a nation has fallen into chaos, into imbecility, losing all power to produce genius, to generate able souls, to sustain the trust of men in each other, or to support any of the conditions of social health and order. Even advances in the right line of progress have to be made slowly, gradually, lest the shock of newness be too great, and break off a people from the traditions in which its faith is embodied; but a mere recoil, a mere denial and destruction of its centralizing principle, is the last and utmost calamity which can befall any nation.

This is no fine-spun doctrine, fit for parlors and lecture-rooms, but not for counting-rooms and congressional halls. It is solid, durable fact. History is full of it; and he is a mere mole, and blinder than midnight, who cannot perceive it. The spectacle of nations falling into sudden, chronic, careless imbecility is frequent and glaring enough for even wilfulness to see; and the central secret of this sad phenomenon, so I am sure, has been suggested here. When the socializing faith of a nation has perished, the alternative for it becomes this, that it can be stable only as it is stagnant, and vigorous only as it is lawless.

Of this I am sure; but whether Bullion Street can be willing to understand it I am not so sure. Yet if it cannot, or some one in its behalf, grass will grow there. And why should it refuse heed? Who is more concerned? Does Bullion Street desire chaos? Does it wish that the pith should be taken out of every statute, and the chief value from every piece of property? If not, its course is clear. This nation has a vital faith, — or had one, — well grounded in its traditions. Conserve this; or, if it has been impaired, renew its vigor. This

faith is our one sole pledge of order, of peace, of growth, of all that we prize in the present, or hope for the future. That it is a noble faith, new in its breadth, its comprehension and magnanimity, — this would seem in my eyes rather to enhance than diminish the importance of its conservation. Yet the only argument against it is, that it is generous, broad, inspiring; and the only appeal in opposition to it must be made to the coldness of skepticism, the suicidal miserliness of egotism, or the folly and fatuity of ignorance.

Our nation has a political faith. Will you, conservative men, conserve this, and so regain and multiply the blessing it has already brought? or will you destroy it, and wait till, through at least a century of tossing and tumult, another, and that of less value, is grown? A faith, a crystallizing principle for many millions of people is not grown in a day; if it can be grown in a century is problematical. The fact, and the choice, are before you.

Our nation *had* a faith which it cherished with sincerity and sureness. If half the nation has fallen away from this, — if half the remaining moiety is doubtful, skeptical about it, — if, therefore, we are already a house divided against itself and tottering to its fall, — to what is all due? Simply to the fact that no nation can long unsay its central principle, and yet preserve it in faithfulness and power, — that no nation can long preach the sanctity of natural right, the venerableness of man's nature, and the identity of pure justice with political interest, from an auction-block on which men and maidens are sold, — that, in fine, a nation cannot continue long with impunity to play within its own borders the part both of Gessler and Tell, both of Washington and Benedict Arnold, both of Christ and of him that betrayed him.

We must choose. For our national faith we must make honest payment, so conserving it, and with it all for which nations may hope; or else, refus-

ing to meet these costs, we must suffer the nation's soul to perish, and in the imbecility, the chaos, and shame that will follow, suffer therewith all that nations may lawfully fear.

What good omens, then, attend our time, now when the first officer of the land has put the trumpet to his mouth and blown round the world an intimation that, to the extent of the nation's power, these costs will begin to be paid, this true conservation to be practised! The work is not yet done; and the late elections betoken too much of moral debility in the people. But my trust continues firm. The work will be done, — at least, so far as we are responsible for its doing. And then! Then our shame, our misery, our deadly sickness will be taken away; no more that poison in our politics; no more that degradation in our commercial relations; no more that careful toning down of sentiment to low levels, that it may harmonize with low conditions; no more that need to shun the company of all healthful and heroic thoughts, such as are fit, indeed, to brace the sinews of a sincere social order, but sure to crack the sinews of a feeble and faithless conventionalism. Base men there will yet be, and therefore base politics; but when once our nation has paid the debt it owes to itself and the human race, when once it has got out of its blood the venom of this great injustice, it will, it must, arise beautiful in its young strength, noble in its new-consecrated faith, and stride away with a generous and achieving pace upon the great highways of historical progress. Other costs will come, if we are worthy; other lessons there will be to learn. I anticipate a place for brave and wise restrictions, — for I am no Red Republican, — as well as for brave and generous expansions. Lessons to learn, errors to unlearn, there will surely be; tasks to attempt, and disciplines to practise; but once place the nation in the condition of *health*, once get it at one with its own heart, once get it out of

these aimless eddies into clear sea, out of these accursed "doldrums," (as the sailors phrase it,) this commixture of broiling calm and sky-bursting thunder-gust, into the great trade-winds of natural tendency that are so near at hand, — and I can trust it to meet all future

emergency. All the freshest blood of the world is flowing hither: we have but to wed this with the life-blood of the universe, with eternal truth and justice, and God has in store no blessing for noblest nations that will not be secured for ours.

---

### THE CHASSEURS À PIED.

AMONG the most celebrated corps of the French army, one of the most conspicuous and remarkable is that peculiar body of troops to which has been given the name of *Chasseurs à Pied*, or *Foot-Chasseurs*, to distinguish it from an organization of mounted men in the same service, uniformed and trained on similar principles. The *Chasseurs à Pied* have not attained the same romantic renown as that acquired by their brethren and rivals in arms, the *Zouaves*, but, nevertheless, they have had an exceedingly brilliant career in the late wars and conquests of France. They possess their own characteristics of originality, too, and are, in many respects, one of the most efficient and formidable forces in existence.

In order to convey a clear and correct idea of the new principles adopted in the organization and equipment of the *Chasseurs*, and to furnish our readers with some facts that may be interesting to them as historical students, and most useful to such among them as are connected with or may have any aspiration for military life, we must beg them to go back with us, for a moment, to the very period of the invention of gunpowder. It would be out of the question, of course, to attempt, in these pages, a description of all the curious weapons that were at first employed under the name of fire-arms. We will only remark that such weapons were, despite the anathemas of Bayard and the sarcasms of Ariosto, very much

used as early as the middle of the sixteenth century, and played an important part on the battle-fields of that epoch.

To the Spaniards belongs the credit of having rendered the use of fire-arms more easy, more regular, and more general among the nations. For more than a hundred years the Spaniards were the very masters of the art of war. Their power had begun to decline, but they still retained their military superiority; and from the Battle of Ceresole, won by the Count of Engghien in 1544, down to the memorable victory of Rocroy, gained in 1643 by a hero of the same race and the same name, they had the upper-hand in all pitched engagements. Their generals were the very best and most thoroughly instructed, and formed a real school; they, too, were the only officers who practised strategy. Their organization was better than any other, and their celebrated *tercios* were the very model of all regiments. Their armament was likewise superior, as they had adopted the musket, which was the first fire-arm that a man could handle with any facility, load with rapidity, and aim with any precision. Each of their *tercios* or battalions contained a regulated proportion of these musketeers, and the number was large, compared to the whole mass of troops.

The excellent results attained by the Spaniards, in the more perfect organization and equipment of their infan-

try, did not escape the attention of the French officers; and one of them especially, the Duke Francis de Guise, endeavored to turn his observations to good account. It is to him that we are indebted for the first rough sketch of regimental organization modelled upon that of the *tercios*, and, in more than one encounter with the Huguenots, the numbers of thoroughly skilled arquebuse-men embodied in the old French bands in Picardy and Piedmont secured advantages to the Catholic armies. In the opposite party, a young general who was destined to become a great king, endowed with that creative instinct, that genius which is as readily applicable to the science of government as to that of war, and which, when tempered with good sense, may bestow glory and happiness upon whole nations, Henry IV., had taken particular pains to increase the number and the efficiency of his arquebuse-men, and frequently managed to employ them in ways as novel as they were successful. At the Battle of Coutras, he distributed them in groups of twenty-five, in the midst of his squadrons of cavalry, so that, when the royal *gendarmerie* advanced to charge the latter, they were suddenly received with murderous volleys by these arquebuse-men of the *spur*, as they were called, owing to their combination with the cavalry, and the shock they thus encountered gave victory to the Protestants. Henry IV. went even too far with his passion for fire-arms. He increased their number and their use among cavalry so extravagantly, that the latter arm was perverted from its proper object. The cavalry, for a long time, forgot that their strength lay in the points of their sabres, in the dash of the men, and the speed of their horses.

Most of the great captains of an early day thus signalized their progress by some improvement in the equipment of their infantry. One of the most formidable enemies of Spanish power, Maurice of Nassau, a skilful engineer and

tactician, was the first to array infantry in such a manner as to combine the simultaneous use of the musket and the pike. Before his time, fire-arms had been used only for skirmishing service; he commenced to use them in line. This reform was, however, only foreshadowed, as it were, by the Dutch General; it was reserved for Gustavus Adolphus to complete it. While he was executing a series of military operations such as the world had not beheld since the days of Cæsar, he was also creating a movable artillery, and giving to the fire of his infantry an efficacy which had not been attained before. For the heavy machines of war which were drawn by oxen to the field of battle, and which remained there motionless and paralyzed by the slightest movements of the contending armies, he substituted light cannon drawn by horses and following up all the manœuvres of either cavalry or foot. He had found the infantry formed in dense battalions. His system arranged it in long continuous lines in which each rank of musketeers was sustained by several ranks of pikemen, so that his array, thus distributed, should present to the enemy a front bristling with steel, while, at the same time, it could cover a large space of ground with its discharge of lead. Attentive to all kinds of detail, he also gave his soldiers the cartouch-box and knapsack instead of the cumbersome apparatus to which they had been accustomed. In fact, Gustavus Adolphus was the founder of the modern science of battle. In strategy and the grand combinations of warfare, he was the disciple and rival of the ancient masters; for, even if this "divine portion" of the military art be inaccessible to the vast number of its votaries, and if history can easily enumerate those who were capable of comprehending it, and, more especially, of applying it, its rules and principles have, nevertheless, been by no means the same in all ages. On the contrary, the invention of fire-arms demanded an entirely new system of

tactics, and this the Swedish hero introduced.

The example set by Gustavus was not, however, very rapidly followed, and, although some slight improvements were introduced by French officers during the seventeenth century, it was not until the time of Louis XIV. that the reforms started by Maurice of Nassau, and so successfully continued by the Swedish army, began to attain their consummation. The progress made in that direction was due to Vauban, whose eminent genius had mastered every question and every branch of study so completely, that, when applied to on any subject connected with politics or war, his opinion was always clear and correct. The very numerous essays and sketches from his hand which are found deposited in the fortresses and in the archives of France all reveal some flash of genius, and even his wildest speculations bear the stamp of his high intellect and excellent heart. Engineering science was carried by him to such a degree of perfection that it has made but few advances since his time; and it was Vauban who induced Louis XIV. to replace the pike and the musket with a weapon which should be, at one and the same time, an instrument for both firing and thrusting, namely, the bayonet-gun. The Royal Fusileer Regiment, since called the Royal Artillery, was the first one armed with this weapon, (in 1670,) and in 1703 the whole French army finally gave up the pike. Notwithstanding some reverses sustained by the infantry thus armed, and notwithstanding the disapproval of Puy-ségur and others, this gun was soon adopted by all Europe, and the success of the great Frederick put a conclusive indorsement on this new style of weapon. Frederick had taken up and perfected the ideas of Gustavus Adolphus; and he now laid down certain rules for the formation and manœuvring of infantry, which are still followed at this day; and since that time, no one has disputed the fact that the strength of foot-troops lies in their guns and their legs.

Our present firelock differs from the article used during the Seven Years' War only in its more careful construction and some modifications of detail. The most important of these relates to the more rapid explosion of the charge. In 1840 the old flint-locks were generally replaced by the percussion-lock, which is simpler, is less exposed to the effects of dampness, and more quickly and surely ignites the powder. Even the ordinary regulation-musket with its bayonet was spoken of by Napoleon in his time as "the best engine of warfare ever invented by man." Since the day of the Great Emperor, and even during the reign of the present Napoleon, continued improvements have been made in the character of the weapon used by the French infantry. The weight, length, correctness of aim, durability, and handiness of the gun have all been carefully examined and modified, to the advantage of the soldier, until, finally, we have a weapon which combines wonderful qualities of lightness, strength, correctness of equipoise, ease and rapidity of loading, with perfect adaptability as a combination of the lance, pike, and sword, when it has ceased to be a fire-arm.

We have not here the space to enter upon a disquisition concerning these progressive changes; but suffice it to say that nearly all the peculiar styles of fire-arms were well known at an early period, and that the rifling, etc., of guns and cannon, with the other modifications now adopted, are merely the development and consummation of old ideas. For instance, the rifled arquebuse was known and used at the close of the fifteenth century, and, although the rifled musket was not put in general use by the French infantry, from the fact that its reduced length and the greater complication of movements required in loading and discharging it deprived it of other advantages when in the hands of troops of the line, still it was adopted in a certain proportion in some branches of the French service.

As early as the middle of the seventeenth century, some corps of light cavalry called *Carabins* were armed with the short rifle-musket, and hence the derivation of the term *carabines* applied to the weapon. These "carabines" were also very promptly adopted by hunters and sportsmen everywhere. The Swiss and the Tyrolese employed them in chasing the chamois among their mountains, and practised their skill in the use of them at general shooting-matches, which to this very day are celebrated as national festivals. The Austrian Government was the first to profit by this preference on the part of certain populations for accurate fire-arms, and at once proceeded to organize battalions of Tyrolese *Chasseurs*, or *Huntsmen*, — to give the meaning of the French word. These *Chasseurs* were applied in the Austrian service as light troops, and so great was their efficiency against the Prussians that Frederick the Great was compelled, in his turn, to organize a battalion of *Chasseur* sharp-shooters. France followed suit, in the course of the eighteenth century, and called into existence various corps of the same description, under different names. These, however, were but short-lived, although some of them, for instance, the Grassin Legion, acquired quite a reputation.

Finally came the French Revolution. The troops of the Republic were more remarkable for courage and enthusiasm than for tactics and drill. They usually attacked as skirmishers, — a system which may be employed successfully by even the most regularly disciplined armies, but which is sometimes more, especially useful to raw troops, because it gives the private soldier an opportunity to compensate by personal intelligence for the lack of thorough instruction. Struck by the aptitude of the French recruits for that kind of fighting, the Convention, in reorganizing the army, decreed the formation of some half-brigades of light infantry. The picked men were to be armed with the new weapon, and re-

ceived the name of *Carabiniers*. The carbine of 1793 is the first specimen of that kind of arm which was regularly employed in France.

Subsequently, owing to many practical defects, when Napoleon reorganized the equipment of the French armies, the carbine was dropped from the service, although the regiments of light infantry were retained, and their picked companies preserved the title of *Carabiniers*. In the Imperial Guard, too, there were companies of Skirmishers, Flankers, and *Chasseurs*, but neither one of these corps was distinguished by any particular style of arms or drill. The Emperor's wish was to have the armament and training of all his infantry uniform, so that all the regiments should be equally adapted to the service of troops of the line or light troops. Finally, to carry out his design with greater ease, he formed all the men who were more active and agile than the rest, or whose low stature prevented them from becoming Grenadiers, into companies of *Voltigeurs*, — and this was one of his finest military creations.

However, notwithstanding the correctness of Napoleon's views, as a general principle, the thousand and one uses of a corps of picked marksmen as light troops were so universally admitted that the different nations of Europe continued and even augmented that branch of their military service. Under different names they were found not only in the armies of England, Austria, Prussia, and Russia, but also under the banners of the secondary powers, such as Sweden, Piedmont, and Switzerland.

After the disasters of 1815, the reorganization of the French army was confided to Marshal Gouvion de St. Cyr, who united to sincere patriotism every qualification of an able general. He gave to the French service the basis of its present success, his suggestions having, of course, been perfected and expanded in the mean time. Among other things, he prescribed the formation

of battalions of Chasseurs, to be organized in legions, side by side with the infantry of the line, but with their own special equipment. This plan was not efficiently executed, and the Chasseur battalions shared the fate of the Department Legions of France, and were merged in the existing regiments.

The project, in a different form, was revived by Marshal Soult, who, as Minister of War, in 1833, succeeded in securing the passage of a royal ordinance prescribing the formation of companies of sharpshooters "armed with carabines and uniformed in a manner befitting their special service." These companies were to be united subsequently into battalions, and were to undergo a particular course of training. Although the ordinance was not immediately carried into execution, the impulse had been given, and ere long successful improvements in the rifle having been effected by an old officer of the Royal Guard, named Delvigne, and a certain Colonel Poncharra, inspector of the manufacture of arms, the Duke of Orléans brought about the formation of a company of marksmen peculiarly trained and equipped, and provided with the so-called Delvigne-Poncharra carabine. This company was placed in garrison at Vincennes, where, under skilful and popular commanders, it gave such satisfaction that it was finally decided to try the experiment on a larger scale, and a decree of November 14, 1838, created a battalion of the same character.

This corps, then, and even now, known to the people as the *Tirailleurs de Vincennes*, wore a uniform very similar to that of the present Chasseurs, but quite different from that of the infantry of the period. Instead of the stiff accoutrements and heavy headgear of the latter, they assumed a frock, wide and roomy pantaloons, and a light military shako. The double folds of white buckskin, which were very fine to look at, to be sure, but which oppressed the lungs and offered a conspic-

nous mark to the enemy, were discarded; the sabre was no longer allowed to dangle between the legs of the soldier and impede his movements; while the necessary munitions were carried in a manner more convenient and better adapted to their preservation. The arms consisted of a carabine, and a long, solid, sharpened appendage to it, termed the *sword-bayonet*. This latter weapon was provided with a hilt, and could be used for both cut and thrust, with considerable effect, while, affixed to the end of the carabine, it furnished a most formidable pike.

Although the Delvigne-Poncharra carabine had great advantages, it still did not command the range of the coarser and heavier muskets of the line, and, in order to make up for this in some degree, the most robust and skilful men of the corps were armed with a heavier gun, constructed on the same principles, but capable of throwing a heavier charge with precision, to greater distances. The proportion of men so armed was one-eighth of the battalion. The use of these two different calibres of fire-arms had some drawbacks, but they were counterbalanced by some curious advantages. For instance, the battalion could keep up a steady fire at ordinary distances, while, at the same moment, the men armed with the heavy carabines, or *Carabiniers*, as they were distinctively called, even within their own battalion, could reach the enemy at points where he deemed himself beyond the range of the force he saw in front of him. United in groups, the Carabiniers could thus produce severe effect, and actually formed a sort of *hand artillery*, — to use an expression often employed concerning them.

The Tirailleurs thus composed were, owing to the shortness of their carabines, drawn up in two ranks, instead of in the regimental style of three ranks. They manœuvred in line, like all other infantry battalions, but, in addition to the ordinary drill, were trained in gymnastics and double-quick evolutions, as

well as in fencing with the bayonet, a special course of sharp-shooting, and what was termed *the new Tirailleur drill*.

Gymnastics have always been encouraged in the French army, and, when not carried to excess, they are of the greatest use, particularly in developing the strength of young men, giving suppleness and confidence to raw recruits, and facilitating their manœuvres. Running was naturally a portion of these exercises, although it was rarely permitted in the evolutions of French troops, since it was found to produce much disorder. The Tirailleurs were so trained, however, that they could move, with all their accoutrements, in ranks, without noise and without confusion, at a cadenced and measured running step termed the *pas gymnastique*, or gymnastic step,—and they could use it even during complicated field-manœuvres. This was a most excellent innovation, for it enabled infantry to pass rapidly to any important point, and to execute many evolutions with the promptitude in some degree which cavalry obtains from the combination of the two gaits.

The bayonet-exercise was very acceptable to the men, for it augmented their confidence in their weapons and their skill in handling them.

The target or sharp-shooting drill was much the most complicated and difficult, as the troops were taught to fire when kneeling and lying on the ground, and to avail themselves of the slightest favoring circumstances of the soil. The rules and methods adopted in this branch of the drill have been the subject of profound and careful study, and are exceedingly ingenious.

The approval of these measures by the French Government was such, that, by a decree of August 28th, 1839, the merely temporary organization of the Tirailleurs was made permanent and separate, and the corps was sent to camp at Fontainebleau. There, the agility of the men, their neat and con-

venient uniforms and equipments, and their rapid and orderly evolutions struck every one who saw them. When, at the close of their period of encampment, the King was passing them in review as a special compliment, he warmly asked Marshal Soult what he thought of the new corps. The Marshal, in replying, emphatically expressed the wish that His Majesty had thirty such battalions instead of only one.

However, the new organization found some opponents, and many urgent arguments were adduced to prevent its extension. In order to put all these to the test, it was finally determined to submit the Tirailleurs to the ordeal of actual warfare; and they were speedily shipped to Africa, where it was quickly discovered that their gymnastic training had so prepared them that they easily became inured to the fatigues and privations of campaigning life. Their heavy carabines succeeded admirably, and the skill of their marksmen—among others, of a certain Sergeant Pistouley—was the theme of universal praise.

The Tirailleurs were now brigaded with the Zouaves, and ere long had shared glorious laurels with those celebrated troops.

Finally, in 1840, the dangers that seemed to be accumulating over France on all sides assumed so dark a form that the patriotism of the whole nation was aroused, and, in the midst of the general outpouring of men and means, the Duke of Orléans was authorized to form no less than ten battalions of Chasseurs.

The Duke set himself about this important task with all the zeal that had characterized his first effort to create the organization, and all the erudition he had gleaned from years of military study and research. In the first place, he abandoned the title of Tirailleurs, as being not sufficiently distinctive, and adopted that of Chasseurs à Pied, or Foot-Chasseurs. The organization by

battalions was retained, and the one formed two years before at Vincennes was designated as the First Battalion, and recalled from Africa to St. Omer as a model for the other nine that were to be organized. St. Omer offered extensive barracks, a vast field suitable to military exercise, and, in fine, all the establishments requisite for a large concourse of troops. The ranks were soon filled with picked men from all sides, and ardent, ambitious officers from every corps of the army sought commands. Among the latter we may mention a certain Captain, since Marshal de M'Mahon, who was put at the head of the Tenth Battalion.

Under the eyes of the Prince Royal, and in accordance with a series of regulations drawn up by him with the greatest care, and constantly modified to suit circumstances, the battalions were drilled and trained assiduously in all the walks of their profession connected with their own destined service. Every branch of their military life was illustrated by their exercises, and even the officers went through a thorough course of special instruction under accomplished tutors, who were also officers of peculiar ability and experience. While the Duke of Orléans, with the distinguished General Rostolan and two picked lieutenant-colonels, remained at St. Omer in charge of the growing force, another lieutenant-colonel was intrusted with the task of training subordinates to serve as teachers in sharp-shooting, and for this purpose a detachment was assembled at Vincennes, consisting of ten officers and a number of subalterns who had attracted attention by their particular aptitude. These, after having been thoroughly instructed in the manufacture of small arms, the preparation of munitions, and the rules and practice of sharp-shooting, were sent to St. Omer to furnish the new battalions with the officers who were to form part of the permanent organization. The weapon selected was an improvement upon the former carabines of the Tirailleurs; and

while the old proportion, to wit, the eighth part of each battalion, were armed with guns of longer range, and styled distinctively Carabiniers, these were set apart as the picked company of each battalion. The Duke, taking up his residence at St. Omer, attended in person to all that was going forward; and so constant were his exertions, and so warm the zeal of those who assisted the enterprise, that in a few months all the battalions were equipped, armed, and well drilled.

One fine spring morning, — it was in May, 1841, — a long column of troops entered Paris with a celerity hitherto unknown. There was no false glitter, no tinsel; everything was neat and martial, with bugles for their only music, and a uniform that was sombre, indeed, but of such harmonious simplicity as to be by no means devoid of elegance. This column consisted of the Chasseurs, coming to receive their standard from the hands of Louis Philippe, and speeding through the streets with their *gymnastic step*. On the very next day, as though to signalize the serious and entirely military character of the organization, four of these battalions were sent off to Africa, and the remaining six posted at the different leading fortresses of France, where the collections of artillery, etc., enabled them to proceed with the perfect development of their training.

It was only a year later, when the Duke of Orléans was snatched away, on the very eve of some crowning experiments he was about to make in illustration of the full uses and capacities of this force, that it received the title of Chasseurs d'Orléans, which the modesty of its founder would not tolerate during his lifetime. This name they gallantly bore through the combats that marked their novitiate in Africa, where it was at once found that the complete preparation of both officers and men made victory comparatively easy for them. The deadly precision of their aim struck terror into the Arabs, and,

as early as 1842, the splendid behavior of the Sixth Battalion in the bloody fights of the Oued Foddah at once ranged the Chasseurs among the finest troops in Africa. To attempt to follow them step by step in their career would be idle in the space we have here allotted to ourselves. We shall therefore cite merely a few instances where their courage and efficiency shone with peculiar lustre.

In the course of the year 1845, an impostor, playing upon the credulity of the Arabs, and artfully availing himself of the organization ready furnished by the religious sect to which he belonged, succeeded in bringing about a revolt of a great portion of the tribes in Algiers and Oran. He went by the title of "Master of the Hour," a sort of Messiah who had been long expected in that region. But he was more generally known as Bou-Maza, or *The Father with the She-Goat*, from the fact that a she-goat was his customary companion, and was supposed by the populace to serve him as a medium of communication with the supernatural Powers. This man exhibited a great deal of skill and audacity. His activity was so extraordinary, and he had been seen at so many different points at almost the same time, that his very existence was at first doubted, and many supposed him to be a myth. At one time it was thought that the insurrection had been quelled, as a chief calling himself Bou-Maza had been captured and shot, when, suddenly, the real leader reappeared among the Flittas, one of the most warlike tribes of Algeria, and living in a region very difficult of access. Against these and the Prophet, General Bourjolly, the French commander, marched at once, but unfortunately with very inadequate force. A terrible combat ensued, the Fourth Regiment of the Chasseurs d'Afrique and the Ninth Battalion of the Chasseurs d'Orléans having to sustain the brunt of it. Both these corps performed prodigies of valor, and it was worth while to hear the men of each reciprocally

narrating the glory and the peril of their comrades,—these telling by what noble exploits the mounted Chasseurs (d'Afrique) had saved the remains of Lieutenant-Colonel Berthier, and the others describing the Chasseurs à Pied, how they stood immovable, although without cartridges, around the body of their commander, Clère, with their terrible sword-bayonets bloody to the hilt!

On almost the same day, the Eighth Battalion succumbed to a frightful catastrophe. At a period of supposed tranquillity, the Souhalia tribe, who had been steadfast allies of the French, were unexpectedly attacked by Abd-el-Kader at the head of an overwhelming force. Lieutenant-Colonel Montagnac, with only sixty-two horsemen of the Second Hussars and three hundred and fifty men of the Eighth Chasseurs d'Orléans, hurried to the rescue. He was repeatedly warned of the danger, but, despite all that could be said, he dashed at the whole force of Abd-el-Kader. At the very first discharge, Montagnac fell mortally wounded, and in a few moments all the horses and nearly all the men were disabled. Captain Cognord, of the Second Hussars, rallied the survivors, and this little handful of heroes, huddled together upon a hillock, fought like tigers, until their ammunition was exhausted. The Arabs then closed in upon the group, which had become motionless and silent, and, to use the expressive language of an eyewitness, "felled them to the earth as they would overturn a wall." The enemy found none remaining but the dead, or those who were so badly wounded that they gave no sign of life. Before expiring, Montagnac had summoned to his aid a small detachment he had left in reserve. The latter, on its approach, was immediately surrounded, and perished to the very last man. There was now surviving of the whole French force only the Carabinier company of the Eighth Chasseurs, upon whom the Arabs rushed with fury, from every side. After a resistance of almost fabulous hero-

ism, during which the flag of the company was shot away in shreds, and the Carabiniers cut their bullets into six and eight pieces so as to prolong their defence, every volley decimating the foe, this little band of seventy men, encumbered with ten wounded, succeeded in wearying and disheartening the Emir to such an extent that he determined to abandon the direct assault which was costing him so dearly, and to surround the French detachment in the ruined building which served them for a refuge, and so starve them out. Captain Dutertre, Adjutant of the Eighth, who had been captured by the Arabs in the early part of the action, was sent forward by the enemy toward his old comrades. For a moment the firing ceased, and the Captain shouted so that all could hear him, — “Chasseurs, they have sworn to behead me, if you do not lay down your arms; and I say to you, Die, rather than surrender one single man!”

The Captain was instantly sabred, and the conflict recommenced. The same summons was repeated twice afterwards, and twice failed, when, finally, the firing ceased, and the Arabs bivouacked around their prey. Every possible approach was closed and guarded, and, thus caged in, the Chasseurs remained for three nights and days without food or drink. At length, by a sudden and desperate dash, on the morning of September 26th, the seventy heroes, bearing their ten wounded comrades, succeeded in breaking through the line of Arab sentinels, and escaped to a neighboring chain of hills. Thither they were pursued by their wild foemen, who, although infuriated at the daring and success of this sally, had a sufficient respect for the heavy carabines of the French, and merely hovered closely on their rear, awaiting some favorable opportunity to dash in upon them. This moment soon came. The French soldiers, no longer able to withstand the torments of thirst, descending from the hills, in spite of the entreaties of their of-

ficers, dashed into a neighboring stream to cool their burning lips. The instant of doom had come, and, in less time than it takes to recite the narrative, all but twelve of the little band were massacred by the exulting Arabs. The twelve escaped to Djemaa only after terrible privations and sufferings.

We might readily fill a volume with episodes equally glorious and equally gloomy in the career of the Chasseurs. They were in nearly all the brilliant actions of the ensuing Algerian campaigns, and, at Zaatcha, Isly, and other famed engagements, they contended side by side with the renowned Zouaves for the palm of military excellence. Their agility, their promptitude in action, their ardor in attack, and their solidity in retreat, their endurance on the march, their skill and intelligence in availing themselves of every inequality of ground and in turning everything to account, made them so conspicuously preferable, as an infantry corps, for certain operations, that Marshal Bugeaud caused the number of battalions employed in Africa to be increased to six. From that time to the present, continual progress has been made in the organization, discipline, and instruction of the Chasseurs, and all the objections which at different periods were raised against the special composition and details of the force having been one by one met and obviated, France now counts no less than twenty-one battalions of them in her army.

It was for a long time thought by some, that, although the Chasseurs, like the Zouaves, had been successful in the skirmishing engagements of Algeria, they would not be found so useful in European warfare. This opinion was proved to be erroneous at the siege of Rome, in 1849, where the Chasseurs, armed with their new and terrible weapon, the *carabine à tige*, in the management of which they had been thoroughly drilled, rendered the most important service; and from what was

seen of them there it became evident that the existence of such a force, so perfected in every particular, would hereafter greatly modify the relations and conditions of the defence and attack of fortified works. The importance of this fact will impress the reader, when he remembers how large a part fortresses have played in warfare since 1815, and especially when he glances at the tendency everywhere perceptible now toward transforming military strongholds into great intrenched camps, as revealed at Antwerp in Belgium, Fredericia in Denmark, Buda and Comorn in Hungary, Peschiera, Mantua, Venice, Verona, and Rome in Italy, Silistria and Sebastopol in the East, and Washington, Manassas, and Richmond in America.

Other nations have not been slow to follow French example. Russia is rapidly manufacturing rifled pieces for her service; England is providing her whole army with the Minié musket, and Austria and Prussia are applying inventions of their own to the armament of corps organized and trained on the principle of the French Chasseurs.

The Duke of Wellington is said to have remarked, not long before his death, while speaking of the English troops, that they had, indeed, adopted the new musket, but that it would be physically difficult for them to transform themselves into light infantry. The same observation will undoubtedly apply to all the Continental nations excepting the French; but in the United States, while we could muster the finest heavy troops in the world, we have also the most abundant material for just such light infantry as those described in the foregoing sketch.

The Chasseurs are not merely distinguished as perfect light infantry, but they also form excellent troops of the line. By the weight of their fire, they are capable of producing in battles and sieges effects unknown before their appearance on the scene, and that is the

great point, the entirely new feature about them.

The creation of these battalions, well planned and happily executed as it has been, remains a most important event in military history. Consecrated by the valor and the intelligence of the officers and soldiers of France, it has been the signal and the source of new and rapid reforms. One of these battalions attached to each infantry division adds fresh force to that fine classification which first arose under the Republic, and, although somewhat perverted under the Empire, still remains the basis of the French grand organization, recalling, as it does, the immortal idea of the Roman Legion.

With the aid of its example, and the emulation inspired by the success of the Chasseurs, the splendid system of the French infantry-service has been completed under the present Napoleon; and we now behold the race he rules so disciplined for war, the respective qualities of the North and the South of France, the firmness and solidity of the former and the enthusiasm and ardor of the latter, so beautifully blended, that we may well exclaim, "Here, indeed, is a whole nation armed! *in petite robur!*"

In conclusion, the writer and compiler of this sketch would not be venturing too far, perhaps, were he to remark that so excellent an example can be nowhere better followed than in this country, if, as would to-day appear a certainty, we are to turn aside from the ways of peace to study the art of war. We have here precisely the material for whole armies of light infantry, the most favorable conditions for their equipment and instruction, and, owing to the nature of the region we inhabit, its dense woodlands, its wide savannas, its broad rivers, and its numerous ranges of rough mountains, the very land in which the tactics and marksmanship of the Chasseurs would be most available.

## LATEST VIEWS OF MR. BIGLOW.

## PRELIMINARY NOTE.

[It is with feelings of the liveliest pain that we inform our readers of the death of the Reverend Homer Wilbur, A. M., which took place suddenly, by an apoplectic stroke, on the afternoon of Christmas day, 1862. Our venerable friend (for so we may venture to call him, though we never enjoyed the high privilege of his personal acquaintance) was in his eighty-fourth year, having been born June 12, 1779, at Pigsgusset Precinct (now West Jerusha) in the then District of Maine. Graduated with distinction at Hubville College in 1805, he pursued his theological studies with the late Reverend Preserved Thacker, D. D., and was called to the charge of the First Society in Jaalam in 1809, where he remained till his death.

"As an antiquary he has probably left no superior, if, indeed, an equal," writes his friend and colleague, the Reverend Jeduthun Hitchcock, to whom we are indebted for the above facts; "in proof of which I need only allude to his 'History of Jaalam, Genealogical, Topographical, and Ecclesiastical,' 1849, which has won him an eminent and enduring place in our more solid and useful literature. It is only to be regretted that his intense application to historical studies should have so entirely withdrawn him from the pursuit of poetical composition, for which he was endowed by Nature with a remarkable aptitude. His well-known hymn, beginning, 'With clouds of care encompassed round,' has been attributed in some collections to the late President Dwight, and it is hardly presumptuous to affirm that the simile of the rainbow in the eighth stanza would do no discredit to that polished pen."

We regret that we have not room at present for the whole of Mr. Hitchcock's exceedingly valuable communication. We hope to lay more liberal extracts from it before our readers at an early day. A summary of its contents will give some notion of its importance and interest. It contains: 1st, A biographical sketch of Mr. Wilbur, with notices of his predecessors in the pastoral office, and of eminent clerical contemporaries; 2d, An obituary of deceased, from the Punkin-Falls "Weekly Parallel"; 3d, A list of his printed and manuscript productions and of projected works; 4th, Personal anecdotes and recollections, with specimens of table-talk; 5th, A tribute to his relict, Mrs. Dorcas (Pilcox) Wilbur; 6th, A list of graduates fitted for different colleges by Mr. Wilbur, with biographical memoranda touching the more distinguished; 7th, Concerning learned, charitable, and other societies, of which Mr. Wilbur was a member, and of those with which, had his life been prolonged, he would doubtless have been associated, with a complete catalogue of such Americans as have been Fellows of the Royal Society; 8th, A brief summary of Mr. Wilbur's latest conclusions concerning the Tenth Horn of the Beast in its special application to recent events, for which the public, as Mr. Hitchcock assures us, have been waiting with feelings of lively anticipation; 10th, Mr. Hitchcock's own views on the same topic; and, 11th, A brief essay on the importance of local histories. It will be apparent that the duty of preparing Mr. Wilbur's biography could not have fallen into more sympathetic hands.

In a private letter with which the reverend gentleman has since favored us, he expresses the opinion that Mr. Wilbur's life was shortened by our unhappy civil war. It disturbed his studies, dislocated all his habitual associations and trains of thought, and unsettled the foundations of a faith, rather the result of habit than conviction, in the capacity of man for self-government. "Such has been the felicity of my life," he said to Mr. Hitchcock, on the very morning of the day he died, "that, through the divine mercy, I could always say, *Summum nec metuo diem, nec opto*. It has been my habit, as you know, on every recurrence of this blessed anniversary, to read Milton's 'Hymn of the Nativity' till its sublime harmonies so dilated my soul and quickened its spiritual sense that I seemed to hear that other song which gave assurance to the shepherds that there was One who would lead them also in green pastures and beside the still waters. But to-day I have been unable to think of anything but that mournful text, 'I came not to send peace, but a sword,' and, did it not smack of pagan presumptuousness, could almost wish I had never lived to see this day."

Mr. Hitchcock also informs us that his friend "lies buried in the Jaalam graveyard, under a large red-cedar which he specially admired. A neat and substantial monument is to be erected over his remains, with a Latin epitaph written by himself; for he was accustomed to say pleasantly that there was at least one occasion in a scholar's life when he might show the advantages of a classical training."

The following fragment of a letter addressed to us, and apparently intended to accompany Mr. Biglow's contribution to the present number, was found upon his table after his decease. — EDITORS ATLANTIC MONTHLY.]

To the Editors of the ATLANTIC MONTHLY.

Jaalam, 24<sup>th</sup> Decr, 1862.

RESPECTED SIRS,—The infirm state of my bodily health would be a sufficient apology for not taking up the pen at this time, wholesome as I deem it for the mind to apricate in the shelter of epistolary confidence, were it not that a considerable, I might even say a large, number of individuals in this parish expect from their pastor some publick expression of sentiment at this crisis. Moreover, *Qui tacitus ardet magis uritur*. In trying times like these, the besetting sin of undisciplined minds is to seek refuge from inexplicable realities in the dangerous stimulant of angry partisanship or the indolent narcotick of vague and hopeful vaticination: *fortunamque suo temperat arbitrio*. Both by reason of my age and my natural temperament, I am unfitted for either. Unable to penetrate the inscrutable judgments of God, I am more than ever thankful that my life has been prolonged till I could in some small measure comprehend His mercy. As there is no man who does not at some time render himself amenable to the one,—*quum vix justus sit securus*,—so there is none that does not feel himself in daily need of the other.

I confess, I cannot feel, as some do, a personal consolation for the manifest evils of this war in any remote or contingent advantages that may spring from it. I am old and weak, I can bear little, and can scarce hope to see better days; nor is it any adequate compensation to know that Nature is old and strong and can bear much. Old men philosophize over the past, but the present is only a burthen and a weariness. The one lies before them like a placid evening landscape; the other is full of the vexations and anxieties of housekeeping. It may be true enough that *miscet hæc illis, prohibetque Clotho fortunam stare*, but he who said it was fain at last to call in Atropos with her shears before her time; and I cannot help selfishly mourning that the fortune of our Republic could not at least stand till my days were numbered.

Tibullus would find the origin of wars in the great exaggeration of riches, and does not stick to say that in the days of the beechen trencher there was peace. But averse as I am by nature from all wars, the more as they have been especially fatal to libraries, I would have this one go on till we are reduced to wooden platters again, rather than surrender the principle to defend which it was undertaken. Though I believe Slavery to have been the cause of it, by so thoroughly demoralizing Northern politicks for its own purposes as to give opportunity and hope to treason, yet I would not have our thought and purpose diverted from their true object,—the maintenance of the idea of Government. We are not merely suppressing an enormous riot, but contending for the possibility of permanent order coexisting with democratical fickleness; and while I would not superstitiously venerate form to the sacrifice of substance, neither would I forget that an adherence to precedent and prescription can alone give that continuity and coherence under a democratical constitution which are inherent in the person of a despotick monarch and the selfishness of an aristocratical class. *Stet pro ratione voluntas* is as dangerous in a majority as in a tyrant.

I cannot allow the present production of my young friend to go out without a protest from me against a certain extremeness in his views, more pardonable in the poet than the philosopher. While I agree with him that the only cure for rebellion is suppression by force, yet I must animadvert upon certain phrases where I seem to see a coincidence with a popular fallacy on the subject of compromise. On the one hand there are those who do not see that the vital principle of Government and the seminal principle of Law cannot properly be made a subject of compromise at all, and on the other those who are equally blind to the truth that without a compromise of individual opinions, interests, and even rights, no society would be possible. *In medio tutissimus*. For my own part, I would gladly —

EF I a song or two could make,  
 Like rockets druv by their own burnin',  
 All leap an' light, to leave a wake  
 Men's hearts an' faces skyward turnin'!—  
 But, it strikes me, 't ain't jest the time  
 Fer stringin' words with settisfaction:  
 Wut 's wanted now 's the silent rhyme  
 'Twixt upright Will an' downright Action.

Words, ef you keep 'em, pay their keep,  
 But gabble 's the short cut to ruin ;  
 It 's gratis, (gals half-price,) but cheap  
 At no rate, ef it henders doin' ;  
 Ther' 's nothin' wuss, 'less 't is to set  
 A martyr-prem'um upon jawrin' :  
 Teapots git dangerous, ef you shet  
 Their lids down on 'em with Fort Warren.

'Bout long enough it 's ben discussed  
 Who sot the magazine afire,  
 An' whether, ef Bob Wickliffe bust,  
 'T would scare us more or blow us higher.  
 D' ye s'pose the Gret Foreseer's plan  
 Wuz settled fer him in town-meetin' ?  
 Or thet ther' 'd ben no Fall o' Man,  
 Ef Adam 'd on'y bit a sweetin' ?

Oh, Jon'than, ef you want to be  
 A rugged chap agin an' hearty,  
 Go fer wutever 'll hurt Jeff D.,  
 Nut wut 'll boost up ary party.  
 Here 's hell broke loose, an' we lay flat  
 With half the univarse a-singin',  
 Till Sen'tor This an' Gov'nor Thet  
 Stop squabblin' fer the garding-ingin'.

It 's war we 're in, not politics ;  
 It 's systems wrastlin' now, not parties ;  
 An' victory in the eend 'll fix  
 Where longest will an' truest heart is.  
 An' wut 's the Guv'ment folks about ?  
 Tryin' to hope ther' 's nothin' doin',  
 An' look ez though they did n't doubt  
 Sunthin' pertickler wuz a-brewin'.

Ther' 's critters yit thet talk an' act  
 Fer wut they call Conciliation ;  
 They 'd hand a buff'lo-drove a tract  
 When they wuz madder than all Bashan.  
 Conciliate ? it jest means *be kicked*,  
 No metter how they phrase an' tone it ;  
 It means thet we 're to set down licked,  
 Thet we 're poor shotes an' glad to own it !

A war on tick 's ez dear 'z the deuce,  
 But it wun't leave no lastin' traces,  
 Ez 't would to make a sneakin' truce  
 Without no moral specie-basis :  
 Ef green-backs ain't nut jest the cheese,  
 I guess ther' 's evils thet 's extremer, —  
 Fer instance, — shinplaster idees  
 Like them put out by Gov'nor Seymour.

Last year, the Nation, at a word,  
 When tremblin' Freedom cried to shield her,  
 Flamed weldin' into one keen sword  
 Waitin' an' longin' fer a wielder :  
 A splendid flash !—an' how 'd the grasp  
 With sech a chance ez thet wuz tally ?  
 Ther' warn't no meanin' in our clasp, —  
 Half this, half thet, all shilly-shally.

More men ? More Man ! It 's there we fail ;  
 Weak plans grow weaker yit by lengthenin' :  
 Wut use in addin' to the tail,  
 When it 's the head 's in need o' strengthenin' ?  
 We wanted one thet felt all Chief  
 From roots o' hair to sole o' stockin',  
 Square-sot with thousan'-ton belief  
 In him an' us, ef earth went rockin' !

Ole Hick'ry would n't ha' stood see-saw  
 'Bout doin' things till they wuz done with, —  
 He 'd smashed the tables o' the Law  
 In time o' need to load his gun with ;  
 He could n't see but jest one side, —  
 Ef his, 't wuz God's, an' thet wuz plenty ;  
 An' so his "*Forrards !*" multiplied  
 An army's fightin' weight by twenty.

But this 'ere histin', creak, creak, creak,  
 Your cappen's heart up with a derrick,  
 This tryin' to coax a lightnin'-streak  
 Out of a half-discouraged hay-rick,  
 This hangin' on mont' arter mont'  
 Fer one sharp purpose 'mongst the twitter, —  
 I tell ye, it does kind o' stunt  
 The peth an' sperit of a critter.

In six months where 'll the People be,  
 Ef leaders look on revolution  
 Ez though it wuz a cup o' tea, —  
 Jest social el'ments in solution ?  
 This weighin' things does wal enough  
 When war cools down, an' comes to writin' ;  
 But while it 's makin', the true stuff  
 Is pison-mad, pig-headed fightin'.

Democ'acy gives every man  
 A right to be his own oppressor ;  
 But a loose Gov'ment ain't the plan,  
 Helpless ez spilled beans on a dresser :  
 I tell ye one thing we might larn  
 From them smart critters, the Seceders, —  
 Ef bein' right 's the fust consarn,  
 The 'fore-the-fust 's cast-iron leaders.

But 'pears to me I see some signs  
 That we 're a-goin' to use our senses :  
 Jeff druv us into these hard lines,  
 An' ough' to bear his half th' expenses ;  
 Slavery 's Secession's heart an' will,  
 South, North, East, West, where'er you find it,  
 An' ef it drors into War's mill,  
 D'ye say them thunder-stones sha'n't grind it ?

D' ye s'pose, ef Jeff giv *him* a lick,  
 Ole Hick'ry 'd tried his head to sof'n  
 So 's 't would n't hurt thet ebony stick  
 Thet 's made our side see stars so of'n ?  
 "No !" he 'd ha' thundered, "on your knees,  
 An' own one flag, one road to glory !  
 Soft-heartedness, in times like these,  
 Shows sof'ness in the upper story !"

An' why should we kick up a muss  
 About the Pres'dunt's proclamation ?  
 It ain't a-goin' to lib'rate us,  
 Ef we don't like emancipation :  
 The right to be a cussed fool  
 Is safe from all devices human,  
 It 's common (ez a gin'l rule)  
 To every critter born o' woman.

So *we* 're all right, an' I, fer one,  
 Don't think our cause 'll lose in vally  
 By rammin' Scriptur' in our gun,  
 An' gittin' Natur' fer an ally :  
 Thank God, say I, fer even a plan  
 To lift one human bein's level,  
 Give one more chance to make a man,  
 Or, anyhow, to spile a devil !

Not thet I 'm one thet much expec'  
 Millennium by express to-morrer ;  
 They *will* miscarry, — I rec'lec'  
 Tu many on 'em, to my sorrer :  
 Men ain't made angels in a day,  
 No matter how you mould an' labor 'em, —  
 Nor 'riginal ones, I guess, don't stay  
 With Abe so of'n ez with Abraham.

The'ry thinks Fact a pooty thing,  
 An' wants the banns read right ensuin' ;  
 But Fact wun't noways wear the ring  
 'Thout years o' settin' up an' wooin' :  
 But, arter all, Time's dial-plate  
 Marks cent'ries with the minute-finger,  
 An' Good can't never come tu late,  
 Though it doos seem to try an' linger.

An' come wut will, I think it 's grand  
 Abe 's gut his will et last bloom-furnaced  
 In trial-flames till it 'll stand  
 The strain o' bein' in deadly earnest :  
 Thet 's wut we want, — we want to know  
 The folks on our side hez the bravery  
 To b'lieve ez hard, come weal, come woe,  
 In Freedom ez Jeff doos in Slavery.

Set the two forces foot to foot,  
 An' every man knows who 'll be winner,  
 Whose faith in God hez ary root  
 Thet goes down deeper than his dinner :  
 Then 't will be felt from pole to pole,  
 Without no need o' proclamation,  
 Earth's Biggest Country 's gut her soul  
 An' risen up Earth's Greatest Nation !

---

## REVIEWS AND LITERARY NOTICES.

*Slavery and Secession in America, Historical and Economical; together with a Practical Scheme of Emancipation.* By THOMAS ELLISON, F. S. S., etc. Second Edition : Enlarged. With a Reply to the Fundamental Arguments of Mr. James Spence, contained in his Work on the American Union, and Remarks on the Productions of Other Writers. With Map and Appendices. London : Sampson Low, Son, & Co.

WE have too long delayed to speak of Mr. Ellison's book. More than a year ago, before Mr. Stuart Mill or Professor Cairnes had written in our behalf, before we had received a word of sympathy from any representative Englishman, save Mr. John Bright, the first edition of this work was placed before the British public. And we could not have asked for a better informed or more judicious defender than Mr. Ellison. "Slavery and Secession in America" is a temperate and concise statement of the essential features of our national struggle. The supposed interest of half a million of slaveholders in the extension of the Southern institution is truly represented as the cause of their guilty insurrection against the liberties of their countrymen.

Mr. Ellison does not desire immediate emancipation, and wastes no sentiment upon the sufferings of the negro. But the economical and social position of Slavery is given with the unanswerable emphasis of careful figures. He traces the rise and increase of the institution in the States, until its disgrace culminates in a bloody rebellion. He clearly shows, that, by acknowledging the doctrine involved in Secession, by allowing it to govern the intercourse between nations, the morality of society would be shaken from its base. The anti-slavery character of the strife in which we are involved is made to appear, — slavery-diffusion being the object of the South, slavery-restriction the aim of the North. It is shown that the Secession ordinances utterly failed to point out a single instance in which the rights of the Southern people were infringed upon by the National Executive; also, that the alleged right of Secession is neither Constitutional, nor, when backed by no tangible grievance, can it be called revolutionary. In short, Mr. Ellison takes the only ground which seems possible to loyalists in America: namely, that Secession — in other words, the treason of slaveholders against the Constitution of their country — is of necessity punishable

by law; and that good men of all nationalities should unite in the moral support of a benignant government thus wantonly assailed.

The "practical scheme of emancipation" promised us in the title can hardly be said to amount to a scheme at all; but there are suggestions worth attending to, if that delicate matter might be managed as we would, not as we must.

We have marked but two passages for a questioning comment. General Taylor, by an inadvertency strange to pass to a second edition, is represented as putting down the South-Carolina Nullifiers in 1833. Also, Dr. Charles Mackay, the New-York Correspondent of the London "Times," is quoted as having once borne anti-slavery testimony. This is certainly hard. Whatever emoluments slave-masters or their allies may hereafter have it in their power to bestow this gentleman has fairly earned. If he ever did say anything that was disagreeable to them, it should not be remembered against him.

The merit of Mr. Ellison's book is neither in rhetoric, philanthropic sentiment, nor any exalted theory of political philosophy; it is in an unanswerable appeal to statistics, and a condensed statement of facts. The work may be commended to all desirous of arriving at the truth.

But no conventional phrases of a book-notice can express our obligations to Mr. Ellison and those few of his countrymen who have publicly rebuked the noisy bitterness of writers striving, with too much success, to debauch the sentiment of England. Most dear to us is an occasional lull in that storm of insolence and mendacity designed to embarrass the Government of the United States in the august and solemn championship of human liberty committed to its charge. And let it be remarked that our expectations of English approval were never Utopian. The great principle involved in the American contest was so far above the level of the ordinary pursuits of men, that, even among ourselves, few have been able to transfuse it into their daily consciousness. We never looked to England for the encouragement of a popular enthusiasm, — hardly, perhaps, for a cold acquiescence. John Bull, we said, is proverbially a grumbler, proverbially indifferent to all affairs but his own; he will be annoyed by tariffs, and

plagued by scarcity of cotton; — what wonder, if we are a little misunderstood? The minor contributors to his daily press will not be able to think long or wisely of what they write; we must be ready to pardon a certain amount of irritation and misstatement. That such was the feeling of intelligent Americans towards England, at the beginning of our troubles, we have no doubt. But for the scurrility heaped upon us by what claims to be the higher British press we were totally unprepared, — and for this good reason, that such malignity of criticism as is possible in America could never have suggested it. Let us not be misunderstood. We acknowledge the "Rowdy Journal" and Mr. Jefferson Brick. Undoubtedly, newspapers exist among us of which the description of Mr. Dickens is no very extravagant caricature. But their editors, if not of notoriously infamous life, are those whose minds are unenlarged by any generous education, — men whose lack of grammar suggests a certain palliation of their want of veracity and good-breeding. Such journals are seldom or never seen by the large class of cultivated American readers, and are in no sense representative of them. The "Saturday Review" and "Blackwood's Magazine" are said to be conducted by men of University training. Their articles are written in clear and precise English, and often contain vigorous thought. They publish few papers which do not give evidence of at least tolerable scholarship in their writers. Of kindred periodicals on this side of the ocean it may be safely said, that the intelligence of the reader forces their criticism up to some decent standard of honest painstaking. We may thus explain the bewilderment which came over us at that burst of vulgar ribaldry from the leading British press, in which the organs above named have achieved a scandalous preëminence. Vibrating from the extreme of shallowness to the extreme of sufficiency, scorning to be limited in abuse by adhering to any single hypothesis, the current literature of England has gloated over the rebellion of Slavery with the cynical chuckles of a sour spinster. Would that language less strong could express our meaning! President Lincoln — whatever may be judged his deficiency in resources of statesmanship — will be embalmed by history as one pos-

sessing many qualities peculiarly adapted to our perilous crisis, together with an integrity of life and purpose honorably representing the yeomanry of the Republic. This man, the ruler of a friendly people, British journalists have proclaimed guilty of crimes to which the records of the darkest despotisms can scarcely furnish a parallel. The precious blood of Ellsworth was taken by the "Saturday Review" as the text of such disgraceful banter as we trust few bar-keepers in America would bestow upon a bully killed in a pot-house fray. General Butler, for a verbal infelicity in an order of imperative necessity and wholesome effect, has been befouled by language which no careful historian would apply to Tiberius or Louis XV. But enough of this. We should be glad to believe that these utterers of false witness were boorish men, in dark and desperate ignorance of the true bearing of our current affairs. We are unable so to believe.

It is a relief to turn to that small company of Englishmen who have extended brother-hands to us in the day of our necessity. No world-homage of literary admiration is worth the personal emotion with which they are recognized in America as representatives of that *Old England* which has place in the affection and gratitude of every cultivated man among us. They have done us justice, when contempt for justice alone was popular, and a cynical skepticism seemed the only retreat from blatant abuse. Cairnes, Mill, Ellison, and others whom we need not name,—for the sake of such men let us still think of England in generous temper. Their sympathies have been with us through this terrible arbitrament of arms; they were with us in that solemn close of the old year, when the destiny of our dumb four millions weighed upon the night. These men have told us that the principle for which we contend is sound and worthy: they may also tell us that we have made occasional mistakes in reducing the principle to practice; and of this we are painfully conscious. It is well for us to forego that reckless bravado of unexampled prosperity once so offensive to foreign ears. Yet the best thing we ever had to boast of has been with us in the storm. According to the admirable observation of Niebuhr,—“Liberty exists where public opinion can constrain Gov-

ernment to fulfil its duties, and where, on the other side, in times of popular infatuation, the Government can maintain a wise course in spite of public opinion.” This liberty has been preserved to us through all the turbulence of war. Like some divine element, it has mingled in the convulsion of human passion, and already prophesies the day when the service of man to man, as of man to God, shall be rendered in perfect freedom.

*A Treatise on Military Law and the Practice of Courts-Martial.* By CAPTAIN S. V. BENÉT, Ordnance Department, U. S. Army, late Assistant Professor of Ethics, Law, etc., Military Academy, West Point. New York: D. Van Nostrand.

IN these days of large armies and intense military enthusiasm, the very title of a military book commends it, *primâ facie*, to public interest; and when it promises to elucidate and systematize the intricate subject of military law, it has great specific importance in the eyes of the tens of thousands of officers who are constantly called upon to administer that law, and to whom the duties of courts-martial are new and difficult. But, to understand still more clearly the great value of such a work, supposing it to be well written, we must go back in the history of military courts, and see how little had been done to render them systematic and uniform,—what a comparatively unoccupied field the author had to reap in,—what needs there were to supply; and then we shall be better able to criticize his work, and to judge of its practical value.

For a very long period we followed, in our army, the practice of the English courts-martial, as we adopted the English Common Law in our civic courts.

The military code to be applied and administered by courts-martial is contained in the Act of Congress of the 10th of April, 1806, commonly called “The Rules and Articles of War,” and in a few other acts and parts of acts, supplementary to these, which have been enacted from time to time, as circumstances seemed to require.

In the year 1839, Major-General Maccomb, commander-in-chief of the army, prepared a little treatise on “The Practice of Courts-Martial,” which, in lieu of

something better, was generally used; and the modes of proceeding and forms of orders and records there given established uniformity in the actions and duties of such courts throughout the army.

Five or six years later, Captain John P. O'Brien, of the Fourth Artillery, issued "A Treatise on American Military Law and Practice of Courts-Martial." This work evinced a great deal of legal research, and a thorough knowledge of the practical applications of military law; but it is voluminous, wanting in arrangement, and, while valuable as a storehouse from which to draw materials, not suited for ready reference, or for the study of beginners. It is now, we believe, out of print; and, as its accomplished author is not living, it can hardly be adapted to the wants of the army at the present day.

In the year 1846, Captain William C. De Hart, of the Second Artillery, published his excellent work, entitled, "Observations on Military Law, and the Constitution and Practice of Courts-Martial." In his Preface he says,—"Since the legal establishment of the army and navy of the United States, there has been no work produced, written for the express purpose, . . . and intended as a guide for the administration of military justice." And, in a note, he adds, "The small treatise on courts-martial by the late Major-General Macomb is no exception to the remark." He makes, if we remember rightly, no reference to Captain O'Brien's work, which appeared but a short time before his own.

The work of Captain De Hart, so far in advance of what had yet appeared on this subject, written, too, by an expert, who had been long employed under the orders of the War Department as the acting judge-advocate of the army, (the office of judge-advocate not being created till a later day,) was regarded as the chief authority in the army. But it was never designed, nor can it be easily adapted, for instruction. It is a philosophical discussion of the subject, containing many historical citations and illustrations, which show the reader his authorities without fortifying his positions. For a text-book, therefore, it lacks arrangement, and is too discursive.

Up to this time, the subject of military law was not studied at the Military Academy; but in the year 1856, when the course of studies in that institution was length-

ened, so as to consume five years instead of four, this branch was added to the curriculum, and has since been retained,—its importance being made every day more manifest. Then a treatise was wanted, which, while it could be used as authority in our vast army, should be also suited as a text-book for the cadets, from which they could recite in the section-room, and which should be their *vade-mecum* for future reference,—originally learned, and always consulted.

This was Captain Benét's self-appointed task, and he has performed it admirably. He has examined all the authorities, French and English, and his book bears the evidences of this original investigation. For purposes of study, his system is clear, his arrangement logical, and his divisions numerous and just. All the directions as to *trials* are very practically set forth, so that any sensible volunteer officer, appointed upon a court unexpectedly, could very soon, by the aid of these pages, make himself "master of the position." And as there is much concurrent, and sometimes apparently conflicting, jurisdiction of military and civic courts, this volume ought to be on every lawyer's table as the special expounder of military law, wherever it may approach the action of the civil code.

Having said thus much of the general plan, scope, and merits of the work, let us cast a brief glance at the nature of its contents. It is called a treatise on *Military Law*. What is military law? It is that law which governs the army, and all individuals connected with it. In other words, it has respect to military organization and discipline. It must not be confounded with *Martial Law*, which is the suspension of civic law, and the substitution of military law over citizens, not soldiers, in extraordinary circumstances.

Military law, which cannot wait for the slow processes of civic courts, is immediate and condign in its action, and is administered by courts-martial, to which are confided the powers of judge and jury. These courts examine into the cases, find verdicts, and pronounce sentences,—all, however, subject to the revision and sanction of the supreme authority which convened them.

Courts-martial are divided into two classes: *General Courts*, for the trial of of-

fficers, and of the higher grades of offences; and *Regimental* or *Garrison Courts*, for the consideration of less important cases in a regiment or garrison. General courts vary in the number of members: they must be composed of not less than *five*, and of never more than *thirteen*. Regimental or garrison courts are never composed of more than three members. For general courts, only, a judge-advocate is appointed to conduct the prosecution for the United States.

The offences against military law are determined by the "Rules and Articles of War," in which the principal offences are distinctly set forth and forbidden; and, that unanticipated misconduct may not be without cognizance and punishment, the *ninety-ninth* article includes all such cases under the charge of "conduct to the prejudice of good order and military discipline," which is of universal scope.

The punishments are also set forth in the Articles of War. Those prescribed for officers include death, — cashiering,\* — cashiering, with a clause disabling the officer from ever holding any office under the United States, — dismissal, — suspension from rank and pay, — reprimand. For soldiers the principal punishments are death, — confinement, — confinement on bread-and-water diet, — solitary confinement, — forfeiture of pay and allowances, — discharges.

The conduct of the trial, the duties of all persons concerned, members, judge-advocate, prisoner, witnesses, counsel, etc., are given in detail, and will be very easily learned. Forms of orders for convening courts-martial, modes of recording the proceedings, the form of a general order confirming or disapproving the proceedings, the form of the judge-advocate's certificate, and the forms of charges and specifications under different articles of war, are given in the Appendix, and are used *verbatim* by all judge-advocates and recorders. There are also explanations of the duties of courts of inquiry, and of boards for retiring disabled officers; and extracts from the Acts of Congress bear-

\* Cashiering implies something infamous in the British service; and although it has been attempted to make no distinction between cashiering and dismissing in our service, something of the opprobrium still attaches to the former punishment.

ing upon military law. The Articles of War are also given for reference. The book is thus rendered complete as a manual for the conduct of courts-martial, from the original order to the execution of the sentence.

From what has been said, it will be gathered that the work was needed, that it admirably supplies the need, and that it may be recommended, without qualification, as providing all the information which it purports to provide, and which could be demanded of it, in a lucid, systematic, and simple manner. It is an octavo volume, containing 377 pages, clearly printed in large type, and on excellent paper; the binding is serviceable, being in strong buff leather, like other law-books.

*Lectures on Moral Science.* Delivered before the Lowell Institute, Boston. By MARK HOPKINS, D.D., LL.D. Boston: Gould and Lincoln. 12mo.

It is a little curious that there is not a single science in which man is constitutionally, and therefore directly interested, to which Emanuel Kant has not, in one way or another, written a *Prolegomena*. Professionally he did so in the case of Metaphysic: and out of the great original claim which he here established there emanates a separate claim, in each particular science of the order already indicated, to a sublime dictatorship. And chiefly is this claim valid in Moral Philosophy; for it was his province, the first of all men, clearly to reveal, as a scientific fact certified by demonstration, the divine eminence of the practical above the merely speculative powers of man, — the fulfilment of which mission justly entitled him to all the privileges incident to the vantage-ground thus gained, — privileges widely significant in a survey of that field where chiefly these practical powers hold their Olympian supremacy, the field of Moral Philosophy.

Nothing could have afforded us a better excuse for a *résumé* of Kant, in this connection, than the new work of Dr. Hopkins. Of the many treatises on Moral Science with which the reading world has been flooded and bewildered since the time of Coleridge, there is this one alone found worthy of being ranged along-side of the works of the old Königsberg seer, —

the one alone which, like his, deals with the grander features of the science. It is the best realization objectively of Kant's subjective principles that has yet been given. But how, the plain English reader will ask, are we to understand from this the place which the new work takes in literature? Not readily, indeed, unless one has already taken the trouble to examine such of Kant's treatises as have found their way out of German into hardly tolerable English, and has, moreover, reflected upon the importance of the principles therein established. But, of those who will read this notice, not one out of fifty has had even the opportunity for examination, not one out of five thousand has really taken the opportunity, and, of those that have, one half, at least, have done so independently of any philosophic aim, and have therefore reflected to very little purpose on the principles involved. Therefore, what the reader could not or has not chosen to do for himself we will do for him, at the same time congratulating him that there is now placed in his hands as complete and perfect a structure outwardly, in the work under notice, as the groundwork furnished by the old master was, in its subjective analysis, simple and profound.

Those who approach human nature, or the nature outside of us, with a reverence for reality, will give precedence, after the manner of Nature, to those powers which are predominant and determinative; and in man these are Reason and Will. These two exist as identical in Personality, which we may denominate as we choose, whether Rational Will, or, as Kant does more frequently, Practical Reason. Here, in the identity of these two powers in Personality, and still more in their relation to each other as they are differentiated in personal existence, does Morality originate and develop according to principles.

Now let it be remembered that Kant's mission was, as above indicated, to exclude the speculative side of our nature from any direct relation to human destiny, inasmuch as it could not answer either of the three great questions which every man everywhere and of necessity puts, — Whence am I? What am I? and Whither do I tend? — and therefore stood confused in the presence of any grand reality, whether human or divine, and to make the

Practical Reason the sole and immediate link of connection between ourselves and the realities from the presence of which the Speculative Reason had been driven. Then will it be clearly seen how he would answer the fundamental question of Moral Philosophy, — Wherein does the quality of Goodness originally reside?

The answer, from Kant's own lips, is this: "There is nothing in the world, nor, generally speaking, even out of it, possible to be conceived, which can without limitation be held good, but a *Good Will*." The good is not in the end attained, not even in the volition, but is a principle resident in the will itself. "The volition is between its principle *a priori*, which is formal, and its spring *a posteriori*, which is material; and since it must be determined by something, and being deprived of every material principle, it must be determined by the formal."

Now, although President Hopkins considers Moral Philosophy as a philosophy of ends, he evidently does not mean ends *a posteriori* and material, but ends *a priori*, using the term as the best objective translation of principles. Almost as if with the conscious design of making his work harmonize with the groundwork furnished by Kant, he has developed a graduated series of conditions, according to which we ascend "the great world's altar-stairs," from lower and conditioned good up to that good which is the condition of all, itself unlimited, namely, in the will fulfilling its original design. The "law of limitation," according to which not only the subordinate powers of man, but even the forces of Nature, from those concerned in the highest animal organization down to that of gravitation, are made to take their places in the chain of dependence which hangs from the human will, is the most important part, scientifically, of the whole work. It is in accordance with this law that the science of Morals becomes a structure, — universal in its base and regularly ascending after the order of Nature, harmonious in all its parts, and proceeding upward within hearing of universal harmonies. Hitherto there has been no such structure; but only tabernacles have been built, because there was no Solomon to build a temple.

Once having determined the connection which there is between the Will and the

principle of Good, there still remains to be determined the place which Reason has in this connection.

Merely to act according to some teleological or determining principle gives man no preëminence above Nature, except in degree. That which is peculiar to man is that he has the faculty of acting according to laws as *represented and reflected upon in the light of thought*, — to which reason is absolutely indispensable. Reason is therefore necessary to choice, — to freedom. There can, therefore, no more be goodness without reason than there can be without will. Yet there might be, as Kant justly argues, if good were to be in any case identified with mere happiness. "For," says he, "all the actions which man has to perform with a view to happiness, and the whole rule of his conduct, would be much more exactly presented to him by instinct, and that end had been much more certainly attained than it ever can be by reason; and should the latter also be bestowed on the favored creature, it must be of use only in contemplating the happy predisposition lodged in instinct, to admire this, to rejoice in it, and be grateful for it to the beneficent Cause; in short, Nature would have prevented reason from any practical\*use in subduing appetite, etc., and from excogitating for itself a project of happiness; she would have taken upon herself not only the choice of ends, but the means, and had with wise care intrusted both to instinct merely." The fact, then, that reason has been given, and has been endowed with a practical use, is sufficient to prove that some more worthy end than felicity is designed, — namely, a will good in itself, — rationally good, — that is, *from choice*.

Out of the *rationality* of will is developed its *morality*. Here, only, is found the possibility of failure in respect of the end constitutionally indicated, — here only the avenues of temptation, by which alien elements come in to array the man against himself in a terrible conflict, so sublime that it is a spectacle to heavenly powers. It is only as this rationality is clearly developed, and is allotted its just place in Moral Science, that the universal structure to which we have already alluded, and which, as we saw, culminated in the will, assumes its peculiar sublimity. For the *voluntariness* which is consciously real-

ized in reason gives man the mastery over constitutional processes, not merely to direct, but even to thwart them; nor this merely for himself, but it is in his power, through the nullification of his own constitution, to nullify also that of the world, to dally with the institutions of Nature, and on the grandest scale to play the meddler.

Merely of itself, apart from reason, the will could only work out its teleological type in darkness and by blind necessity; there could be no goodness, for this involves conscious elements. But through reason, that which of itself the will would yield as unconscious impulse obtains *representation*, and thus becomes a recognized principle, which in connection with the feelings involves an element of obligation.

Conscience, thus, instead of being a separate and independent faculty, is, as Dr. Hopkins also places it, a function of the moral reason. Into the courts of this reason come not only the higher indications of will, but also the impulses of appetite, instinct, and affection, — not moral in themselves, indeed, but yet assuming the garments of morality as seen in this high presence.

That which was made fundamental by Kant, in all that he has left on the subject of Moral Philosophy, is the position that it is wholly to be developed out of practical reason, or will as represented in reason. The same position is fundamental in President Hopkins's work, and it is here that its philosophic value chiefly rests. This position is developed in plain English, with strict scientific truth, and yet with a warm and sympathetic glow, as regards outward embodiment, that very much heightens the elevating power of the principles and conclusions evolved. Nor is man, because of his independent personality, made to stand alone, but always is he seen in the higher and All-Comprehending Presence. Ideal truth is reached without necessitating Idealism, and harmony is attained without Pantheism.

We have purposely confined ourselves to the most general feature of the work, because it is this which gives it its great and distinctive importance; yet the whole structure is as elaborately and beautifully wrought as it is fitly grounded in the truth of Nature.

*The National Almanac and Annual Record for 1863.* Philadelphia: George W. Childs. 12mo. pp. 600.

VOLUMES like this are the very staff of history. What a stride in literature from the "Prognostications" of Nostradamus and Partridge, and the imposture of such prophetic chap-books as the almanacs of Moore and Poor Robin, to the bulky volumes teeming with all manner of information, such as the "Almanach Impérial," the "New Edinburgh," or "Thorn's Irish Almanac"! In the list of superior works ranking with those just named is to be included the new "National Almanac." We have here assuredly a vast improvement over anything in this way which has heretofore been attempted among us. A more comprehensive range of topics is presented, and such standard subjects as we should naturally expect to find introduced are worked up with much more copiousness and accuracy of treatment. It is evident on every page that a thoroughly active and painstaking industry has presided over the preparation of the volume. Statistics have not been taken at second-hand, where the primary sources of knowledge could be rendered available. The details of the great Departments of the Federal Government have been revised by the Departments themselves. In like manner, the particulars concerning the several States have in most cases been corrected by a State officer. Thus, as respects the leading subjects in the book, we have here not only the most accurate information before the public, but we have it in the latest authorized or official form. Facts are as a general rule brought down to date, instead of being six or twelve months behind-hand, as has been the case heretofore in similar publications, the compilers of which were content to await the tardy printing by Congress of documents and reports. Hence the work is pervaded by an air of freshness and vitality. It is not merely a receptacle of outgrown facts and accomplished events, but the companion and interpreter of the scenes and activities of the

stirring present. It strives to seize and embody the whole being and doing of the passing time.

It is quite impossible to exhibit in these few lines any adequate conception of the diversity and fulness of the subjects. All the valuable results of the last census are classified and incorporated. Then we have the entire organization of the military, naval, and civil service, — the tariff and tax laws conveniently arranged, — the financial, industrial, commercial, agricultural, literary, educational, and ecclesiastical elements of our condition, — the legislation of the last three sessions of Congress, and full and detailed statistics of the individual States, — to which is added a minute sketch of the foreign Governments. Nor can we overlook the fact, that, in the abundant matter relating to our present war, the narrative of events, obituary notices, etc., reach back to the commencement of the Rebellion, so as to furnish a complete and unbroken record of the contest from its outbreak. So much for the diversified nature of the matter; and an idea may be formed of its aggregate bulk from the fact that it exceeds, by nearly one-third, the size of the "American Almanac."

The publication is, we trust, the dawning of a new era in this department of our literature. We have done well heretofore, but we have been behind many of the leading foreign works. There are in this initial volume indications that the new series which it inaugurates will be conducted with a thoroughness, enterprise, and skill which cannot fail to supply a great want. The politician, statesman, and scholar, the merchant, mechanic, and tradesman, every newspaper-reader, and, in truth, every observant and thoughtful man, of whatsoever profession or business, always wants at hand a minute and trustworthy exhibition of the manifold elements which constitute the changeful present as it ebbs and flows around him. Such hand-books are indispensable for present reference, and they constitute an invaluable storehouse for the future.

THE  
ATLANTIC MONTHLY.

A MAGAZINE OF LITERATURE, ART, AND POLITICS.

VOL. XI.—MARCH, 1863.—NO. LXV.

---

CHRISTOPHER NORTH.

PLUTARCH, when about to enter upon the crowded lives of Alexander and Cæsar, declares his purpose and sets forth the true nature and province of biography in these words:—"It must be borne in mind that my design is not to write histories, but lives. And the most glorious exploits do not always furnish us with the clearest discoveries of virtue or vice in men. Sometimes a matter of less moment, an expression or a jest, informs us better of their characters and inclinations than the most famous sieges, the greatest armaments, or the bloodiest battles whatsoever. Therefore, as portrait-painters are more exact in the lines and features of the face, in which character is seen, than in the other parts of the body, so I must be allowed to give my more particular attention to the marks and indications of the souls of men, and while I endeavor by these to portray their lives, may be free to leave more weighty matters and great battles to be treated of by others."

That these general principles of biography are correct, and that Plutarch, by adhering to them, succeeded, beyond all

others, in making his heroes realities, men of flesh and blood, whom we see and know like those about us, in whom we feel the warmest interest, and from whom we derive lessons of deep wisdom, as from our own experience,—all this could best be shown by the enduring popularity of his "Lives," and the seal of approval set upon them by critics of the most opposite schools. What a long array of names might be presented of those who have given their testimony to the wondrous fascination of this undying Greek!—names of the great and wise through many long centuries, men differing in age, country, religion, language, and occupation. For ages he has charmed youth, instructed manhood, and solaced graybeards. His heroes have become household words throughout the world. He has been equally familiar with court, with camp, and with cottage. He has been the companion of the soldier, the text-book of the philosopher, and the *vade-mecum* of kings and statesmen. And his name even now, after the lapse of so many generations, is fresher than ever.

Yet Lord Macaulay could not refrain from a sneer at Plutarch as a pedant who thought himself a great philosopher and a great politician. Pedant he may have been; philosopher and politician he may not have been; but he was, nevertheless, the prince of biographers. Macaulay has praised Boswell's "Life of Johnson" as the best biography ever written. But was not Boswell a pedant? Was he a philosopher? Macaulay himself has penned many biographies. Most of them are quite above the pedantry of small facts. Instead, they are crammed with deep philosophy, with abstractions, and with the balancing of antithetical qualities. They are bloodless frameworks, without life or humanity,—bundles of peculiarities skilfully grouped, and ticketed with such and such a name. No one sees a man within. As biographies they will not be remembered, but as instances of labored learning, of careful special pleading, and of brilliant rhetoric. Elsewhere, however, he has descended from philosophy, and not been above the pedantry of detail. And he has given us, in consequence, charming lives,—successful, in fact, just so far as he has followed in the footsteps of the old Greek. Yet who would for a moment compare his Pitt, his Goldsmith, or his William IV., as biography, with Plutarch's Alcibiades, or Cato the Censor? We remember the fact that Goldsmith sometimes wore a peach-blossom suit, but we see Cato in his toga.

Very many works have been written, purporting to be "The Life and Times" of this or that man. Where a man has occupied a large historic place, has been moulded by his times, and has moulded in turn the coming years, such works are well enough as history. As biography they are failures. The Times get the upper hand, and thrust down the Life. Without the Life, such works would be better, too, as history; for man and the world are two different things, and their respective provinces cannot, without confusion, be thrown

into one. Now every leading man bears a twofold character. He is man, and something more: he is a power in history. Whatever concerns him as man,—his humanity, his individuality, his personal qualities, his character and inclinations, "the marks and indications of the soul," as Plutarch phrases it,—all this, and hardly more than this, is matter for biography, and for that alone. But so far as he is a representative man, standing for communities, for nations, for the world of his time,—so far as he is an historic force, making and solving, in some degree, large human problems,—so far as he is the organ chosen by destiny to aid in the development of his race,—just so far he is a maker of history, and therefore its proper subject, and its alone. Napoleon was not only a man, but he was Europe for some twenty years. Louis XIV. was the Europe of half a century. There should be lives of such men, for they were akin to their fellows: histories, too, should be theirs, for they were allied to Nature, and fate, and law. They jested; and Biography, smiling, seized her tablets. They embodied a people; and Clío, pondering, opened the long scrolls of time.

All biography has been said to be eulogistic in its nature. This is well enough. But it is not well, when the author, high on daring stilts, overlooks the little matters just about him, and, rapidly running his eye over the wastes that stretch from Dan to Beersheba, prates of the fields that lie along the distant horizon. Nor is it well, when he forgets his hero, and writes himself,—when he constantly thrusts upon us philosophy, abstractions, and the like,—when he has a pet theory to sustain through thick and thin,—when narrative becomes disquisition, memoir is criticism, life is bloodless, and the man is a puppet whose strings he jerks freakishly. There may be something good in all this; but it is all quite out of place: it is simply not biography. The foundation of most biographical sins is, perhaps, ambition,—an ambition to do

something more or something other than the subject demands, and to pitch the strain in too high a key. Hence we have usually found the memoirs of comparatively insignificant men to be better reading, and more fertile in suggestion, than those of what are called great men. Not that the real life, as he lived it, of a man of mediocrity has in itself more seeds of thought than that of a hero. Far otherwise. But his written life has often greater lessons of wisdom for us, precisely because it is generally found to give us more of the individual, and more of our common humanity,—which is the very thing we want. There is less of pretext to pour this one small drop into the broad ocean, and then treat us to a vague essay on salt-water. What is it, for instance, that gives to Southey's "Life of Nelson" its great excellence? There have been many other works on the same subject, larger, fuller, and more carefully studied. But these will perish, while that will be cherished by all the generations to come. It is because the author kept throughout precisely on a level with his subject. He was conscious, on every page, that he was writing of one man,—that nothing was trivial which could throw light on this man, and nothing important which did not tend directly to the same end. Nelson was made to speak, not only in his own words, but in the many little ways and actions which best show the stuff one is made of. There is no essay, nothing strictly didactic. Facts are given: inferences are left entirely with the reader. Few books are more wearisome than those which are thoroughly exhaustive, which point a moral and adorn a tale on every page. Imagination and thought must sit supine, despairing of new conquests. Their work has all been done before.

Christopher North—Heaven be praised!—was not an "historic force." He was a good many things, but not that. And so it was always pleasant to read him and about him. He was so com-

pletely vital and individual, that nothing that concerned him ever lacked in human interest. The world has known him for a long time, and has lost nothing by the acquaintance. Latterly it has come to know him better than before in his character of citizen, son, husband, and father; and it has come to the sage conclusion that even as a family-man he was not quite so bad, after all. It is a great relief to know at last that Christopher was throughout consistent,—that the child was father to the man. One of his first exploits was fishing with a bent pin. Another was to preach a little sermon on a naughty fish. The "application," though brief, was earnest. To the infant expounder, the subject of his discourse doubtless appeared in the guise of a piscatorial Cockney. After many other the like foreshadowings, and after draining dry his native village, he went, when twelve years of age, to Glasgow University. Professor Jardine, who then held the chair of Logic, was fully alive to the rare promise of his pupil, and said of him subsequently,—“He lived in my family during the whole course of his studies at Glasgow, and the general superintendence of his education was committed to me; and it is but justice to him to declare, that during my long experience I never had a pupil who discovered more genius, more ardor, or more active and persevering diligence.” But his ardor was not limited to philosophy and the humanities: his powers required a larger field than the curriculum. He walked, ran, wrestled, boxed, boated, fished, wrote poetry, played the flute, danced, kept a careful diary, and read largely. Even at this early age, he felt the merit of the then unappreciated Wordsworth, and, on the appearance of the "Lyrical Ballads," wrote the author a letter expressive of his admiration.

In 1803, Wilson, now eighteen, was transferred to Oxford as a Gentleman Commoner of Magdalen. And surely never lighted on the Oxford orb so glori-

ous a vision, or such a bewildering phenomenon. He was, indeed,

“*Rara avis in terris, nigroque simillima cygno.*”

There, as elsewhere, his life was an extraordinary one. His immense vitality forced him to seek expression in every possible direction. The outlets which sufficed for ordinary souls were insignificant conduits for the great floods pent up within his breast; and he surged forth mightily at every point, carrying all before him. His tastes and sympathies were all-embracing. His creed and his practice were alike catholic. All was fish that came to his net. He sat at the feet of muscular Gamaliels, and campaigned with veterans of the classics. He hobnobbed with prize-fighters, and was the choice spirit in the ethereal feasts of poets. He was king of the ring, and *facile princeps* in the Greek chorus. He could “talk horse” with any jockey in the land; yet who like him could utter tender poetry and deep philosophy? He had no rival in following the hounds, or scouring the country in breakneck races; and none so careered over every field of learning. He angled in brooks and books, and landed many a stout prize. He would pick up here and there a “fly in amber,” and add it to his stores. He was the easy victor in every foot-race, and took the Newdigate prize for poetry, in 1806. He burned the midnight oil, and looked through ruddy wine at the small hours chasing each other over the dial. For hours, almost whole days, he would sit silent at the helm of his boat on the Isis, his rapt eye peopling the vacant air with unutterable visions. He swam like a dolphin, rode like a Centaur, and De Quincey called him the best unprofessional male dancer he had ever seen. Three times he was vanquished by a huge shoemaker,—so the story goes,—champion of the “Town”: at the fourth meeting, the Gentleman Commoner proved himself the better man, knocked his antagonist out of time, and

gave him twenty pounds. Another professor of the manly art of self-defence, who had ventured to confront the young Titan, and was unexpectedly laid low, said in astonishment,—“You can be only one of the two: you are either Jack Wilson or the Devil.” He proved himself to be the former, by not proclaiming, “*Væ victis!*” and by taking his prize of war to the nearest ale-house, and then and there filling him with porter. Sotheby said it was worth a journey from London to hear him translate a Greek chorus; and, at a later day, the brawny Cumberland men called him “a varra bad un to lick.”

Never were such “constitutionals” known, even at old Oxford. He would wander away alone, sometimes for many days, tramping over the country leagues and leagues away, making the earth tremble with his heavy tread, and distancing everything with his long, untiring stride. Then, on his return, he would be the prince of good-fellows once more, and fascinate the merry revellers with the witchery of his tongue. Even when a boy, he had won a bet by walking six miles in two minutes less than an hour. He once dined in Grosvenor Square, and made his appearance at Oxford at an early hour the next morning, having walked the fifty-eight miles at a tremendous pace. In his vacations, he walked over all the Lake region of England, the North of Scotland, and the greater part of Wales. On finishing his course at Oxford, he went on foot to Edinburgh,—more than three hundred miles. He was equally remarkable as a leaper, surpassing all competitors. He once jumped across the Cherwell—twenty-three feet clear—with a run of only a few yards. This is, we believe, the greatest feat of the kind on record. General Washington, it is known, had great powers in this way; but the greatest distance ever leaped by him, if we remember right, was but twenty-one feet.

The many vagaries into which he was led, and the innumerable odd

pranks he played, would be sufficient, in the case of any one else, to prove that he was not a reading man. But not so with Wilson. One of his contemporaries at Oxford thus described him:—"Wilson read hard, lived hard, but never ran into vulgar or vicious dissipation. He talked well, and loved to talk. Such gushes of poetic eloquence as I have heard from his lips,—I doubt whether Jeremy Taylor himself, could he speak as well as he wrote, could have kept up with him. Every one anticipated his doing well, whatever profession he might adopt, and when he left us, old Oxford seemed as if a shadow had fallen upon its beauty." Wilson himself confessed that he yielded, for a short time, to "unbridled dissipation," seeking solace for the agony he experienced from the conduct of his stern mother, who ruthlessly nipped in the bud his affection for a bonny lass at Dychmont. He might have used the very words of Gibbon, whose father nipped, in a similar way, his attachment for Mademoiselle Susan Curchod, afterward Madame Necker:—"After a painful struggle, I yielded to my fate: I sighed as a lover, I obeyed as a son; my wound was insensibly healed by time, absence, and the habits of a new life." It is difficult to conceive of Gibbon's wound as a deep one, or of his struggle as painful. But Wilson, whose affections were far stronger, suffered much. He almost made up his mind to run away to Timbuctoo, with Mungo Park; and his deep gloom showed how the iron had entered his soul. But time and absence and new habits healed his wound, as well as Gibbon's, without a journey to Africa.

We mentioned above that Wilson carried off the Newdigate prize for the best poem, in 1806. His subject was, "Painting, Poetry, and Architecture." He professed, in general, to put a very low estimate on college prize-poems, and rated his own so low that he would not allow it to be published with his subsequent poems. But in the "Noctes

Ambrosianæ" for October, 1825, he was not above saying a good word in favor of these much-berated effusions, as follows:—

"*North.* It is the fashion to undervalue Oxford and Cambridge prize-poems; but it is a stupid fashion. Many of them are most beautiful. Heber's 'Palestine!' A flight, as upon angel's wing, over the Holy Land! How fine the opening!

[We omit the lines quoted,—the well-known beginning of the poem.]

"*Tickler.* More than one of Wrangham's prize-poems are excellent; Richard's 'Aboriginal Brutus' is a powerful and picturesque performance; Chinnery's 'Dying Gladiator' magnificent; and Milman's 'Apollo Belvedere' splendid, beautiful, and majestic.

"*North.* Macaulay and Praed have written very good prize-poems. These two young gentlemen ought to make a figure in the world."

Heber was a contemporary and friend of Wilson at Oxford; as was also Lockhart, among others. The distant See of Calcutta interrupted the intercourse of the former, in after-life, while Maga and party bound the latter still closer to his old college-friend. One of Wilson's college-mates has given an odd anecdote descriptive of his appearance at their social gatherings:—

"I shall never forget his figure, sitting with a long earthen pipe, a great tie-wig on. Those wigs had descended, I fancy, from the days of Addison, (who had been a member of our college,) and were worn by us all, (in order, I presume, to preserve our hair and dress from tobacco-smoke,) when smoking commenced after supper; and a strange appearance we made in them."

Wilson left Oxford in 1807, after passing a highly creditable examination for his degree. His disappointed affections had so weighed upon him, that he had a nervous apprehension of being plucked,—which, however, turned out to be quite unnecessary. He was now twenty-two years of age, a

man singularly favored both by Nature and by fortune, — possessed of almost everything which might seem to insure the fullest measure of health, happiness, success, and fame. Rarely, indeed, do the gods give so freely of their good gifts to a single mortal. His circumstances were easy: a fortune of some fifty thousand pounds having come to him from his father, who had died while his son was a mere boy. After visiting his mother at Edinburgh, and rambling largely here and there, he purchased the beautiful estate of Elleray on Lake Windermere, and there fixed his residence. These were the halcyon days of that noted region: the “Lakers,” as they were called, were then in their glory. A rare coterie, indeed, it was that was gathered together along the banks of Windermere. Though they are now no more, yet is their memory so linked to these scenes that thousands of fond pilgrims still visit these placid waters to throw one glance upon the home of genius, the birthplace of great thoughts. Here Wilson was in his element. His soul feasted itself on the wondrous charms of Nature, and held high converse with the master-minds of literature. There was quite enough to satisfy the cravings even of his multi-form spirit. He soon came to know, and to be on terms of greater or less intimacy with, Coleridge, Wordsworth, De Quincey, Southey, the celebrated Bishop Watson, of the See of Llandaff, Charles Lloyd, and others, — then the *genii loci*. It may be remembered that his admiration for Wordsworth was already of long standing, his boyish enthusiasm having led him, when at Glasgow, to send his tribute of praise to the author of the “Lyrical Ballads.” Some fifteen to twenty years later, — in one of the numbers of the “Noctes,” — his admiration for the poet had temporarily cooled somewhat. Then was its aphelion, and soon it began to return once more toward its central sun. It must have been transient spleen which dictated such sentences as these: —

“*Tickler*. Wordsworth says that a great poet must be great in all things.

“*North*. Wordsworth often writes like an idiot; and never more so than when he said of Milton, ‘His soul was like a star, and dwelt apart!’ For it dwelt in tumult, and mischief, and rebellion. Wordsworth is, in all things, the reverse of Milton, — a good man, and a bad poet.

“*Tickler*. What! that Wordsworth whom Maga cries up as the Prince of Poets?

“*North*. Be it so: I must humor the fancies of some of my friends. But had that man been a great poet, he would have produced a deep and lasting impression on the mind of England; whereas his verses are becoming less and less known every day, and he is, in good truth, already one of the illustrious obscure. . . .

“And yet, with his creed, what might not a great poet have done? That the language of poetry is but the language of strong human passion! . . . And what, pray, has he made out of this true and philosophical creed? A few ballads, (pretty, at the best,) two or three moral fables, some natural description of scenery, and half a dozen narratives of common distress or happiness. Not one single character has he created, not one incident, not one tragical catastrophe. He has thrown no light on man’s estate here below; and Crabbe, with all his defects, stands immeasurably above Wordsworth as the Poet of the Poor. . . . I confess that the ‘Excursion’ is the worst poem, of any character, in the English language. It contains about two hundred sonorous lines, some of which appear to be fine, even in the sense, as well as the sound. The remaining seven thousand three hundred are quite ineffectual. Then what labor the builder of that lofty rhyme must have undergone! It is, in its own way, a small Tower of Babel, and all built by a single man.”

Christopher was surely in the dumps, when he wrote thus: he was soured by

an Edinburgh study. After a run in the crisp air of the moors, he would never have written such atrabilious criticism of a poet whom he admired highly, for it was not honestly in the natural man. Neither his postulates nor his inferences are quite correct. It is incorrect to say that the poet's creed was a true one; that, with it, he might have been a great poet; but that, from not making the most of it, he was a bad one. De Quincey's position, we think, was the only true one: that Wordsworth's poetic creed was radically false, — a creed more honored in the breach than the observance, — a creed good on paper only; that its author, though professing, did in fact never follow it; that, with it, he could never have been a great poet; and that, without it, he was really great.

Wilson at Windermere, like Wilson at Oxford, was versatile, active, Titanic, mysterious, and fascinating. An immense energy and momentum marked the man; and a strange fitfulness, a lack of concentration, made the sum total of results far too small. There was power; but much of it was power wasted. He overflowed everywhere; his magnificent *physique* often got the better of him; his boundless animal spirits fairly ran riot with him; his poetic soul made him the fondest and closest of Nature's wooers; his buoyant health lent an untold luxury to the mere fact of existence; his huge muscles and tuneful nerves always hungered for action, and bulged and thrilled joyously when face to face with danger. He was exuberant, extravagant, enthusiastic, reckless, stupendous, fantastic. It is only by the cumulation of epithets that one can characterize a being so colossal in proportion, so many-sided in his phases, so manifold in operation. He was a brilliant of the first water, whose endless facets were forever gleaming, now here, now there, with a gorgeous, but irregular light. No man could tell where to look for the coming splendor. The glory dazzled all eyes, yet few saw

their way the clearer by such fitful flashes.

Wilson, in some of his phases, reminds us often of a great glorified child, rejoicing in an eternal boyhood. He had the same impulse, restlessness, glee, zest, and *abandon*. All sport was serious work with him, and serious work was sport. No frolic ever came amiss, whatever its guise. He informed play with the earnestness of childhood and the spirituality of poesy. He could turn everything into a hook on which to hang a frolic. No dark care bestrode the horse behind this perennial youth. No haggard spectre, reflected from a turbid soul, sat moping in the prow of his boat, or kept step with him in the race. Like the Sun-god, he was buoyant and beautiful, careless, free, elastic, unfading. Years never cramped his bounding spirits, or dimmed the lustre of his soul. He was ever ready for prank and pastime, for freak and fun. Of all his loves at Elleray, boating was the chief. He was the Lord-High-Admiral of all the neighboring waters, and had a navy at his beck. He never wearied of the lake: whether she smiled or frowned on her devotee, he worshipped all the same. Time and season and weather were all alike to the sturdy skipper. One howling winter's night he was still at his post, when Billy Balmer brought tidings that "his master was wellnigh frozen to death, and had icicles a finger-length hanging from his hair and beard." Though there was storm without, the great child had his undying sunshine within.

In 1811, he married Miss Jane Penny, of Ambleside, described as the belle of that region, — a woman of rare beauty of mind and person, gentle, true, and loving. She was either a pedestrian by nature, or converted by the arguments of her husband; for, a few years after marriage, they took a long, leisurely stroll on foot among the Highlands, making some three hundred and fifty miles in seven weeks. The union of these two bright spirits was singularly

happy and congenial, — a pleasing exception to the long list of mismated authors. Nought was known between them but the tenderest attachment and unwearied devotion to each other. For nearly forty years they were true lovers; and when death took her, a void was left which nothing could fill. The bereaved survivor mourned her sincerely for more than seventeen years, — never, for an instant, forgetting her, until his own summons came. Some one has related the following touching incident. “When Wilson first met his class, in the University, after his wife’s death, he had to adjudicate on the comparative merits of various essays which had been sent in on competition for a prize. He bowed to his class, and, in as firm voice as he could command, apologized for not having examined the essays, — ‘for,’ said he, ‘I could not see to read them in the darkness of the shadow of the Valley of Death.’ As he spoke, the tears rolled down his cheeks; he said no more, but waved his hand to his class, who stood up as he concluded and hurried out of the lecture-room.”

The joys of Ellera were destined to be fleeting. The fortune of its master was melted away by the mismanagement of others, leaving him but a slender pittance. He bore his loss like a man, sorrowing, but not repining. The estate was given up, and a new home found with his mother, in Edinburgh. This was in 1815. Four years later, fortune had smiled on his cheerful labors, and given him the wherewithal to provide a home of his own for his wife and little ones, — the well-known house in Anne Street, which was for so many years the abode of domestic joys, the shrine of literature, the centre of friendship and hospitality. On his arrival at Edinburgh, Wilson, already famous, though young, finding fame an unsubstantial portion for a man with a family, looked about him for something more tangible, and determined to get his livelihood by the law. Kit North

a lawyer, eating bread earned by legal sweat! The very idea seems comical enough. Yet it cannot be doubted, that, with his intellect, energy, eloquence, and capacity for work, he would, when driven to concentration and persistence by the spurs of necessity, duty, and affection, have run his race manfully, and reached the goal with the very foremost. Happily the question is an open one, for his affairs took another turn, which may have given Scotland one legal lord the less. For some time the briefless barrister diligently frequented the Edinburgh courts, on the lookout for business. If he had few cases, he had excellent company in another “limb,” of his own kidney, John Gibson Lockhart. These two roystering pundits, having little to do, filled up their moments mainly with much fun, keeping their faculties on the alert for whatever might turn up. The thing that soon turned up was “Blackwood.”

The “Edinburgh Review” — the first in the field of the modern politico-literary periodicals — commenced its career in 1802, under the leadership of Brougham, Sydney Smith, Jeffrey, and Horner, all staunch Whigs. At first, literature had the second place, while politics occupied the chief seat; though in later years their relative positions have been reversed. Then, the one great thing in view was to have an able party-organ, the fearless champion of a certain policy in matters of State. The Whigs must be glorified, and the Tories put down, at all events, whatever else might be done. The rejoicings of the former, and the discomfiture of the latter, soon bore witness to the ability and success of this new-fledged champion. But this one-sided state of things could not continue always. The Tories, too, must have a mouth-piece to testify of their devotion to “the good old cause,” and silence the clamors of their opponents. Accordingly, in 1809, appeared the “Quarterly Review,” with Gifford as editor, and Scott, Southey,

Croker, Canning, and others, as chief contributors. Under the conduct of such men, it became at once an organ of great power, yet still not quite what was wanted. It did not seem to meet entirely the demands of the case. It had not the wit, pungency, and facility of its rival, and failed of securing so general a popularity. Its learning and gravity made it better suited to be the oracle of scholars than the organ of a party. Compared with its adversary across the Tweed, it was like a ponderous knight, cased in complete steel, attacking an agile, light-armed Moorish cavalier; or, to use Ben Jonson's illustration, like a Spanish great galleon opposed to the facile manœuvres of a British man-of-war. For such an enemy there were needed other weapons. Well might the Tories say, —

"Non tali auxilio, nec defensoribus istis  
Tempus eget."

William Blackwood, the Prince-Street publisher, thought, that, to be successful, the war should be carried into Africa, — that the enemy must be met on his own ground with his own weapons. Hogg, whose weekly paper, "The Spy," had recently fallen through, also came to the conclusion that a sprightly monthly publication, of strong Tory proclivities, could not fail to do well. So, the times being ripe, Blackwood issued, in March, 1817, the first number of his new monthly, then called "The Edinburgh Monthly Magazine." Though himself a violent Tory, he, singularly enough, chose as his editors two Whigs, — Pringle the poet, and Cleghorn. Hogg lent his aid from the beginning. Scott, too, wrote now and then; and very soon Wilson made his appearance as "Ere-mus," contributing prose and verse. But the new magazine did not prove to be what was hoped, — a decided success. It was, in fact, quite flat and dull, having nothing life-like and characteristic. The radical error of attempting to build on such heterogeneous foundations was soon perceived. Vigor of action could proceed only from entire unanimity of

sentiment. Soon a rupture arose between editors and publisher, and the former seceded with the list of subscribers, leaving the latter his own master. He at once decided to remodel his periodical entirely, — to make it a thorough-going partisan, and to infuse a new life and vigor by means of personality and wit. How well he succeeded we all know. Thenceforward, until his death in 1834, he acted as editor, and a better one it would be difficult to find. The new management went into effect in October, 1817, with the famous No. VII. The difference was apparent at once, not only in the ability and style, but also in the title of the periodical, which was then changed to the name which it has borne ever since. In this number appeared the first really distinctive article of the magazine, — the celebrated "Translation from an Ancient Chaldean Manuscript," — an allegorical account, in quaint Scripture phrase, of Blackwood's quarrel with his editors, and a savage onslaught on the leading Whigs of Edinburgh. So great a hubbub arose immediately on the appearance of this diatribe that it was suppressed as soon as possible; and though the editor offered an earnest apology for its insertion, he was finally mulcted in costs in a large sum for libel. But the general effect was highly favorable to the new magazine. It gave it — what had been lacking before — notoriety and a recognized position, and made its existence no longer a matter of indifference. It was known that Hogg conceived the idea, and wrote some portion of the article. But few could believe, as was claimed by some, that all the sharp touches came from his hand. Hogg, it appears, wrote the first part; Wilson and Lockhart together contributed most of the remainder, amidst side-splitting guffaws, in a session in the house of the Dowager Wilson, in Queen Street; while the philosophic Sir William Hamilton, in adding his mite, was so moved by uproarious cachinnation that he fairly tumbled out of his chair.

The power and personality which thus early characterized the magazine were its leading features in after-years. Wilson and Lockhart became at once its chief contributors,—Wilson especially writing for its columns, with the most extraordinary profusion, on all conceivable topics, in prose and verse, for more than thirty years. By these articles he became known beyond his own circle, and on these his fame must ultimately rest. His daughter points to them with pride, and unhesitatingly expresses the opinion that they in themselves are a sufficient answer to all who doubt whether the great powers of their author ever found adequate expression. We are unable to agree with her. Able and brilliant as these articles unquestionably were, we cannot think that such glimpses and fragments—or, in fact, all the relics left by their author—furnish results at all commensurate with the man. Though Maga increased his immediate reputation, we think it diminished his lasting fame, by leading him to scatter, instead of concentrating his remarkable powers on some one great work. Scott and other great authorities saw so much native genius in Wilson, that they often said that it lay in him to become the first man of his time, though they feared that his eccentricities and lack of steadiness might prove fatal to his success.

Though never really the editor of "Blackwood," Wilson was from the first its guiding spirit,—the leaven that leavened the whole lump. The way in which he threw himself into his work he described as follows:—"We love to do our work by fits and starts. We hate to keep fiddling away, an hour or two at a time, at one article for weeks. So off with our coat, and at it like a blacksmith. When we once get the way of it, hand over hip, we laugh at Vulcan and all his Cyclops. From nine of the morning till nine at night, we keep hammering away at the metal, iron or gold, till we produce a most beautiful article. A biscuit and a glass

of Madeira, twice or thrice at the most,—and then to a well-won dinner. In three days, gentle reader, have We, Christopher North, often produced a whole magazine,—a most splendid number. For the next three weeks we were as idle as a desert, and as vast as an antre,—and thus on we go, alternately laboring like an ant, and relaxing in the sunny air like a dragon-fly, enamored of extremes." Of all his contributions, we think the "Noctes Ambrosianæ" give by far the best idea of their author. They are perfectly characteristic throughout, though singularly various. Every mood of the man is apparent; and hardly anything is touched which is not adorned. Their pages reveal in turn the poet, the philosopher, the scholar, and the pugilist. "Though continued during thirteen years, their freshness does not wither. To this day we find the series delightful reading: we can always find something to our taste, whether we crave fish, flesh, or fowl. Whether we lounge in the sanctum, or roam over the moors, we feel the spirit of Christopher always with us.

It has been attempted, on Wilson's behalf, to excuse the fierce criticism and violent personality of Maga in its early days, on the plea that his influence over that periodical was less then than afterwards,—and that, as his control increased, the bitterness decreased. This is a special plea which cannot be allowed. The magazine was moulded, from the beginning, more by Wilson than by all others. If personalities had been offensive to him, they would not have been inserted, except in a limited degree. Lockhart, it is true, was far more bitter, but his influence was less. He could never have been successful in running counter to Wilson. Besides, though Wilson's nominal power might have been greater in the control of the magazine in later years, it was virtually but little, if at all, increased. The fact is, these onslaughts were perfectly congenial to his nature at that time.

His young blood made him impetuous, passionate, and fond of extremes,—perhaps unduly so. He was a warm lover, and a strong, though not malignant, hater,—and consequently deliberately made himself the fiercest of partisans. It was all pure fun with him, though it was death to the victims. He dearly loved to have a cut at the Cockneys, and was never happier than when running a tilt à l'outrance with what seemed to be a sham. Still, he felt no ill-will, and could see nothing wrong in the matter. We are entirely disposed, even in reference to this period of his life, to accept the honest estimate which he made of himself, as “free from jealousy, spite, envy, and uncharitableness.” When the fever of his youth had been somewhat cooled by time, his feelings and opinions naturally became more moderate, and his expression of them less violent. In his early days, when his mother heard of his having written an article for the “Edinburgh Review,” she said, “John, if you turn Whig, this house is no longer big enough for us both.” But his Toryism then was quite as good as hers. By-and-by, as party became less, and friendship more, he entertained at his house the leading Whigs, and admitted them to terms of intimacy. Even his daughter was allowed to marry a Whig. And in 1852 the old man hobbled out to give his vote for Macaulay the Whig, as representative in Parliament of the good town of Edinburgh. Conceive of such a thing in 1820! All this was but the gradual toning-down of a strong character by time and experience. “Blackwood” naturally exhibited some of the results of the change.

Much allowance must be made for the altered spirit of the times. A generation or two ago, there was everywhere far more of rancor and less of decorum in the treatment of politics and criticism than would now be tolerated. All the world permitted and expected strong partisanship, bitter personality, and downright abuse. They would have

called our more sober reticence by the name of feebleness: their truculence we stigmatize as slander and Billingsgate. Wilson was an extremist in everything; yet he strained but a point or two beyond his fellows. When the tide of party began gradually to subside, he fell with it. Mrs. Gordon has given a very correct picture of the state of things in those days:—

“It is impossible for us, at this time, to realize fully the state of feeling that prevailed in the literature and politics of the years between 1810 and 1830. We can hardly imagine why men who at heart respected and liked each other should have found it necessary to hold no communion, but, on the contrary, to wage bitter war, because the one was an admirer of the Prince Regent and Lord Castlereagh, the other a supporter of Queen Caroline and Mr. Brougham. We cannot conceive why a poet should be stigmatized as a base and detestable character, merely because he was a Cockney and a Radical; nor can we comprehend how gentlemen, aggrieved by articles in newspapers and magazines, should have thought it necessary to the vindication of their honor to horsewhip or shoot the printers or editors of the publications. Yet in 1817 and the following years such was the state of things in the capital of Scotland. . . . You were either a Tory and a good man, or a Whig and a rascal, and *vice versâ*. If you were a Tory and wanted a place, it was the duty of all good Tories to stand by you; if you were a Whig, your chance was small; but its feebleness was all the more a reason why you should be proclaimed a martyr, and all your opponents profligate mercenaries.” But parties changed, and men changed with them. It was a Whig ministry which gave Wilson, in 1852, a pension of two hundred pounds. Mrs. Gordon has praised her father as “the beau-ideal of what a critic should be, whose judgments will live as *parts* of literature, and not merely *talk* about it.” That these so-called judg-

ments are worthy to live, and will live, we fully believe; yet we could never think him a model critic, or even a great one. Though not deficient in analytic power, he wanted the judicial faculty. He could create, but he could not weigh coolly and impartially what was created. His whole make forbade it. He was impatient, passionate, reckless, furious in his likes and dislikes. His fervid enthusiasm for one author dictated a splendid tribute to a friend; while an irrational prejudice against another called out a terrific diatribe against a foe. In either case, there might be "thoughts that breathe and words that burn"; still, there was but little of true criticism. The matchless papers on Spenser and Homer represent one class, and the articles on Hazlitt and Leigh Hunt the other. While the former exhibit the tender sympathy of a poet and the enthusiasm of a scholar, the latter reveal the uncompromising partisan, swinging the hangman's cord, and brandishing the scourge of scorpions. Of the novelist's three kinds of criticism—"the slash, the tickle, and the plaster"—he recognized and employed only the two extremes. Neither in criticism nor in the conduct of life was Ovid's "*Medio tutissimus ibis*" ever a rule for him. In the "Noctes" for June, 1823, some of his characteristics are wittily set forth, with some spice of caricature, in a mock defiance given to Francis Jeffrey, "King of Blue and Yellow," by the facetious Maginn, under his pseudonym of Morgan Odoherty:—"Christopher, by the grace of Brass, Editor of Blackwood's and the Methodist Magazines; Duke of Humbug, of Quiz, Poffery, Cutup, and Slashand-hackaway; Prince Paramount of the Gentlemen of the Press, Lord of the Magaziners, and Regent of the Reviewers; Mallet of Whiggery, and Castigator of Cockaigne; Count Palatine of the Periodicals; Marquis of the Holy Poker; Baron of Balaam and Blarney; and Knight of the most stinging Order of the Nettle."

In 1820 Wilson was elected Professor of Moral Philosophy in the University of Edinburgh,—an office which he held for more than thirty years. The rival candidate was his friend, Sir William Hamilton, a firm Whig; and the canvass, which was purely a political one, was more fiery than philosophic. Wilson's character was the grand object of attack and defence, and round it all the hard fighting was done. Though it was pure and blameless, it offered some points which an unscrupulous adversary might readily misconstrue, with some show of plausibility. His free, erratic life, his little imprudences, his unguarded expressions, and the reckless "Chaldee MS.," might, with a little twisting, be turned to handles of offence, and wrested to his disadvantage. But the fanatic zeal of his opponents could not rest till their accusations had run through nearly the whole gamut of immoralities. He was not only a blasphemer towards God, but corrupt to wife and children. It seems comical enough at this day that he was obliged to bolster up his cause by sending round to his respectable acquaintances for certificates of good moral character. When at last he triumphed by a greater than two-thirds vote, an attempt was made to reconsider; but the new Professor held his own, and the factious were drowned in hisses.

His personal relations to his pupils were singularly happy. A strange charm went out from his presence at all times, which fascinated all, and drew them to him. Their enthusiasm and love for him have been spoken of as "something more to be thought of than the proudest literary fame." "As he spoke, the bright blue eye looked with a strange gaze into vacancy, sometimes darkening before a rush of indignant eloquence; the tremulous upper lip curving with every wave of thought or hint of passion; and the golden gray hair floating on the old man's mighty shoulders,—if, indeed, that could be called an age which seemed but the immortal-

ity of a more majestic youth." In his lecture-room utterances, there was an undue preponderance of rhetoric, declamation, and sentiment over logic, analysis, and philosophy. Yet he once said of himself, that he was "thoroughly logical and argumentative; not a rhetorician, as fools aver." Whether this estimate was right or wrong in the main may be a matter of question: we think it wrong. His genius, in our view, lay rather in pictorial passion than in ratiocination. At all events, as a teacher of philosophy, it appears to us that his conception of the duties of his office, and his style of teaching, were far inferior to those of his competitor and subsequent associate, Sir William Hamilton. The one taught like a trumpet-tongued poet, and the other like an encyclopædic philosopher. The personal magnetism of the former led captive the feelings, while the sober arguments of the latter laid siege to the understanding. The great fact which impressed Wilson's students was his overpowering oratory, and not his particular theory, or his train of reasoning. One of them compares the nature of his eloquence with that of the leading orators of his day, and thinks that in absolute power over the hearers it was greater than that of any other. The matter, too, as well as the manner of the lectures, receives commendation at the hands of this enthusiastic disciple. He says, — "It was something to have seen Professor Wilson, — this all confessed; but it was something also, and more than is generally understood, to have studied under him. Nothing now remains of the Professor's long series of lectures save a brief fragment or two. Here and there some pupil may be found, who has treasured up these Orphic sayings in his memory or his note-book; but to the world at large these utterances will be always unknown."

We have been considerably disappointed in Wilson's "Letters." We looked for something racy, having the

full flavor of the author's best spirits. We found them plain matter-of-fact, not what we should term at all characteristic. Perhaps it was more natural that they should be of this sort. Letters are generally vent-holes for what does not escape elsewhere. Literary men, who are at the same time men of action, seldom write as good letters as do their more quiet brethren. And this is because they have so many more ways open to them of sending out what lies within. They are depleted of almost all that is purely distinctive and personal, long before they sit down to pen an epistle to a friend. The formula might be laid down, — Given any man, and the quality of his correspondence will vary inversely as the quantity of his expression in all other directions. If, Wilson being the same man, fortune had hemmed him in, and contracted his sphere of action, — or if, as author, he had devoted himself to works of solid learning, instead of to the airy pages of "Blackwood," — the sprightly humor and broad hilarity that were in him would have bubbled out in these "Letters," and the "Noctes" and the "Recreations" would have been a song unsung.

An anecdote of De Quincey, given by Wilson's biographer, is worth repeating. He and Wilson were warm friends during many long years, and innumerable were the sessions in which they met together to hold high converse. One stormy night the philosophic dreamer made his appearance at the residence of his friend the Professor, in Gloucester Place. The war of the elements increased to such a pitch, that the guest was induced to pass the night in his new quarters. Though the storm soon subsided, not so with the "Opium-Eater." The visit, begun from necessity, was continued from choice, until the revolving days had nearly made up the full year. He bothered himself but little with the family-arrangements, but dined in his own room, often turning night into day. His repast always consisted

of coffee, boiled rice and milk, and mutton from the loin. Every day he sent for the cook, and solemnly gave her his instructions. The poor creature was utterly overwhelmed by his grave courtesy and his "awfu' sight of words." Well she might be, for he addressed her in such terms as these:—"Owing to dyspepsia affecting my system, and the possibility of an additional disarrangement of the stomach taking place, consequences incalculably distressing would arise, so much so, indeed, as to increase nervous irritation, and prevent me from attending to matters of overwhelming importance, if you do not remember to cut the mutton in a diagonal, rather than a longitudinal form."

The picture of the aged Christopher, sitting by his own fireside, and surrounded by his grandchildren, is a charming one. He always loved to be with and to play with children,—a trait which he had in common with Agesilaus, Nelson, Burke, Napoleon, Wellington, and many others to whom was given the spirit of authority. As he grew old, he became passionately fond of the little men and women, and his affection was reciprocated. It was rare sport, when grandpapa kept open doors, and summoned the youthful company into his room. There were games, and stories, and sweetmeats, and presents. Sometimes notable feasts were set out, to which the little mouths did large justice, while the stalwart host took the part of waiter, and decorously responded to every wish. Of course, he played at fishing; for what would Christopher be without a hook? When an infant, he fished with thread and pin: when age had crippled him, the ruling passion still led him to limp into deep waters on a crutch, and cast out as of yore. So he and the youngsters angled for imaginary trouts, with imaginary rods, lines, and flies, out of imaginary boats floating in imaginary lochs. And whether there were silly nibbles or sturdy bites, all agreed that they had glorious sport.

"With sports like these were all their cares  
beguiled;  
The sports of children satisfy the child."

And—the poet might have added—they often do much to satisfy the child of larger growth. It was thus that the old man kept alive the embers of his youth.

Charles Lamb once, considering whom of the world's vanished worthies he would rather evoke, singled out Fulke Greville, and also—if our memory is correct—Sir Thomas Browne. He thought, very sensibly, that any reasonable human being, if permitted to summon spirits from the vasty deep, would base his choice upon personal qualities, and not on mere general reputation. There would be an elective affinity, a principle of natural selection, (not Darwinian,) by which each would aim to draw forth a spirit to his liking. One would not summon the author of such and such a book, but this or that man. Milton wrote an admirable epic, but he would be awful in society. Shakespeare was a splendid dramatist, but one would hardly ask him for a boon-companion. Who could feel at ease under that omniscient eye? But, if the Plutonian shore might, for a few brief moments, render to our call its waiting shades, there are not very many for whom our lips would sooner syllable the word of resurrection than for Christopher North. Only to look upon him in his prime would be worth much. To have a day with him on the moors, or an ambrosial night, would be a possession forever.

Even now we can almost see him standing radiant before us, illuminated and transfigured by the halo streaming round him. A huge man, towering far above his fellows; with Herculean shoulders, deep chest, broad back, sturdy neck, brawny arms, and massive fists; a being with vast muscle and tense nerve; of choicest make, and finest tone and temper,—robust and fine, bulky and sinewy, ponderous and agile, stalwart and elastic; a hammer to give, and a rock to receive blows; with

the light tread of the deer, and the fell paw of the lion; crowned with a dome-like head, firm-set, capacious, distinctive, cleanly cut, and covered with long, flowing, yellow hair; a forehead broad, high, and rounded, strongly and equally marked by perception and imagination, wit and fancy; light blue eyes, capable of every expression, and varying with every mood, but generally having a far, dim, dreamy look into vacancy,—the gaze of the poet seeing visions; a firm, high, aquiline nose, indicating both intellect and spirit; flexible lips, bending to every breath of passion; a voice of singular compass and pliancy, responding justly to all his wayward humors and all his noble thoughts, now tremulous with tender passion, now rough with a partisan's fury; a man of strange contradictions and inconsistencies every way; a hand of iron with a glove of silk; a tiger's claw sheathed in velvet; one who fought lovingly, and loved fiercely; champion of the arena, passionate poet, chastiser of brutes, caresser of children, friend of brawlers, lover of beauty; a pugilistic Professor of Moral Philosophy, who, in a thoroughly professional way, gayly put up his hands and scientifically floored his man in open day, at a public fair; \* sometimes of the oak, sometimes of the willow; now bearing grief without a murmur, now howling in his pain like the old gods and heroes, making all Nature resonant with his cries; knowing nothing of envy save from the reports of others, yet never content to be outdone even in veriest trifles; a tropical heart and a cool brain; full of strong prejudices and fine charities,

generous and exacting, heedless and sympathetic, quick to forgive, slow to resent, firm in love, transient in hate; to-day scaling the heavens with frantic zeal, to-morrow relaxing in long torpor; fond of long, solitary journeys, and given to conviviality; tender eyes that a word or a thought would fill, and hard lips that would never say die; a child of Nature thrilled with ecstasy by storm and by sunshine, and a cultured scholar hungering for new banquets; dreamer, doer, poet, philosopher, simple child, wisest patriarch; a true cosmopolitan, having largest aptitudes,—a tree whose roots sucked up juices from all the land, whose liberal fruits were showered all around; having a key to unlock all hearts, and a treasure for each; hospitable friend, husband-lover, doting father; a boisterous wit, fantastic humorist, master of pathos, practical joker, sincere mourner; always an extremist, yielding to various excess; an April day, all smiles and tears; January and May met together; a many-sided fanatic; a universal enthusiast; a large-hearted sectarian; a hot-headed judge; a strong sketch full of color, with neutral tints nowhere, but full of fiery lights and deep glooms; buoyant, irrepressible, fuming, rampant, with something of divine passion and electric fire; gentle, earnest, true; a wayward prodigal, loosely scattering abroad where he should bring together; great in things indifferent, and indifferent in many great ones; a man who would have been far greater, if he had been much less,—if he had been less catholic and more specific; immeasurably greater in his own personality than in any or all of his deeds either actual or possible;—such was the man Christopher North, a Hercules-Apollo, strong and immortally beautiful,—a man whom, with all his foibles, negligences, and ignorances, we stop to admire, and stay to love.

\* One who met him many years ago in Edinburgh, at the conclusion of a lecture, tells us, as we write these closing sentences, of his splendid figure, as he saw him twirl an Irish shillalah and show off its wonderful properties as an instrument of fun at a fair.

## "CHOOSE YOU THIS DAY WHOM YE WILL SERVE."

YES, tyrants, you hate us, and fear while you hate  
 The self-ruling, chain-breaking, throne-shaking State!  
 The night-birds dread morning, — your instinct is true, —  
 The day-star of Freedom brings midnight for you!

Why plead with the deaf for the cause of mankind?  
 The owl hoots at noon that the eagle is blind!  
 We ask not your reasons, — 't were wasting our time, —  
 Our life is a menace, our welfare a crime!

We have battles to fight, we have foes to subdue, —  
 Time waits not for us, and we wait not for you!  
 The mower mows on, though the adder may writhe  
 And the copper-head coil round the blade of his scythe!

"No sides in this quarrel," your statesmen may urge,  
 Of school-house and wages with slave-pen and scourge! —  
 No sides in the quarrel! proclaim it as well  
 To the angels that fight with the legions of hell!

They kneel in God's temple, the North and the South,  
 With blood on each weapon and prayers in each mouth.  
 Whose cry shall be answered? Ye Heavens, attend  
 The lords of the lash as their voices ascend!

"O Lord, we are shaped in the image of Thee, —  
 Smite down the base millions that claim to be free,  
 And lend Thy strong arm to the soft-handed race  
 Who eat *not* their bread in the sweat of their face!"

So pleads the proud planter. What echoes are these?  
 The bay of his bloodhound is borne on the breeze,  
 And, lost in the shriek of his victim's despair,  
 His voice dies unheard. — Hear the Puritan's prayer!

"O Lord, that didst smother mankind in Thy flood,  
 The sun is as sackcloth, the moon is as blood,  
 The stars fall to earth as untimely are cast  
 The figs from the fig-tree that shakes in the blast!

"All nations, all tribes in whose nostrils is breath,  
 Stand gazing at Sin as she travails with Death!  
 Lord, strangle the monster that struggles to birth,  
 Or mock us no more with Thy 'Kingdom on Earth'!

"If Ammon and Moab must reign in the land  
 Thou gavest Thine Israel, fresh from Thy hand,  
 Call Baäl and Ashtaroth out of their graves  
 To be the new gods for the empire of slaves!"

Whose God will ye serve, O ye rulers of men ?  
 Will ye build you new shrines in the slave-breeder's den ?  
 Or bow with the children of light, as they call  
 On the Judge of the Earth and the Father of All ?

Choose wisely, choose quickly, for time moves apace, —  
 Each day is an age in the life of our race !  
 Lord, lead them in love, ere they hasten in fear  
 From the fast-rising flood that shall girdle the sphere !

## THE HORRORS OF SAN DOMINGO.\*

### CHAPTER V.

#### INTRODUCTION OF SLAVERY — THE SLAVE-TRADE — AFRICAN TRIBES — THE CODE NOIR — THE MULAT- TOES.

IT will be necessary for the present to omit the story of the settlement and growth of the French Colony, and of the pernicious commercial restrictions which swelled the unhappy heritage of the island, in order that we may reach, in this and a succeeding article, the great points of interest connected with the Negro, his relation to the Colony and complicity with its final overthrow.

The next task essential to our plan is to trace the entrance of Negro Slavery into the French part of the island, to describe the victims, and the legislation which their case inspired.

The first French Company which undertook a regular trade with the west coast of Africa was an association of merchants of Dieppe, without authority or privileges. They settled a little island in the Senegal, which was called St. Louis. This property soon passed into the hands of a more formal association of Rouen merchants, who carried on the trade till 1664, the date of the establishment of the West-India Com-

\* See Numbers LVI., LVIII., and LIX. of this magazine.

pany, to which they were obliged to sell their privileges for one hundred and fifty thousand livres. This great Company managed its African business so badly, that it was withdrawn from their hands in 1673, and made over as a special interest to a Senegal Company. The trade, in palm-oil, ivory, etc., was principally with France, and negro slaves for the colonies do not yet appear in numbers to attract attention.\* But in 1679 this Company engaged with the Crown to deliver yearly, for a term of eight years, two thousand negroes, to be distributed among the French Antilles. This displaced a previous engagement, made in 1675, for the delivery of eight hundred negroes. The Company had also to furnish as many negroes for the galleys at Marseilles as His Majesty should find convenient. And the Crown offered a bounty of thirteen livres per head for every negro, to be paid in "pieces of India."

This is a famous phrase in the early annals of the slave-trade. Reckoning by "pieces" was customary in the

\* Du Tertre, the missionary historian of the Antilles, proudly says, previously to this date, that the opinion of France in favor of personal liberty still shielded a French deck from the traffic: "Selon les lois de la France, qui abhorre la servitude sur toutes les nations du monde, et où tous les esclaves recourent heureusement la liberté perdue, sitost qu'ils y abordent, et qu'ils en touchent la terre."

transaction of business upon the coast of Africa. Merchandise, provisions, and presents to the native princes had their value thus expressed, as well as slaves. If the negro merchant asked ten pieces for a slave, the European trader offered his wares divided into ten portions, each portion being regarded as a "piece," without counting the parts which made it up. Thus, ten coarse blankets made one piece, a musket one piece, a keg of powder weighing ten pounds was one, a piece of East-India blue calico four pieces, ten copper kettles one piece, one piece of chintz two pieces, which made the ten for which the slave was exchangeable: and at length he became commercially known as a "piece of India." The bounty of thirteen livres was computed in France upon the wholesale value of the trinkets and notions which were used in trade with Africa.

The traffic by pieces is as old as the age of Herodotus;\* it was originally a dumb show of goods between two trading parties ignorant of each other's language, but at length it represented a transaction which the parties should have been ashamed to mention.

Although this second Senegal Company was protected by the rigid exclusion, under pain of fine and confiscation, of all other Frenchmen from the trade, it soon fell into debt and parted with its privilege to a third Company, and this in turn was restricted by the formation of a Guinea Company, so that it soon sold out to a fourth Senegal Company, which passed in 1709 into the hands of Rouen merchants who started a fifth; and this too was merged in the West-India Company which was formed in 1718. So little did the agriculture of the islands, overstocked with *engagés*, justify as yet the slave-traders in the losses and expenses which they incurred.

The Guinea Company was bound to import only one thousand yearly into all the French Antilles; but it did not flour-

ish until it became an *Asiento* Company, when, during the War of Succession, a Bourbon mounted the throne of Spain. It was called *Asiento* because the Spanish Government *let*, or farmed by *treaty*, the privilege of supplying its colonies with slaves. The two principal articles of this contract, which was to expire in 1712, related to the number of negroes and the rent of the privilege. If the war continued, the French Company was bound to furnish Spain with thirty-eight thousand negroes during the ten years of the contract, but in case of peace, with forty-eight thousand. Each negro that the Company could procure was let to it for 33½ piastres, in pieces of India. In consequence of this treaty, the ports of Chili and Peru, and those in the South Sea, from which all other nations were excluded, stood open to the French, who carried into them vast quantities of merchandise besides the slaves, and brought home great sums in coin and bars. The raw gold and silver alone which they imported for the year 1709 was reckoned at thirty millions of livres.

But at the Peace of Utrecht, Louis XIV., exhausted by an unprofitable war, relinquished his *asiento* to the English, who were eager enough to take it. It was for this advantage that Marlborough had been really fighting; at least, it was the only one of consequence that Blenheim and Malplaquet secured to his country.

The reign of Louis XV. commenced in 1715. By letters-patent which he issued on the 16th of January, 1716, he granted permission to all the merchants in his kingdom to engage in the African trade, provided their ships were fitted out only in the five ports of Rouen, Rochelle, Bordeaux, Nantes, and St. Malo; nine articles were specially framed to encourage the trade in slaves, as by the Peace of Utrecht all the South-Sea ports were closed to the French, and only their own colonies remained. France no longer made great sums of money by the trade in slaves, but her colonies began to thrive and demand a new species of

\* *Melpomene*, § 196.

labor. The poor white emigrants were exhausted and demoralized by an apprenticeship which had all the features of slavery, and by a climate which will not readily permit a white man to become naturalized even when he is free.

It is the opinion of some French anti-slavery writers that the *engagés* might have tilled the soil of Hayti to this day, if they had labored for themselves alone. This is doubtful; the white man can work in almost every region of the Southern States, but he cannot raise cotton and sugar upon those scorching plains. It is not essential for the support of an anti-slavery argument to suppose that he can. Nor is it of any consequence, so far as the question of free-labor is concerned, either to affirm or to deny that the white man can raise cotton in Georgia or sugar in Louisiana. The blacks themselves, bred to the soil and wonted to its products, will organize free-labor there, and not a white man need stir his pen or his hoe to solve the problem.

At first it seems as if the letters-patent of Louis XV. were inspired by some new doctrine of free-trade. And he did cherish the conviction that in the matter of the slave-trade it was preferable to a monopoly; but his motive sprang from the powerful competition of England and Holland, which the Guinea Company faced profitably only while the War of Succession secured to it the *asiento*. The convention of merchants which Louis XIV. called in Paris, during the year 1701, blamed monopolies in the address which it drew up, and declared freedom of trade to be more beneficial to the State; but this was partly because the Guinea Company arbitrarily fixed the price of slaves too high, and carried too few to the colonies.

So a free-trade in negroes became at last a national necessity. Various companies, however, continued to hold or to procure trading privileges, as the merchants were not restrained from engaging in commerce in such ways as they

preferred. The Cape-Verde, the South-Sea, the Mississippi or Louisiana, and the San-Domingo Companies tried their fortunes still. But they were all displaced, and free-trade itself was swallowed up, by the union of all the French Antilles under the great West-India Company of 1716. This was hardly done before the Government discovered that the supply of negroes was again diminishing, partly because so extensive a company could not undertake the peculiar risks and expenses of a traffic in slaves. So in the matter of negroes alone trade was once more declared free in 1741, burdened only with a certain tax upon every slave imported.

At this time the cultivation of sugar alone in the principal French islands consumed all the slaves who could be procured. The cry for laborers was loud and exacting, for the French now made as much sugar as the English, and were naturally desirous that more negroes should surrender the sweets of liberty to increase its manufacture. In less than forty years the average annual export of French sugar had reached 80,000 hogsheads. In 1742 it was 122,541 hogsheads, each of 1200 pounds. The English islands brought into the market for the same year only 65,950 hogsheads, a decrease which the planters attributed to the freedom enjoyed by the French of carrying their crops directly to Spanish consumers without taking them first to France. But whatever may have been the reason, the French were determined to hold and develop the commercial advantage which this single product gained for them. The English might import as many slaves and lay fresh acres open to the culture, but the French sugar was discovered to be of a superior quality; that of San Domingo, in particular, was the best in the world.

The French planter took his slaves on credit, and sought to discharge his debt with the crops which they raised. This increased the consumption of negroes, and he was constantly in debt

for fresh ones. To stimulate the production of sugar, the Government lifted half the entry-tax from each negro who was destined for that culture.

A table which follows shortly will present the exports for 1775 of the six chief products of San Domingo, Martinique, Guadeloupe, and Cayenne. But we must say something first about the value of the *livre*.

In the Merovingian times, the right of coining money belonged to many churches and abbeys,—among others, to St. Martin de Tours. There were seigniorial and episcopal coins in France till the reign of Philip Augustus, who endeavored to reduce all the coin in his kingdom to a uniform type. But he was obliged still to respect the money of Tours, although he had acquired the old right of coinage that belonged to it. So that there was a *livre* of Paris and a *livre* of Tours, called *livre tournois*: the latter being worth five deniers less than the *livre* of Paris. The tendency of the Crown to absorb all the local moneys of France was not completely successful till the reign of Louis XIV., who abolished the Paris *livre* and made the *livre tournois* the money of account. The earliest *livre* was that of Charlemagne, the silver value of which is representable by eighty cents. It steadily depreciated, till it was worth in the reign of Louis XIV. about sixty cents, from which it fell rapidly to the epoch of the Revolution, when its value was only nineteen cents, and the franc took its place.

It is plain from this, that, when livres are spoken of during a period of a hundred years, their precise equivalent in English or American money cannot be stated,—still less their market-relations to all the necessaries of life. The reader can therefore procure from the statistics of these periods only an approximative idea of the values of crops and the wealth created by their passing into trade.

A great deal of the current specie of the island consisted of Spanish and

Portuguese coin, introduced by illegal trade. A Spanish *piastre gourde* in 1776 was rated at  $7\frac{1}{2}$  livres, and sometimes was worth  $8\frac{1}{2}$  livres. A *piastre gourde* was a dollar. If we represent this dollar by one hundred cents, we can approach the value of the French *livre*, because the *gourde* passed in France for only  $5\frac{1}{2}$  livres; that is, a *livre* had already fallen to the value of the present franc, or about nineteen cents.

The difference of value between Paris and the colony was the cause of great embarrassment. Projects for establishing an invariable money were often discussed, but never attempted. All foreign specie ought to have become merchandise in the colony, and to have passed according to its title and weight. Exchange of France with San Domingo was at  $66\frac{2}{3}$ : that is, 66 livres, 13 sols, 4 deniers tournois were worth a hundred livres in the Antilles. Deduct one-third from any sum to find the sum in livres tournois.

\* This was the scarlet dye of the Caribs, which they procured from the red pulpy covering of the seeds of the *Bixa orellana*, by simply rubbing their bodies with them. The seeds, when macerated and fermented, yielded a paste, which was imported in rolls under the name of *Orléan*, and was used in dyeing. It was also put into chocolate to deepen its color and lend an astringency which was thought to be wholesome. Tonic pills were made of it. The fibres of the bark are stronger than those of hemp. The name *Roucou* is from the Carib *Urucu*. In commerce the dye is also known as Annatto.

steps of labor, is the negro's manifesto of the French slave-trade. The surprising totals betray the sudden development of that iniquity under the stimulus of national ambition. The slave expresses his misery in the ciphers of luxury. The single article of sugar, which lent a new nourishment to the daily food of every country, sweetened the child's pap, the invalid's posset, and the drinks of rich and poor, yielded its property to medicine, made the nauseous palatable, grew white and frosted in curious confections, and by simply coming into use stimulated the trades and inventions of a world, was the slave's insinuation of the bitterness of his condition. Out of the eaten came forth meat, and out of the bitter sweetness.

In 1701, Western San Domingo had 19,000 negroes: in 1777, a moderate estimate gives 300,000, not including 50,000 children under fourteen years of age, — and in the other French colonial possessions 500,000. In the year 1785, sixty-five slavers brought to San Domingo 21,662 negroes, who were sold for 43,236,216 livres; and 32,990 were landed in the smaller French islands. In 1786, the value of the negroes imported was estimated at 65,891,395 livres, and the average price of a negro at that time was 1997 livres.

But we must recollect that these figures represent only living negroes. A yearly percentage of dead must be added, to complete the number taken from the coast of Africa. The estimate was five per cent. to cover the unavoidable losses incurred in a rapid and healthy passage; but such passages were a small proportion of the whole number annually made, and the mortality was irregular. It was sometimes frightful; a long calm was one long agony: asphyxia, bloody flux, delirium and suicide, and epidemics swept between the narrow decks, as fatally, but more mercifully than the kidnappers who tore these people from their native fields. The shark was their sexton, and the

gleam of his white belly piloted the slaver in his regular track across the Atlantic. What need to revive the accounts of the horrors of the middle passage? We know from John Newton and other Englishmen what a current of misery swept in the Liverpool slavers into the western seas. The story of French slave-trading is the same. I can find but one difference in favor of the French slaver, that he took the shackles from his cargo after it had been a day or two at sea. The lust for procuring the maximum of victims, who must be delivered in a minimum of time and at the least expense, could not dally with schemes to temper their suffering, or to make avarice obedient to common sense. It was a transaction incapable of being tempered. One might as well expect to ameliorate the act of murder. Nay, swift murder would have been affectionate, compared with this robbery of life.

Nor is the consumption of negroes by the sea-voyage the only item suggested by the annual number actually landed. We should have to include all the people maimed and killed in the predatory excursions of native chiefs or Christian kidnappers to procure their cargoes. A village was not always surprised without resistance. The most barbarous tribes would defend their liberty. We can never know the numbers slain in wars which were deliberately undertaken to stock the holds of slavers.

Nor shall we ever know how many victims dropped out of the ruthless caravan, exhausted by thirst and forced marches, on the routes sometimes of three hundred leagues from the interior to the sea. They were usually divided into files containing each thirty or forty slaves, who were fastened together by poles of heavy wood, nine feet long, which terminated in a padlocked fork around the neck. When the caravan made a halt, one end of the pole was unfastened and dropped upon the ground. When it dropped, the slave was anchored; and at night his arm was tied to the end of

the pole which he carried, so that a whole file was hobbled during sleep. If any one became too enfeebled to preserve his place, the brutal keepers transferred him to the swifter voracity of the hyena, who scented the wake of the caravan across the waste to the sea's margin, where the shark took up the trail.

The census of the slaves in San Domingo was annually taken upon the capitation-tax which each planter had to pay; thus the children, and negroes above forty-five years of age, escaped counting. But in 1789, Schoelcher says

Outfit of large vessel, . . . . .	150,000	livres
“ “ corvette, . . . . .	50,000	“

Two hundred and seventy-four slavers entered the ports of San Domingo, from 1767 to 1774, bringing 79,000 negroes. One-third of these perished from various causes, including the cold of the mountains and the unhealthiness of the coffee-plantations, so that only 52,667 remained. These could not naturally increase, for the mortality was nearly double the number of births, and the negroes had few children during the first years after their arrival. Only

that the census declared five hundred thousand slaves; that is, in twelve years the increase had been two hundred thousand. How many negroes deported from Africa do these figures represent! what number who died soon after landing, too feeble and diseased to become acclimated!

Here is the prospectus of an expedition to the coast of Guinea in 1782 for the purpose of landing seven hundred slaves in the Antilles. They were shipped in two vessels, one of six hundred tons, the other a small corvette.

one birth was reckoned to thirty slaves. There was always a great preponderance of males, because they could bear the miseries of the passage better than the women, and were worth more upon landing. Include also the effects of forced labor, which reduced the average duration of a slave's life to fifteen years, and carried off yearly one-fifteenth of the whole number, and the reason for the slaver's profits and for his unscrupulous activity become clear.

Out of the sugar, thus clarified with blood, the glittering frosted-work of colonial splendor rose. A few great planters debauched the housekeeping of the whole island. Beneath were debts, distrust, shiftlessness, the rapacity of imported officials, the discontent of resident planters with the customs of the mother-country, the indifference of absentees, the cruel rage for making the most and the best sugar in the world, regardless of the costly lives which the mills caught and crushed out with the canes. Truly, it was sweet as honey in the mouth, and suddenly became bitter as wormwood in the belly.

Let us glance at the people who were thus violently torn from the climate, habits, diet, and customs which created their natural and congenial soil, from their mother-tongues, their native loves and hatreds, from the insignificant, half-barbarous life, which certainly poisoned not the life-blood of a single Christian, though it sweetened not his tea. What bitterness has crept into the great heart of Mr. Carlyle, which beats to shatter the affectations and hypocrisies of a generation, and to summon a civilized world to the worship of righteousness and truth! Is this a Guinea trader or a prophet who is angry when Quashee prefers his pumpkins and millet, reared without the hot guano of the lash, and who will not accept the reduction of a bale of cotton or a tierce of sugar, though Church and State be disinfected of slavery? \* It is a drop of planter's gall which the sham-hater shakes testily from his corroded pen. How far the effluvia of the slave-ship will be wafted, into what strange latitudes of temperance and sturdy independence, even to the privacy of solemn and high-minded

\* *Latter-Day Pamphlets*, No. I. pp. 32, 34; No. II. pp. 23, 25, 47; No. III. p. 3. "And you, Quashee, my pumpkin, idle Quashee, I say you must get the Devil sent away from your elbow, my poor dark friend!" We say amen to that, with the reserved privilege of designating the Devil. "Ware that Colonial Sand-bank! Starboard now, the Nigger Question!" Starboard it is!

thought! A nation can pass through epochs of the black-death, and recover and improve its average health; but does a people ever completely rally from this blackest death of all?

The Guinea trader brought to San Domingo in the course of eighty years representatives of almost every tribe upon the west coast of Africa and of its interior for hundreds of miles. Many who were thus brought were known only by the names of their obscure neighborhoods; they mingled their shade of color and of savage custom with the blood of a new Creole nation of slaves. With these unwilling emigrants the vast areas of Africa ran together into the narrow plains at the end of a small island; affinity and difference were alike obedient to the whip of the overseer, whose law was profit, and whose method cruelty, in making this strange people grow.

When a great continent has been thus ransacked to stock a little farm, the qualities which meet are so various, and present such lively contrasts, that the term *African* loses all its application. From the Mandingo, the Foulah, the Jolof, through the Felatahs, the Eboes, the Mokos, the Feloups, the Coromantines, the Bissagos, all the sullen and degraded tribes of the marshy districts and islands of the Slave Coast, and inland to the Shangallas, who border upon Southwestern Abyssinia, the characters are as distinct as the profiles or the colors. The physical qualities of all these people, their capacity for labor, their religious tendencies and inventive skill, their temperaments and diets, might be constructed into a sliding scale, starting with a Mandingo, or a Foulah such as Ira Aldridge, and running to earth at length in a Papel.

The Mandingoes of the most cultivated type seldom found their way to the West Indies. But if ever slave became noticeable for his temperate and laborious habits, a certain enterprise and self-subsistence, a cleanly, regular, and polished way, perhaps keeping his master's accounts, or those of his own pri-

vate ventures, in Arabic, and mindful of his future, he was found to be a Mandingo. Their States are on the Senegal; Arabic is not their language, but they are zealous Mohammedans, and have schools in which the children learn the Koran. The men are merchants and agriculturists; they control the trade over a great extent of country, and the religion also, for the Koran is among the wares they carry, and they impose at once the whole form of their social condition. These Northern African nations have been subjected to Arab and Moorish influence, and they make it plain that great movements have taken place in regions which are generally supposed to be sunk in savage quiescence. The Mandingoes, notwithstanding a shade of yellow in the complexion, are still negroes, that is, they are an aboriginal people, improved by contact with Islamism, and capable of self-development afterwards; but the Moors never ruled them, nor mingled with their blood. Their features are African, in the popular sense of that word, without one Semitic trace. Awakened intelligence beams through frank and pleasing countenances, and lifts, without effacing, the primitive type. Undoubtedly, their ancestors sprang into being on sites where an improved posterity reside. But what a history lies between the Fetichism which is the mental form of African religious sentiment, and the worship of one God without image or symbol!

In the administration of justice, some classes of their criminals are sold into slavery, and occasionally a Mandingo would be kidnapped. But there are many Mandingoes who are still pagans, and know nothing of Arabic or commerce, yet who have the excellences of the dominant tribes: these were found in the gangs of the slave-merchant.

So were the Jolofs, handsome, black as jet, with features more regular than the Mandingoes, almost European, excepting the lips: a nonchalant air, very

warlike upon occasion, but not disposed to labor. They have magistrates, and some forms for the administration of justice, but a civilization less developed than the Mandingo, in consequence of early contact with Christians. It is said that the slave-traders taught them to lie and steal, and to sell each other, whenever they could not supply a sufficient number of their neighbors, the simple and pastoral Serreres.

The Foulahs live upon the elevated plateaus of Senegambia and around the sources of the Rio Grande. The Mandingoes introduced the Koran among them. French writers represent them as being capable of sustained labor; they cultivate carefully the millet, wheat, cotton, tobacco, and lentils, and have numerous herds. Their mutton is famous, and their oxen are very fat. The Foulahs are mild and affable, full of *esprit*, fond of hunting and music; they shun brandy, and like sweet drinks. It is not difficult to govern them, as they unite good sense to quiet manners, and have an instinct for propriety. Their horror of slavery is so great, that, if one of them is condemned to be sold, all the neighbors club together to pay his forfeit or purchase a ransom; so that few of them were found in the slave-ships, unless seized in the fields, or carried off from the villages by night.

They have mechanics who work in iron and silver, leather and wood; they build good houses, and live in them cleanly and respectable. The Foulahs show, quite as decidedly as the Mandingoes, that great passions and interests have given to these parts of Africa a history and developed stocks of men. When the Foulahs are compared with the wandering Felatahs, from whom they came, who speak the same language and wear the same external characters, it will be seen how Nature has yearned for her children in these unknown regions, and set herself, for their sakes, great stints of work, in that motherly ambition to bring them forward in the world. Yes, — thought the Guinea

trader, — these skilful Foulahs are Nature's best gifts to man.

Their pure African origin is, however, still a contested point. Many ethnologists are unwilling to attribute so much capacity to a native negro tribe. D'Eichthal objects, that "a pretended negro people, pastoral, nomadic, warlike, propagating a religious faith, to say nothing of the difference in physical characteristics, offers an anomaly which nothing can explain. It would force us to attribute to the black race, whether for good or for evil, acts and traits that are foreign to its nature. To cite only one striking example, let me recall that Job Ben Salomon, the African, who in the last century was carried to America and thence to England, and was admired by all who knew him for the loftiness of his character, the energy of his religious fanaticism, and the extent of his intelligence, — this Ben Salomon, who has been cited as a model of that which the negro race could produce, did not belong to that race; he was a Foulah." \*

D'Eichthal develops at great length his theory, that the Foulahs are descended from some Eastern people of strong Malay characters, who found their way to their present site through Madagascar, along the coast, to Cordofan, Darfour, and Haoussa. They are bronzed, or copper-colored, or like polished mahogany, — the red predominating over the black. Their forms are tall and slim, with small hands and feet, thin curved noses, long hair braided into several queues, and an erect profile. Certain negro traits do not exist in them.

Burmeister, who saw Ira Aldridge, the Foulah actor, play in *Macbeth*, *Othello*, and his other famous parts, saw nothing negro about him, except the length of his arm, the shrillness of his voice in excitement, the terrible animality of the murder-scenes, and his tendency to exaggerate. "The bright-colored nails were very evident, and

\* *Mémoires de la Société Ethnologique*, Tom. I. Ptie 2, p. 147.

his whole physiognomy, in spite of his beard, was completely negro-like." \*

But if Ira Aldridge's exaggerated style of acting points to an African origin, would it not be better, if some of our distinguished actors, who are presumptively white before the foot-lights, took out free-papers at once? We have seen *Macbeth* and *Othello* so "created" by the Caucasian models of the stage, that but one line of Shakespeare remained in our memory, and narrowly escaped the lips, — "Out, hyperbolical fiend!"

It is not unlikely that the Felatah was mixed with Moorish or Kabylie blood to make the Foulah. If so, it proves the important fact, that, when the good qualities of the negro are crossed with a more advanced race, the product will be marked with intelligence, mobility, spiritual traits, and an organizing capacity. Felatah blood has mixed with white blood in the Antilles; the Jolof and the Eboe have yielded primitive affections and excellences to a new mulatto breed. This great question of the civilizable qualities of a race cannot be decided by quoting famous isolated cases belonging to pure breeds, but only by observing and comparing the average quality of the pure or mixed.

When we approach the Slave Coast itself, strong contrasts in appearance and culture are observable among the inhabitants; they are all negroes, but in different social conditions, more or less liable to injury from the presence of the slaver, and yielding different temperaments and qualities to colonial life. The beautiful and fertile amphitheatre called Whidah, in North latitude 6°, with Dahomey just behind it, is populous with a superior race. Where did it come from? The area which it occupies has only about fifty miles of coast and less than thirty of interior; its people are as industrious and thrifty as any on the

\* *The Comparative Anatomy and Physiology of the African Negro*, by Hermann Burmeister.

face of the earth. They never raised sugar and indigo with enthusiasm, but at home their activity would have interpreted to Mr. Carlyle a soul above pumpkins. They cultivated every square foot of ground up to the threshold of their dwellings; the sides of ditches, hedges, and inclosures were planted with melons and vegetables, and the roads between the villages shrank to foot-paths in the effort to save land for planting. On the day when a crop was harvested, another was sown.

Their little State was divided into twenty-six provinces or counties, ruled by hereditary lords. The King was simply the most important one of these. Here were institutions which would have deserved the epithet *patriarchal*, save for the absence of overseers and the auction-block. The men worked in the field, the women spun at home. Two markets were held every four days in two convenient places, which were frequented by five or six thousand traders. Every article for sale had its appropriate place, and the traffic was conducted without tumult or fraud. A judge and four inspectors went up and down to hear and settle grievances. The women had their stalls, at which they sold articles of their own manufacture from cotton or wood, plates, wooden cups, red and blue paper, salt, cardamom-seeds, palm-oil, and calabashes.

How did it happen that such a thrifty little kingdom learned the shiftlessness of slave-trading? Early navigators discovered that they had one passion, that of gaming. This was sedulously cultivated by the French and Portuguese who had colonies at stake. A Whidah man, after losing all his money and merchandise, would play for his wife and children, and finally for himself. A slave-trader was always ready to purchase him and his interesting family from the successful gamester, who, in turn, often took passage in the same vessel. In this way Whidah learned to procure slaves for itself, who could be

gambled away more conveniently: the markets exposed for sale monthly one thousand human beings, taken from the inferior tribes of the coast. The whole administration of justice of these superior tribes was overthrown by the advent of the European, who taught them to punish theft, adultery, and other crimes by putting up the criminal for sale.

The Whidah people were Fetich-worshippers; so were the inhabitants of Benin. But the latter had the singularity of refusing to sell a criminal, adjudged to slavery, to the foreign slave-traders, unless it was a woman. They procured, however, a great many slaves from the interior for the Portuguese and French. The Benin people dealt in magic and the ordeal; they believed in apparitions, and filled up their cabins with idols to such an extent as nearly to eject the family.

The slaves of the river Calabar and the Gaboon were drawn from very inferior races, who lived in a state of mutual warfare for the purpose of furnishing each other to the trader. They kidnapped men in the interior, and their expeditions sometimes went so far that the exhausted victims occasioned the slaver a loss of sixty per cent. upon his voyage. The toughest of these people were the Eboes; the most degraded were the Papels and Bissagos.

The Congo negro was more intelligent than these; he understood something of agriculture and the keeping of cattle. He made Tombo wine and some kinds of native cloth. The women worked in the fields with their children slung to their backs. The Congo temperament near the coast was mild and even, like the climate; but there dwelt in the mountains the Auziko and N'teka, who were cannibals. The Congoes in Cuba had the reputation of being stupid, sensual, and brutal; but these African names have always been applied without much discrimination.

The slavers collected great varieties of negroes along the coasts of Loango

and Benguela; some of them were tall, well-made, and vigorous, others were stunted and incapable. They were all pagans, accustomed to Fetich- and serpent-worship, very superstitious, without manliness and dignity, stupid and unimpressible.

The Benguela women learned the panel game from the Portuguese. This is an ugly habit of enticing men to such a point of complicity, that an indignant husband, and a close calculator, can appear suddenly and denounce the victim. Many a slave was furnished in this way.—But we restrain the pen from tracing the villanous and savage methods, suggested by violence or fraud or lust, to keep those decks well stocked over which the lilies of France drooped with immunity.

All these negroes differed much in their sensitiveness to the condition of slavery. Many of them suffered silently, and soon disappeared, killed by labor and homesickness. Others committed suicide, in the belief that their spirits would return to the native scenes. It was not uncommon for a whole family to attempt to reinhabit their old cabin in this way. The planters attributed these expensive deeds of manumission to a depraved taste or mania; but we do not know that they laid Greek under contribution for a term, as Dr. Cartwright did, who applied the word *drapetomania* to the malady of the American fugitive. Many negroes sought relief in a marooning life; but their number was not so great as we might expect. After two or three days' experience, hunger and exposure drove them back, if they were not caught before. The number of permanent maroons did not reach a thousand.

But a few tribes were so turbulent and sullen that the planter avoided buying them, unless his need of field-hands was very urgent. He was obliged to be circumspect, however; for the traders knew how to jockey a man with a sick, disabled, or impracticable negro. The Jews made a good business of buy-

ing refuse negroes and furbishing them up for the market. The French traders thought it merit to deceive a Jew; but the latter feigned to be abjectly helpless, in order to enjoy this refitting branch of the business.

The Coromantine negroes were especial objects of suspicion, on account of their quarrelsome and incendiary temper. Such powerful and capable men ought to have valued more highly the privileges of their position; but they could never quite conquer their prejudices, and were continually interpreting the excellent constitutional motto, *Vera pro gratis*, into, *Liberty instead of sugar!* An English physician of the last century, James Grainger by name, wrote a poem in four books upon the "Sugar-Cane," published in 1764. Perhaps it would be more correct to say that he exhibited a dose; but the production yields the following lines which show that the Coromantine of Jamaica was no better than his brother of San Domingo:—

"Yet, if thine own, thy children's life, be dear,  
Buy not a Cormantee, though healthy, young,  
Of breed too generous for the servile field:  
They, born to freedom in their native land,  
Choose death before dishonorable bonds;  
Or, fired with vengeance, at the midnight  
hour  
Sudden they seize thine unsuspecting watch,  
And thine own poniard bury in thy breast."

All these kinds of negroes, and many others whom it would be tedious to mention, differing in intelligence and capability, were alike in the vividness of their Fetich-worship and the feebleness of their spiritual sentiments.\* They

\* Sometimes Fetichism furnished a legend which Catholicism, in its best estate, would not despise. Here is one that belongs to the Akwapim country, which lies north of Akkra, and is tributary to Ashantee. "They say that Odomañkama created all things. He created the earth, the trees, stones, and men. He showed men what they ought to eat, and also said to them, 'Whenever anybody does anything that is lovely, think about it, and do it also, only do not let your eye grow red' (that is, inflamed, lustful). When He had finished

brought over the local superstitions, the grotesque or revolting habits, the twilight exaggerations of their great pagan fatherland, into a practical paganism, which struck at their rights, and violated their natural affections, with no more pretence of religious than of temporal consolation, and only capable of substituting one Fetich for another. The delighted negroes went to mass as to their favorite *Calenda*; the tawdry garments and detestable drone of the priest, whose only Catholicism was his indiscriminate viciousness, appeared to them a superior sorcery; the Host was a great *Gree-gree*; the muttered liturgy was a palaver with the spirits; music, incense, and gilding charmed them for a while away from the barbarous ritual of their midnight serpent-worship. The priests were white men, for the negroes thought that black baptism would not stick; but they were fortune-hunters, like the rest of the colony, mere agents of the official will, and seekers of their pleasures in the huts of the negro-quarter.\* The curates declared that the innate stupidity of the African baffled all their efforts to instil a truth or rectify an error. The secret practice of serpent-worship was punishable, as the stolen gatherings for dancing were, because it unfitted them for the next day's toil, and excited notions of vengeance in their minds. But the curates declined the trouble of teaching them the difference in spiritual association between the wafer in a box and the snake in a hamper. On the whole, the negro loved to thump his sheepskin drum, and work himself

the creation, He left men and went to heaven; and when He went, the Fetiches came hither from the mountains and the sea. Now, touching these Fetiches, as well as departed spirits, they are not God, neither created by God, but He has only given them permission, at their request, to come to men. For which reason no Fetich ever receives permission to slay a man, except directly from the Creator."—Petermann's *Mittheilungen*, 1856, p. 466.

\* *Droit Public des Colonies Françaises, d'après les Lois faites pour ces Pays*, Tom. I. p. 306.

up to the frantic climax of a barbarous chant, better than to hear the noises in a church. He admired the pomp, but was continually stealing away to renew the shadowy recollection of some heathen rite. What elevating influence could there be in the Colonial Church for these children of Nature, who were annually reinforcing Church and Colony at a frightful pace with heathenism? Twenty or thirty tribes of pagans were imported at the rate of twenty thousand living heads per annum, turned loose and mixed together, with a sense of original wrong and continual cruelty rankling amid their crude and wild emotions, and prized especially for their alleged deficiency of soul, and animal ability to perform unwholesome labor. Slavery never wore so black a face. The only refining element was the admixture of superior tribes, a piece of good-fortune for the colony, which the planter endeavored as far as possible to miss by distributing the fresh cargoes according to their native characters. A fresh Eboe was put under the tutelage of a naturalized Eboe, a Jolof with a Jolof, and so on: their depressed and unhealthy condition upon landing, and their ignorance of the Creole dialect, rendered this expedient.\*

But these distinctions could not be preserved upon such a limited area and amid these jostling tribes. People of a dozen latitudes swarmed in the cabins

\* On the other hand, an elaborate *Manuel des Habitans de St. Domingue* cautions the planters on this point: "Carefully avoid abandoning the new negroes to the discretion of the old ones, who are often very glad to play the part of hosts for the sake of such valets, to whom they make over the rudest part of their day's work. This produces disgust and repugnance in the new-comers, who cannot yet bear to be ordered about, least of all to be maltreated by negroes like themselves, while, on the contrary, they submit willingly and with affection to the orders of a white." This Manual, which reads like a treatise on muck or the breeding of cattle, proceeds to say, that, if the planter would preserve his negroes' usefulness, he must be careful to keep off the ticks.

of a single negro-quarter. Even the small planter could not stock his habitation with a single kind of negro: the competition at each trade-sale of slaves prevented it. So did a practice of selling them by the scramble. This was to shut two or three hundred of them into a large court-yard, where they were all marked at the same price, and the gates thrown open to purchasers. A greedy crowd rushed in, with yells and fighting, each man struggling to procure a quota, by striking them with his fists, tying handkerchiefs or pieces of string to them, fastening tags around their necks, regardless of tribe, family, or condition. The negroes, not yet recovered from their melancholy voyage, were amazed and panic-stricken at this horrible onslaught of avaricious men; they frequently scaled the walls, and ran frantically up and down the town.

As soon as the slaves were procured, by sale on shipboard, by auction, or by scramble, they received the private marks of their owners. Each planter had a silver plate, perforated with his letter, figure, or cipher, which he used to designate his own slaves by branding. If two planters happened to be using the same mark, the brand was placed upon different spots of the body. The heated plate, with an interposing piece of oiled or waxed paper, was touched lightly to the body; the flesh swelled, and the form of the brand could never be obliterated. Many slaves passed from one plantation to another, being sold and resold, till their bodies were as thick with marks as an obelisk. How different from the symbols of care in the furrowed face and stooping form of a free laborer, where the history of a humble home, planted in marriage and nursed by independent sorrow, is printed by the hand of God!

By this fusion of native races a Creole nation of slaves was slowly formed and maintained. The old qualities were not lost, but new qualities resulted from the new conditions. The *bozal* negro was

easily to be distinguished from the Creole. *Bozal* is from the Spanish, meaning *muzzled*, that is, ignorant of the Creole language and not able to talk.\* Creole French was created by the negroes, who put into it very few words of their native dialects, but something of the native construction, and certain euphonic peculiarities. It is interesting to trace their love of alliteration and a concord of sounds in this mongrel French, which became a new colonial language. The bright and sparkling French appears as if submitted to great heat and just on the point of running together. There is a great family of African dialects in which a principal sound, or the chief sound of a leading word, appears in all the words of a sentence, from no grammatical reason at all, but to satisfy a sweetish ear. It is like the charming gabble of children, who love to follow the first key that the tongue strikes. Mr. Grout † and other missionaries note examples of this: *Abantu bake bonke abakoluayo ba hlala ba de ba be ba que-dile*, is a sentence to illustrate this native disposition. The alliteration is sometimes obscured by elisions and contractions, but never quite disappears. Mr. Grout says: "So strong is the influence of this inclination to concord produced by the repetition of initials, that it controls the distinction of number, and quite subordinates that of gender, and tends to mould the pronoun after the likeness of the initial element of the noun to which it refers; as, *Izintombi zake zi ya hamba*, 'The daughters of him they do walk.'" These characteristics appear in the formation of the Creole French, in connection with another childlike habit of the negro, who loves to put himself in the objective case, and to say *me* instead of *I*, as if he knew that he had to be a chattel.

The article *un, une*, could not have

\* In Cuba, the slave who had lived upon the island long enough to learn the language was called *Ladino*, "versed in an idiom."

† *American Oriental Society*, Vol. I. p. 423, *et seq.*

been pronounced by a negro. It became in his mouth *nion*. The personal pronouns *je, tu, il*, were converted into *mo, to, ly*, and the possessive *mon, ton, son* into *à moue, à toue, à ly*, and were placed after the noun, which negro dialects generally start their sentences with. Possessive pronouns had the unmeaning syllable *quien* before them, as, *Nous gagné quien à nous*, for *Nous avons les nôtres*; and demonstrative pronouns were changed in this way: *Mo voir z'animaux là yo*, for *J'ai vu ces animaux*, and *Ci la yo qui té vivre*, for *Ceux qui ont vécu*. A few more examples will suffice to make other changes clear. A negro was asked to lend his horse; he replied, *Mouchée* (Monsieur), *mo pas gagné choual, mais mo connais qui gagné ly; si ly pas gagné ly, ly faut mo gagné ly, pour vous gagné*: "Massa, me no got horse, but me know who got um; if him no got um, him get me um for you." *Quelquechose* becomes *quichou*; *zozo* = *oiseau*; *gourné* = *combattre*; *gueté* = *voir*; *zombi* = *revenant*; *bougé* = *demeurer*; *helé* = *appeler*, etc.\*

The dialect thus formed by the aid of traits common to many negro tribes was a solution into which their differ-

\* Harvey's *Sketches of Haiti*, p. 292. See a vocabulary in *Manuel des Habitans de St. Domingue*, par L. J. Ducœurjoly, Tom. II. Here is a verse of a Creole song, written in imitation of the negro dialect:—

Dipl mo perdi Lisette,  
Mo pas souchié Calinda,\*  
Mo quitté bram-bram sonette,  
Mo pas batte bamboula.†  
Quand mo contré l'aut' negresse,  
Mo pas gagné z'yeu pour ly;  
Mo pas souchié travail pièce,  
Tou qui chose a moué mourri.

The French of which is as follows:—

Mes pas, loin de ma Lisette,  
S'éloignent du Calinda;  
Et ma ceinture à sonnette  
Languit sur mon bamboula.  
Mon œil de toute autre belle  
N'aperçoit plus le souris;  
Le travail en vain m'appelle,  
Mes sens sont anéantis.

\* A favorite dance.

† A kind of tambourine or drum made of a keg stretched with skins, and sometimes hung with bells.

ences fell to become modified; when the barriers of language were broken down, the common African nature, with all its good and evil, appeared in a Creole form. The forced labor, the caprice of masters, and the cruel supervision of the overseers engendered petty vices of theft, concealment, and hypocrisy. The slave became meaner than the native African in all respects; even his passions lost their extravagant sincerity, but part of the manliness went with it. Intelligence, ability, adroitness were exercised in a languid way; rude and impetuous tribes became more docile and manageable, but those who were already disposed to obedience did not find either motive or influence to lift their natures into a higher life. An average slave-character, not difficult to govern, but without instinct to improve, filled the colony. A colonist would hardly suspect the fiery Africa whose sun ripened the ancestors of his slaves, unless he caught them by accident in the midst of their voluptuous *Calenda*, or watched behind some tree the midnight orgy of magic and Fetichism. A slave-climate gnawed at the bold edges of their characters and wore them down, as the weather rusted out more rapidly than anywhere else all the iron tools and implements of the colony. The gentler traits of the African character, mirth and jollity, affectionateness, domestic love, regard and even reverence for considerate masters, were the least impaired; for these, with a powerful religiosity, are indigenous, like the baobab and palm, and give a great accent to the name of Africa. What other safeguard had a planter with his wife and children, who lived with thirty slaves or more, up to six hundred, upon solitary plantations that were seldom visited by the *maréchaussée*, or rural police? The root of such a domination was less in the white man's superiority than in the docile ability of those who ought to have been his natural enemies. "*Totidem esse hostes quot servos*," said Seneca; but he was thinking of the Scythian

and Germanic tribes. A North-American Indian, or a Carib, though less pagan than a native African, could never become so subdued. Marooning occurred every day, and cases of poisoning, perpetrated generally by Ardra negroes, who were addicted to serpent-worship, were not infrequent; but they poisoned a rival or an enemy of their own race as often as a white man. The "Affiches Américaines," which was published weekly at Port-au-Prince, had always a column or two describing fugitive negroes; but local disturbances or insurrectionary attempts were very rare: a half-dozen cannot be counted since the Joloofs of Diego Columbus frightened Spaniards from the colony. If this be so in an island whose slaves were continually reinforced by native Africans, bringing Paganism to be confirmed by a corrupt Catholicism, where every influence was wanton and debased, and the plantation-cruelties, as we shall shortly see, outheroed everything that slaveholding annals can reveal, how much less likely is it that we shall find the slave insurrectionary in the United States, whence the slave-trade has been excluded for nearly two generations, and where the African, modified by climate, and by religious exercises of his own which are in harmony with his native disposition and enjoin him not to be of a stout mind, waits prayerfully till liberty shall be proclaimed! If the slaveholder ever lived in dread, it was not so much from what he expected as from what he knew that he deserved. But the African is more merciful than the conscience of a slaveholder. Blessed are these meek ones: they shall yet inherit earth in America!

France was always more humane than her colonies, for every rising sun did not rekindle there the dreadful paradox that sugar and sweetness were incompatible, and she could not taste the stinging lash as the crystals melted on her tongue.\* An ocean rolled between.

\* There was a proverb as redoubtably popular as Solomon's "Spare the rod"; it origi-

She always endeavored to protect the slave by legislation; but the Custom of Paris, when it was gentle, was doubly distasteful to the men who knew how impracticable it was. Louis XIII. would not admit that a single slave lived in his dominions, till the priests convinced him that it was possible through the slave-trade to baptize the Ethiopian again. Louis XIV. issued the famous *Code Noir* in 1685, when the colonists had already begun to shoot a slave for a saucy gesture, and to hire buccaneers to hunt marooning negroes at ten dollars per head.†

The *Code Noir* was the basis of all the colonial legislation which affected the condition of the slave, and it is important to notice its principal articles. We have only room to present them reduced to their essential substance.

Negroes must be instructed in the Catholic religion, and *bozals* must be baptized within eight days after landing. All overseers must be Catholic. Sundays and *fête* days are days of rest for the negro; no sale of negroes or any other commodity can take place on those days.

Free men who have children by slaves, and masters who permit the con-

nated in Brazil, where the natives were easily humiliated:—"Regarder un sauvage de travers, c'est le battre; le battre, c'est le tuer: battre un nègre, c'est le nourrir": Looking hard at a savage is beating him: beating is the death of him: but to beat a negro is bread and meat to him.

† A Commissioner's fee under the Fugitive-Slave Bill. History will repeat herself to emphasize the natural and inalienable rights of slave-catchers. In 1706 the planters organized a permanent force of maroon-hunters, twelve men to each quarter of the island, who received the annual stipend of three hundred livres. In addition to this, the owners paid thirty livres for each slave caught in the canes or roads, forty-five for each captured beyond the *mornes*, and sixty for those who escaped to more distant places. The hunters might fire at the slave, if he could not be otherwise stopped, and draw the same sums. In 1711 the maroons became so insolent that the planters held four regular chases or *battues* per annum.

nection, are liable to a fine of two thousand pounds of sugar. If the guilty person be a master, his slave and her children are confiscated for the benefit of the hospital, and cannot be freed.

If a free man is not married to any white person during concubinage with his slave, and shall marry said slave, she and her children shall become enfranchised.

No consent of father and mother is essential for marriage between slaves, but no master can constrain slaves to marry against their will.

If a slave has a free black or colored woman for his wife, the male and female children shall follow the condition of the mother; and if a slave-woman has a free husband, the children shall follow his condition.

The weekly ration for a slave of ten years old and upwards consists of five Paris pints of manioc meal, or three cassava loaves, each weighing two and a half pounds, with two pounds of salt beef, or three of fish, or other things in proportion, but never any tafia\* in the place of a ration; and no master can avoid giving a slave his ration by offering him a day for his own labor. Weaned children to the age of ten are entitled to half the above ration. Each slave must also have two suits of clothes yearly, or cloth in proportion.

Slaves who are not properly nourished and clothed by their masters can lodge a complaint against them. If it be well-founded, the masters can be prosecuted without cost to the slave.

Slaves who are old, infirm, diseased, whether incurable or not, must be supported. If they are abandoned by masters, they are to be sent to the hospital, and the masters must pay six sols daily for their support.

A slave's testimony can be received as a statement to serve the courts in procuring light elsewhere; but no judge can draw presumption, conjecture, or proof therefrom.

The slave who strikes his master or

\* A coarse rum distilled from the sugar-cane.

mistress, or their children, so as to draw blood, or in the face, may be punished even with death; and all excesses or offences committed by slaves against free persons shall be severely punished, even with death, if the case shall warrant.

Any free or enfranchised person who shall shelter a fugitive shall be fined three hundred pounds of sugar for each day.

A slave who is condemned to death shall be valued before execution, and the estimated price paid to the master, provided the latter has not made a pretended complaint.

Masters may chain and whip their slaves, but not mutilate, torture, or kill them.

If a master or overseer shall kill a slave, he shall be prosecuted; but if he can convince the court of cause, he may be discharged without pardon from the King.

Masters who are twenty years old can free their slaves at will or by testamentary act, without being held to give a reason for it; and if a slave is named by testament a general legatee, or an executor, or guardian of children, he shall be considered enfranchised.

An enfranchised slave shall be regarded as free as any person born in France, without letters of naturalization; he can enjoy the advantages of natives everywhere, even if he was born in a foreign country.

An enfranchised slave must pay singular respect to his ancient master, his widow, and children; an injury done to them will be punished more severely than if done to others. But he is free, and quit of all service, charge, and tenure that may be pretended by his former master, either respecting his person or property and succession.

An enfranchised slave shall enjoy the same rights, privileges, and immunities as if he had been born free. The King desires that he may merit his acquired liberty, and that it may confer upon

him, as well in his person as estate, the same effects which the blessing of natural liberty confers upon French subjects.

The last article, and all that related to enfranchisement, are notable for their political effect upon the colony. The free mulattoes interpreted the liberal clauses of the Code into an extension of the rights of citizenship to them, as the natural inference from their freed condition. The lust of masters and the defencelessness of the slave-woman sowed thickly another retribution in the fated soil.

The custom of enfranchising children of mixed blood, and sometimes their mothers, commenced in the earliest times of the French colonies, when the labor of *engagés* was more valuable than that of slaves, and the latter were objects of buccaneering license as much as of profit. The colonist could not bear to see his offspring inventoried as chattels. In this matter the nations of the South of Europe appear to atone for acts of passion by after-thoughts of humanity. The free descendants of mulattoes who were enfranchised by French masters in Louisiana, and who form a respectable and flourishing class in that State, now stand beneath the American flag at the call of General Butler. But the Anglo-American alone seems willing to originate a chattel and to keep him so. His passion will descend as low for gratification as a Frenchman's or a Spaniard's, but his heart will not afterwards mount as high.

Acts of enfranchisement required at first the sanction of the Government, until in 1682 the three sovereign courts of St. Christophe, Martinique, and Guadeloupe offered the project of a law which favored enfranchisements; it led to the articles upon that subject in the Edict of 1685, quoted above, which sought at once to restrain the license of masters and to afford them a legal way to be humane and just.\*

\* Other motives became influential as soon as the slaves discovered their advantages. A

In 1703 there were only one hundred and fifty freed persons in San Domingo. In 1711 a colonial ordinance proscribed every enfranchisement which did not have the approbation of the colonial government. The King sanctioned this ordinance in 1713, and declared that all masters who neglected the formality should lose their slaves by confiscation.

In 1736 the number of freed slaves, black and mulatto, was two thousand. The Government, alarmed at the increase, imposed a sum upon the master for each act of enfranchisement, in the hope to check his license. But the master evaded this and every other salutary provision; the place and climate, so distant from the Custom of Paris, where men dishonored only complexions like their own, lent occasion and immunity. Colonial Nature was more potent than paper restrictions. In 1750 there were four thousand freed persons.

But the desire of enfranchising children was so great that the colonists evaded all the regulations, which multiplied yearly, by taking their slaves to France, where they became free as soon as their feet pressed the soil. The only measure which the Government could devise to meet this evasion was to forbid all men of color to contract marriages in France.

master in want of money would offer emancipation for a certain sum; the slave would employ every means, even the most illicit, to raise the amount upon which his or her freedom depended. A female slave would demand emancipation for herself or for some relative as her price for yielding to a master: attractive negroes wielded a great deal of power in this way. A great evil arose from testamentary acts of enfranchisement, or equivalent promises; for the slave in question would sometimes poison his master to hasten the day of liberty. On the other hand, many masters of the nobler kind emancipated their slaves as a reward for services: the rearing of six living children, thirty years of field or domestic labor without marooning, industry, economy, attachment, the discovery of a poisoning scheme or of an *émeute*, saving the life of a white person with great risk,—all these were occasional reasons for enfranchisement.

In 1787 the free persons of color in San Domingo numbered 19,632. In 1790 their numbers were 25,000.

In 1681 the white inhabitants of San Domingo numbered four thousand; but in 1790, notwithstanding a constant tide of emigration from Europe, they numbered only thirty thousand.

The number of slaves at the same time was about four hundred thousand, a number which represents the violent removal of several millions of black men from Africa: some writers not anti-slavery reckon this tremendous crime of the white man at ten millions!

What a climate, and what a system, in which only the mulatto thrives!

Thus far we have traced the causes and elements, of Nature, race, and policy, the passions and peculiarities of many kinds of men, which culminated at

length, in no fair forms of humanity nor beneficent institutions, but in the foremost sugar-plantation of the world, whose cane-rows were planted and nourished by the first of crimes, whose juice was expressed by over-hasty avarice and petulant ambition that could not be satisfied unless the crime preserved features as colossal as the passion of the hour.

We are now in a condition to perceive that the Horrors of San Domingo were those of suicide. Bloody licentiousness lays violent hands upon its life. Its weaknesses were full of fatal vigor, lust poisoned the humanity which it inspired, the soil of the buccaneer could raise nothing which was not exuberant with vengeance. Slave-Insurrection was a mere accidental episode in the closing scenes of this bad and blundering career.

---

## A LONDON SUBURB.

ONE of our English summers looks, in the retrospect, as if it had been patched with more frequent sunshine than the sky of England ordinarily affords; but I believe that it may be only a moral effect,—a “light that never was on sea nor land,”—caused by our having found a particularly delightful abode in the neighborhood of London. In order to enjoy it, however, I was compelled to solve the problem of living in two places at once,—an impossibility which I so far accomplished as to vanish, at frequent intervals, out of men’s sight and knowledge on one side of England, and take my place in a circle of familiar faces on the other, so quietly that I seemed to have been there all along. It was the easier to get accustomed to our new residence, because it was not only rich in all the material properties of a home, but had

also the home-like atmosphere, the household element, which is of too intangible a character to be let even with the most thoroughly furnished lodging-house. A friend had given us his suburban residence, with all its conveniences, elegancies, and snuggeries,—its drawing-rooms and library, still warm and bright with the recollection of the genial presences that we had known there,—its closets, chambers, kitchen, and even its wine-cellar, if we could have availed ourselves of so dear and delicate a trust,—its lawn and cozy garden-nooks, and whatever else makes up the multitudinous idea of an English home,—he had transferred it all to us, pilgrims and dusty wayfarers, that we might rest and take our ease during his summer’s absence on the Continent. We had long been dwelling in tents, as it were, and morally shivering by

hearths which, heap the bituminous coal upon them as we might, no blaze could render cheerful. I remember, to this day, the dreary feeling with which I sat by our first English fireside, and watched the chill and rainy twilight of an autumn day darkening down upon the garden; while the portrait of the preceding occupant of the house (evidently a most unamiable personage in his lifetime) scowled inhospitably from above the mantel-piece, as if indignant that an American should try to make himself at home there. Possibly it may appease his sulky shade to know that I quitted his abode as much a stranger as I entered it. But now, at last, we were in a genuine British home, where refined and warm-hearted people had just been living their daily life, and had left us a summer's inheritance of slowly ripened days, such as a stranger's hasty opportunities so seldom permit him to enjoy.

Within so trifling a distance of the central spot of all the world, (which, as Americans have at present no centre of their own, we may allow to be somewhere in the vicinity, we will say, of St. Paul's Cathedral,) it might have seemed natural that I should be tossed about by the turbulence of the vast London whirlpool. But I had drifted into a still eddy, where conflicting movements made a repose, and, wearied with a good deal of uncongenial activity, I found the quiet of my temporary haven more attractive than anything that the great town could offer. I already knew London well; that is to say, I had long ago satisfied (so far as it was capable of satisfaction) that mysterious yearning—the magnetism of millions of hearts operating upon one—which impels every man's individuality to mingle itself with the immensest mass of human life within his scope. Day after day, at an earlier period, I had trodden the thronged thoroughfares, the broad, lonely squares, the lanes, alleys, and strange labyrinthine courts, the parks, the gardens and inclosures of ancient studi-

ous societies, so retired and silent amid the city-uproar, the markets, the foggy streets along the river-side, the bridges,—I had sought all parts of the metropolis, in short, with an unweariable and indiscriminating curiosity; until few of the native inhabitants, I fancy, had turned so many of its corners as myself. These aimless wanderings (in which my prime purpose and achievement were to lose my way, and so to find it the more surely) had brought me, at one time or another, to the sight and actual presence of almost all the objects and renowned localities that I had read about, and which had made London the dream-city of my youth. I had found it better than my dream; for there is nothing else in life comparable (in that species of enjoyment, I mean) to the thick, heavy, oppressive, sombre delight which an American is sensible of, hardly knowing whether to call it a pleasure or a pain, in the atmosphere of London. The result was, that I acquired a home-feeling there, as nowhere else in the world,—though afterwards I came to have a somewhat similar sentiment in regard to Rome; and as long as either of those two great cities shall exist, the cities of the Past and of the Present, a man's native soil may crumble beneath his feet without leaving him altogether homeless upon earth.

Thus, having once fully yielded to its influence, I was in a manner free of the city, and could approach or keep away from it as I pleased. Hence it happened, that, living within a quarter of an hour's rush of the London Bridge Terminus, I was oftener tempted to spend a whole summer-day in our garden than to seek anything new or old, wonderful or commonplace, beyond its precincts. It was a delightful garden, of no great extent, but comprising a good many facilities for repose and enjoyment, such as arbors and garden-seats, shrubbery, flower-beds, rose-bushes in a profusion of bloom, pinks, poppies, geraniums, sweet-peas, and a va-

riety of other scarlet, yellow, blue, and purple blossoms, which I did not trouble myself to recognize individually, yet had always a vague sense of their beauty about me. The dim sky of England has a most happy effect on the coloring of flowers, blending richness with delicacy in the same texture; but in this garden, as everywhere else, the exuberance of English verdure had a greater charm than any tropical splendor or diversity of hue. The hunger for natural beauty might be satisfied with grass and green leaves forever. Conscious of the triumph of England in this respect, and loyally anxious for the credit of my own country, it gratified me to observe what trouble and pains the English gardeners are fain to throw away in producing a few sour plums and abortive pears and apples,—as, for example, in this very garden, where a row of unhappy trees were spread out perfectly flat against a brick wall, looking as if impaled alive, or crucified, with a cruel and unattainable purpose of compelling them to produce rich fruit by torture. For my part, I never ate an English fruit, raised in the open air, that could compare in flavor with a Yankee turnip.

The garden included that prime feature of English domestic scenery, a lawn. It had been levelled, carefully shorn, and converted into a bowling-green, on which we sometimes essayed to practise the time-honored game of bowls, most unskilfully, yet not without a perception that it involves a very pleasant mixture of exercise and ease, as is the case with most of the old English pastimes. Our little domain was shut in by the house on one side, and in other directions by a hedge-fence and a brick wall, which last was concealed or softened by shrubbery and the impaled fruit-trees already mentioned. Over all the outer region, beyond our immediate precincts, there was an abundance of foliage, tossed aloft from the near or distant trees with which that agreeable suburb is adorned.

The effect was wonderfully sylvan and rural, insomuch that we might have fancied ourselves in the depths of a wooded seclusion; only that, at brief intervals, we could hear the galloping sweep of a railway-train passing within a quarter of a mile, and its discordant screech, moderated by a little farther distance, as it reached the Blackheath Station. That harsh, rough sound, seeking me out so inevitably, was the voice of the great world summoning me forth. I know not whether I was the more pained or pleased to be thus constantly put in mind of the neighborhood of London; for, on the one hand, my conscience stung me a little for reading a book, or playing with children in the grass, when there were so many better things for an enlightened traveller to do,—while, at the same time, it gave a deeper delight to my luxurious idleness, to contrast it with the turmoil which I escaped. On the whole, however, I do not repent of a single wasted hour, and only wish that I could have spent twice as many in the same way; for the impression in my memory is, that I was as happy in that hospitable garden as the English summer-day was long.

One chief condition of my enjoyment was the weather. Italy has nothing like it, nor America. There never was such weather except in England, where, in requital of a vast amount of horrible east-wind between February and June, and a brown October and black November, and a wet, chill, sunless winter, there are a few weeks of incomparable summer, scattered through July and August, and the earlier portion of September, small in quantity, but exquisite enough to atone for the whole year's atmospherical delinquencies. After all, the prevalent sombreness may have brought out those sunny intervals in such high relief, that I see them, in my recollection, brighter than they really were: a little light makes a glory for people who live habitually in a gray gloom. The English, however, do not seem to know how enjoyable the mo-

mentary gleams of their summer are ; they call it broiling weather, and hurry to the sea-side with red, perspiring faces, in a state of combustion and deliquescence ; and I have observed that even their cattle have similar susceptibilities, seeking the deepest shade, or standing mid-leg deep in pools and streams to cool themselves, at temperatures which our own cows would deem little more than barely comfortable. To myself, after the summer heats of my native land had somewhat effervesced out of my blood and memory, it was the weather of Paradise itself. It might be a little too warm ; but it was that modest and inestimable superabundance which constitutes a bounty of Providence, instead of just a niggardly enough. During my first year in England, residing in perhaps the most ungenial part of the kingdom, I could never be quite comfortable without a fire on the hearth ; in the second twelvemonth, beginning to get acclimatized, I became sensible of an austere friendliness, shy, but sometimes almost tender, in the veiled, shadowy, seldom smiling summer ; and in the succeeding years — whether that I had renewed my fibre with English beef and replenished my blood with English ale, or whatever were the cause — I grew content with winter and especially in love with summer, desiring little more for happiness than merely to breathe and bask. At the midsummer which we are now speaking of, I must needs confess the noontide sun came down more fervently than I found altogether tolerable ; so that I was fain to shift my position with the shadow of the shrubbery, making myself the movable index of a sun-dial that reckoned up the hours of an almost interminable day.

For each day seemed endless, though never wearisome. As far as your actual experience is concerned, the English summer-day has positively no beginning and no end. When you awake, at any reasonable hour, the sun is already shining through the curtains ;

you live through unnumbered hours of Sabbath quietude, with a calm variety of incident softly etched upon their tranquil lapse ; and at length you become conscious that it is bed-time again, while there is still enough daylight in the sky to make the pages of your book distinctly legible. Night, if there be any such season, hangs down a transparent veil through which the by-gone day beholds its successor ; or, if not quite true of the latitude of London, it may be soberly affirmed of the more northern parts of the island, that Tomorrow is born before Yesterday is dead. They exist together in the golden twilight, where the decrepit old day dimly discerns the face of the ominous infant ; and you, though a mere mortal, may simultaneously touch them both, with one finger of recollection and another of prophecy. I cared not how long the day might be, nor how many of them. I had earned this repose by a long course of irksome toil and perturbation, and could have been content never to stray out of the limits of that suburban villa and its garden. If I lacked anything beyond, it would have satisfied me well enough to dream about it, instead of struggling for its actual possession. At least, this was the feeling of the moment ; although the transitory, flitting, and irresponsible character of my life there was perhaps the most enjoyable element of all, as allowing me much of the comfort of house and home without any sense of their weight upon my back. The nomadic life has great advantages, if we can find tents ready pitched for us at every stage.

So much for the interior of our abode, — a spot of deepest quiet, within reach of the intensest activity. But, even when we stepped beyond our own gate, we were not shocked with any immediate presence of the great world. We were dwelling in one of those oases that have grown up (in comparatively recent years, I believe) on the wide waste of Blackheath, which otherwise offers a

vast extent of unoccupied ground in singular proximity to the metropolis. As a general thing, the proprietorship of the soil seems to exist in everybody and nobody; but exclusive rights have been obtained, here and there, chiefly by men whose daily concerns link them with London, so that you find their villas or boxes standing along village-streets which have often more of an American aspect than the elder English settlements. The scene is semi-rural. Ornamental trees overshadow the sidewalks, and grassy margins border the wheel-tracks. The houses, to be sure, have certain points of difference from those of an American village, bearing tokens of architectural design, though seldom of individual taste; and, as far as possible, they stand aloof from the street, and separated each from its neighbor by hedge or fence, in accordance with the careful exclusiveness of the English character, which impels the occupant, moreover, to cover the front of his dwelling with as much concealment of shrubbery as his limits will allow. Through the interstices, you catch glimpses of well-kept lawns, generally ornamented with flowers, and with what the English call rock-work, being heaps of ivy-grown stones and fossils, designed for romantic effect in a small way. Two or three of such village-streets as are here described take a collective name,—as, for instance, Blackheath Park,—and constitute a kind of community of residents, with gate-ways, kept by policemen, and a semi-privacy, stepping beyond which, you find yourself on the breezy heath.

On this great, bare, dreary common I often went astray, as I afterwards did on the Campagna of Rome, and drew the air (tainted with London smoke though it might be) into my lungs by deep inspirations, with a strange and unexpected sense of desert-freedom. The misty atmosphere helps you to fancy a remoteness that perhaps does not quite exist. During the little time that it lasts, the solitude is as impressive as

that of a Western prairie or forest; but soon the railway-shriek, a mile or two away, insists upon informing you of your whereabouts; or you recognize in the distance some landmark that you may have known,—an insulated villa, perhaps, with its garden-wall around it, or the rudimental street of a new settlement which is sprouting on this otherwise barren soil. Half a century ago, the most frequent token of man's beneficent contiguity might have been a gibbet, and the creak, like a tavern-sign, of a murderer swinging to and fro in irons. Blackheath, with its highwaymen and footpads, was dangerous in those days; and even now, for aught I know, the Western prairie may still compare favorably with it as a safe region to go astray in. When I was acquainted with Blackheath, the ingenious device of garroting had recently come into fashion; and I can remember, while crossing those waste places at midnight, and hearing footsteps behind me, to have been sensibly encouraged by also hearing, not far off, the clinking hoof-tramp of one of the horse-patrols who do regular duty there. About sunset, or a little later, was the time when the broad and somewhat desolate peculiarity of the heath seemed to me to put on its utmost impressiveness. At that hour, finding myself on elevated ground, I once had a view of immense London, four or five miles off, with the vast Dome in the midst, and the towers of the two Houses of Parliament rising up into the smoky canopy, the thinner substance of which obscured a mass of things, and hovered about the objects that were most distinctly visible,—a glorious and sombre picture, dusky, awful, but irresistibly attractive, like a young man's dream of the great world, foretelling at that distance a grandeur never to be fully realized.

While I lived in that neighborhood, the tents of two or three sets of cricket-players were constantly pitched on Blackheath, and matches were going forward that seemed to involve the

honor and credit of communities or counties, exciting an interest in everybody but myself, who cared not what part of England might glorify itself at the expense of another. It is necessary to be born an Englishman, I believe, in order to enjoy this great national game; at any rate, as a spectacle for an outside observer, I found it lazy, lingering, tedious, and utterly devoid of pictorial effects. Choice of other amusements was at hand. Butts for archery were established, and bows and arrows were to be let, at so many shots for a penny,—there being abundance of space for a farther flight-shot than any modern archer can lend to his shaft. Then there was an absurd game of throwing a stick at crockery-ware, which I have witnessed a hundred times, and personally engaged in once or twice, without ever having the satisfaction to see a bit of broken crockery. In other spots, you found donkeys for children to ride, and ponies of a very meek and patient spirit, on which the Cockney pleasure-seekers of both sexes rode races and made wonderful displays of horsemanship. By way of refreshment there was gingerbread, (but, as a true patriot, I must pronounce it greatly inferior to our native dainty,) and ginger-beer, and probably stancher liquor among the booth-keeper's hidden stores. The frequent railway-trains, as well as the numerous steamers to Greenwich, have made the vacant portions of Blackheath a play-ground and breathing-place for the Londoners, readily and very cheaply accessible; so that, in view of this broader use and enjoyment, I a little grudged the tracts that have been filched away, so to speak, and individualized by thriving citizens. One sort of visitors especially interested me: they were schools of little boys or girls, under the guardianship of their instructors, — charity-schools, as I often surmised from their aspect, collected among dark alleys and squalid courts; and hither they were brought to spend a summer afternoon, these pale little

progeny of the sunless nooks of London, who had never known that the sky was any broader than that narrow and vapory strip above their native lane. I fancied that they took but a doubtful pleasure, being half affrighted at the wide, empty space overhead and round about them, finding the air too little medicated with smoke, soot, and graveyard exhalations, to be breathed with comfort, and feeling shelterless and lost because grimy London, their slatternly and disreputable mother, had suffered them to stray out of her arms.

Passing among these holiday-people, we come to one of the gate-ways of Greenwich Park, opening through an old brick wall. It admits us from the bare heath into a scene of antique cultivation and woodland ornament, traversed in all directions by avenues of trees, many of which bear tokens of a venerable age. These broad and well-kept pathways rise and decline over the elevations and along the bases of gentle hills which diversify the whole surface of the Park. The loftiest and most abrupt of them (though but of very moderate height) is one of the earth's noted summits, and may hold up its head with Mont Blanc and Chimborazo, as being the site of Greenwich Observatory, where, if all nations will consent to say so, the longitude of our great globe begins. I used to regulate my watch by the broad dial-plate against the Observatory-wall, and felt it pleasant to be standing at the very centre of Time and Space.

There are lovelier parks than this in the neighborhood of London, richer scenes of greensward and cultivated trees; and Kensington, especially, in a summer afternoon, has seemed to me as delightful as any place can or ought to be, in a world which, some time or other, we must quit. But Greenwich, too, is beautiful, — a spot where the art of man has conspired with Nature, as if he and the great mother had taken counsel together how to make a pleasant scene, and the longest liver of the

two had faithfully carried out their mutual design. It has, likewise, an additional charm of its own, because, to all appearance, it is the people's property and play-ground in a much more genuine way than the aristocratic resorts in closer vicinity to the metropolis. It affords one of the instances in which the monarch's property is actually the people's, and shows how much more natural is their relation to the sovereign than to the nobility, which pretends to hold the intervening space between the two: for a nobleman makes a paradise only for himself, and fills it with his own pomp and pride; whereas the people are sooner or later the legitimate inheritors of whatever beauty kings and queens create, as now of Greenwich Park. On Sundays, when the sun shone, and even on those grim and sombre days when, if it do not actually rain, the English persist in calling it fine weather, it was good to see how sturdily the plebeians trod under their own oaks, and what fulness of simple enjoyment they evidently found there. They were the people, — not the populace, — specimens of a class whose Sunday clothes are a distinct kind of garb from their week-day ones; and this, in England, implies wholesome habits of life, daily thrift, and a rank above the lowest. I longed to be acquainted with them, in order to investigate what manner of folks they were, what sort of households they kept, their politics, their religion, their tastes, and whether they were as narrow-minded as their betters. There can be very little doubt of it: an Englishman is English, in whatever rank of life, though no more intensely so, I should imagine, as an artisan or petty shopkeeper, than as a member of Parliament.

The English character, as I conceive it, is by no means a very lofty one; they seem to have a great deal of earth and grimy dust clinging about them, as was probably the case with the stalwart and quarrelsome people who sprouted up out of the soil, after Cadmus had sown

the dragon's teeth. And yet, though the individual Englishman is sometimes preternaturally disagreeable, an observer standing aloof has a sense of natural kindness towards them, in the lump. They adhere closer to the original simplicity in which mankind was created than we ourselves do; they love, quarrel, laugh, cry, and turn their actual selves inside out, with greater freedom than any class of Americans would consider decorous. It was often so with these holiday-folks in Greenwich Park; and, ridiculous as it may sound, I fancy myself to have caught very satisfactory glimpses of Arcadian life among the Cockneys there, hardly beyond the scope of Bow-Bells, picnicking in the grass, uncouthly gambolling on the broad slopes, or straying in motley groups or by single pairs of love-making youths and maidens, along the sun-streaked avenues. Even the omnipresent policeman or park-keepers could not disturb the beatific impression on my mind. One feature, at all events, of the Golden Age was to be seen in the herds of deer that encountered you in the somewhat remoter recesses of the Park, and were readily prevailed upon to nibble a bit of bread out of your hand. But, though no wrong had ever been done them, and no horn had sounded nor hound bayed at the heels of themselves or their antlered progenitors, for centuries past, there was still an apprehensiveness lingering in their hearts; so that a slight movement of the hand or a step too near would send a whole squadron of them scampering away, just as a breath scatters the winged seeds of a dandelion.

The aspect of Greenwich Park, with all those festal people wandering through it, resembled that of the Borghese Gardens under the walls of Rome, on a Sunday or Saint's day; but, I am not ashamed to say, it a little disturbed whatever grimly ghost of Puritanic strictness might be lingering in the sombre depths of a New-England heart, among severe and sunless remembrances of the Sabbaths of childhood, and pangs of remorse

for ill-gotten lessons in the catechism, and for erratic fantasies or hardly suppressed laughter in the middle of long sermons. Occasionally, I tried to take the long-boarded sting out of these compunctious smarts by attending divine service in the open air. On a cart outside of the Park-wall, (and, if I mistake not, at two or three corners and secluded spots within the Park itself,) a Methodist preacher uplifts his voice and speedily gathers a congregation, his zeal for whose religious welfare impels the good man to such earnest vociferation and toilsome gesture that his perspiring face is quickly in a stew. His inward flame conspires with the too fervid sun and makes a positive martyr of him, even in the very exercise of his pious labor; insomuch that he purchases every atom of spiritual increment to his hearers by loss of his own corporeal solidity, and, should his discourse last long enough, must finally exhale before their eyes. If I smile at him, be it understood, it is not in scorn; he performs his sacred office more acceptably than many a prelate. These way-side services attract numbers who would not otherwise listen to prayer, sermon, or hymn, from one year's end to another, and who, for that very reason, are the auditors most likely to be moved by the preacher's eloquence. Yonder Greenwich pensioner, too,—in his costume of three-cornered hat, and old-fashioned, brass-buttoned blue coat with ample skirts, which makes him look like a contemporary of Admiral Benbow,—that tough old mariner may hear a word or two which will go nearer his heart than anything that the chaplain of the Hospital can be expected to deliver. I always noticed, moreover, that a considerable proportion of the audience were soldiers, who came hither with a day's leave from Woolwich,—hardy veterans in aspect, some of whom wore as many as four or five medals, Crimean or East-Indian, on the breasts of their scarlet coats. The miscellaneous congregation listen with every appearance of heart-

felt interest; and, for my own part, I must frankly acknowledge that I never found it possible to give five minutes' attention to any other English preaching: so cold and commonplace are the homilies that pass for such, under the aged roofs of churches. And as for cathedrals, the sermon is an exceedingly diminutive and unimportant part of the religious services,—if, indeed, it be considered a part,—among the pompous ceremonies, the intonations, and the resounding and lofty-voiced strains of the choristers. The magnificence of the setting quite dazzles out what we Puritans look upon as the jewel of the whole affair; for I presume that it was our forefathers, the Dissenters in England and America, who gave the sermon its present prominence in the Sabbath exercises.

The Methodists are probably the first and only Englishmen who have worshipped in the open air since the ancient Britons listened to the preaching of the Druids; and it reminded me of that old priesthood, to see certain memorials of their dusky epoch—not religious, however, but warlike—in the neighborhood of the spot where the Methodist was holding forth. These were some ancient burrows, beneath or within which are supposed to lie buried the slain of a forgotten or doubtfully remembered battle, fought on the site of Greenwich Park as long ago as two or three centuries after the birth of Christ. Whatever may once have been their height and magnitude, they have now scarcely more prominence in the actual scene than the battle of which they are the sole monuments retains in history,—being only a few mounds side by side, elevated a little above the surface of the ground, ten or twelve feet in diameter, with a shallow depression in their summits. When one of them was opened, not long since, no bones, nor armor, nor weapons were discovered, nothing but some small jewels, and a tuft of hair,—perhaps from the head of a valiant general, who, dying on the field of his vic-

tory, bequeathed this lock, together with his indestructible fame, to after-ages. The hair and jewels are probably in the British Museum, where the potsherds and rubbish of innumerable generations make the visitor wish that each passing century could carry off all its fragments and relics along with it, instead of adding them to the continually accumulating burden which human knowledge is compelled to lug upon its back. As for the fame, I know not what has become of it.

After traversing the Park, we come into the neighborhood of Greenwich Hospital, and will pass through one of its spacious gate-ways for the sake of glancing at an establishment which does more honor to the heart of England than anything else that I am acquainted with, of a public nature. It is very seldom that we can be sensible of anything like kindness in the acts or relations of such an artificial thing as a National Government. Our own Government, I should conceive, is too much an abstraction ever to feel any sympathy for its maimed sailors and soldiers, though it will doubtless do them a severe kind of justice, as chilling as the touch of steel. But it seemed to me that the Greenwich pensioners are the petted children of the nation, and that the Government is their dry-nurse, and that the old men themselves have a childlike consciousness of their position. Very likely, a better sort of life might have been arranged, and a wiser care bestowed on them; but, such as it is, it enables them to spend a sluggish, careless, comfortable old age, grumbling, growling, gruff, as if all the foul weather of their past years were pent up within them, yet not much more discontented than such weather-beaten and battle-battered fragments of human kind must inevitably be. Their home, in its outward form, is on a very magnificent plan. Its germ was a royal palace, the full expansion of which has resulted in a series of edifices externally more beautiful than any English palace that I have seen, consisting of several quad-

rangles of stately architecture, united by colonnades and gravel walks, and inclosing grassy squares, with statues in the centre, the whole extending along the Thames. It is built of marble, or very light-colored stone, in the classic style, with pillars and porticos, which (to my own taste, and, I fancy, to that of the old sailors) produce but a cold and shivery effect in the English climate. Had I been the architect, I would have studied the characters, habits, and predilections of nautical people in Wapping, Rotherhithe, and the neighborhood of the Tower, (places which I visited in affectionate remembrance of Captain Lemuel Gulliver, and other actual or mythological navigators,) and would have built the hospital in a kind of ethereal similitude to the narrow, dark, ugly, and inconvenient, but snug and cozy homeliness of the sailor boarding-houses there. There can be no question that all the above attributes, or enough of them to satisfy an old sailor's heart, might be reconciled with architectural beauty and the wholesome contrivances of modern dwellings, and thus a novel and genuine style of building be given to the world.

But their countrymen meant kindly by the old fellows in assigning them the ancient royal site where Elizabeth held her court and Charles II. began to build his palace. So far as the locality went, it was treating them like so many kings; and, with a discreet abundance of grog, beer, and tobacco, there was perhaps little more to be accomplished in behalf of men whose whole previous lives have tended to unfit them for old age. Their chief discomfort is probably for lack of something to do or think about. But, judging by the few whom I saw, a listless habit seems to have crept over them, a dim dreaminess of mood, in which they sit between asleep and awake, and find the long day wearing towards bedtime without its having made any distinct record of itself upon their consciousness. Sitting on stone benches in the sunshine, they subside into slumber,

or nearly so, and start at the approach of footsteps echoing under the colonnades, ashamed to be caught napping, and rousing themselves in a hurry, as formerly on the midnight watch at sea. In their brightest moments, they gather in groups and bore one another with endless sea-yarns about their voyages under famous admirals, and about gale and calm, battle and chase, and all that class of incident that has its sphere on the deck and in the hollow interior of a ship, where their world has exclusively been. For other pastime, they quarrel among themselves, comrade with comrade, and perhaps shake paralytic fists in furrowed faces. If inclined for a little exercise, they can bestir their wooden legs on the long esplanade that borders by the Thames, criticizing the rig of passing ships, and firing off volleys of malediction at the steamers, which have made the sea another element than that they used to be acquainted with. All this is but cold comfort for the evening of life, yet may compare rather favorably with the preceding portions of it, comprising little save imprisonment on shipboard, in the course of which they have been tossed all about the world and caught hardly a glimpse of it, forgetting what grass and trees are, and never finding out what woman is, though they may have encountered a painted spectre which they took for her. A country owes much to human beings whose bodies she has worn out and whose immortal parts she has left undeveloped or debased, as we find them here; and having wasted an idle paragraph upon them, let me now suggest that old men have a kind of susceptibility to moral impressions, and even (up to an advanced period) a receptivity of truth, which often appears to come to them after the active time of life is past. The Greenwich pensioners might prove better subjects for true education now than in their school-boy days; but then where is the Normal School that could educate instructors for such a class?

There is a beautiful chapel for the

pensioners, in the classic style, over the altar of which hangs a picture by West. I never could look at it long enough to make out its design; for this artist (though it pains me to say it of so respectable a countryman) had a gift of frigidity, a knack of grinding ice into his paint, a power of stupefying the spectator's perceptions and quelling his sympathy, beyond any other limner that ever handled a brush. In spite of many pang of conscience, I seize this opportunity to wreak a life-long abhorrence upon the poor, blameless man, for the sake of that dreary picture of Lear, an explosion of frosty fury, that used to be a bugbear to me in the Athenæum Exhibition. Would fire burn it, I wonder?

The principal thing that they have to show you, at Greenwich Hospital, is the Painted Hall. It is a splendid and spacious room, at least a hundred feet long and half as high, with a ceiling painted in fresco by Sir James Thornhill. As a work of art, I presume, this frescoed canopy has little merit, though it produces an exceedingly rich effect by its brilliant coloring and as a specimen of magnificent upholstery. The walls of the grand apartment are entirely covered with pictures, many of them representing battles and other naval incidents that were once fresher in the world's memory than now, but chiefly portraits of old admirals, comprising the whole line of heroes who have trod the quarter-decks of British ships for more than two hundred years back. Next to a tomb in Westminster Abbey, which was Nelson's most elevated object of ambition, it would seem to be the highest meed of a naval warrior to have his portrait hung up in the Painted Hall; but, by dint of victory upon victory, these illustrious personages have grown to be a mob, and by no means a very interesting one, so far as regards the character of the faces here depicted. They are generally commonplace, and often singularly stolid; and I have observed (both in the Painted Hall and elsewhere, and not only in portraits, but in

the actual presence of such renowned people as I have caught glimpses of) that the countenances of heroes are not nearly so impressive as those of statesmen, — except, of course, in the rare instances where warlike ability has been but the one-sided manifestation of a profound genius for managing the world's affairs. Nine-tenths of these distinguished admirals, for instance, if their faces tell truth, must needs have been blockheads, and might have served better, one would imagine, as wooden figure-heads for their own ships than to direct any difficult and intricate scheme of action from the quarter-deck. It is doubtful whether the same kind of men will hereafter meet with a similar degree of success; for they were victorious chiefly through the old English hardihood, exercised in a field of which modern science had not yet got possession. Rough valor has lost something of its value, since their days, and must continue to sink lower and lower in the comparative estimate of warlike qualities. In the next naval war, as between England and France, I would bet, methinks, upon the Frenchman's head.

It is remarkable, however, that the great naval hero of England — the greatest, therefore, in the world, and of all time — had none of the stolid characteristics that belong to his class, and cannot fairly be accepted as their representative man. Foremost in the roughest of professions, he was as delicately organized as a woman, and as painfully sensitive as a roet. More than any other Englishman he won the love and admiration of his country, but won them through the efficacy of qualities that are not English, or, at all events, were intensified in his case and made poignant and powerful by something morbid in the man, which put him otherwise at cross-purposes with life. He was a man of genius; and genius in an Englishman (not to cite the good old simile of a pearl in the oyster) is usually a symptom of a lack of balance in the general making-up

of the character; as we may satisfy ourselves by running over the list of their poets, for example, and observing how many of them have been sickly or deformed, and how often their lives have been darkened by insanity. An ordinary Englishman is the healthiest and wholesomest of human beings; an extraordinary one is almost always, in one way or another, a sick man. It was so with Lord Nelson. The wonderful contrast or relation between his personal qualities, the position which he held, and the life that he lived, makes him as interesting a personage as all history has to show; and it is a pity that Southey's biography — so good in its superficial way, and yet so inadequate as regards any real delineation of the man — should have taken the subject out of the hands of some writer endowed with more delicate appreciation and deeper insight than that genuine Englishman possessed.

But the English capacity for hero-worship is full to the brim with what they are able to comprehend of Lord Nelson's character. Adjoining the Painted Hall is a smaller room, the walls of which are completely and exclusively adorned with pictures of the great Admiral's exploits. We see the frail, ardent man in all the most noted events of his career, from his encounter with a Polar bear to his death at Trafalgar, quivering here and there about the room like a blue, lambent flame. No Briton ever enters that apartment without feeling the beef and ale of his composition stirred to its depths, and finding himself changed into a hero for the nonce, however stolid his brain, however tough his heart, however unexcitable his ordinary mood. To confess the truth, I myself, though belonging to another parish, have been deeply sensible to the sublime recollections there aroused, acknowledging that Nelson expressed his life in a kind of symbolic poetry which I had as much right to understand as these burly islanders. Cool and critical observer as I sought

to be, I enjoyed their burst of honest indignation when a visitor (not an American, I am glad to say) thrust his walking-stick almost into Nelson's face, in one of the pictures, by way of pointing a remark; and the by-standers immediately glowed like so many hot coals, and would probably have consumed the offender in their wrath, had he not effected his retreat. But the most sacred objects of all are two of Nelson's coats, under separate glass cases. One is that which he wore at the Battle of the Nile, and it is now sadly injured by moths, which will quite destroy it in a few years, unless its guardians preserve it as we do Washington's military suit, by occasionally baking it in an oven. The other is the coat in which he received his death-wound at Trafalgar. On its breast are sewed three or four stars and orders of knighthood, now much dimmed by time and damp, but which glittered brightly enough on the battle-day to draw the fatal aim of a French marksman. The bullet-hole is visible on the shoulder, as well as a part of the golden tassels of an epaulet, the rest of which was shot away. Over the coat is laid a white waistcoat with a great blood-stain on it, out of which all the redness has utterly faded, leaving it of a dingy yellow hue, in the threescore years since that blood gushed out. Yet it was once the reddest blood in England,—Nelson's blood!

The hospital stands close adjacent to the town of Greenwich, which will always retain a kind of festal aspect in my memory, in consequence of my having first become acquainted with it on Easter Monday. Till a few years ago, the first three days of Easter were a carnival-season in this old town, during which the idle and disreputable part of London poured itself into the streets like an inundation of the Thames,—as unclean as that turbid mixture of the offscourings of the vast city, and overflowing with its grimy pollution whatever rural innocence, if any, might

be found in the suburban neighborhood. This festivity was called Greenwich Fair, the final one of which, in an immemorial succession, it was my fortune to behold.

If I had bethought myself of going through the fair with a note-book and pencil, jotting down all the prominent objects, I doubt not that the result might have been a sketch of English life quite as characteristic and worthy of historical preservation as an account of the Roman Carnival. Having neglected to do so, I remember little more than a confusion of unwashed and shabbily dressed people, intermixed with some smarter figures, but, on the whole, presenting a mobbish appearance such as we never see in our own country. It taught me to understand why Shakespeare, in speaking of a crowd, so often alludes to its attribute of evil odor. The common people of England, I am afraid, have no daily familiarity with even so necessary a thing as a wash-bowl, not to mention a bathing-tub. And furthermore, it is one mighty difference between them and us, that every man and woman on our side of the water has a working-day suit and a holiday suit, and is occasionally as fresh as a rose, whereas, in the good old country, the griminess of his labor or squalid habits clings forever to the individual, and gets to be a part of his personal substance. These are broad facts, involving great corollaries and dependencies. There are really, if you stop to think about it, few sadder spectacles in the world than a ragged coat or a soiled and shabby gown, at a festival.

This unfragrant crowd was exceedingly dense, being welded together, as it were, in the street through which we strove to make our way. On either side were oyster-stands, stalls of oranges, (a very prevalent fruit in England, where they give the withered ones a guise of freshness by boiling them,) and booths covered with old sail-cloth, in which the commodity that most at-

tracted the eye was gilt gingerbread. It was so completely enveloped in Dutch gilding that I did not at first recognize an old acquaintance, but wondered what those golden crowns and images could be. There were likewise drums and other toys for small children, and a variety of showy and worthless articles for children of a larger growth; though it perplexed me to imagine who, in such a mob, could have the innocent taste to desire playthings, or the money to pay for them. Not that I have a right to accuse the mob, on my own knowledge, of being any less innocent than a set of cleaner and better dressed people might have been; for, though one of them stole my pocket-handkerchief, I could not but consider it fair game, under the circumstances, and was grateful to the thief for sparing me my purse. They were quiet, civil, and remarkably good-humored, making due allowance for the national gruffness; there was no riot, no tumultuous swaying to and fro of the mass, such as I have often noted in an American crowd, no noise of voices, except frequent bursts of laughter, hoarse or shrill, and a widely diffused, inarticulate murmur, resembling nothing so much as the rumbling of the tide among the arches of London Bridge. What immensely perplexed me was a sharp, angry sort of rattle, in all quarters, far off and close at hand, and sometimes right at my own back, where it sounded as if the stout fabric of my English surtout had been ruthlessly rent in twain; and everybody's clothes, all over the fair, were evidently being torn asunder in the same way. By-and-by, I discovered that this strange noise was produced by a little instrument called "The Fun of the Fair,"—a sort of rattle, consisting of a wooden wheel, the cogs of which turn against a thin slip of wood, and so produce a rasping sound when drawn smartly against a person's back. The ladies draw their rattles against the backs of their male friends, (and everybody passes for a friend at Greenwich Fair,) and

the young men return the compliment on the broad British backs of the ladies; and all are bound by immemorial custom to take it in good part and be merry at the joke. As it was one of my prescribed official duties to give an account of such mechanical contrivances as might be unknown in my own country, I have thought it right to be thus particular in describing the Fun of the Fair.

But this was far from being the sole amusement. There were theatrical booths, in front of which were pictorial representations of the scenes to be enacted within; and anon a drummer emerged from one of them, thumping on a terribly lax drum, and followed by the entire *dramatis personæ*, who ranged themselves on a wooden platform in front of the theatre. They were dressed in character, but woefully shabby, with very dingy and wrinkled white tights, threadbare cotton-velvets, crumpled silks, and crushed muslin, and all the gloss and glory gone out of their aspect and attire, seen thus in the broad daylight and after a long series of performances. They sang a song together, and withdrew into the theatre, whither the public were invited to follow them at the inconsiderable cost of a penny a ticket. Before another booth stood a pair of brawny fighting-men, displaying their muscle, and soliciting patronage for an exhibition of the noble British art of pugilism. There were pictures of giants, monsters, and outlandish beasts, most prodigious, to be sure, and worthy of all admiration, unless the artist had gone incomparably beyond his subject. Jugglers proclaimed aloud the miracles which they were prepared to work; and posture-makers dislocated every joint of their bodies and tied their limbs into inextricable knots, wherever they could find space to spread a little square of carpet on the ground. In the midst of the confusion, while everybody was treading on his neighbor's toes, some little boys were very solicitous to brush your boots. These lads,

I believe, are a product of modern society, — at least, no older than the time of Gay, who celebrates their origin in his "Trivial"; but in most other respects the scene reminded me of Bunyan's description of Vanity Fair, — nor is it at all improbable that the Pilgrim may have been a merry-maker here, in his wild youth.

It seemed very singular — though, of course, I immediately classified it as an English characteristic — to see a great many portable weighing-machines, the owners of which cried out continually and again, — "Come, know your weight! Come, come, know your weight to-day! Come, know your weight!" — and a multitude of people, mostly large in the girth, were moved by this vociferation to sit down in the machines. I know not whether they valued themselves on their beef, and estimated their standing as members of society at so much a pound; but I shall set it down as a national peculiarity, and a symbol of the prevalence of the earthly over the spiritual element, that Englishmen are wonderfully bent on knowing how solid and physically ponderous they are.

On the whole, having an appetite for the brown bread and the tripe and sausages of life, as well as for its nicer cakes and dainties, I enjoyed the scene, and was amused at the sight of a gruff old Greenwich pensioner, who, forgetful of the sailor-frolics of his young days, stood looking with grim disapproval at all these vanities. Thus we squeezed our way through the mob-jammed town, and emerged into the Park, where, likewise, we met a great many merry-makers, but with freer space for their gambols than in the streets. We soon found ourselves the targets for a cannonade with oranges, (most of them in a decayed condition,) which went humming past our ears from the vantage-ground of neighboring hillocks, sometimes hitting our sacred persons with an inelastic thump. This was one of the privileged freedoms of the time, and was nowise to be re-

sented, except by returning the salute. Many persons were running races, hand in hand, down the declivities, especially that steepest one on the summit of which stands the world-central Observatory, and (as in the race of life) the partners were usually male and female, and often caught a tumble together before reaching the bottom of the hill. Hereabouts we were pestered and haunted by two young girls, the eldest not more than thirteen, teasing us to buy matches; and finding no market for their commodity, the taller one suddenly turned a somerset before our faces, and rolled heels over head from top to bottom of the hill on which we stood. Then, scrambling up the acclivity, the topsy-turvy trollop offered us her matches again, as demurely as if she had never flung aside her equilibrium; so that, dreading a repetition of the feat, we gave her sixpence and an admonition, and enjoined her never to do so any more.

The most curious amusement that we witnessed here — or anywhere else, indeed — was an ancient and hereditary pastime called "Kissing in the Ring." It is one of the simplest kinds of games, needing little or no practice to make the player altogether perfect; and the manner of it is this. A ring is formed, (in the present case, it was of large circumference and thickly gemmed around with faces, mostly on the broad grin,) into the centre of which steps an adventurous youth, and, looking round the circle, selects whatever maiden may most delight his eye. He presents his hand, (which she is bound to accept,) leads her into the centre, salutes her on the lips, and retires, taking his stand in the expectant circle. The girl, in her turn, throws a favorable regard on some fortunate young man, offers her hand to lead him forth, makes him happy with a maidenly kiss, and withdraws to hide her blushes, if any there be, among the simpering faces in the ring; while the favored swain loses no time in transferring her salute to

the prettiest and plumpest among the many mouths that are primming themselves in anticipation. And thus the thing goes on, till all the festive throng are inwreathed and intertwined into an endless and inextricable chain of kisses; though, indeed, it smote me with compassion to reflect that some forlorn pair of lips might be left out, and never know the triumph of a salute, after throwing aside so many delicate reserves for the sake of winning it. If the young men had any chivalry, there was a fair chance to display it by kissing the homeliest damsel in the circle.

To be frank, however, at the first glance, and to my American eye, they looked all homely alike, and the chivalry that I suggest is more than I could have been capable of, at any period of my life. They seemed to be country-lasses, of sturdy and wholesome aspect, with coarse-grained, cabbage-rosy cheeks, and, I am willing to suppose, a stout texture of moral principle, such as would bear a good deal of rough usage without suffering much detriment. But how unlike the trim little damsels of my native land! I desire above all things to be courteous; but, since the plain truth must be told, the soil and climate of England produce feminine beauty as rarely as they do delicate fruit, and though admirable specimens of both are to be met with, they are the hot-house ameliorations of refined society, and apt, moreover, to relapse into the coarseness of the original stock. The men are man-like, but the women are not beautiful, though the female Bull be well enough adapted to the male. To return to the lasses of Greenwich Fair, their charms were few, and their behavior, perhaps, not altogether commendable; and yet it was impossible not to feel a degree of faith in their innocent intentions, with such a half-bashful zest and entire simplicity did they keep up their part of the game. It put the spectator in good-humor to look at them, because there

was still something of the old Arcadian life, the secure freedom of the antique age, in their way of surrendering their lips to strangers, as if there were no evil or impurity in the world. As for the young men, they were chiefly specimens of the vulgar sediment of London life, often shabbily genteel, rowdyish, pale, wearing the unbrushed coat, unshifted linen, and unwashed faces of yesterday, as well as the haggardness of last night's jollity in a gin-shop. Gathering their character from these tokens, I wondered whether there were any reasonable prospect of their fair partners returning to their rustic homes with as much innocence (whatever were its amount or quality) as they brought to Greenwich Fair, in spite of the perilous familiarity established by Kissing in the Ring.

The manifold disorders resulting from the fair, at which a vast city was brought into intimate relations with a comparatively rural district, have at length led to its suppression; this was the very last celebration of it, and brought to a close the broad-mouthed merriment of many hundred years. Thus my poor sketch, faint as its colors are, may acquire some little value in the reader's eyes from the consideration that no observer of the coming time will ever have an opportunity to give a better. I should find it difficult to believe, however, that the queer pastime just described, or any moral mischief to which that and other customs might pave the way, can have led to the overthrow of Greenwich Fair; for it has often seemed to me that Englishmen of station and respectability, unless of a peculiarly philanthropic turn, have neither any faith in the feminine purity of the lower orders of their countrywomen, nor the slightest value for it, allowing its possible existence. The distinction of ranks is so marked, that the English cottage-damsel holds a position somewhat analogous to that of the negro girl in our Southern States. Hence comes inevitable detriment to the moral condition of those men them-

selves, who forget that the humblest woman has a right and a duty to hold herself in the same sanctity as the highest. The subject cannot well be discussed in these pages; but I offer it as a serious conviction, from what I have been able to observe, that the England of to-day is the unscrupulous old England of Tom Jones and Joseph Andrews, Humphrey Clinker and Roderick Random; and in our refined era, just the same as at that more free-spoken epoch, this singular people has a certain contempt for any fine-strained purity, any special squeamishness, as they consider it, on the part of an ingenuous youth. They appear to look upon it as a suspicious phenomenon in the masculine character.

Nevertheless, I by no means take upon me to affirm that English morality, as regards the phase here alluded to, is really at a lower point than our own. Assuredly, I hope so, because, making

a higher pretension, or, at all events, more carefully hiding whatever may be amiss, we are either better than they, or necessarily a great deal worse. It impressed me that their open avowal and recognition of immoralities served to throw the disease to the surface, where it might be more effectually dealt with, and leave a sacred interior not utterly profaned, instead of turning its poison back among the inner vitalities of the character, at the imminent risk of corrupting them all. Be that as it may, these Englishmen are certainly a franker and simpler people than ourselves, from peer to peasant; but if we can take it as compensatory on our part, (which I leave to be considered,) that they owe those noble and manly qualities to a coarser grain in their nature, and that, with a finer one in ours, we shall ultimately acquire a marble polish of which they are unsusceptible, I believe that this may be the truth.

---

### THE VAGABONDS.

WE are two travellers, Roger and I.

Roger's my dog. — Come here, you scamp!  
Jump for the gentlemen, — mind your eye!

Over the table, — look out for the lamp! —  
The rogue is growing a little old;

Five years we've tramped through wind and weather,  
And slept out-doors when nights were cold,  
And ate and drank — and starved — together.

We've learned what comfort is, I tell you!

A bed on the floor, a bit of rosin,  
A fire to thaw our thumbs, (poor fellow!  
The paw he holds up there's been frozen),  
Plenty of catgut for my fiddle,

(This out-door business is bad for strings),  
Then a few nice buckwheats hot from the griddle,  
And Roger and I set up for kings!

No, thank ye, Sir, — I never drink;

Roger and I are exceedingly moral, —  
Are n't we, Roger? — See him wink! —

Well, something hot, then, — we won't quarrel.

He 's thirsty, too, — see him nod his head?  
 What a pity, Sir, that dogs can't talk!  
 He understands every word that 's said, —  
 And he knows good milk from water-and-chalk.

The truth is, Sir, now I reflect,  
 I 've been so sadly given to grog,  
 I wonder I 've not lost the respect  
 (Here 's to you, Sir!) even of my dog.  
 But he sticks by, through thick and thin;  
 And this old coat, with its empty pockets,  
 And rags that smell of tobacco and gin,  
 He 'll follow while he has eyes in his sockets.

There is n't another creature living  
 Would do it, and prove, through every disaster,  
 So fond, so faithful, and so forgiving,  
 To such a miserable thankless master!  
 No, Sir! — see him wag his tail and grin!  
 By George! it makes my old eyes water!  
 That is, there 's something in this gin  
 That chokes a fellow. But no matter!

We 'll have some music, if you 're willing,  
 And Roger (hem! what a plague a cough is, Sir!)  
 Shall march a little. — Start, you villain!  
 Stand straight! 'Bout face! Salute your officer!  
 Put up that paw! Dress! Take your rifle!  
 (Some dogs have arms, you see!) Now hold your  
 Cap while the gentlemen give à trifle,  
 To aid a poor old patriot soldier!

March! Halt! Now show how the rebel shakes,  
 When he stands up to hear his sentence.  
 Now tell us how many drams it takes  
 To honor a jolly new acquaintance.  
 Five yelps, — that 's five; he 's mighty knowing!  
 The night 's before us, fill the glasses! —  
 Quick, Sir! I 'm ill, — my brain is going! —  
 Some brandy, — thank you, — there! — it passes!

Why not reform? That 's easily said;  
 But I 've gone through such wretched treatment,  
 Sometimes forgetting the taste of bread,  
 And scarce remembering what meat meant,  
 That my poor stomach 's past reform;  
 And there are times when, mad with thinking,  
 I 'd sell out heaven for something warm  
 To prop a horrible inward sinking.

Is there a way to forget to think?  
 At your age, Sir, home, fortune, friends,

A dear girl's love, — but I took to drink ; —  
 The same old story ; you know how it ends.  
 If you could have seen these classic features, —  
 You need n't laugh, Sir ; they were not then  
 Such a burning libel on God's creatures :  
 I was one of your handsome men !

If you had seen HER, so fair and young,  
 Whose head was happy on this breast !  
 If you could have heard the songs I sung  
 When the wine went round, you would n't have guessed  
 That ever I, Sir, should be straying  
 From door to door, with fiddle and dog,  
 Ragged and penniless, and playing  
 To you to-night for a glass of grog !

She 's married since, — a parson's wife :  
 'T was better for her that we should part, —  
 Better the soberest, prosiest life  
 Than a blasted home and a broken heart.  
 I have seen her ? Once : I was weak and spent  
 On the dusty road : a carriage stopped :  
 But little she dreamed, as on she went,  
 Who kissed the coin that her fingers dropped !

You 've set me talking, Sir ; I 'm sorry ;  
 It makes me wild to think of the change !  
 What do you care for a beggar's story ?  
 Is it amusing ? you find it strange ?  
 I had a mother so proud of me !  
 'T was well she died before — Do you know  
 If the happy spirits in heaven can see  
 The ruin and wretchedness here below ?

Another glass, and strong, to deaden  
 This pain ; then Roger and I will start.  
 I wonder, has he such a lumpish, leaden,  
 Aching thing, in place of a heart ?  
 He is sad sometimes, and would weep, if he could,  
 No doubt, remembering things that were, —  
 A virtuous kennel, with plenty of food,  
 And himself a sober, respectable cur.

I 'm better now ; that glass was warming. —  
 You rascal ! limber your lazy feet !  
 We must be fiddling and performing  
 For supper and bed, or starve in the street. —  
 Not a very gay life to lead, you think ?  
 But soon we shall go where lodgings are free,  
 And the sleepers need neither victuals nor drink ; —  
 The sooner, the better for Roger and me !

## WILLIE WHARTON.

WOULD you like to read a story which is true, and yet not true? The one I am going to tell you is a superstructure of imagination on a basis of facts. I trust you are not curious to ascertain the exact proportion of each. It is sufficient for any reasonable reader to be assured that many of the leading incidents interwoven in the following story actually occurred in one of our Western States, a few years ago.

It was a bright afternoon in the spring-time; the wide, flowery prairie waved in golden sunlight, and distant tree-groups were illuminated by the clear, bright atmosphere. Throughout the whole expanse, only two human dwellings were visible. These were small log-cabins, each with a clump of trees near it, and the rose of the prairies climbing over the roof. In the rustic piazza of one of these cabins a woman was sewing busily, occasionally moving a cradle gently with her foot. On the steps of the piazza was seated a man, who now and then read aloud some paragraph from a newspaper. From time to time, the woman raised her eyes from her work, and, shading them from the sunshine with her hand, looked out wistfully upon the sea of splendor, everywhere waving in flowery ripples to the soft breathings of the balmy air. At length she said, —

“Brother George, I begin to feel a little anxious about Willie. He was told not to go out of sight, and he is generally a good boy to mind; but I should think it was more than ten minutes since I have seen him. I wish you would try the spy-glass.”

The man arose, and, after looking abroad for a moment, took a small telescope from the corner of the piazza, and turned it in the direction the boy had taken.

“Ah, now I see the little rogue!” he

exclaimed. “I think it must have been that island of high grass that hid him from you. He has not gone very far; and now he is coming this way. But who upon earth is he leading along? I believe the adventurous little chap has been to the land of Nod to get him a wife. I know of no little girl, except my Bessie, for five miles round; and it certainly is not she. The fat little thing has toppled over in the grass, and Willie is picking her up. I believe in my soul she’s an Indian.”

“An Indian!” exclaimed the mother, starting up suddenly. “Have you heard of any Indians being seen hereabouts? Do blow the horn to hurry him home.”

A tin horn was taken from the nail on which it hung, and a loud blast stirred the silent air. Moles stopped their digging, squirrels paused in their gambols, prairie-dogs passed quickly from one to another a signal of alarm, and all the little beasts wondered what could be the meaning of these new sounds which had lately invaded the stillness of their haunts.

George glanced at the anxious countenance of his sister, and said, —

“Don’t be frightened, Jenny, if some Indians do happen to call and see us. You know you always agreed with me that they would be as good as Christians, if they were treated justly and kindly. Besides, you see this one is a very small savage, and we shall soon have help enough to defend us from her formidable blows. I made a louder noise with the horn than I need to have done; it has startled your husband, and he is coming from his plough; and there is my wife and Bessie running to see what is the matter over here.”

By this time the truant boy and his companion approached the house, and he mounted the steps of the piazza with eager haste, pulling her after him, im-

mediately upon the arrival of his father, Aunt Mary, and Cousin Bessie. Brief explanation was made, that the horn was blown to hurry Willie home; and all exclaimed, —

“Why, Willie! who is this?”

“Found her squatting on the grass, pulling flowers,” he replied, almost out of breath. “Don’t know her name. She talks lingo.”

The whole company laughed. The new-comer was a roly-poly, round enough to roll, with reddish-brown face, and a mop of black hair, cut in a straight line just above the eyes. But *such* eyes! large and lambent, with a foreshadowing of sadness in their expression. They shone in her dark face like moonlit waters in the dusky landscape of evening. Her only garment was a short kirtle of plaited grass, not long enough to conceal her chubby knees. She understood no word of English, and, when spoken to, repeated an Indian phrase, enigmatical to all present. She clung to Willie, as if he were an old friend; and he, quite proud of the manliness of being a protector, stood with his arm across her brown shoulders, half offended at their merriment, saying, —

“She’s *my* little girl. I found her.”

“I *thought* he’d been to the land of Nod to get him a wife,” said Uncle George, smiling.

Little Bessie, with clean apron, and flaxen hair nicely tied up with ribbons, was rather shy of the stranger.

“She ’th dirty,” lisped she, pointing to her feet.

“Well, s’pose she is?” retorted William. “I guess *you*’d be dirty, too, if you’d been running about in the mud, without any shoes. But she’s pretty. She’s like my black kitten, only she a’n’t got a white nose.”

Willie’s comparison was received with shouts of laughter; for there really was some resemblance to the black kitten in that queer little face. But when the small mouth quivered with a grievous expression, and she clung closer to

Willie, as if afraid, kind Uncle George patted her head, and tried to part the short, thick, black hair, which would not stay parted, but insisted upon hanging straight over her eyebrows. Baby Emma had been wakened in her cradle by the noise, and began to rub her eyes with her little fists. Being lifted into her mother’s lap, she hid her face for a while; but finally she peeped forth timidly, and fixed a wondering gaze on the new-comer. It seemed that she concluded to like her; for she shook her little dimpled hand to her, and began to crow. The language of children needs no interpreter. The demure little Indian understood the baby-salutation, and smiled.

Aunt Mary brought bread and milk, which she devoured like a hungry animal. While she was eating, the wagon arrived with Willie’s older brother, Charley, who had been to the far-off mill with the hired man. The sturdy boy came in, all aglow, calling out, —

“Oh, mother! the boy at the mill has caught a prairie-dog. Such a funny-looking thing!”

He halted suddenly before the small stranger, gave a slight whistle, and exclaimed, —

“Halloo! here’s a funny-looking prairie-puss!”

“She a’n’t a prairie-puss,” cried Willie, pushing him back with doubled fists. “She’s a little girl; and she’s *my* little girl. I found her.”

“She’s a great find,” retorted the roguish brother, as he went behind her, and pulled the long black hair that fell over her shoulders.

“Now you let her alone!” shouted Willie; and the next moment the two boys were rolling over on the piazza, pommelling each other, half in play, half in earnest. The little savage sat coiled up on the floor, watching them without apparent emotion; but when a hard knock made Willie cry out, she sprang forward with the agility of a kitten, and, repeating some Indian word with strong emphasis, began to beat

Charley with all her might. Instinctively, he was about to give blows in return; but his father called out, —

“Hold there, my boy! Never strike a girl!”

“And never harm a wanderer that needs protection,” said Uncle George. “It is n’t manly, Charley.”

Thus rebuked, Charley walked away somewhat crestfallen. But before he disappeared at the other end of the piazza, he turned back to sing, —

“Willie went a-hunting, and caught a pappoose.”

“She a’n’t a pappoose, she ’s a little girl,” shouted Willie; “and she’s *my* little girl. I did n’t hunt her; I found her.”

Uncle George and his family did not return to their cabin till the warm, yellow tint of the sky had changed to azure-gray. While consultations were held concerning how it was best to dispose of the little wanderer for the night, she nestled into a corner, where, rolled up like a dog, she fell fast asleep. A small bed was improvised for her in the kitchen. But when they attempted to raise her up, she was dreaming of her mother’s wigwam, and, waking suddenly to find herself among strangers, she forgot the events of the preceding hours, and became a pitiful image of terror. Willie, who was being undressed in another room, was brought in in his night-gown, and the sight of him reassured her. She clung to him, and refused to be separated from him; and it was finally concluded that she should sleep with her little protector in his trundle-bed, which every night was rolled out from under the bed of his father and mother. A tub of water was brought, and as Willie jumped into it, and seemed to like to splash about, she was induced to do the same. The necessary ablutions having been performed, and the clean night-gowns put on, the little ones walked to their trundle-bed hand in hand. Charley pulled the long hair once more, as they passed, and began to sing, “Willie went a-hunting”; but the young knight-errant was too sleepy and tired to return

to the charge. The older brother soon went to rest also; and all became as still within-doors as it was on the wide, solitary prairie.

The father and mother sat up a little while, one mending a harness, the other repairing a rip in a garment. They talked together in low tones of Willie’s singular adventure; and Mrs. Wharton asked her husband whether he supposed this child belonged to the Indians whose tracks their man had seen on his way to the mill. She shared her brother’s kindly feeling toward the red men, because they were an injured and oppressed race. But, in her old New-England home, she had heard and read stories that made a painful impression on the imagination of childhood; and though she was now a sensible and courageous woman, the idea of Indians in the vicinity rendered the solitude of the wilderness oppressive. The sudden cry of a night-bird made her start and turn pale.

“Don’t be afraid,” said her husband, soothingly. “It is as George says. Nothing but justice and kindness is needed to render these wild people firm friends to the whites.”

“I believe it,” she replied; “but treaties with them have been so wickedly violated, and they are so shamefully cheated by Government-agents, that they naturally look upon all white men as their enemies. How can they know that we are more friendly to them than others?”

“We have been kind to their child,” responded Mr. Wharton, “and that will prevent them from injuring us.”

“I would have been just as kind to the little thing, if we had an army here to protect us,” she rejoined.

“They will know that, Jenny,” he said. “Indian instincts are keen. Your gentle eyes and motherly ways are a better defence than armies would be.”

The mild blue eyes thanked him with an affectionate glance. His words somewhat calmed her fears; but before retiring to rest, she looked out, far and

wide, upon the lonely prairie. It was beautiful, but spectral, in the ghostly veil of moonlight. Every bolt was carefully examined, and the tin horn hung by the bedside. When all preparations were completed, she drew aside the window-curtain to look at the children in their trundle-bed, all bathed with silvery moonshine. They lay with their arms about each other's necks, the dark brow nestled close to the rosy cheek, and the mass of black hair mingled with the light brown locks. The little white boy of six summers and the Indian maiden of four slept there as cozily as two kittens with different fur. The mother gazed on them fondly, as she said, —

"It is a pretty sight. I often think what beautiful significance there is in the Oriental benediction, 'May you sleep tranquilly as a child when his friends are with him!'"

"It is, indeed, a charming picture," rejoined her husband. "This would be a text for George to preach from; and his sermon would be, that confidence is always born of kindness."

The fear of Indians vanished from the happy mother's thoughts, and she fell asleep with a heart full of love for all human kind.

The children were out of their bed by daylight. The little savage padded about with naked feet, apparently feeling much at home, but seriously incommoded by her night-gown, which she pulled at restlessly, from time to time, saying something in her own dialect, which no one could interpret. But they understood her gestures, and showed her the kirtle of plaited grass, still damp with the thorough washing it had had the night before. At sight of it she became quite voluble; but what she said no one knew. "What gibberish you talk!" exclaimed Charley. She would not allow him to come near her. She remembered how he had pulled her hair and tussled with Willie. But two bright buttons on a string made peace between them. He put

the mop on his head, and shook it at her, saying, "Moppet, you 'd be pretty, if you wore your hair like folks." Willie was satisfied with this concession; and already the whole family began to outgrow the feeling that the little wayfarer belonged to a foreign race.

Early in the afternoon two Indians came across the prairie. Moppet saw them first, and announced the discovery by a shrill shout, which the Indians evidently heard; for they halted instantly, and then walked on faster than before. When the child went to meet them, the woman quickened her pace a little, and took her hand; but no signs of emotion were perceptible. As they approached the cabin, Moppet appeared to be answering their brief questions without any signs of fear. "Poor little thing!" said Mrs. Wharton. "I am glad they are not angry with her. I was afraid they might beat her."

The strangers were received with the utmost friendliness, but their stock of English was so very scanty that little information could be gained from them. The man pointed to the child, and said, "Wik-a-nee, me go way she." And the woman said, "Me tank." No further light was ever thrown upon Willie's adventure in finding a pappoose alone on the prairie. The woman unstrapped from her shoulder a string of baskets, which she laid upon the ground. Moppet said something to her mother, and placed her hand on a small one brightly stained with red and yellow. The basket was given to her, and she immediately presented it to Willie. At the same time the Indian woman offered a large basket to Mrs. Wharton, pointing to the child, and saying, "Wik-a-nee. Me tank." Money was offered her, but she shook her head, and repeated, "Wik-a-nee. Me tank." The man also refused the coin, with a slow motion of his head, saying, "Me tank." They ate of the food that was offered them, and received a salted fish and bread with "Me tank."

"Mother," exclaimed Willie, "I want

to give Moppet something. May I give her my Guinea-peas?"

"Certainly, my son, if you wish to," she replied.

He ran into the cabin, and came out with a tin box. When he uncovered it, and showed Moppet the bright scarlet seeds, each with a shining black spot, her dark eyes glowed, and she uttered a joyous "Eugh!" The passive, sad expression of the Indian woman's countenance almost brightened into a smile, as she said, "Wik-a-nee tank."

After resting awhile, she again strapped the baskets on her shoulder, and taking her little one by the hand, they resumed their tramp across the prairie, — no one knowing whence they came, or whither they were going. As far as they could be seen, it was noticed that the child looked back from time to time. She was saying to her mother she wished they could take that little pale-faced boy with them.

"So Moppet is gone," said Charley. "I wonder whether we shall ever see her again." Willie heaved a sigh, and said, "I wish she was my little sister."

Thus met two innocent little beings, unconscious representatives of races widely separated in moral and intellectual culture, but children of the same Heavenly Father, and equally subject to the attractions of great Mother Nature. Blessed childhood, that yields spontaneously to those attractions, ignoring all distinctions of pride or prejudice! Verily, we should lose all companionship with angels, were it not for the ladder of childhood, on which they descend to meet us.

It was a pleasant ripple in the dull stream of their monotonous life, that little adventure of the stray pappoose. At almost every gathering of the household, for several days after, something was recalled of her uncouth, yet interesting looks, and of her wild, yet winning ways. Charley persisted in his opinion that "Moppet would be pretty, if she wore her hair like folks."

"Her father and mother called her Wik-a-nee," said Willie; "and I like that name better than I do Moppet." He took great pains to teach it to his baby sister; and he succeeded so well, that, whenever the red-and-yellow basket was shown to her, she said, "Mik-a-nee," — the W. being beyond her infant capabilities.

Something of tenderness mixed with Mrs. Wharton's recollections of the grotesque little stranger. "I never saw anything so like the light of an astral lamp as those beautiful large eyes of hers," said she. "I began to love the odd little thing; and if she had stayed much longer, I should have been very loath to part with her."

The remembrance of the incident gradually faded; but whenever a far-off neighbor or passing emigrant stopped at the cabin, Willie brought forward his basket, and repeated the story of Wik-a-nee, — seldom forgetting to imitate her strange cry of joy when she saw the scarlet peas. His mother was now obliged to be more watchful than ever to prevent him from wandering out of sight and hearing. He had imbibed an indefinite idea that there was a great realm of adventure out there beyond. If he could only get a little nearer to the horizon, he thought he might perhaps find another pappoose, or catch a prairie-dog and tame it. He had heard his father say that a great many of those animals lived together in houses under ground, — that they placed sentinels at their doors to watch, and held a town-meeting when any danger approached. When Willie was summoned from his exploring excursions, he often remonstrated, saying, "Mother, what makes you blow the horn so soon? You never give me time to find a prairie-dog. It would be capital fun to have a dog that knows enough to go to town-meeting." Charley took particular pleasure in increasing his excitement on that subject. He told him he had once seen a prairie-dog standing sentinel at the entrance-hole of their

habitations. He made a picture of the creature with charcoal on the shed-door, and proposed to prick a copy of it into Willie's arm with India-ink, which was joyfully agreed to. The likeness, when completed, was very much like a squash upon two sticks, but it was eminently satisfactory to the boys. There was no end to Willie's inquiries. How to find that hole which Charley had seen, to crawl into it, and attend a dogs' town-meeting, was the ruling idea of his life. Unsentimental as it was, considering the juvenile gallantry he had manifested, it was an undeniable fact, that, in the course of a few months, prairie-dogs had chased Wik-a-nee almost beyond the bounds of his memory.

Autumn came, and was passing away. The waving sea of verdure had become brown, and the clumps of trees, dotted about like islands, stood denuded of their foliage. At this season the cattle were missing one day, and were not to be found. A party was formed to go in search of them, consisting of all the men from both homesteads, except Mr. Wharton, who remained to protect the women and children, in case of any unforeseen emergency. Charley obtained his father's permission to go with Uncle George; and Willie began to beg hard to go also. When his mother told him he was too young to be trusted, he did not cry, because he knew it was an invariable rule that he was never to have anything he cried for; but he grasped her gown, and looked beseechingly in her face, and said, —

"Oh, mother, do let me go with Charley, just this once! Maybe we shall catch a prairie-dog."

"No, darling," she replied. "You are not old enough to go so far. When you are a bigger boy, you shall go after the cattle, and go a-hunting with father, too, if you like."

"Oh, dear!" he exclaimed, impatiently, "when *shall* I be a bigger boy? You *never* will let me go far enough to see the prairie-dogs hold a town-meeting!"

The large brown eyes looked up very imploringly.

Mr. Wharton smiled and said, —

"Jenny, you do keep the little fellow tied pretty close to your apron-string. Perhaps you had better let him go this time."

Thus reinforced, the petted boy redoubled his importunities, and finally received permission to go, on condition that he would be very careful not to wander away from his brother. Charley promised not to trust him out of his sight; and the men said, if they were detained till dark, they would be sure to put the boys in a safe path to return home before sunset. Willie was equipped for the excursion, full of joyous anticipations of marvellous adventures and promises to return before sunset and tell his parents about everything he had seen. His mother kissed him, as she drew the little cap over his brown locks, and repeated her injunctions over and over again. He jumped down both steps of the piazza at once, eager to see whether Uncle George and Charley were ready. His mother stood watching him, and he looked up to her with such a joyful smile on his broad, frank face, that she called to him, —

"Come and kiss me again, Willie, before you go; and remember, dear, not to go out of sight of Uncle George and Charley."

He leaped up the steps, gave her a hearty smack, and bounded away.

When the party started, she stood a little while gazing after them. Her husband said, —

"What a pet you make of that boy, Jenny. And it must be confessed he is the brightest one of the lot."

"And a good child, too," she rejoined. "He is so affectionate, and so willing to mind what is said to him! But he is so active, and eager for adventures! How the prairie-dogs do occupy his busy little brain!"

"That comes of living out West," replied Mr. Wharton, smiling. "You

know the miller told us, when we first came, that there was nothing like it for making folks know everything about all *natur*’.”

They separated to pursue their different avocations, and, being busy, were consequently cheerful,—except that the mother had some occasional misgivings whether she had acted prudently in consenting that her darling should go beyond sound of the horn. She began to look out for the boys early in the afternoon; but the hours passed, and still they came not. The sun had sunk below the horizon, and was sending up regular streaks of gold, like a great glittering crown, when Charley was seen coming alone across the prairie. A pang like the point of a dagger went through the mother’s heart. Her first thought was,—

“Oh, my son! my son! some evil beast has devoured him.”

Charley walked so slowly and wearily that she could not wait for his coming, but went forth to meet him. As soon as she came within sound of his voice, she called out,—

“Oh, Charley, where’s Willie?”

The poor boy trembled in every joint, as he threw himself upon her neck and sobbed out,—

“Oh, mother! mother!”

Her face was very pale, as she asked, in low, hollow tones,—

“Is he dead?”

“No, mother; but we don’t know where he is. Oh, mother, do forgive me!” was the despairing answer.

The story was soon told. The cattle had strayed farther than they supposed, and Willie was very tired before they came in sight of them. It was not convenient to spare a man to convey him home, and it was agreed that Charley should take him a short distance from their route to a log-cabin, with whose friendly inmates they were well acquainted. There he was to be left to rest, while his brother returned for a while to help in bringing the cattle together. The men separated, going in

various circuitous directions, agreeing to meet at a specified point, and wait for Charley. He had a boy’s impatience to be at the place of rendezvous. When he arrived near the cabin, and had led Willie into the straight path to it, he charged him to go into the house, and not leave it till he came for him; and then he ran back with all speed to Uncle George. The transaction seemed to him so safe that it did not occur to his honest mind that he had violated the promise given to his mother. While the sun was yet high in the heavens, his uncle sent him back to the log-cabin for Willie, and sent a man with him to guide them both within sight of home. Great was their alarm when the inmates of the house told them they had not seen the little boy. They searched, in hot haste, in every direction. Diverging from the road to the cabin was a path known as the Indian trail, on which hunters, of various tribes, passed and repassed in their journeys to and from Canada. The prints of Willie’s shoes were traced some distance on this path, but disappeared at a wooded knoll not far off. The inmates of the cabin said a party of Indians had passed that way in the forenoon. With great zeal they joined in the search, taking with them horns and dogs. Charley ran hither and thither, in an agony of remorse and terror, screaming, “Willie! Willie!” Horns were blown with all the strength of manly lungs; but there was no answer,—not even the illusion of an echo. All agreed in thinking that the lost boy had been on the Indian trail; but whether he had taken it by mistake, or whether he had been tempted aside from his path by hopes of finding prairie-dogs, was matter of conjecture. Charley was almost exhausted by fatigue and anxiety, when his father’s man guided him within sight of home, and told him to go to his mother, while he returned to give the alarm to Uncle George. This was all the unhappy brother had to tell; and during the re-

cital his voice was often interrupted by sobs, and he exclaimed, with passionate vehemence,—

“Oh, father! oh, mother! do forgive me! I did n't think I was doing wrong,—indeed, I did n't!”

With aching hearts, they tried to soothe him; but he would not be comforted.

Mr. Wharton's first impulse was to rush out in search of his lost child. But the shades of evening were close at hand, and he deemed it unsafe to leave Jenny and Mary and their little girls with no other protector than an overtired boy.

“Oh, why did I advise her to let the dear child go?” was the lamenting cry continually resounding in his heart; and the mother reproached herself bitterly that she had consented against her better judgment.

Neither of them uttered these thoughts; but remorseful sorrow manifested itself in increased tenderness toward each other and the children. When Emma was undressed for the night, the mother's tears fell fast among her ringlets; and when the father took her in his arms to carry her to the trundle-bed, he pressed her to his heart more closely than ever before; while she, all wondering at the strange tearful silence round her, began to grieve, and say,—

“I want Willie to go to bed with me. Why don't Willie come?”

Putting strong constraint upon the agony her words excited, the unhappy parents soothed her with promises until she fell into a peaceful slumber. As they turned to leave the bedroom, both looked at the vacant pillow where that other young head had reposed for years, and they fell into each other's arms and wept.

Charley could not be persuaded to go to bed till Uncle George came; and they forbore to urge it, seeing that he was too nervous and excited to sleep. Stars were winking at the sleepy flowers on the prairie, when the party returned with a portion of the cattle, and

no tidings of Willie. Uncle George's mournful face revealed this, before he exclaimed,—

“Oh, my poor sister! I shall never forgive myself for not going with your boys. But the cabin was in plain sight, and the distance so short I thought I could trust Charley.”

“Oh, don't, uncle! don't!” exclaimed the poor boy. “My heart will break!”

A silent patting on the head was the only answer; and Uncle George never reproached him afterward.

Neither of the distressed parents could endure the thoughts of discontinuing the search till morning. A wagon was sent for the miller and his men, and, accompanied by them, Mr. Wharton started for the Indian trail. They took with them lanterns, torches, and horns, and a trumpet, to be sounded as a signal that the lost one was found. The wretched mother traversed the piazza slowly, gazing after them, as their torches cast a weird, fantastic light on the leafless trees they passed. She listened to the horns resounding in the distance, till the *tremolo* motion they imparted to the air became faint as the buzz of insects. At last, Charles, who walked silently by her side, was persuaded to go to bed, where, some time after midnight, he cried himself into uneasy, dreamful slumber. But no drowsiness came to the mother's eyelids. All night long she sat watching at the bedroom-window, longing for the gleam of returning torches, and the joyful *fanfare* of the trumpet. But all was dark and still. Only stars, like the eyes of spirits, looked down from the solemn arch of heaven upon the desolate expanse of prairie.

The sun had risen when the exploring party returned, jaded and dispirited, from their fruitless search. Uncle George, who went forth to meet them, dreaded his sister's inquiring look. But her husband laid his hand tenderly on her shoulder, and said,—

“Don't be discouraged, Jenny. I don't

believe any harm has happened to him. There are no traces of wild beasts."

"But the Indians," she murmured, faintly.

"I am glad to hear you say that," said Uncle George. "My belief is that he is with the Indians; and for that reason, I think we have great cause to hope. Very likely he saw the Indians, and thought Wik-a-nee was with them, and so went in pursuit of her. If she, or any of her relatives, are with those hunters, they will be sure to bring back our little Willie; for Indians are never ungrateful."

The mother's fainting heart caught eagerly at this suggestion; and Charley felt so much relieved by it that he was on the point of saying he was sure it must have been either Moppet or a dogs' town-meeting that lured Willie from the path he had pointed out to him. But everybody looked too serious for jesting; and memory of his own fault quickly repressed the momentary elasticity.

Countless were the times that the bereaved parents cast wistful glances over the prairie, with a vague hope of deservyng Indians returning with their child. The search was kept up for days and weeks. All the neighbors, within a circuit of fifteen miles, entered zealously into the work, and explored prairie and forest far and wide. At last these efforts were given up as useless. Still Uncle George held out the cheerful prospect that the Indians would bring him, when they returned from their long hunting-excursion; and with this the mother tried to sustain her sinking hopes. But month after month she saw the snowy expanse of prairie gleaming in the moonlight, and no little foot-step broke its untrodden crust. Spring returned, and the sea of flowers again rippled in waves, as if Flora and her train had sportively taken lessons of the water-nymphs; but no little hands came laden with blossoms to heap in Emma's lap. The birds twittered and warbled, but the responsive whistle of

the merry boy was silent; only its echo was left in the melancholy halls of memory. His chair and plate were placed as usual, when the family met at meals. At first this was done with an undefined hope that he might come before they rose from table, and afterward they could not bear to discontinue the custom, because it seemed like acknowledging that he was entirely gone.

Mrs. Wharton changed rapidly. The light of her eyes grew dim, the color faded from her cheeks, and the tones of her once cheerful voice became plaintive as the "Light of Other Days." Always, from the depths of her weary heart, came up the accusing cry, "Oh, why did I let him go?" She never reproached others; but all the more bitterly did Mr. Wharton, Uncle George, and above all poor Charley, reproach themselves. The once peaceful cabins were haunted by a little ghost, and the petted child became an accusing spirit. Alas! who is there that is not chained to some rock of the past, with the vulture of memory tearing at his vitals, screaming forever in the ear of conscience? These unavailing regrets are inexorable as the whip of the Furies.

Four years had passed away, when some fur-traders passed through that region, and told of a white boy they had seen among the Pottawatomie Indians. Everybody had heard the story of Willie's mysterious disappearance, and the tidings were speedily conveyed to the Wharton family. They immediately wrote to the United-States Agent among that tribe. After waiting awhile, they all became restless. One day, Uncle George said to his sister,—

"Jenny, I have never forgiven myself for leaving your boys to take care of themselves, that fatal day. I cannot be easy. I must go in search of Willie."

"Heaven bless you!" she replied. "My dear James has just been talking of starting on the same journey. I confess I want some one to go and look for the poor boy; but it seems to me selfish; for it is a long and difficult jour-

ney, and may bring fresh misfortunes upon us."

After some friendly altercation between Mr. Wharton and the brother, as to which should go, it was decided that George should have his way; and brave, unselfish Aunt Mary uttered no word of dissuasion. He started on his arduous journey, cheered by hope, and strong in a generous purpose. It seemed long before a letter was received from him, and when it came, its contents were discouraging. The Indian Agent said he had caused diligent search to be made, and he was convinced there was no white child among the tribes in that region. Uncle George persevered in efforts to obtain some clue to the report which had induced him to travel so far. But after several weeks, he was obliged to return alone, and without tidings.

Mrs. Wharton's hopes had been more excited than she was herself aware of, and she vainly tried to rally from the disappointment. This never-ending uncertainty, this hope forever deferred, was harder to endure than would have been the knowledge that her dear son was dead. She thought it would be a relief, even if fragments of his clothes should be found, showing that he had been torn to pieces by wild beasts; for then she would have the consolation of believing that her darling was with the angels. But when she thought of him hopelessly out of reach, among the Indians, imagination conjured up all manner of painful images. Deeper and deeper depression overshadowed her spirits and seriously impaired her health. She was diligent in her domestic duties, careful and tender of every member of her household, but everything wearied her. Languidly she saw the seasons come and go, and took no pleasure in them. A village was growing up round her; but the new-comers, in whom she would once have felt a lively interest, now flitted by her like the shadows in a magic-lantern. "Poor woman!" said the old settlers to the new ones. "She is not what she was. She is heart-broken."

Eight years more passed away, and Mrs. Wharton, always feeble, but never complaining, continued to perform a share of household work, with a pensive resignation which excited tenderness in her family and inspired even strangers with pitying deference. Her heart-strings had not broken, but they gradually withered and dried up, under the blighting influence of this life-long sorrow. It was mild October weather, when she lay down to rise no more. Emma had outgrown the trundle-bed, and no one occupied it; but it remained in the old place. When they led her into the bedroom for the last time, she asked them to draw it out, that she might look upon Willie's pillow once more. Memories of her fair boy sleeping there in the moonlight came into her soul with the vividness of reality. Her eyes filled with tears, and she seemed to be occupied with inward prayer. At a signal from her, the husband and brother lifted her tenderly, and placed her in the bed, which Aunt Mary had prepared. The New Testament was brought, and Mr. Wharton read the fourteenth chapter of John. As they closed the book, she said faintly, "Sing, 'I'm going home.'" It was a Methodist hymn, learned in her youth, and had always been a favorite with her. The two families had often sung it together on Sabbath days, exciting the wonderment of the birds in the stillness of the prairie. They now sang it with peculiar depth of feeling; and as the clear treble of Aunt Mary's voice, and the sweet childlike tones of Emma, followed and hovered over the clear, strong tenor of Uncle George, and the deep bass of Mr. Wharton, the invalid smiled serenely, while her attenuated hand moved to the measure of the music.

She slept much on that and the following day, and seemed unconscious of all around her. On the third day, her watchful husband noticed that her countenance lighted up suddenly, like a landscape when clouds pass from the sun.

This was followed by a smile expressive of deep inward joy. He stooped down and whispered, —

“What is it, dear?”

She looked up, with eyes full of interior light, and said, —

“Our Willie!”

She spoke in tones stronger than they had heard from her for several days; and after a slight pause, she added, —

“Don’t you see him? Wik-a-nee is with him, and he is weaving a string of the Guinea-peas in her hair. He wears an Indian blanket; but they look happy, there where yellow leaves are falling and the bright waters are sparkling.”

“It is a flood of memory,” said Mr. Wharton, in a low tone. “She recalls the time when Wik-a-nee was so pleased with the Guinea-peas that Willie gave her.”

“She has wakened from a pleasant dream,” said Uncle George, with the same subdued voice. “It still remains with her, and the pictures seem real.”

The remarks were not intended for her ear, but she heard them, and murmured, —

“No, — not a dream. Don’t you see them?”

They were the last words she ever uttered. She soon dozed away into apparent oblivion; but twice afterward, that preternatural smile illumined her whole countenance.

At that same hour, hundreds of miles away, on the side of a wooded hill, mirrored in bright waters below, sat a white lad with a brown lassie beside him, among whose black shining tresses he was weaving strings of scarlet seeds. He was clothed with an Indian blanket, and she with a skirt of woven grass. Above them, from a tree glorious with sunshine, fell a golden shower of autumn leaves. They were talking together in some Indian dialect.

“A-lee-lah,” said he, “your mother always told me that I gave you these red seeds when I was a little boy. I wonder where I was then. I wish I knew. I never understood half she told

me about the long trail. I don’t believe I could ever find my way.”

“Don’t go!” said his companion, pleadingly. “The sun will shine no more on A-lee-lah’s path.”

He smiled and was silent for a few minutes, while he twined some of the scarlet seeds on grasses round her wrist. He revealed the tenor of his musings by saying, —

“A-lee-lah, I wish I could see my mother. Your mother told me she had blue eyes and pale hair. I don’t remember ever seeing a woman with blue eyes and pale hair.”

Suddenly he started.

“What is it?” inquired the young girl, springing to her feet.

“My mother!” he exclaimed. “Don’t you see her? She is smiling at me. How beautiful her blue eyes are! Ah, now she is gone!” His whole frame quivered with emotion, as he cried out, in an agony of earnestness, “I want to go to my mother! I *must* go to my mother! Who can tell me where to find my mother?”

“You have looked into the Spirit-Land,” replied the Indian maiden, solemnly.

Was the mighty power of love, in that dying mother’s heart, a spiritual force, conveying her image to the mind of her child, as electricity transmits the telegram? Love photographs very vividly on the memory; when intensely concentrated, may it not perceive scenes and images unknown to the bodily eye, and, like the sunshine, under favorable circumstances, make the pictures visible? Who can answer such questions? Mysterious beyond comprehension are the laws of our complex being. The mother saw her distant son, and the son beheld his long-forgotten mother. How it was, neither of them knew or thought; but on the soul of each, in their separate spheres of existence, the vision was photographed.

In the desolated dwelling on the prairie, they were all unconscious of this magnetic transmission of intelligence

between the dying mother and her far-off child. As she lay in her coffin, they spoke soothingly to each other, that she had passed away without suffering, dreaming pleasantly of Willie and the little Indian girl. Their memories were excited to fresh activity, and the sayings and doings of Willie and the papoose were recounted for the thousandth time. Emma had no recollection of her lost brother, and the story of his adventure with Moppet always amused her young imagination. But such reminiscences never brought a smile to Charley's face. When he heard the clods fall on his mother's coffin, heavier and more dismally fell on his heart the remembrance of his broken promise, which had so dried up the fountains of her life.

Four times had the flowers bloomed above that mother's grave, and still, for her dear sake, all the memorials of her absent darling remained as she had liked to have them. The trundle-bed was never removed, the Indian basket remained under the glass in the bedroom, where his own little hands had put it, and his chair retained its place at the table. Out of the family he was nearly forgotten; but parents now and then continued to frighten truant boys by telling them of Willie Wharton, who was carried off by Indians and never heard of after.

The landscape had greatly changed since Mr. Wharton and his brother-in-law built their cabins in the wilderness. Those cabins were now sheds and kitchens appended to larger and more commodious dwellings. A village had grown up around them. On the spire of a new meeting-house a gilded fish sailed round from north to south, to the great admiration of children in the opposite school-house. The wild-flowers of the prairie were supplanted by luxuriant fields of wheat and rye, forever undulating in wave-like motion, as if Nature loved the rhythm of the sea, and breathed it to the inland grasses. Neat little Bessie was a married woman now, and presided over the young Squire's establish-

ment, in a large white house with green blinds. Charley had taken to himself a wife, and had a little Willie in the cradle, in whose infant features grandfather fondly traced some likeness to the lost one.

Such was the state of things, when Charles Wharton returned from the village-store, one day, with some articles wrapped in a newspaper from Indiana. A vague feeling of curiosity led him to glance over it, and his attention was at once arrested by the following paragraph:—

"A good deal of interest has been excited here by the appearance of a young man, who supposes himself to be twenty-three years old, evidently white, but with the manners and dress of an Indian. He says he was carried away from his home by Indians, and they have always told him he was then six years old. He speaks no English, and an Indian interpreter who is with him is so scantily supplied with words that the information we have obtained is very unsatisfactory. But we have learned that the young man is trying to find his mother. Some of our neighbors regard him as an impostor. But he does not ask for money, and there is something in his frank physiognomy calculated to inspire confidence. We therefore believe his statement, and publish it, hoping it may be seen by some bereaved family."

Charles rushed into the field, and exclaimed,—

"Father, I do believe we have at last got some tidings of Willie!"

"Where? What is it?" was the quick response.

The offered newspaper was eagerly seized, and the father's hand trembled visibly while he read the paragraph.

"We must start for Indiana directly," he said; and he walked rapidly toward the house, followed by his son.

Arriving at the gate, he paused and said,—

"But, Charles, he will have altered so much that perhaps we should n't

know him; and it may be, as the people say, that this youth is an impostor."

The young man replied, unhesitatingly, —

"I can tell whether he is an impostor. I shall know my brother."

His voice quivered a little, as he spoke the last word.

Mr. Wharton, without appearing to notice it, said, —

"You have a great deal of work on hand at this season. Would n't it be better for Uncle George and me to go?"

He answered impetuously, —

"If all my property goes to ruin, I will hunt for Willie all over the earth; so long as there is any hope of finding him. I always felt as if mother could n't forgive me for leaving him that day, though she always tried to make me think she did. And now, if we find him at last, she is not here to" —

His voice became choked.

Mr. Wharton replied, impressively, —

"She will come with him, my son. Wherever he may be, they are not divided now."

The next morning Charles started on his expedition, having made preparations for an absence of some months, if so long a time should prove necessary. The first letters received from him were tantalizing. The young man and his interpreter had gone to Michigan, in consequence of hearing of a family there who had lost a little son many years ago. But those who had seen him in Indiana described him as having brown eyes and hair, and as saying that his mother's eyes were the color of the sky. Charles hastened to Michigan. The wanderer had been there, but had left, because the family he sought were convinced he was not their son. They said he had gone to Canada, with the intention of rejoining the tribe of Indians he had left.

We will not follow the persevering brother through all his travels. Again and again he came close upon the track, and had the disappointment of arriving a little too late. On a chilly day of ad-

vanced autumn, he mounted a pony and rode toward a Canadian forest, where he was told some Indians had encamped. He tied his pony at the entrance of the wood, and followed a path through the underbrush. He had walked about a quarter of a mile, when his ears were pierced by a shrill, discordant yell, which sounded neither animal nor human. He stopped abruptly, and listened. All was still, save a slight creaking of boughs in the wind. He pressed forward in the direction whence the sound had come, not altogether free from anxiety, though habitually courageous. He soon came in sight of a cluster of wigwams, outside of which, leaning against trees, or seated on the fallen leaves, were a number of men, women, and children, dressed in all sorts of mats and blankets, some with tufts of feathers in their hair, others with bands and tassels of gaudy-colored wampum. One or two had a regal air, and might have stood for pictures of Arab chiefs or Carthaginian generals; but most of them looked squalid and dejected. None of them manifested any surprise at the entrance of the stranger. All were as grave as owls. They had, in fact, seen him coming through the woods, and had raised their ugly war-whoop, in sport, to see whether it would frighten him. It was their solemn way of enjoying fun. Among them was a youth, tanned by exposure to wind and sun, but obviously of white complexion. His hair was shaggy, and cut straight across his forehead, as Moppet's had been. Charles fixed upon him a gaze so intense that he involuntarily took up a hatchet that lay beside him, as if he thought it might be necessary to defend himself from the intruder.

"Can any of you speak English?" inquired Charles.

"Me speak," replied an elderly man.

Charles explained that he wanted to find a white young man who had been in Indiana and Michigan searching for his mother.

"*Him* pale-face," rejoined the inter-

preter, pointing to the youth, whose brown eyes glanced from one to the other with a perplexed expression.

Charles made a strong effort to restrain his impatience, while the interpreter slowly explained his errand. The pale-faced youth came toward him.

"Let me examine your right arm," said Charles.

The beaver-skin mantle was raised; and there, in a dotted outline of blue spots, was the likeness of the prairie-dog which in boyish play he had pricked into Willie's arm. With a joyful cry he fell upon his neck, exclaiming, "My brother!" The interpreter repeated the word in the Indian tongue. The youthful stranger uttered no sound; but Charles felt his heart throb, as they stood locked in a close embrace. When their arms unclasped, they looked earnestly into each other's faces. That sad memory of the promise made to their gentle mother, and so thoughtlessly broken, brought tears to the eyes of the elder brother; but the younger stood apparently unmoved. The interpreter, observing this, said, —

"Him sorry-glad; but red man he no cry."

There was much to damp the pleasure of this strange interview. The uncouth costume, and the shaggy hair falling over the forehead, gave Willie such a wild appearance, it was hard for Charles to realize that they were brothers. Inability to understand each other's language created a chilling barrier between them. Charles was in haste to change his brother's dress, and acquire a stock of Indian words. The interpreter was bound farther north; but he agreed to go with them three days' journey, and teach them on the way. They were merely guests at the encampment, and no one claimed a right to control their motions. Charles distributed beads among the women and pipes among the men; and two hours after he had entered the wood, he was again mounted on his pony, with William and the interpreter walking be-

side him. As he watched his brother's erect figure striding along, with such a bold, free step, he admitted to himself that there were some important compensations for the deficiencies of Indian education.

Languages are learned rapidly, when the heart is a pupil. Before they parted from the interpreter, the brothers were able, by the aid of pantomime, to interchange various skeletons of ideas, which imagination helped to clothe with bodies. At the first post-town, a letter was despatched to their father, containing these words: "I have found him. He is well, and we are coming home. Dear Lucy must teach baby Willie to crow and clap his hands. God bless you all! Charley."

They pressed forward as fast as possible, and at the last stage of their journey travelled all night; for Charles had a special reason for wishing to arrive at the homestead on the following day. The brothers were now dressed alike, and a family-likeness between them was obvious. Willie's shaggy hair had been cut, and the curtain of dark brown locks being turned aside revealed a well-shaped forehead whiter than his cheeks. He had lost something of the freedom of his motions; for the new garments sat uneasily upon him, and he wore them with an air of constraint.

The warm golden light of the sun had changed to silvery brightness, and the air was cool and bracing, when they rode over the prairie so familiar to the eye of Charles, but which had lost nearly all the features that had been impressed on the boyish mind of William. At a little distance from the village they left their horses and walked across the fields to the back-door of their father's house; for they were not expected so soon, and Charles wished to take the family by surprise. It was Thanksgiving day. Wild turkeys were prepared for roasting, and the kitchen was redolent of pies and plum-pudding. When they entered, no one was there but an old

woman hired to help on festive occasions. She uttered a little cry when she saw them; but Charles put his finger to his lip, and hurried on to the family sitting-room. All were there, — Father, Emma, Uncle George, Aunt Mary, Bessie and her young Squire, Charles's wife, baby, and all. There was a universal rush, and one simultaneous shout of, "Willie! Willie!" Charles's young wife threw herself into his arms; but all the rest clustered round the young stranger, as the happy father clasped him to his bosom. When the tumult of emotion had subsided a little, Charles introduced each one separately to his brother, explaining their relationship as well as he could in the Indian dialect. Their words were unintelligible to the wanderer, but he understood their warmth of welcome, and said, —

"Me tank. Me no much speak."

Mr. Wharton went into the bedroom and returned with a morocco case, which he opened and placed in the stranger's hand, saying, in a solemn tone, —

"Your mother."

Charles, with a tremor in his voice, repeated the word in the Indian tongue. Willie gazed at the blue eyes of the miniature, touched them, pointed to the sky, and said, —

"Me see she, time ago."

All supposed that he meant the memories of his childhood. But he in fact referred to the vision he had seen four years before, as he explained to them afterward, when he had better command of their language.

The whole family wept as the miniature passed from hand to hand, and, with a sudden outburst of grief, Charles exclaimed, —

"Oh, if *she* were only here with us this happy day!"

"My son, she *is* with us," said his father, impressively.

William was the only one who seemed unmoved. He did not remember his mother, except as he had seen her in

that moment of clairvoyance; and it had been part of his Indian training to suppress emotion. But he put his hand on his heart, and said, —

"Me no much speak."

When the little red-and-yellow basket was brought forward, it awakened no recollections in his mind. They pointed to it, and said, "Wik-a-nee, Moppet"; but he made no reponse.

His father eyed him attentively, and said, —

"It surely *must* be our Willie. I see the resemblance to myself. We cannot be mistaken."

"I *know* he is our Willie," said Charles; and removing his brother's coat, he showed what was intended to be the likeness of a prairie-dog. His father and Uncle George remembered it well; and it was a subject of regret that William could not be made to understand any jokes about his boyish state of mind on that subject. Mr. Wharton pointed to the chair he used to occupy, and said, —

"It seems hardly possible that this tall stranger can be the little Willie who used to sit there. But it *is* our Willie. God be praised!" He paused a moment, and added, "Before we partake of our Thanksgiving dinner, let us all unite in thanks to our Heavenly Father; 'for this my son was dead and is alive again, he was lost and is found.'"

They all rose, and he offered a prayer, to which heart-felt emotion imparted eloquence.

Charles had taken every precaution to have his brother appear as little as possible like a savage, when he restored him to his family; and now, without mentioning that he would like raw meat better than all their dainties, he went to the kitchen to superintend the cooking of some Indian succotash, and buffalo-steak *very* slightly broiled.

For some time, the imperfect means of communicating by speech was a great impediment to confidential intercourse, and a drawback upon their happiness. Emma, whose imagination had been a

good deal excited by the prospect of a new brother, was a little disappointed. In her own private mind, she thought she should prefer for a brother a certain Oberlin student, with whom she had danced the last Thanksgiving evening. Bessie, always a stickler for propriety, ventured to say to her mother that she hoped he would learn to use his knife and fork, like other people. But to older members of the family, who distinctly remembered Willie in his boyhood, these things seemed unimportant. It was enough for them that the lost treasure was found.

The obstacle created by difference of language disappeared with a rapidity that might have seemed miraculous, were it not a well-known fact that one's native tongue forgotten is always easily restored. It seems to remain latent in the memory, and can be brought out by favorable circumstances, as writing with invisible ink reappears under the influence of warmth. Tidings of the young man's restoration to his family spread like fire on the prairie. People for twenty miles round came to see the Willie Wharton of whose story they had heard so much. Children were disappointed to find that he was not a little rosy-cheeked boy, such as had been described to them. Some elderly people, who prided themselves on their sagacity, shook their heads when they observed his rapid improvement in English, and said to each other, —

“It a'n't worth while to disturb neighbor Wharton's confidence; but depend upon it, that fellow's an impostor. As for the mark on his arm that they call a prairie-dog, it looks as much like anything else that has legs.”

To the family, however, every week brought some additional confirmation that the stranger was their own Willie. By degrees, he was able to make them understand the outlines of his story. He did not remember anything about parting from his brother on that disastrous day, and of course could not explain what had induced him to turn

aside to the Indian trail. He said the Indians had always told him that a squaw, whose pappoose had died, took a fancy to him, and decoyed him away; and that afterward, when he cried to go back, they would not let him go. From them he also learned that he called himself six years old, at the time of his capture; but his name had been gradually forgotten, both by himself and them. He wandered about with that tribe eight summers and winters. Sometimes, when they had but little food, he suffered with hunger; and once he was wounded by a tomahawk, when they had a fight with some hostile tribe; but they treated him as well as they did their own children. He became an expert hunter, thought it excellent sport, and forgot that he was not an Indian. His squaw-mother died, and, not long after, the tribe went a great many miles to collect furs. In the course of this journey they encountered various tribes of Indians. One night they encamped near some hunters who spoke another dialect, which they could partly understand. Among them was a woman, who said she knew him. She told him his mother was a white woman, with eyes blue as the sky, and that she was very good to her little pappoose, when she lost her way on the prairie. She wanted her husband to buy him, that they might carry him back to his mother. He bought him for ten gallons of whiskey, and promised to take him to his parents the next time the tribe travelled in that direction,—because, he said, their little pappoose had liked them very much.

“We remember her very well,” said Mr. Wharton. “Her name was Wik-a-nee.”

“That not *name*,” replied William. “Wik-a-nee mean little small thing.”

“You were a small boy when you found the pappoose on the prairie,” rejoined his father. “You took a great liking to her, and said she was *your* little girl. When she went away, you gave her your box of Guinea-peas.”

"Guinea-peas? What that?" inquired the young man.

"They are red seeds with black spots on them," replied his father. "Emma, I believe you have some. Show him one."

The moment he saw it, he exclaimed,—

"Haha! A-lee-lah show me Guinea-peas. Her say me give she."

"Then you know Wik-a-nee?" said his father, in an inquiring tone.

The wanderer had acquired the gravity of the Indians. He never laughed, and rarely smiled. But a broad smile lighted up his frank countenance, as he answered,—

"Me know A-lee-lah very well. She not Wik-a-nee now."

Then he became grave again, and told how he was twining the red seeds in A-lee-lah's hair, when his mother came and looked at him with great blue eyes and smiled. Most of his auditors thought he was telling a dream. But Mr. Wharton said to his oldest son,—

"I told you, Charles, that mother and son were not separated now."

William seemed perplexed by this remark; but he comprehended in part, and said,—

"Me see into Spirit-Land."

When asked why he had not started in search of his mother then, he replied,—

"A-lee-lah's father, mother die. A-lee-lah say not go. Miles big many. Me not know the trail. But Indians go hunt fur. Me go. Me sleep. Me dream mother come, say go home. Me ask where mother? Charles come. Him say brother."

The little basket was again brought forth, and Mr. Wharton said,—

"Wik-a-nee gave you this, when she went away; but when we showed it to you, you did not remember it."

He took it and looked at it, and said,—

"Me not remember"; but when Emma would have put it away, he held it fast; and that night he carried it with him to his chamber.

Some degree of restlessness had been observed in him previously to this conversation. It increased as the weeks passed on. He became moody, and liked to wander off alone, far from the settlement. The neighbors said to each other,— "He will never be contented. He will go back to the Indians." The family feared it also. But Uncle George, who was always prone to look on the bright side of things, said,—

"We shall win him, if we manage right. We must n't try to constrain him. The greatest mistake we make in our human relations is interfering too much with each other's freedom. We are too apt to think *our* way is the *only* way. It's no such very great matter, after all, that William sometimes uses his fingers instead of a knife and fork, and likes to squat on the floor better than to sit in a chair. We must n't drive him away by taking too much notice of such things. Let him do just as he likes. We are all creatures of circumstances. If you and I were obliged to dance in tight boots, and make calls in white kid gloves, we should feel like fettered fools."

"And *be* what we felt like," replied Mr. Wharton; "and the worst part of it would be, we should n't long have sense enough to *feel* like fools, but should fall to pitying and despising people who were of any use in the world. But really, brother George, to have a son educated by Indians is not exactly what one could wish."

"Undoubtedly not, in many respects; but it has its advantages. William has already taught me much about the habits of animals and the qualities of plants. Did you ever see an eye so sure as his to measure distances, or to send an arrow to the mark? He never studied astronomy, but he knows how to make use of the stars better than we do. Last week, when we got benighted in the woods, he at once took his natural place as our leader; and how quickly his sagacity brought us out of our trouble! He will learn enough of our ways, by

degrees. But I declare I would rather have him always remain as he is than to make a city-fop of him. I once saw an old beau at Saratoga, — a forlorn-looking mortal, creeping about in stays and tight boots; and I thought I should rather be the wildest Ojibbeway that ever hunted buffaloes in a ragged blanket."

The rational policy recommended by Uncle George was carefully pursued. Everything was done to attract William to their mode of life, but no remark was made when he gave a preference to Indian customs. Still, he seemed moody, and at times sad. He carried within him a divided heart. One day, when he was sitting on a log, looking absent and dejected, his father put his hand gently upon his shoulder, and said, —

"Are you not happy among us, my son? Don't you like us?"

"Me like very much," was the reply. "Me glad find father, brother. All good."

He paused a moment, and then added, —

"A-lee-lah's father, mother be dead. A-lee-lah alone. A-lee-lah did say not go. Me promise come back soon."

Mr. Wharton was silent. He was thinking what it was best to say. After waiting a little, William said, —

"Father, me not remember what is English for squaw."

"Woman," replied Mr. Wharton.

"Not that," rejoined the young man.

"What call Charles's squaw?"

"His wife," was the reply.

"Father, A-lee-lah be my wife. Me like bring A-lee-lah. Me fraid father not like Indian."

Mr. Wharton placed his hand affectionately on his child's head, and said, —

"Bring A-lee-lah, in welcome, my son. Your mother loved her, when she was Wik-a-nee; and we will all love her now. Only be sure and come back to us."

The brown eyes looked up and thanked him, with a glance that well repaid

the struggle those words had cost the wise father.

So the uncivilized youth again went forth into the wilderness, saying, as he parted from them, "Me bring A-lee-lah." They sent her a necklace and bracelets of many-colored beads, and bade him tell her that they remembered Wik-a-nee, and had always kept her little basket, and that they would love her when she came among them. Charles travelled some distance with his brother, bought a new Indian blanket for him, and returned with the garments he had worn during his sojourn at home. They felt that they had acted wisely and kindly, but it was like losing Willie again; for they all had great doubts whether he would ever return.

He was incapable of writing a letter, and months passed without any tidings of him. They all began to think that the attractions of a wild life had been strong enough to conquer his newly awakened natural affections. Uncle George said, —

"If it prove so, we shall have the consciousness of having done right. We could not have kept him against his will, even if we had wished to do it. If anything will win him to our side, it will be the influence of love and freedom."

"They are strong agencies, and I have great faith in them," replied Mr. Wharton.

Summer was far advanced, when a young man and woman in Indian costume were seen passing through the village, and people said, "There is William Wharton come back again!" They entered the father's house like strange apparitions. Baby Willie was afraid of them, and toddled behind his mother, to hide his face in the folds of her gown. All the other members of the family had talked over the subject frequently, and had agreed how they would treat Wik-a-nee, if she came among them again. So they kissed them both, as they stood there in their Indian blankets, and said, "Welcome home, brother!"

Welcome, sister!" A-lee-lah looked at them timidly, with her large moonlight eyes, and said, "Me no speak." Mr. Wharton put his hand gently on her head, and said, "We will love you, my daughter." William translated the phrase to her, heaved a sigh, which seemed a safety-valve for too much happiness, and replied, "Me thank father, brother, sister, all." And A-lee-lah said, "Me tank," as her mother had said, in years long gone by.

All felt desirous to remove from her eyebrows the mass of straight black hair, which she considered extremely becoming, but which they regarded as a great disfigurement to her really handsome face. However, no one expressed such an opinion, by word or look. They had previously agreed not to manifest any distaste for Indian fashions.

Mr. Wharton, apart, remarked to Charles,—

"When you were a boy, you said Moppet would be pretty, if she wore her hair like folks. It was true then, and is still more true now."

"Let us have patience, and we shall see her handsome face come out of that cloud by-and-by," rejoined Uncle George. "If we prove that we love her, we shall gain influence over her. Wild-flowers, as well as garden-flowers, grow best in the sunshine."

Emma tried to conform to the wishes of the family in her behavior; but she did not feel quite sure that she should ever be able to love the young Indian. It was not agreeable to have a sister who was clothed in a blanket and wore her hair like a Shetland pony. Cousin Bessie thought stockings, long skirts, and a gown ought to be procured for her immediately. Her father said,—

"Let me tell you, Bessie, it would be far more rational for you to follow *her* fashion about short skirts. I should like to see *you* step off as she does. She could n't move so like a young deer, if she had long petticoats to trammel her limbs."

But Bessie confidentially remarked to

Cousin Emma that she thought her father had some queer notions; to which Emma replied, that, for her part, she thought A-lee-lah ought to dress "like folks," as Charley used to say, when he was a boy. They could not rest till they had made a dress like their own, and had coaxed William to persuade her to wear it. In a tone of patient resignation, she at last said, "Me try." But she was evidently very uncomfortable in her new habiliments. She often wriggled her shoulders, and her limbs were always getting entangled in the folds of her long, full skirts. She finally rebelled openly, and, with an emphatic "Me no like," cast aside the troublesome garments and resumed her blanket.

"I suppose she felt very much as I should feel in tight boots and white kid gloves," said Uncle George. "You will drive them away from us, if you interfere with them so much."

It was agreed that Aunt Mary would understand how to manage them better than the young folks did; and the uncivilized couple were accordingly invited to stay at their uncle's house. Emma cordially approved of this arrangement. She told Bessie that she did hope Aunt Mary would make them more "like folks," before the Oberlin student visited the neighborhood again; for she did n't know what he *would* think of some of their ways. Bessie said,—

"I feel as if I ought to invite William and his wife to dine with us; but if any of my husband's family should come in, I should feel *so* mortified to have them see a woman with a blanket over her shoulders sitting at my table! Besides, they like raw meat, and that is dreadful."

"Certainly it is not pleasant," replied her father; "but I once dined in Boston, at a house of high civilization, where the odor of venison and of Stilton cheese produced much more internal disturbance than I have ever experienced from any of their Indian messes."

This philosophical way of viewing the subject was thought by some of the neighbors to be assumed, as the best mode of concealing wounded pride. They said, in compassionate tones, that they really did pity the Whartons; for, let them say what they would, it must be dreadfully mortifying to have that squaw about. But if such a feeling was ever remotely hinted to Uncle George, he quietly replied, —

“So far from feeling ashamed of A-lee-lah, we are truly grateful to her; and we are deeply thankful that William married her. His love for her safely bridges over the wide chasm between his savage and his civilized life. Without her, he could not feel at home among us; and the probability is that we should not be able to keep him. By help of his Indian wife, I think we shall make him contented, and finally succeed in winning them over to our mode of life. Meanwhile, they are happy in their own way, and we are thankful for it.”

The more enlightened portion of the community commended these sentiments as liberal and wise; but some, who were not distinguished either for moral or intellectual culture, said, sneeringly, —

“They talk about his Indian wife! I suppose they jumped over a stick together in some dirty wigwam, and that they call being married!”

Uncle George and Aunt Mary had been so long in the habit of regulating their actions by their own principles, that they scarcely had a passing curiosity to know what such neighbors thought of their proceedings. They never wavered in their faith that persevering kindness and judicious non-interference would gradually produce such transformations as they desired. No changes were proposed, till they and their untutored guests had become familiarly acquainted and mutually attached. At first, the wild young couple were indisposed to stay much in the house. They wandered far off into the woods, and spent most of their time in making mats and baskets. As these were always ad-

mired by their civilized relatives, and gratefully accepted, they were happier than millionnaires. They talked to each other altogether in the Indian dialect, which greatly retarded their improvement in English. But it was thus they had talked when they first made love, and it was, moreover, the only way in which their tongues could move unfettered. Her language no longer sounded to William like “lingo,” as he had styled it in the boyish days when he found her wandering alone on the prairie. No utterance of the human soul, whether in the form of language or belief, is “lingo,” when we stand on the same spiritual plane with the speaker, and thus can rightly understand it.

The first innovation in the habits of the young Indian was brought about by the magical power of two side-combs ornamented with colored glass. At the first sight of them, A-lee-lah manifested admiration almost equal to that which the scarlet peas had excited in her childish mind. Aunt Mary, perceiving this, parted the curtain of raven hair, and fastened it on each side with the gaudy combs. Then she led her to the glass, put her finger on the uncovered brow, and said, —

“A-lee-lah has a pretty forehead. Aunt Mary likes to see it so.”

William translated this to his simple wife, who said, —

“Aunt Mary good. Me tank.”

Mr. Wharton happened to come in, and he kissed the brown forehead, saying, —

“Father likes to have A-lee-lah wear her hair so.”

The conquest was complete. Henceforth, the large, lambent eyes shone in their moonlight beauty without any overhanging cloud.

Thus adroitly, day by day, they were guided into increasing conformity with civilized habits. After a while, it was proposed that they should be married according to the Christian form, as they had previously been by Indian ceremonies. No attempt was made to offer

higher inducements than the exhibition of wedding-finery, and the assurance that all William's relatives would be made very happy, if they would conform to the custom of his people. The bride's dress was a becoming hybrid between English and Indian costumes. Loose trousers of emerald-green merino were fastened with scarlet cord and tassels above gaiters of yellow beaver-skin thickly embroidered with beads of many colors. An upper garment of scarlet merino was ornamented with gilded buttons, on each of which was a shining star. The short, full skirt of this garment fell a little below the knee, and the border was embroidered with gold-colored braid. At the waist, it was fastened with a green morocco belt and gilded buckle. The front-hair, now accustomed to be parted, had grown long enough to be becomingly arranged with the jewelled side-combs, which she prized so highly. The long, glossy, black tresses behind were gathered into massive braids, intertwined on one side with narrow scarlet ribbon, and on the other with festoons of the identical Guinea-peas which had so delighted her when she was Wik-a-nee. The braids were fastened by a comb with gilded points, which made her look like a crowned Indian queen. Emma was decidedly struck by her picturesque appearance. She said privately to Cousin Bessie, —

"I should like such a dress myself, if other folks wore it; but don't you tell that I said so."

Charles smiled, as he remarked to his wife, —

"The grub has come out of her blanket a brilliant butterfly. Uncle George and Aunt Mary are working miracles."

After the wedding-ceremony had been performed, Mr. Wharton kissed the bride, and said to the bridegroom, —

"She is handsome as a wild tulip."

"Bright as the torch-flower of the prairies," added Uncle George.

When William made these compli-

ments intelligible to A-lee-lah, she maintained her customary Indian composure of manner, but her brown cheeks glowed like an amber-colored bottle of claret in the sunshine. William, though he deemed it unmanly to give any outward signs of satisfaction, was inwardly proud of his bride's finery, and scarcely less pleased with his own yellow vest, blue coat, and brass buttons; though he preferred above them all the yellow gaiters, which A-lee-lah had skilfully decorated with tassels and bright-colored wampum.

The next politic movement was to build for them a cabin of their own, taking care to preserve an influence over them by frequent visits and kind attentions. They would have been very happy in the freedom of their new home, had it not been for the intrusion of many strangers, who came to look upon them from motives of curiosity. The universal Yankee nation is a self-elected Investigating Committee, which never adjourns its sessions. This is amusing, and perhaps edifying, to their own inquiring minds; but William and A-lee-lah had Indian ideas of natural politeness, which made them regard such invasions as a breach of good manners.

By degrees, however, the young couple became an old story, and were left in comparative peace. The system of attraction continued to work like a charm. As A-lee-lah was never annoyed by any assumption of superiority on the part of her white relatives, she took more and more pains to please them. This was manifested in many childlike ways, which were extremely winning, though they were sometimes well calculated to excite a smile. As years passed on, they both learned to read and write English very well. William worked industriously on his farm, though he never lost his predilection for hunting. A-lee-lah became almost as skilful at her needle as she was at weaving baskets and wampum. Her talk, with its slightly foreign arrangement, was as pretty as the unformed utterance

of a little child. Her taste for music improved. She never attained to Italian embroidery of sound, still less to German intonations of intellect; but the rude, monotonous Indian chants gave place to the melodies of Scotland, Ireland, and Ethiopia. Her taste in dress changed also. She ceased to delight in garments of scarlet and yellow, though she retained a liking for bits of bright, warm color. Nature guided her taste correctly in this, for they harmonized admirably with her brown complexion and lustrous black hair. She always wore skirts shorter than others, and garments too loose to impede freedom of motion. Bonnets were her utter aversion, but she consented to wear a woman's riding-hat with a drooping feather. Those outside the family learned to call her Mrs. William Wharton; and strangers who visited the village were generally attracted by her handsome

person and the simple dignity of her manners. Her father-in-law regarded her with paternal affection, not un-mixed with pride.

"Who, that did n't know it," said he, "could be made to believe this fine-looking woman was once little Moppet, who coiled herself up to sleep on the floor of our log-cabin?"

Uncle George replied, —

"You know I always told you it was the nature of all sorts of flowers to grow, if they had plenty of genial air and sunshine."

As for A-lee-lah's little daughter, Jenny, she is universally admitted to be the prettiest and brightest child in the village. Mr. Wharton says her busy little mind makes him think of his Willie, at her age; and Uncle Charles says he has no fault to find with her, for she has her mother's beautiful eyes, and wears her hair "like folks."

---

### A CALL TO MY COUNTRY-WOMEN.

In the newspapers and magazines you shall see many poems—written by women who meekly term themselves weak, and modestly profess to represent only the weak among their sex — tunefully discussing the duties which the weak owe to their country in days like these. The invariable conclusion is, that, though they cannot fight, because they are not men, — or go down to nurse the sick and wounded, because they have children to take care of, — or write effectively, because they do not know how, — or do any great and heroic thing, because they have not the ability, — they can pray; and they generally do close with a melodious and beautiful prayer. Now praying is a good thing. It is, in fact, the very best thing in the world to do, and there is no danger of our having too much of it; but if

women, weak or strong, consider that praying is all they can or ought to do for their country, and so settle down contented with that, they make as great a mistake as if they did not pray at all. True, women cannot fight, and there is no call for any great number of female nurses; notwithstanding this, I believe, that, to-day, the issue of this war depends quite as much upon American women as upon American men, — and depends, too, not upon the few who write, but upon the many who do not. The women of the Revolution were not only Mrs. Adams, Mrs. Reed, and Mrs. Schuyler, but the wives of the farmers and shoemakers and blacksmiths everywhere. It is not Mrs. Stowe, or Mrs. Howe, or Miss Stevenson, or Miss Dix, alone, who is to save the country, but the thousands upon thousands who are

at this moment darning stockings, tending babies, sweeping floors. It is to them I speak. It is they whom I wish to get hold of; for in their hands lies slumbering the future of this nation.

The women of to-day have not come up to the level of to-day. They do not stand abreast with its issues. They do not rise to the height of its great argument. I do not forget what you have done. I have beheld, O Dorcases, with admiration and gratitude, the coats and garments, the lint and bandages, which you have made. Tender hearts, if you could have finished the war with your needles, it would have been finished long ago; but stitching does not crush rebellion, does not annihilate treason, or hew traitors in pieces before the Lord. Excellent as far as it goes, it stops fearfully short of the goal. This ought ye to do, but there are other things which you ought not to leave undone. The war cannot be finished by sheets and pillow-cases. Sometimes I am tempted to believe that it cannot be finished till we have flung them all away. When I read of the Rebels fighting bare-headed, bare-footed, haggard, and unshorn, in rags and filth,—fighting bravely, heroically, successfully,—I am ready to make a burnt-offering of our stacks of clothing. I feel and fear that we must come down, as they have done, to a recklessness of all incidentals, down to the rough and rugged fastnesses of life, down to the very gates of death itself, before we shall be ready and worthy to win victories. Yet it is not so, for the hardest fights the earth has ever known have been made by the delicate-handed and purple-robed. So, in the ultimate analysis, it is neither gold-lace nor rags that overpower obstacles, but the fiery soul that consumes both in the intensity of its furnace-heat, bending impossibilities to the ends of its passionate purpose.

This soul of fire is what I wish to see kindled in our women,—burning white and strong and steady, through all weakness, timidity, vacillation, treachery in

Church or State or press or parlor, scorching, blasting, annihilating whatsoever loveth and maketh a lie,—extinguished by no tempest of defeat, no drizzle of delay, but glowing on its steadfast path till it shall have cleared through the abomination of our desolation a highway for the Prince of Peace.

O my country-women, I long to see you stand under the time and bear it up in your strong hearts, and not need to be borne up through it. I wish you to stimulate, and not crave stimulants from others. I wish you to be the consolers, the encouragers, the sustainers, and not tremble in perpetual need of consolation and encouragement. When men's brains are knotted and their brows corrugated with fearful looking for and hearing of financial crises, military disasters, and any and every form of national calamity consequent upon the war, come you out to meet them, serene and smiling and unafraid. And let your smile be no formal distortion of your lips, but a bright ray from the sunshine in your heart. Take not acquiescently, but joyfully, the spoiling of your goods. Not only look poverty in the face with high disdain, but embrace it with gladness and welcome. The loss is but for a moment; the gain is for all time. Go farther than this. Consecrate to a holy cause not only the incidentals of life, but life itself. Father, husband, child,—I do not say, Give them up to toil, exposure, suffering, death, without a murmur;—that implies reluctance. I rather say, Urge them to the offering; fill them with sacred fury; fire them with irresistible desire; strengthen them to heroic will. Look not on details, the present, the trivial, the fleeting aspects of our conflict, but fix your ardent gaze on its eternal side. Be not resigned, but rejoicing. Be spontaneous and exultant. Be large and lofty. Count it all joy that you are reckoned worthy to suffer in a grand and righteous cause. Give thanks evermore that you were born in this time;

and because it is dark, be you the light of the world.

And follow the soldier to the battlefield with your spirit. The great army of letters that marches Southward with every morning sun is a powerful engine of war. Fill them with tears and sighs, lament separation and suffering, dwell on your loneliness and fears, mourn over the dishonesty of contractors and the incompetency of leaders, doubt if the South will ever be conquered, and foresee financial ruin, and you will damp the powder and dull the swords that ought to deal death upon the foe. Write as tenderly as you will. In camp, the roughest man idealizes his far-off home, and every word of love uplifts him to a lover. But let your tenderness unfold its sunny side, and keep the shadows for His pity who knows the end from the beginning, and whom no foreboding can dishearten. Glory in your tribulation. Show your soldier that his unflinching courage, his undying fortitude, are your crown of rejoicing. Incite him to enthusiasm by your inspiration. Make a mock of your discomforts. Be unwearying in details of the little interests of home. Fill your letters with kittens and Canaries, with baby's shoes, and Johnny's sled, and the old cloak which you have turned into a handsome gown. Keep him posted in all the village-gossip, the lectures, the courtings, the sleigh-rides, and the singing-schools. Bring out the good points of the world in strong relief. Tell every sweet and brave and pleasant and funny story you can think of. Show him that you clearly apprehend that all this warfare means peace, and that a dastardly peace would pave the way for speedy, incessant, and more appalling warfare. Help him to bear his burdens by showing him how elastic you are under yours. Hearten him, enliven him, tone him up to the true hero-pitch. Hush your plaintive *Miserere*, accept the nation's pain for penance, and commission every Northern breeze to bear a *Te Deum laudamus*.

Under God, the only question, as to whether this war shall be conducted to a shameful or an honorable close, is not of men or money or material resource. In these our superiority is unquestioned. As Wellington phrased it, there is hard pounding; but we shall pound the longest, if only our hearts do not fail us. Women need not beat their pewter spoons into bullets, for there are plenty of bullets without them. It is not whether our soldiers shall fight a good fight; they have played the man on a hundred battle-fields. It is not whether officers are or are not competent; generals have blundered nations into victory since the world began. It is whether this people shall have virtue to endure to the end,—to endure, not starving, not cold, but the pangs of hope deferred, of disappointment and uncertainty, of commerce deranged and outward prosperity checked. Will our vigilance to detect treachery and our perseverance to punish it hold out? If we stand firm, we shall be saved, though so as by fire. If we do not, we shall fall, and shall richly deserve to fall; and may God sweep us off from the face of the earth, and plant in our stead a nation with the hearts of men, and not of chickens!

O women, stand here in the breach,—for here you may stand powerful, invincible, I had almost said omnipotent. Rise now to the heights of a sublime courage,—for the hour has need of you. When the first ball smote the rocky sides of Sumter, the rebound thrilled from shore to shore, and waked the slumbering hero in every human soul. Then every eye flamed, every lip was touched with a live coal from the sacred altar, every form dilated to the stature of the Golden Age. Then we felt in our veins the pulse of immortal youth. Then all the chivalry of the ancient days, all the heroism, all the self-sacrifice that shaped itself into noble living, came back to us, poured over us, swept away the dross of selfishness and deception and petty scheming, and Patriotism rose from the swelling wave stately as a god-

dess. Patriotism, that had been to us but a dingy and meaningless antiquity, took on a new form, a new mien, a countenance divinely fair and forever young, and received once more the homage of our hearts. Was that a childish outburst of excitement, or the glow of an aroused principle? Was it a puerile anger, or a manly indignation? Did we spring up startled pigmies, or girded giants? If the former, let us veil our faces, and march swiftly (and silently) to merciful forgetfulness. If the latter, shall we not lay aside every weight, and this besetting sin of despondency, and run with patience the race set before us?

A true philosophy and a true religion make the way possible to us. The Most High ruleth in the kingdom of men, and giveth it to whomsoever He will; and He never yet willed that a nation strong in means and battling for the right should be given over to a nation weak and battling for the wrong. Nations have their future—reward and penalty—in this world; and it is as certain as God lives that Providence *and* the heaviest battalions will prevail. We have had reverses, but no misfortune hath happened unto us but such as is common unto nations. Country has been sacrificed to partisanship. Early love has fallen away, and lukewarmness has taken its place. Unlimited enthusiasm has given place to limited stolidity. Disloyalty, overawed at first into quietude, has lifted its head among us, and waxes wroth and ravening. There are dissensions at home worse than the guns of our foes. Some that did run well have faltered; some signal-lights have gone shamefully out, and some are lurid with a baleful glare. But unto this end were we born, and for this cause came we into the world. When shall greatness of soul stand forth, if not in evil times? When the skies are fair and the seas smooth, all ships sail festively. But the clouds lower, the winds shriek, the waves boil, and immediately each craft shows its quality. The deep is strown with broken

masts, parted keels, floating wrecks; but here and there a ship rides the raging sea, and flings defiance to the wind. She overlives the sea because she is sea-worthy. Not our eighty years of peace alone, but our two years of war are the touchstone of our character. We have rolled our Democracy as a sweet morsel under our tongue; we have gloried in the prosperity which it brought to the individual; but if the comforts of men minister to the degradation of man, if Democracy levels down and does not level up, if our era of peace and plenty leaves us so feeble and frivolous, so childish, so impatient, so deaf to all that calls to us from the past and entreats us in the future, that we faint and fail under the stress of our one short effort, then indeed is our Democracy our shame and curse. Let us show now what manner of people we are. Let us be clear-sighted and far-sighted to see how great is the issue that hangs upon the occasion. It is not a mere military reputation that is at stake, not the decay of a generation's commerce, not the determination of this or that party to power. It is the question of the world that we have been set to answer. In the great conflict of ages, the long strife between right and wrong, between progress and sluggardly, through the Providence of God we are placed in the van-guard. Three hundred years ago a world was unfolded for the battle-ground. Choice spirits came hither to level and intrench. Swords clashed and blood flowed, and the great reconnoissance was successfully made. Since then both sides have been gathering strength, marshalling forces, planting batteries, and to-day we stand in the thick of the fray. Shall we fail? Men and women of America, will you fail? Shall the cause go by default? When a great Idea, that has been uplifted on the shoulders of generations, comes now to its Thermopylae, its glory-gate, and needs only stout hearts for its strong hands,—when the eyes of a great multitude are turned

upon you, and the fates of dumb millions in the silent future rest with you, — when the suffering and sorrowful, the lowly, whose immortal hunger for justice gnaws at their hearts, who blindly see, but keenly feel, by their God-given instincts, that somehow you are working out their salvation, and the high-born, monarchs in the domain of mind, who, standing far off, see with prophetic eye the two courses that lie before you, one to the Uplands of vindicated Right, one to the Valley of the Shadow of Death, alike fasten upon you their hopes, their prayers, their tears, — will you, for a moment's bodily comfort and rest and repose, grind all these expectations and hopes between the upper and nether millstone? Will you fail the world in this fateful hour by your faint-heartedness? Will you fail yourself, and put the knife to your own throat? For the peace which you so dearly buy shall bring to you neither ease nor rest. You will but have spread a bed of thorns. Failure will write disgrace upon the brow of this generation, and shame will outlast the age. It is not with us as with the South. She can surrender without dishonor. She is the weaker power, and her success will be against the nature of things. Her dishonor lay in her attempt, not in its relinquishment. But we shall fail, not because of mechanics and mathematics, but because our manhood and womanhood weighed in the balance are found wanting. There are few who will not share in the sin. There are none who will not share in the shame. Wives, would you hold back your husbands? Mothers, would you keep your sons? From what? for what? From the doing of the grandest duty that ever ennobled man, to the grief of the greatest infamy that ever crushed him down. You would hold him back from prizes before which Olympian laurels fade, for a fate before which a Helot slave might cower. His country in the agony of her death-struggle calls to him for suc-

cor. All the blood in all the ages, poured out for liberty, poured out for him, cries unto him from the ground. All that life has of noble, of heroic, beckons him forward. Death itself wears for him a golden crown. Ever since the world swung free from God's hand, men have died, — obeying the blind fiat of Nature; but only once in a generation comes the sacrificial year, the year of jubilee, when men march lovingly to meet their fate and die for a nation's life. Holding back, we transmit to those that shall come after us a blackened waste. The little one that lies in his cradle will be accursed for our sakes. Every child will be base-born, springing from ignoble blood. We inherited a fair fame, and bays from a glorious battle; but for him is no background, no stand-point. His country will be a burden on his shoulders, a blush upon his cheek, a chain about his feet. There is no career for the future, but a weary effort, a long, a painful, a heavy-hearted struggle to lift the land out of its slough of degradation and set it once more upon a dry place.

Therefore let us have done at once and forever with paltry considerations, with talk of dependency and darkness. Let compromise, submission, and every form of dishonorable peace be not so much as named among us. Tolerate no coward's voice or pen or eye. Wherever the serpent's head is raised, strike it down. Measure every man by the standard of manhood. Measure country's price by country's worth, and country's worth by country's integrity. Let a cold, clear breeze sweep down from the mountains of life, and drive out these miasmas that befog and beguile the unwary. Around every hearthstone let sunshine gleam. In every home let fatherland have its altar and its fortress. From every household let words of cheer and resolve and high-heartedness ring out, till the whole land is shining and resonant in the bloom of its awakening spring.

## THE TRUE CHURCH.

I ASKED a holy man one day,  
 "Where is the one true church, I pray?"

"Go round the world," said he, "and search:  
 No man hath found the one true church."

I pointed to a spire, cross-crowned.  
 "The church is false!" he cried, and frowned.

But, murmuring he had told me wrong,  
 I pointed to the entering throng.

He answered, "If a church be true,  
 It hath not many, but a few."

Around the font the people pressed,  
 And crossed themselves from brow to breast.

"A cross!" he cried, "writ on the brow  
 In water!—is it Christ's?—look thou!

"Each forehead, frowning, sheds it off:  
 Christ's cross abides through scowl and scoff."

Then, looking through the open door,  
 We saw men kneeling on the floor;

Faint candles, by the daylight dimmed,—  
 Like wicks the foolish virgins trimmed;

Fair statues of the saints, as white  
 As now their robes are, in God's light;

Sun-ladders, dropped aslant, all gold,—  
 Like stairs the angels trod of old.

Around, above, from nave to roof,  
 He gazed, and said, in sad reproof,—

"Alas! who is it understands  
 God's temple is not made with hands?"

— We walked along a shaded way,  
 Beneath the apple-blooms of May,

And came upon a church whose dome  
 Bore still the cross, but not for Rome.

We brushed a cobweb from a pane,  
And gazed within the sacred fane

“Do prayers,” he asked, “the more avail,  
If murmured nigh an altar-rail?”

“Does water sprinkled from a bowl  
Wash any sin from any soul?”

“Do tongues that taste the bread and wine  
Speak truer after, by that sign?”

“The very priest, in gown and bands,  
Hath lying lips and guilty hands!”

“He speaks no error,” answered I;  
“He says the living all shall die,

“The dead all rise; and both are true;  
Both wholesome doctrines,—old, not new.”

My friend returned, “He aims a blow  
To strike the sins of long ago,—

“Yet shields, the while, with studied phrase,  
The evil present in these days.

“Doth God in heaven impute no crime  
To prophets who belie their time?”

— We turned away among the tombs:  
The bees were in the clover-blooms;

The crickets leaped to let us pass;  
And God’s sweet breath was on the grass.

We spelled the legends on the stones:  
The graves were full of martyrs’ bones,—

Of bodies which the rack once brake  
In witness for the dear Lord’s sake,—

Of ashes gathered from the pyres  
Of saints whose souls fled up through fires.

I heard him murmur, as we passed,  
“Thus won they all the crown at last;

“Which now men lose, through looking back  
To find it at the stake and rack:

“The rack and stake have gathered grime:  
God’s touchstone is the passing time.”

— Just then, amid some olive-sprays,  
Two orioles perched, and piped their lays,

Until the gold beneath their throats  
Shook molten in their mellow notes.

Then, pealing from the church, a psalm  
Rolled forth upon the outer calm.

“Both choirs,” said I, “are in accord;  
For both give worship to the Lord.”

Said he, “The tree-top song, I fear,  
Fled first and straightest to God’s ear.”

“If men bind other men in chains,  
Then chant, doth God accept the strains?”

“Do loud-lipped hymns His ear allure?—  
God hates the church that harms the poor!”

— Then rose a meeting-house in view,  
Of bleached and weather-beaten hue,

Where, plain of garb and pure of heart,  
Men kept the church and world apart,

And sat in waiting for the light  
That dawns upon the inner sight;

Nor did they vex the silent air  
With any sound of hymn or prayer;

But on their lips God’s hand was pressed,  
And each man kissed it and was blessed.

I asked, “Is this the true church, then?”  
“Nay,” answered he, “a sect of men:

“And sects that lock their doors in pride  
Shut God and half His saints outside.

“The gates of heaven, the Scriptures say,  
Stand open wide by night and day:

“Whoso shall enter hath no need  
To walk by either church or creed:

“The false church leadeth men astray;  
The true church showeth men the way.”

— Whereat I still more eager grew  
To shun the false and find the true;

And, naming all the creeds, I sought  
What truth, or lie, or both, they taught :

Thus, — “ Augustine — had *he* a fault ? ”  
My friend looked up to yon blue vault,

And cried, “ Behold ! can one man’s eyes  
Bound all the vision of the skies ? ”

I said, “ The circle is too wide.”  
“ God’s truth is wider,” he replied ;

“ And Augustine, on bended knee,  
Saw just the little he could see ;

“ So Luther sought with eyes and heart,  
Yet caught the glory but in part ;

“ So Calvin opened wide his soul,  
Yet could not comprehend the whole :

“ Not Luther, Calvin, Augustine,  
Saw half the vision I have seen ! ”

— Then grew within me a desire  
That kindled like a flame of fire.

I looked upon his reverent brow,  
Entreating, “ Tell me, who art thou ? ”

When, by the light that filled the place,  
I knew it was the Lord’s own face !

Through all my blood a rapture stole  
That filled my body and my soul.

I was a sinner and afraid :  
I bowed me in the dust and prayed : —

“ O Christ the Lord ! end Thou my search,  
And lead me to the one true church ! ”

Then spake He, not as man may speak :  
“ The one true church thou shalt not seek ;

“ Behold, it is enough,” He said,  
“ To find the one true Christ, its Head ! ”

Then straight He vanished from my sight,  
And left me standing in the light.

## UNDER THE PEAR-TREE.

## PART II.

## CHAPTER IV.

Two years passed; and Swan Day was to all appearance no nearer his return to the land of his birth than when he first trod the deck that bore him away from it. He was still on the first round of the high ladder to fortune. Thus far he had wrought diligently and successfully. He had been sent hither and thither: from Canton to Hong-Kong; from Macao to Ningpo and Shanghai. He was clerk, supercargo, anything that the interest of the Company demanded. He worked with a will. His thoughts were full of tea, silks, and lacquered ware,—of exquisite carved ivory and wonderful porcelains,—of bamboos, umbrellas, and garden-chairs,—of Hong-Hi, Ching-Ho, and Pi-Fo-Fum.

There were moments, between the despatch of one vessel and the lading of another, when his mind would follow the sun, as it blazed along down out of sight of China, and fast on its way towards the Fox farm,—when an intense longing seized him to look once again on the shady nest of all his hopes and labors. He hated the life he led. He hated the noisy Tartar women that surrounded him,—aquatic and disgusting as crawfish,—brown, stupid, and leering. He hated the feline yawling of their music. He hated the yellow water, swarming with boats, and settled with junks. He hated their pagodas, and their hideous effigies of their ancestors, looking like dumb idols. Their bejewelled Buddhas, their incense-lamps, their night and day, were alike odious to him.

Stretched on a bamboo chair, in an interval of labor, and when the intense heat brought comparative stillness, before his closed eyes came often up his

home among the New-Hampshire hills. He thought of his dead mother in the burying-ground, and the slate stones standing in the desolate grass. Then his thoughts ran eagerly back to the Fox farm, and the sweet, lonely figure that stood watching his return under the pear-tree,—the warm kiss of happy meeting, life opening fair, and a long vista through which the sunlight peeped all the more brightly for the shadowing trees.

Then over the farm, broad and bountiful, scanning every detail of the large red house, the great barns and sheds, the flocks of turkeys, and the geese, kept for feathers, and not dreamed of for eating. (Our Puritan fathers held neither to Christmas nor Christmas goose.) Through the path up by the well-sweep, where the moss-covered bucket hangs dripping with the purest of water. Beyond the corn-barn to the butternut-trees,—by this time, they have dropped their rich, oily fruit; and the chestnut-burrs, split open, and lying on the sunny ground. Then round to the house again, where the slant October sun shines in at the hospitable open door, where the little wheel burrs contentedly, and the loom goes *flap-flap*, as the strong arm of Cely Temple presses the cloth together, and throws the shuttle past, like lightning: stout cloth for choppers and ploughmen comes out of that loom!

In all his peepings at the interior of the house, one figure has accompanied him, beautified and glorified the place; so that, whether he looks into the buttery, where fair, round cheeses fill the shelves, or wanders up the broad stairs with wide landings to the "peacock chamber," he seems to himself always to be going over a temple of sweet and sacred recollections. Into

the peacock chamber, therefore, his soul may wander, where the walls are sparsely decked with black-and-white sketches, ill displaying the glorious plumage of the bird, and, like all old pictures, very brown, — even to the four-posted bed, whitely dressed, and heaped to a height that would defy “the true princess” to feel a pea through it, and the white toilet-table, neatly ornamented with a holder and a pair of scissors, both sacred from common usage. Asparagus in the chimney, with scarlet berries. General Washington, very dingy and respectable, over the fireplace; and two small circular frames, inclosing the Colonel and his wife in profile. The likenesses are nearly exact, and the two noses face each other as if in an argument. Dutch tiles are set round the fireplace, of odd Scripture scenes, common in design and coarse in execution. Into the “square room” below, where the originals of the black profiles sit and smoke their pipes, Swan does not care to venture. But some day, he will show the Colonel!

Many days, these thoughts came to Swan. Months, alas, years, they came, — but few and far between. The five thousand dollars that was to have been the summit was soon only the footstool of his ambition. He became partner, and then head of a house having commercial relations with half the world. His habits assimilated themselves to the country about him, and the cool, green pictures of his mountain-home ceased to float before his sleeping eyes or soothe his waking fancies.

His busy life left him little opportunity for reading. But he took in much knowledge at first-hand by observation, which was perhaps better; and as he hit against all sorts of minds, he became in time somewhat reflective and philosophical. Through daily view of the yellow water, and perhaps the glare of the bright sun on it, or the sight of so much nankeen cloth, or the yellow faces about him, perhaps, — or whatever the cause or causes, — Swan certainly al-

tered in his personal appearance, as the years went by. The handsome, erect youth, lithe and active, with keen features and brilliant eyes, ruddy lips and clear oval face, was gradually fading and transforming into something quite different. The brilliant eyes became sleepy, and, from a habit of narrowing the lids over them, possibly to shut out the bright sun, receded more and more beyond the full and flaccid cheeks, and even contracted a Mongolian curve at the outer corners.

One May morning Swan sat alone in his Chinese-furnished room, luxuriously appointed, as became him, on his silk, shaded ottoman, and dreamily fanned himself. His dreams were of nothing more than what occupied him waking. If he glanced upward, he would see the delicate silk curtains at the windows, and the mirrors of polished steel between the carved ivory lattices. Great porcelain vases, such as are never seen here, were disposed about the room, and jars of flowers of strange hues stood on mats of yellow wool. Furniture inlaid with ivory, mother-of-pearl, and coral, decked the apartment, and a small, rich table held an exquisite tea-set. Swan had just been drinking from it, and the room was full of the fragrance. He toyed with the tea-cup, and half dozed. Then, rousing himself, he put fresh tea from the canister into the cup, and poured boiling water over it from the mouth of the fantastic dragon. Covering the cup, he dallied languidly with the delicious beverage, and with the half-thoughts, half-musings, that came with the dreamy indolence of the weather. Was it, indeed, ten years, — ten, — nay, fifteen years, that he had lived this China-life?

The door swung softly open, and a servant brought a note, and stood waiting for him to read it.

Swan glanced disdainfully at the object, which he could never quite consider human, — at his white and blue petticoats, and his effeminate face, so sleepy

and so mindless, as if he expected him to turn into a plate or sugar-bowl, or begin flying in the air across some porcelain river, and alighting on the pinnacle of a pagoda.

"Hong man, he outside," said the servant.

"Show him in, you stupid fool!" said the master, "and get out of the room with yourself!"

#### CHAPTER V.

THE Hong merchant's intelligence proved at once to Swan Day the absolute necessity of his return to America to protect the interests of the Company in Boston. With the promptitude which had thus far been one of the chief elements of his success, he lost not a moment in (so to speak) changing his skin, for the new purpose of his existence.

It seemed as if with the resumption of the dress of his native country, (albeit of torrid texture still, since a chocolate silk coat, embroidered waistcoat, and trousers of dark satin speak to a modern ear of fashions as remote as China,) Swan resumed many of the habits and feelings therewith connected. With the flowing flowered robe he cast off forever the world to which it belonged, and his pulse beat rapidly and joyfully as the sails filled with the breeze that bore him away. He gazed with a disdainful pleasure at the receding shore, and closed his eyes, — to turn his back fairly and forever on the Chew-Sins and the Wu-Wangs, — to let the Hang dynasty go hang, — to shut out from all but future fireside-*tales* the thought of varnish-trees, soap-trees, talow-trees, wax-trees, and litchi, — never more to look on the land of the rhinoceros, the camel, the elephant, and the ape, — on the girls with thick, protuberant lips, copper skins, and lanky, black hair, — on the corpulent gentry with their long talons, and madams tottering on their hoofs, reminding him constantly of the animal kingdom, as

figured to imagination in childhood, of the rat that wanted his long tail again, or of the horse that will never win a race, — on the land of lanterns and lying, of silver pheasants and — of scamps.

The faster the good ship sailed, the stronger the east-wind blew, the swifter ran the life-current in the veins of the returning exile, — friend, countryman, lover.

As the vessel neared the coast of Massachusetts, and the land-breeze brought to his eager nostrils the odors of his native orchards, or the aromatic fragrance of the pine, and the indescribable impression, on all his senses, of home, the fresh love of country rushed purely through his veins, bubbled warmly about the place where his heart used to beat, and rose to his brain in soft, sweet imaginations. Vivid pictures of past and future, identical in all their essential features, swam before his closed eyes, languid now from excess of pleasure. Again and again he drew in the breath of home, and felt it sweeter than the gales from the Spice Islands or odors from Araby the Blest. Hovering before his fancy, came sweet eyes, full of bewildering light, half-reproachful, half-sad, and all-bewitching; a form of such exquisite grace that he wondered not it swam and undulated before him; over all, the rose-hue of youth, and the smooth, sweet charm of lip and hand that memory brought him, in that last timid caress under the pear-tree after sunset.

As soon as he could possibly so arrange his affairs in Boston as to admit of his taking a journey to Walton, Swan determined to do so. But affairs will not always consent to an arrangement; and although he exerted himself to gain a week's leisure, it was not till the Indian summer was past that he took his place in the stage-coach which plied between Boston and Walton.

How very short seemed the time since he was last on this road! Yet how much had things changed! Fifteen years!

Was it possible he had been gone so long? How rapidly they had gone over himself! He felt scarcely a day older. The stage-coach was aptly termed "Accommodation," and Swan had great amusement, as he sat with the driver on the box, in noting the differences in the aspect of houses and people, since his own last ride over the same road. New villages had sprung up here and there, while already more than one manufacturing establishment showed the Northern tendencies; and the elements of progress peeped from every settlement, in the shape of meeting- and school-houses.

When the driver whipped up his modest team to an animated trot before the Eagle Hotel in Walton, Swan felt as if he must have been in a dream only, and had just now awakened. Walton was one of those New-Hampshire towns, of which there came afterwards to be many, which were said "to be good to go from"; accordingly, everybody had gone everywhere, except the old inhabitants and the children. All the youths had gone towards "the pleasant Ohio, to settle on its banks"; and such maidens as had courage to face a pioneer settlement followed their chosen lords, while the less enterprising were fain to stay at home and bewail their singlehood. All business was necessarily stagnant, and all the improvements, architectural or otherwise, which had marked the route on which Swan had come, now seemed suddenly to have ceased. He might have thought Walton the Enchanted Palace, and himself the Fairy Prince that was to waken to life and love the Sleeping Beauty.

How unchanged was everything! The store where he used to sell crockery and pins,—the great elm-tree in front of it,—the old red tavern on the hill, where they had the Thanksgiving ball,—the houses, from one end of the street to the other, all just as when he left: he might have found his way in the dark to every one of them.

At the Eagle Tavern, the same men

sat on the stoop, with chairs tilted back, smoking. A man in the bar-room was mixing flip or gin-sling for two others, who were playing checkers. Taft himself stood at the door, somewhat changed indeed, though he was always fat, but with the same ready smile as ever; and Swan could see through the windows, by the bright candle-light, the women flitting to and fro, in brisk preparations for supper.

Swan's first touch of surprise was that Taft did not recognize him,—him whom he used to see every day of his life! That was strange. It looked as if time told on Taft's faculties a little. He had himself recognized Taft in a moment. So he had recognized everything, as they drove along, and now how familiar everything looked in the evening light!

Wrapping his travelling-cloak about him, Swan asked to be shown directly to his room, and, in his anxiety to avoid being recognized, ordered a light supper to be sent up to him. First of all, he wanted to see Dorcas, to settle affairs with Colonel Fox, and to feel established. Until then, he cared not to see or talk with his old acquaintances. It would be time enough afterwards to take them by the hand,—to employ them, perhaps. And as it takes almost no time to think, before he was half-way up the stairs, Swan Day had got as far as the erection of a superb country-seat on the hill where the old Cobb house stood, and of employing a dozen smart young carpenters and masons of his acquaintance in the village. The garden should have a pagoda in it; and one room in the house should be called the "China room," and should be furnished exclusively with Chinese tables and chairs; and he would have a brilliant lantern-fête, and— Here he reached the top-stair, and the little maid pointed to his room, curtsied, and ran away.

Swan dropped his cloak, snuffed the candle, and, sitting down before the pleasant wood-fire that had been hastily lighted, proceeded to make his own

tea, by a new Invention for Travelers.

As people are not changed so quickly as they expect and intend to be by circumstances, it came to pass that Swan Day's plans for elegant expenditure in his native town soon relapsed, perhaps under the influence of the Chinese herb, into old channels and plans for acquisition. The habit of years was a little too strong for him to turn short round and pour out what he had been for so many years garnering in. Rather, perhaps, keep in the tread-mill of business awhile longer, and then be the nabob in earnest. At present, who knew what these mutterings in the political atmosphere portended? A war with England seemed inevitable, and that at no distant period. It might be better to retire on a limited certainty; but then there was also the manful struggle for a splendid possibility.

A neat-handed maid brought in a tray, with the light supper he had ordered.

The sight of four kinds of pies, with cold turkey and apple-sauce, brought the Fox farm and its inhabitants more vividly to his mind than anything else he had seen. Pumpkin of the yellowest, custard of the richest, apple of the spiciest, and mince that was one mass of appetizing dainty, filled the room with the flavor of by-gone memories. Every sense responded to them. The fifteen years that had hung like a curtain of mist before him suddenly lifted, and he saw the view beyond, broad, bountiful, and cheery, under the sunshine of love, hope, and plenty. He closed his eyes, and the flavor filled his soul, as sweet music makes the lover faint with happiness.

He took out his writing-materials, and wrote, —

"MY DEAREST, SWEETEST DORCAS, —  
Never for one instant has the thought of you left my heart, since" —

"That's a lie, to begin with!" said he,

coolly, and throwing the paper into the fire, — "try again!"

"DEAREST DORCAS, — I feel and I know what you may possibly think of me by this time, — that you may possibly imagine me false to the vows which" —

It will be perceived that Swan had improved in rhetoric, since the day he parted from his lady-love. Still he could not satisfy himself in a letter. In short, he felt that expression outran the reality, however modestly and moderately chosen. Some vividness, some fervency, he must have, of course. But how in the world to get up the requisite definition even to the words he could conscientiously use? The second attempt followed the first.

Swan Day is not the first man who has found himself mistaken in matters of importance. In his return to his native country, and the scenes of his early life, he had taken for granted the evergreen condition of his sentiments. Like the reviving patient in epilepsy, who declares he has never for an instant lost his consciousness, while the bystanders have witnessed the dead fall, and taken note of the long interval, — so this sojourner of fifteen years in strange lands felt the returning pulse of youth, without thought of the lapsing time that bridges over all gulfs of emotion, however deep.

In fact, that part of his nature which had been in most violent action fifteen years before had been lying as torpid under Indian suns as if it had been dead indeed; and his sense of returning vitality was mixed with curious speculations about his own sensations.

He dropped the pen, and placed his feet on the top of the high stuffed easy-chair which adorned the room. This inverted personal condition relieved his mystification somewhat, or perhaps brought his whole nature more into harmony.

"Dorcas! — hm! hm! — fifteen years!

so it is! — ah! she must be sadly changed indeed! At thirty, a woman is no longer a wood-nymph. Even more than thirty she must be.”

He removed his feet from their elevation, and carefully arranged a different scaffolding out of the materials before him, by placing a cricket on the table, and his feet on the cricket. To do this effectually and properly required the removal of the four pies, and the displacement of the cold turkey.

But Swan was mentally removing far greater and more serious difficulties. By the time he had asked himself one or two questions, and had answered them, such as, “Whether, all the conditions being changed, I am to be held to my promise?” and the like, he had placed one foot carefully up. Then, before conscience had time to trip him up, the other foot followed, and he found himself firmly posted.

“I will write a note to-morrow, — put it into the post-office — No, that won't do; in these places, nobody goes to the post-office once a week; — I'll send a note to the house.”

Here he warmed up.

“A note, asking her to meet me under the great pear-tree, as we met — It is, by Jove! just fifteen years to-morrow night since I left Walton! That's good! it will help on some” —

The little maid here interrupted his meditations by coming for the relics of the supper; and Swan, weary with unwonted thought, dropped the paper curtains, and plunged, body and soul, into fifty pounds of live-geese feathers.

#### CHAPTER VI.

THE great clock in the dining-room whirred out twelve strokes before Swan opened his eyes. As soon as the eyes took in the principal features of the apartment, which process his mental preoccupation had hindered the night before, he was as much at home as if he had never left Walton.

The great beam across the low room,

— the little window-panes, — the rag-carpet, made of odds and ends patriotically arranged to represent the American eagle holding stars and stripes in his firm and bounteous claws, with an open beak that seemed saying, — “Here they be! — ‘cordin’ as you behave yourselves! — stars *or* stripes!” — all within was more familiar to his eye than household words, for it was the old room he had occupied the year before he left America. He stepped quickly across the chamber to a certain beam, where he had, fifteen years before, written four initial letters, and intertwined them so curiously that the Gordian knot was easy weaving in comparison. The Gordian one was cut; — and this had been painted and effaced forever.

Swan returned to his trunk with a half-sigh. He selected a suit of clothes which he had purchased in Boston, put aside his travelling-dress, and looked out of the window occasionally as he dressed. It was a warm, sunny day. The Indian summer had relented and come back to take one more peep, before winter should shut the door on all the glowing beauty of the year. A dozen persons were crossing the street. He knew every one of them at sight. Of course there was no forgetting old Dan Sears, with whom he had forty times gone a-fishing; nor Phil Sanborn, who had stood behind the counter with him two years at the old store. Though Phil had grown stout, there was the same look. There was the old store, too, looking exactly as it did when he went away, the sign a little more worn in the gilding. He seemed to smell the mingled odors of rum, salt-fish, and liquorice, with which every beam and rafter was permeated. And there was old Walsh going home drunk this minute! with a salt mackerel, as usual, for his family-dinner.

He wrote a short note as he dressed and shaved leisurely. The note was to Dorcas, and only said, — “Meet me under the old pear-tree before sunset to-night,” — and was signed with his ini-

tials. This note he at first placed on the little mantel-shelf in plain sight, so that he should not forget to take it down-stairs when he went to breakfast. Afterwards he put it into his pocket-book.

His dress — But the dress of 1811 has not arrived at the picturesque, and could never be classical under any circumstances. He finished his toilet, and went into the dining-room just as everybody else had dined, and asked the landlord what he could have for breakfast. Even then, the landlord hardly looked curious. Taft was certainly failing. In five minutes he found himself at a well-known little table, with the tavern-staple for odd meals, ham and eggs, flanked with sweet-meats and cake, just as he remembered of old. He nibbled at the sharp barberries lying black in the boiled molasses, and listened eagerly to the talk about British aggressions which was going on in the bar-room. Suddenly a face looked in at the low window.

Swan sprang forward, kicked over his chair, and knocked the earthen pepper-box off the table. Before he reached the window, however, the shadow had passed round the corner of the house, out of sight.

It was only a youthful figure, surmounted by a broad-brimmed straw hat, that half hid two sweet, sparkling eyes. Ah! but they were Dorcas's eyes!

He picked up the pepper-box, and mechanically sifted its contents into the barberry-dish.

Dorcas's eyes,—lips,—cheeks,—and waving grace! A rocking movement, a sort of beating, bounding, choking emotion, made the room suddenly dark, and he fell heavily into a chair.

The landlord opened the door, and said,—

“The hoss and shay ready, any time.”

Swan roused himself, and drove away, without speaking to any of the smoking

loungers on the stoop, to whom he was as if he had never been born. But this, from his preoccupied state, did not strike him as singular. One little voice, a bird's voice, as he drove along through the pine woods, sang over and over the same tune,—“Dorcas! Dorcas!”

The silence of the road, when all animated Nature slept in the warm noon of the late autumn day, when even the wheels scarcely sounded on the dead pine-spears, made this solitary voice, like Swan's newly awakened memory, all but angelic.

The sadness, which, through all the beauty of a New-England November, whispers in the fallen leaves, and through the rustle of the firs, overspread Swan's soul, not yet strengthened as well as freshened by his native air. He was melancholy and half stunned. He had been frightened, as he sat in the chair, by the capacity for enjoyment and suffering that was left in him. And he peered curiously into his own soul, as if the sensibilities locked up there belonged to somebody else. Impulsively he turned his horse towards the graveyard,—forgetting that he had all along intended to go there,—and fastening him at the broken gate, went on till he reached his mother's grave. Before his departure he had set up a slate stone to her memory and that of Robert Day, a soldier in the English army.

“She shall have a marble monument now, poor mother!” thought the son, picking his way through the long, tangled grass of the dreary place. Not a tree, not a shrub in sight. Not even the sward kept carefully. The slate had fallen flat, or, more likely, had been thrown down, and no hand had cared to raise again a stone to the memory of a despised enemy, who had never been even seen in Walton.

When Swan tried to move the stone, a thousand ugly things swarmed from beneath it. He dropped it, shuddering, and passed on. A white marble tablet of some pretension stood near, and recorded the names of

ZEPHANIAH FOX,

AND

AZUBAH, HIS WIFE.

*They died the same day, and their bones rest here, till the final resurrection.*

He glanced at the date, —

JUNE 14<sup>th</sup>, 1805.

And he had never heard of it! — never guessed it! But then, he had not heard at all from Dorcas. Poor Dorcas! how had she borne this sudden and terrible bereavement? All that he might have been to her in her sorrow, for one moment all that he had *not* been, floated by him. The yellow melted away that had so long incrustated his soul, and he felt on his bared breast, as it were, the fresh air of truth and constancy, — of all that makes life worth the having.

He drove away, — away over the broad fields and the well-remembered meadows, out upon the Dummerston road, and over the Ridge Hill. Well, life was not all behind him!

He took out his watch. It was time to keep his appointment. He left the horse at the tavern-door, and walked up the road towards the trysting-place, the old pear-tree. He looked wistfully at it, and sprang over the wall, with considerable effort, as he could not but admit to himself. That old pear-tree! They had called it old fifteen years ago, — and here it stood, as proud and strong as then! The two great branches that stretched towards the south, and which he had often thought had something benignant in their aspect, as if they would bless the wayfarer or the sojourner under their shade, still reached forth and spread abroad their strong arms. But to-night, whether from his own excited imagination, or because the early frosts had stripped it of its leaves and so bereaved it of all that gave grace to its aspect, or perhaps from the deepening twilight, — however it was, the old tree had a different expression, and stretched forth two skele-

ton arms with a sort of half-warning, half-mocking gesture, that sent a shudder over his frame, already disturbed by the successive presence, in the last two or three hours, of more emotions than he could comfortably sustain.

Swan was not an imaginative person. Yet the tree looked to him like a living, sentient thing, dooming him and warning him. As in the compression of the brain in drowning, it is said forgotten memories are hustled uppermost, and the events of early life vividly written on the consciousness, — so in this unwonted stir of past and present associations, Swan found himself remembering, with a thrill of pleasure that was chased by a spasm of pain, the last evening on which he had parted from Dorcas. He remembered, as if it were but now, how he had turned towards the pear-tree, when Dorcas had gone out of sight and he dared not follow her, and that the pear-tree had seemed to hear, to see, to sympathize with him, — that it had spread out great blessing arms on the southern air, and had seemed to encourage and strengthen his hopes of a happy return.

Was the fearful expression it now wore a shadow, a forerunner of what he might expect? He shook off, with an effort that was less painful than the sufferance of the thought, both fears and prognostics. He turned his back and walked rapidly and uneasily up and down the path between the tree and the old well.

He had left Dorcas blooming, lovely, and twenty-two. As blooming, as lovely, as lithe, and as sparkling, she was now. His own eyes had seen the vision.

But would she remember and love him still? For the first time it occurred to him that he must himself be somewhat changed, — changed certainly, since old Taft did not recognize him, after all the hogsheads of rum he had sold him! For the first time he felt a little thrill of fear, lest Dorcas should have been inconstant, — or lest, seeing him now, she might not love him as she once did. A faint blush passed over his face.

He raised his eyes, and Dorcas stood before him at the distance of a few feet: the bloom on her delicate cheek the same,—the dimpled chin, the serene forehead, the arch and laughing eyes!

Somehow, she seemed like a ghost, too; for, when he stepped towards her, she retreated, keeping the same distance between them.

“Dorcas!” said Swan, imploringly.

“What do you want of me?” answered a sweet voice, trembling and low.

“Are you really Dorcas? really, really *my* Dorcas?” said Swan, in an agony of uncertain emotion.

“To be sure I am Dorcas!” answered the girl, in a half-terrified, half-petulant tone.

In a moment she darted up the path out of sight, just as Dorcas had done on the last night he had seen her!

Had he kept the kiss on his lips with which he had parted from her,—that kiss which, to him at least, had been one of betrothal?

The short day was nearly dead. In the gloom of the darkening twilight, Swan stood leaning against the old tree and looking up the path where the figure had disappeared, doubting whether a vision had deluded his senses or not.

Was Dorcas indeed separated from him? Was there no bringing back the sweet, olden time of love to her? She had seemed to shrink from him and fade out of sight. Could she never indeed love him again?

It was getting dark. But for the great, broad moon, that just then shone out from behind the Ridge Hill, he would not have seen another figure coming down the path from the house. Swan felt as if he had lived a long time in the last half-hour.

A woman walked cautiously towards him, apparently proceeding to the well. She stooped a little, and a wooden hoop round her person supported a pail on each side, which she had evidently come to fill. It was no angel that came to trouble the fountain to-night. She pulled down the chained bucket with a

strong, heavy sweep, and the beam rose high in the air, with the stone securely fastened to the end. While she drew up and poured the water into the pails, she looked several times covertly at the stranger. The stranger, on his part, scanned her as closely. She belonged to the house, he thought. Probably she had come to live on the Fox farm at the death of the old people,—to take care of Dorcas, possibly. Again he scanned her curiously.

The face was an ordinary one. A farmer's wife, even of the well-to-do, fore-handed sort, had many cares, and often heavy labors. Fifty years ago, inventive science had given no assistance to domestic labor, and all household work was done in the hardest manner. This woman might have had her day of being good-looking, possibly. But the face, even by moonlight, was now swarthy with exposure; the once round arm was dark and sinewy; and the plainly parted hair was confined and concealed by a blue-and-white handkerchief knotted under her chin. The forehead was freely lined; and the lips opened, when they did open, on dark, unfrequent teeth. These observations Swan made as he moved forward to speak to her; for there was no special expressiveness or animation to relieve the literal stamp of her features.

“Can you tell me, Madam,—hem!—who lives now on this place? It used to belong to Colonel Fox, I think.”

He called her “Madam” at a venture, though she might, for all he could see, be a “help” on the farm. But it was n't Cely, nor yet Dinah.

At the sound of his voice the woman's whole expression changed. Her quick eyes fell back into a look of dreamy inquiry and softness. She dropped her pails to the ground, and stood, fenced in by the hoop, like a statue of bewilderment,—if such a statue could be carved.

Was his face transfigured in the moonlight, as she slowly gathered up old memories, and compared the form before her

with the painted shadows of the past? She answered not a word, but clasped her hands tightly together, and bent her head to listen again to the voice.

"I say! good woman!"—this time with a raised tone, for he thought she might be deaf,—“is not this the old Fox farm? Please tell me who lives here now. The family are dead, I think.”

The woman opened her clenched hands and spread the palms outward and upward. Then, in a low tone of astonishment, she said,—

“Good Lord o’ mercy! if it a’n’t him!”

He moved nearer, and put his hand on her shoulder to reassure her.

“To be sure it is, my good soul. Don’t be frightened. I give you my word, I am myself, and nobody else. And pray, now, who may you be? Do you live here?” he added, with a short laugh.

He addressed her jocosely; for he saw the poor frightened thing would never give him the information he wanted, unless he could contrive to compose her. It was odd, too, that he should frighten everybody so. Dorcas had hurried off like a lapwing.

“Swan Day!” said the woman, softly.

“That is my name, Goody! But I am ashamed to say, I don’t remember you. Pray, did you live here when I went away?”

“Yes,” said she, softly again, and this time looking into his eyes.

“Tell me, then, if you can tell me, whose hands this farm fell into? Who owns the place? Has it gone out of the family? Where is Dorcas Fox?”

He spoke hastily, and held her by the arm, as if he feared she would slide away in the moonlight.

“Dorcas Fox is here, Swan. I am Dorcas.”

“You? you, Dorcas Fox?” said he, roughly. “Was it a ghost I saw?” he murmured,—“or is this a ghost?”

He had seen a bud, fresh, dewy, and blooming; and now he brushed away from his thought the wilted and brown

substitute. Not a line of the face, not a tone of the voice, did he remember.

“Don’t you see anything about me, Swan,—anything that reminds you of Dorcas Fox?” said the woman, eagerly, and clasping her hands again.

His eyes glared at her in the moonlight, as he exclaimed,—

“No, my God! not a feature!”

#### CHAPTER VII.

“WELL, I expect I be changed, Swan,” said Dorcas, sadly.

She said nothing about his change; and, besides, she had recognized him.

“They say my Dorcas favors me, and looks as I used to. Come, come up to the house; Mr. Mowers ’ll be glad to see you. You don’t know how many times we ’ve talked you over, and wondered if ever you ’d come back! But, dear sakes! you can’t think what a kind of a shock you give me, Swan! Why, I expected nothin’ but what you was dead, years ago!”

Here was a pretty expression of sentiment! Swan only answered, faintly,—

“Did you?” and rubbed his eyes to wake himself up.

They walked slowly towards the house. The great red walls stood staring and peaceful, as of old, and the milkers were coming in from the farmyard with their pails foaming and smoking, as they used to do fifteen years before. In the door-way, with his pipe in his mouth, stood Henry Mowers, the monarch of all he surveyed. He had come, by marriage, to own the Fox farm of twelve hundred acres. He had woodland and pasture-land, cattle and horses, like Job,—and in his house, health, peace, and children: dark-eyed Dorcas and Jemima, white-headed Obed and Zephaniah, and the twins that now clambered over his shoulder and stood on his broad, strong palms,—two others, Philip and Henry, had died in the cradle.

Dorcas the younger stood in the door-

way, and leaned gracefully towards her father. She whispered to him, as the stranger approached,—

“There ’s the man coming now with mother! I thought ’t was a crazy man!”

The mother came eagerly forward, anxious to prevent the unrecognizing glance, which she knew must be painful.

“What do you think, Henry? Swan Day has come back, just in time to spend Thanksgiving with us!”

“Swan Day? I want to know!” answered Henry, mechanically holding out his hand, and then shaking it longer and longer in the vain attempt to recall the youthful features.

“Well! if ever!” he continued, turning to his wife, with increased astonishment at the perspicacity she had shown, while Swan’s eyes were fixed on the slender figure of the young Dorcas, seeming to see the river of life flowing by and far beyond him.

Keeping up a despairing shaking, Henry walked the stranger into the old square room, where the once sanded floor was now covered with a carpet, and a piano strutted in the corner where the bed used to stand. But still in the other corner stood the old “buffet,” and the desk where Colonel Fox kept his yellow papers. How stern, strong, and mighty Henry looked, with his six feet height, his sinewy limbs and broad chest, and his clear, steady eyes, full of manliness! How cheery the old parlor looked, too, as the evening advanced, and Dorcas lighted the pine-knots that sparkled up the chimney and set all the eyes and cheeks in the room ablaze! That was a pleasant evening, when the three elders chatted freely of all that had come and gone in Swan’s absence,— of those who had died, and those who were living, and of settlers even far beyond Western New York!

“It will be like old times to have you here to-morrow at Thanksgiving, won’t it?” said Henry.

“Won’t it?” echoed Dorcas.

Swan said it would, and good-night.

When he was gone, little Dorcas exclaimed,—

“What a queer little old man, mother! is n’t he?”

“How, queer, Dorcas?” said her mother, curious to compare the effects on the minds of the different members of the family of their visitor’s appearance.

“Oh, so odd-looking! such queer little eyes! and no hair on the top of his head! and such funny whiskers!” said Dorcas, smoothing her own abundant locks, and looking at her father and brothers, whose curls were brushed back and straight up into the air, a distance of three inches, after the fashion then called “Boston.” The smallest child gave an instinctive push over his forehead at the remark, and Zephaniah added,—

“He ’s as round and yellow as a pun-kin!”

“He looked stiddy to Dorcas all the time,” said ’Mima, roguishly.

“Now you shet up, you silly child!” said Dorcas, with the dignity of a twelve-month’s seniority.

“Wal, he dropped this ’ere in my hand, anyhow, as he went out,” said Obed, opening his hand cautiously, and showing a Spanish doubloon.

“Oh! then you must give it right back to him to-morrow, Obe!” said the honest sisters; “it ’s gold! and he could n’t ’a’ meant you should hev it!”

“I do’ know ’bout that! I’ll keep it t’ll he asks me for ’t, I guess!” said Obed, sturdily.

“What did you think about him, Henry?” said the wife; “you would n’t ’a’ known him?”

“Never! there a’n’t an inch o’ Swan Day in him! They say people change once in seven years. I should be loath to feel I’d lost all my looks as he has!”

“We grow old, though,” answered she, with a touch of pathos in her voice, as she remembered the words of Swan.

“Old? of course, wife!” was the hearty answer; “but then we’ve got somethin’ to show for ’t!”

He glanced at her and the children proudly, and then bidding the young ones, "Scatter, quick time!" he stretched his comfortable six-feet-two before the fire, and smiled out of an easy, happy heart.

"What's looks?" said he, philosophically. "You look jest the same to me, wife, as ever you did!"

"Do I?" said the pleased wife. "Well, I'm glad I do. I could n't bear to seem different to you, Henry!"

Henry took his pipe from his mouth, and then looked at his wife with a steady and somewhat critical gaze.

"I don't think anything about it, wife; but if I want to think on 't,—why, I can, by jes' shettin' my eyes,—and there you are! as handsome as a picter! Little Dorcas is the very image of you, at her age; and you look exactly like her,—only older, of course.—Everything ready for Thanksgiving? We'll give Day a good dinner, anyhow!"

"Yes, all 's ready," answered Dorcas, with her eyes fixed on the fire.

"I knew it! There 's no fail to you, wife!—never has been!—never will be!"

Dorcas rose and went behind her husband, took his head in her two faithful hands, kissed his forehead, and went upstairs.

"Little Dorcas" was fastening her hair in countless *papillotes*. She smiled bashfully, as her mother entered the room, and showed her white, even teeth, between her rosy lips.

"I wonder if I ever did look so pretty as that child does!" said the mother to herself.

But she said to Dorcas only this:—

"Here 's your great-aunt's pin and

ring. They used to be mine, when I was young and foolish. Take care of 'em, and don't you be foolish, child!"

"I wonder what mother meant!" soliloquized the daughter, when her mother had kissed her and said good-night; "she certainly had tears in her eyes!"

In the gray dawn of the next morning, Swan Day rode out of Walton in the same stage-coach and with the same "spike-team" of gray horses which had brought him thither thirty-six hours before. When the coach reached Troy, and the bright sun broke over the picturesque scenery of the erratic Ashuelot, he drew his breath deeply, as if relieved of a burden. Presently the coach stopped, the door opened, and the coachman held out his hand in silence.

"Fare, is it?"

"Fare."

Opening his pocket-book, he saw the note which he had written to Dorcas, appointing an interview, and which he had forgotten to send to her.

As he rode on, he tore the letter into a thousand minute fragments, scattering them for a mile in the coach's path, and watching the wheels grind them down in the dust.

"'T is n't the only thing I have n't done that I meant to!" said he, with a sad smile over his fallow face.

He buttoned his coat closely to his chin, raised the collar to his ears, and shut his eyes.

The coachman peeped back at his only passenger, touched the nigh leader with the most delicate hint of a whipcord, and said confidentially to the off wheel,—

"What a sleepy old porpus that is in there!"

## THE LAST CRUISE OF THE MONITOR.

AN actor in the scenes of that wild night when the Monitor went down craves permission to relate the story of her last cruise.

Her work is now over. She lies a hundred fathoms deep under the stormy waters off Cape Hatteras. But "the little cheese-box on a raft" has made herself a name which will not soon be forgotten by the American people.

Every child knows her early story,— it is one of the thousand romances of the war, — how, as our ships lay at anchor in Hampton Roads, and the army of the Potomac covered the Peninsula, one shining March day, —

"Far away to the South uprose  
A little feather of snow-white smoke;  
And we knew that the iron ship of our foes  
Was steadily steering its course  
To try the force  
Of our ribs of oak."

Iron conquered oak; the balls from the Congress and Cumberland rattled from the sides of the Rebel ship like hail; she passed on resistless, and

"Down went the Cumberland, all a wrack."

The Congress struck her flag, and the band of men on the Peninsula waited their turn, — for the iron monster belched out fire and shell to both sea and land. Evening cut short her work, and she returned to Norfolk, leaving terror and confusion behind her.

The morning saw her return; but now between her expected prey, the Minnesota, and herself, lay a low, black raft, to the lookers-on from the Merrimack no more formidable than the masts of the sunken Cumberland, or the useless guns of the Congress, near whose shattered hulks the Monitor kept guard, the avenger of their loss.

As the haughty monster approached the scene of her triumph, the shock of an unexampled cannonade checked her career. That little black turret poured

out a fire so tremendous, so continuous, that the jubilant crew of the Merrimack faltered, surprised, terrified. The revolving tower was a marvel to them. One on board of her at the time has since told me, that, though at first entirely confident of victory, consternation finally took hold of all.

"D—n it!" said one, "the thing is full of guns."

An hour the contest raged, and then the iron scales of the invincible began to crumble under repeated blows thundered from that strange revolving terror. A slaughtering, destroying shot smashing through the port, a great seam battered in the side, crippled and defeated, the Merrimack turned prow and steamed away.

This was the end of her career, as really as when, a few weeks later, early morning saw her wrapped in sudden flame and smoke, and the people of Norfolk heard in their beds the report which was her death-knell.

So fear ended for a time, and the Monitor saw little service, until at Fort Darling she dismounted every gun, save one, when all her comrades failed to reach the mark. Then, a little worn by hard fighting, she went to Washington for some slight repairs, but specially to have better arrangements made for ventilation, as those on board suffered from the confined air during action.

The first of September a fresh alarm came, when she went down to Hampton Roads to meet the new Merrimack, said to be coming out, and stationed herself at the mouth of the James River, between the buried Congress and Cumberland, whose masts still rose above water, a monument of Rebel outrage and Union heroism. Here she remained expectant for more than two months, all on board desiring action, but thinking the new year must come in before anything could be done.

The last week in December found her lying under the guns of Fortress Monroe, and busily fitting for sea. Her own guns had been put in perfect working order, and shone like silver, one bearing the name of Worden, the other that of Ericsson. Her engineer, Mr. Campbell, was in the act of giving some final touches to the machinery, when his leg was caught between the piston-rod and frame of one of the oscillating engines, with such force as to bend the rod, which was an inch and a quarter in diameter and about eight inches long, and break its cast-iron frame, five-eighths of an inch in thickness. The most remarkable fact in this case is, that the limb, though jammed and bruised, remained unbroken, — our men in this iron craft seeming themselves to be iron.

The surgeon who examined the limb, astonished at the narrow escape, thought at first that it might, by energetic treatment, be cured in a few days; and as the engineer, who had been with the vessel from her launching, was extremely anxious to remain on board, he was disposed at first to yield to his wishes, but afterwards, reflecting that confined air and sea-sickness would have a bad effect, concluded to transfer him to the hospital, the engineer remarking, as he was carried off, — “Well, this may be Providential.”

It was Providential indeed!

His place was filled, and the preparations went on briskly. The turret and sight-holes were calked, and every possible entrance for water made secure, only the smallest openings being left in the turret-top, and the blower-stacks, through which the ship was ventilated. On the afternoon of December 29, 1862, she put on steam, and, in tow of the Rhode Island, passed the fort, and out to sea under sealed orders.

General joy was expressed at this relief from long inaction. The sick came upon deck, and in the clear sky, fresh air, and sense of motion, seemed to gain new life.

The Rhode Island, like all side-wheel

steamers, left in her wake a rolling, foaming track of waves, which the Monitor, as she passed over it, seemed to smooth out like an immense flat-iron. In the course of the afternoon, we saw the Passaic in tow of the State of Georgia, like a white speck, far in advance of us.

As we gradually passed out to sea, the wind freshened somewhat; but the sun went down in glorious clouds of purple and crimson, and the night was fair and calm above us, though in the interior of our little vessel the air had already begun to lose its freshness. We suffered more or less from its closeness through the night, and woke in the morning to find it heavy with impurity from the breaths of some sixty persons, composing the officers and crew. Sunrise found us on deck, enjoying pure air, and watching the East.

“Where yonder dancing billows dip,  
Far off to Ocean's misty verge,  
Ploughs Morning, like a full-sailed ship,  
The Orient's cloudy surge.  
With spray of scarlet fire, before  
The ruffled gold that round her dies,  
She sails above the sleeping shore,  
Across the waking skies.”

During the night we had passed Cape Henry, and now, at dawn, found ourselves on the ocean, — the land only a blue line in the distance. A few more hours, and that had vanished. No sails were visible, and the Passaic, which we had noticed the evening before, was now out of sight. The morning and afternoon passed quietly; we spent most of our time on deck, on account of the confined air below, and, being on a level with the sea, with the spray dashing over us occasionally, amused ourselves with noting its shifting hues and forms, from the deep green of the first long roll to the foam-crest and prismatic tints of the falling wave.

As the afternoon advanced, the freshening wind, the thickening clouds, and the increasing roll of the sea gave those most accustomed to ordinary ship-life some new experiences. The little ves-

sel plunged through the rising waves, instead of riding them, and, as they increased in violence, lay, as it were, under their crests, which washed over her continually, so that, even when we considered ourselves safe, the appearance was that of a vessel sinking.

"I'd rather go to sea in a diving-bell!" said one, as the waves dashed over the pilot-house, and the little craft seemed buried in water.

"Give me an oyster-scow!" cried another, — "anything! — only let it be wood, and something that will float over, instead of under the water!"

Still she plunged on, and about six thirty P. M. we made Cape Hatteras; in half an hour we had rounded the point, and many on board expressed regret that the Monitor should not have been before the Passaic in doing so. Our spy-glasses were in constant use; we saw several vessels in the distance, and about seven P. M. discovered the Passaic four or five miles *astern* to the north of us, in tow of the steamer State of Georgia.

A general hurrah went up, — "Hurrah for the first iron-clad that ever rounded Cape Hatteras! Hurrah for the little boat that is first in everything!" The distance between ourselves and the Passaic widened, and we gradually lost sight of her.

At half-past seven a heavy shower fell, lasting about twenty minutes. At this time the gale increased; black, heavy clouds covered the sky, through which the moon glimmered fitfully, allowing us to see in the distance a long line of white, plunging foam, rushing towards us, — sure indication, to a sailor's eye, of a stormy time.

A gloom overhung everything; the banks of cloud seemed to settle around us; the moan of the ocean grew louder and more fearful. Still our little boat pushed doggedly on: victorious through all, we thought that here, too, she would conquer, though the beating waves sent shudders through her whole frame. Bearing still the marks of one of the

fiercest battles of the war, we had grown to think her invulnerable to any assault of man or element, and as she breasted these huge waves, plunging through one only to meet another more mighty, we thought, — "She is stanch! she will weather it!"

An hour passed; the air below, which had all day been increasing in closeness, was now almost stifling, but our men lost no courage. Some sang as they worked, and the cadence of the voices, mingling with the roar of waters, sounded like a defiance to Ocean.

Some stationed themselves on top of the turret, and a general enthusiasm filled all breasts, as huge waves, twenty feet high, rose up on all sides, hung suspended for a moment like jaws open to devour, and then, breaking, gnashed over in foam from side to side. Those of us new to the sea, and not appreciating our peril, hurrahed for the largest wave; but the captain and one or two others, old sailors, knowing its power, grew momentarily more and more anxious, feeling, with a dread instinctive to the sailor, that, in case of extremity, no wreck yet known to ocean could be so hopeless as this. Solid iron from keelson to turret-top, clinging to anything for safety, if the Monitor should go down, would only insure a share in her fate. No mast, no spar, no floating thing, to meet the outstretched hand in the last moment.

The sea, like the old-world giant, gathered force from each attack. Thick and fast came the blows on the iron mail of the Monitor, and still the brave little vessel held her own, until, at half-past eight, the engineer, Waters, faithful to the end, reported a leak. The pumps were instantly set in motion, and we watched their progress with an intense interest. She had seemed to us like an old-time knight in armor, battling against fearful odds, but still holding his ground. We who watched, when the blow came which made the strong man reel and the life-blood spout, felt our hearts faint within us; then again

ground was gained, and the fight went on, the water lowering somewhat under the laboring pumps.

From nine to ten it kept pace with them. From ten to eleven the sea increased in violence, the waves now dashing entirely over the turret, blinding the eyes and causing quick catchings of the breath, as they swept against us. At ten the engineer had reported the leak as gaining on us; at half-past ten, with several pumps in constant motion, one of which threw out three thousand gallons a minute, the water was rising rapidly, and nearing the fires. When these were reached, the vessel's doom was sealed; for with their extinction the pumps must cease, and all hope of keeping the Monitor above water more than an hour or two expire. Our knight had received his death-blow, and lay struggling and helpless under the power of a stronger than he.

A consultation was held, and, not without a conflict of feeling, it was decided that signals of distress should be made. Ocean claimed our little vessel, and her trembling frame and failing fire proved she would soon answer his call; yet a pang went through us, as we thought of the first iron-clad lying alone at the bottom of this stormy sea, her guns silenced, herself a useless mass of metal. Each quiver of her strong frame seemed to plead with us not to abandon her. The work she had done, the work she was to do, rose before us; might there not be a possibility of saving her yet?—her time could not have come so soon. We seemed to hear a voice from her saying,—"Save me, for once I have saved you! My frame is stanch still; my guns may again silence the roar of Rebel batteries. The night will pass, and calm come to us once more. Save me!" The roar of Ocean drowned her voice, and we who descended for a moment to the cabin knew, by the rising water through which we waded, that the end was near.

Small time was there for regrets.

Rockets were thrown up, and answered by the Rhode Island, whose brave men prepared at once to lower boats, though, in that wild sea, it was almost madness.

The Monitor had been attached to the Rhode Island by two hawsers, one of which had parted at about seven P. M. The other remained firm, but now it was necessary it should be cut. How was that possible, when every wave washed clean over her deck? what man could reach it alive? "Who'll cut the hawser?" shouted Captain Bankhead. Acting-Master Stodder volunteered, and was followed by another. Holding by one hand to the ropes at her side, they cut through, by many blows of the hatchet, the immense rope which united the vessels. Stodder returned in safety, but his brave companion was washed over and went down.

The men were quiet and controlled, but all felt anxiety. Master's-Mate Peter Williams suggested bailing, in the faint hope that in this way the vessel might be kept longer above water. A bailing party was organized by John Stocking, boatswain, who, brave man, at last went down. Paymaster Keeler led the way, in company with Stocking, Williams, and one or two others; and though the water was now waist-deep, and they knew the vessel was liable to go down at almost any moment, they worked on nobly, throwing out a constant stream of water from the turret.

Meanwhile the boat launched from the Rhode Island had started, manned by a crew of picked men.

A mere heroic impulse could not have accomplished this most noble deed. For hours they had watched the raging sea. Their captain and they knew the danger; every man who entered that boat did it at peril of his life; and yet all were ready. Are not such acts as these convincing proof of the divinity in human nature?

We watched her with straining eyes, for few thought she could live to reach us. She neared; we were sure of her, thank God!

In this interval the cut hawser had become entangled in the paddle-wheel of the Rhode Island, and she drifted down upon us: we, not knowing this fact, supposed her coming to our assistance; but a moment undeceived us. The launch sent for our relief was now between us and her, — too near for safety. The steamer bore swiftly down, stern first, upon our starboard quarter. "Keep off! keep off!" we cried, and then first saw she was helpless. Even as we looked, the devoted boat was caught between the steamer and the iron-clad, — a sharp sound of crushing wood was heard, — thwarts, oars, and splinters flew in air, — the boat's crew leaped to the Monitor's deck. Death stared us in the face; our iron prow must go through the Rhode Island's side, and then an end to all. One awful moment we held our breath, — then the hawser was cleared, — the steamer moved off, as it were, step by step, first one, then another, till a ship's-length lay between us, and then we breathed freely. But the boat! — had she gone to the bottom, carrying brave souls with her? No, there she lay, beating against our iron sides, but still, though bruised and broken, a life-boat to us.

There was no hasty scramble for life when it was found she floated; all held back. The men kept steadily on at their work of bailing, — only those leaving, and in the order named, whom the captain bade save themselves. They descended from the turret to the deck with mingled fear and hope, for the waves tore from side to side, and the coolest head and bravest heart could not guaranty safety. Some were washed over as they left the turret, and, with a vain clutch at the iron deck, a wild throwing-up of the arms, went down, their death-cry ringing in the ears of their companions.

The boat sometimes held her place by the Monitor's side, then was dashed hopelessly out of reach, rising and falling on the waves. A sailor would spring from the deck to reach her, be seen for

a moment in mid-air, and then, as she rose, fall into her. So she gradually filled up; but some poor souls who sought to reach her failed even as they touched her receding sides, and went down.

We had on board a little messenger-boy, the special charge of one of the sailors, and the pet of all; he must inevitably have been lost, but for the care of his adopted father, who, holding him firmly in his arms, escaped as by miracle, being washed overboard, and succeeded in placing him safely in the boat.

The last but one to make the desperate venture was the surgeon; he leaped from the deck, and at the very instant saw the boat being swept away by the merciless sea. Making one final effort, he threw his body forward as he fell, striking across the boat's side so violently, it was thought some of his ribs must be broken. "Haul the Doctor in!" shouted Lieutenant Greene, perhaps remembering how, a little time back, he himself, almost gone down in the unknown sea, had been "hailed in" by a quinine rope flung him by the Doctor. Stout sailor-arms pulled him in, one more sprang to a place in her, and the boat, now full, pushed off, — in a sinking condition, it is true, but still bearing hope with her, for *she was a wood*.

Over the waves we toiled slowly, pulling for life. The men stuffed their pea-jackets into the holes in her side, and bailed incessantly. We neared the Rhode Island; but now a new peril appeared. Right down upon our centre, borne by the might of rushing water, came the whale-boat sent to rescue others from the iron-clad. We barely floated; if she struck us with her bows full on us, we must go to the bottom. One sprang, and, as she neared, with outstretched arms, met and turned her course. She passed against us, and his hand, caught between the two, was crushed, and the arm, wrenched from its socket, fell a helpless weight at his side; but life remained. We were saved, and an arm was a small price to pay for life.

We reached the Rhode Island; ropes were flung over her side, and caught with a death-grip. Some lost their hold, were washed away, and again dragged in by the boat's crew. What chance had one whose right arm hung a dead weight, when strong men with their two hands went down before him? He caught at a rope, found it impossible to save himself alone, and then for the first time said,—"I am injured; can any one aid me?" Ensign Taylor, at the risk of his own life, brought the rope around his shoulder in such a way it could not slip, and he was drawn up in safety.

In the mean time the whale-boat, nearly our destruction, had reached the side of the Monitor, and now the captain said,—"It is madness to remain here longer; let each man save himself." For a moment he descended to the cabin for a coat, and his faithful servant followed to secure a jewel-box, containing the accumulated treasure of years. A sad, sorry sight it was. In the heavy air the lamps burned dimly, and the water, waist-deep, splashed sullenly against the wardroom's sides. One lingering look, and he left the Monitor's cabin forever.

Time was precious; he hastened to the deck, where, in the midst of a terrible sea, Lieutenant Greene nobly held his post. He seized the rope from the whale-boat, wound it about an iron stanchion, and then around his wrists, for days afterward swollen and useless from the strain. His black body-servant stood near him.

"Can you swim, William?" he asked.

"No," replied the man.

"Then keep by me, and I'll save you."

One by one, watching their time between the waves, the men filled in, the captain helping the poor black to a place, and at last, after all effort for others and none for themselves, Captain Bankhead and Lieutenant Greene took their places in the boat. Two or three still remained, clinging to the turret; the captain had begged them to come down,

but, paralyzed with fear, they sat immovable, and the gallant Brown, promising to return for them, pushed off, and soon had his boat-load safe upon the Rhode Island's deck.

Here the heartiest and most tender reception met us. Our drenched clothing was replaced by warm and dry garments, and all on board vied with each other in acts of kindness. The only one who had received any injury, Surgeon Weeks, was carefully attended to, the dislocated arm set, and the crushed fingers amputated by the gentlest and most considerate of surgeons, Dr. Webber of the Rhode Island.

For an hour or more we watched from the deck of the Rhode Island the lonely light upon the Monitor's turret; a hundred times we thought it gone forever,—a hundred times it reappeared, till at last, about two o'clock, Wednesday morning, it sank, and we saw it no more.

We had looked, too, most anxiously, for the whale-boat which had last gone out, under the command of Master's-Mate Brown, but saw no signs of it. We knew it had reached the Monitor, but whether swamped by the waves, or drawn in as the Monitor went down, we could not tell. Captain Trenchard would not leave the spot, but sailed about, looking in vain for the missing boat, till late Wednesday afternoon, when it would have been given up as hopelessly lost, except for the captain's dependence on the coolness and skill of its tried officer. He thought it useless to search longer, but, hoping it might have been picked up by some coasting vessel, turned towards Fortress Monroe.

Two days' sail brought us to the fort, whence we had started on Monday with so many glowing hopes, and, alas! with some who were never to return. The same kindness met us here as on the Rhode Island; loans of money, clothing, and other necessaries, were offered us. It was almost well to have suffered, so much beautiful feeling did it bring out.

A day or two at the fort, waiting

for official permission to return to our homes, and we were on our way,—the week seeming, as we looked back upon it, like some wild dream. One thing only appeared real: our little vessel was lost, and we, who, in months gone by, had learned to love her, felt a strange pang go through us as we remembered that never more might we tread her deck, or gather in her little cabin at evening.

We had left her behind us, one more treasure added to the priceless store which Ocean so jealously hides. The Cumberland and Congress went first; the little boat that avenged their loss has followed; in both noble souls have gone down. Their names are for history; and so long as we remain a people, so long will the work of the Monitor be remembered, and her story told to our children's children.

## LYRICS OF THE STREET.

### V.

#### THE DARKENED HOUSE.

ONE year ago, this dreary night,  
 This house, that, in my way,  
 Checks the swift pulses of delight,  
 Was cordial glad, and gay.

The household angels tended there  
 Their ivy-cinctured bower,  
 And by the hardier plant grew fair  
 A lovely lily-flower.

The skies rained sunshine on its head,  
 It throve in summer air:  
 "How straight and sound!" the father said;  
 The mother said, "How fair!"

One little year is gathering up  
 Its glories to depart;  
 The skies have left one marble drop  
 Within the lily's heart.

For growth and bloom no more avails  
 The Seasons' changing breath;  
 With sudden constancy it feels  
 The sculpture-touch of Death

But from its breast let golden rays,  
 Immortal, break and rise,  
 Linking the sorrow-clouded days  
 With dawning Paradise.

## AMERICA THE OLD WORLD.

FIRST-BORN among the Continents, though so much later in culture and civilization than some of more recent birth, America, so far as her physical history is concerned, has been falsely denominated the *New World*. Hers was the first dry land lifted out of the waters, hers the first shore washed by the ocean that enveloped all the earth beside; and while Europe was represented only by islands rising here and there above the sea, America already stretched an unbroken line of land from Nova Scotia to the far West.

In the present state of our knowledge, our conclusions respecting the beginning of the earth's history, the way in which it took form and shape as a distinct, separate planet, must, of course, be very vague and hypothetical. Yet the progress of science is so rapidly reconstructing the past that we may hope to solve even this problem; and to one who looks upon man's appearance upon the earth as the crowning work in a succession of creative acts, all of which have had relation to his coming in the end, it will not seem strange that he should at last be allowed to understand a history which was but the introduction to his own existence. It is my belief that not only the future, but the past also, is the inheritance of man, and that we shall yet conquer our lost birthright.

Even now our knowledge carries us far enough to warrant the assertion that there was a time when our earth was in a state of igneous fusion, when no ocean bathed it and no atmosphere surrounded it, when no wind blew over it and no rain fell upon it, but an intense heat held all its materials in solution. In those days the rocks which are now the very bones and sinews of our mother earth—her granites, her porphyries, her basalts, her syenites—were melted into a liquid mass. As I am writing for the

unscientific reader, who may not be familiar with the facts through which these inferences have been reached, I will answer here a question which, were we talking together, he might naturally ask in a somewhat skeptical tone. How do you know that this state of things ever existed, and, supposing that the solid materials of which our earth consists were ever in a liquid condition, what right have you to infer that this condition was caused by the action of heat upon them? I answer, Because it is acting upon them still; because the earth we tread is but a thin crust floating on a liquid sea of fire; because the agencies that were at work then are at work now, and the present is the logical sequence of the past. From artesian wells, from mines, from geysers, from hot springs, a mass of facts has been collected proving incontestably the heated condition of all materials at a certain depth below the earth's surface; and if we need more positive evidence, we have it in the fiery eruptions that even now bear fearful testimony to the molten ocean seething within the globe and forcing its way out from time to time. The modern progress of Geology has led us by successive and perfectly connected steps back to a time when what is now only an occasional and rare phenomenon was the normal condition of our earth; when those internal fires were inclosed in an envelope so thin that it opposed but little resistance to their frequent outbreak, and they constantly forced themselves through this crust, pouring out melted materials that subsequently cooled and consolidated on its surface. So constant were these eruptions, and so slight was the resistance they encountered, that some portions of the earlier rock-deposits are perforated with numerous chimneys, narrow tunnels as it were, bored by the liquid masses that poured out through

them and greatly modified their first condition.

The question at once suggests itself, How was even this thin crust formed? what should cause any solid envelope, however slight and filmy when compared to the whole bulk of the globe, to form upon the surface of such a molten mass? At this point of the investigation the geologist must appeal to the astronomer; for in this vague and nebulous border-land, where the very rocks lose their outlines and flow into each other, where matter exists only in its essential elements, not yet specialized into definite forms and substances, — there the two sciences meet. Astronomy shows us our planet thrown off from the central mass of which it once formed a part, to move henceforth in an independent orbit of its own. That orbit, it tells us, passed through celestial spaces cold enough to chill this heated globe, and of course to consolidate it externally. We know, from the action of similar causes on a smaller scale and on comparatively insignificant objects immediately about us, what must have been the effect of this cooling process upon the heated mass of the globe. All substances when heated occupy more space than they do when cold. Water, which expands when freezing, is the only exception to this rule. The first effect of cooling the surface of our planet must have been to solidify it, and thus to form a film or crust over it. That crust would shrink as the cooling process went on; in consequence of the shrinking, wrinkles and folds would arise upon it, and here and there, where the tension was too great, cracks and fissures would be produced: In proportion as the surface cooled, the masses within would be affected by the change of temperature outside of them, and would consolidate internally also, the crust gradually thickening by this process.

But there was another element without the globe, equally powerful in building it up. Fire and water wrought to-

gether in this work, if not always harmoniously, at least with equal force and persistency. I have said that there was a time when no atmosphere surrounded the earth; but one of the first results of the cooling of its crust must have been the formation of an atmosphere, with all the phenomena connected with it, — the rising of vapors, their condensation into clouds, the falling of rains, the gathering of waters upon its surface. Water is a very active agent of destruction, but it works over again the materials it pulls down or wears away, and builds them up anew in other forms. As soon as an ocean washed over the consolidated crust of the globe, it would begin to abrade the surfaces upon which it moved, gradually loosening and detaching materials, to deposit them again as sand or mud or pebbles at its bottom in successive layers, one above another. Thus, in analyzing the crust of the globe, we find at once two kinds of rocks, the respective work of fire and water: the first poured out from the furnaces within, and cooling, as one may see any mass of metal cool that is poured out from a smelting-furnace to-day, in solid crystalline masses, without any division into separate layers or leaves; and the latter in successive beds, one over another, the heavier materials below, the lighter above, or sometimes in alternate layers, as special causes may have determined successive deposits of lighter or heavier materials at some given spot.

There were many well-fought battles between geologists before it was understood that these two elements had been equally active in building up the crust of the earth. The ground was hotly contested by the disciples of the two geological schools, one of which held that the solid envelope of the earth was exclusively due to the influence of fire, while the other insisted that it had been accumulated wholly under the agency of water. This difference of opinion grew up very naturally; for the great leaders of the two schools lived in different localities,

and pursued their investigations over regions where the geological phenomena were of an entirely opposite character,—the one exhibiting the effect of volcanic eruptions, the other that of stratified deposits. It was the old story of the two knights on opposite sides of the shield, one swearing that it was made of gold, the other that it was made of silver, and almost killing each other before they discovered that it was made of both. So prone are men to hug their theories and shut their eyes to any antagonistic facts, that it is related of Werner, the great leader of the Aqueous school, that he was actually on his way to see a geological locality of especial interest, but, being told that it confirmed the views of his opponents, he turned round and went home again, refusing to see what might force him to change his opinions. If the rocks did not confirm his theory, so much the worse for the rocks,—he would none of them. At last it was found that the two great chemists, fire and water, had worked together in the vast laboratory of the globe, and since then scientific men have decided to work together also; and if they still have a passage at arms occasionally over some doubtful point, yet the results of their investigations are ever drawing them nearer to each other,—since men who study truth, when they reach their goal, must always meet at last on common ground.

The rocks formed under the influence of heat are called, in geological language, the Igneous, or, as some naturalists have named them, the Plutonic rocks, alluding to their fiery origin, while the others have been called Aqueous or Neptunic rocks, in reference to their origin under the agency of water. A simpler term, however, quite as distinctive, and more descriptive of their structure, is that of the stratified and unstratified or massive rocks. We shall see hereafter how the relative position of these two kinds of rocks and their action upon each other enables us to

determine the chronology of the earth, to compare the age of her mountains, and if we have no standard by which to estimate the positive duration of her continents, to say at least which was the first-born among them, and how their characteristic features have been successively worked out. I am aware that many of these inferences, drawn from what is called “the geological record,” must seem to be the work of the imagination. In a certain sense this is true,—for imagination, chastened by correct observation, is our best guide in the study of Nature. We are too apt to associate the exercise of this faculty with works of fiction, while it is in fact the keenest detective of truth.

Beside the stratified and unstratified rocks, there is still a third set, produced by the contact of these two, and called, in consequence of the changes thus brought about, the Metamorphic rocks. The effect of heat upon clay is to bake it into slate; limestone under the influence of heat becomes quick-lime, or if subjected afterwards to the action of water, it is changed to mortar; sand under the same agency is changed to a coarse kind of glass. Suppose, then, that a volcanic eruption takes place in a region of the earth's surface where successive layers of limestone, of clay, and of sandstone have been previously deposited by the action of water. If such an eruption has force enough to break through these beds, the hot, melted masses will pour out through the rent, flow over its edges, and fill all the lesser cracks and fissures produced by such a disturbance. What will be the effect upon the stratified rocks? Whenever these liquid masses, melted by a heat more intense than can be produced by any artificial means, have flowed over them or cooled in immediate contact with them, the clays will be changed to slate, the limestone will have assumed a character more like marble, while the sandstones will be vitrified. This is exactly what has been found to be the case, wherever the

stratified rocks have been penetrated by the melted masses from beneath. They have been themselves partially melted by the contact, and when they have cooled again, their stratification, though still perceptible, has been partly obliterated, and their substance changed. Such effects may often be traced in dikes, which are only the cracks in rocks filled by materials poured into them at some period of eruption when the melted masses within the earth were thrown out and flowed like water into any inequality or depression of the surface around. The walls that inclose such a dike are often found to be completely altered by contact with its burning contents, and to have assumed a character quite different from the rocks of which they make a part; while the mass itself which fills the fissure shows by the character of its crystallization that it has cooled more quickly on the outside, where it meets the walls, than at the centre.

The first two great classes of rocks, the unstratified and stratified rocks, represent different epochs in the world's physical history: the former mark its revolutions, while the latter chronicle its periods of rest. All mountains and mountain-chains have been upheaved by great convulsions of the globe, which rent asunder the surface of the earth, destroyed the animals and plants living upon it at the time, and were then succeeded by long intervals of repose, when all things returned to their accustomed order, ocean and river deposited fresh beds in uninterrupted succession, the accumulation of materials went on as before, a new set of animals and plants were introduced, and a time of building up and renewing followed the time of destruction. These periods of revolution are naturally more difficult to decipher than the periods of rest; for they have so torn and shattered the beds they uplifted, disturbing them from their natural relations to each other, that it is not easy to reconstruct the parts and give them coherence and com-

pleteness again. But within the last half-century this work has been accomplished in many parts of the world with an amazing degree of accuracy, considering the disconnected character of the phenomena to be studied; and I think I shall be able to convince my readers that the modern results of geological investigation are perfectly sound logical inferences from well-established facts. In this, as in so many other things, we are but "children of a larger growth." The world is the geologist's great puzzle-box; he stands before it like the child to whom the separate pieces of his puzzle remain a mystery till he detects their relation and sees where they fit, and then his fragments grow at once into a connected picture beneath his hand.

It is a curious fact in the history of progress, that, by a kind of intuitive insight, the earlier observers seem to have had a wider, more comprehensive recognition of natural phenomena as a whole than their successors, who far excel them in their knowledge of special points, but often lose their grasp of broader relations in the more minute investigation of details. When geologists first turned their attention to the physical history of the earth, they saw at once certain great features which they took to be the skeleton and basis of the whole structure. They saw the great masses of granite forming the mountains and mountain-chains, with the stratified rocks resting against their slopes; and they assumed that granite was the first primary agent, and that all stratified rocks must be of a later formation. Although this involved a partial error, as we shall see hereafter, when we trace the upheavals of granite even into comparatively modern periods, yet it held a great geological truth also; for, though granite formations are by no means limited to those early periods, they are nevertheless very characteristic of them, and are indeed the great foundation-stones on which the physical history of the globe is built.

Starting from this landmark, the earlier geologists divided the world's history into three periods. As the historian recognizes as distinct phases in the growth of the human race Ancient History, the Middle Ages, and Modern History, so they distinguished between what they called the Primary period, when, as they believed, no life stirred on the surface of the earth, the Secondary or middle period, when animals and plants were introduced and the land began to assume continental proportions, and the Tertiary period, or comparatively modern geological times, when the aspect of the earth as well as its inhabitants was approaching more nearly to the present condition of things. But as their investigations proceeded, they found that every one of these great ages of the world's history was divided into numerous lesser epochs, each of which had been characterized by a peculiar set of animals and plants, and had been closed by some great physical convulsion, that disturbed and displaced the materials accumulated during such a period of rest. The further study of these subordinate periods showed that what had been called Primary formations, the volcanic or Plutonic rocks, formerly believed to be confined to the first geological ages, belonged to all the periods, successive eruptions having taken place at all times, pouring up through the accumulated deposits, penetrating and injecting their cracks, fissures, and inequalities, as well as throwing out large masses on the surface. Up to our own day there has never been a period when such eruptions have not taken place, though they have been constantly diminishing in frequency and extent. In consequence of this discovery, that rocks of igneous character were by no means exclusively characteristic of the earliest times, they are now classified together upon very different grounds from those on which geologists first united them; though, as the name *Primary* was long retained, we still find it applied to them, even in geological works of quite

recent date. This defect of nomenclature is to be regretted as likely to mislead the student, because it seems to refer to time; whereas it no longer signifies the age of the rocks, but simply their character. The name Plutonic or Massive rocks is, however, now almost universally substituted for that of Primary.

There is still a wide field of investigation to be explored by the chemist and the geologist together, in the mineralogical character of the Plutonic rocks, which differs greatly in the different periods. The earlier eruptions seem to have been chiefly granitic, though this must not be understood in too wide a sense, since there are granite formations even as late as the Tertiary period; those of the middle periods were mostly porphyries and basalts; while in the more recent ones, lavas predominate. We have as yet no clue to the laws by which this distribution of volcanic elements in the formation of the earth is regulated; but there is found to be a difference in the crystals of the Plutonic rocks belonging to different ages, which, when fully understood, enables us to determine the age of any Plutonic rock by its mode of crystallization; so that the mineralogist will as readily tell you by its crystals whether a bit of stone of igneous origin belongs to this or that period of the world's history, as the palæontologist will tell you by its fossils whether a piece of rock of aqueous origin belongs to the Silurian or Devonian or Carboniferous deposits.

Although subsequent investigations have multiplied so extensively not only the number of geological periods, but also the successive creations that have characterized them, yet the first general division into three great eras was nevertheless founded upon a broad and true generalization. In the first stratified rocks in which any organic remains are found, the highest animals are fishes, and the highest plants are cryptogams; in the middle periods reptiles come in, accompanied by fern and moss

forests; in later times quadrupeds are introduced, with a dicotyledonous vegetation. So closely does the march of animal and vegetable life keep pace with the material progress of the world, that we may well consider these three divisions, included under the first general classification of its physical history, as the three Ages of Nature; the more important epochs which subdivide them may be compared to so many great dynasties, while the lesser periods are the separate reigns contained therein. Of such epochs there are ten, well known to geologists; of the lesser periods about sixty are already distinguished, while many more loom up from the dim regions of the past, just discerned by the eye of science, though their history is not yet unravelled.

Before proceeding farther, I will enumerate the geological epochs in their succession, confining myself, however, to such as are perfectly well established, without alluding to those of which the limits are less definitely determined, and which are still subject to doubts and discussions among geologists. As I do not propose to make here any treatise of Geology, but simply to place before my readers some pictures of the old world, with the animals and plants that inhabited it at various times, I shall avoid, as far as possible, all debatable ground, and confine myself to those parts of my subject which are best known, and can therefore be more clearly presented.

First, we have the Azoic period, *devoid of life*, as its name signifies,—namely, the earliest stratified deposits upon the heated film forming the first solid surface of the earth, in which no trace of living thing has ever been found. Next comes the Silurian period, when the crust of the earth had thickened and cooled sufficiently to render the existence of animals and plants upon it possible, and when the atmospheric conditions necessary to their maintenance were already established. Many of the names given to these periods are by no means signif-

icant of their character, but are merely the result of accident: as, for instance, that of Silurian, given by Sir Roderick Murchison to this set of beds, because he first studied them in that part of Wales occupied by the ancient tribe of the Silures. The next period, the Devonian, was for a similar reason named after the county of Devonshire, in England, where it was first investigated. Upon this follows the Carboniferous period, with the immense deposits of coal from which it derives its name. Then comes the Permian period, named, again, from local circumstances, the first investigation of its deposits having taken place in the province of Permian, in Russia. Next in succession we have the Triassic period, so called from the trio of rocks, the red sandstone, Muschel Kalk, (shell-limestone,) and Keuper, (clay,) most frequently combined in its formations; the Jurassic, so amply illustrated in the chain of the Jura, where geologists first found the clue to its history; and the Cretaceous period, to which the chalk cliffs of England and all the extensive chalk deposits belong. Upon these follow the so-called Tertiary formations, divided into three periods, all of which have received most characteristic names. In this epoch of the world's history we see the first approach to a condition of things resembling that now prevailing, and Sir Charles Lyell has most fitly named its three divisions, the "Eocene," or the dawn, the "Miocene," meaning the continuance and increase of that light, and lastly, the "Pliocene," signifying its fulness and completion. Above these deposits comes what has been called in science the present period,—*the modern times* of the geologist,—that period to which man himself belongs, and since the beginning of which, though its duration be counted by hundreds of thousands of years, there has been no alteration in the general configuration of the earth, consequently no important modification of its climatic conditions, and no change in the animals and plants inhabiting it.

I have spoken of the first of these periods, the Azoic, as having been absolutely devoid of life, and I believe this statement to be strictly true; but I ought to add that there is a difference of opinion among geologists upon this point, many believing that the first surface of our globe may have been inhabited by living beings, but that all traces of their existence have been obliterated by the eruptions of melted materials, which not only altered the character of those earliest stratified rocks, but destroyed all the organic remains contained in them. It will be my object to show in this series of papers, not only that the absence of the climatic and atmospheric conditions essential to organic life, as we understand it, must have rendered the previous existence of any living beings impossible, but also that the completeness of the Animal Kingdom in those deposits where we first find organic remains, its intelligible and coherent connection with the successive creations of all geological times and with the animals now living, affords the strongest internal evidence that we have indeed found in the lower Silurian formations, immediately following the Azoic, the beginning of life upon earth. When a story seems to us complete and consistent from the beginning to the end, we shall not seek for a first chapter, even though the copy in which we have read it be so torn and defaced as to suggest the idea that some portion of it may have been lost. The unity of the work, as a whole, is an incontestable proof that we possess it in its original integrity. The validity of this argument will be recognized, perhaps, only by those naturalists to whom the Animal Kingdom has begun to appear as a connected whole. For those who do not see order in Nature it can have no value.

For a table containing the geological periods in their succession, I would refer to any modern text-book of Geology, or to an article in the "Atlantic Monthly" for March, 1862, upon "Meth-

ods of Study in Natural History," where they are given in connection with the order of introduction of animals upon earth.

Were these sets of rocks found always in the regular sequence in which I have enumerated them, their relative age would be easily determined, for their superposition would tell the whole story: the lowest would, of course, be the oldest, and we might follow without difficulty the ascending series, till we reached the youngest and uppermost deposits. But their succession has been broken up by frequent and violent alterations in the configuration of the globe. Land and water have changed their level,—islands have been transformed to continents,—sea-bottoms have become dry land, and dry land has sunk to form sea-bottom,—Alps and Himalayas, Pyrenees and Apennines, Alleghanies and Rocky Mountains, have had their stormy birthdays since many of these beds have been piled one above another, and there are but few spots on the earth's surface where any number of them may be found in their original order and natural position. When we remember that Europe, which lies before us on the map as a continent, was once an archipelago of islands,—that, where the Pyrenees raise their rocky barrier between France and Spain, the waters of the Mediterranean and Atlantic met,—that, where the British Channel flows, dry land united England and France, and Nature in those days made one country of the lands parted since by enmities deeper than the waters that run between,—when we remember, in short, all the fearful convulsions that have torn asunder the surface of the earth, as if her rocky record had indeed been written on paper, we shall find a new evidence of the intellectual unity which holds together the whole physical history of the globe in the fact that through all the storms of time the investigator is able to trace one unbroken thread of thought from the beginning to the present hour.

The tree is known by its fruits,—and the fruits of chance are incoherence, incompleteness, unsteadiness, the stammering utterance of blind, unreasoning force. A coherence that binds all the geological ages in one chain, a stability of purpose that completes in the beings born to-day an intention expressed in the first creatures that swam in the Silurian ocean or crept upon its shores, a steadfastness of thought, practically recognized by man, if not acknowledged by him, whenever he traces the intelligent connection between the facts of Nature and combines them into what he is pleased to call his system of Geology, or Zoölogy, or Botany,—these things are not the fruits of chance or of an unreasoning force, but the legitimate results of intellectual power. There is a singular lack of logic, as it seems to me, in the views of the materialistic naturalists. While they consider classification, or, in other words, their expression of the relations between animals or between physical facts of any kind, as the work of their intelligence, they believe the relations themselves to be the work of physical causes. The more direct inference surely is, that, if it requires an intelligent mind to recognize them, it must have required an intelligent mind to establish them. These relations existed before man was created; they have existed ever since the beginning of time; hence, what we call the classification of facts is not the work of his mind in any direct original sense, but the recognition of an intelligent action prior to his own existence.

There is, perhaps, no part of the world, certainly none familiar to science, where the early geological periods can be studied with so much ease and precision as in the United States. Along their northern borders, between Canada and the United States, there runs the low line of hills known as the Laurentian Hills. Insignificant in height, nowhere rising more than fifteen hundred or two thousand feet

above the level of the sea, these are nevertheless the first mountains that broke the uniform level of the earth's surface and lifted themselves above the waters. Their low stature, as compared with that of other more lofty mountain-ranges, is in accordance with an invariable rule, by which the relative age of mountains may be estimated. The oldest mountains are the lowest, while the younger and more recent ones tower above their elders, and are usually more torn and dislocated also. This is easily understood, when we remember that all mountains and mountain-chains are the result of upheavals, and that the violence of the outbreak must have been in proportion to the strength of the resistance. When the crust of the earth was so thin that the heated masses within easily broke through it, they were not thrown to so great a height, and formed comparatively low elevations, such as the Canadian hills or the mountains of Bretagne and Wales. But in later times, when young, vigorous giants, such as the Alps, the Himalayas, or, later still, the Rocky Mountains, forced their way out from their fiery prison-house, the crust of the earth was much thicker, and fearful indeed must have been the convulsions which attended their exit.

The Laurentian Hills form, then, a granite range, stretching from Eastern Canada to the Upper Mississippi, and immediately along its base are gathered the Azoic deposits, the first stratified beds, in which the absence of life need not surprise us, since they were formed beneath a heated ocean. As well might we expect to find the remains of fish or shells or crabs at the bottom of geysers or of boiling springs, as on those early shores bathed by an ocean of which the heat must have been so intense. Although, from the condition in which we find it, this first granite range has evidently never been disturbed by any violent convulsion since its first upheaval, yet there has been a gradual rising of that part of the continent, for

the Azoic beds do not lie horizontally along the base of the Laurentian Hills in the position in which they must originally have been deposited, but are lifted and rest against their slopes. They have been more or less dislocated in this process, and are greatly metamorphized by the intense heat to which they must have been exposed. Indeed, all the oldest stratified rocks have been baked by the prolonged action of heat.

It may be asked how the materials for those first stratified deposits were provided. In later times, when an abundant and various soil covered the earth, when every river brought down to the ocean, not only its yearly tribute of mud or clay or lime, but the *débris* of animals and plants that lived and died in its waters or along its banks, when every lake and pond deposited at its bottom in successive layers the lighter or heavier materials floating in its waters and settling gradually beneath them, the process by which stratified materials are collected and gradually harden into rock is more easily understood. But when the solid surface of the earth was only just beginning to form, it would seem that the floating matter in the sea can hardly have been in sufficient quantity to form any extensive deposits. No doubt there was some abrasion even of that first crust; but the more abundant source of the earliest stratification is to be found in the submarine volcanoes that poured their liquid streams into the first ocean. At what rate these materials would be distributed and precipitated in regular strata it is impossible to determine; but that volcanic materials were so deposited in layers is evident from the relative position of the earliest rocks. I have already spoken of the innumerable chimneys perforating the Azoic beds, narrow outlets of Plutonic rock, protruding through the earliest strata. Not only are such funnels filled with the crystalline mass of granite that flowed through them in a liquid state, but it has often poured over their sides,

mingling with the stratified beds around. In the present state of our knowledge, we can explain such appearances only by supposing that the heated materials within the earth's crust poured out frequently, meeting little resistance,—that they then scattered and were precipitated in the ocean around, settling in successive strata at its bottom,—that through such strata the heated masses within continued to pour again and again, forming for themselves the chimney-like outlets above mentioned.

Such, then, was the earliest American land,—a long, narrow island, almost continental in its proportions, since it stretches from the eastern borders of Canada nearly to the point where now the base of the Rocky Mountains meets the plain of the Mississippi Valley. We may still walk along its ridge and know that we tread upon the ancient granite that first divided the waters into a northern and southern ocean; and if our imaginations will carry us so far, we may look down toward its base and fancy how the sea washed against this earliest shore of a lifeless world. This is no romance, but the bald, simple truth; for the fact that this granite band was lifted out of the waters so early in the history of the world, and has not since been submerged, has, of course, prevented any subsequent deposits from forming above it. And this is true of all the northern part of the United States. It has been lifted gradually, the beds deposited in one period being subsequently raised, and forming a shore along which those of the succeeding one collected, so that we have their whole sequence before us. In regions where all the geological deposits, Silurian, Devonian, Carboniferous, Permian, Triassic, etc., are piled one upon another, and we can get a glimpse of their internal relations only where some rent has laid them open, or where their ragged edges, worn away by the abrading action of external influences, expose to view their successive layers, it must, of course, be more difficult to follow

their connection. For this reason the American continent offers facilities to the geologist denied to him in the so-called Old World, where the earlier deposits are comparatively hidden, and the broken character of the land, intersected by mountains in every direction, renders his investigation still more difficult. Of course, when I speak of the geological deposits as so completely unveiled to us here, I do not forget the sheet of drift which covers the continent from North to South, and which we shall discuss hereafter, when I reach that part of my subject. But the drift is only a superficial and recent addition

to the soil, resting loosely above the other geological deposits, and arising, as we shall see, from very different causes.

In this article I have intended to limit myself to a general sketch of the formation of the Laurentian Hills with the Azoic stratified beds resting against them. In the Silurian epoch following the Azoic we have the first beach on which any life stirred; it extended along the base of the Azoic beds, widening by its extensive deposits the narrow strip of land already upheaved. I propose in my next article to invite my readers to a stroll with me along that beach.

---

## PERICLES AND PRESIDENT LINCOLN.

ANCIENT history is forever indispensable to the speculative historian. The ground of its value is the very fact of its antiquity; by which we mean, not simply distance in time, but distance as the result of separate construction,—distance as between two systems of reality, each orbicularly distinct from the other. One system—that with which our destiny is concurrent—is still flying its rounds in space; the other has whirled itself out of space, and through a maze of scattered myths and records, into human remembrances. This latter system, though hermetically sealed to the realities of outward existence, still, and by this very exclusion from all practical uses, becomes of paramount interest to the philosophic historian; indeed, it is only because the shadowy planets of the ancient cycle still repeat their revolutions in human thought, that the philosophy of history is at all possible. Philosophy, in its ideal pretensions, frequently forgets its material conditions: it claims for itself the power of constructing wholes in thought where only parts have been given in reality,

as if, dispensing with material supports, it could bridge over a chasm in Nature. And so it seems to do, but so in fact it never does; it never builds but on models; it never in any system gives ideal completeness, until a real completeness is furnished, either through this system or some other that is analogous. There can, therefore, be no speculative anticipation in history, save as it makes its way into the blank future along the line of diagrams furnished by the past; the splendid composition, in our thoughts, of realities as yet undeveloped, is set up in the skeleton types left us of realities that not only have themselves been accomplished, but which belong to a system that is concluded.

Else,—if the philosophy of history does not thus depend upon some sort of *real* conclusions for its *notional* ones,—why is it that no such philosophy existed, even in name, among the ancients? It may be said that some prevailing practical motive is necessary to the existence of philosophy in any field, and that no such motive was present to the ancient mind in this particular field

of history. Admitted; yet this does not at all disturb our position. No motive would have sufficed for so grand an aim, short of a sublime consciousness regarding the destiny of the human race. But whence was this consciousness to be derived? To the ancient mind, the development of the human drama, considered strictly as human, moved within narrow boundaries; traced backward through a number of generations so limited that they might be counted on one's fingers, the human *personæ* did not absolutely disappear, but they emerged again, and in a precedent cycle, only as divinities. The consciousness of human destiny was thus elevated by infinite grades, but not of this destiny as human, as depending for its splendors upon the human will. It was an exaltation that consisted in the sacrifice of humanity. No definite records existed through which any previous cycle of human events could be translated into thought; and in default of a human, there was substituted a divine cycle. From this mythologic past of the ancients was reflected upon their present every-day existence a peculiar glory; but it was not the glory of humanity. To celestial or infernal powers were attributed the motives and impulses out of which their life was developed, not to the human will. The future, as a matter of course, partook of this divine investment; so that history to the ancients was something which in either direction was lost in mystery, not a system to be philosophically analyzed, or to be based on principles of any sort. It is true that in the time of Herodotus, when nations, hitherto insulated, came to know each other better, an interest began to be awakened in history as resting upon a human basis; but this is to be accounted for only by the fact, that each nation coming in contact with another received from it the record of a development differing from its own in the details of outward circumstances, yet similar in certain general features; and in some

cases, as in that of Egypt, there was presented an historic *epos* anterior in time. But in no case were furnished hints so suggestive as those which ancient history furnishes to us, nor any which would answer the purposes of philosophy; in no case was there presented a completed arch, but only antecedent parts of a structure yet in suspense respecting its own conclusion. Fate uncourteously insisted upon making her disclosures by separate instalments; she would advance nothing at any rate of discount. What, therefore, was the ancient philosopher to do? His reflections concerning the past must of necessity be partial; how much more would his anticipations of the future fail of anything like demonstrative certitude!

We moderns, on the other hand, are eminently fortunate, because within the cycle of our thoughts revolves the entire *epos* of the ancient world. Here there is the element of *completeness*: it is our privilege to look upon the final *tableau* before the curtain falls, to have gathered in the concluding no less than the prelusive signals, to have seen where the last stone in the arch bottoms upon a real basis. Let it be that to us it is a drama of shadows; yet are none of the prominent features lost; indeed, they are rather magnified by the distance; our actors upon the ancient *proscenium* walk in buskins and look upon us out of masks whose significance has been intensified by remoteness in time. This view of the case yields an ample refutation of those arguments frequently adduced of late, in certain quarters, to prove the inutility of classical studies. Thus, it is urged, that, in every department of human knowledge, we transcend the most splendid acquirements of the ancients, and therefore that it is so much time wasted which we devote towards keeping up an acquaintance with antiquity. But how is it that we so far overtop the ancients? Simply by preserving our conscious connection with them, just as man-

hood towers above childhood through the remembered experiences of childhood. As an evidence of this, we need only note the sudden impulse which modern civilization received through the revival of ancient literature. As it is by resolving into constellations the *nebulae*, disconnected from the earth by vast intervals of space, that we conjecture the awful magnitude of the universe, so do we conjecture the magnitude of human life by resolving into distinct shapes the nebulous mist of antiquity separated from us by vast intervals in time. The profoundest lessons, such as are heeded by the race, such as are universally intelligible, have this obliquity of origin. Thus, in the distractions of the present, no relief is found through compensatory consolations from the present; but we turn to the figures of the past, — figures caught in the mind, and held fixed, as in bas-relief, — figures in the attitude of antagonistic strife or of sublime rest, — figures that master our intellects as can none from the tumultuous present, (excepting the present of dreams,) and that out of their eternal repose anticipate for us contingencies that do not yet exist, but are representatively typified through such as have existed and passed away.

It is a fact well ascertained in physical geography, that the New World and the Old stand over against each other, not merely as antipodal opposites, but so corresponding in outline that a promontory in one is met by a gulf in the other, and sinuous seas by outstanding continents, (so that over against the Gulf of Mexico, for instance, is opposed the projection of Western Africa,) as if the gods had, in the registry of some important covenant, rent the earth in twain for indentures. In this way, also, do the two great hemispheres of Time stand opposed; so that, from the shaping of the ancient, we may anticipate even the undeveloped conformation of the modern: in place of the direct reality, which is of necessity wanting, we have the next best thing

to guide us even in our most perilous coastings, namely, its well-defined *analogue* in the remote past.

Thus, considering merely this *analogue*, might one have prophetically announced, even in the generations immediately succeeding to Christ, when Christianity bade fair to become a world-power in a new civilization, that here, indeed, was a new planting of Mysteries, which, although infinitely transcending them in fulness and meaning, were yet the counterparts of mysteries which had hitherto swayed the human heart, — but that, pure and holy as were these mysteries, they should yet, in their human connections, share the vicissitudes of the old, — that, like them, they should march through tribulations on to triumph, — that, like them, once having triumphed and become a recognized source of power, they should be linked with hierarchical delusions and the degradations of despotism, — that, like them, too, in some future generation, they should, through the protesting intellect, be uplifted from these delusions and degradations. Thus, also, and following the same guidance, might our prophet have foretold the *political* shapings of the newly emerging hemisphere of Christendom. He would thus, through a precise analogy in ancient history, have anticipated the conjunction of principles so novel in their operation as were those of Christianity with the new races, then lying in wait along the skirts of the Roman Empire, and biding their time. From a necessity already demonstrated in the ancient world, he would have foreseen the necessity of Feudalism for the modern, as following inevitably in the train of barbarian conquest, the recurrence of which had been distinctly foreshadowed. In connection with the Protestantism of intellect in religious matters, he would have anticipated a similar movement in politics; he would have prefigured the conflict that was to be renewed between the many and the few for power; and if by some miracle his material vision

could have been made coextensive in space with the scope which was possible for him in thought, if he could have followed the sails of Columbus across the Atlantic, then, in connection with the transference of European civilization to the New World, and foreseeing the revulsion in habits and institutions that must follow such local separation, he might have indicated the arena which *representatively* was to stand for Christendom, and in which, if anywhere, the great problem of human freedom should be solved, either by a success so grand that the very reflex of its splendor should illumine the universal heart of man, or by a failure so overwhelming and disastrous that the ruinous impulse should be communicated with the crushing effect of a thunderbolt through the whole structure of Christian civilization.

Standing, as we do, face to face with the crisis in which this problem is to be solved, and through one part or the other of the alternative just stated, it is evident, from what has already been said, that no light can so fully illustrate the position and its contingencies as that which reaches us from antiquity, and through analogies such as we have hinted at in the preceding paragraphs.

In the first place, in order properly to understand the specific analogy which we now proceed to develop and apply to the case in hand, it is absolutely necessary that the reader should fix Hellas in his mind's eye as the counterpart of Christendom. Let it be understood, then, that all that preceded Hellenism in the ancient world was but the vestibule of its magnificent temple, and that the sole function of the Roman Empire, which came afterwards, was to tide the world over from Hellenic realities to the more sublime realities of Christianity. The mighty deeds of Egyptian conquerors, the imperial splendors of Persian dynasties, — these were but miniature gems that gilded the corridors and archways in the *propylæa* of ancient civilization; and on the other side, the brilliancy of

the Cæsars was not that of an original sun in the heavens, since, in one half of their course, they did but reflect the sunset glories of Greece, and, in the other, the rising glories of Christianity. From Macedonia, then, in the North, southward to the sea, and from the heroic age to the Battle of Pydna, (168 B. C.,) extended, in space and time, the original and peculiar splendors of antiquity.

But two of the Hellenic States were consecrated to a *special* office of glory. These two were Athens and Sparta; and the sublime mission which it was allotted them to fulfil in history was this, that they, within limited boundaries, should concentrate all ante-Christian excellence, — that these two States, opposite in their whole character, should, through the conflict between their antagonistic elements, test the strength and worthiness of ante-Christian principles. Precisely in the same relation to Christendom stands America, with her two opposite types of civilization arrayed against each other in mortal conflict. Here must be tested the merits of modern civilization, just as in Peloponnesus and Attica were tested those of the old; here, too, must be tested the strength even of Christianity as a practical power in the political world. Where Ionic and Doric Greece stood twenty-three centuries ago, stand today the Northern and Southern sections of this country; they hold between them, as did their Hellenic prototypes, the heritage of laborious ages, and to their eyes alone have the slowly growing fruits of time seemed ready, from very ripeness, to fall into the lap of man. In either case, Hellenic or American, we look upon generations totally different in circumstance from those which came before them, — generations, freed not only from the despotic tutelage of Nature, (from whom they exact tribute, instead of, as formerly, paying it to her,) but also from the still more galling tutelage of ignorance and of the social necessities

imposed by ignorance, — generations which, in either the ancient or modern instance, stand representatively for the whole race, and by necessity, since they only could fairly be said, unimpeded by external conditions, perfectly to represent themselves. It matters not whether we take the particular generation contemporary with Pericles or with President Lincoln (his modern *redivivus*); each stands illustrious as the last reach upward of the towering civilizations that respectively pushed them to this eminence; the highest point is in each case reached, and all that remains is to make this sublime elevation tenable for the race universally, so that, instead of the pyramidal mountain, we shall have the widely extended *plateau*.

Here we will anticipate a question which the reader, we imagine, is already about to put. He will readily admit that Greece, in her palmiest era, politically, grasped, in form and conception at least, the highest ideal of rational liberty; but why, he will ask, was not this divine boon made universally available? Why was it not extended to Persia, and to the Asiatic hosts that for security hid themselves in the folds of her garments? why not to the dwellers on the Nile? Why was it that it was not even retained by Greece herself? The truth is, that no sooner was the golden fleece in the hands of the adventurers that had sought it so zealously than it was rent by their discords. Elements of barbarism had run uncurbed alongside of intellectual and artistic refinements. Mingled with high-minded heroes were a set of treacherous Iscariots. But why, it will naturally be asked, had there not been *hitherto* some outbreak of these discordant elements? That question is easily answered, if we consider that up to this time there had existed certain external elements, which, by arousing incessantly the patriotic feelings of all Greece against hostilities from without, had administered an opiate to the Cerberus of domestic strife. The terrible storm was maturing its thunderbolts

treacherously and in subterranean chambers; but its mutterings were effectually silenced by the more audible thunderings that burst across the Ægean from the Persian throne. Treachery was lulled to sleep, while the nobler sentiment which united Greece against Asiatic despotism was perpetually stung into activity in the popular heart, and inspired the utterances of eloquence. Thus it might not have been; if Greece had first come within hail of Persia through the ordinary commerce of peace; since, in that case, after receiving from the latter her treacherous gifts, her voluptuous effeminacies, she would easily have fallen into the vast net-work that already trammelled all Asia, and would then, through her own entanglement, include the whole world. But it was not in peace that they met. The first question put to Hellas by her Oriental neighbor was in effect this: — Are you willing, without going to the trouble of subjecting the matter to the test of actual conflict, to consider yourself as having been whipped? This, it must be confessed, was a shivering introduction to the world for Greece, — something like a Lacedæmonian baptism, — but it stood her in good stead. Like the dip in the Styx, it insured immortality. The menaces of despotism, coming from the East, gave birth to the impulses of freedom in the West; and the latter sustained themselves at a more exalted height, in proportion as the former were backed by substantial support. Subtract anything from that deafening chorus of slaves which follows in the train of Xerxes, and we must by the same amount take from the pæans of aspiring Greece. Abolish the outlying provinces that acknowledge a forced allegiance to the Persian monarch, or turn out of their course the tributary streams that from every part of Asia swell the current of Eastern barbarism, and there arises the necessity, also, of circumscribing within narrower limits the glories of the Western civilization. Against the dangers of

external invasion, against all the menaces of barbarians, Greece was secure through the forces which by opposition were developed in herself, — and for so long a period was she secure against herself. But the very rapidity and decisiveness of her triumphs over the barbarian cut this period short, and cut short also the rising column of Hellenic power. At the same time that Cimon is finishing up the fleet of Persia, Pericles is preparing for the culmination of Greece. In all this there seemed nothing final; from the serenity of the Grecian sky, and from the summer silence which inwrought her statues and Pentelic colonnades, there was heralded the promise of a ceaseless æon of splendor. Resting from one mighty effort, and, in the moment of rest, clothing herself in the majesty of beauty, Hellas yet seemed ready to burst forth out of this rest into an effort more gigantic, to be followed by a more memorable rest as the reflex of a destiny more nearly consummated. But in this promise there was the very hollowness of deception. Just because the intense strain against external barbarism had relaxed, those elements which common necessity had made tributary to success and triumph began to suffer dissolution; each separate interest became a prominent centre of a distinct political crystallization; and it was in this way that certain elements of barbarism, inherent in Spartan civilization, now for the first time arrayed it in direct opposition to the Athenian. It was this defection, on the part of Sparta, from the cause of freedom, which cut the world off from those benefits that it was in the power of Greece to confer. Athens, whatever other faults she may have had, stood ready to extend these benefits. As she alone had awakened for herself an echo of Hellenic victory in her world of Art, so was she alone prepared, through a world-wide extension of this victory over slavery, to multiply the intellectual reflexes of so splendid a triumph; hers it was to disinthral

and illuminate the world. And here, where she had a right to look for the coöperation of all Greece, as hitherto, was she thwarted; here, holding the van in a procession of triumph, which, as carrying forward a glorious disinthralment into Asia and into Egypt, and as outfacing the most inveterate of all despotisms, should far out-rival the fabled procession of Dionysus, — here was she not merely hindered by the *vis inertia* of her southern neighbor, but was actually stopped in her movement by a newly revealed force of opposition, was flanked by an ancient ally, now turned traitor, in the summertime of a most auspicious peace; and in her efforts to disembarrass herself of this enemy in the rear, were her energies totally exhausted.

A position precisely similar, in its main features, does Republican America hold to-day. She has established her own freedom against all European intrusion; and in her efforts to do this she arrived at political union as an indispensable necessity, and merged all separate interests in a common one. That interest, already vindicated for herself, has become world-wide in its meaning; so that, in virtue of what she has accomplished in the cause of freedom, she takes an authoritative position of leadership in modern civilization. And what is it that hinders the fulfillment of her exalted mission? She, too, has been flanked in her march by a traitor within her own borders; against her, and doing violence to her high office, are opposed the backward-tending elements of barbarism, which, if not immediately neutralized, if not summarily crushed, will drag her to the lowest stages of weakness and exhaustion.

A very minute parallel might be drawn between the opposing civilizations that are to-day in this country contending for the mastery and those which were engaged in a similar conflict in the days of Pericles. New England would be found to be the Attica of America; while, on the other

hand, the Southrons would most exactly correspond to the ancient Lacedæmonians. As the Cavaliers who first settled Virginia helped on the Puritan exodus, so did the Dorians that settled Sparta, through the tumult of their overwhelming invasion, drive the Ionians from their old homes to the barren wastes of Attica,—barren as compared with the fertile valleys of the Eurotas, just as New England would be considered sterile when contrasted with Virginia or the Valley of the Mississippi. Like the Ionian Greeks, the “Yankees” stand before the world as the recognized advocates and supporters of a pure democracy. The descendants of the Cavaliers, on the contrary, join hands, as did the ancient Dorians, in favor of an oligarchy, and of an oligarchy, too, based on the institution of slavery. Upon this difference rested the political dissensions of Greece, as do now those of our own country. The negro plays no more important part in the difference between the North and South than did the Helot in the contests between the Spartans and the Athenians. It is not in either case the simple fact of human slavery which necessitates the civil strife, but it is the radical opposition between *a government that is founded upon slavery* and one which is not. The Athenians had slaves; and so, for that matter, might New England have to-day: yet, for all that, the civil strife would have been inevitable, because both in Greece and America this strife evidently arises out of the conflict between the interests of an oligarchy based upon slavery and a democracy in which slavery, if it exists at all, exists as a mere accident that may be dispensed with without any radical social revolution. Slavery, as opposed to divine law or to abstract justice, never has brought, nor ever will bring, two countries into conflict with each other; but slavery made indispensable as *a peculiar institution*, as an organized fact, as a fundamental social necessity, *must* come into conflict with the totally opposite institutions of

democracy, and that not because it is merely or nominally slavery, but because it is a political organ modifying the entire structure of government. Slavery, as it existed in Athens, slavery, as it existed formerly in the Northern States, was in everything, except its name and accidents, consistent with democracy; and, in either case, to dispense with the institution was to introduce no radical change, but only to do away with the name and accidents.\*

In Sparta, or in the South, the case was far otherwise. Here, slavery existed in its strict severity; it came into being in connection with material conditions,—that is, in connection with a soil especially favorable to agriculture,—and it maintained its existence by reason of its fitness, its indispensableness, to certain social conditions; it could not, therefore, be changed or annulled without running counter both to the inveterate tendencies of Nature and the still more inveterate tendencies of habit. This difference between the two estates of slavery is evident also from the fact, that, while, in the one case, the law would admit of no emancipation, in the other, the emancipation was effected legally, either in the lump, as in New England, or by instalments, as in Athens; and in the latter State we must remember that the process was rendered the more easy and natural by the fact that the slaves were, in the first instance, generally prisoners taken in war, and not unfrequently stood upon the same social level, before their capture, with their captors, while in Sparta the slaves were taken as a subject race, and held as inferiors.

Much glory has been given to Lacedæmon on the score of her martial merits. To ourselves this glory seems rather her shame, since these merits are inseparable from her grand political mistake. We might as justly exalt Feudalism on the ground of its military estab-

\* Here, however, the reader must understand that the infernal system of slave-stealing is left entirely out of the account.

ishment, which, after all, we must admit to be an absolute necessity in the system. To the Spartan oligarchy it was equally necessary that the whole State should exist perpetually under martial law. In the first place, it was necessary, if for nothing else, for the intimidation of the Helots, who were continually watching their opportunity for insurrection, as is shown in that memorable attempt made in connection with the Messenian War. It was, moreover, necessary for a government not strong by sea to extend its boundaries by military conquest; for by each successive conquest a possible enemy is actually forced into subjection, and made to contribute to the central power which subdues it.

Indeed, it is true that every feature of the State polity which that old rascal Lycurgus gave to Sparta must be considered and judged in connection with this grand martial establishment, upon which the Lacedæmonian oligarchy was based, and through which the nefarious attempt to establish oligarchies in all the rest of the world was supported. The establishment itself was barbarous, and could not possibly have thrived under the art-loving, home-protecting eye of the Athenian Pallas. All domestic sanctities were rudely invaded, and even the infant's privilege to live depended upon its martial promise; the aspirations of religion were levelled down into sympathy with the most brutal enthusiasm, as afterwards happened in the case of Rome; the very idea of Beauty was demolished, and with it all that was sacred in human nature, and all hope of progress. The whole State was sacred to the idea of Military Despotism.

Thus it happened that Sparta, from her first introduction in history to her exit, was at a stand-still in whatever involved anything higher than brute force. In this respect she differed from Athens as much as the South at this day differs from the North, and from precisely the same causes, the principal of

which, in each case, was barbarism, — barbarism deliberately organized, and maintained in conscious preference to intellectual refinement.

And yet it is remarkable that both Lacedæmon and the South, as compared with their respective rivals, started in life at an immense advantage, and seemingly with a far more auspicious prospect before them. The early Virginian turned up his nose at Plymouth as a very despicable affair, and wondered that the Puritans did not set sail *en masse* for the Bahamas. Gorgeous were the descriptions of Virginia sent home by some of the first settlers, in which lions and tigers, and a whole menagerie of tropical animals, came in for no small share of wonder; and, as an offset to this summer luxuriance of life, most disparaging pictures were drawn of the bleak sterility of New England, — and even that which was the only compensation for this barrenness of the earth, namely, the abundance of fish in the sea, was, as respects the revenue derived from it, made an especial subject of derision. Thus, doubtless, did the ancient Peloponnesian look upon Attica in the small beginnings of her infinite growth; he had exactly the same topics for his ridicule, — sterility, fishery, and all; and just as in the case of the South, was the laugh in the end turned against himself. But to the very last there was one stinging jest on the lips of the Spartan, — the very same which the modern slaveholder flings with so great gusto against the unfortunate Yankee, — and that was Athenian cupidity. The ancient and the modern jester are alike condemned on their own indictment, since upon cupidity the most petulant, upon cupidity the most voracious in its greedy demands, rested the whole Spartan polity, as does the system of slaveholding in the South. The Spartan, like the Southern planter, might protest that money was of no consequence whatever, that to him it was only so much iron, — but why? Only because that, by the satisfaction of a

cupidity more profound, he was able to dispense with the ordinary necessities of an honest democrat.

In peace, Sparta was a nonentity; in the resources which enrich and glorify the time of peace she was a bankrupt. Fine arts or education she had none: these centred in Athens. These were elements of progress, and could no more be tolerated in Peloponnesus than in our Gulf States. Taking our Southern civilization or that of Lacedæmon, we must say of each that it is thoroughly brutalized; we may challenge either to show us a single master-piece of intellect, whether in the way of analysis or of construction,—but none can they show.

Even in a military sense, the forces which Democracy could marshal, either in ancient Greece or in modern America, were more than a match for the corresponding oligarchical factions. Athens, like New England, was a commercial centre, and therefore a prominent naval power; and this naval prominence, in each instance, was so great as to give a decisive superiority over a non-commercial rival. Sparta used her influence and power to establish oligarchic institutions in the various provinces of Greece, which generally corresponded to our Territories,—in which latter the South has, with an equally unworthy zeal, been for several years seeking to establish her peculiar institutions. Epidamnus proved a Grecian Kansas. As in our own country, the hostile factions refrained from war as long as human nature would allow; but, once engaged in it, it became a vital struggle, that could be terminated only by the exhaustion of one of the parties.

Athens was the stronger: why, then, did she not conquer her rival? With equal pertinence we might ask, Why have not we, who are the stronger, subjugated the South? The answer to both questions is the same. Political prejudice overmasters patriotism. Neither ourselves nor the ancient Atheni-

ans appear to have the remotest idea of the importance of the cause for which we are contending. To us, as to them, the avenue to future glory lies through the blood-red path of war, of desperate, unrelenting war. Nothing else, no compromise, no negotiations of any sort, would suffice. This the Athenians never realized; this *we* do not seem to understand. Among ourselves, as among them, the peace-party—a party in direct sympathy with the aims and purposes of the enemy—blusters and intrigues. President Lincoln meets with the same embarrassments in connection with this party that Pericles met in his campaigns against Sparta: it was his coming into power that precipitated the violence of war; his determined action against all sympathizers with the enemy draws down upon him the intensified wrath of these sympathizers; the generals whom he sends into the field, if, like Alcibiades, they are characterized by any spirit in their undertakings, are trammelled with political entanglements and rendered useless, while some slow, half-brained Nicias, with no heart in the cause, is placed at the head of expeditions that result only in defeat.

There is the same diffusiveness connected with our military plans which characterized the operations of the Athenians against Sparta. We do not make the special advantage which we have over the South through our naval superiority available against her special vulnerability. We intimidate her, as Pericles did the Peloponnesians, by circumnavigating her territories with a great display of our naval power; we effect a few landings upon her coasts; but all these invasions lead to no grand results, they do not subdue our armed enemy. What with these errors in the general conduct of the war, and the lack of energy which characterizes every part, our prospects of ultimate success are fast being ruined. Unless some change be quickly effected, unless political sentiment can be made to give place to the original enthusiasm with which

we commenced the war, and this enthusiasm be embodied in military enterprise, our case is a hopeless one. On the other hand, if things go on as they have been going on, the political opposition to the war will rise to such a height as to overturn the Administration, and in its place install those who are desirous of a reconstruction of the Union on a Southern basis. The same errors on the part of Athens led to just this result in Greece; an oligarchy came at last to rule even over the democratic city itself. The consequence was the downfall of Greece, and in her ruin was demonstrated the failure of ancient civilization. In a like event, nothing could save us, nothing could save modern civilization, from the same disastrous ruin.

The barbarism which at successive intervals in history has swept southward over Asia was, at the least, something fresher and better than that which it displaced. The Gothic barbarians were, in very truth, the scourges of God to the inferior and more despicable barbarians of Southern Europe. The for-

mer exemplified a barbarism unconscious of itself, and carrying in its very rudeness the hope of the world; and the more complete and overwhelming its revolutions, the more glorious the promise involved in them. But, from the establishment over a continent of a system so deliberately barbarous that it dares to array its brutal features against the sunlight of this nineteenth century, that it dares even to oppose itself, with a distinct confession of its base purposes, against the only free, beneficent, and hope-giving government in the world, — from the triumph of such a system and over such a government there is not the shadow of a hope, but rather the widest possible field for dismal apprehension. From this barbarism we have everything to fear; and the only way to successfully oppose it is through the movements of war. Only through a triumph gained in the battle-field, and held decisive for all future time, can we, as a nation, make our way out of the fatal entanglements of this present time into the bright and glorious heritage of the future.

## REVIEWS AND LITERARY NOTICES.

*My Diary, North and South.* By W. H. RUSSELL. Boston: T. O. H. P. Burnham. pp. xxii., 602.

PLUTARCH, as a patriotic Bœotian, felt called on to write a tract concerning the malice of Herodotus in having told some unpleasant truths about the Thebans; and many of our countrymen have shown themselves as Bœotian, at least, if not as patriotic, in their diatribes against Mr. Russell, who is certainly very far from being an Herodotus, least of all in that winning simplicity of style which made him so dangerous in the eyes of Plutarch. It was foolish to take Mr. Russell at his own valuation, to elevate a clever Irish

reporter of the London "Times" into a representative of England; but it was still more foolish, in attacking him, to mistake violence for force, and sensible people will be apt to think that there must have been some truth in criticisms which were resented with such unreasoning clamor. It is only too easy to force the growth of those national antipathies which ripen the seeds of danger and calamity to mankind; for there are few minds that are not capacious enough for a prejudice, and it has sometimes seemed as if, in our hasty resentment of the littlenesses of Englishmen, we were in danger of forgetting the greatness of England. A nation risks nothing in being underrated; the real peril is in under-

rating and misunderstanding a rival who may at any moment become an antagonist, — who will almost certainly become such, if we do our best to help him in it. Especially in judging the qualities of a people, we should be careful to take our measure by the highest, and not the lowest, types it has shown itself capable of producing. In moments of alarm, danger, or suffering, a nation is apt to relapse into that intellectual and moral condition of Mob from which it has slowly struggled upward; and this is especially true in an age of newspapers, where Cleon finds his way to every breakfast-table. It is her mob side that England has been showing us lately; but this should not blind us to the fact that in the long run the character of a nation tends more and more to assimilate itself to that ideal typified in its wisest thinkers and best citizens. In the qualities which historians and poets love to attribute to their country, national tendencies and aspirations are more or less consciously represented; these qualities the nation will by-and-by learn to attribute to itself, until, becoming gradually traditional, they will at length realize themselves as active principles. The selfish clamor of Liverpool merchants, who see a rival in New York, and of London bankers who have dipped into Confederate stock, should not lead us to conclude, with M. Albert Blanc, that the foreign policy of England is nothing more or less than *une haine de commerçants et d'industriels, haine implacable et inflexible comme les chiffres*.\*

Mr. Russell's book purports to be, and probably is in substance, the diary from which he made up his letters to the London "Times"; and it is rather amusing, as well as instructive, to see the somewhat muddy sources which, swelled by affluents of verbiage and invention, gather head enough to contribute their share to the sonorous shallowness of "the leading journal of Europe." When we learn, as we do from this "Diary," what a contributor to that eminent journal is, when left to his own devices,—that he does not know the difference between *would* and *should*, (which, to be sure, is excusable in an Irishman,) that he believes *in petto* to mean in *miniature*, uses *protagonist* with as vague a notion of its sense as Mrs. Malaprop had of her derangement of epitaphs, and

\* *Mémoires et Correspondance de J. DE MAISTRE*, p. 92.

then recall to mind the comparative correctness of Mr. Russell's correspondence in point of style, we conceive a hearty respect for the proof-reader in Printing-House Square. We should hardly have noticed these trifles, except that Mr. Russell has a weakness for displaying the cheap jewelry of what we may call *lingo*, and that he is rather fond of criticizing the dialect and accent of persons who were indiscreet enough to trust him with their confidences. There is one respect, however, in which the matter has more importance,—in its bearing on our estimate of Mr. Russell as a trustworthy reporter of what he saw and heard. Conscientious exactness is something predicable of the whole moral and intellectual nature, and not of any special faculty; so that, when we find a man using words without any sense of their meaning, and assuming to be familiar with things of which he is wholly ignorant, we are justified in suspecting him of an habitual inaccuracy of mind, which to a greater or less degree disqualifies him both as observer and reporter. We say this with no intention of imputing any wilful misstatements to Mr. Russell, but as something to be borne in mind while reading his record of private conversations. A scrupulous fidelity is absolutely essential, where the whole meaning may depend on a tone of voice or the use of one word instead of another. Any one accustomed to the study of dialects will understand what we mean, if he compare Mr. Olmsted's extracts from his diary with Mr. Russell's. The latter represents himself as constantly hearing the word *Britisher* used seriously and in good faith, and remarks expressly on an odd pronunciation of *Europe* with the accent on the last syllable, which he noticed in Mr. Seward among others. Mr. Russell's memory is at fault. What he heard was *Eurôpean*; and *Britisher* is not, and never was, an Americanism.

We do not, however, mean to doubt the general truthfulness of Mr. Russell's reports. We find nothing in his book which leads us to modify the opinion we expressed of him more than a year ago.\* We still think him "a shrewd, practised, and, for a foreigner, singularly accurate observer." We still believe that his "strictures, if rightly taken, may do us

\* *Atlantic Monthly*, Vol. VIII., p. 765.

infinite service." But we must enter our earnest protest against a violation of hospitality and confidence, which, if it became common, would render all society impossible. Any lively man might write a readable and salable book by *exploiting* his acquaintances; but such a proceeding would be looked upon by all right-minded people as an offence similar in kind, if not in degree, to the publication of private letters. A shrewd French writer has remarked, that a clever man in a foreign country should always know two things,— *what* he is, and *where* he is. Mr. Russell seems habitually to have forgotten both. Even Montaigne, the most garrulous of writers, becomes discreet in speaking of other people. If we learn from him that the Duke of Florence mixed a great deal of water with his wine and the Duchess hardly any at all, we learn it, without any connivance of his, from his diary, and that a hundred and fifty years after his death.

One of the first reflections which occur to the reader, as he closes Mr. Russell's book, with a half-guilty feeling of being an accomplice after the fact in his indiscretions, to use the mildest term, is a general one on the characteristic difference between the traveller as he is and as he was hardly a century ago. A man goes abroad now not so much to see countries and learn something from them, as to write a book that shall pay his travelling-charges. The object which men formerly proposed to themselves, in visiting foreign lands, seems to have been to find out something which might be of advantage to their own country, in the way either of trade, agriculture, or manufactures, — and they treated of manners, when they touched upon them at all, with the coolness and impartiality of naturalists. They did not conclude things to be necessarily worse because they were different. A modern Tom Coryat, instead of introducing the use of the fork among his countrymen, would find some excuse for thinking the Italians a *nasty* people because they used it. In our day it would appear that the chief aim of a traveller was to discover (or where that failed, to invent) all that he possibly can to the disadvantage of the country he visits; and he is so scrupulous a censor of individual manners that he has no eyes left for national characteristics. Another striking difference between the

older traveller and his modern successor is that the observer and the object to be observed seem to have reversed their relations to each other, so that the man, with his sensations, prejudices, and annoyances, fills up the greater part of the book, while the foreign country becomes merely incidental, a sort of canvas, on which his own portrait is to be painted for the instruction of his readers. Pliny used to say that something was to be learned from the worst book; and accordingly let us be thankful to the voyagers of the last thirty years that they have taught us where we can get the toughest steak and the coldest coffee which this world offers to the diligent seeker after wisdom, and have made us intimately acquainted with the peculiarities of the fleas, if with those of none of the other dwellers in every corner of the globe. Such interesting particulars, to be sure, may claim a kind of classic authority in Horace's journey to Brundisium; but perhaps a gnat or a frog that kept Horace awake may fairly assume a greater historical importance than would be granted to similar tormentors of Brown, Jones, and Robinson. Were it not for Mr. Olmsted, we should conclude the Arthur-Young type of traveller to be extinct, and that people go abroad merely for an excuse to write about themselves, — it is so much easier to write a clever book than a solid one. The plan of Montaigne, who wrote his travels round himself without stirring beyond his library, was as much wiser and cheaper as the result was more entertaining.

But, apart from the self-consciousness and impertinence which detract so much from the value of most recent books of travel, it may be doubted whether, since the French Revolution gave birth to the Caliban of Democracy, there has been a tourist without political bias toward one side or the other; and now that the "Special Correspondent" has been invented, whose business it is to be one-sided, if possible, and at all events entertaining, the last hope of rational information from anywhere would seem to be cut off. And of all travellers, the Englishman is apt to be the worst. What Fuller said of him two centuries ago is still in the main true, — that, "though some years abroad, he is never out of England." He carries with him an ideal England, made up of

all that is good, great, refined, and, above all, "in easy circumstances," by which to measure the short-comings of other less-favored nations. He may have dined contentedly for years at the "Cock" or the "Mitre," but he must go first to Paris or New York to be astonished at dirt or to miss napkins. He may have been the life-long victim of the London *cabby*, but he first becomes aware of extortion as he struggles with the porters of Avignon or the hackmen of Jersey City. We are not finding fault with this insularity as a feature of national character, — on the contrary, we rather like it, for the first business of an Englishman is to be an Englishman, and we wish that Americanism were as common among Americans, — but, since no man can see more than is in his own mind, it is a somewhat dangerous quality in a traveller. Moreover, the Englishman in America is at a double disadvantage; for his understanding the language leads him to think that everything is easy to understand, while at the same time he cannot help looking on every divergence of manners or ideas from the present British standard in a nation speaking the same tongue, as a barbarism, if not as a personal insult to himself. Worse than all, he has perhaps less than anybody of that quality, we might almost say faculty, which Mirabeau called "political sociability," and accordingly can form no conception of a democracy which levels upward, — of any democracy, indeed, except one expressly invented to endanger the stability of English institutions, certainly the most comfortable in the world for any one who belongs to the class which has only to enjoy and not to endure them. The travellers of an average Englishman are generally little more than a "Why, bless me, you don't say so! how very extraordinary!" in two volumes octavo.

Mr. Russell is only an Irishman with an English veneer, and, to borrow the Kulewala formula, is neither the best nor the worst of tourists. In range of mind and breadth of culture he is not to be compared with Mr. Dicey, who was in America at the same time, and whose letters we hope soon to see published in a collected form; but he had opportunities, especially in the Seceding States, such as did not fall, and indeed could not have fallen, to the lot of

any other man. As the representative of an English journal, he was welcomed by the South, eager to show him its best side; as a foreigner, his impressions were fresh and vivid; and his report of the condition of things there is the only even presumably trustworthy one we have had since the beginning of the Rebellion. The New England States, he tells us, he did not visit; but that does not prevent his speaking glibly of their "bloody-minded and serious people," and of the "frigid intellectuality" of Boston, about both of which he knows as little as of Juvenal. This should serve to put us on our guard against some of his other generalizations, which may be based on premises as purely theoretic. But it is not in generalizations that Mr. Russell is strong, nor, to do him justice, does he often indulge in them, — always excepting, of course, the *ex officio* one which he owes his employers, and which he was sent out to find arguments for, that the Union is irrevocably split asunder. It is as a reporter that he has had his training, and it is as a reporter that he is valuable. Quick to catch impressions, and from among them to single out the *taking* parts, his sketches of what he saw and heard, if without any high artistic merit, have a coarse truth that will make them of worth to the future student of these times. They are all the better that Mr. Russell was unable, from the nature of the case, to elaborate and *Timesify* them.

The first half of the book is both the most interesting and the most valuable, — the second half being so largely made up of personal grievances (which, if Mr. Russell had not the dignity to despise them, he might at least have been wise enough to be silent about) as to be tedious in comparison. We regret that Mr. Russell should have been subjected to so many personal indignities for having written what we believe to have been as impartial an account of what he saw of the panic-rout which followed the Battle of Manassas as any one could have written under the same conditions, — though we doubt if the correspondent of a French newspaper would come off much better, under like circumstances, in England. It is not beyond the memory of man that the Duke of Wellington himself was pelted in London. But we are surprised that Mr. Russell should have so far misapprehended

his position, should have so readily learned to look upon himself as an ambassador, (we believe the "Times" is not yet recognized by our Government as anything more than a belligerent power,) as to consider it a hardship that he was not allowed to accompany General McClellan's army to the Peninsula. He seems to have thought that everything happens in America, as La Rochefoucauld said of France. We are sorry that he was not permitted to go, for he would have helped us to some clearer understanding of a campaign about whose conduct and results there seems to be plenty of passionate misjudgment and very little real knowledge. But when should we hear the last of the vulgar presumption of an American reporter who should try to hitch himself in the same way to the staff of a British army?

Mr. Russell's testimony to the ill effects of slavery is as emphatic, if not so circumstantial, as that of Mr. Olmsted. It is of the more weight as coming from a man who saw the system under its least repulsive aspect. His report also of what he heard from some of the chief plotters in the Secession conspiracy as to their plans and theories is very instructive, and deserves special attention now that their allies in the Free States are beginning to raise their heads again. We have always believed, and our impression is strengthened by Mr. Russell's testimony, that the Southern leaders originally intended nothing more than a *coup d'état*, which, by the help of their fellow-conspirators at the North, was to put them in possession of the Government. It is plain, also, from what Mr. Russell tells us, that the movers of the slaveholding treason reckoned confidently on aid from abroad, especially from England; and this may help Englishmen to understand that the sensitiveness of Northern people and statesmen to the open sympathy which the Rebellion received from the leading journals and public men of Great Britain was not so unreasonable as they have been taught to regard it. Cousins of England, we feel inclined to say, remember that there is nothing so hard to bear as contempt; that there may be patriotism where there are no pedigrees; that family-trees are not the best timber for a frame of government; that truth is no less true because it is spoken through the nose; and that there may be

devotion to great principles and national duties among men who have not the air of good society, — nay, that, in the long run, good society itself is found to consist, not of Grammonts and Chesterfields, but of the men who have been loyal to conviction and duty, and who have had more faith in ideas than in Vanity Fair. People on both sides of the water may learn something from Mr. Russell's book, if they read it with open minds, especially the lesson above all others important to the statesman, that even being right is dangerous, if one be not right at the right time and in the right way.

*The Results of Emancipation.* By AUGUSTIN COCHIN, Ex-Maire and Municipal Councillor of Paris. Translated by MARY L. BOOTH, Translator of Count De Gasparin's Works on America, etc. Boston: Walker, Wise, & Co.

It is doubtless a little unfashionable to question the all-sufficiency of statistics to the salvation of men or nations. Nevertheless we believe that their power is of a secondary and derivative character. The confidence which first leads brave souls to put forth their energies against a giant evil comes through deductive, not inductive, inquiry. The men and women who have efficiently devoted themselves to awaken the American people to the element of guilt and peril in their national life have seldom been exhaustively acquainted with the facts of slavery or those of emancipation. Few of them were political economists, or had much concern with scientific relations. They were persons of emotional organization, and of a delicate moral susceptibility. It was sufficient for them to know that one God reigned, and that whatever He had caused to be a true political economy must accord with those Christian ethics which command acknowledgment from the human soul. They wanted no catalogue of abuses to convince them that an institution which began by denying a man all right in his own person was not and could not come to good. And this fine impressibility of nature, which needs no statistics, when it is combined with genius, — if we may be pardoned an Hibernicism which almost writes itself, — may be said to create its

own statistics. Shakspeare needed not to dog murderers, note-book in hand, in order to give in Macbeth a comprehensive summary of their pitiable estate. It may, indeed, be necessary for physicians to study minutely many special cases of insanity in order to build up by induction the grand generalization of Lear; but he who gave it grasped it entire in an ideal world, and left to less happy natures the task of imitating its august proportions by patiently piling together a thousand facts. The abolition of slavery must be demanded by the moral instinct of a people before their understanding may be satisfied of its practical fitness and material success. The evidences in favor of emancipation are useful after the same manner as the evidences of Christianity: the man whose heart cannot be stirred by the tender appeal of the Gospel shall not be persuaded by the exegetical charming of the most orthodox expositor.

But now that circumstances have caused loyal American citizens to think upon slavery, and to mark with a quickened moral perception its enormous usurpations, there could be no publication more timely than this volume by M. Cochin. To be sure, all illustration of the results of this legalized injustice, derived from a past experience, must be tame to those who stand face to face with the gigantic conspiracy in which it has concentrated its venom, and from which it must stagger to its doom. The familiar proverb which declares that the gods make mad those whom they would destroy has a significance not always considered. For when a man loses his intellectual equilibrium, a baseness of character which never broke through the crust of conventionality may be suddenly revealed; and when a wicked system goes mad, such depths of perfidy are disclosed as few imagined to exist. During the last two years, while our Southern sky has been aglow with the red light of the slave-masters' insurrection, few of us could probe and pry about among details of lesser villainies than those pertinent to the day. And so it is fortunate that M. Cochin now comes to address a people instinctively grasping at the principle which may give them peace, and to offer them his calm and thorough investigation of the material basis whereon that principle may surely rest.

"L'Abolition de l'Esclavage," of which the first volume is translated under the title at the head of this notice, was published in 1861. It is a diligent study of official and other testimony bearing upon slavery and emancipation. M. Cochin had access to the unpublished records of every ministry in Europe, and gives his evidence with scientific precision. He has faithfully detailed the effects of liberating the slaves in the colonies of France and England, as well as in those of Denmark, Sweden, and Holland. By an admirable clearness of arrangement, and a certain *netteté* of statement, the reader retains an impression of the experience in slavery and its abolition which each colony represents. That no disturbance should follow emancipation, we apprehend that no one, who believes in the moral government of the world, can seriously expect. Ceasing to persist in sin frees neither man nor nation from the penalty it entails. But the distressing consequences of any social upheaval make a far greater impression upon the common mind than the familiar evils of the condition from which the community emerges. The amount of suffering which must temporarily follow an act of justice long delayed is always over-estimated. Many half-measures for the public safety, many blunders easy to be avoided, produce the derangement of affairs which the enemies of human freedom are never tired of proclaiming. It is the merit of M. Cochin to separate that penalty of wrong which it is impossible to extinguish from the disastrous results of causes peculiar to the politics of a given nation, or to the private character of its officers. He certainly shows that production and commerce have not been annihilated by the abolition of slavery, while the moral condition of both races has been manifestly improved. Recognizing the immutable laws which are potent in the life of nations, M. Cochin touches upon the remote antecedents of slavery as well as the immediate antecedents of emancipation. His results are divided into groups, material, economical, and moral; thus the reader may easily systematize the information of the book. There are practical lessons in relation to the great deed to which our nation has been called that may well be laid to heart. The insurrection of San Domingo preceded emancipation,

and was due to the absurd law of the Constituent Assembly which gave the same privileges to freemen of every color and every degree of education and capacity. While we recognize the negro as a man, let us remember that the time for recognizing him as a citizen is not yet. We must also mark the importance of paying with promptness the indemnity to the master, in order that the greater part of it may pass in the form of wages into the hands of the servant. Forewarned of mistakes in the methods of emancipation, which other nations deplore, we encounter the question with many important aids to its solution.

M. Cochin, though not a Protestant like Count de Gasparin, writes in a similar spirit of fervent Christian belief. In the second volume of his work, which we trust will soon appear in America, the relation of Christianity to slavery is powerfully discussed. The Catholic Church is shown to oppose this crime against humanity, and the Pope, as if to indorse the conclusion, has conferred an order of knighthood upon the author since the publication of his book. It is worth while to note that the most logical and effective assailants of slavery that these last years have produced have been devout Catholics,—Augustin Cochin in France, and Orestes A. Brownson in America. And while we think that it will require a goodly amount of special pleading to clear, either the Catholic Church or most Protestant sects from former complicity with this iniquity, we heartily rejoice that those liberal men who intelligently encourage and direct the noblest instinct of the time are the exclusive possession of no form of religious belief. From every ritual of worship, from every variety of speculative creed, earnest minds have reached the same practical ground of labor for the freedom of man. Such minds realize that Christianity can approximate its exact application only as the machinery of human society is rightly comprehended. The Gospel, acting through the church, the meeting-house, the lecture-room, and the press, is demanding the redemption of master and slave from the mutual curse of their relation. Every affliction and struggle of this civil war may be sanctified, not only to the moral improvement, but also to the material prosperity of our land.

Great events are required to inspire a people with great ideas. *Sicut patribus sit Deus nobis* is the motto of the city whence the "Atlantic" goes forth to its readers. Let all who adopt this aspiration remember for what they ask. God was with our fathers, and sent them hardship, peril, defeat, that, battling painfully therewith, they might become great and fruitful men. Not otherwise can He be with us. From the misery of our civil strife we may eude a future happiness, as well as a present blessedness. The fierce excitement of physical action has been contagious to the heart and intellect of the time. Realities have presented themselves which can be met only by ideas. In the seeming distant years of our old prosperity, a few men and women sought to abolish slavery because it oppressed the inferior race; to-day, the nation deals with it because it has rendered the superior race hopelessly violent and corrupt. Of course, there will always be a class of doubting Thomases ready to deny the presence of any divine leadership that may not at once be touched and weighed and measured. To the prototype of these men such tangible evidence as his feeble faith could accept was not withheld. And those among us who are in like condition may read M. Cochin's book, and be convinced that a system which to the common sense of the Christian world seems morally wrong is neither politically expedient nor materially necessary.

*A Treatise on the Law of Promissory Notes and Bills of Exchange.* By THEOPHILUS PARSONS, LL. D., Dane Professor of Law in Harvard University, and Author of Treatises on the Law of Contracts, on the Elements of Mercantile Law, on Maritime Law, and the Laws of Business for Business-Men. In Two Volumes. Philadelphia: J. B. Lippincott & Co.

WE eat and drink paper and live upon paper, is a metaphor which has been true enough these many years, but we probably appreciate the liveliness of it just at the present time more thoroughly than ever before. But even now we realize very imperfectly what a power in the world paper-money is; for we are apt to

think of it only as a circulating medium in the form of bank-notes, or treasury-notes, or of somebody's currency which has the merit of making no pretensions to the theoretical idea of a currency which represents gold, the representative of everything else. Bills of exchange and promissory notes are instruments quite as indispensable to modern commerce and civilization; and when the necessities of an enlarged commercial intercourse, some five or six hundred years ago, first led to the use of paper as a representative of money, it was in the form of bills of exchange. All the absolute requirements of social life and of commerce among the ancient Greeks and Romans were satisfied by the use of the precious metals as money, though the want of new facilities and new instruments of commercial exchange must have been constantly experienced. Cicero, writing to his friend Atticus, when he was about to send his son to Athens, inquires whether he can have credit upon Athens for what money his son may have occasion for, or whether the young man must carry it with him in specie. Cicero desired to accomplish what is now effected by a negotiable bill of exchange; and if such instruments had been in use, he would have gone to the forum and purchased a bill on Athens for the requisite amount. But as it was, though he may possibly have found some one at Rome who had money owing to him by some one at Athens, and may have arranged with this Roman creditor that this debt should be paid to his son at Athens by the debtor there, it is quite certain that no instrument answering to our negotiable bill of exchange was used in the transaction.

Though the discovery or invention of bills of exchange cannot be ascribed with certainty to any precise period, they are for the first time unmistakably referred to in laws of the commercial nations of Southern Europe in the latter part of the thirteenth century, and they probably came into frequent use soon after that time. Perhaps the earliest bill of exchange of which we have an authentic copy is one made at the beginning of the fifteenth century, and which approaches pretty nearly to the form now in use. A translation of the instrument from the Italian, in which it was written, is as follows:—

"Francisco de Prato and Company at Barcelona. In the name of God, Amen. The 23th day of April, 1404. Pay by this first of exchange at usance to Pietro Gilberto and Pietro Olivo one thousand scuti at ten shillings Barcelona money per scuto, which thousand scuti are in exchange with Giovanni Colombo at twenty-two grosses per scuto, and place to our account; and Christ keep you.

"ANTONIO QUARTI SAB. DI BRUGIS."

For this curious relic of commercial history we are indebted to the fact that the mercantile company upon which the bill was drawn failed to pay it, whereupon the parties fell into a dispute about the matter of damages, and the magistrates of Bruges wrote to those of Barcelona, setting forth this bill with the facts of the case, and requesting information upon the usage respecting bills of exchange in their city.

A bill drawn in England about the year 1500 bears less resemblance to the form now used, and instead of commencing and ending with the devout expressions of the Italian bill, it has the formal words, "Be it known to all Me<sup>e</sup> y<sup>t</sup> I," etc., and "hereto I hynde me myn executours and all my Goodis, wheresoever they may be founde, in Wytnesse whereof I have written and sealyed this Byll, the X Day of," etc. It was made payable to a person named, "or to the Bringer of this Byll."

Bills of exchange were first used only for the benefit of a specified payee, but it was not long before the element of negotiability was added to foreign bills, which, thus perfected, became at once the indispensable instruments of commerce which they now are. The negotiability of inland bills and of promissory notes was not recognized till long afterwards. In England, inland bills were not used in any form till about the middle of the seventeenth century; and Lord Holt, in a case reported half a century later, said he remembered the time when actions upon inland bills first began. Indeed, the earliest case in which foreign bills of exchange are mentioned in the English Reports is as late as the first year of the reign of James I., though they appear to have been known to the courts in the preceding reign of Elizabeth, for there are extant precedents of declarations upon them of that period. The earliest reported case of an inland bill occurs in 1663. It ap-

pears that the negotiability of promissory notes was a matter of doubt with the Court of Queen's Bench as late as 1702. The court seem to have felt very little confidence in their own opinion upon the question; for Chief Justice Holt, after urging his opinion against the negotiability of such instruments, took occasion to speak with two or three of the most famous merchants in London, as to the consequences it was alleged would follow from obstructing their negotiability; and on another day he says that they had told him it was very frequent with them to make such notes, and that they looked upon them as bills of exchange, and that they had been used a matter of thirty years, and were frequently transferred and indorsed as bills of exchange. In 1704 Parliament put an end to the dispute between Lord Holt and the merchants by recognizing the negotiable qualities of promissory notes which now belong to them.

The law of promissory notes and bills of exchange is thus seen to be of very recent origin. In the early part of the seventeenth century there was a single reported case in the English language in this department of legal learning; now these volumes of Professor Parsons present us an array of more than ten thousand cases decided in the highest courts of England and America, and a great majority of these are cases that have occurred within the present century, if not within the last quarter of a century. Though the subject is apparently a simple one, it has presented a multitude of questions for the consideration of the courts, many of which it has taxed their highest wisdom to rightly solve.

A new book in any department of the law has one merit, if it is worth anything at all, — and that is, the merit of presenting the latest conclusions of the courts upon the topics treated of. In the department of the law treated of by the work now under notice, this merit is one of special consideration, for it has hardly reached its full development, and some of its important rules are hardly settled. In this treatise Professor Parsons has taken much pains to present the law just as judicial determinations and legislative enactments have left it up to the period of publication. But this work has merits which will last after its newness is gone. It is compre-

hensive in its plan, embracing the discussion of many points in the law of negotiable paper which are not referred to in other treatises upon the subject. In style, the text of the work is written with a clearness and grace which often give it all the pleasantness of a finished essay, if one chooses to read on without allowing his attention to be called off by the frequent references to the notes. The notes occupy much space, and give very full discussions of the more important points, with quotations from the most important decisions. They are printed in a smaller type, and the author is thereby enabled to give much more matter in his work than he otherwise could. A logical arrangement of the subject-matter in chapters which are subdivided into numerous sections, each treating of a separate topic, which is tersely expressed in a heading to it, makes it very easy for one to find the statement or discussion of any point which he desires to investigate. This admirable mode of arrangement and division of the subject is a characteristic of all the legal treatises of Professor Parsons, and our own experience is that it is much easier to find what we want in his works than in any others that we have had occasion to use or refer to. The usefulness of a law-book depends also very much upon its index; and the completeness and accuracy of this part of the work are noticeable in this as well as in the other treatises of the author.

In our examination of the work we had marked several chapters, with the intention of making special reference to them: the first chapters of the work, for the precision and clearness with which the essential elements of bills and notes are defined and explained; the chapter on Checks, for presenting the most complete statement which we have of the law upon that important topic; the chapters upon Action and Evidence, for giving in a systematic form much matter which is of the greatest use to the practitioner, but which the text-books have generally left him to pick up as best he may, or have presented in a brief and unsatisfactory manner; and other chapters for still other features of excellence. But we have not space for further comment. These volumes are the result of a truly vast amount of labor, and we are confident that they will be received by the profession, by students, and by

business-men with a hearty gratitude to the author for the service he has done them in writing this new work.

There is a short Appendix, containing a reprint of the provisions of the Stamp Act of the United States in relation to

bills, notes, letters of credit, drafts, orders, and checks; together with an examination of some of the questions which the statute suggests.

The mechanical execution of these volumes is very superior.

## RECENT AMERICAN PUBLICATIONS

RECEIVED BY THE EDITORS OF THE ATLANTIC MONTHLY.

Poems. By Thomas Bailey Aldrich. New York. G. W. Carleton. 32mo. pp. 161. \$1.00.

The King's Bell. By Richard Henry Stoddard. New York. G. W. Carleton. 12mo. pp. 72. 75 cts.

Somebody's Luggage. By Charles Dickens. Philadelphia. T. B. Peterson & Brothers. 8vo. paper. pp. 86. 25 cts.

A Talk with My Pupils. By Mrs. Charles Sedgwick. New York. Published for the Author by John Hopper. 12mo. pp. iv., 235. \$1.00.

Lyra Cœlestis. Hymns on Heaven. Selected by A. C. Thompson, D. D., Author of "The Better Land," "Gathered Lilies," etc. Boston. Gould & Lincoln. 12mo. pp. 332. \$2.00.

The Results of Emancipation. By Augustin Cochin, Ex-Maire and Municipal Councilor of Paris. Work crowned by the Institute of France (*Académie Française*). Translated by Mary L. Booth, Translator of Count De Gasparin's Works on America, etc. Boston. Walker, Wise, & Co. 12mo. pp. xiv., 412. \$1.50.

Poems of Religious Sorrow, Comfort, Counsel, and Aspiration. New York. Sheldon & Co. crown 8vo. pp. iv., 204. \$1.25.

The Black Man, his Antecedents, his Genius, and his Achievements. By William Wells Brown, Author of "Sketches of Places and People Abroad," etc. New York. Thomas Hamilton. 12mo. pp. 288. \$1.00.

A Manual of Elementary Instruction, for the Use of Public and Private Schools and Normal Classes; containing a Graduated Course of Object Lessons for training the Senses and developing the Faculties of Children. By E. A. Sheldon, Superintendent of Public Schools, Oswego, N. Y.; assisted by Miss M. E. M. Jones and Professor H. Krusi. New York. C. Scribner. 12mo. pp. 465. \$1.50.

Elements of Military Art and History: comprising the History and Tactics of the Separate Arms; the Combination of the Arms; and the Minor Operations of War. By Edw. De la Barre Duparcq, Captain of Engineers in the Army of France, and Professor of the Military Art in the Imperial School of Saint-Cyr. Translated and edited by Brigadier-General George W. Cullum, Chief of Staff of the General-in-Chief of the Armies of the United States; late Aide-de-Camp to Lieutenant-General Scott; and Chief of Staff and of Engineers of Major-General Halleck, while commanding the Departments of the Missouri and Mississippi. New York. D. Van Nostrand. 8vo. pp. 456. \$4.00.

Papers on Practical Engineering. No. 8. Official Report to the United States Engineer Department, of the Siege and Reduction of Fort Pulaski, Georgia, February, March, and April, 1862. By Brigadier-General Q. A. Gillmore, U. S. Volunteers, Captain of Engineers, U. S. A. Illustrated by Maps and Engraved Views. New York. D. Van Nostrand. 8vo. pp. 96. \$2.50.

St. Paul's Epistle to the Romans: newly translated, and explained from a Missionary Point of View. By the Right Rev. J. W. Colenso, D. D., Bishop of Natal. New York. D. Appleton & Co. 12mo. pp. 261. \$1.25.

The Soldier's Book: A Pocket-Diary for Accounts and Memoranda, for Non-Commissioned Officers and Privates of the U. S. Volunteer and Regular Army. By Captain Robert N. Scott, Fourth U. S. Infantry. New York. D. Appleton & Co. 18mo. pp. 8. 25 cts.

VOL. XI.—APRIL, 1863.—NO. LXVI.

ON THE VICISSITUDES OF KEATS'S FAME.

[JOSEPH SEVERN, the author of the following paper, scarcely needs introduction to the readers of the "Atlantic Monthly"; but no one will object to reperusing, in connection with his valuable contribution, this extract from the Preface to "Adonais," which Shelley wrote in 1821:—

"He [Keats] was accompanied to Rome and attended in his last illness by Mr. Severn, a young artist of the highest promise, who, I have been informed, 'almost risked his own life, and sacrificed every prospect, to unwearied attendance upon his dying friend.' Had I known these circumstances before the completion of my poem, I should have been tempted to add my full tribute of applause to the more solid recompense which the virtuous man finds in the recollection of his own motives. Mr. Severn can dispense with a reward from 'such stuff as dreams are made of.' His conduct is a noble augury of the success of his future career. May the unextinguished spirit of his illustrious friend animate the creations of his pencil, and plead against oblivion for his name!"

Mr. Severn is residing in Rome at the present time, from which city he transmits this paper.]

I WELL remember being struck with the clear and independent manner in which Washington Allston, in the year 1818, expressed his opinion of John Keats's verse, when the young poet's writings first appeared, amid the ridicule of most English readers. Mr. Allston was at that time the only discriminating judge among the strangers to Keats who were residing abroad, and he took occasion to emphasize in my hearing his opinion of the early effusions of the young poet in words like these:—"They are crude materials of real poetry, and Keats is sure to become a great poet."

It is a singular pleasure to the few personal friends of Keats in England (who may still have to defend him against the old and worn-out slanders) that in America he has always had a solid fame, independent of the old English prejudices.

Here in Rome, as I write, I look back through forty years of worldly changes to behold Keats's dear image again in memory. It seems as if he should be living with me now, inasmuch as I never could understand his strange and contradictory death, his falling away so suddenly from health and strength. He had that fine compactness of person

which we regard as the promise of longevity, and no mind was ever more exultant in youthful feeling. I cannot summon a sufficient reason why in one short year he should have been thus cut off, "with all his imperfections on his head." Was it that he lived too soon, — that the world he sought was not ready for him?

For more than the year I am now dwelling on, he had fostered a tender and enduring love for a young girl nearly of his own age, and this love was reciprocal, not only in itself, but in all the worldly advantages arising from it of fortune on her part and fame on his. It was encouraged by the sole parent of the lady; and the fond mother was happy in seeing her daughter so betrothed, and pleased that her inheritance would fall to so worthy an object as Keats. This was all well settled in the minds and hearts of the mutual friends of both parties, when poor Keats, soon after the death of his younger brother, unaccountably showed signs of consumption: at least, he himself thought so, though the doctors were widely undecided about it. By degrees it began to be deemed needful that the young poet should go to Italy, even to preserve his life. This was at last accomplished, but too late; and now that I am reviewing all the progress of his illness from his first symptoms, I cannot but think his life might have been preserved by an Italian sojourn, if it had been adopted in time, and if circumstances had been improved as they presented themselves. And, further, if he had had the good fortune to go to America, which he partly contemplated before the death of his younger brother, not only would his life and health have been preserved, but his early fame would have been insured. He would have lived independent of the London world, which was striving to drag him down in his poetic career, and adding to the sufferings which I consider the immediate cause of his early death.

In Italy he always shrank from speaking in direct terms of the actual things which were killing him. Certainly the "Blackwood" attack was one of the least of his miseries, for he never even mentioned it to me. The greater trouble which was engulfing him he signified in a hundred ways. Was it to be wondered at, that at the time when the happiest life was presented to his view, when it was arranged that he was to marry a young person of beauty and fortune, when the little knot of friends who valued him saw such a future for the beloved poet, and he himself, with generous, unselfish feelings, looked forward to it more delighted on their account, — was it to be wondered at, that, on the appearance of consumption, his ardent mind should have sunk into despair? He seemed struck down from the highest happiness to the lowest misery. He felt crushed at the prospect of being cut off at the early age of twenty-four, when the cup was at his lips, and he was beginning to drink that draught of delight which was to last his mortal life through, which would have insured to him the happiness of home, (happiness he had never felt, for he was an orphan,) and which was to be a barrier for him against a cold and (to him) a malignant world.

He kept continually in his hand a polished, oval, white carnelian, the gift of his widowing love, and at times it seemed his only consolation, the only thing left him in this world clearly tangible. Many letters which he was unable to read came for him. Some he allowed me to read to him; others were too worldly, — for, as he said, he had "already journeyed far beyond them." There were two letters, I remember, for which he had no words, but he made me understand that I was to place them on his heart within his winding-sheet.

Those bright falcon eyes, which I had known only in joyous intercourse, while revelling in books and Nature, or while he was reciting his own poetry, now

beamed an unearthly brightness and a penetrating steadfastness that could not be looked at. It was not the fear of death,—on the contrary, he earnestly wished to die,—but it was the fear of lingering on and on, that now distressed him; and this was wholly on my account. Amidst the world of emotions that were crowding and increasing as his end approached, I could always see that his generous concern for me in my isolated position at Rome was one of his greatest cares. In a little basket of medicines I had bought at Gravesend at his request there was a bottle of laudanum, and this I afterwards found was destined by him “to close his mortal career,” when no hope was left, and to prevent a long, lingering death, for my poor sake. When the dismal time came, and Sir James Clark was unable to encounter Keats's penetrating look and eager demand, he insisted on having the bottle, which I had already put away. Then came the most touching scenes. He now explained to me the exact procedure of his gradual dissolution, enumerated his deprivations and toils, and dwelt upon the danger to my life, and certainly to my fortunes, from my continued attendance upon him. One whole day was spent in earnest representations of this sort, to which, at the same time that they wrung my heart to hear and his to utter, I was obliged to oppose a firm resistance. On the second day, his tender appeal turned to despair, in all the power of his ardent imagination and bursting heart.

From day to day, after this time, he would always demand of Sir James Clark, “How long is this *posthumous* life of mine to last?” On finding me inflexible in my purpose of remaining with him, he became calm, and tranquilly said that he was sure why I held up so patiently was owing to my Christian faith, and that he was disgusted with himself for ever appearing before me in such savage guise; that he now felt convinced how much every human being required the support of religion,

that he might die decently. “Here am I,” said he, “with desperation in death that would disgrace the commonest fellow. Now, my dear Severn, I am sure, if you could get some of the works of Jeremy Taylor to read to me, I might become *really* a Christian, and leave this world in peace.” Most fortunately, I was able to procure the “Holy Living and Dying.” I read some passages to him, and prayed with him, and I could tell by the grasp of his dear hand that his mind was reviving. He was a great lover of Jeremy Taylor, and it did not seem to require much effort in him to embrace the Holy Spirit in these comforting works.

Thus he gained strength of mind from day to day just in proportion as his poor body grew weaker and weaker. At last I had the consolation of finding him calm, trusting, and more prepared for his end than I was. He tranquilly rehearsed to me what would be the process of his dying, what I was to do, and how I was to *bear it*. He was even minute in his details, evidently rejoicing that his death was at hand. In all he then uttered he breathed a simple, Christian spirit; indeed, I always think that he died a Christian, that “Mercy” was trembling on his dying lips, and that his tortured soul was received by those Blessed Hands which could alone welcome it.\*

\* Whilst this was passing at Rome, another scene of the tragedy was enacting in London. The violence of the Tory party in attacking Keats had increased after his leaving England, but he had found able defenders, and amongst them Mr. John Scott, the editor of the “Champion,” who published a powerful vindication of Keats, with a denunciation of the party-spirit of his critics. This led to a challenge from Mr. Scott to Mr. Lockhart, who was then one of the editors of “Blackwood.” The challenge was shifted over to a Mr. Christie, and he and Mr. Scott fought at Chalk Farm, with the tragic result of the death of Keats's defender,—and this within a few days of the poet's death at Rome. The deplorable catastrophe was not without its compensations, for ever after there was a more chastened feeling in both parties.

After the death of Keats, my countrymen in Rome seemed to vie with one another in evincing the greatest kindness towards me. I found myself in the midst of persons who admired and encouraged my beautiful pursuit of painting, in which I was then indeed but a very poor student, but with my eyes opening and my soul awakening to a new region of Art, and beginning to feel the wings growing for artistic flights I had always been dreaming about.

In all this, however, there was a solitary drawback: there were few Englishmen at Rome who knew Keats's works, and I could scarcely persuade any one to make the effort to read them, such was the prejudice against him as a poet; but when his gravestone was placed, with his own expressive line, "Here lies one whose name was writ in water," then a host started up, not of admirers, but of scoffers, and a silly jest was often repeated in my hearing, "Here lies one whose name was writ in water, and *his works in milk and water*"; and this I was condemned to hear for years repeated, as though it had been a pasquinade; but I should explain that it was from those who were not aware that I was the friend of Keats.

At the first Easter after his death I had a singular encounter with the late venerable poet, Samuel Rogers, at the table of Sir George Beaumont, the distinguished amateur artist. Perhaps in compliment to my friendship for Keats, the subject of his death was mentioned by Sir George, and he asked Mr. Rogers if he had been acquainted with the young poet in England. Mr. Rogers replied, that he had had more acquaintance than he liked, for the poems were tedious enough, and the author had come upon him several times for money. This was an intolerable falsehood, and I could not restrain myself until I had corrected him, which I did with my utmost forbearance,—explaining that Mr. Rogers must have mistaken some other person for Keats,—that I was

positive my friend had never done such a thing in any shape, or even had occasion to do it,—that he possessed a small independence in money, and *a large one in mind*.

The old poet received the correction with much kindness, and thanked me for so effectually setting him right. Indeed, this encounter was the groundwork of a long and to me advantageous friendship between us. I soon discovered that it was the principle of his sarcastic wit not only to sacrifice all truth to it, but even all his friends, and that he did not care to know any who would not allow themselves to be abused for the purpose of lighting up his breakfast with sparkling wit, though not quite, indeed, at the expense of the persons then present. I well remember, on one occasion afterwards, Mr. Rogers was entertaining us with a volley of sarcasms upon a disagreeable lawyer, who made pretensions to knowledge and standing not to be borne; on this occasion the old poet went on, not only to the end of the breakfast, but to the announcement of the very man himself on an accidental visit, and then, with a bland smile and a cordial shake of the hand, he said to him, "My dear fellow, we have all been talking about you up to this very minute,"—and looking at his company still at table, and with a significant wink, he, with extraordinary adroitness and experienced tact, repeated many of the good things, reversing the meaning of them, and giving us the enjoyment of the *double-entendre*. The visitor was charmed, nor even dreamed of the ugliness of his position. This incident gave me a painful and repugnant impression of Mr. Rogers, yet no doubt it was after the manner of his time, and such as had been the fashion in Walpole's and Johnson's days.

I should be unjust to the venerable poet not to add, that notwithstanding what is here related of him, he oftentimes showed himself the generous and noble-hearted man. I think that in

all my long acquaintance with him he evinced a kind of indirect regret that he had commenced with me in such an ugly attack on dear Keats, whose fame, when I went to England in 1838, was not only well established, but was increasing from day to day, and Mr. Rogers was often at the pains to tell me so, and to relate the many histories of poets who had been less fortunate than Keats.

It was in the year of the Reform Bill, 1830, that I first heard of the Paris edition (Galignani's) of Keats's works, and I confess that I was quite taken by surprise, nor could I really believe the report until I saw the book with the engraved portrait from my own drawing; for, after all the vicissitudes of Keats's fame which I had witnessed, I could not easily understand his becoming the poet of "the million." I had now the continued gratification in Rome of receiving frequent visits from the admirers of Keats and Shelley, who sought every way of showing kindness to me. One great cause of this change, no doubt, was the rise of all kinds of mysticism in religious opinions, which often associated themselves with Shelley's poetry, and I then for the first time heard him named as the only really religious poet of the age. To the growing fame of Keats I can attribute some of the pleasantest and most valuable associations of my after-life, as it included almost the whole society of gifted young men at that time called "Young England." Here I may allude to the extraordinary change I now observed in the manners and morals of Englishmen generally: the foppish love of dress was in a great measure abandoned, and all intellectual pursuits were caught up with avidity, and even made fashionable.

The most remarkable example of the strange capriciousness of Keats's fame which fell under my personal observation occurred in my later Roman years, during the painful visit of Sir Walter Scott to Rome in the winding-up days

of his eventful life, when he was broken down not only by incurable illness and premature old age, but also by the accumulated misfortunes of fatal speculations and the heavy responsibility of making up all with the pen then trembling in his failing hand.

I had been indirectly made known to him by his favorite ward and *protégée*, the late Lady Northampton, who, accustomed to write to him monthly, often made mention of me; for I was on terms of friendship with all her family, an intimacy which in great part arose from the delight she always had in Keats's poetry, being herself a poetess, and a most enlightened and liberal critic.

When Sir Walter arrived, he received me like an old and attached friend; indeed, he involuntarily tried to make me fill up the terrible void then recently created by the death of Lady Northampton at the age of thirty-seven years. I went at his request to breakfast with him every morning, when he invariably commenced talking of his lost friend, of her beauty, her singularly varied accomplishments, of his growing delight in watching her from a child in the Island of Mull, and of his making her so often the model of his most successful female characters, the Lady of the Lake and Flora MacIvor particularly. Then he would stop short to lament her unlooked-for death with tears and groans of bitterness such as I had never before witnessed in any one,—his head sinking down on his heaving breast. When he revived, (and this agonizing scene took place every morning,) he implored me to pity him, and not heed his weakness,—that in his great misfortunes, in all their complications, he had looked forward to Rome and his dear Lady Northampton as his last and certain hope of repose; she was to be his comfort in the winding-up of life's pilgrimage: now, on his arrival, his life and fortune almost exhausted, she was gone! *gone!* After these pathetic outpourings, he would gradually recover

his old cheerfulness, his expressive gray eye would sparkle even in tears, and soon that wonderful power he had for description would show itself, when he would often stand up to enact the incident of which he spoke, so ardent was he, and so earnest in the recital.

Each morning, at his request, I took for his examination some little picture or sketch that might interest him, and amongst the rest a picture of Keats, (now in the National Portrait Gallery of London,) but this I was surprised to find was the only production of mine that seemed not to interest him; he remained silent about it, but on all the others he was ready with interesting comments and speculations. Observing this, and wondering within myself at his apathy with regard to the young lost poet, as I had reason to be proud of Keats's growing fame, I ventured to talk about him, and of the extraordinary caprices of that fame, which at last had found its resting-place in the hearts of *all real lovers of poetry*.

I soon perceived that I was touching on an embarrassing theme, and I became quite bewildered on seeing Miss Scott turn away her face, already crimsoned with emotion. Sir Walter then falteringly remarked, "Yes, yes, the world finds out these things *for itself at last*," and taking my hand, closed the interview, — our last, for the following night he was taken seriously ill, and I never saw him again, as his physician immediately hurried him away from Rome.

The incomprehensibility of this scene induced me to mention it on the same day to Mr. Woodhouse, the active and discriminating friend of Keats, who had collected every written record of the poet, and to whom we owe the preservation of many of the finest of his productions. He was astonished at my recital, and at my being ignorant of the fact that *Sir Walter Scott was a prominent contributor to the Review*

*which through its false and malicious criticisms had always been considered to have caused the death of Keats.*

My surprise was as great as his at my having lived all those seventeen years in Rome and been so removed from the great world, that this, a fact so interesting to me to know, had never reached me. I had been unconsciously the painful means of disturbing poor old Sir Walter with a subject so sore and unwelcome that I could only conclude it must have been the immediate cause of his sudden illness. Nothing could be farther from my nature than to have been guilty of such seemingly wanton inhumanity; but I had no opportunity afterwards of explaining the truth, or of justifying my conduct in any way.

This was the last striking incident connected with Keats's fame which fell within my own experience, and perhaps may have been the last, or one of the last, symptoms of that party-spirit which in the artificial times of George IV. was so common even among poets in their treatment of one another, — they assuming to be mere politicians, and striving to be oblivious of their heart-ennobling pursuit.

It only remains for me to speak of my return to Rome in 1861, after an absence of twenty years, and of the favorable change and the enlargement during that time of Keats's fame, — not as manifested by new editions of his works, or by the contests of publishers about him, or by the way in which most new works are illustrated with quotations from him, or by the fact that some favorite lines of his have passed into proverbs, but by the touching evidence of his *silent grave*. That grave, which I can remember as once the object of ridicule, has now become the poetic shrine of the world's pilgrims who care and strive to live in the happy and imaginative region of poetry. The head-stone, having twice sunk, owing to its faulty foundation, has been twice renewed by loving strangers, and each time, as I am

informed, these strangers were Americans. Here they do not strew flowers, as was the wont of olden times, but they pluck everything that is green and living on the grave of the poet. The *Custode* tells me, that, notwithstanding all his pains in sowing and planting, he cannot "meet the great consumption." Latterly an English lady, alarmed at the rapid disappearance of the verdure on and around the grave, actually left an annual sum to renew it. When the *Custode* complained to me of the continued thefts, and asked what he was to do, I replied, "Sow and plant twice as much; extend the poet's domain; for, as it was so scanty during his short life, surely it ought to be afforded to him twofold in his grave."

Here on my return to Rome, all kinds of happy associations with the poet surround me, but none so touching as my recent meeting with his sister. I had known her in her childhood, during my first acquaintance with Keats, but had never seen her since. I knew of her marriage to a distinguished Spanish patriot, Señor Llanos, and of her permanent residence in Spain; but it was re-

served for me to have the felicity of thus accidentally meeting her, like a new-found sister, in Rome. This city has an additional sacredness for both of us as the closing scene of her illustrious brother's life, and I am held by her and her charming family in loving regard as the last faithful friend of the poet. That I may indulge the pleasures of memory and unite them with the sympathy of present incidents, I am now engaged on a picture of the poet's grave, and am treating it with all the picturesque advantages which the antique locality gives me, as well as the elevated associations which this poetic shrine inspires. The classic story of Endymion being the subject of Keats's principal poem, I have introduced a young Roman shepherd sleeping against the head-stone with his flock about him, whilst the moon from behind the pyramid illuminates his figure and serves to realize the poet's favorite theme in the presence of his grave. This interesting incident is not fanciful, but is what I actually saw on an autumn evening at Monte Tertanio the year following the poet's death.

---

### A SPASM OF SENSE.

THE conjunction of amiability and sense in the same individual renders that individual's position in a world like this very disagreeable. Amiability without sense, or sense without amiability, runs along smoothly enough. The former takes things as they are. It receives all glitter as pure gold, and does not see that it is custom alone which varnishes wrong with a shiny coat of respectability, and glorifies selfishness with the aureole of sacrifice. It sets down all collisions as foreordained, and never observes that they occur because people will not smooth off their angles, but

sharpen them, and not only sharpen them, but run them into you. It forgets that the Lord made man upright, but he hath sought out many inventions. It attributes all the confusion and inaptitude which it finds to the nature of things, and never suspects that the Devil goes around in the night, thrusting the square men into the round places, and the round men into the square places. It never notices that the reason why the rope does not unwind easily is because one strand is a world too large and another a world too small, and so it sticks where it

ought to roll, and rolls where it ought to stick. It makes sweet, faint efforts with tender fingers and palpitating heart to oil the wheels and polish up the machine, and does not for a moment imagine that the hitch is owing to original incompatibility of parts and purposes, that the whole machine must be pulled to pieces and made over, and that nothing will be done by standing patiently by, trying to soothe away the creaking and wheezing and groaning of the laboring, lumbering thing, by laying on a little drop of sweet-oil with a pin-feather. As it does not see any of these things that are happening before its eyes, of course it is shallowly happy. And on the other hand, he who does see them and is not amiable is grimly and Grendally happy. He likes to say disagreeable things, and all this dismay and disaster scatter disagreeable things broadcast along his path, so that all he has to do is to pick them up and say them. Therefore this world is his paradise. He would not know what to do with himself in a world where matters were sorted and folded and laid away ready for you when you wanted them. He likes to see human affairs mixing themselves up in irretrievable confusion. If he detects a symptom of straightening, it shall go hard but he will thrust in his own fingers and snarl a thread or two. He is delighted to find dogged duty and eager desire butting each other. All the irresistible forces crashing against all the immovable bodies give him no shock, only a pleasant titillation. He is never so happy as when men are taking hold of things by the blade, and cutting their hands, and losing blood. He tells them of it, but not in order to relieve so much as to "aggravate" them; and he does aggravate them, and is satisfied. Oh, but he is an aggravating person!

It is you, you who combine the heart of a seraph with the head of a cherub, who know what trouble is. You see where the shoe pinches, but your whole

soul relucts from pointing out the tender place. You see why things go wrong, and how they might be set right; but you have a mortal dread of being thought meddlesome and impertinent, or cold and cruel, or restless and arrogant, if you attempt to demolish the wrong or rebel against the custom. When you draw your bow at an abuse, people think you are trying to bring down religion and propriety and humanity. But your conscience will not let you see the abuse raving to and fro over the earth without taking aim; so, either way, you are cut to the heart.

I love men. I adore women. I value their good opinion. There is much in them to applaud and imitate. There is much in them to elicit faith and reverence. If, only, one could see their good qualities alone, or, seeing their vapid and vicious ones, could contemplate them with no touch of tenderness for the owner, life might indeed be lovely. As it is, while I am at one moment rapt in enthusiastic admiration of the strength and grace, the power and pathos, the hidden resources, the profound capabilities of my race, at another, I could wish, Nero-like, that all mankind were concentrated in one person and all womankind in another, that I might take them, after the fashion of rural schoolmasters, and shake their heads together. Condemnation and reproach are not in my line; but there is so much in the world that merits condemnation and reproach and receives indifference and even reward, there is so much acquiescence in wrong doing and wrong thinking, so much letting things jolt along in the same rut wherein we and they were born, without inquiring whether, lifted into another groove, they might not run more easily, that, if one who does see the difficulty holds his peace, the very stones will cry out. However gladly one would lie on a bed of roses and glide silken-sailed down the stream of life, how exquisitely painful soever it may be

to say what you fear and feel may give pain, it is only a Sybarite who sets ease above righteousness, only a coward who misses victory through dread of defeat.

There are many false ideas afloat regarding womanly duties. I do not design now to open anew any vulgar, worn-out, woman's-rights question. Every remark that could be made on that theme has been made—but one, and that I will take the liberty to make now in a single sentence and close the discussion. It is this: the man who gave rubber-boots to women did more to elevate woman than all the theorists, male or female, that ever were born.

But without any suspicious lunges into that dubious region which lies outside of woman's universally acknowledged "sphere," (a blight rest upon the word!) there is within the pale, within the boundary-line which the most conservative never dreamed of questioning, room for a great divergence of ideas. Now divergence of ideas does not necessarily imply fighting at short range. People may adopt a course of conduct which you do not approve; yet you may feel it your duty to make no open animadversion. Circumstances may have suggested such a course to them, or forced it upon them; and perhaps, considering all things, it is the best they can do. But when, encouraged by your silence, they publish it to the world, not only as relatively, but intrinsically, the best and most desirable,—when, not content with swallowing it themselves as medicine, they insist on ramming it down your throat as food,—it is time to buckle on your armor and have at them.

A little book, published by the Tract Society, called "The Mother and her Work," has been doing just this thing. It is a modest little book. It makes no pretensions to literary or other superiority. It has much excellent counsel, pious reflection, and comfortable suggestion. Being a little book, it costs but little, and it will console, refresh, and

instruct weary, conscientious mothers, and so have a large circulation, a wide influence, and do an immense amount of mischief. For the Evil One in his senses never sends out poison labelled "POISON." He mixes it in with great quantities of innocent and nutritive flour and sugar. He shapes it in cunning shapes of pigs and lambs and hearts and birds and braids. He tints it with gay hues of green and pink and rose, and puts it in the confectioner's glass windows, where you buy—what? Poison? No, indeed! Candy, at prices to suit the purchasers. So this good and pious little book has such a preponderance of goodness and piety that the poison in it will not be detected, except by chemical analysis. It will go down sweetly, like grapes of Beulah. Nobody will suspect he is poisoned; but just so far as it reaches and touches, the social dyspepsia will be aggravated.

I submit a few atoms of the poison revealed by careful examination.

"The mother's is a *most honorable* calling. 'What a pity that one so gifted should be so tied down!' remarks a superficial observer, as she looks upon the mother of a young and increasing family. The pale, thin face and feeble step, bespeaking the multiplied and wearying cares of domestic life, elicit an earnest sympathy from the many, thoughtlessly flitting across her pathway, and the remark passes from mouth to mouth, 'How I pity her! What a shame it is! She is completely worn down with so many children.' It may be, however, that this young mother is one who needs and asks no pity," etc.

"But the *true mother* yields herself uncomplainingly, yea, cheerfully, to the wholesome privation, solitude, and self-denial allotted her. . . . Was she fond of travelling, of visiting the wonderful in Nature and in Art, of mingling in new and often-varying scenes? Now she has found 'an abiding city,' and no allurements are strong enough to tempt her thence. Had society charms for

her, and in the social circle and the festive throng were her chief delights? Now she stays at home, and the gorgeous saloon and brilliant assemblage give place to the nursery and the baby. Was she devoted to literary pursuits? Now the library is seldom visited, the cherished studies are neglected, the rattle and the doll are substituted for the pen. Her piano is silent, while she chants softly and sweetly the soothing lullaby. Her dress can last another season now, and the hat—oh, she does not care, if it is not in the latest mode, for she has a baby to look after, and has no time for herself. Even the ride and the walk are given up, perhaps too often, with the excuse, 'Baby-tending is exercise enough for me.' Her whole life is reversed."

The assumption is that all this is just as it should be. The thoughtless person may fancy that it is a pity; but it is not a pity. This is a model mother and a model state of things. It is not simply to be submitted to, not simply to be patiently borne; it is to be aspired to as the noblest and holiest state.

That is the strychnine. You may counsel people to take joyfully the spoiling of their goods, and comfort, encourage, and strengthen them by so doing; but when you tell them that to be robbed and plundered is of itself a priceless blessing, the highest stage of human development, you do them harm; because, in general, falsehood is always harmful, and because, in particular, so far as you influence them at all, you prevent them from taking measures to stop the wrong-doing. You ought to counsel them to bear with Christian resignation what they cannot help; but you ought with equal fervor to counsel them to look around and see if there are not many things which they can help, and if there are, by all means to help them. What is inevitable comes to us from God, no matter how many hands it passes through; but submission to unnecessary evils is cowardice or laziness; and extolling of the evil as good is sheer

ignorance, or perversity, or servility. Even the ills that must be borne should be borne under protest, lest patience degenerate into slavery. Christian character is never formed by acquiescence in or apotheosis of wrong.

The principle that underlies these extracts, and makes them ministrative of evil, is the principle that a woman can benefit her children by sacrificing herself. It teaches, that pale, thin faces and feeble steps are excellent things in young mothers,—provided they are gained by maternal duties. We infer that it is meet, right, and the bounden duty of such to give up society, reading, riding, music, and become indifferent to dress, cultivation, recreation, to everything, in short, except taking care of the children. It is all just as wrong as it can be. It is wrong morally; it is wrong socially; wrong in principle, wrong in practice. It is a blunder as well as a crime, for it works woe. It is a wrong means to accomplish an end; and it does not accomplish the end, after all, but demolishes it.

On the contrary, the duty and dignity of a mother require that she should never subordinate herself to her children. When she does so, she does it to their manifest injury and her own. Of course, if illness or accident demand unusual care, she does well to grow thin and pale in bestowing unusual care. But when a mother in the ordinary routine of life grows thin and pale, gives up riding, reading, and the amusements and occupations of life, there is a wrong somewhere, and her children shall reap the fruits of it. The father and mother are the head of the family, the most comely and the most honorable part. They cannot benefit their children by descending from their Heaven-appointed places, and becoming perpetual and exclusive feet and hands. This is the great fault of American mothers. They swamp themselves in a slough of self-sacrifice. They are smothered in their own sweetness. They dash into domesticity with an impetus and abandonment that anni-

hilate themselves. They sink into their families like a light in a poisonous well, and are extinguished.

One hears much complaint of the direction and character of female education. It is dolefully affirmed that young ladies learn how to sing operas, but not how to keep house, — that they can conjugate Greek verbs, but cannot make bread, — that they are good for pretty toying, but not for homely using. Doubtless there is foundation for this remark, or it would never have been made. But I have been in the East, and the West, and the North, and the South; I know that I have seen the best society, and I am sure I have seen very bad, if not the worst; and I never met a woman whose superior education, whose piano, whose pencil, whose German, or French, or any school-accomplishments, or even whose novels, clashed with her domestic duties. I have read of them in books; I did hear of one once; but I never met one, — not one. I have seen women, through love of gossip, through indolence, through sheer famine of mental *pabulum*, leave undone things that ought to be done, — rush to the assembly, the lecture-room, the sewing-circle, or vegetate in squalid, shabby, unwholesome homes; but I never saw education run to ruin. So it seems to me that we are needlessly alarmed in that direction.

But I have seen scores and scores of women leave school, leave their piano and drawing and fancy-work, and all manner of pretty and pleasant things, and marry and bury themselves. You hear of them about six times in ten years, and there is a baby each time. They crawl out of the farther end of the ten years, sallow and wrinkled and lank, — teeth gone, hair gone, roses gone, plumpness gone, — freshness, and vivacity, and sparkle, everything that is dewy, and springing, and spontaneous, gone, gone, gone forever. This our Tract-Society book puts very prettily. "She wraps herself in the robes of infantile simplicity, and, burying her womanly nature in the tomb of childhood,

patiently awaits the sure-coming resurrection in the form of a noble, high-minded, world-stirring son, or a virtuous, lovely daughter. The nursery is the mother's chrysalis. Let her abide for a little season, and she shall emerge triumphantly, with ethereal wings and a happy flight."

But the nursery has no business to be the mother's chrysalis. God never intended her to wind herself up into a cocoon. If He had, He would have made her a caterpillar. She has no right to bury her womanly nature in the tomb of childhood. It will surely be required at her hands. It was given her to sun itself in the broad, bright day, to root itself fast and firm in the earth, to spread itself wide to the sky, that her children in their infancy and youth and maturity, that her husband in his strength and his weakness, that her kinsfolk and neighbors and the poor of the land, the halt and the blind and all Christ's little ones, may sit under its shadow with great delight. No woman has a right to sacrifice her own soul to problematic, high-minded, world-stirring sons, and virtuous, lovely daughters. To be the mother of such, one might perhaps pour out one's life in draughts so copious that the fountain should run dry; but world-stirring people are extremely rare. One in a century is a liberal allowance. The overwhelming probabilities are, that her sons will be lawyers and shoemakers and farmers and commission-merchants, her daughters nice, "smart," pretty girls, all good, honest, kind-hearted, commonplace people, not at all world-stirring, not at all the people one would glory to merge one's self in. If the mother is not satisfied with this, if she wants them otherwise, she must be otherwise. The surest way to have high-minded children is to be high-minded yourself. A man cannot burrow in his counting-room for ten or twenty of the best years of his life, and come out as much of a man and as little of a mole as he went in. But the twenty years should have ministered to his manhood,

instead of trampling on it. Still less can a woman bury herself in her nursery, and come out without harm. But the years should have done her great good. This world is not made for a tomb, but a garden. You are to be a seed, not a death. Plant yourself, and you will sprout. Bury yourself, and you can only decay. For a dead opportunity there is no resurrection. The only enjoyment, the only use to be attained in this world, must be attained on the wing. Each day brings its own happiness, its own benefit; but it has none to spare. What escapes to-day is escaped forever. To-morrow has no overflow to atone for the lost yesterdays.

Few things are more painful to look upon than the self-renunciation, the self-abnegation of mothers,—painful both for its testimony and its prophecy. Its testimony is of over-care, over-work, over-weariness, the abuse of capacities that were bestowed for most sacred uses, an utter waste of most pure and life-giving waters. Its prophecy is of early decline and decadence, forfeiture of position and power, and worst, perhaps, of all, irreparable loss and grievous wrong to the children for whom all is sacrificed.

God gives to the mother supremacy in her family. It belongs to her to maintain it. This cannot be done without exertion. The temptation to come down from her throne and become a mere hewer of wood and drawer of water is very strong. It is so much easier to work with the hands than with the head. One can chop sticks all day serenely unperplexed. But to administer a government demands observation and knowledge and judgment and resolution and inexhaustible patience. Yet, however uneasy lies the head that wears the crown of womanhood, that crown cannot be bartered away for any baser wreath without infinite harm. In both cases there must be sacrifice; but in the one case it is unto death, in the other unto life. If the mother stands on high ground, she brings her children up to

her own level; if she sinks, they sink with her.

To maintain her rank, no exertion is too great, no means too small. Dress is one of the most obvious things to a child. If the mother wears cheap or shabby or ill-assorted clothes, while the children's are fine and harmonious, it is impossible that they should not receive the impression that they are of more consequence than their mother. Therefore, for her children's sake, if not for her own, the mother should always be well-dressed. Her baby, so far as it is concerned in the matter, instead of being an excuse for a faded bonnet, should be an inducement for a fresh one. It is not a question of riches or poverty; it is a thing of relations. It is simply that the mother's dress—her morning and evening and street and church dress—should be quite as good as, and if there is any difference, better than her child's. It is of no manner of consequence how a child is clad, provided only its health be not injured, its taste corrupted, or its self-respect wounded. Children look prettier in the cheapest and simplest materials than in the richest and most elaborate. But how common is it to see the children gayly caparisoned in silk and feathers and flounces, while the mother is enveloped in an atmosphere of cottony fadiness! One would take the child to be mistress and the mother a servant. "But," the mother says, "I do not care for dress, and Caroline does. She, poor child, would be mortified not to be dressed like the other children." Then do you teach her better. Plant in her mind a higher standard of self-respect. Don't tell her you cannot afford to do for her thus and thus; that will scatter premature thorns along her path; but say that you do not approve of it; it is proper for her to dress in such and such a way. And be so nobly and grandly a woman that she shall have faith in you.

It is essential also that the mother have sense, intelligence, comprehension.

As much as she can add of education and accomplishments will increase her stock in trade. Her reading and riding and music, instead of being neglected for her children's sake, should for their sake be scrupulously cultivated. Of the two things, it is a thousand times better that they should be attended by a nursery-maid in their infancy than by a feeble, timid, inefficient matron in their youth. The mother can oversee half a dozen children with a nurse; but she needs all her strength, all her mind, her own eyes, and ears, and quick perceptions, and delicate intuition, and calm self-possession, when her sturdy boys and wild young girls are leaping and bounding and careering into their lusty life. All manner of novel temptations beset them,—perils by night and perils by day,—perils in the house and by the way. Their fierce and hungry young souls, rioting in awakening consciousness, ravening for pleasure, strong and tumultuous, snatch eagerly at every bait. They want then a mother able to curb, and guide, and rule them; and only a mother who commands their respect can do this. Let them see her sought for her social worth,—let them see that she is familiar with all the conditions of their life,—that her vision is at once broader and keener than theirs,—that her feet have travelled along the paths they are just beginning to explore,—that she knows all the phases alike of their strength and their weakness,—and her influence over them is unbounded. Let them see her uncertain, uncomfortable, hesitating, fearful without discrimination, leaning where she ought to support, interfering without power of suggesting, counselling, but not controlling, with no presence, no bearing, no experience, no prestige, and they will carry matters with a high hand. They will overrule her decisions, and their love will not be unmingled with contempt. It will be strong enough to prick them when they have done wrong, but not strong enough to keep them from doing wrong.

Nothing gives a young girl such vantage-ground in society and in life as a mother,—a sensible, amiable, brilliant, and commanding woman. Under the shelter of such a mother's wing, the neophyte is safe. This mother will attract to herself the wittiest and the wisest. The young girl can see society in its best phases, without being herself drawn out into its glare. She forms her own style on the purest models. She gains confidence, without losing modesty. Familiar with wisdom, she will not be dazed by folly. Having the opportunity to make observations before she begins to be observed, she does not become the prey of the weak and the wicked. Her taste is strengthened and refined, her standard elevates itself, her judgment acquires a firm basis. But cast upon her own resources, her own blank inexperience, at her first entrance into the world, with nothing to stand between her and what is openly rapid and covertly vicious, with no clear eye to detect for her the false and distinguish the true, no strong, firm, judicious hand to guide tenderly and undeviatingly, to repress without irritating and encourage without emboldening, what wonder that the peach-bloom loses its delicacy, deepening into *rouge* or hardening into brass, and the happy young life is stranded on a cruel shore?

Hence it follows that our social gatherings consist, to so lamentable an extent, of pert youngsters or faded oldsters. Thence come those abominable "young people's parties," where a score or two or three of boys and girls meet and manage after their own hearts. Thence it happens that conversation seems to be taking its place among the Lost Arts, and the smallest of small talk reigns in its stead. Society, instead of giving its tone to the children, takes it from them, and since it cannot be juvenile, becomes insipid, and because it is too old to prattle, jabbars. Talkers are everywhere, but where are the men that say things? Where are

the people that can be listened to and quoted? Where are the flinty people whose contact strikes fire? Where are the electric people who thrill a whole circle with sudden vitality? Where are the strong people who hedge themselves around with their individuality, and will be roused by no prince's kiss, but taken only by storm, yet, once captured, are sweeter than the dews of Hymettus? Where are the seers, the prophets, the Magi, who shall unfold for us the secrets of the sky and the seas, and the mystery of human hearts?

Yet fathers and mothers not only acquiesce in this state of things, they approve of it. They foster it. They are forward to annihilate themselves. They are careful to let their darlings go out alone, lest they be a restraint upon them,—as if that were not what parents were made for. If they were what they ought to be, the restraint would be not only wholesome, but impalpable. The relation between parents and children should be such that pleasure shall not be quite perfect, unless shared by both. Parents ought to take such a tender, proud, intellectual interest in the pursuits and amusements of their children that the children shall feel the glory of the victory dimmed, unless their parents are there to witness it. If the presence of a sensible mother is felt as a restraint, it shows conclusively that restraint is needed.

A woman also needs self-cultivation, both physical and mental, in order to self-respect. Undoubtedly Diogenes glorified himself in his tub. But people in general, and women in universal,—except the geniuses,—need the pomp of circumstance. A slouchy garb is both effect and cause of a slouchy mind. A woman who lets go her hold upon dress, literature, music, amusement, will almost inevitably slide down into a bog of muggy moral indolence. She will lose her spirit; and when the spirit is gone out of a woman, there is not much left of her. When she cheapens herself, she diminishes her value. Especially when the

evanescent charms of mere youth are gone, when the responsibilities of life have left their mark upon her, is it indispensable that she attend to all the fitnesses of externals, and strengthen and polish all her mental and social qualities. By this I do not mean that women should allow themselves to lose their beauty as they increase in years. Men grow handsome as they grow older. There is no reason, there ought to be no reason, why women should not. They will have a different kind of beauty, but it will be just as truly beauty and more impressive and attractive than the beauty of sixteen. It is absurd to suppose that God has made women so that their glory passes away in half a dozen years. It is absurd to suppose that thought and feeling and passion and purpose, all holy instincts and impulses, can chisel away on a woman's face for thirty, forty, fifty years, and leave that face at the end worse than they found it. They found it a negative,—mere skin and bone, blood and muscle and fat. They can but leave their mark upon it, and the mark of good is good. Pity does not have the same finger-touch as revenge. Love does not hold the same brush as hatred. Sympathy and gratitude and benevolence have a different sign-manual from cruelty and carelessness and deceit. All these busy little sprites draw their fine lines, lay on their fine colors; the face lights up under their tiny hands; the prisoned soul shines clearer and clearer through, and there is the consecration and the poet's dream.

But such beauty is made, not born. Care and weariness and despondency come of themselves, and groove their own furrows. Hope and intelligence and interest and buoyancy must be wooed for their gentle and genial touch. A mother must battle against the tendencies that drag her downward. She must take pains to grow, or she will not grow. She must sedulously cultivate her mind and heart, or her old age will be ungraceful; and if she lose fresh-

ness without acquiring ripeness, she is indeed in an evil case. The first, the most important trust which God has given to any one is himself. To secure this trust, He has made us so that in no possible way can we benefit the world so much as by making the most of ourselves. Indulging our whims, or, inordinately, our just tastes, is not developing ourselves; but neither is leaving our own fields to grow thorns and thistles, that we may plant somebody else's garden-plot, keeping our charge. Even were it possible for a mother to work well to her children in thus working ill to herself, I do not think she would be justified in doing it. Her account is not complete when she says, "Here are they whom thou hast given me." She must first say, "Here am I." But when it is seen that suicide is also child-murder, it must appear that she is under doubly heavy bonds for herself.

Husbands, moreover, have claims, though wives often ignore them. It is the commonest thing in the world to see parents tender of their children's feelings, alive to their wants, indulgent to their tastes, kind, considerate, and forbearing, but to each other hasty, careless, and cold. Conjugal love often seems to die out before parental love. It ought not so to be. Husband and wife should each stand first in the other's estimation. They have no right to forget each other's comfort, convenience, sensitiveness, tastes, or happiness in those of their children. Nothing can discharge them from the obligations which they are under to each other. But if a woman lets herself become shabby, drudgy, and commonplace as a wife, in her efforts to be perfect as a mother, can she expect to retain the consideration that is due to the wife? Not a man in the world but would rather see his wife tidy, neat, and elegant in her attire, easy and assured in her bearing, intelligent and vivacious in her talk, than the contrary; and if she neglect these things, ought she to

be surprised, if he turns to fresh woods and pastures new for the diversion and entertainment which he seeks in vain at home? This is quaky ground, but I know where I am, and I am not afraid. I don't expect men or women to say that they agree with me, but I am right for all that. Let us bring our common sense to bear on this point, and not be fooled by reiteration. Cause and effect obtain here as elsewhere. If you add two and two, the result is four, however much you may try to blink it. People do not always tell lies, when they are telling what is not the truth; but falsehood is still disastrous. Men and women think they believe a thousand things which they do not believe; but as long as they think so, it is just as bad as if it were so. Men talk—and women listen and echo—about the overpowering loveliness and charm of a young mother surrounded by her blooming family, ministering to their wants and absorbed in their welfare, self-denying and self-forgetful; and she is lovely and charming; but if this is all, it is little more than the charm and loveliness of a picture. It is not magnetic and irresistible. It has the semblance, but not the smell of life. It is pretty to look at, but it is not vigorous for command. Her husband will have a certain kind of admiration and love. Her wish will be law within a certain very limited sphere; but beyond that he will not take her into his counsels and confidence. A woman must make herself obvious to her husband, or he will drift out beyond her horizon. She will be to him very nearly what she wills and works to be. If she adapts herself to her children and does not adapt herself to her husband, he will fall into the arrangement, and the two will fall apart. I do not mean that they will quarrel, but they will lead separate lives. They will be no longer husband and wife. There will be a domestic alliance, but no marriage. A predominant interest in the same objects binds them together after a fashion; but marriage is some-

thing beyond that. If a woman wishes and purposes to be the friend of her husband, — if she would be valuable to him, not simply as the nurse of his children and the directress of his household, but as a woman fresh and fair and fascinating, to him intrinsically lovely and attractive, she should make an effort for it. It is not by any means a thing that comes of itself, or that can be left to itself. She must read, and observe, and think, and rest up to it. Men, as a general thing, will not tell you so. They talk about having the slippers ready, and enjoin women to be domestic. But men are blockheads, — dear, and affectionate, and generous blockheads, — benevolent, large-hearted, and chivalrous, — kind, and patient, and hard-working, — but stupid where women are concerned. Indispensable and delightful as they are in real life, pleasant and comfortable as women actually find them, not one in ten thousand but makes a dunce of himself the moment he opens his mouth to theorize about women. Besides, they have an axe to grind. The pretty things they inculcate — slippers, and coffee, and care, and courtesy — ought indeed to be done, but the others ought not to be left undone. And to the former women seldom need to be exhorted. They take to them naturally. A great many more women bore boorish husbands with fond little attentions than would appreciative ones by neglect. Women domesticate themselves to death already. What they want is cultivation. They need to be stimulated to develop a large, comprehensive, catholic life, in which their domestic duties shall have an appropriate niche, and not dwindle down to a narrow and servile one, over which those duties shall spread and occupy the whole space.

This mistake is the foundation of a world of wretchedness and ruin. I can see Satan standing at the mother's elbow. He follows her around into the nursery and the kitchen. He tosses up the babies and the omelets, delivers

dutiful harangues about the inappropriateness of the piano and the library, and grins fiendishly in his sleeve at the wreck he is making, — a wreck not necessarily of character, but of happiness; for I suppose Satan has so bad a disposition, that, if he cannot do all the harm he would wish, he will still do all he can. It is true that there are thousands of noble men married to fond and foolish women, and they are both happy. Well, the fond and foolish women are very fortunate. They have fallen into hands that will entreat them tenderly, and they will not perceive that anything is kept back. Nor are the noble men wholly unfortunate, in that they have not taken to their hearths shrews. But this is not marriage.

There are women less foolish. They see their husbands attracted in other directions more often and more easily than in theirs. They have too much sterling worth and profound faith to be vulgarly jealous. They fear nothing like shame or crime; but they feel the fact that their own preoccupation with homely household duties precludes real companionship, the interchange of emotions, thoughts, sentiments, a living and palpable and vivid contact of mind with mind, of heart with heart. They see others whose leisure ministers to grace, accomplishments, piquancy, and attractiveness, and the moth flies towards the light by his own nature. Because he is a wise and virtuous and honorable moth, he does not dart into the flame. He does not even scorch his wings. He never thinks of such a thing. He merely circles around the pleasant light, sunning himself in it without much thought one way or another, only feeling that it is pleasant; but meanwhile Mrs. Moth sits at home in darkness, mending the children's clothes, which is not exhilarating. Many a woman who feels that she possesses her husband's affection misses something. She does not secure his fervor, his admiration. His love is honest and solid, but a little dormant, and therefore dull. It

does not brace, and tone, and stimulate. She wants not the love only, but the keenness and edge and flavor of the love; and she suffers untold pangs. I know it, for I have seen it. It is not a thing to be uttered. Most women do not admit it even to themselves; but it is revealed by a lift of the eyelash, by a quiver of the eye, by a tone of the voice, by a trick of the finger.

But what is the good of saying all this, if a woman cannot help herself? The children must be seen to, and the work must be done, and after that she has no time left. The "mother of a young and increasing family," with her "pale, thin face and feeble step," and her "multiplied and wearying cares," is "completely worn down with so many children." She has neither time nor spirit for self-culture, beyond what she may obtain in the nursery. What satisfaction is there in proving that she is far below where she ought to be, if inexorable circumstance prevent her from climbing higher? What use is there in telling her that she will alienate her husband and injure her children by her course, when there is no other course for her to pursue? What can she do about it?

There is one thing that she need not do. She need not sit down and write a book, affirming that it is the most glorious and desirable condition imaginable. She need not lift up her voice and declare that "she lives above the ills and disquietudes of her condition, in an atmosphere of love and peace and pleasure far beyond the storms and conflicts of this material life." Who ever heard of the mother of a young and increasing family living in an atmosphere of peace, not to say pleasure, above conflicts and storms? Who does not know that the private history of every family with the ordinary allowance of brains is a record of incessant internecine warfare? If she said less, we might believe her. When she says so much, we cannot help suspecting. To make the best of anything, it is not ne-

cessary to declare that it is the best thing. Children must be taken care of, but it is altogether probable that there are too many of them. Some people think that opinion several times more atrocious than murder in the first degree; but I see no atrocity in it, and there is none. I think there is an immense quantity of nonsense about, regarding this thing. For my part, I don't credit half of it. I believe in Malthus, — a great deal more than Malthus did himself. The prosperity of a country is often measured by its population; but quite likely it should be taken in inverse ratio. I certainly do not see why the mere multiplication of the species is so indicative of prosperity. Mobs are not so altogether lovely that one should desire their indefinite increase. A village is honorable, not according to the number, but the character of its residents. The drunkards and the paupers and the thieves and the idiots rather diminish than increase its respectability. It seems to me that the world would be greatly benefited by thinning out. Most of the places that I have seen would be much improved by being decimated, not to say quinqueted or bisected. If people are stubborn and rebellious, stiff-necked and uncircumcised in heart and ears, the fewer of them the better. A small population, trained to honor and virtue, to liberality of culture and breadth of view, to self-reliance and self-respect, is a thousand times better than an overcrowded one with everything at loose ends. As with the village, so with the family. There ought to be no more children than can be healthily and thoroughly reared, as regards the moral, physical, and intellectual nature both of themselves and their parents. All beyond this is wrong and disastrous. I know of no greater crime than to give life to souls, and then degrade them, or suffer them to be degraded. Children are the poor man's blessing and Cornelia's jewels, just so long as Cornelia and the poor man can make adequate

provision for them. But the ragged, filthy, squalid, unearthly little wretches that wallow before the poor man's shanty-door are the poor man's shame and curse. The sickly, sallow, sorrowful little ones, shadowed too early by life's cares, are something other than a blessing. When Cornelia finds her children too many for her, when her step trembles and her cheek fades, when the sparkle flits out of her wine of life and her salt has lost its savor, her jewels are Tarpeian jewels. One child educated by healthy and happy parents is better than seven dragging their mother into the grave, notwithstanding the unmeasured reprobation of our little book. Of course, if they can stand seven, very well. Seven and seventy times seven, if you like, only let them be buds, not blights. If we obeyed the laws of God, children would be like spring blossoms. They would impart as much freshness and strength as they abstract. They are a natural institution, and Nature is eminently healthy. But when they "come crowding into the home-nest," as our book daintily says, they are a nuisance. God never meant the home-nest to be crowded. There is room enough and elbow-room enough in the world for everything that ought to be in it. The moment there is crowding, you may be sure something wrong is going on. Either a bad thing is happening, or too much of a good thing, which counts up just the same. The parents begin to repair the evil by a greater one. They attempt to patch their own rents by dilapidating their children. They recruit their own exhausted energies by laying hold of the young energies around them, and older children are bored, and fretted, and deformed in figure and temper by the care of younger children. This is horrible. Some care and task and responsibility are good for a child's own development; but every care, every toil, every atom of labor that is laid upon children beyond what is solely the best for their own character is intolerable and inexcusable oppression. Parents have no right to

lighten their own burdens by imposing them upon the children. The poor things had nothing to do with being born. They came into the world without any volition of their own. Their existence began only to serve the pleasure or the pride of others. It was a culpable cruelty, in the first place, to introduce them into a sphere where no adequate provision could be made for their comfort and culture; but to shoulder them, after they get here, with the load which belongs to their parents is outrageous. Earth is not a paradise at best, and at worst it is very near the other place. The least we can do is to make the way as smooth as possible for the new-comers. There is not the least danger that it will be too smooth. If you stagger under the weight which you have imprudently assumed, stagger. But don't be such an unutterable coward and brute as to illumine your own life by darkening the young lives which sprang from yours. I often wonder that children do not open their mouths and curse the father that begat and the mother that bore them. I often wonder that parents do not tremble lest the cry of the children whom they oppress go up into the ears of the Lord of Sabaoth, and bring down wrath upon their guilty heads. It was well that God planted filial affection and reverence as an instinct in the human breast. If it depended upon reason, it would have but a precarious existence.

I wish women would have the sense and courage — I will not say, to say what they think, for that is not always desirable — but to think according to the facts. They have a strong desire to please men, which is quite right and natural; but in their eagerness to do this, they sometimes forget what is due to themselves. To think namby-pambyism for the sake of pleasing men is running benevolence into the ground. Not that women conscientiously do this, but they do it. They don't mean to pander to false masculine notions, but they do. They don't know that they are pandering to them, but

they are. Men say silly things, partly because they don't know any better, and partly because they don't want any better. They are strong, and can generally make shift to bear their end of the pole without being crushed. So they are tolerably content. They are not very much to blame. People cannot be expected to start on a crusade against ills of which they have but a vague and cloudy conception. The edge does not cut them, and so they think it is not much of a sword after all. But women have, or ought to have, a more subtle and intimate acquaintance with realities. They ought to know what is fact and what is fol-de-rol. They ought to distinguish between the really noble and the simply physical, not to say faulty. If men do not, it is women's duty to help them. I think, if women would only not be quite so afraid of being thought unwomanly, they would be a great deal more womanly than they are. To be brave, and single-minded, and discriminating, and judicious, and clear-sighted, and self-reliant, and decisive, that is pure womanly. To be womanish is not to be womanly. To be flabby, and plastic, and weak, and acquiescent, and insipid, is not womanly. And I could wish sometimes that women would not be quite so patient. They often exhibit a degree of long-suffering entirely unwarrantable. There is no use in suffering, unless you cannot help it; and a good, stout, resolute protest would often be a great deal more wise, and Christian, and beneficial on all sides, than so much patient endurance. A little spirit and "spunk" would go a great way towards

setting the world right. It is not necessary to be a termagant. The firmest will and the stoutest heart may be combined with the gentlest delicacy. Tameness is not the stuff that the finest women are made of. Nobody can be more kind, considerate, or sympathizing towards weakness or weariness than men, if they only know it exists; and it is a wrong to them to go on bolstering them up in their bungling opinions, when a few sensible ideas, wisely administered, would do so much to enlighten them, and reveal the path which needs only to be revealed to secure their unhesitating entrance upon it. It is absurd to suppose that unvarying acquiescence is necessary to secure and retain their esteem, and that a frank avowal of differing opinions, even if they were wrong, would work its forfeiture. A respect held on so frail a tenure were little worth. But it is not so. I believe that manhood and womanhood are too truly harmonious to need iron bands, too truly noble to require the props of falsehood. Truth, simple and sincere, without partiality and without hypocrisy, is the best food for both. If any are to be found on either side too weak to administer or digest it, the remedy is not to mix it with folly or falsehood, for they are poisons, but to strengthen the organisms with wholesome tonics, — not undiluted, perhaps, but certainly unadulterated.

O Edmund Sparkler, you builded better than you knew, when you reared eulogiums upon the woman with no nonsense about her!

## MY SHIP.

MIST on the shore, and dark on the sand,  
 The chilly gulls swept over my head,  
 When a stately ship drew near the land, —  
 Onward in silent grace she sped.

Lonely, I threw but a coward's glance  
 Upon the brave ship tall and free,  
 Joyfully dancing her mystic dance,  
 As if skies were blue and smooth the sea.

I breathed the forgotten odors of Spain,  
 Remembered my castles so far removed,  
 For they brought the distant faith again  
 That one who loves shall be beloved.

Then the goodly galleon suddenly  
 Dropped anchor close to the barren strand,  
 And various cargoes, all for me,  
 Laid on the bosom of my land.

O friend! her cargoes were thy love,  
 The stately ship thy presence fair;  
 Her pointed sails, like wings above,  
 Shall fill with praises and with prayer.

## BETROTHAL BY PROXY:

## A ROMANCE OF GENEALOGY.

## CHAPTER I.

YE who listen with impatience to the Reports of Historical Societies and have hitherto neglected to subscribe to an Antiquarian Journal, ye who imagine that there can be no intelligent and practical reply to the *cui bono?* shake of the head which declines to supply the funds for a genealogical investigation, attend to the history of my adventure in Foxden.

There! — I like to begin with the Moral; for no sensible man will leave

the point and purpose of his testimony to the languid curiosity of a spent reader. Dr. Johnson never did so; and who am I to question his literary infallibility? So if you do not take kindly to the solemn rumble of the Johnsonese mail-coach of a sentence in which we set out, receive the purport of it thus: It is of advantage to be on good terms with one's ancestors: Also; men absorbed in this practical present may be all the better for a little counter irritation with the driest twigs of the family-tree.

And now, *Why did I marry Miss Hurribattle?* I am sure I had no intention of doing so. In the first place, when about eighteen years of age, I had firmly determined never to marry anybody. Then there were so many nice *tea-ing* families in the Atlantic city whose principal street was decorated by my modest counsellor's sign, that I really must excuse the rather unpleasant wonder of several friends at my out-of-the-way selection. That a somewhat experienced advocate, who had resisted for three years the fascinations of city belle-ship, should spend the legal vacation in a visit to an old gentleman he never saw before, and return affianced to a lady nobody had ever heard of,—I own there was something temptingly discussible in the circumstance; and knowing that fine relish for personal topics which distinguishes the American *conversazione*, how could I hope to escape? At first, it was a little awkward, when I went to a party, to see people who were talking together glance at me and murmur on with increased interest. Sometimes, when the wave of talk retreated a little, I would catch the prattle of some retiring rill to this effect: "But who are these Hurribattles? What an odd name! I wonder if that had anything to do with it."

The querist, whoever he or she might be, had unconsciously struck upon the explanation of the whole matter. Yes, it was the name: it had a great deal to do with it. And if you will allow me to step back a little into the past, and thence begin over again in good storyteller fashion, I will endeavor to make you understand how it all came about.

If I were obliged to designate in one word the profession and calling of Colonel Prowley of Foxden, I should say he was a *Correspondent*. Of course I do not mean a regular newspaper-correspondent, paid to concoct letters from Paris in the office of the "Foxden Regulator"; nor yet the amateur ditto, who is never tired of making family-tours to the White Mountains. But rather was

he a gentleman, with an immense epistolary acquaintance all over the country, whose main business in life consisted in writing letters to all sorts of persons in a great variety of places. And this he did as his particular contribution towards the solution of this question: What in the world—or rather, what in the United States—is a man to do who accumulates sufficient property to relieve him from the necessities of active business? The answers offered to this inquiry of the Democratic Sphinx are, as we all know, various enough. Some men, of ready assurance and fluent speech, go into politics; some doze in libraries; some get up trotting-matches and yacht-races; while others dodge the difficulty altogether by going to disport themselves among the arts and letters of a foreign land. Colonel Prowley, with considerable originality, was moved to find employment in *letter-writing*, pursuing it with the same daily relish which many people find for gossip or small-talk. And this is the way in which I came to be favored with the good gentleman's communications. About three years ago a friend in England procured for me a book that I had long coveted,—Morton's "New English Canaan," printed at Amsterdam in the year 1637. This little volume, after the novelty of a fresh perusal was past, I happened to lend to a young gentleman of our boarding-house, who prepared short notices of books for one of the evening papers. He, it would appear, thought that some account of my acquisition might supply the matter for his diurnal paragraph. At all events, I received, some days after, a letter dated from Foxden, and bearing the signature of Elijah Prowley. It was couched in the old-fashioned style of compliment and excuses for the liberty taken,—which liberty consisted in requesting to have a fac-simile made of a certain page of a work that he had traced through a newspaper-article to my possession. The object, he said, was to supply the deficiency in a copy of the "Canaan" that

had a place in his own library. Of course the request was complied with, and the correspondence begun.

The Colonel, to do him justice, wrote very entertaining letters, despite the somewhat antiquated phraseology in which his sentiments were clothed. Indeed, I soon found in his epistles all the variety of the *grab-bag* at a country-fair, in which the purchaser of the right of *grab* fumbles with pleasing uncertainty as to whether he is to draw forth a hymn-book or a shaving-brush, a packet of note-paper or a box of patent polish for stoves. At one time he would communicate the particulars of some antiquarian discovery at Foxden; at another he would copy for me the weekly bill of the town mortality, or journalize the parish quarrels about the repairs of the stove-funnel in Mr. Clifton's church.

I was well pleased to find that the little notes of acknowledgment which I despatched after the receipt of these leviathans seemed to be considered a sufficient representation of capital to justify the enormous rate of epistolary interest which the Colonel bestowed. I liked the style of my correspondent. It did me good to meet with the strong old expressions of our ancestors that were turning up in unexpected places. If the dear old phrases were sometimes better or worse than the fact they expressed, they must have improved what was good, and gibbeted more effectually what to the times seemed evil. Who would now think of designating a parcel of serious savages "the praying Indians of Natick"? And yet there is a sound and a power about the words that would go far to convert the skeptical aborigines in their own despite. Why, there was something rich and nervous in the talk of the very law-makers. "The accursed sect of the Quakers,"—what a fine spirit such an accusative case gives to the dry formula of a legal enactment! the beat of the drum by which the edict was proclaimed in the streets of Boston seems only an appropriate accompaniment to

so stirring a denunciation. Then to invite a brother to "exercise prophecy,"—as Winthrop used to call the business of preaching,—there is really something soul-invigorating in the very sound. No wonder the people could stand a good two-hours' discourse under so satisfactory a title!

I suppose, then, that much of my original relish for the communications of my Foxden correspondent came from his mastery over the antique glossary, and perhaps the rather ancient style of thought that fitted well the method of conveyance. Indeed, a good course of Bishop Copleston's "magic-lantern school" made me peculiarly susceptible to the refreshment of changing the gorgeous haze of modern philosophers for the sharpness and vitality with which old-fashioned people clothe such ideas as are vouchsafed to them.

I soon found that my friend had that passion for what may be called petty antiquarian research which is so puzzling to those who escape its contagion. Also that a pride of family, that lingers persistently in some parts of New England, seemed to concentrate itself and envelop him as in a cloud. He had attained the age of sixty a bachelor,—perhaps from finding no person in Foxden of sufficiently clear lineage to be united with the Squire's family,—or perhaps because he had a sister, five years older than himself, who fulfilled the duties of companion and housekeeper.

How strange a sensation it is to feel a real friendship and familiarity with one we have never seen! Yet if people are drawn together by those mysterious affinities which, like the daughters of the horse-leech, are ever crying, "Give, give," a few bits of paper bridge over space well enough, and enable us to recognize abroad the scattered fragments that complete ourselves.

The Colonel studied up my ancestors, who, it appears, were once people of sufficient consideration in the land, and finally transferred the interest to myself. At one time he took the trouble

to go down to Branton, about forty miles from Foxden, for the purpose of verifying inquiries about progenitors of mine who had originally settled in that place. He advised me, as a son, in my reading and business; and although I often dismissed his suggestions as the whims of an old-fashioned recluse, I was always touched by the simplicity and sincere interest that prompted them. He would mysteriously hint that something might one day occur to give tangible proof of the regard in which he held me; but as I paid little heed to such warnings, I was totally unprepared for the plan developed in the letter of which an extract is here presented:—

“Concerning the propriety of your marrying, my dear young friend, my sister and myself have long known but one opinion; the only difficulty that has exercised us being, whom, among my divers correspondents, we could most heartily commend to your selection. Now it is known to you that I have striven for some time past to trace the descendants of the old family of Hurribattel, who seem to have disappeared from Branton about the year ten in the present century. The interest I have taken in the research comes from the fact that your great-great-uncle appears at one time to have been affianced to a lady of that family. For what reason an alliance which had everything to recommend it was broken off I have sorely puzzled myself to conjecture, but linger always in the labyrinths of doubt. Some months ago I received a catalogue from the Soggimarsh College in the Far West, to whose funds I had contributed a modest subscription. I was thrown into an ecstasy of astonishment, when, in glancing over the names of the honorable Faculty, my attention was arrested by words to this effect: *Miss Hurribattle, Professor of Calisthenics and Female Department*. Of course, I wrote to her immediately, and received right cordial replies to all inquiries. She seemed much interested in the union of the

families that was formerly contemplated, and much desires to see you as the representative of your great-great-uncle. I need only add, that, so far as may be judged by the happy vein of her correspondence, she has at present no ensnarement of the heart, and has agreed to pay me a visit at Foxden the first of August next, when, by reason of the vacation, she will be at liberty for five weeks. Your own visit to me, so often postponed, is, as I believe, definitively fixed for the same time. So I expect you both, and need not enlarge on the strange delight it would give me, if a family-engagement of seventy years' standing should be closed by a marriage beneath my roof.”

There was something so preposterous in this desperate match-making between people whom they had never seen, that Colonel Prowley and his sister had taken into their hands, that it really made a greater impression upon me than if the parties had been less unlikely to come together. A Professor of Calisthenics! Could anything be more unpromising? Yet, when my friend copied for me some extracts from the lady's letters that were sensible and feminine, I thought how odd it would be, if something should come of it, after all. I often found myself skipping Colonel Prowley's accounts of old Doctor Dastick, Mrs. Hunesley, and other great people of his town, and pondering upon the notices of his Western correspondent. I began to have a mysterious presentiment — which, in view of the calisthenics, I could not explain — that we might be not unadapted to each other. In any case, the lady's fine family-name was a recommendation that I knew how to appreciate. They have very young professors out West, I thought, and this is merely a temporary position; besides, I had a friend who married a female physician, and the match has turned out a very happy one. So I played with the idea, half in jest and half seriously, and looked forward with much interest to my visit to Foxden.

## CHAPTER II.

It was near noon, on an August day, when the train left me at the Foxden station. Upon casting my eyes about to see what was to be done next, I observed a very shabby and rickety carry-all, with the legend "Railway-Omnibus" freshly painted upon its side.

"It is better than a mile and a half up to Colonel Prowley's; but I calculate I can take you there, after I've left this lady," responded the proprietor of this turnout, in reply to a question of mine.

"But I want to go to Colonel Prowley's, too," said a feminine voice at my side.

"Well, now that's complete," acquiesced the driver. "I'll just go get the baggage, and put you both through right away."

Of course I turned to view my companion. She was a middle-aged lady, something disordered in dress and hair, with a sharply marked countenance, and that diffusive sort of eye that seems to take one in as a speck which breaks the view of more interesting objects lying on the verge of the horizon. Yet her face was dimpled by those indescribable changing lines which indicate that a cessation of impulse has not marked the wearer's retreat from youth, and make us feel anew how blessed a thing it is for the character to keep our impulses strong within us, and to be strong ourselves in their restraint.

I was doubting whether to begin those little shivers and sidelings with which people who feel that they ought to be acquainted, but have nobody to introduce them, endeavor to supply the deficiency, when the lady abruptly pronounced my name, and inquired if I responded thereto.

"I thought it must be you," she said, on being satisfied regarding my identity, "for the Colonel wrote me that he expected you about this time. I feel we shall become friends. I am Miss Hurribattle."

Although I had a strong suspicion

who it must be, yet a cold surprise seemed to run through me, when the dire certainty so suddenly declared itself. I dropped my carpet-bag, as if all my daintily built castles were in it, and it was best to crush them to pieces at once and have it over. I pondered, and helped tie a bandbox on behind the vehicle, and after some time found myself in the carryall staring at the felt hat of the driver an inch or two before my nose, and Miss Hurribattle established by my side. It occurred to me that it was my place to resume the conversation, and, in a sudden spasm of originality, I changed a remark respecting the beauty of the day into an observation on the steepness of the hill we began to ascend.

"It is very steep," assented the lady, "and I have a particular objection to riding up-hill: it always appears to me I am helping the horses draw. However, it may sometimes be pleasant; for I remember paying a visit of a fortnight to Boston, when I was a girl, and there I really thought that hills could not have been placed more conveniently."

"How so?" inquired I.

"Why, I stayed with some friends who lived in Charles Street, just on the bay; consequently we always drove up-hill when we went to a party, and down-hill when we came home."

"And you were always so much more content to return than to go, that the accelerated speed of a down-hill passage was agreeable," suggested I, after having cast about vaguely for an explanation.

"Oh, dear! no! It was all on account of my back-hair: for in going up-hill one naturally leans forward,—so, of course, it could n't get tumbled; but when we were coming home, it was no matter."

I glanced slightly at Miss Hurribattle, and thought it strange that a lady of her present disorderly and straggly appearance could have ever felt so much interest in fashionable proprieties. She seemed to be conscious of what was passing in my mind, and suddenly said,—

"Did you ever see a lady throw a stone?"

"I probably have," I replied; "though I do not at present recall any particular instance."

"Very well, then,—you will remember that it always seems as if she was going to throw herself after it. Now I recognize in this a portion of the mystic instruction that natural phenomena may give us, if we look at them earnestly; for is it not intended that woman should pursue with her whole being whatever she undertakes? The man throws his stone with a little jerk of the hand: he may be a legislator, a philanthropist, a father, and a merchant, each with distinct portions of himself, and be each with all the better effect to the others; but when a woman throws her stone, it is better for her to project herself along with it."

"But, surely, you cannot believe that she is entitled only to a single fling at the mark?"

"On the contrary, let her change her mark as often as she finds it too easy or too hard to hit. All I insist upon is a temporary concentration upon one pursuit. You wondered just now that I could ever have cared for display, or have thought much of my appearance; but at that time I knew no better, and followed the world with a devotion for which I have now, I trust, a better object."

I began to be quite interested in the sincerity and confidence with which my companion talked to me, and, after a few remarks expressing concurrence, I framed a question that would draw out the motives of her connection with the college, should she care to communicate them.

"It has been fortunate for me," answered Miss Hurribattle, "to have been born with an activity of temperament that has kept me from that *maladie des désabusés* which, when the freshness of youth has passed, frequently attacks ladies of some intellectual culture who do not marry. A strong principle of

self-assertion, that has long been characteristic of my family, has left us unbound by that common propriety of sacrificing our best happiness for the sake of appearing happy to the world. This induced my father to quit Branton in pretty much the same spirit of opposition with which Chatterton quitted Bristol. Disgusted with its local celebrities, and chafing under the petty exactions and petty gossip to which a sudden loss of fortune had exposed him, he left the town without communicating to the neighbors his future destination. But I will not poach upon our friend the Colonel's speciality, and give you a family-history. It is sufficient to say that a year or two ago I was led to interest myself in the Soggimarsh College as a ground unincumbered by the old incredulities of man's best inspirations which grow so thickly in what are called the highest civilizations,—incredulities, indeed, which, in the fine figure of Coleridge, are nothing but credulities after all, only seen from behind, as they bow and nod assent to the habitual and the fashionable. But I see you are wondering at the particular position in the Academy which our catalogue assigns me, and you shall have the explanation. I have for a long time been painfully impressed with the total neglect of physical education by the women of America. It seems to me that no very important moral advance can be achieved while the exquisite organism through which our impressions come, and through which they should go forth again in acts, is so perverted. I was very anxious that the Soggimarsh College should distinctly recognize a correct physical training as being at least as important as any branch of mental discipline. Accordingly, when the titles of the professorships were under discussion, it seemed right not to take my designation from the classes I instruct in history and philosophy, but from the general gymnastic development of the female members of the college, which it is likewise my duty to oversee. I know,

of course, that the prejudices of the public would hold me in greater esteem as a teacher of some ancient lore than in the capacity I assume before them; but you see I throw my stone in the womanish fashion, and do not leave enough of myself behind to be troubled about the matter."

I believe I have good Sir Thomas Browne's fancy of rejoicing to find people individual in something beside their proper names; and by this, as well as much more conversation not set down, I had the satisfaction to discover that Miss Hurribattle had something more than her bold patronymic to distinguish her from the Misses Smith and Robinson of my city-acquaintance. I could hardly believe that we had advanced so far to the footing of old friends, before we reached our destination. As our carryall turned into Colonel Prowley's avenue, however, a sudden recollection of the little romance the proprietor had arranged for his arriving guests came over me like a terrible dream. What a pity it is, I thought, that a friendly intercourse which I should highly prize must be disturbed by the awkward consciousness that this old letter-writer and his sister are watching and misinterpreting with all the zeal of match-makers who have baited their trap, and are ready to mistake anything for a nibble!

We drew up before a formal-looking, old-fashioned house, with piazzas to the two stories, each bordered with a good extent of unquestionably modern gutter. The staple growth of the place, in which the house was set, like the centre of an antique breastpin, seemed to lie in the shrub called box. This ornamental vegetable stretched down each side of the gravel walk, hedged in all sorts of ugly geometrical figures that contained flower-beds, and stood sentinel to the lower line of the piazza; farther on, you would see it allowed to grow to the height of three or four feet, to be curiously cut into cubes, pyramids, and miniature arches.

Colonel Prowley, who was soon at the door to receive us, was a much less imposing sort of man than I had imagined him. He appeared short and modest, and showed a kind face set about half-way up the chin in one of the old section-of-stove-pipe stocks that buckle up from behind; there was a little embarrassment in his manner, as if he found it hard to receive with proper cordiality two dear friends whose faces he had never before seen. We were taken to the parlor, stiffly neat in all its appurtenances, introduced to Miss Prowley, and soon after summoned to dinner.

There was much satisfaction in sitting down to such a repast as the Colonel knew how to give, only it made one shudder a little when he told us the names of great people long passed away who had ranged themselves about the same piece of mahogany during the days of his father and grandfather, for fourscore years into the past. However, if such reminiscences make us reflect upon the mutable character of human affairs, and send grave speculations of the "fleeting show" and "man's illusion" concerning which the poet has told us, I find that the best way is to remember that it is well to make our humble department in the show as entertaining as we can, and our little fragment of the illusion as illusive as possible.

At the head of the table sat the sister of our host, arrayed in the lank bombazine skirt, tight sleeves, and muslin cravat, which constituted the old-lady uniform of the past generation, and which in rare instances yet survives in the country. Upon her right hand was placed the clergyman, Mr. Clifton, who came to dine every Monday, — it being a convenient arrangement on account of the washing; and on her left was one Deacon Reyner, who kept the parish records, and was the local antiquary of the town.

One of the pleasantest diversions with which I am acquainted is a dinner among elderly people of character and originality, who are content to toss about

the ball of conversation among themselves, and allow me to watch the game. And in this way was I entertained on my arrival at Foxden; for Miss Hurribattle was directly at her ease, and had plenty to say; while the brother and sister were content to offer the best of everything, and did not attempt to draw me out of my silence. I perceived they were thinking what a pity it was that Miss Hurribattle and myself had not the equality of age and temper that they had fancied for us; for I observed how they would follow the streaks of gray that straggled through the lady's locks, and then glance at the neatly turned moustache upon which in those days I prided myself, and realize that their agreeable plans might be destined to disappointment.

I remember the conversation first fell upon a certain general history of the Prowley family that its present masculine representative had in preparation.

"By the way," said Deacon Reyner, addressing the future historian on this head, "I have secured a correct copy of poor Prosody's epitaph, as you asked me the other day."

Miss Hurribattle, who looked as if she had some doubt whether poor Prosody was a man or an animal, returned a non-committal, "Indeed! I am very glad of it," but soon after added, "Was he a favorite dog?"

"A dog!" exclaimed the Colonel, whose family-history, dates and all, seemed to course his veins instead of blood, "he was my many times great uncle! I have surely told you how Noah Prowlie, who came to New England in 1642, and is supposed to have settled at Foxden some years later, married Desire, daughter of the Reverend Jabez Pluck. Being a rigid grammarian,—a character sufficiently rare at that period,—he named his three sons Orthography, Syntax, and Prosody,—a proceeding that is understood to have offended the Reverend Jabez, who was naturally partial to the Scriptural nomenclature then in

vogue. His scruples, I regret to say, were more than justified in the conduct of his grandchildren. Poor Orthography Prowlie was an idle fellow, who never got beyond making his mark upon paper, and consequently made none in the world; Syntax could never agree with anybody; while as for Prosody, poor fellow" —

"It is enough to say that neither his verses nor his life would bear scanning!" said the Deacon, desiring to keep the conversation off unpleasant topics.

"But you certainly had a poet in your family?" said Miss Hurribattle, determined to repair her blunder by suggesting a potent cause of congratulation.

"Indeed we had, Madam!" said the Colonel, with creditable emotion; "though unfortunately none of his productions have come down to us. But we have the highest contemporary testimony to his excellence in a copy of verses prefixed to his posthumous discourse entitled 'The New Snare of a Maypole, or Satan's own Trap for a Slippery Church.' The lines were written by his colleague, the Reverend Exaltation Brymm, and are certainly much to the purpose: I generally keep a copy of them in my pocket-book."

"Oh, do read them, brother!" said Miss Prowley, with strong interest.

Thus adjured, the Colonel produced a piece of paper, put on his spectacles, and read to this effect:—

"New Englande! weep: Thy tunefull Prowlie's gone,

Who skillfully his Armour buckled on  
Agaynst Phyllystine Scorn and Revelrie:  
His Sword well-furbished was a Sight to see!  
This littel Booke of his shall still be greene  
While Sathan's Fangles Iorden stand betweene:

Now Pot of Sinne boil up thy dõlefull Skum!  
Ye juggelling Quakers laugh: his Inkhorn's dumb.

He put XIII Pslames in verse for our Quire,  
And with XXVII Pastorals wictch Apollo's Lyre."

"Do you recollect John Norton's funeral elegy on Ann Bradstreet, the

Eve of our female minstrelsy?" interrogated Miss Hurribattle; "there are two lines in it which are still in my memory:—

'Could Maro's muse but hear her lively strain,  
He would condemn his works to fire again.'

What a launch upon the sea of fame! and how sad it is that an actual freight of verses should be preserved in the ship's hold!"

"Well, well, my kinsman was perhaps wise in trusting none of his psalms or pastorals to the press, especially as that greatest of poets, Pope, has since been in the world. But I truly regret that he left no portrait, nor even so much as an outline in black from which something might be made up by an imaginative artist. I have judges, majors, and attorneys, all properly labelled, in the other room, who would be much improved by a slight dash of the æsthetic element; however, I suppose it can't be helped now!"

"Not unless you substitute Saint Josselyn for an ancestor, as Mrs. Hunesley did the other day," said Miss Prowley.

"Ha, ha! it might not be a bad plan to follow out the lady's suggestion: but do tell the story of her strange mistake."

"Why, you must know that the other day old Doctor Dastick brought his New-York niece to call upon us. She began to talk to my brother, and when at last topics of conversation failed, turned to look at the picture of Saint Josselyn, which could be seen through the open folding-doors."

"The gentleman whose sole garment consists of some sort of skin thrown over his shoulders: you must all have observed it as we came in to dinner," said our host, in parenthesis.

"Well, immediately below the Saint hangs a small painting of Uncle Joshua, in white stockings, cocked hat, and coat of maroon velvet, the poor gentleman's favorite dress.

"Ah!" said Mrs. Hunesley, with her eyes fixed upon the Saint, "quite a fine portrait!"

"Why, yes," said my brother, nat-

urally supposing she meant the small picture below, 'a very fine portrait, and a capital likeness of my Uncle Joshua.'

"Indeed!" said the lady, with a well-bred effort to conceal her surprise; 'he was taken in a—a—fancy dress, I suppose.'

"On the contrary, it was his ordinary costume," insisted the Colonel. 'I can remember him walking up the broad-aisle at church, dressed just as you see him there.'

"I should not have thought it would have been allowed! Did not the deacons turn him out?" exclaimed Mrs. Hunesley, in great astonishment.

"Turn him out! Why, Madam, he was a deacon himself, and the most popular man in the parish.'

"Well, I had no idea that such things had ever been permitted in this country! I should have supposed that the fear of such an example on the young would have induced people to keep him in confinement.'

"Good heavens, Madam!" remonstrated the Colonel, roused to a desperate vindication of the family-honor, 'let me tell you that his excellent influence on the young was the crowning virtue of his character. He used to go about town with his pockets filled with nuts and gingerbread to reward them when they were good.'

"It is enough," replied the lady; 'our views of propriety are so totally different that we will not pursue the subject. I will only say that—really—in that dress, *I don't see where he could have had any pockets!*'"

Deacon Reyner laughed heartily at these strictures upon the proprieties of his predecessor, and said,—

"Of course, the last remark must have brought about an explanation."

"Why, yes," said Colonel Prowley; "but when we see how slight an accident resolved the mystery, we should receive with doubt much of the personal scandal which is tossing about the world."

The clergyman assented very cordially to this proposition, and added, that

it was a reflection that those of his flock then present would do well to bear in mind that very evening at Doctor Dastick's bone-party.

I confess to being a little startled at the spectral name of this entertainment, and began to puzzle myself whether the Doctor gave a levee to rapping spirits, or moralized over the skulls in his collection, like Hamlet in the church-yard. Miss Hurribattle seemed wandering in the mazes of a similar perplexity, and finally said,—

“What is a bone-party? Is it given out of compliment to the dead or the living?”

“Nay,” said the Deacon, “I don't see how it could be much of a compliment to the dead.”

“Except upon the principle, *De mortuis nil, nisi bone 'em!*” suggested Miss Hurribattle, with such perfect gravity that neither Miss Prowley nor the clergyman suspected the jocular atrocity that was hidden in her speech.

“The bone-parties of old Doctor Dastick,” explained the Colonel, “are entertainments peculiar to Foxden; and as there is to be one this evening to which we are all invited, any anticipation of the diversion seems likely to diminish whatever of satisfaction may be in prospect. I will, however, remark, that some of the Doctor's guests are grievously oppressed by somnolence during his scholastic expositions; as a protection against which infirmity of the flesh, I do commend an after-dinner nap. It has been the fashion of the house since the days of my grandfather; and as he lived to a ripe old age, I do not think it could have been deleterious.”

Soon after this, Colonel Prowley pushed back his chair from the table as a signal for the dispersal of the party. And I betook myself to my chamber, a sober apartment, with very uneven floor and very small windows, through one of which I peered out upon the box before the house, and thought over the people whose acquaintance I had just made. Once only were these musings inter-

rupted by snatches of a conversation between my host and hostess as they passed across the piazza.

“When this comes about, sister, as I still believe it must, you shall adorn a page of my diary with one of your illustrative drawings. A pair of doves would be appropriate, or perhaps a vine clinging round an oak.”

“And which of our guests is to be represented by the oak?” asked Miss Prowley, in a tone which betrayed a woman's perception of matrimonial incongruities.

“Nay, sister, our young friend has a steadiness of character which would be ill-mated with some giddy girl from the nursery. So, make your vine a little woody, and the union will be all the firmer.”

As there was no chance of taking a nap after this, I presently descended to walk in the garden. And there I encountered Miss Hurribattle, who did not seem to be one of the convenient visitors who can be put to sleep after dinner. The conversation which I had the honor of renewing with the lady, though it did not at all advance the whimsical project of Colonel Prowley, increased my respect for the high instincts of Nature which prompted her concern in the elevation of woman. She showed me how a reform, presenting on its surface much that was meagre and partial, was sustained by those accomplished in the study of the question, no less from the rigorous necessities of logic than from the demonstrations of history and experiment.

And here, perchance, the reader observes that we make but slight progress towards a solution of the inquiry proposed some pages back. Yet let it be remembered that in real experience the novelist's art of foreshadowing the end from the beginning and aiming every petty incident at the final result is very seldom perceptible. “*Il ne faut pas voyager pour voir, mais pour ne pas voir,*” says the proverb; and the journey of life is included in its application. We

do our rarest deeds, we take our most important steps, by what seems accident. Instead of forming plans with remote designs, we find it our best policy to seize circumstances as they run past us,—knowing, that, if we have strength and quickness enough, we may take from them all that is required.

### CHAPTER III.

DOCTOR DASTICK'S bone-party was certainly an entertainment of unique description. A kind old gentleman was its originator, who thought to turn the enthusiasm for lectures, which the Lyceum had developed in Foxden, into a private and pleasant channel. Possessed with this praiseworthy design, the Doctor, who had given up practice by reason of years and competence, remembered a certain cabinet containing fossils, crystals, fragments of Indian implements, small pieces of the skeletons of their proprietors, vertebræ of extinct animals, besides a great amount of miscellaneous rubbish that refused to come to terms and be classified. Thus it seemed good to the proprietor of this medical rag-bag to invite the citizens of Foxden to a series of explanatory lectures upon its varied contents. This would have done well enough, if the Doctor could only have persuaded himself to select his most interesting specimens, and read up upon them, so as to retail a little fluent information after the manner of the lyceum-philosophers. But, unfortunately, the professional pride of the lecturer induced him to speak without preparation or discrimination upon any osteological article which happened to come to hand: which fact, perhaps, accounted for the prevalent somnolence of the auditory, concerning which I had been forewarned.

It is barely possible that these mid-summer-night diversions of Doctor Dastick were suggested by the fame of evenings which, during the previous winter, several city physicians (men of eminent scientific attainments) had devoted to

the instruction of their friends. And rumor could scarcely have overestimated the privilege of listening to the discursive fireside talk of such accurate observers. Having vividly realized all that was to be known of their subjects of special investigation, these distinguished gentlemen would steam steadily athwart the light winds of conversation and bring their company to a pleasant haven. The Foxden ex-practitioner, however, lacking the metropolitan attrition which keeps the intellectual engine in effective polish, drifted vaguely in a sea of fragmentary information;—occasionally, to be sure, bumping against some encyclopedic argosy, but, for the most part, making very leisurely progress, with much apparent waste in the machinery. A brief extract from my note-book may furnish an idea of these scientific discourses.

"Now, my friends," pursues the Doctor, "let us examine another curiosity,"—here he would take down something that looked like a mottled paving-stone in a very crumbling condition,— "let us examine it carefully through the glass,"—here a pause, during which he performed the operation in question. "What is it? Is it a fossil turtle? No,"—with great deliberation,— "I should say it was *not* a fossil turtle. Is it a mass of twigs taken from the stomach of a mastodon? No, on the whole, it can't be a mass of twigs taken from the stomach of a mastodon. Is it a specimen of the top of Mount Sinai? No, it is not a specimen of the top of Mount Sinai. What is it, then? *I—don't—know—what—it—is!*"

Having arrived at this satisfactory conclusion, the Doctor would pass on to the next specimen, which, having provoked a similar series of interrogations and negations, would be dismissed with no very different result.

There is sometimes an advantage in not being a notable person; at all events, I thought so, when I saw the Prowleys and their guests of chief consideration, to wit, the clergyman, dea-

con, and Miss Hurribattle, accommodated on the first row of chairs, with their faces under grand illumination by two camphene-lamps upon the Doctor's table. There they sat, together with Mrs. Hunesley from New York, two or three distinguished visitors from the hotel, and the elders of Foxden, looking wistfully at the bones, as if in envy of their fleshless condition that sultry August evening.

It was with real satisfaction that I perceived I was considered worthy of no more worshipful company than that of the standing stragglers at the dark end of the parlor. And as the evening breeze came freshly through the window at the back of the room, I rejoiced heartily in my lack of title to the consideration of being snugly penned in a more honorable position. As I found it might be done without attracting attention, I obeyed a strong impulse that seized me to pass through the open window to the piazza. Thence I presently descended, and strolled about the precise gravel-walks, puzzling myself to conjecture how much of the rich light was owing to the red glow which lingered in the west, and how much to the full moon just breaking through the trees. My investigations were suddenly interrupted by the advent of a carry-all, which drove with great rapidity to the Doctor's gate. It was the very railway-omnibus that a few hours before had brought Miss Hurribattle and myself from the station.

"Hollo, Cap'n," called out the driver, complimenting me with that military title, "can you give a hand to this trunk? I've got to go right slap back after two more fares."

I was near the gate, and of course cheerfully acceded to this request. A heavy trunk was lifted out, and placed just behind the lilac-bushes at the edge of the lawn. The driver jumped into his omnibus and hurried away with all speed, lest his two fares should pay themselves to a rival conveyance. Behind him, however, he had left the pro-

prietress of the trunk,—a lady of about five-and-twenty, in whose countenance I detected that strange sort of familiarity that entire strangers sometimes carry about them.

"This is Doctor Dastick's, is it not? Do you know whether Mrs. Hunesley expected me?" she asked, with a grace of manner that was quite irresistible.

I informed her that I was a stranger in the place, and was only at the Doctor's for a single evening; but that I could not think that Mrs. Hunesley expected anybody, as I had just seen that lady firmly fixed in the front row of chairs before the Doctor's table,—whence, owing to the crowd of sitters behind, she would have some difficulty in extricating herself.

"Oh, I would not have her called for the world!" gayly exclaimed my companion. "She has told me all about the dear old Doctor's lectures; and I would not disturb his learned explanations on any account."

"I do not think that the company in general would regret an interlude of modern life and interest," said I.

"Perhaps not; but nothing seems to me so rude and disagreeable as to interrupt people, or disturb their attention, when assembled for a definite object."

We walked up the gravel-path, and softly entered the hall, where a shawl and bonnet were deposited. The Doctor's discourse was very audible, and the unexpected visitor seemed disposed to establish herself upon one of the hall-chairs, and wait till it was over. There was a graceful confidence in her movement, which is to me more captivating than a pretty face; and when I had opportunity to observe more closely, I was greatly attracted by the sensibility and refinement expressed through a countenance which otherwise would have been plain. As I seemed to be whimsically cast in the part of host, and as I perceived the lady was too well-bred to make my position at all awkward, I proposed the piazza as a pleasanter place of waiting than that she had chosen.

And here let me make one of those weighty observations, derived from a profound experience, which I trust will have a redeeming savor to the judicious, should this tale of mine fail to command that general popularity to which I have begun to suspect its title. I have found that all the fine passages that lighten and enlighten this life of ours seldom run into the traps we set for them, but seem to take a perverse satisfaction in descending upon us when we are least prepared for their reception. I have never been asked out to dine with a gentleman, devoted, we will say, to the same speciality in which I have a humble interest, without being sadly disappointed in the talk that my host had kindly promised me. And when I am going to another country, and a dear friend gives me a letter to some one whom he tells me I shall be glad to meet, and from whom I shall gain great instruction, I accept the letter, knowing very well that the man I shall really be glad to meet, and from whom I shall truly gain instruction, will present himself on the top of a diligence, or take a seat at my table at some cheap *café* or chop-house. Thus it is, that, when there is every reason why people should break through the commonplace rubbish on the surface, and disclose a pure vein of thought and feeling, they rarely contrive to do it, but reserve their best things for the chances that touch them, when self-consciousness is asleep, and the unconstrained humanity within expands to absorb its like. Is it not in every one's experience that there are persons with whom chance has thrown us for a few hours, whom we know better, and who know us better, than the friends with whom we have babbled of green fields, thermometers, and dirty pavements for a score of years? As I confidently expect an affirmative reply to this question, I fear no censure in saying that the evening passed on Doctor Dastick's piazza made me feel there was a possibility of social intercourse resembling the extravagant

spirituality of the mystics, when the soul bounds to the height of joyful knowledge, and without process or medium knows complete satisfaction.

How we came to talk of many things, I cannot remember; but we somehow found ourselves speaking of matters of near and deep experience without consciousness of singularity. We admitted those puzzling life-questions that present themselves on a still summer evening, when we long to escape from the conditions of finite being, and yet contemplate the necessity of working at our tasks shackled by a thousand iron circumstances.

"My plan of life, so far as I have any, seems to point to education," said my companion. "I am thrown in great measure upon my own activity for support, and have an aunt who is very zealous in the work, and who has often asked me to become her fellow-laborer. Until now I could never well leave home; but she has written to me again since" — she stopped, as if distressed, and with a woman's tact glanced at her mourning-dress to tell me the story; — "she has written to me earnestly of late upon the subject. I feel how noble an object it is to live for, and I want an object, Heaven knows; but there are reasons — perhaps I should say feelings, not reasons — why I hesitate. I am asked to bind myself for ten years to the work in a Western college. There are many advantages in a permanent position, both for the teacher and the institution, but" —

Her voice faltered; and I felt that Nature had at times made other suggestions to that fresh young spirit, other possibilities had dawned through the future; perhaps they were certainties, — and the thought passed me with a shudder.

"Teaching is a terrible drudgery," I said; "the labor and devotion of the true teacher are yet unrecognized by the world."

"I am not afraid of the vexations," she replied: "I am very fond of being

with young people; yet I have been taught to think it was happier, if our affections could be somewhat more concentrated than — In short, I had better finish an awkward sentence, by saying that I do not feel quite ready to pledge myself to give up all possibilities connected with my New-England home."

It was spoken with such sweet ingenuousness that I was only charmed. The simple sincerity of the confession seemed to me much better than the flip-pant jest and pert talk with which I had heard such subjects treated while making my observations upon what my city-acquaintances had assured me was good society. Is it not Sterling who exclaims that a luxurious and polished life without a true sense of the beautiful and the great is more barren and sad to see than that of the ignorant and the brutalized? And if this be true, how shall we imagine a greater satisfaction than to find the fresh truth of Nature set in a polished and graceful form? For since it is through form that we take cognizance of all we love and all we believe, it is well that the sign and idea should merge, and come complete and whole to govern us a right.

I should have no objection to meditating after this manner for a page or two, as well as further hinting what important nothings sparkled upon Doctor Dastick's piazza that pleasant summer night. But as I must curtail this biographical fragment in some part or other, it seems best to do it about that portion where I may trust that the experience of every reader will supply the deficiency.

How harshly sounded the creaking of the furniture, and how strangely commercial and matter-of-fact the voices of the people that announced the conclusion of the lecture! Mrs. Hunesley managed to get out among the first, and was heartily glad to see my newly acquired friend, calling her, "My dear Kate," — which I thought was a very pretty name, — and saying that she had not expected her quite so soon.

I looked into the parlor and saw the Prowley party tumbling over chairs, and scaling settees, in their haste to meet the cooling breezes of the piazza. But when they finally accomplished their purpose, and I was advancing with inquiries and congratulations, I started at seeing the surprise depicted in the countenance of Miss Hurribattle, as she gazed in the direction where I stood.

"Why, Aunt Patience!" exclaimed a voice at my side.

"Why, Kate Hurribattle!" was the response.

"How in the name of wonder did you get to Foxden?"

"How under the sun did *you* get to Foxden?"

"Why *I* am here naturally enough as the guest of my friend Colonel Prowley."

"And *I* am here naturally enough as the guest of my friend Mrs. Hunesley."

Now if I had dramatized the little event I have been trying to relate, I should have reached the precise point where the auditor would button up his coat, put on his hat, let his patent spring-seat go up with a click, and begin to leave the theatre with all expedition. What would it matter to him that I had prepared a circumstantial account of how all petty objections were got over, or that I had elaborated a peculiarly felicitous *tag* which Colonel Prowley would speak at a few backs as they disappeared into the lobby? The auditor referred to has got an inkling of how things are to end, and can guess out the particulars as he hurries off to his business. And here will be observed our decided advantage in having made sure of the Moral by a vigorous assertion of the same at the commencement of this narrative; for, thus relieved of the necessity of a final flutter into the empyrean of ethics, we may part company in a few easy sentences.

Although the circumstances I have set down, from being awkwardly packed in a small compass, may not appear to fit into each other with all the exact-

ness of a dissecting-map, I am sure, that, as they really occurred spread over a necessary time, they seemed natural and simple enough. Mrs. Hunesley, Doctor Dastick's favorite niece, was the school-mate of Miss Kate Hurribattle, and what more likely than that she should invite her friend to pass a few weeks with her at her summer-home in the country? And could there be a greater necessity than that, meeting daily as we did through those lovely August weeks, she should become — in short, that I should marry Miss Hurribattle?

— And when this foolish little romance, which had taken nebulous outline in

the fancy of Colonel Prowley, suddenly fell at his feet a serious indubitability, the dear, delighted old gentleman was the first to declare, that, as our engagement had existed for the last seventy years, it certainly did not seem worth while to wait much longer. At all events, we did not wait longer than the following Thanksgiving; since which period my experience leads me to declare, that, if the Miss Hurribattle of my great-great-uncle's day was at all comparable to the member of her family I met at Foxden, my respected relative made a great mistake in living a bachelor.

---

#### RESIGNATION.

YOU know how a little child of three or four years old kicks and howls, if it do not get its own way. You know how quietly a grown-up man takes it, when ordinary things fall out otherwise than he wished. A letter, a newspaper, a magazine, does not arrive by the post on the morning on which it had been particularly wished for, and counted on with certainty. The day proves rainy, when a fine day was specially desirable. The grown-up man is disappointed: but he soon gets reconciled to the existing state of facts. He did not much expect that things would turn out as he wished them. Yes: there is nothing like the habit of being disappointed, to make a man resigned when disappointment comes, and to enable him to take it quietly. And a habit of practical resignation grows upon most men, as they advance through life.

You have often seen a poor beggar, most probably an old man, with some lingering remains of respectability in his faded appearance, half ask an alms of a passer-by: and you have seen him, at a word of repulse, or even on finding

no notice taken of his request, meekly turn away: too beaten and sick at heart for energy: drilled into a dreary resignation by the long custom of finding everything go against him in this world. You may have known a poor cripple, who sits all day by the side of the pavement of a certain street, with a little bundle of tracts in his hand, watching those who pass by, in the hope that they may give him something. I wonder, indeed, how the police suffer him to be there: for, though ostensibly selling the tracts, he is really begging. Hundreds of times in the long day, he must see people approaching, and hope that they may spare him a halfpenny, and find ninety-nine out of each hundred pass without noticing him. It must be a hard school of Resignation. Disappointments without number have subdued that poor creature into bearing one disappointment more with scarce an appreciable stir of heart. But, on the other hand, kings, great nobles, and the like, have been known, even to the close of life, to violently curse and swear, if things went against them; going the

length of stamping and blaspheming even at rain and wind, and branches of trees and plashes of mud, which were of course guiltless of any design of giving offence to these eminent individuals. There was a great monarch, who, when any little cross-accident befell him, was wont to fling himself upon the floor, and there to kick and scream and tear his hair. And around him, meanwhile, stood his awe-stricken attendants: all doubtless ready to assure him that there was something noble and graceful in his kicking and screaming, and that no human being had ever before with such dignity and magnanimity torn his hair. My friend Mr. Smith tells me that in his early youth he had a (very slight) acquaintance with a great prince, of elevated rank and of vast estates. That great prince came very early to his greatness; and no one had ever ventured, since he could remember, to tell him he had ever said or done wrong. Accordingly, the prince had never learned to control himself, nor grown accustomed to bear quietly what he did not like. And when any one, in conversation, related to him something which he disapproved, he used to start from his chair, and rush up and down the apartment, furiously flapping his hands together, till he had thus blown off the steam produced by the irritation of his nervous system. That prince was a good man: and so aware was he of his infirmity, that, when in these fits of passion, he never suffered himself to say a single word: being aware that he might say what he would afterwards regret. And though he could not wholly restrain himself, the entire wrath he felt passed off in flapping. And after flapping for a few minutes, he sat down again, a reasonable man once more. All honor to him! For my friend Smith tells me that that prince was surrounded by toadies, who were ready to praise everything he might do, even to his flapping. And in particular, there was one humble retainer, who, whenever his master flapped, was wont

to hold up his hands in an ecstasy of admiration, exclaiming, "It is the flapping of a god, and not of a man!"

Now all this lack of Resignation on the part of princes and kings comes of the fact, that they are so far like children that they have not become accustomed to be resisted, and to be obliged to forego what they would like. Resignation comes by the habit of being disappointed, and of finding things go against you. It is, in the case of ordinary human beings, just what they expect. Of course, you remember the adage, "Blessed is he who expecteth nothing, for he shall not be disappointed." I have a good deal to say about that adage. Reasonableness of expectation is a great and good thing: despondency is a thing to be discouraged and put down as far as may be. But meanwhile let me say, that the corollary drawn from that dismal beatitude seems to me unfounded in fact. I should say just the contrary. I should say, "Blessed is he who expecteth nothing, for he will very likely be disappointed." You know, my reader, whether things do not generally happen the opposite way from that which you expected. Did you ever try to keep off an evil you dreaded by interposing this buffer? Did you ever think you might perhaps prevent a trouble from coming by constantly anticipating it,—keeping, meanwhile, an under-thought that things rarely happen as you anticipate them, and thus that your anticipation of the thing might possibly keep it away? Of course you have; for you are a human being. And in all common cases, a watch might as well think to keep a skilful watchmaker in ignorance of the way in which its movements are produced, as a human being think to prevent another human being from knowing exactly how he will think and feel in given circumstances. We have watched the working of our own watches far too closely and long, my friends, to have the least difficulty in understanding the great principles upon which the watches

of other men go. I cannot look inside your breast, my reader, and see the machinery that is working there: I mean the machinery of thought and feeling. But I know exactly how it works, nevertheless: for I have long watched a machinery precisely like it.

There are a great many people in this world who feel that things are all wrong, that they have missed stays in life, that they are beaten,—and yet who don't much mind. They are indurated by long use. They do not try to disguise from themselves the facts. There are some men who diligently try to disguise the facts, and who in some measure succeed in doing so. I have known a self-sufficient and disagreeable clergyman who had a church in a large city. Five-sixths of the seats in the church were quite empty; yet the clergyman often talked of what a good congregation he had, with a confidence which would have deceived any one who had not seen it. I have known a church where it was agony to any one with an ear to listen to the noise produced when the people were singing; yet the clergyman often talked of what splendid music he had. I have known an entirely briefless barrister, whose friends gave out that the sole reason why he had no briefs was that he did not want any. I have known students who did not get the prizes for which they competed, but who declared that the reason of their failure was, that, though they competed for the prizes, they did not wish to get them. I have known a fast young woman, after many engagements made and broken, marry as the last resort a brainless and penniless blackguard; yet all her family talk in big terms of what a delightful connection she was making. Now, where all that self-deception is genuine, let us be glad to see it; and let us not, like Mr. Snarling, take a spiteful pleasure in undeceiving those who are so happy to be deceived. In most cases, indeed, such trickery deceives nobody. But where it truly deceives those who

practise it, even if it deceive nobody else, you see there is no true Resignation. A man who has made a mess of life has no need to be resigned, if he fancies he has succeeded splendidly. But I look with great interest, and often with deep respect, at the man or woman who feels that life has been a failure,—a failure, that is, as regards *this* world,—and yet who is quite resigned. Yes: whether it be the unsoured old maid, sweet-tempered, sympathetic in others' joys, God's kind angel in the house of sorrow,—or the unappreciated genius, quiet, subdued, pleased to meet even one who understands him amid a community which does not,—or the kind-hearted clever man to whom eminent success has come too late, when those were gone whom it would have made happy: I reverence and love, more than I can express, the beautiful natures I have known thus subdued and resigned.

Yes: human beings get indurated. When you come to know well the history of a great many people, you will find that it is wonderful what they have passed through. Most people have suffered a very great deal, since they came into this world. Yet in their appearance there is no particular trace of it all. You would not guess, from looking at them, how hard and how various their lot has been. I once knew a woman, rather more than middle-aged. I knew her well, and saw her almost every day; for several years, before I learned that the homely Scotch-woman had seen distant lands, and had passed through very strange ups and downs, before she settled into the quiet, orderly life in which I knew her. Yet when spoken to kindly, by one who expressed surprise that all these trials had left so little trace, the inward feeling, commonly suppressed, burst bitterly out, and she exclaimed, "It's a wonder that I'm living at all!" And it is a wonder that a great many people are living, and looking so cheerful and

so well as they do, when you think what fiery passion, what crushing sorrow, what terrible losses, what bitter disappointments, what hard and protracted work they have gone through. Doubtless, great good comes of it. All wisdom, all experience, comes of suffering. I should not care much for the counsel of the man whose life had been one long sunshiny holiday. There is greater depth in the philosophy of Mr. Dickens than a great portion of his readers discern. You are ready to smile at the singular way in which Captain Cuttle commended his friend Jack Bunsby as a man of extraordinary wisdom, whose advice on any point was of inestimable value. "Here 's a man," said Captain Cuttle, "who has been more beaten about the head than any other living man!" I hail the words as the recognition of a great principle. To Mr. Bunsby it befell in a literal sense; but we have all been (in a moral sense) a good deal beaten about both the head and the heart before we grew good for much. Out of the travail of his nature, out of the sorrowful history of his past life, the poet or the moralist draws the deep thought and feeling which find so straight a way to the hearts of other men. Do you think Mr. Tennyson would ever have been the great poet he is, if he had not passed through that season of great grief which has left its noble record in "In Memoriam"? And a youthful preacher, of vivid imagination and keen feeling, little fettered by anything in the nature of good taste, may by strong statements and a fiery manner draw a mob of unthinking hearers: but thoughtful men and women will not find anything in all *that*, that awakens the response of their inner nature in its truest depths; they must have religious instruction into which real experience has been transfused; and the worth of the instruction will be in direct proportion to the amount of real experience which is embodied in it. And after all, it is better to be wise and good than to be gay

and happy, if we must choose between the two things; and it is worth while to be severely beaten about the head, if *that* is the condition on which alone we can gain true wisdom. True wisdom is cheap at almost any price. But it does not follow at all that you will be happy (in the vulgar sense) in direct proportion as you are wise. I suppose most middle-aged people, when they receive the ordinary kind wish at New-Year's time of a Happy New-Year, feel that *happy* is not quite the word; and feel that, too, though well aware that they have abundant reason for gratitude to a kind Providence. It is not *here* that we shall ever be happy,—that is, completely and perfectly happy. Something will always be coming to worry and distress. And a hundred sad possibilities hang over us: some of them only too certainly and quickly drawing near. Yet people are content, in a kind of way. They have learnt the great lesson of Resignation.

There are many worthy people who would be quite fevered and flurried by good fortune, if it were to come to any very great degree. It would injure their heart. As for bad fortune, they can stand it nicely, they have been accustomed to it so long. I have known a very hard-wrought man, who had passed, rather early in life, through very heavy and protracted trials. I have heard him say, that, if any malicious enemy wished to kill him, the course would be to make sure that tidings of some signal piece of prosperity should arrive by post on each of six or seven successive days. It would quite unhinge and unsettle him, he said. His heart would go: his nervous system would break down. People to whom pieces of good-luck come rare and small have a great curiosity to know how a man feels when he is suddenly told that he has drawn one of the greatest prizes in the lottery of life. The kind of feeling, of course, will depend entirely on the kind of man. Yet very great prizes, in the way of dignity

and duty, do for the most part fall to men who in some measure deserve them, or who at least are not conspicuously undeserving of them and unfit for them. So that it is almost impossible that the great news should elicit merely some unworthy explosion of gratified self-conceit. The feeling would in almost every case be deeper and worthier. One would like to be sitting at breakfast with a truly good man, when the letter from the Prime-Minister comes in, offering him the Archbishopric of Canterbury. One would like to see how he would take it. Quietly, I have no doubt. Long preparation has fitted the man who reaches that position for taking it quietly. A recent Chancellor publicly stated how *he* felt, when offered the Great Seal. His first feeling, that good man said, was of gratification that he had fairly reached the highest reward of the profession to which he had given his life; but the feeling which speedily supplanted *that* was an overwhelming sense of his responsibility and a grave doubt as to his qualifications. I have always believed, and sometimes said, that good fortune — not so great or so sudden as to injure one's nerves or heart, but kindly and equable — has a most wholesome effect upon human character. I believe that the happier a man is, the better and kinder he will be. The greater part of unamiability, ill-temper, impatience, bitterness, and uncharitableness comes out of unhappiness. It is because a man is so miserable that he is such a sour, suspicious, fractious, petted creature. I was amused, this morning, to read in the newspaper an account of a very small incident which befell the new Primate of England on his journey back to London, after being enthroned at Canterbury. The reporter of that small incident takes occasion to record that the Archbishop had quite charmed his travelling-companions in the railway-carriage by the geniality and kindness of his manner. I have no doubt he did. I am sure he is a truly good Christian

man. But think of what a splendid training for producing geniality and kindness he has been going through for a great number of years! Think of the moral influences which have been bearing on him for the last few weeks! We should all be kindly and genial, if we had the same chance of being so. But if Dr. Longley had a living of a hundred pounds a year, a fretful, ailing wife, a number of half-fed and half-educated little children, a dirty, miserable house, a bleak country round, and a set of wrong-headed and insolent parishioners to keep straight, I venture to say he would have looked, and been, a very different man in that railway-carriage running up to London. Instead of the genial smiles that delighted his fellow-travellers, (according to the newspaper-story,) his face would have been sour, and his speech would have been snappish; he would have leaned back in the corner of a second-class carriage, sadly calculating the cost of his journey, and how part of it might be saved by going without any dinner. Oh, if I found a four-leaved shamrock, I would undertake to make a mighty deal of certain people I know! I would put an end to their weary schemings to make the ends meet. I would cut off all those wretched cares which jar miserably on the shaken nerves. I know the burst of thankfulness and joy that would come, if some dismal load, never to be cast off, were taken away. And I would take it off. I would clear up the horrible muddle. I would make them happy: and in doing *that*, I know that I should make them good.

But I have sought the four-leaved shamrock for a long time, and never have found it; and so I am growing subdued to the conviction that I never shall. Let us go back to the matter of Resignation, and think a little longer about *that*.

Resignation, in any human being, means that things are not as you would wish, and yet that you are content.

Who has all he wishes? There are many houses in this world in which Resignation is the best thing that can be felt any more. The bitter blow has fallen; the break has been made; the empty chair is left (perhaps a very little chair); and never more, while Time goes on, can things be as they were fondly wished and hoped. Resignation would need to be cultivated by human beings; for all round us there is a multitude of things very different from what we would wish. Not in your house, not in your family, not in your street, not in your parish, not in your country, and least of all in yourself, can you have things as you would wish. And you have your choice of two alternatives. You must either fret yourself into a nervous fever, or you must cultivate the habit of Resignation. And very often Resignation does not mean that you are at all reconciled to a thing, but just that you feel you can do nothing to mend it. Some friend, to whom you are really attached, and whom you often see, vexes and worries you by some silly and disagreeable habit, — some habit which it is impossible you should ever like, or ever even overlook; yet you try to make up your mind to it, because it cannot be helped, and you would rather submit to it than lose your friend. You hate the east-wind: it withers and pinches you, in body and soul: yet you cannot live in a certain beautiful city without feeling the east-wind many days in the year. And that city's advantages and attractions are so many and great that no sane man with sound lungs would abandon the city merely to escape the east-wind. Yet, though resigned to the east-wind, you are anything but reconciled to it.

Resignation is not always a good thing. Sometimes it is a very bad thing. You should never be resigned to things continuing wrong, when you may rise and set them right. I dare say, in the Romish Church, there were good men before Luther who were keenly alive to the errors and evils that had crept into it,

but who, in despair of making things better, tried sadly to fix their thoughts upon other subjects: who took to illuminating missals, or constructing systems of logic, or cultivating vegetables in the garden of the monastery, or improving the music in the chapel: quietly resigned to evils they judged irremediable. Great reformers have not been resigned men. Luther was not resigned; Howard was not resigned; Fowell Buxton was not resigned; George Stephenson was not resigned. And there, is hardly a nobler sight than that of a man who determines that he will NOT make up his mind to the continuance of some great evil: who determines that he will give his life to battling with that evil to the last: who determines that either that evil shall extinguish him, or he shall extinguish it. I reverence the strong, sanguine mind, that resolves to work a revolution to better things, and that is not afraid to hope it *can* work a revolution. And perhaps, my reader, we should both reverence it all the more that we find in ourselves very little like it. It is a curious thing, and a sad thing, to remark in how many people there is too much resignation. It kills out energy. It is a weak, fretful, unhappy thing. People are reconciled, in a sad sort of way, to the fashion in which things go on. You have seen a poor, slatternly mother, in a way-side cottage, who has observed her little children playing in the road before it, in the way of passing carriages, angrily ordering the little things to come away from their dangerous and dirty play; yet, when the children disobey her, and remain where they were, just saying no more, making no farther effort. You have known a master tell his man-servant to do something about stable or garden, yet, when the servant does not do it, taking no notice: seeing that he has been disobeyed, yet wearily resigned, feeling that there is no use in always fighting. And I do not speak of the not unfrequent cases in which the master, after giving his orders, comes to discover that it is best

they should not be carried out, and is very glad to see them disregarded: I mean when he is dissatisfied that what he has directed is not done, and wishes that it were done, and feels worried by the whole affair, yet is so devoid of energy as to rest in a fretful resignation. Sometimes there is a sort of sense as if one had discharged his conscience by making a weak effort in the direction of doing a thing, an effort which had not the slightest chance of being successful. When I was a little boy, many years since, I used to think this; and I was led to thinking it by remarking a singular characteristic in the conduct of a school-companion. In those days, if you were chasing some other boy who had injured or offended you, with the design of retaliation, if you found you could not catch him, by reason of his superior speed, you would have recourse to the following expedient. If your companion was within a little space of you, though a space you felt you could not make less, you would suddenly stick out one of your feet, which would hook round his, and he, stumbling over it, would fall. I trust I am not suggesting a mischievous and dangerous trick to any boy of the present generation. Indeed, I have the firmest belief that existing boys know all we used to know, and possibly more. All this is by way of rendering intelligible what I have to say of my old companion. He was not a good runner. And when another boy gave him a sudden flick with a knotted handkerchief, or the like, he had little chance of catching that other boy. Yet I have often seen him, when chasing another, before finally abandoning the pursuit, stick out his foot in the regular way, though the boy he was chasing was yards beyond his reach. Often did the present writer meditate on that phenomenon, in the days of his boyhood. It appeared curious that it should afford some comfort to the evaded pursuer, to make an offer at upsetting the escaping youth, — an offer which could not possibly be successful. But very often, in

after-life, have I beheld in the conduct of grown-up men and women the moral likeness of that futile sticking-out of the foot. I have beheld human beings who lived in houses always untidy and disorderly, or whose affairs were in a horrible confusion and entanglement, who now and then seemed roused to a feeling that this would not do, who querulously bemoaned their miserable lot, and made some faint and futile attempt to set things right, attempts which never had a chance to succeed, and which ended in nothing. Yet it seemed somehow to pacify the querulous heart. I have known a clergyman, in a parish with a bad population, seem suddenly to waken up to a conviction that he must do something to mend matters, and set agoing some weak little machinery, which could produce no appreciable result, and which came to a stop in a few weeks. Yet that faint offer appeared to discharge the claims of conscience, and after it the clergyman remained long time in a comatose state of unhealthy Resignation. But it is a miserable and a wrong kind of Resignation which dwells in that man who sinks down, beaten and hopeless, in the presence of a recognized evil. Such a man may be in a sense resigned, but he cannot possibly be content.

If you should ever, when you have reached middle age, turn over the diary or the letters you wrote in the hopeful though foolish days when you were eighteen or twenty, you will be aware how quietly and gradually the lesson of Resignation has been taught you. You would have got into a terrible state of excitement, if any one had told you then that you would have to forego your most cherished hopes and wishes of that time; and it would have tried you even more severely to be assured that in not many years you would not care a single straw for the things and the persons who were then uppermost in your mind and heart. What an entirely new set of friends and interests is that which now surrounds you! and how completely

the old ones are gone: gone, like the sunsets you remember in the summers of your childhood; gone, like the primroses that grew in the woods where you wandered as a boy! Said my friend Smith to me, a few days ago: "You remember Miss Jones, and all about that? I met her yesterday, after ten years. She is a fat, middle-aged, ordinary-looking woman. What a terrific fool I was!" Smith spoke to me in the confidence of friendship; yet I think he was a little mortified at the heartiness with which I agreed with him on the subject of his former folly. He had got over it completely; and in seeing that he was (at a certain period) a fool, he had come to discern that of which his friends had always been aware. Of course, early interests do not always die out. You remember Dr. Chalmers, and the ridiculous exhibition about the wretched little likeness of an early sweetheart, not seen for forty years, and long since in her grave. You remember the singular way in which he signified his remembrance of her, in his famous and honored age. I don't mean the crying, nor the walking up and down the garden-walk calling her by fine names. I mean the taking out his card: not his *carte*; you could understand *that*: but his visiting-card bearing his name, and sticking it behind the portrait with two wafers. Probably it pleased him to do so; and assuredly it did harm to no one else. And we have all heard of the like things. Early affections are sometimes, doubtless, cherished in the memory of the old. But still, more material interests come in, and the old affection is crowded out of its old place in the heart. And so those comparatively fanciful disappointments sit lightly. The romance is gone. The mid-day sun beats down, and *there* lies the dusty way. When the cantankerous and unamiable mother of Christopher North stopped his marriage with a person at least as respectable as herself, on the ground that the person was not good enough, we are told that the future

professor nearly went mad, and that he never quite got over it. But really, judging from his writings and his biography, he bore up under it, after a little, wonderfully well.

But looking back to the days which the old yellow letters bring back, you will think to yourself, Where are the hopes and anticipations of that time? You expected to be a great man, no doubt. Well, you know you are not. You are a small man, and never will be anything else; yet you are quite resigned. If there be an argument which stirs me to indignation at its futility, and to wonder that any mortal ever regarded it as of the slightest force, it is that which is set out in the famous soliloquy in "Cato," as to the Immortality of the Soul. Will any sane man say, that, if in this world you wish for a thing very much, and anticipate it very clearly and confidently, you are therefore sure to get it? If that were so, many a little schoolboy would end by driving his carriage and four, who ends by driving no carriage at all. I have heard of a man whose private papers were found after his death all written over with his signature as he expected it would be when he became Lord Chancellor. Let us say his peerage was to be as Lord Smith. There it was, SMITH, C., SMITH, C., written in every conceivable fashion, so that the signature, when needed, might be easy and imposing. That man had very vividly anticipated the woosack, the gold robe, and all the rest. It need hardly be said, he attained none of these. The famous argument, you know of course, is, that man has a great longing to be immortal, and that therefore he is sure to be immortal. Rubbish! It is not true that any longing after immortality exists in the heart of a hundredth portion of the race. And if it were true, it would prove immortality no more than the manifold signatures of SMITH, C., proved that Smith was indeed to be Chancellor. No: we cling to the doctrine of a Future Life; we could not live without it; but we be-

lieve it, not because of undefined longings within ourselves, not because of reviving plants and flowers, not because of the chrysalis and the butterfly,—but because “our Saviour, Jesus Christ, hath abolished death, and brought life and immortality to light through the gospel.”

There is something very curious, and very touching, in thinking how clear and distinct, and how often recurring, were our early anticipations of things that were never to be. In this world, the fact is for the most part the opposite of what it should be to give force to Plato's (or Cato's) argument: the thing you vividly anticipate is the thing that is least likely to come. The thing you don't much care for, the thing you don't expect, is the likeliest. And even if the event prove what you anticipated, the circumstances, and the feeling of it, will be quite different from what you anticipated. A certain little girl three years old was told that in a little while she was to go with her parents to a certain city, a hundred miles off,—a city which may be called Altenburg as well as anything else. It was a great delight to her to anticipate that journey, and to anticipate it very circumstantially. It was a delight to her to sit down at evening on her father's knee, and to tell him all about how it would be in going to Altenburg. It was always the same thing. Always, first, how sandwiches would be made,—how they would all get into the carriage, (which would come round to the door,) and drive away to a certain railway-station,—how they would get their tickets, and the train would come up, and they would all get into a carriage together, and lean back in corners, and eat the sandwiches, and look out of the windows, and so on. But when the journey was actually made, every single circumstance in the little girl's anticipations proved wrong. Of course, they were not in-

tionally made wrong. Her parents would have carried out to the letter, if they could, what the little thing had so clearly pictured and so often repeated. But it proved to be needful to go by an entirely different way and in an entirely different fashion. All those little details, dwelt on so much, and with so much interest, were things never to be. It is even so with the anticipations of larger and older children. How distinctly, how fully, my friend, we have pictured out to our minds a mode of life, a home and the country round it, and the multitude of little things which make up the habitude of being, which we long since resigned ourselves to knowing could never prove realities! No doubt, it is all right and well. Even Saint Paul, with all his gift of prophecy, was not allowed to foresee what was to happen to himself. You know how he wrote that he would do a certain thing, “so soon as I shall see how it will go with me.”

But our times are in the Best Hand. And the one thing about our lot, my reader, that we may think of with perfect contentment, is that they are so. I know nothing more admirable in spirit, and few things more charmingly expressed, than that little poem by Mrs. Waring which sets out that comfortable thought. You know it, of course. You should have it in your memory; and let it be one of the first things your children learn by heart. It may well come next after, “O God of Bethel”: it breathes the self-same tone. And let me close these thoughts with one of its verses:—

“There are briars besetting every path,  
Which call for patient care:  
There is a cross in every lot,  
And an earnest need for prayer:  
But a lowly heart that leans on Thee  
Is happy anywhere!”

## THE FLAG.

THERE 's a flag hangs over my threshold, whose folds are more dear to me  
Than the blood that thrills in my bosom its earnest of liberty ;  
And dear are the stars it harbors in its sunny field of blue  
As the hope of a further heaven that lights all our dim lives through.

But now should my guests be merry, the house is in holiday guise,  
Looking out through its burnished windows like a score of welcoming eyes.  
Come hither, my brothers who wander in saintliness and in sin !  
Come hither, ye pilgrims of Nature ! my heart doth invite you in.

My wine is not of the choicest, yet bears it an honest brand ;  
And the bread that I bid you lighten I break with no sparing hand ;  
But pause, ere you pass to taste it, one act must accomplished be :  
Salute the flag in its virtue, before ye sit down with me.

The flag of our stately battles, not struggles of wrath and greed :  
Its stripes were a holy lesson, its spangles a deathless creed ;  
'T was red with the blood of freemen, and white with the fear of the foe,  
And the stars that fight in their courses 'gainst tyrants its symbols know.

Come hither, thou son of my mother ! we were reared in the self-same arms ;  
Thou hast many a pleasant gesture, thy mind hath its gifts and charms ;  
But my heart is as stern to question as mine eyes are of sorrows full :  
Salute the flag in its virtue, or pass on where others rule.

Thou lord of a thousand acres, with heaps of uncounted gold,  
The steeds of thy stall are haughty, thy lackeys cunning and bold :  
I envy no jot of thy splendor, I rail at thy follies none :  
Salute the flag in its virtue, or leave my poor house alone.

Fair lady with silken trappings, high waving thy stainless plume,  
We welcome thee to our numbers, a flower of costliest bloom :  
Let a hundred maids live widowed to furnish thy bridal bed ;  
But pause where the flag doth question, and bend thy triumphant head.

Take down now your flaunting banner, for a scout comes breathless and pale,  
With the terror of death upon him ; of failure is all his tale :  
" They have fled while the flag waved o'er them ! they 've turned to the foe  
their back !  
They are scattered, pursued, and slaughtered ! the fields are all rout and  
wrack ! "

Pass hence, then, the friends I gathered, a goodly company !  
All ye that have manhood in you, go, perish for Liberty !  
But I and the babes God gave me will wait with uplifted hearts,  
With the firm smile ready to kindle, and the will to perform our parts.

When the last true heart lies bloodless, when the fierce and the false have won,  
I 'll press in turn to my bosom each daughter and either son ;  
Bid them loose the flag from its bearings, and we 'll lay us down to rest  
With the glory of home about us, and its freedom locked in our breast.

## WET-WEATHER WORK.

BY A FARMER.

## I.

It is raining; and being in-doors, I look out from my library-window, across a quiet country-road, so near that I could toss my pen into the middle of it.

A thatched stile is opposite, flanked by a straggling hedge of Osage-orange; and from the stile the ground falls away in green and gradual slope to a great plateau of measured and fenced fields, checkered, a month since, with bluish lines of Swedes, with the ragged purple of mangels, and the feathery emerald-green of carrots. There are umber-colored patches of fresh-turned furrows; here and there the mossy, luxurious verdure of new-springing rye; gray stubble; the ragged brown of discolored, frost-bitten rag-weed; next, a line of tree-tops, thickening as they drop to the near bed of a river, and beyond the river-basin showing again, with tufts of hemlock among naked oaks and maples; then roofs, cupolas, ambitious lookouts of suburban houses, spires, belfries, turrets: all these commingling in a long line of white, brown, and gray, which in sunny weather is backed by purple hills, and flanked one way by a shining streak of water, and the other by a stretch of low, wooded mountains that turn from purple to blue, and so blend with the northern sky.

Is the picture clear? A road; a farm-flat of party-colored checkers; a near wood, that conceals the sunken meadow of a river; a farther wood, that skirts a town, — that seems to overgrow the town, so that only a confused line of roofs, belfries, spires, towers, rise above the wood; and these tallest spires and turrets lying in relief against a purple hill-side, that is as far beyond the town as the town is beyond my window; and the purple hill-side trending southward to a lake-like gleam of wa-

ter, where a light-house shines upon a point; and northward, as I said, these same purple hills bearing away to paler purple, and then to blue, and then to haze.

Thus much is seen, when I look directly eastward; but by an oblique glance southward (always from my library-window) the checkered farm-land is repeated in long perspective: here and there is a farm-house with its clustered out-buildings; here and there a blotch of wood, or of orcharding; here and there a bright sheen of winter-grain; and the level ends only where a slight fringe of tree-tops, and the iron cordon of a railway that leaps over a marshy creek upon trestle-work, separate it from Long Island Sound.

To the north, under such oblique glance as can be caught, the farm-lands in smaller inclosures stretch half a mile to the skirts of a quiet village. A few tall chimneys smoke there lazily, and below them you see as many quick and repeated puffs of white steam. Two white spires and a tower are in bold relief against the precipitous basaltic cliff, at whose foot the village seems to nestle. Yet the mountain is not wholly precipitous; for the columnar masses have been fretted away by a thousand frosts, making a sloping *débris* below, and leaving above the iron-yellow scars of fresh cleavage, the older blotches of gray, and the still older stain of lichens. Nor is the summit bald, but tufted with dwarf cedars and oaks, which, as they file away on either flank, mingle with a heavier growth of hickories and chestnuts. A few stunted kalmias and hemlock-spruces have found foothold in the clefts upon the face of the rock, showing a tawny green, that blends prettily with the scars, lichens, and weather-

stains of the cliff; all which show under a sunset light richly and changefully as the breast of a dove.

But just now there is no glow of sunset; raining still. Indeed, I do not know why I should have described at such length a mere landscape, (than which I know few fairer,) unless because of a rainy day it is always in my eye, and that now, having invited a few outsiders to such entertainment as may belong to my wet farm-days, I should present to them at once my oldest acquaintance,—the view from my library-window.

But as yet it is only coarsely outlined. We may some day return to it with a fond particularity; for let me warn the reader that I have that love of such scenes, nay, for the very verdure of the lawn, that I could put an ink-mark for every blade of the fresh-springing grass, and yet feel that the tale of its beauty, and of its emerald wealth, were not half told.

This day we spend in-doors, and busy ourselves with the whims, doctrines, and economics of a few

#### OLD-TIME FARMERS.

THE shelves where they rest in velleum and in dust are only an arm's-length from the window; so that I can relieve the stiff classicism of Flaxman's rendering of the "Works and Days," or the tedious iteration of Columella and Crescenzo, by a glance outside into the rain-cloud, under which lies always the checkered illustration of the farming of to-day, and beyond which the spires stand in sentinel.

Hesiod is currently reckoned one of the oldest farm-writers; but there is not enough in his homely poem ("Works and Days") out of which to conjure a farm-system. He gives good advice, indeed, about the weather, about ploughing when the ground is not too wet, about the proper timber to put to a plough-beam, about building a house, and taking a bride. But, on the other

hand, he gives very bad advice, where, as in Book II., (line 244,) he recommends to stint the oxen in winter, and (line 285) to put three parts of water to the Biblian wine.

Mr. Gladstone notes the fact that Homer talks only in a grandiose way of rural life and employments, as if there were no small landholders in his day; but Hesiod, who must have lived within a century of Homer, with his modest homeliness, does not confirm this view. He tells us a farmer should keep two ploughs, and be cautious how he lends either of them. His household stipulations, too, are most moderate, whether on the score of the bride, the maid, or the "forty-year-old" ploughman; and for guardianship of the premises the proprietor is recommended to keep "a sharp-toothed cur."

This reminds us how Ulysses, on his return from voyaging, found seated round his good bailiff Eumæus four savage watch-dogs, who straightway (and here Homer must have nodded) attack their old master, and are driven off only by a good pelting of stones.

This Eumæus, by the way, may be regarded as the Homeric representative farmer, as well as bailiff and swineherd,—the great original of Gurth, who might have prepared a supper for Cedric the Saxon very much as Eumæus extemporized one upon his Greek farm for Ulysses. Pope shall tell of this bit of cookery in rhyme that has a ring of the Rappahannock:—

"His vest succinet then girding round his waist,  
Forth rushed the swain with hospitable haste,  
Straight to the lodgements of his herd he run,  
Where the fat porkers slept beneath the sun;  
Of two his cutlass launched the spouting blood;  
These quartered, singed, and fixed on forks of wood,  
All hasty on the hissing coals he threw;  
And, smoking, back the tasteful viands drew,  
Broachers, and all."

This is roast pig: nothing more elegant or digestible. For the credit of Greek farmers, I am sorry that Eumæus has nothing better to offer his landlord, — the most abominable dish, Charles Lamb and his pleasant fable to the contrary notwithstanding, that was ever set before a Christian.

To return to Hesiod, we suspect that he was only a small farmer — if he had ever farmed at all — in the foggy latitude of Bœotia, and knew nothing of the sunny wealth in the south of the peninsula, or of such princely estates as Eumæus managed in the Ionian seas. Flaxman has certainly not given him the look of a large proprietor in his outlines: his toilet is severely scant, and the old gentleman appears to have lost two of his fingers in a chaff-cutter. As for Perses, who is represented as listening to the sage,\* his dress is in the extreme of classic scantiness, — being, in fact, a mere night-shirt, and a tight fit at that.

But we dismiss Hesiod, the first of the heathen farm-writers, with a loving thought of his pretty Pandora, whom the goddesses so bedecked, whom Jove looks on (in Flaxman's picture) with such sharp approval, and whose attributes the poet has compacted into one resonant line, daintily rendered by Cooke, —

“Thus the sex began

A lovely mischief to the soul of man.”

I next beg to pull from his place on the shelf, and to present to the reader, my friend General Xenophon, a most graceful writer, a capital huntsman, an able strategist, an experienced farmer, and, if we may believe Laertius, “handsome beyond expression.”

It is refreshing to find such qualities united in one man at any time, and doubly refreshing to find them in a person so far removed from the charities of to-day that the malcontents cannot pull his character in pieces. To be sure, he

\* Flaxman's *Illustrations of "Works and Days,"* Plate I.

was guilty of a few acts of pillage in the course of his Persian campaign; but he tells the story of it in his “Anabasis” with a brave front: his purse was low, and needed replenishment; there is no cover put up, of disorderly sutlers or camp-followers.

The farming reputation of the General rests upon his “Economics” and his horse-treatise (*ἵππική*).

Economy has come to have a contorted meaning in our day, as if it were only — saving. Its true gist is better expressed by the word *management*; and in that old-fashioned sense it forms a significant title for Xenophon's book: management of the household, management of flocks, of servants, of land, of property in general.

At the very outset we find this bit of practical wisdom, which is put into the mouth of Socrates, who is replying to Critobulus: — “Those things should be called goods that are beneficial to the master. Neither can those lands be called goods which by a man's unskilful management put him to more expense than he receives profit by them; nor may those lands be called goods which do not bring a good farmer such a profit as may give him a good living.”

Thereafter (sec. vii.) he introduces the good Ischomachus, who, it appears, has a thrifty wife at home, and from that source flow in a great many capital hints upon domestic management. The apartments, the exposure, the cleanliness, the order, are all considered in such an admirably practical, common-sense way as would make the old Greek a good lecturer to the sewing-circles of our time. And when the wife of the wise Ischomachus, in an unfortunate moment, puts on *rouge* and cosmetics, the grave husband meets her with this complimentary rebuke: — “Can there be anything in Nature more complete than yourself?”

“The science of husbandry,” he says, and it might be said of the science in most times, “is extremely profitable to those who understand it; but it brings

the greatest trouble and misery upon those farmers who undertake it without knowledge." (sec. xv.)

Where Xenophon comes to speak of the details of farm-labor, of ploughings and fallowings, there is all that precision and particularity of mention, added to a shrewd sagacity, which one might look for in the columns of the "Country Gentleman." He even describes how a field should be thrown into narrow lands, in order to promote a more effectual surface-drainage. In the midst of it, however, we come upon a stereocory maxim, which is, to say the least, of doubtful worth:—"Nor is there any sort of earth which will not make very rich manure, by being laid a due time in standing water, till it is fully impregnated with the virtue of the water." His British translator, Professor Bradley, does, indeed, give a little note of corroborative testimony. But I would not advise any active farmer, on the authority either of General Xenophon or of Professor Bradley, to transport his surface-soil very largely to the nearest frog-pond, in the hope of finding it transmuted into manure. The absorptive and retentive capacity of soils is, to be sure, the bone just now of very particular contention; but whatever that capacity may be, it certainly needs something more palpable than the virtue of standing water for its profitable development.

Here, again, is very neat evidence of how much simple good sense has to do with husbandry: Socrates, who is supposed to have no particular knowledge of the craft, says to his interlocutor,—"You have satisfied me that I am not ignorant in husbandry; and yet I never had any master to instruct me in it."

"It is not," says Xenophon, "difference in knowledge or opportunities of knowledge that makes some farmers rich and others poor; but that which makes some poor and some rich is that the former are negligent and lazy, the latter industrious and thrifty."

Next, we have this masculine *ergo*:—"Therefore we may know that those who will not learn such sciences as they might get their living by, or do not fall into husbandry, are either downright fools, or else propose to get their living by robbery or by begging." (sec. xx.)

This is a good clean cut at politicians, office-holders, and other such beggar craft, through more than a score of centuries,—clean as classicism can make it: the Attic euphony in it, and all the aroma of age.

Once more, and it is the last of the "Œconomica," we give this charming bit of New-Englandism:—"I remember my father had an excellent rule," (*Ischomachus loquitur*), "which he advised me to follow: that, if ever I bought any land, I should by no means purchase that which had been already well-improved, but should choose such as had never been tilled, either through neglect of the owner, or for want of capacity to do it; for he observed, that, if I were to purchase improved grounds, I must pay a high price for them, and then I could not propose to advance their value, and must also lose the pleasure of improving them myself, or of seeing them thrive better by my endeavors."

When Xenophon wrote his rural treatises, (including the *Κυνηγετικός*), he was living in that delightful region of country which lies westward of the mountains of Arcadia, looking toward the Ionian Sea. Here, too, he wrote the story of his retreat, and his wanderings among the mountains of Armenia; here he talked with his friends, and made other such *symposia* as he has given us a taste of at the house of Callias the Athenian; here he ranged over the whole country-side with his horses and dogs: a stalwart and lithe old gentleman, without a doubt; able to mount a horse or to manage one, with the supplest of the grooms; and with a keen eye, as his book shows, for the good points in horse-flesh. A man might make a

worse mistake than to buy a horse after Xenophon's instructions, to-day. A spavin or a wind-gall did not escape the old gentleman's eye, and he never bought a horse without proving his wind and handling him well about the mouth and ears. His grooms were taught their duties with nice speciality: the mane and tail to be thoroughly washed; the food and bed to be properly and regularly prepared; and treatment to be always gentle and kind.

Exception may perhaps be taken to his doctrine in regard to stall-floors. Moist ones, he says, injure the hoof: "Better to have stones inserted in the ground close to one another, equal in size to their hoofs; for such stalls consolidate the hoofs of those standing on them, beside strengthening the hollow of the foot."

After certain directions for rough riding and leaping, he advises hunting through thickets, if wild animals are to be found. Otherwise, the following pleasant diversion is named, which I beg to suggest to sub-lieutenants in training for dragoon-service:—"It is a useful exercise for two horsemen to agree between themselves, that one shall retire through all sorts of rough places, and as he flees, is to turn about from time to time and present his spear; and the other shall pursue, having javelins blunted with balls, and a spear of the same description, and whenever he comes within javelin-throw, he is to hurl the blunted weapon at the party retreating, and whenever he comes within spear-reach, he is to strike him with it."

Putting aside his horsemanship, in which he must have been nearly perfect, there was very much that was grand about the old Greek,—very much that makes us strangely love the man, who, when his soldiers lay benumbed under the snows on the heights of Armenia, threw off his general's coat, or blanket, or what not, and set himself resolutely to wood-chopping and to cheering them. The farmer knew how.

Such men win battles. He has his joke, too, with Cheirisophus, the Lacedæmonian, about the thieving propensity of his townspeople, and invites him, in virtue of it, to *steal* a difficult march upon the enemy. And Cheirisophus grimly retorts upon Xenophon, that Athenians are said to be great experts in stealing the public money, especially the high officers. This sounds home-like! When I come upon such things, I forget the parasangs and the Taochians and the dead Cyrus, and seem to be reading out of American newspapers.

It is quite out of the question to claim Theocritus as a farm-writer; and yet in all old literature there is not to be found such a lively bevy of heifers, and wanton kids, and "butting rams," and stalwart herdsmen, who milk the cows "upon the sly," as in the "Idyls" of the musical Sicilian.

There is no doubt but Theocritus knew the country to a charm: he knew all its roughnesses, and the thorns that scratched the bare legs of the goat-herds; he knew the lank heifers, that fed, "like grasshoppers," only on dew; he knew what clatter the brooks made, tumbling headlong adown the rocks,—

— ἀπὸ τῆς πέτρας καταλείβεται ὑψόθεν ὕδωρ .

he knew, moreover, all the charms and coyness of the country-nymphs, giving even a rural twist to his praises of the courtly Helen:—

"In shape, in height, in stately presence  
fair,

Straight as a furrow gliding from the  
share," \*

A man must have had an *eye* for good ploughing and a lithe figure, as well as a keen scent for the odor of fresh-turned earth, to make such a comparison as that!

Theocritus was no French sentimentalist; he would have protested against the tame elegancies of the Roman Bûcolics; and the *sospiri ardenti* and *mi-*

\* Elton's translation, I think. I do not vouch for its correctness.

*serelli aman* of Guarini would have driven him mad. He is as brisk as the wind upon a breezy down. His cow-tenders are swart and bare-legged, and love with a vengeance. There is no miserable tooting upon flutes, but an uproarious song that shakes the woods; and if it comes to a matter of kissing, there are no "reluctant lips," but a smack that makes the vales resound.

It is no Boucher we have here, nor Watteau: cosmetics and rosettes are far away; tunics are short, and cheeks are nut-brown. It is Teniers, rather:—boors, indeed; but they are live boors, and not manikin shepherds.

I shall call out another Sicilian here, named Moschus, were it only for his picture of a fine, sturdy bullock: it occurs in his "Rape of Europa":—

"With yellow hue his sleekened body beams;  
His forehead with a snowy circle gleams;  
Horns, equal-bending, from his brow emerge,  
And to a moonlight crescent orbiting verge."

Nothing can be finer than the way in which this "milky steer," with Europa on his back, goes sailing over the brine, his "feet all oars." Meantime, she, the pretty truant,

"Grasps with one hand his curved projecting  
horn,  
And with the other closely drawn compressed  
The fluttering foldings of her purple vest,  
Whene'er its fringed hem was dashed with  
dew  
Of the salt sea-foam that in circles flew:  
Wide o'er Europa's shoulders to the gale  
The ruffled robe heaved swelling, like a  
sail."

Moschus is as rich as the Veronese at Venice; and his picture is truer to the premium standard. The painting shows a pampered animal, with over-red blotches on his white hide, and is by half too fat to breast such "salt sea-foam" as flashes on the Idyl of Moschus.

Another poet, Aratus of Cilicia, whose very name has a smack of tillage, has left us a book about the weather (*Διοσημεία*) which is quite as good to mark down a

hay-day by as the later meteorologies of Professor Espy or Judge Butler.

Besides which, our friend Aratus holds the abiding honor of having been quoted by St. Paul, in his speech to the Athenians on Mars Hill:—

"For in Him we live, and move, and have our being; as certain also of your own poets have said: 'For we are also His offspring.'"

And Aratus, (after Elton,)—

"On thee our being hangs; in thee we move;  
All are thy offspring, and the seed of Jove."

Scattered through the lesser Greek poets, and up and down the Anthology, are charming bits of rurality, redolent of the fields and of field-life, with which it would be easy to fill up the measure of this rainy day, and beat off the Grecian couplets to the tinkle of the eave-drops. Up and down, the cicada chirps; the locust, "encourager of sleep," sings his drowsy song; boozy Anacreon flings grapes; the purple violets and the daffodils crown the perfumed head of Heliodora; and the reverent Simonides likens our life to the grass.

Nor will I part company with these, or close up the Greek ranks of farmers, (in which I must not forget the great schoolmaster, Theophrastus,) until I cull a sample of the Anthology, and plant it for a guidon at the head of the column,—a little bannerol of music, touching upon our topic, as daintily as the bees touch the flowering tips of the wild thyme.

It is by Zonas the Sardinian:—

*Αἱ δ' ἄγετε ξουθαὶ συμβλητῆδες ἄκρα μέλισσαι,  
κ. τ. λ.,—*

and the rendering by Mr. Hay:—

"Ye nimble honey-making bees, the flowers  
are in their prime;  
Come now and taste the little buds of sweet-  
ly breathing thyme,  
Of tender poppies all so fair, or bits of raisin  
sweet,  
Or down that decks the apple tribe, or fra-  
grant violet;  
Come, nibble on,—your vessels store with  
honey while you can,  
In order that the hive-protecting, bee-pre-  
serving Pan

May have a tasting for himself, and that the hand so rude,  
That cuts away the comb, may leave yourselves some little food."

Leaving now this murmur of the bees upon the banks of the Pactolus, we will slip over-seas to Tusculum, where Cato was born, who was the oldest of the Roman writers upon agriculture; and thence into the Sabine territory, where, upon an estate of his father's, in the midst of the beautiful country lying northward of the Monte Gennaro, (the Lucretilis of Horace,) he learned the art of good farming.

In what this art consisted in his day, he tells us in short, crackling speech: — "*Primum, bene arare; secundum, arare; tertium, stercorare.*" For the rest, he says, choose good seed, sow thickly, and pull all the weeds. Nothing more would be needed to grow as good a crop upon the checkered plateau under my window as ever fattened among the Sabine Hills.

Has the art come to a stand-still, then; and shall we take to reading Cato on fair days, as well as rainy?

There has been advance, without doubt; but all the advance in the world would not take away the edge from truths, stated as Cato knew how to state them. There is very much of what is called Agricultural Science, nowadays, which is — rubbish. Science is sound, and agriculture always an honest art; but the mixture, not uncommonly, is bad, — no fair marriage, but a monstrous concubinage, with a monstrous progeny of muddy treatises and disquisitions which confuse more than they instruct. In contrast with such, it is no wonder that the observations of such a man as Cato, whose energies had been kept alive by service in the field, and whose tongue had been educated in the Roman Senate, should carry weight with them. The grand truths on which successful agriculture rests, and which simple experience long ago demonstrated, cannot be kept out of view, nor can they be dwarfed by any

imposition of learning. Science may explain them, or illustrate or extend; but it cannot shake their preponderating influence upon the crop of the year. As respects many other arts, the initial truths may be lost sight of, and overlaid by the mass of succeeding developments, — not falsified, but so belittled as practically to be counted for nothing. In this respect, agriculture is exceptional. The old story is always the safe story: you must plough and plough again; and manure; and sow good seed, and enough; and pull the weeds; and as sure as the rain falls, the crop will come.

Many nice additions to this method of treatment, which my fine-farming friends will suggest, are anticipated by the old Roman, if we look far enough into his book. Thus, he knew the uses of a harrow; he knew the wisdom of ploughing in a green crop; he had steeps for his seed; he knew how to drain off the surface-water, — nay, there is very much in his account of the proper preparation of ground for olive-trees, or vine-setting, which looks like a mastery of the principles that govern the modern system of drainage.\*

Of what particular service recent investigations in science have been to the practical farmer, and what positive and available aid, beyond what could be derived from a careful study of the Roman masters, they put into the hands of an intelligent worker, who is tilling ground simply for pecuniary advantage, I shall hope to inquire and discourse upon, some other day: when that day comes, we will fling out the banner of the nineteenth century, and give a gun to Liebig, and Johnson, and the rest.

Meantime, as a farmer who endeavors to keep posted in all the devices for pushing lands which have an awkward habit of yielding poor crops into the better habit of yielding large ones, I will not attempt to conceal the chagrin with which I find this curmudgeon

\* XLIII. "*Sulcos, si locus aquosus erit, alveatos esse oportet,*" etc.

of a Roman Senator, living two centuries before Christ, and northward of Monte Gennaro, who never heard of "Hovey's Root-Cutter," or of the law of primaries, laying down rules\* of culture so clear, so apt, so full, that I, who have the advantages of two thousand years, find nothing in them to laugh at, unless it be a few oblations to the gods; † and this, considering that I am just now burning a little incense (Havana) to the nymph Volutia, is uncallied for.

And if Senator Cato were to wake up to-morrow, in the white house that stares through the rain yonder, and were to open his little musty vellum of slipshod maxims, and, in faith of it, start a rival farm in the bean line, or in vine-growing, — keeping clear of the newspapers, — I make no doubt but he would prove as thrifty a neighbor as my good friend the Deacon.

We nineteenth-century men, at work among our cabbages, clipping off the purslane and the twitch-grass, are disposed to assume a very complacent attitude, as we lean upon our hoe-handles, — as if we were doing tall things in the way of illustrating physiology and the cognate sciences. But the truth is, old Laertes, near three thousand years ago, in his slouch cap and greasy beard, was hoeing up in the same way his purslane and twitch-grass, in his bean-patch on the hills of Ithaca. The difference between us, so far as the crop and the tools go, is, after all, ignominiously small. *He* dreaded the weevil in his beans, and *we* the club-foot in our cabbages; *we* have the "Herald," and *he* had none; *we* have "Plantation-Bitters," and *he* had his jug of the Biblical wine.

M. Varro, another Roman farmer, lies between the same covers "De Re Rusticâ" with Cato, and seems to have

\* This mention, of course, excludes the Senator's *formule* for unguents, aperients, cattle-nourishments, and pickled pork.

† CXXXIV. Cato, *De Re Rusticâ*.

had more literary tact, though less of blunt sagacity. Yet he challenges at once our confidence by telling us so frankly the occasion of his writing upon such a subject. Life, he says, is a bubble, — and the life of an old man a bubble about to break. He is eighty, and must pack his luggage to go out of this world. ("*Annus octogesimus admonet me, ut sarcinas colligam antequam proficiscar e vitâ.*") Therefore he writes down for his wife, Fundania, the rules by which she may manage the farm.

And a very respectably old lady she must have been, to deal with the *villici* and the *coloni*, if her age bore suitable relation to that of her husband. The ripe maturity of many of the rural writers I have introduced cannot fail to strike one. Thus, Xenophon gained a strength in his Elian fields that carried him into the nineties; Cato lived to be over eighty; and now we have Varro, writing his book out by Tusculum at eighty, and surviving to counsel with Fundania ten years more. Pliny, too, (the elder,) who, if not a farmer, had his country-seats, and left very much to establish our acquaintance with the Roman rural life, was a hale, much-enduring man, of such soldierly habits and large abstemiousness as to warrant a good fourscore, — if he had not fallen under that murderous cloud of ashes from Mount Vesuvius, in the year 79.

The poets, doubtless, burnt out earlier, as they usually do. Virgil, whom I shall come to speak of presently, certainly did: he died at fifty-one. Tibullus, whose opening Idyl is as pretty a bit of gasconade about living in a cottage in the country, upon love and a few vegetables, as a maiden could wish for, did not reach the fifties; and Martial, whose "Faustine Villa," if nothing else, entitles him to rural oblation, fell short of the sixties.

Varro indulges in some sharp sneers at those who had written on the same subject before him. This was natural enough in a man of his pursuits: he had written four hundred books!

Of Columella we know scarcely more than that he lived somewhere about the time of Tiberius, that he was a man of wealth, that he travelled extensively through Gaul, Italy, and Greece, observing intelligently different methods of culture, and that he has given the fullest existing compend of ancient agriculture. In his chapter upon Gardening he warms into hexameters; but the rest is stately and euphonious prose. In his opening chapter, he does not forego such praises of the farmer's life as sound like a lawyer's address before a county-society on a fair-day. Cincinnatus and his plough come in for it; and Fabricius and Curius Dentatus; with which names, luckily, our orators cannot whet their periods, since Columella's mention of them is about all we know of their farming.

He falls into the way, moreover, of lamenting, as people obstinately continue to do, the "good old times," when men were better than "now," and when the reasonable delights of the garden and the fields engrossed them to the neglect of the circus and the theatres. But when he opens upon his subject proper, it is in grandiose, Spanish style, (he was a native of Cadiz,) with a maximum broad enough to cover all possible conditions:—" *Qui studium agriculturæ dederit, sciat hæc sibi advocanda: prudentiam rei, facultatem impendendi, voluntatem agendi.*" Or, as Tremellius says,— "That man will master the business, *qui et colere sciet, et poterit, et volet.*"

This is comprehensive, if not encouraging. That "*facultatem impendendi*" is a tremendous bolster to farming as to anything else; it is only another shape of the "*poterit*," and the "*poterit*" only a scholarly rendering of pounds and pence. As if Tremellius had said,— "That man will make his way at farming who understands the business, who has the money to apply to it, and who is willing to bleed freely.

With a kindred sagacity this shrewd Roman advises a man to slip upon his

farm often, in order that his steward may keep sharply at his work; he even suggests that the landlord make a feint of coming, when he has no intention thereto, that he may gain a day's alertness from the bailiff. The book is of course a measure of the advances made in farming during the two hundred years elapsed since Cato's time; but those advances were not great. There was advance in power to systematize facts, advance in literary aptitude, but no very noticeable gain in methods of culture. Columella gives the results of wider observation, and of more persistent study; but, for aught I can see, a man could get a crop of lentils as well with Cato as with Columella; a man would house his flocks and servants as well out of the one as the other; in short, a man would grow into the "*facultatem impendendi*" as swiftly under the teachings of the Senator as of the later writer of the reign of Tiberius.

It is but dull work to follow those teachings; here and there I warm into a little sympathy, as I catch sight, in his Latin dress, of our old friend *Curculio*; here and there I sniff a fruit that seems familiar,—as the *fraga*, or a *morum*; and here and there comes blushing into the crabbed text the sweet name of some home-flower,—a lily, a narcissus, or a rose. The chief value of the work of Columella, however, lies in its clear showing-forth of the relative importance given to different crops, under Roman culture, and to the raising of cattle, poultry, fish, etc., as compared with crops. Knowing this, we know very much that will help us toward an estimate of the domestic life of the Romans. We learn, with surprise, how little they regarded their oxen, save as working-animals,—whether the milk-white steers of Clitumnus, or the dun Campanian cattle, whose descendants show their long-horned stateliness to this day in the Roman forum. The sheep, too, whether of Tarentum or of Canusium, were regarded as of value chiefly for their wool and milk; and it

is surely amazing, that men who could appreciate the iambs of Horace and the eloquence of Cicero should have shown so little fancy for a fat saddle of mutton or for a mottled sirloin of beef.

I change from Columella to Virgil, and from Virgil back to some pleasant Idyl of Tibullus, and from Tibullus to the pretty prate of Horace about the Sabine Hills; I stroll through Pliny's villa, eying the clipped box-trees; I hear the rattle in the tennis-court; I watch the tall Roman girls —

“Grandes virgines proborum colonorum” —

marching along with their wicker-baskets filled with curds and fresh-plucked thrushes, until there comes over me a confusion of times and places.\*

— The sound of the battle of to-day dies; the fresh blood-stains fade; and I seem to wake upon the heights of Tusculum, in the days of Tiberius. The farm-flat below is a miniature Campagna, along which I see stretching straight to the city the shining pavement of the Via Tusculana. The spires yonder melt into mist, and in place of them I see the marble house-walls of which Augustus boasted. As yet the grander monuments of the Empire are not built; but there is a blotch of cliff which may be the Tarpeian Rock, and beside it a huge hulk of building on the Capitoline Hill, where sat the Roman Senate. A little hitherward are the gay turrets of the villa of Mæcenas, and of the princely houses on the Palatine Hill, and in the foreground the stately tomb of Cæcilia Metella. I see the barriers of a hippodrome, (where now howling jockeys make the twilight hideous); a *gestatio*, with its lines of cherry-trees, is before me, and the velvety lavender-green of olive-orchards covers the hills behind. Vines grow upon the slope eastward, —

“Neve tibi ad solem vergant vineta cadentem,” —

twining around, and flinging off a great wealth of tendrils from their support-

ing-poles (*pedamenta*). The figs begin to show the purple bloom of fruitage, and the *villicus*, who has just now come in from the *atriolum*, reports a good crop, and asks if it would not be well to apply a few loads of marl (*tofæcea*) to the summer fallow, which Cato is just now breaking up with the Campanian steers, for barley.

Scipio, a stanch Numidian, has gone to market with three asses loaded with cabbages and asparagus. *Villicus* tells me that the poultry in the fattening-coops (as close-shut as the Strasburg geese)\* are doing well, and he has added a *souppçon* of sweetening to their barley-gruel. The young doves have their legs faithfully broken, (“*obteras crura*,”) and are placidly fattening on their stumps. The thrush-house is properly darkened, only enough light entering to show the food to some three or four thousand birds, which are in course of cramming for the market. The *cochlearium* has a good stock of snails and mussels; and the little dormice are growing into fine condition for an approaching Imperial banquet.

*Villicus* reports the clip of the Tarentine sheep unusually fine, and free from burrs. The new must is all a-foam in the *vinaria*; and around the inner cellar (*gaudentem est!*) there is a tier of urns, as large as school-boys, brimming with ripe Falernian.

If it were not stormy, I might order out the farm-chariot, or *curriculum*, which is, after all, but a low, dumpy kind of horse-cart, and take a drive over the lava pavement of the Via Tusculana, to learn what news is astir, and what the citizens talk of in the forum. Is all quiet upon the Rhine? How is it possibly with Germanicus? And what of that story of the arrest of Seneca? It could hardly have happened, they say, in the good old days of the Republic.

\* “Locus ad hanc rem desideratur maxime calidus, et minimi luminis, in quo singulæ cavæ angustioribus vel sportis inclusæ pendeant aves, sed ita coarctatæ, ne versari possint.” — Columella, Lib. VIII. cap. vii.

And with this mention, as with the sound of a gun, the Roman pastoral dream is broken. The Campagna, the olive-orchards, the *columbarium*, fall back to their old places in the blurred type of Columella. The Campanian steers are unyoked, and stabled in the text of Varro. The turrets of the villa of Mæcenas, and of the palaces of Sylla and the Cæsars, give place to the spires of a New-England town, — southward of which I see through the mist a solitary flag flying over a soldiers' hospital. It reminds of nearer and deadlier perils

than ever environed the Roman Republic, — perils out of which if the wisdom and courage of the people do not find a way, some new Cæsar will point it with the sword.

Looking northward, I see there is a bight of blue in the sky; and a lee set of dark-gray and purple clouds is folding down over the eastern horizon, — against which the spires and the flag show clearer than ever. It means that the rain has stopped; and the rain having stopped, my in-door work is done.

---

## GOLDEN WEDDING.

THE reader whose eye is arrested by my title will doubtless anticipate a romance on that ever-old, ever-new theme of a certain god with a torch leading two souls bound together by iron concealed in flower-wreaths, until, alas! life seems ordinary enough to be symbolized by *tin*, — of the tin-wedding entering into the refiner's fire, and, by sure transmutation, rising from the baser metal to the paler, but purer silver, — of the subtle alchemy of years, which, in human life's great crucible,

"Transmute, so potent are the spells they  
know,

Into pure gold the silver of to-day."

Perhaps, reader, you are not altogether to be disappointed; and yet, for the present, it is only a glass of sparkling wine I wish you to take with me. You will please read on that delicate strip of paper around the bottle's neck the name in gilt, — "Golden Wedding." At once you grow transcendental, and suppose that some German vine-dresser in Catawba-land — by the way, Gerritt Smith's gardener is a nephew of Schiller! — was dreaming of the marriage of the Sun with the Vine, his darling plant, in whose juice linger and sparkle the light and joy of

many faded days. But no, it was named from a real Golden Wedding.

Let me take you — as the clairvoyants say — to a large, sooty, toiling city in the West. From street to street you shall go, and see but little to excite your admiration, unless you are a constant believer that *work is worship*. But here, in the centre of the city, is a noble old mansion with its beautiful park around it, which a traveller who saw it once compared to a pearl on the breast of a blacksmith. Here it was that the Golden Wedding took place.

Who that was there can ever forget it? In my own memory that throng of the worthy, the beautiful, the gay of a great city will stand as the one fulfilment which Fate has given me of many Oriental promissory dreams, most of which she has failed to honor. In that great company you might have traced all the circles of that city's growth, as you may trace a tree's history in its rings. That lady there was the first white baby born here, where now over two hundred thousand human beings reside. Here are the pioneers who filled the first log-huts on the city's site, until they overflowed through the roofs. And here is an inner

circle of children, and an outer one of grandchildren, about the two who are the heart of this beautiful celebration. Can that lovely, erect, blooming lady be a bride of fifty years? Looking at her, one would say it is a great and unnecessary mistake of ours to grow old. But more closely must we look at that quaint old man by her side. Lately he has passed away; but every day of his long life left a trace worthy to be noted well. His eighty years and twenty-five days of life comprise an epitome of the history and growth of a great community. Not so would you at first interpret that plain old man; though, to a knowing eye, that eye, clear with looking at the duty that lies nearest, that mouth, telling of patient, unimpulsive energy, that broadness about the brow, would be guaranties of a marked life.

And now for my story, which you must let me tell in a rambling way; for any systematic biography of that man would be like putting one of his own Catawba-vines into your herbarium.

I introduce you to a fair-haired, handsome youth, on the deck of a small steamboat, which is bearing him to his fortune in the great West. He is penniless. His father was wealthy; but in the war he was a Tory, and, in the confiscation of his property, his sin was visited upon his son. But he was not the boy to repine, with youth and the great West before him. And now as from the steamer's deck he sees a fine landscape with a few log-houses on it, he believes that it is one day to be a great city, and concludes to stop there. So he is put ashore with his trunk.

He has already determined to study law. He goes to the one judge who resides there, and is taken as a student into his office. More log-houses are built; a court-house is erected; and presently that institution at sight of which the shipwrecked Englishman fell on his knees and thanked God he was in a Christian land—the gallows—made its appearance. So the young man had a fair practice.

The records of the West, if they are ever written, will testify how often whim-

sical Fortune thrusts her favors on men against their will. This very judge with whom our youth studied law became environed with pecuniary difficulties, and wished once to satisfy a claim of a few hundred dollars by deeding away a sheep-pasture of a few acres, which was of no sort of use to him. But when he went to get his wife's signature to the conveyance, she burst into tears; she knew, she said, that the pasture was worthless; but she had in her childhood heard there the tinkling of the bells of her father's sheep; it was very foolish, she knew, but now that they had all passed away, the bells over in the pasture tinkled on in her memory, and she hated to give it up. The kind husband would not insist, but went sadly to his work. It was not long before the sheep-pasture was worth a million dollars! Sentiment, you see, is not always an unproductive article.

But this case was scarcely so curious as that which presently thrust a goodly capital on the hands of our young law-student. His first case in the court was that of a horse-thief, whom he induced a jury to acquit. When he came to his client for a fee, the scapegrace whispered that he had nothing on earth wherewith to pay the fee except two old whiskey-stills and — *a horse*. When he heard this last word, the lawyer's conscience gave him a twinge. After a moment's reflection, he said, — "You will need the horse; and you had best make him take you as far as possible from this region of country. I must be satisfied with the whiskey-stills." It was not for a long time that he thought even to inquire about the stills. When he did so, he found them in possession of a man who implored him not to take them away, and promised to pay something for them. Finding that he could not do this, he begged our hero to accept as payment for them a few acres of barren land, which, with great reluctance, he agreed to do. Ere long the tide of emigration set westward, and this land is to-day worth two million dollars!

But his subsequent life showed that

the man's fortune was not luck; for by economy, not by hoarding, — by foresight, and a generous trust to all laborers who wished to lease lands, his wealth grew to nearly fifteen million dollars.

When he found that he had enough to live comfortably upon, he retired from the bar, and devoted himself to horticulture. He found that the region in which he lived was adapted to the growth of the vine, and began his experiments, which, during his life, extended to the culture of more than forty varieties. He laid before the community, from time to time, a report of his successes, he called on all to come and taste the wines he made, until the tidings went over the earth, and from Germany, France, Italy, came vine-dressers and wine-makers, who covered every hill-side for miles around him with vintages.

Those who came from afar to inquire into this new branch of industry, for which he had opened the way, were surprised to meet the millionaire, the Catawba-Prince, in his plain garb and with his humble habits.

How many stories I could tell you of this unintentional, odd homeliness of manner and life, from which he never departed, and which those around him found it impossible to depart from, even in respect to the style of the coffin in which he was laid, and the procession which followed him to the beautiful cemetery! His dress was always that of a man of the humblest fortunes; and Dame Gossip says that he was so fond of his old coat, that, when a change became absolutely necessary, his daughters were obliged to prepare the new one, and substitute it for the old whilst he was asleep, so that in the morning he should put it on unconsciously, or, if he discovered the change, must wear the new or none. The same dame has it that a youth, who afterward became his son-in-law, having caught sight somewhere of one of the old man's daughters, desired to know her, and that, in the park, which was open to all, he met the old gentleman, whom he supposed to be the gar-

dener, and offered him a bribe, if he would bring the lady out among the roses. The old man accepted the bribe, and returned with the lady, whom, with a sly twinkle of the eye, he introduced as "my daughter" to the blushing youth. And again it is told, that once, on a very warm day, the old man, having to wait for a friend, sat down on a stone just outside of his own gate, took off his hat, and, closing his eyes, dozed a little. When he got up, he found a silver quarter in his hat. Whether it was put there by some one who really thought he was an object of charity, or by a wag, the old man appreciated the joke, and, with a smile, put it into the pocket out of which had to come forty thousand dollars for annual taxes. These stories may or may not be true; but in some sense such stories have a certain truth, whether invented or not. They can live and circulate only in a community where they are characteristic of the person of whom they are told. Generous men are not pursued by stories of parsimony; mean men never hear even untrue stories of their generosity.

And this last remark leads me to speak of the relation in which the wealthiest man of the West stood to the throngs of the poor and the suffering who surrounded him.

If, in the city, you had gone to the President of the Boorioboola-Gha Sewing-Circle, or to the Tract-Society Rooms, or to the clergy, and inquired whether the city's richest man was charitable, you would have received an ominous shrug in reply. Vainly have they gone to him for any such charities. Vainly did they go to him for some "poor, but worthy and Christian woman."

"I will give nothing," he replied; "there are enough who will give to her; what I have to give shall go to the *unworthy* poor, whom none will help.—the Devil's poor, Sir,—those whom Christians leave to the Devil."

Many a minister has been sorely puzzled by the receipt of a fifty-dollar bill "for the relief of the depraved." His

office was constantly thronged with outcasts, who were generally relieved by small sums. In his relations with these people, his simplicity and eccentricity were noted by all who knew him. Among many stories which I know to be true, I select the following.

Some six or eight years ago the winter was very cold; the river was frozen, and all the "wharf-rats" were thrown out of work. A near relative of the old gentleman came to the city, and passed the night at his house. After tea he sauntered to the office to take a quiet cigar. To his surprise; he found it filled with a crowd — more than fifty — of brawny, beastly-looking men. The presence of the childlike old man, his face beaming with shrewdness and kindly humor, seemed alone to keep them from being a mob. His manner to them said, — "You poor wretches, I know how reckless you are; yet I am not sure but I should be as bad, had I been exposed to the same bad influences." These houseless vagrants had been coming every night, while the river was frozen, to get a dime for a night's lodging.

The young man had been forced by the unpleasantness of the crowd to go and enjoy his cigar outside. As he sat there, the ugly crowd filed out quietly, each with his dime, (the clerk distributing,) till the last man. He seemed to feel very ill-used, and was scarcely clear of the door-way before he gave vent to his indignation: — "I 'll be d—d, if I don't let Old ——— know that I won't be put off with a five-cent piece and a three-cent piece! Let me ketch him out, and I 'll mash his," etc., etc.

Glowing with righteous indignation, and glad of the opportunity, the young relative rushed in and exclaimed, —

"Mr. ———! I have had many occasions to remonstrate with you on your indiscriminate charities, your encouragement of beggary and vice. The wretch who went out last is breathing threats of personal violence against you, because he has been put off with a five-cent piece and a three-cent piece!"

How was the indignant remonstrant mortified, when the old man simply turned his head to the clerk and said, —

"Mark, why did you not give that man his dime?"

"I had given out all the dimes, Sir, and I gave him all I had left."

"See that he gets his extra two cents the next time he comes. I have no doubt I should have been mad, if I had been in his place."

A forlorn-looking man once came and asked for help.

"I am afraid to give you money. I think I know how you will spend it."

Of course the man protested that strong drink was an abomination unto him, — that what his nature most craved was "pure, fresh milk."

The old man, with a look in which it would be hard to say whether shrewdness or credulity predominated, at once hastened to the milk-cellar and returned with a glass of milk; the fellow swallowed the dose with an eager reluctance quite comical to behold, but which excited no movement in the muscles of the old gentleman's face.

On a raw, wet winter's day, a loafer applied for a pair of shoes. He had on an old, shuffling pair, out at both toes. The old Wine-Prince was sitting with a pair of slippers on, and had his own shoes warming at the fire.

"Well," said he to the applicant, "you do look rather badly off, for such a cold, wet day; here, see if these shoes will fit you," handing his own.

The fellow tried them on and pronounced them a complete fit, and went on his way rejoicing. The clerk was amused, half an hour after, to see the old gentleman searching for his shoes and wondering what had become of them. He was reminded that he had given them to the beggar. On further inquiry, he found that he had no other pair in the house.

The following significant story was told me by the son of the old man. I present it in nearly his own words.

"Adjoining me in the country lives

an old German who nearly seventy years ago was sold in New York for his passage. A confectioner of Baltimore bought him for seven years' service, and he went with his master to fulfil his obligation. When his time was out, he turned his face towards the setting sun, and started to seek his fortune. On arriving in Pittsburg, having no money, he engaged to 'work his way' down the river on a flat-boat. He stopped at the little village, as our city then was, and opened a shop. He was skilful, and succeeded. He came to my father, and bought, on ten years' credit, a place in the country, where, in course of time, he built a house, and, with my father's assistance, planted a vineyard. He then gave up all other business but that of the vine-dresser.

"One day, in the autumn, a few years ago, I overtook the old man on horseback, on his way to town. After wishing me a cheery good-morning, he said, —

"I am on my way to town, to sell your father my wine."

"He will be glad to get it; he is buying wine, and yours is made so carefully that he will be glad to have it."

"I mean to sell it to him for fifty cents a gallon."

"Oh," said I, "don't offer it at that. I know he is paying double that sum."

"Nevertheless, I mean to sell it to him for half a dollar."

"I looked inquiringly."

"Well, Sir, I was but a boy when I left Germany; but I was old enough to remember that a man, after a hard day's work, could go to a wine-house, and for two cents could get a tumblerful. It did him good, and he went home to his family fresher and brighter for his wine. He was never drunk, and never wasted his earnings to appease a diseased appetite. I want to see that state of things brought about here. Our poor people drink whiskey. I want them to have cheap wine in its place. Fifty cents a gallon will pay me well this year for my capital and labor, and next year I think I can sell it for forty cents."

"But, my friend, see how this will

work. You will sell your wine to Mr. — for fifty cents; and he will send it to his wine-cellar, and they will bottle it and sell it for all they can get."

"That's *their* lookout," said the Teuton; "I shall have done my duty."

"It was rather hard to get an advantage of my father, but I thought now I had him. On reaching the city, I sought him out, and told the story with all its circumstances."

"Now, Sir, in presence of the example of this old German, — sold in New York for his passage, faithfully fulfilling the years of his servitude, working his way to a small competency by savings and industry, — will you dare to let the world hear of you, a rich man, making a profit on wine?"

"The old man's eye dropped an instant, then he said, —

"My son, Heaven knows I do not wish to make money out of wine. I have given much time and much money for the last fifty years to make this doubtful experiment successful. I have paid high prices for wine, and used all other means in my power to make it remunerative, — to induce others to plant vineyards. If I should now take your suggestion and bring wine down to a low price, I should ruin the enterprise. But let the extended cultivation of the grape be once firmly established, and then competition will bring it low enough."

"Well," said I, "that may be good worldly wisdom; but I like the spirit of the old Dutchman better, after all."

"There I agree with you; for once, you are right."

A most careful accountant has shown that his contributions to grape-culture amounted to one-fourth of his whole fortune: a clear loss to him, but not to the public.

Though the lips of Christendom repeat, Sunday after Sunday, the warning that the left hand should not know what the right hand doeth, yet it is very apt to judge of a man's liberality by the paragraphs concerning him in the newspapers. The old gentleman once gave

his city several acres of land for an observatory which was to be erected; and there is no doubt that he had reason to conclude, as have others, that it was the worst, as it was the most public, charity of his life. That his private charities were numerous and without self-crediting, the present writer *happens* to know. Once, after going through the great wine-cellar where millions were coined, I went through the barracks in the upper portion of the same building, where a wretched tenantry of the Devil's poor lived in squalor. Each of these families was required to pay room-rent to the millionaire. As I passed along, I found one man and woman in wrathful distress. They must pay their rent, or be turned out of their rooms. The rent was two or three dollars. I said, —

"The old gentleman will not turn you out."

"You do not know him; he will be sure to, if we do not pay him every cent."

I determined to search him out and represent the case. I could not find him; but before I concluded my search, I found that the poor people had been compelled to sell a table and some chairs to pay the rent. The next day I saw them again, and found them heartily abusing the old man as "a stingy brute," who would "sell the chairs from under them." Yet I observed that they had *a new table and three new chairs*. When I asked them how they came by them, they said they had been sent by an unknown hand, which they supposed to be mine. A thought struck me, and after some trouble I ferreted out the fact, that, although the rich old man had, for reasons connected with the good order of the barracks, always ex-

acted every cent of the rent from each tenant, whatever the consequences, he had many times, as in this case, secretly returned more than it had cost them to pay it. They were left to believe him a hard man, and often attributed his benefits to societies and persons whose charity would have been stifled by the whiskey-stench of their rooms.

Thus, then, went on his life, until the day when the Golden Wedding was to be celebrated. That year, the sons, with the vine-dressers, the bottlers, corkers, and all, gathered together and said, —

"Come, now! let us this year make a wine that shall be like the nectar for a true man's soul!"

So, with one accord, they gathered the richest grapes, and selected from them; then they made the wine-press clean and sweet, and cast the grapes therein. One great hiss, — a spurt of gold flushed with rubies, — and all that is acrid is left, all that is rich and sweet is borne away, to be labelled "GOLDEN WEDDING."

And now, as I taste it, it seems to me flavored beyond all earthly wine, as if it were the expression of an humble and faithful man, who had a legitimate object, which he obtained by steadfastness. The wine-makers maintain, that wine, though long confined in bottles, sympathizes still with the vines from which it was pressed; and when the season of the flowering of vines comes, it is always agitated anew. Surely the Catawba must ever sparkle afresh, when in it, as now, we pledge the memory of the brave and wise pioneer whose life climbed to its maturity along with the purple clusters which so had garnered the frost and sunshine of a life as well as of the seasons.

## THE SILURIAN BEACH.

WITH what interest do we look upon any relic of early human history! The monument that tells of a civilization whose hieroglyphic records we cannot even decipher, the slightest trace of a nation that vanished and left no sign of its life except the rough tools and utensils buried in the old site of its towns or villages, arouses our imagination and excites our curiosity. Men gaze with awe at the inscription on an ancient Egyptian or Assyrian stone; they hold with reverential touch the yellow parchment-roll whose dim, defaced characters record the meagre learning of a buried nationality; and the announcement, that for centuries the tropical forests of Central America have hidden within their tangled growth the ruined homes and temples of a past race, stirs the civilized world with a strange, deep wonder.

To me it seems that to look on the first land that was ever lifted above the waste of waters, to follow the shore where the earliest animals and plants were created when the thought of God first expressed itself in organic forms, to hold in one's hand a bit of stone from an old sea-beach, hardened into rock thousands of centuries ago, and studded with the beings that once crept upon its surface or were stranded there by some retreating wave, is even of deeper interest to men than the relics of their own race, for these things tell more directly of the thoughts and creative acts of God.

Standing in the neighborhood of Whitehall, near Lake George, one may look along such a sea-shore, and see it stretching westward and sloping gently southward as far as the eye can reach. It must have had a very gradual slope, and the waters must have been very shallow; for at that time no great mountains had been uplifted, and deep oceans are always the concomitants of lofty heights. We do not, however, judge of this by inference merely; we have an evidence of

the shallowness of the sea in those days in the character of the shells found in the Silurian deposits, which shows that they belonged in shoal waters.

Indeed, the fossil remains of all times tell us almost as much of the physical condition of the world at different epochs as they do of its animal and vegetable population. When Robinson Crusoe first caught sight of the footprint on the sand, he saw in it more than the mere footprint, for it spoke to him of the presence of men on his desert island. We walk on the old geological shores, like Crusoe along his beach, and the footprints we find there tell us, too, more than we actually see in them. The crust of our earth is a great cemetery where the rocks are tombstones on which the buried dead have written their own epitaphs. They tell us not only who they were and when and where they lived, but much also of the circumstances under which they lived. We ascertain the prevalence of certain physical conditions at special epochs by the presence of animals and plants whose existence and maintenance required such a state of things, more than by any positive knowledge respecting it. Where we find the remains of quadrupeds corresponding to our ruminating animals, we infer not only land, but grassy meadows also, and an extensive vegetation; where we find none but marine animals, we know the ocean must have covered the earth; the remains of large reptiles, representing, though in gigantic size, the half aquatic, half terrestrial reptiles of our own period, indicate to us the existence of spreading marshes still soaked by the retreating waters; while the traces of such animals as live now in sand and shoal waters, or in mud, speak to us of shelving sandy beaches and of mud-flats. The eye of the Trilobite tells us that the sun shone on the old beach where he lived; for there is nothing in Nature without a purpose, and when so compli-

cated an organ was made to receive the light, there must have been light to enter it. The immense vegetable deposits in the Carboniferous period announce the introduction of an extensive terrestrial vegetation; and the impressions left by the wood and leaves of the trees show that these first forests must have grown in a damp soil and a moist atmosphere. In short, all the remains of animals and plants hidden in the rocks have something to tell of the climatic conditions and the general circumstances under which they lived, and the study of fossils is to the naturalist a thermometer by which he reads the variations of temperature in past times, a plummet by which he sounds the depths of the ancient oceans,—a register, in fact, of all the important physical changes the earth has undergone.

But although the animals of the early geological deposits indicate shallow seas by their similarity to our shoal-water animals, it must not be supposed that they are by any means the same. On the contrary, the old shells, crustacea, corals, etc., represent types which have existed in all times with the same essential structural elements, but under different specific forms in the several geological periods. And here it may not be amiss to say something of what are called by naturalists *representative types*.

The statement that different sets of animals and plants have characterized the successive epochs is often understood as indicating a difference of another kind than that which distinguishes animals now living in different parts of the world. This is a mistake. There are so-called representative types all over the globe, united to each other by structural relations and separated by specific differences of the same kind as those that unite and separate animals of different geological periods. Take, for instance, mud-flats or sandy shores in the same latitudes of Europe and America; we find living on each animals of the same structural character and of the same general appearance, but with certain specific differences,

as of color, size, external appendages, etc. They represent each other on the two continents. The American wolves, foxes, bears, rabbits, are not the same as the European, but those of one continent are as true to their respective types as those of the other; under a somewhat different aspect they represent the same groups of animals. In certain latitudes, or under conditions of nearer proximity, these differences may be less marked. It is well known that there is a great monotony of type, not only among animals and plants, but in the human races also, throughout the Arctic regions; and the animals characteristic of the high North reappear under such identical forms in the neighborhood of the snow-fields in lofty mountains, that to trace the difference between the ptarmigans, rabbits, and other gnawing animals of the Alps, for instance, and those of the Arctics, is among the most difficult problems of modern science.

And so is it also with the animated world of past ages; in similar deposits of sand, mud, or lime, in adjoining regions of the same geological age, identical remains of animals and plants may be found, while at greater distances, but under similar circumstances, representative species may occur. In very remote regions, however, whether the circumstances be similar or dissimilar, the general aspect of the organic world differs greatly, remoteness in space being thus in some measure an indication of the degree of affinity between different faunæ. In deposits of different geological periods immediately following each other we sometimes find remains of animals and plants so closely allied to those of earlier or later periods that at first sight the specific differences are hardly discernible. The difficulty of solving these questions, and of appreciating correctly the differences and similarities between such closely allied organisms, explains the antagonistic views of many naturalists respecting the range of existence of animals, during longer or shorter geological periods; and the superficial way in which discussions con-

cerning the transition of species are carried on is mainly owing to an ignorance of the conditions above alluded to. My own personal observation and experience in these matters have led me to the conviction that every geological period has had its own representatives, and that no single species has been repeated in successive ages.

The laws regulating the geographical distribution of animals and their combination into distinct or zoölogical provinces called faunæ with definite limits are very imperfectly understood as yet; but so closely are all things linked together from the beginning till to-day that I am convinced we shall never find the clue to their meaning till we carry on our investigations in the past and the present simultaneously. The same principle according to which animal and vegetable life is distributed over the surface of the earth now prevailed in the earliest geological periods. The geological deposits of all times have had their characteristic faunæ under various zones, their zoölogical provinces presenting special combinations of animal and vegetable life over certain regions, and their representative types reproducing in different countries, but under similar latitudes, the same groups with specific differences.

Of course, the nearer we approach the beginning of organic life, the less marked do we find the differences to be, and for a very obvious reason. The inequalities of the earth's surface, her mountain-barriers protecting whole continents from the Arctic winds, her open plains exposing others to the full force of the polar blasts, her snug valleys and her lofty heights, her table-lands and rolling prairies, her river-systems and her dry deserts, her cold ocean-currents pouring down from the high North on some of her shores, while warm ones from tropical seas carry their softer influence to others,—in short, all the contrasts in the external configuration of the globe, with the physical conditions attendant upon them, are naturally accompanied by a cor-

responding variety in animal and vegetable life.

But in the Silurian age, when there were no elevations higher than the Canadian hills, when water covered the face of the earth with the exception of a few isolated portions lifted above the almost universal ocean, how monotonous must have been the conditions of life! And what should we expect to find on those first shores? If we are walking on a sea-beach to-day, we do not look for animals that haunt the forests or roam over the open plains, or for those that live in sheltered valleys or in inland regions or on mountain-heights. We look for Shells, for Mussels and Barnacles, for Crabs, for Shrimps, for Marine Worms, for Star-Fishes and Sea-Urchins, and we may find here and there a fish stranded on the sand or tangled in the sea-weed. Let us remember, then, that, in the Silurian period, the world, so far as it was raised above the ocean, was a beach, and let us seek there for such creatures as God has made to live on sea-shores, and not belittle the Creative work, or say that He first scattered the seeds of life in meagre or stinted measure, because we do not find air-breathing animals when there was no fitting atmosphere to feed their lungs, insects with no terrestrial plants to live upon, reptiles without marshes, birds without trees, cattle without grass, all things, in short, without the essential conditions for their existence.

What we do find — and these, as I shall endeavor to show my readers, in such profusion that it would seem as if God, in the joy of creation, had compensated Himself for a less variety of forms in the greater richness of the early types — is an immense number of beings belonging to the four primary divisions of the Animal Kingdom, but only to those classes whose representatives are marine, whose home then, as now, was either in the sea or along its shores. In other words, the first organic creation expressed in its totality the structural conception since carried out in such wonderful variety of de-

tails, and purposely limited then, because the world, which was to be the home of the higher animals, was not yet made ready to receive them.

I am fully aware that the intimate relations between the organic and physical world are interpreted by many as indicating the absence, rather than the presence, of an intelligent Creator. They argue, that the dependence of animals on material laws gives us the clue to their origin as well as to their maintenance. Were this influence as absolute and unvarying as the purely mechanical action of physical circumstances must necessarily be, this inference might have some pretence to logical probability, — though it seems to me unnecessary, under any circumstances, to resort to climatic influences or the action of any physical laws to explain the thoughtful distribution of the organic and inorganic world, so evidently intended to secure for all beings what best suits their nature and their needs. But the truth is, that, while these harmonious relations underlie the whole creation in such a manner as to indicate a great central plan, of which all things are a part, there is at the same time a freedom, an arbitrary element in the mode of carrying it out, which seems to point to the exercise of an individual will; for, side by side with facts, apparently the direct result of physical laws, are other facts, the nature of which shows a complete independence of external influences.

Take, for instance, the similarity above alluded to between the fauna of the Arctics and that of the Alps, certainly showing a direct relation between climatic conditions and animal and vegetable life. Yet even there, where the shades of specific difference between many animals and plants of the same class are so slight as to baffle the keenest investigators, we have representative types both in the Animal and Vegetable Kingdoms as distinct and peculiar as those of widely removed and strongly contrasted climatic conditions. Shall we attribute the similarities and the differences alike to phys-

ical causes? Compare, for example, the Reindeer of the Arctics with the Ibex and the Chamois, representing the same group in the Alps. Even on mountain-heights of similar altitudes, where not only climate, but other physical conditions would suggest a recurrence of identical animals, we do not find the same; but representative types. The Ibex of the Alps differs, for instance, from that of the Pyrenees, that of the Pyrenees from those of the Caucasus and Himalayas, these again from each other and from that of the Altai.

But perhaps the most conclusive proof that we must seek for the origin of organic life outside of physical causes consists in the permanence of the fundamental types, while the species representing these types have differed in every geological period. Now what we call typical features of structure are in themselves no more stable or permanent than specific features. If physical causes, such as light, heat, moisture, food, habits of life, etc., acting upon individuals, have gradually in successive generations changed the character of the species to which they belong, why not that of the class and the branch also? If we judge this question from the material side at all, we must, in order to judge it fairly, look at it wholly from that point of view. If these specific changes are brought about in this way, it is because external causes have positive permanent effects upon the substances of which animals are built: they have power to change their hair, to change their skin, to change certain external appendages or ornamentations, and any other of those ultimate features which naturalists call specific characters. Now I would ask what there is in the substances out of which class characters are built that would make them less susceptible to such external influences than these specific characters. In many instances the former are more delicate, more sensitive, far more fragile and transient in their material nature than the latter. And yet never, in all the chances

and changes of time, have we seen any alteration in the mode of respiration, of reproduction, of circulation, or in any of the systems of organs which characterize the more comprehensive groups of the Animal Kingdom, although they are quite as much under the immediate influence of physical causes as those structural features which have been constantly changing.

The woody fibre of the Pine-trees has had the same structure from the Carboniferous age to this day, while their mode of branching and the forms of their cones and leaves have been different in each period according to their respective species. The combination of rings, the structure of the wings, and the articulations of the legs are the same in the Cockroaches of the Carboniferous age as in those which infest our ships and our dwellings to-day, while the proportion of their parts is on quite another scale. The tissue of the Corals in the Silurian age is identical in chemical combination and organic structure with that of the Corals of our modern reefs, and yet the extensive researches upon this class for which we are indebted to Milne Edwards and Haime have not revealed a single species extending through successive geological ages, but show us, on the contrary, that every age has had its own kinds, differing among themselves in the same way as those of the Gulf of Mexico differ now from those of the Indian Ocean and the Pacific. The scales of the oldest known fishes in the Silurian beds have the same microscopic structure as those of their representative types to-day, and yet I have never seen a single fossil fish presenting the same specific characters in the successive geological epochs. The teeth of the oldest Sharks show the same microscopic structure as those of the present time, and we do not lack opportunities for comparison, since the former are as common in the mountain-limestone of Ireland as are those of the living Sharks on any beach where our fishermen boil them for the sake of their oil, and yet the Sharks appear un-

der different generic and specific forms in each geological age.

But without multiplying examples, which might be adduced *ad infinitum*, to show permanence of type combined with repeated changes of species, suffice it to say, that, while the general features in the framework of the organic world and the materials of which that framework is built, though quite as subject to the influence of physical external circumstances as any so-called specific features, have remained perfectly intact from the beginning of Creation till now, so that not the smallest difference is to be discerned in these respects between the oldest representatives of the oldest types in the oldest Silurian rocks and their successors through all the geological ages up to the present day, the species have been different in each epoch. It is surely a fair question to ask the advocates of the transmutation theory, whether they attribute to physical laws the discernment that would lead them to change the specific features, but to respect all those characters by which the higher structural combinations of the Animal Kingdom are preserved without alteration, — in other words, to maintain the organic plan, while constantly diversifying the mode of expressing it. If so, it would perhaps be as well to call them by another name, since they show all the comprehensive wisdom of an intelligent Creator. Until they can tell us why certain features of animals and plants are permanent under conditions which, according to their view, have power to change certain other features no more perishable or transient in themselves, the supporters of the development theory will have failed to substantiate their peculiar scientific doctrine.

But this discussion has led us far away from our starting-point, and interrupted our walk along the Silurian beach; let us return to gather a few specimens there, and compare them with the more familiar ones of our own shores. I have said that the beach was a shelving one,

and covered of course with shoal waters ; but as I have no desire to mislead my readers, or to present truths as generally accepted which are still subject to dispute, I would state here that the parallel ridges across the State of New York, considered by some geologists as the successive shores of a receding ocean, are believed by others to be the inequalities on the bottom of a shallow sea. Not only, however, does the general character of these successive terraces suggest the idea that they must have been shores, but the ripple-marks upon them are as distinct as upon any modern beach. The regular rise and fall of the water is registered there in waving, undulating lines as clearly as on the sand-beaches of Newport or Nahant; and we can see on any one of those ancient shores the track left by the waves as they rippled back at ebb of the tide thousands of centuries ago. One can often see where some obstacle interrupted the course of the water, causing it to break around it; and such an indentation even retains the soft, muddy, plastic look that we observe on the present beaches, where the resistance made by any pebble or shell to the retreating wave has given it greater force at that point, so that the sand around the spot is soaked and loosened. There is still another sign, equally familiar to those who have watched the action of water on a beach. Where a shore is very shelving and flat, so that the waves do not recede in ripples from it, but in one unbroken sheet, the sand and small pebbles are dragged and form lines which diverge whenever the water meets an obstacle, thus forming sharp angles on the sand. Such marks are as distinct on the oldest Silurian rocks as if they had been made yesterday. Nor are these the only indications of the same fact. There are certain animals living always upon sandy or muddy shores, which require for their well-being that the beach should be left dry a part of the day. These animals, moving about in the sand or mud from which the water has retreated, leave their tracks there; and if, at such a

time, the wind is blowing dust over the beach, and the sun is hot enough to bake it upon the impressions so formed, they are left in a kind of mould. Such trails and furrows, made by small Shells or Crustacea, are also found in plenty on the oldest deposits.

Admitting it, then, to be a beach, let us begin with the lowest type of the Animal Kingdom, and see what Radiates are to be found there. There are plenty of Corals, but they are not the same kinds of Corals as those that build up our reefs and islands now. The modern Coral animals are chiefly Polyps, but the prevailing Corals of the Silurian age were *Acalephian Hydroids*, animals which indeed resemble Polyps in certain external features, and have been mistaken for them, but which are nevertheless *Acalephs* by their internal structure; for, instead of having the vertical partitions dividing the body into chambers, so characteristic of the Polyps, they are divided by tubes corresponding to the radiating tubes of the *Acalephs* proper, these tubes being themselves divided at regular distances by horizontal floors, so that they never run uninterruptedly from top to bottom of the body. I subjoin a wood-cut of a Silurian Coral, which does not,

however, show the peculiar internal structure, but gives some idea of the general appearance of the old Hydroid Corals. We have but one *Acalephian* Coral now living, the Millepore; and it was by comparing that with these ancient ones that I first detected their relation to the *Acalephs*. For the true *Acalephs* or Jelly-Fishes we shall look in vain; but the presence of the *Acalephian* Corals establishes the existence of the type, and we cannot expect to find those

kinds preserved which are wholly destitute of hard parts. I do not attempt any description of the Polyps proper, because the early Corals of that class are comparatively few, and do not present features sufficiently characteristic to attract the notice of the casual observer.

Of the Echinoderms, the class of Radiates represented now by our Star-Fishes and Sea-Urchins, we may gather any quantity, though the old-fashioned forms are very different from the living ones. I have dwelt at such length in a former article \* on the wonderful beauty and variety of the Crinoids, or, "Stone Lilies," as they have been called, from their resemblance to flowers, that I will only briefly allude to them here. The subjoined wood-cut represents one with a closed

cup; but the number of their different patterns is hardly to be counted, and I would invite any one who questions the abundant expression of life in those days to look at some slabs of ancient limestone in the Zoological Museum at Cambridge, where the stems of the Crinoids are tangled together as thickly as sea-weed on the shore. Indeed, some of our rock-deposits consist chiefly of the fragments of their remains.

The Mollusks were also represented then, as now, by their three classes, —

\* See *Methods of Study in Natural History, Atlantic Monthly*, No. LVII., July, 1862.

Acephala, Gasteropoda, and Cephalopoda. The Acephala or Bivalves we shall find in great numbers, but of a very different pattern from the Oysters, Clams, and Mussels of recent times. The annexed wood-cut represents one of these

Brachiopods, which form a very characteristic type of the Silurian deposits. The square cut of the upper edge, where the two valves meet along the back and are united by a hinge, is altogether old-fashioned, and unknown among our modern Bivalves. The wood-cut does not show the inequality of the two valves, also a very characteristic feature of this group, — one valve being flat and fitting closely into the other, which is more spreading and much fuller. These, also, were represented by a great variety of species, and we find them crowded together as closely in the ancient rocks as Oysters or Clams or Mussels on any of our modern shores. Besides these, there were the Bryozoa, a small-kind of Mollusk allied to the Clams, and very busy then in the ancient Coral work. They grew in communities, and the separate individuals are so minute that a Bryozoa stock looks like some delicate moss. They still have their place among the Reef-Building Corals, but play an insignificant part in comparison with that of their predecessors.

Of the Silurian Univalves or Gasteropods there is not much to tell, for their spiral shells were so brittle that scarcely any perfect specimens are known, though their broken remains are found in such quantities as to show that this class also was very fully represented in the earliest creation. But the highest class of Mollusks, the Cephalopods or Chambered Shells, or Cuttle-Fishes, as they are called when the animal is unprotected by a shell, are, on the contrary, very

well preserved, and they are very numerous. Of these I will speak somewhat more in detail, because their geological history is a very curious one.

The Chambered Nautilus is familiar to all, since, from the exquisite beauty of its shell, it is especially sought for by conchologists; but it is nevertheless not so common in our days as the Squids and Cuttle-Fishes, which are the most numerous modern representatives of the class. In the earliest geological days, on the contrary, those with a shell predominated, differing from the later ones, however, in having the shell perfectly straight instead of curved, though its internal structure was the same as it is now and has ever been. Then, as now, the animal shut himself out from his last year's home, building his annual wall behind him, till his whole shell was divided into successive chambers, all of which were connected by a siphon. Some of the shells of this kind belonging to the Silurian deposits are enormous: giants of the sea they must have been in those days. They have been found fifteen feet long, and as large round as a man's body. One can imagine that the Cuttle-Fish inhabiting such a shell must have been a formidable animal. These straight-chambered shells of the Silurian and Devonian seas are called *Orthoceratites* (see wood-cut below).

We shall meet them again hereafter, under another name and with a different form; for, as they advance in the geological ages, they not only assume the curved outline with ever closer whorls till it culminates in the compact coil of the Ammonites of the middle periods, but the partitions, which are perfectly plain walls in these earlier forms, become scalloped and involuted along the edges in the later ones, making the most delicate and exquisite tracery on the surface of the shell.

Of Articulates we find only two classes, Worms and Crustacea. Insects there were none, — for, as we have seen, this early world was wholly marine. There is little to be said of the Worms, for their soft bodies, unprotected by any hard covering, could hardly be preserved; but, like the marine Worms of our own times, they were in the habit of constructing envelopes for themselves, built of sand; or sometimes from a secretion of their own bodies, and these cases we find in the earliest deposits, giving us assurance that the Worms were represented there. I should add, however, that many impressions described as produced by Worms are more likely to have been the tracks of Crustacea.

But by far the most characteristic class of Articulates in ancient times were the Crustaceans. The Trilobites stand in the same relation to the modern Crustacea as the Crinoids do to the modern Echinoderms. They were then the sole representatives of the class, and the variety and richness of the type are most extraordinary. They were of nearly equal breadth for the whole length of the body, and rounded at the two ends, so as to form an oval outline. To give any adequate idea of the number and variety of species would fill a volume, but I may enumerate some of the more striking differences: as, for instance, the greater or less prominence of the anterior shield, — the preponderance of the posterior end in some, while in others the two ends are nearly equal, — the presence or absence of prongs on the shield and of spines along the sides of the body, —

appendages on the head in some species, of which others are entirely destitute, — and the smooth outline of some, while in others the surface is broken by a variety of external ornamentation. Such are a few of the more prominent differences among them. But the general structural features are the same in all. The middle region of the body is always divided in uniform rings, lobed in the middle so as to make a ridge along the back with a slight depression on either side of it. It is from this three-lobed division that they receive their name. The subjoined wood-cut represents a characteristic Silurian Trilobite.

There is no group more prominent in the earliest creations than this one of the Trilobites, and so exclusively do they belong to them, that, as we shall see, in proportion as the later representatives of the class come in, these old-world Crustaceans drop out of the ranks, fall behind, as it were, in the long procession of animals, and are left in the ancient deposits. Even in the Carboniferous period but few are to be found: they had their day in the Silurian and Devonian ages. In consequence of their solid exterior, the preservation of these animals is very complete; and their attitudes are often so natural, and the condition of all their parts so perfect, that one would say they had died yesterday rather than countless centuries ago.

Their geological history has been very thoroughly studied; not only are we familiar with all their adult characters, but

even their embryology is well known to naturalists. It is, indeed, wonderful that the mode of growth of animals which died out in the Carboniferous period should be better known to us than that of many living types. But it is nevertheless true that their embryonic forms have been found perfectly preserved in the rocks, and Barrande, in his "*Système Silurien de la Bohême*," gives us all the stages of their development, from the time when the animal is merely sketched out as a simple furrow in the embryo to its mature condition. So complete is the sequence, that the plate on which their embryonic changes are illustrated contains more than thirty figures, all representing different phases of their growth. There is not a living Crab represented so fully in any of our scientific works as is that one species of Trilobite whose whole story Barrande has traced from the egg to its adult size. Such facts should make those who rest their fanciful theories of the origin and development of life on the imperfection of the geological record, filling up the supposed lapses to suit themselves, more cautious as to their results.

We have found, then, Radiates, Mollusks, and Articulates in plenty; and now what is to be said of Vertebrates in these old times, — of the highest and most important division of the Animal Kingdom, that to which we ourselves belong? They were represented by Fishes alone; and the Fish chapter in the history of the early organic world is a curious, and, as it seems to me, a very significant one. We shall find no perfect specimens; and he would be a daring, not to say a presumptuous thinker, who would venture to reconstruct a fish of the Silurian age from any remains that are left to us. But still we find enough to indicate clearly, the style of those old fishes, and to show, by comparison with the living types, to what group of modern times they belong. We should naturally expect to find the Vertebrates introduced in their simplest form; but this is by no means the case: the common fishes, as Cod, Herring, Mack-

erel, and the like, were unknown in those days.

But there are two groups of so-called fishes, differing from these by some marked features, among which we may find the modern representatives of these earliest Vertebrates. Of these two groups one consists chiefly now of the Gar-Pikes of our Western waters, though the Sturgeons share also in some of their features. In these fishes there is a singular union of reptilian with fish-like characters. The systems of circulation and of respiration in them are more complicated than in the common fishes; the structure of the skull resembles that of the skull in reptiles, and they have other reptilian characters, such as their ability to move the head upon the neck independently of the body, and the connection of the vertebræ by ball-and-socket joint, instead of by inverted cones, as in the ordinary fishes. Their scales are also peculiar, being covered by enamel so hard, that, if struck with steel, they will emit sparks like flint. It is on account of this peculiarity that the whole group has been called Ganoid. Now, though we have not found as yet any complete specimens of Silurian fishes, their disconnected remains are scattered profusely in the early deposits. The scales, parts of the backbone, parts of the skull, the teeth, are found in a tolerable state of preservation; and these indications, fragmentary as they are, give us the clue to the character of the most ancient fishes. A large proportion of them were no doubt Ganoids; for they had the same peculiar articulation of the vertebræ, the flexibility of the neck, and the hard scales so characteristic of our Gar-Pikes.

There is another type of these ancient Vertebrates, which has also its representatives among our modern fishes. These are the Sharks and Skates, or, as the Greeks used to call them, the Selachians, — making a very appropriate distinction between them and common fishes, on account of the difference in the structure of the skeleton. In Selachians the quality of the bones is granular, instead of

fibrous, as in fishes; the arches above and below the backbone are formed by flat plates, instead of the spines so characteristic of all the fish proper; and the skull consists of a solid box, instead of being built of overlapping pieces like the true fish-skull. They differ also in their teeth, which, instead of being implanted in the bone by a root, as in fishes, are loosely set in the gum without any connection with the bone, and are movable, being arranged in several rows one behind another, the back rows moving forward to take the place of the front ones when the latter are worn off. They are unlike the common fishes also in having the backbone continued to the very end of the tail, which is cut in uneven lobes, the upper lobe being the longer of the two, while the terminal fin, so constant a feature in fishes, is wanting. The Selachians resemble higher Vertebrate types not only in the small number of their eggs, and in the closer connection of the young with the mother, but also in their embryological development, which has many features in common with that of birds and turtles. Of this group, also, we find numerous remains in the ancient geological deposits; and though we have not the means of distinguishing the species, we have ample evidence for determining the type.

This combination of higher with lower features in the earlier organic forms is very striking, and becomes still more significant when we find that many of the later types recall the more ancient ones. I have called these more comprehensive groups of former times, combining characters of different classes, synthetic or prophetic types; and we might as fitly give the name of retrospective types to many of the later groups, for they recall the past, as the former anticipate the future. And it is not only among the Fishes and the Reptiles that we find these combinations. The most numerous of the ancient Radiates are the Acalephian Corals, combining, in the Hydroid form, the Polyp-like mode of life, habits, and general appearance with

the structure of *Acalephs*. The Crinoids, with the closed cups in some, and the open, star-like crowns in others, unite features of the present Star-Fishes and Sea-Urchins, and, by their stem attaching them to the ground, include also a Polyp-like character; while the Trilobites, with their uniform rings and their prominent anterior shield, unite characters of Worms and Crustacea.

These early types seem to sketch in broad, general characters the Creative purpose, and to include in the first average expression of the plan all its structural possibilities. The Crinoid forms include the thought of the modern Star-Fishes and Sea-Urchins; the simple chambered shells of the Silurian anticipate the more complicated structure of the later ones; the Trilobites give the most comprehensive expression of the Articulate type; while the early Fishes not only prophesy the Reptiles which are to come, but also hint at Birds and even at Mammalia by their embryonic development and their mode of reproduction.

Looked at from this point of view, the animal world is an intellectual Creation, complete in all its parts, and coherent throughout; and when we find, that, although these ancient types have become obsolete and been replaced by modern ones, yet there are always a few old-fashioned individuals, left behind, as it were, to give the key to the history of their race, as the Gar-Pike, for instance, to explain the ancient Fishes, the Millepore to explain the old *Acalephian* Corals, the *Nautilus* to be the modern exponent of the *Ammonites* and *Orthoceratites* of past times, we cannot avoid the impression that this Creative work has been intended also to be educational for Man, and to teach him his own relation to the organic world. The embryology of the modern types confirms this idea, for here we find an epitome of their geological history. The embryo of the present Star-Fishes recalls the Crinoids; the embryo of the Crab recalls the Trilobites; the embryo of the Vertebrates,

including even that of the higher Mammalia, recalls the ancient Fishes. Does not this fact, that the individual animal in its growth recalls the history of its type, prove that the Creative Thought in its immediate present action embraces all that has gone before, as its first organic expression included all that was to come? The study of Nature in its highest meaning shows us the present doubly rich with all the past, and the past linked and interwoven with the present, not lying divorced and dead behind it.

I have spoken of the Silurian beach as if there were but one, not only because I wished to limit my sketch, and to attempt at least to give it the vividness of a special locality, but also because a single such shore will give us 'as good an idea of the characteristic fauna of the time as if we drew our material from a wider range. There are, however, a great number of parallel ridges belonging to the Silurian and Devonian periods, running from east to west, not only through the State of New York, but far beyond, through the States of Michigan and Wisconsin into Minnesota; one may follow nine or ten such successive shores in unbroken lines, from the neighborhood of Lake Champlain to the Far West. They have all the irregularities of modern sea-shores, running up to form little bays here, and jutting out in promontories there; and upon each one are found animals of the same kind, but differing in species from those of the preceding.

Although the early geological periods are more legible in North America, because they are exposed over such extensive tracts of land, yet they have been studied in many other parts of the globe. In Norway, in Germany, in France, in Russia, in Siberia, in Kamtchatka, in parts of South America, in short, wherever the civilization of the white race has extended, Silurian deposits have been observed, and everywhere they bear the same testimony to a profuse and varied creation. The earth was teeming then with life as now, and in whatever corner of its surface the geolo-

gist finds the old strata, they hold a dead fauna as numerous as that which lives and moves above it. Nor do we find that there was any gradual increase or decrease of any organic forms at the beginning and close of the successive periods. On the contrary, the opening scenes of every chapter in the world's history have been crowded with life, and its last leaves as full and varied as its first.

I think the impression that the faunæ of the early geological periods were more scanty than those of later times arises partly from the fact that the present creation is made a standard of comparison for all preceding creations. Of course, the collections of living types in any museum must be more numerous than those of fossil forms, for the simple reason that almost the whole of the present surface of the earth, with the animals and plants inhabiting it, is known to us, whereas the deposits of the Silurian and Devonian periods are exposed to view only over comparatively limited tracts and in disconnected regions. But let us compare a given extent of Silurian or Devonian sea-shore with an equal extent of sea-shore belonging to our own time, and we shall soon be convinced that the one is as populous as the other. On the New-England coast there are about one hundred and fifty different kinds of fishes, in the Gulf of Mexico two hundred and fifty, in the Red Sea about the same. We may allow in present times an average of two hundred or two hundred and fifty different kinds of fishes to an extent of ocean covering about four hundred miles. Now I have made a special study of the Devonian rocks of Northern Europe, in the Baltic and along the shore of the German Ocean. I have found in those deposits alone one hundred and ten kinds of fossil fishes. To judge of the total number

of species belonging to those early ages by the number known to exist now is about as reasonable as to infer that because Aristotle, familiar only with the waters of Greece, recorded less than three hundred kinds of fishes in his limited fishing-ground, therefore these were all the fishes then living. The fishing-ground of the geologist in the Silurian and Devonian periods is even more circumscribed than his, and belongs, besides, not to a living, but to a dead world, far more difficult to decipher.

But the sciences of Geology and Palæontology are making such rapid progress, now that they go hand in hand, that our familiarity with past creations is daily increasing. We know already that extinct animals exist all over the world: heaped together under the snows of Siberia, — lying thick beneath the Indian soil, — found wherever English settlers till the ground or work the mines of Australia, — figured in the old Encyclopædias of China, where the Chinese philosophers have drawn them with the accuracy of their nation, — built into the most beautiful temples of classic lands, for even the stones of the Parthenon are full of the fragments of these old fossils, and if any chance had directed the attention of Aristotle towards them, the science of Palæontology would not have waited for its founder till Cuvier was born, — in short, in every corner of the earth where the investigations of civilized men have penetrated, from the Arctic to Patagonia and the Cape of Good Hope, these relics tell us of successive populations lying far behind our own, and belonging to distinct periods of the world's history.

In my next article I shall give some account of the marshes and forests of the Carboniferous age, with their characteristic vegetation and inhabitants.

## CORALIE.

PALE water-flowers,  
 That quiver in the quick turn of the brook,  
 And thou, dim nook, —  
 Dimmer in twilight, — call again to me  
 Visions of life and glory that were ours,  
 When first she led me here, young Coralie !

No longer blest,  
 Yet standing here in silence, may not we  
 Fancy or feign  
 That little flowers do fall about thy rest  
 In silver mist and tender-dropping rain,  
 And that thy world is peace, loved Coralie ?

Our friendships flee,  
 And, darkening all things with her mighty shade,  
 Comes Misery.  
 No longer look the faces that we see,  
 With the old eyes ; and Woe itself shall fade,  
 Nor even this be left us, Coralie !

Feelings and fears  
 That once were ours have perished in the mould,  
 And grief is cold :  
 Hearts may be dead to grief ; and if our tears  
 Are failing or forgetful, there will be  
 Mourners about thy bed, lost Coralie !

The brook-flowers shine,  
 And a faint song the falling water has, —  
 But not for thee !  
 The dull night weepeth, and the sorrowing pine  
 Drops his dead hair upon thy young grave-grass,  
 My Coralie ! my Coralie !

---

I TOOK from its glass a flower,  
 To lay on her grave with dull accusing tears ;  
 But the heart of the flower fell out as I handled the rose,  
 And my heart is shattered, and soon will wither away.

I watch the changing shadows,  
 And the patch of windy sunshine upon the hill,  
 And the long blue woods ; and a grief no tongue can tell  
 Breaks at my eyes in drops of bitter rain.

I hear her baby-wagon,  
 And the little wheels go over my heart :  
 Oh, when will the light of the darkened house return ?  
 Oh, when will she come who made the hills so fair ?

I sit by the parlor-window,  
 When twilight deepens, and winds get cold without ;  
 But the blessed feet no more come up the walk,  
 And my little girl and I cry softly together.

---

### SOJOURNER TRUTH, THE LIBYAN SIBYL.

MANY years ago, the few readers of radical Abolitionist papers must often have seen the singular name of Sojourner Truth, announced as a frequent speaker at Anti-Slavery meetings, and as travelling on a sort of self-appointed agency through the country. I had myself often remarked the name, but never met the individual. On one occasion, when our house was filled with company, several eminent clergymen being our guests, notice was brought up to me that Sojourner Truth was below, and requested an interview. Knowing nothing of her but her singular name, I went down, prepared to make the interview short, as the pressure of many other engagements demanded.

When I went into the room, a tall, spare form arose to meet me. She was evidently a full-blooded African, and though now aged and worn with many hardships, still gave the impression of a physical development which in early youth must have been as fine a specimen of the torrid zone as Cumberworth's celebrated statuette of the Negro Woman at the Fountain. Indeed, she so strongly reminded me of that figure, that, when I recall the events of her life, as she narrated them to me, I imagine her as a living, breathing impersonation of that work of art.

I do not recollect ever to have been conversant with any one who had more

of that silent and subtle power which we call personal presence than this woman. In the modern Spiritualistic phraseology, she would be described as having a strong sphere. Her tall form, as she rose up before me, is still vivid to my mind. She was dressed in some stout, grayish stuff, neat and clean, though dusty from travel. On her head she wore a bright Madras handkerchief, arranged as a turban, after the manner of her race. She seemed perfectly self-possessed and at her ease,—in fact, there was almost an unconscious superiority, not unmixed with a solemn twinkle of humor, in the odd, composed manner in which she looked down on me. Her whole air had at times a gloomy sort of drollery which impressed one strangely.

"So, this is *you*," she said.

"Yes," I answered.

"Well, honey, de Lord bless ye! I jes' thought I 'd like to come an' have a look at ye. You 's heerd o' me, I reckon?" she added.

"Yes, I think I have. You go about lecturing, do you not?"

"Yes, honey, that 's what I do. The Lord has made me a sign unto this nation, an' I go round a-testifyin', an' showin' on 'em their sins agin my people."

So saying, she took a seat, and, stooping over and crossing her arms on her knees, she looked down on the floor, and appeared to fall into a sort of reverie.

Her great gloomy eyes and her dark face seemed to work with some undercurrent of feeling; she sighed deeply, and occasionally broke out, —

“O Lord! O Lord! Oh, the tears, an’ the groans, an’ the moans! O Lord!”

I should have said that she was accompanied by a little grandson of ten years, — the fattest, jolliest woolly-headed little specimen of Africa that one can imagine. He was grinning and showing his glistening white teeth in a state of perpetual merriment, and at this moment broke out into an audible giggle, which disturbed the reverie into which his relative was falling.

She looked at him with an indulgent sadness, and then at me.

“Laws, Ma’am, *he* don’t know nothin’ about it, — *he* don’t. Why, I ’ve seen them poor critters, beat an’ ’bused an’ hunted, brought in all torn, — ears hangin’ all in rags, where the dogs been a-bitin’ of ’em!”

This set off our little African Puck into another giggle, in which he seemed perfectly convulsed.

She surveyed him soberly, without the slightest irritation.

“Well, you may bless the Lord you *can* laugh; but I tell you, ’t wa’n’t no laughin’ matter.”

By this time I thought her manner so original that it might be worth while to call down my friends; and she seemed perfectly well pleased with the idea. An audience was what she wanted, — it mattered not whether high or low, learned or ignorant. She had things to say, and was ready to say them at all times, and to any one.

I called down Dr. Beecher, Professor Allen, and two or three other clergymen, who, together with my husband and family, made a roomful. No princess could have received a drawing-room with more composed dignity than Sojourner her audience. She stood among them, calm and erect, as one of her own native palm-trees waving alone in the desert. I presented one after another to her, and at last said, —

“Sojourner, this is Dr. Beecher. He is a very celebrated preacher.”

“*Is he?*” she said, offering her hand in a condescending manner, and looking down on his white head. “Ye dear lamb, I ’m glad to see ye! De Lord bless ye! I loves preachers. I ’m a kind o’ preacher myself.”

“You are?” said Dr. Beecher. “Do you preach from the Bible?”

“No, honey, can’t preach from de Bible, — can’t read a letter.”

“Why, Sojourner, what do you preach from, then?”

Her answer was given with a solemn power of voice, peculiar to herself, that hushed every one in the room.

“When I preaches, I has jest one text to preach from, an’ I always preaches from this one. *My* text is, ‘WHEN I FOUND JESUS.’”

“Well, you could n’t have a better one,” said one of the ministers.

She paid no attention to him, but stood and seemed swelling with her own thoughts, and then began this narration: —

“Well, now, I ’ll jest have to go back, an’ tell ye all about it. Ye see, we was all brought over from Africa, father an’ mother an’ I, an’ a lot more of us; an’ we was sold up an’ down, an’ hither an’ yon; an’ I can ’member, when I was a little thing, not bigger than this ’ere,” pointing to her grandson, “how my ole mammy would sit out o’ doors in the evenin’, an’ look up at the stars an’ groan. She ’d groan an’ groan, an’ says I to her, —

“‘Mammy, what makes you groan so?’

“An’ she ’d say, —

“‘Matter enough, chile! I ’m groanin’ to think o’ my poor children: they don’t know where I be, an’ I don’t know where they be; they looks up at the stars, an’ I looks up at the stars, but I can’t tell where they be.

“‘Now,’ she said, ‘chile, when you ’re grown up, you may be sold away from your mother an’ all your ole friends, an’ have great troubles come on ye; an’

when you has these troubles come on ye, jes' go to God, an' He 'll help ye.'

"An' says I to her, —

" 'Who is God, anyhow, mammy?'

"An' says she, —

" 'Why, chile, you jes' look up *dar* ! It 's Him that made all *dem* !'

"Well, I did n't mind much 'bout God in them days. I grew up pretty lively an' strong, an' could row a boat, or ride a horse, or work round, an' do 'most anything.

" 'At last I got sold away to a real hard massa an' missis. Oh, I tell you, they *was* hard ! 'Peared like I could n't please 'em, nohow. An' then I thought o' what my old mammy told me about God ; an' I thought I 'd got into trouble, sure enough, an' I wanted to find God, an' I heerd some one tell a story about a man that met God on a threshin'-floor, an' I thought, 'Well an' good, I 'll have a threshin'-floor, too.' So I went down in the lot, an' I threshed down a place real hard, an' I used to go down there every day, an' pray an' cry with all my might, a-prayin' to the Lord to make my massa an' missis better, but it did n't seem to do no good ; an' so says I, one day, —

" 'O God, I been a-askin' ye, an' askin' ye, an' askin' ye, for all this long time, to make my massa an' missis better, an' you don't do it, an' what *can* be the reason ? Why, maybe you *can't*. Well, I should n't wonder ef you could n't. Well, now, I tell you, I 'll make a bargain with you. Ef you 'll help me to git away from my massa an' missis, I 'll agree to be good ; but ef you don't help me, I really don't think I can be. Now,' says I, 'I want to git away ; but the trouble 's jest here : ef I try to git away in the night, I can't see ; an' ef I try to git away in the day-time, they 'll see me, an' be after me.'

"Then the Lord said to me, 'Git up two or three hours afore daylight, an' start off.'

"An' says I, 'Thank 'ee, Lörd ! that 's a good thought.'

"So up I got, about three o'clock in the mornin', an' I started an' travelled

pretty fast, till, when the sun rose, I was clear away from our place an' our folks, an' out o' sight. An' then I begun to think I did n't know nothin' where to go. So I kneeled down, and says I, —

" 'Well, Lord, you 've started me out, an' now please to show me where to go.'

"Then the Lord made a house appear to me, an' He said to me that I was to walk on till I saw that house, an' then go in an' ask the people to take me. An' I travelled all day, an' did n't come to the house till late at night ; but when I saw it, sure enough, I went in, an' I told the folks that the Lord sent me ; an' they was Quakers, an' real kind they was to me. They jes' took me in, an' did for me as kind as ef I 'd been one of 'em ; an' after they 'd giv me supper, they took me into a room where there was a great, tall, white bed ; an' they told me to sleep there. Well, honey, I was kind o' skeered when they left me alone with that great white bed ; 'cause I never had been in a bed in my life. It never came into my mind they could mean me to sleep in it. An' so I jes' camped down under it, on the floor, an' then I slep' pretty well. In the mornin', when they came in, they asked me ef I had n't been asleep ; an' I said, 'Yes, I never slep' better.' An' they said, 'Why, you have n't been in the bed !' An' says I, 'Laws, you did n't think o' sech a thing as my sleepin' in dat 'ar *bed*, did you ? I never heerd o' sech a thing in my life.'

"Well, ye see, honey, I stayed an' lived with 'em. An' now jes' look here : instead o' keepin' my promise an' bein' good, as I told the Lord I would, jest as soon as everything got a-goin' easy, *I forgot all about God*.

" 'Pretty well don't need no help ; an' I gin up prayin.' I lived there two or three years, an' then the slaves in New York were all set free, an' ole massa came to our house to make a visit, an' he asked me ef I did n't want to go back an' see the folks on the ole place. An' I told him I did. So he said, ef I 'd jes' git into the wagon with him, he 'd carry me over. Well, jest as I was goin' out

to git into the wagon, *I met God!* an' says I, 'O God, I did n't know as you was so great!' An' I turned right round an' come into the house, an' set down in my room; for 't was God all around me. I could feel it burnin', burnin', burnin' all around me, an' goin' through me; an' I saw I was so wicked, it seemed as ef it would burn me up. An' I said, 'O somebody, somebody, stand between God an' me! for it burns me!' Then, honey, when I said so, I felt as it were somethin' like an *amberill* [umbrella] that came between me an' the light, an' I felt it was *somebody*,—somebody that stood between me an' God; an' it felt cool, like a shade; an' says I, 'Who 's this that stands between me an' G'bd? Is it old Cato?' He was a pious old preacher; but then I seemed to see Cato in the light, an' he was all polluted an' vile, like me; an' I said, 'Is it old Sally?' an' then I saw her, an' she seemed jes' so. An' then says I, 'Who is this?' An' then, honey, for a while it was like the sun shinin' in a pail o' water, when it moves up an' down; for I begun to feel 't was somebody that loved me; an' I tried to know him. An' I said, 'I know you! I know you! I know you!'—an' then I said, 'I don't know you! I don't know you! I don't know you!' An' when I said, 'I know you, I know you,' the light came; an' when I said, 'I don't know you, I don't know you,' it went, jes' like the sun in a pail o' water. An' finally somethin' spoke out in me an' said, '*This is Jesus!*' An' I spoke out with all my might, an' says I, '*This is Jesus!* Glory be to God!' An' then the whole world grew bright, an' the trees they waved an' waved in glory, an' every little bit o' stone on the ground shone like glass; an' I shouted an' said, 'Praise, praise, praise to the Lord!' An' I begun to feel sech a love in my soul as I never felt before,—love to all creatures. An' then, all of a sudden, it stopped, an' I said, 'Dar 's de white folks, that have abused you an' beat you an' abused your people,—think o' them!' But

then there came another rush of love through my soul, an' I cried out loud,—'Lord, Lord, I can love *even de white folks!*'

"Honey, I jes' walked round an' round in a dream. Jesus loved me! I knowed it,—I felt it. Jesus was my Jesus. Jesus would love me always. I did n't dare tell nobody; 't was a great secret. Everything had been got away from me that I ever had; an' I thought that ef I let white folks know about this, maybe they 'd get *Him* away,—so I said, 'I 'll keep this close. I won't let any one know.'"

"But, Sojourner, had you never been told about Jesus Christ?"

"No, honey. I had n't heerd no preachin',—been to no meetin'. Nobody had n't told me. I 'd kind o' heerd of Jesus, but thought he was like General Lafayette, or some o' them. But one night there was a Methodist meetin' somewhere in our parts, an' I went; an' they got up an' begun for to tell der 'periences; an' de fust one begun to speak. I started, 'cause he told about Jesus. 'Why,' says I to myself, 'dat man 's found him, too!' An' another got up an' spoke, an' I said, 'He 's found him, too!' An' finally I said, 'Why, they all know him!' I was so happy! An' then they sung this hymn": (Here Sojourner sang, in a strange, cracked voice, but evidently with all her soul and might, mispronouncing the English, but seeming to derive as much elevation and comfort from bad English as from good):—

'There is a holy city,  
A world of light above,  
Above the stairs and regions,\*  
Built by the God of love.

"An everlasting temple,  
And saints arrayed in white  
There serve their great Redeemer  
And dwell with him in light.

"The meanest child of glory  
Outshines the radiant sun;  
But who can speak the splendor  
Of Jesus on his throne?"

\* *Starry* regions.

"Is this the man of sorrows  
Who stood at Pilate's bar,  
Condemned by haughty Herod  
And by his men of war?"

"He seems a mighty conqueror,  
Who spoiled the powers below,  
And ransomed many captives  
From everlasting woe.

"The hosts of saints around him  
Proclaim his work of grace,  
The patriarchs and prophets,  
And all the godly race,

"Who speak of fiery trials  
And tortures on their way;  
They came from tribulation  
To everlasting day.

"And what shall be my journey,  
How long I'll stay below,  
Or what shall be my trials,  
Are not for me to know.

"In every day of trouble  
I'll raise my thoughts on high,  
I'll think of that bright temple  
And crowns above the sky."

I put in this whole hymn, because Sojourner, carried away with her own feeling, sang it from beginning to end with a triumphant energy that held the whole circle around her intently listening. She sang with the strong barbaric accent of the native African, and with those indescribable upward turns and those deep gutturals which give such a wild, peculiar power to the negro singing, — but above all, with such an overwhelming energy of personal appropriation that the hymn seemed to be fused in the furnace of her feelings and come out recrystallized as a production of her own.

It is said that Rachel was wont to chant the "Marseillaise" in a manner that made her seem, for the time, the very spirit and impersonation of the gaunt, wild, hungry, avenging mob which rose against aristocratic oppression; and in like manner, Sojourner, singing this hymn, seemed to impersonate the fervor of Ethiopia, wild, savage, hunted of all nations, but burning after God in her tropic heart, and stretching her scar-

red hands towards the glory to be revealed.

"Well, den ye see, after a while I thought I'd go back an' see de folks on de ole place. Well, you know, de law had passed dat de culled folks was all free; an' my old missis, she had a daughter married about dis time who went to live in Alabama, — an' what did she do but give her my son, a boy about de age of dis yer, for her to take down to Alabama? When I got back to de ole place, they told me about it, an' I went right up to see ole missis, an' says I, —

"Missis, have you been an' sent my son away down to Alabama?"

"Yes, I have," says she; 'he's gone to live with your young missis.'

"Oh, Missis," says I, 'how could you do it?'

"Poh!" says she, 'what a fuss you make about a little nigger! Got more of 'em now than you know what to do with.'

"I tell you, I stretched up. I felt as tall as the world!"

"Missis," says I, 'I'll have my son back agin!'

"She laughed.

"You will, you nigger? How you goin' to do it? You ha'n't got no money."

"No, Missis, — but God has, — an' you'll see He'll help me!" — an' I turned round an' went out.

"Oh, but I was angry to have her speak to me so haughty an' so scornful, as ef my chile was n't worth anything. I said to God, 'O Lord, render unto her double!' It was a dreadful prayer, an' I did n't know how true it would come.

"Well, I did n't rightly know which way to turn; but I went to the Lord, an' I said to Him, 'O Lord, ef I was as rich as you be, an' you was as poor as I be, I'd help you, — you know I would; and, oh, do help me!' An' I felt sure then that He would.

"Well, I talked with people, an' they said I must git the case before a grand jury. So I went into the town when they

was holdin' a court, to see ef I could find any grand jury. An' I stood round the court-house, an' when they was a-comin' out, I walked right up to the grandest-lookin' one I could see, an' says I to him, —

“ ‘ Sir, be you a grand jury ? ’ ”

“ An' then he wanted to know why I asked, an' I told him all about it ; an' he asked me all sorts of questions, an' finally he says to me, —

“ ‘ I think, ef you pay me ten dollars, that I 'd agree to git your son for you. ’ An' says he, pointin' to a house over the way, ‘ You go 'long an' tell your story to the folks in that house, an' I guess they 'll give you the money. ’ ”

“ Well, I went, an' I told them, an' they gave me twenty dollars ; an' then I thought to myself, ‘ Ef ten dollars will git him, twenty dollars will git him *sartin'.* ’ So I carried it to the man all out, an' said, —

“ ‘ Take it all, — only be sure an' git him. ’ ”

“ Well, finally they got the boy brought back ; an' then they tried to frighten him, an' to make him say that I was n't his mammy, an' that he did n't know me ; but they could n't make it out. They gave him to me, an' I took him an' carried him home ; an' when I came to take off his clothes, there was his poor little back all covered with scars an' hard lumps, where they 'd flogged him.

“ Well, you see, honey, I told you how I prayed the Lord to render unto her double. Well, it came true ; for I was up at ole missis' house not long after, an' I heerd 'em readin' a letter to her how her daughter's husband had murdered her, — how he 'd thrown her down an' stamped the life out of her, when he was in liquor ; an' my ole missis, she giv a screech, an' fell flat on the floor. Then says I, ‘ O Lord, I did n't mean all that ! You took me up too quick. ’ ”

“ Well, I went in an' tended that poor critter all night. She was out of her mind, — a-cryin', an' callin' for her daughter ; an' I held her poor ole head on my arm, an' watched for her as ef

she 'd been my babby. An' I watched by her, an' took care on her all through her sickness after that, an' she died in my arms, poor thing ! ”

“ Well, Sojourner, did you always go by this name ? ”

“ No, 'deed ! My name was Isabella ; but when I left the house of bondage, I left everything behind. I wa'n't goin' to keep nothin' of Egypt on me, an' so I went to the Lord an' asked Him to give me a new name. And the Lord gave me Sojourner, because I was to travel up an' down the land, showin' the people their sins, an' bein' a sign unto them. Afterwards I told the Lord I wanted another name, 'cause everybody else had two names ; and the Lord gave me Truth, because I was to declare the truth to the people.

“ Ye see some ladies have given me a white satin banner, ” she said, pulling out of her pocket and unfolding a white banner, printed with many texts, such as, “ Proclaim liberty throughout all the land unto all the inhabitants thereof, ” and others of like nature. “ Well, ” she said, “ I journeys round to camp-meetins, an' wherever folks is, an' I sets up my banner, an' then I sings, an' then folks always comes up round me, an' then I preaches to 'em. I tells 'em about Jesus, an' I tells 'em about the sins of this people. A great many always comes to hear me ; an' they 're right good to me, too, an' say they want to hear me agin. ”

We all thought it likely ; and as the company left her, they shook hands with her, and thanked her for her very original sermon ; and one of the ministers was overheard to say to another, “ There 's more of the gospel in that story than in most sermons. ”

Sojourner stayed several days with us, a welcome guest. Her conversation was so strong, simple, shrewd, and with such a droll flavoring of humor, that the Professor was wont to say of an evening, “ Come, I am dull, can't you get Sojourner up here to talk a little ? ” She would come up into the parlor, and sit among pictures

and ornaments, in her simple stuff gown, with her heavy travelling-shoes, the central object of attention both to parents and children, always ready to talk or to sing, and putting into the common flow of conversation the keen edge of some shrewd remark.

“Sojourner, what do you think of Women’s Rights?”

“Well, honey, I ’s ben to der meet-ins, an’ harked a good deal. Dey wanted me fur to speak. So I got up. Says I, — ‘Sisters, I a’n’t clear what you ’d be after. Ef women want any rights more ’n dey ’s got, why don’t dey jes’ take ’em, an’ not be talkin’ about it?’ Some on ’em came round me, an’ asked why I did n’t wear Bloomers. An’ I told ’em I had Bloomers enough when I was in bondage. You see,” she said, “dey used to weave what dey called nigger-cloth, an’ each one of us got jes’ sech a strip, an’ had to wear it width-wise. Them that was short got along pretty well, but as for me” — She gave an indescribably droll glance at her long limbs and then at us, and added, — “Tell *you*, I had enough of Bloomers in them days.”

Sojourner then proceeded to give her views of the relative capacity of the sexes, in her own way.

“S’pose a man’s mind holds a quart, an’ a woman’s don’t hold but a pint; ef her pint is *full*, it’s as good as his quart.”

Sojourner was fond of singing an extraordinary lyric, commencing, —

“I ’m on my way to Canada,  
That cold, but happy land;  
The dire effects of Slavery  
I can no longer stand.  
O righteous Father,  
Do look down on me,  
And help me on to Canada,  
Where colored folks are free!”

The lyric ran on to state, that, when the fugitive crosses the Canada line,

“The Queen comes down unto the shore,  
With arms extended wide,  
To welcome the poor fugitive  
Safe onto Freedom’s side.”

In the truth thus set forth she seemed to have the most simple faith.

But her chief delight was to talk of “glory,” and to sing hymns whose burden was, —

“O glory, glory, glory,  
Won’t you come along with me?”

and when left to herself, she would often hum these with great delight, nodding her head.

On one occasion, I remember her sitting at a window singing and fervently keeping time with her head, the little black Puck of a grandson meanwhile amusing himself with ornamenting her red-and-yellow turban with green dandelion-curls, which shook and trembled with her emotions, causing him perfect convulsions of delight.

“Sojourner,” said the Professor to her, one day, when he heard her singing, “you seem to be very sure about heaven.”

“Well, I be,” she answered, triumphantly.

“What makes you so sure there is any heaven?”

“Well, ’cause I got such a hankerin’ arter it in here,” she said, — giving a thump on her breast with her usual energy.

There was at the time an invalid in the house, and Sojourner, on learning it, felt a mission to go and comfort her. It was curious to see the tall, gaunt, dusky figure stalk up to the bed with such an air of conscious authority, and take on herself the office of consoler with such a mixture of authority and tenderness. She talked as from above, — and at the same time, if a pillow needed changing or any office to be rendered, she did it with a strength and handiness that inspired trust. One felt as if the dark, strange woman were quite able to take up the invalid in her bosom, and bear her as a lamb, both physically and spiritually. There was both power and sweetness in that great warm soul and that vigorous frame.

At length, Sojourner, true to her name, departed. She had her mission elsewhere. Where now she is I know not; but she left deep memories behind her.

To these recollections of my own I will add one more anecdote, related by Wendell Phillips.

Speaking of the power of Rachel to move and bear down a whole audience by a few simple words, he said he never knew but one other human being that had that power, and that other was Sojourner Truth. He related a scene of which he was witness. It was at a crowded public meeting in Faneuil Hall, where Frederick Douglas was one of the chief speakers. Douglas had been describing the wrongs of the black race, and as he proceeded, he grew more and more excited, and finally ended by saying that they had no hope of justice from the whites, no possible hope except in their own right arms. It must come to blood; they must fight for themselves, and redeem themselves, or it would never be done.

Sojourner was sitting, tall and dark, on the very front seat, facing the platform; and in the hush of deep feeling, after Douglas sat down, she spoke out in her deep, peculiar voice, heard all over the house, —

“Frederick, is God dead?”

The effect was perfectly electrical, and thrilled through the whole house, changing as by a flash the whole feeling of the audience. Not another word she said or needed to say; it was enough.

It is with a sad feeling that one contemplates noble minds and bodies, nobly and grandly formed human beings, that have come to us cramped, scarred, maimed, out of the prison-house of bondage. One longs to know what such beings might have become, if suffered to unfold and expand under the kindly developing influences of education.

It is the theory of some writers, that to the African is reserved, in the later and palmier days of the earth, the full and harmonious development of the religious element in man. The African seems to seize on the tropical fervor and luxuriance of Scripture imagery as something native; he appears to feel himself to be of the same blood with

those old burning, simple souls, the patriarchs, prophets, and seers, whose impassioned words seem only grafted as foreign plants on the cooler stock of the Occidental mind.

I cannot but think that Sojourner with the same culture might have spoken words as eloquent and undying as those of the African Saint Augustine or Tertullian. How grand and queenly a woman she might have been, with her wonderful physical vigor, her great heaving sea of emotion, her power of spiritual conception, her quick penetration, and her boundless energy! We might conceive an African type of woman so largely made and moulded, so much fuller in all the elements of life, physical and spiritual, that the dark hue of the skin should seem only to add an appropriate charm, — as Milton says of his Penserose, whom he imagines

“Black, but such as in esteem  
Prince Memnon’s sister might beseem,  
Or that starred Ethiop queen that strove  
To set her beauty’s praise above  
The sea-nymph’s.”

But though Sojourner Truth has passed away from among us as a wave of the sea, her memory still lives in one of the loftiest and most original works of modern art, the *Libyan Sibyl*, by Mr. Story, which attracted so much attention in the late World’s Exhibition. Some years ago, when visiting Rome, I related Sojourner’s history to Mr. Story at a breakfast at his house. Already had his mind begun to turn to Egypt in search of a type of art which should represent a larger and more vigorous development of nature than the cold elegance of Greek lines. His glorious Cleopatra was then in process of evolution, and his mind was working out the problem of her broadly developed nature, of all that slumbering weight and fulness of passion with which this statue seems charged, as a heavy thundercloud is charged with electricity.

The history of Sojourner Truth worked in his mind and led him into the deeper recesses of the African nature, — those

unexplored depths of being and feeling, mighty and dark as the gigantic depths of tropical forests, mysterious as the hidden rivers and mines of that burning continent whose life-history is yet to be. A few days after, he told me that he had conceived the idea of a statue which he should call the Libyan Sibyl. Two years subsequently, I revisited Rome, and found the gorgeous Cleopatra finished, a thing to marvel at, as the creation of a new style of beauty, a new manner of art. Mr. Story requested me to come and repeat to him the history of Sojourner Truth, saying that the conception had never left him. I did so; and a day or two after, he showed me the clay model of the Libyan Sibyl. I have never seen the marble statue; but am told by those who have, that it was by far the most impressive work of art at the Exhibition.

A notice of the two statues from the London "Athenæum" must supply a description which I cannot give.

"The Cleopatra and the Sibyl are seated, partly draped, with the characteristic Egyptian gown, that gathers about the torso and falls freely around the limbs; the first is covered to the bosom, the second bare to the hips. Queenly Cleopatra rests back against her chair in meditative ease, leaning her cheek against one hand, whose elbow the rail of the seat sustains; the other is outstretched upon her knee, nipping its forefinger upon the thumb thoughtfully, as though some firm, wilful purpose filled her brain, as it seems to set those luxurious features to a smile as if the whole

woman 'would.' Upon her head is the coif, bearing in front the mystic *uraeus*, or twining basilisk of sovereignty, while from its sides depend the wide Egyptian lappels, or wings, that fall upon her shoulders. The *Sibilla Libica* has crossed her knees,—an action universally held amongst the ancients as indicative of reticence or secrecy, and of power to bind. A secret-keeping looking dame she is, in the full-bloom proportions of ripe womanhood, wherein choosing to place his figure the sculptor has deftly gone between the disputed point whether these women were blooming and wise in youth, or deeply furrowed with age and burdened with the knowledge of centuries, as Virgil, Livy, and Gellius say. Good artistic example might be quoted on both sides. Her forward elbow is propped upon one knee; and to keep her secrets closer, for this Libyan woman is the closest of all the Sibyls, she rests her shut mouth upon one closed palm, as if holding the African mystery deep in the brooding brain that looks out through mournful, warning eyes, seen under the wide shade of the strange horned (ammonite) crest, that bears the mystery of the Tetragrammaton upon its upturned front. Over her full bosom, mother of myriads as she was, hangs the same symbol. Her face has a Nubian cast, her hair wavy and plaited, as is meet."

We hope to see the day when copies both of the Cleopatra and the Libyan Sibyl shall adorn the Capitol at Washington.

## AMERICAN HORTICULTURE.

HORTICULTURE in the United States has, except in a commercial sense, been subordinate to the pursuit of wealth. Before man can indulge in objects of elegance and refinement, he must have secured the comforts of life: the *utile* must lead the *dulce*, a well-stocked kitchen-garden precede the parterre. We have now, however, in the older sections of the Union, at least, passed through the ordeal of a young nation: elegance is following the plain and practical; the spacious mansion, with its luxurious appurtenances, is succeeding the cottage, as this in turn was the successor of the cabin. The perception of the picturesque is a natural result of earlier steps in the path of refinement: man may build from a vulgar ambition for distinction, but he seldom plants unless prompted by love of Nature and elevated impulses. Lord Bacon, in his essay "Of Gardens," says, "When ages grow to civility and elegance, men come to build stately sooner than to garden finely; as if gardening were the greater perfection." A case which seems to confirm this position occurs to us. The site of a noble building, erected for our Government, was adorned by wide-spreading trees, the growth of generations, which, after the building was completed, the architect cut down before his axe could be arrested. On being reproached for his Vandalism, he retorted, — "Trees may be seen everywhere, but such a Grecian portico as that — where?"

Among a young people like ourselves, the nursery and the market-garden hold prominent places in horticultural pursuits; the latter yields a prompt return for the investment of capital and labor, and just in proportion as demand increases, so will be the exertion to meet it. Thus we find the markets of the cities amply supplied with every luxury of fruit and vegetable: the seasons are anticipated by artificial means, glass is

brought into requisition, and the tables of the wealthy are furnished with a profusion unknown to royalty in an earlier age.

The capacity of Americans to mould circumstances to themselves rather than adapt themselves to circumstances, to remove obstacles, to accomplish by the aid of machinery much that other peoples reach through toil alone, has passed into a proverb: hence it need hardly cause surprise, if unexampled success attend efforts at market-gardening, bringing to the very doors of the comparatively poor vegetables and fruits which in Europe are enjoyed only by the higher classes. As an illustration, — where but in America are peaches planted by a single individual by tens of thousands, and carried to market on steamboats chartered for the special purpose, in quantities of one or two thousand bushels at a trip?

The earlier American nurseries were few in number, and, compared with some now existing, of quite limited extent, — though equal, perhaps, in proportion to population. The first of which there is any record, and probably the earliest established, was that of John Bartram, near Philadelphia, about the year 1730. Here were congregated many of the prominent native plants and trees, preparatory to exportation to Europe, — also the fruits and plants of the other hemisphere, obtained in exchange for American productions. The specimen trees planted by the elder Bartram and his descendants still adorn the grounds, classic to the botanist and the lover of Nature: long may they stand, living memorials of generations passed away, our earliest evidence of a taste for horticulture!

The next nursery in the order of date is that of Prince, in Flushing, New York, established, we believe, prior to the Revolution, and continued by the family to the present day. Flushing has become a centre in the nursery-trade, and many acres

thereabout are covered with young trees intended for transplantation. A stroll round the village would lead one to suppose the chief interest of the inhabitants was bound up in the nursery-business, as is that of Lynn in shoes, and of Lowell in cotton goods. Prominent among the Flushing nurseries are those of Parsons, which, though of comparatively recent origin, abound in rich treasures.

The nurseries of the brothers David and Cuthbert Landreth appear to have been the third in the order of succession. They were established at Philadelphia shortly after the Revolution, and within the limits of the city. The increase of population and their expanding trade caused a removal to another and more ample field of culture, which, for nearly half a century, was the resort of most people of taste who visited Philadelphia.

Nurseries are now found everywhere. The Far West has some which count the young trees by millions, and fruit-trees of single kinds by the hundred thousand. The Hoveys, of Boston, have long been prominent, not only as nurserymen, but as writers on horticulture. Elwanger and Barry, of Rochester, New York, have a large breadth of land, we forbear to state our impression of the number of acres, covered by nursery-stock. Professional florists also have multiplied to an unlimited extent, exhibiting the growth of refining taste. Plants suited to window-culture, and bouquets of choice flowers, are sold on street-corners, and carried from door to door. Camellias, of which we recollect single flowers having been sold at a dollar, can now be purchased at fifty cents the plant.

It might be curious, in reference to this subject of horticulture, to institute an inquiry as to cause and effect. Have the increased means of gratifying taste expanded it, or has taste rapidly developed created the means of supply? Doubtless there has been reaction from both directions, each operating on the other. One striking exhibition of pure taste among us is the formation of picturesque

arboretums, especially of terebinthinate trees, and others allied to the Coniferæ. This taste, so diligently cultivated in England, has found zealous worshippers among us, and some admirable collections have been formed. The cemetery of Laurel Hill, at Philadelphia, under the critical eye and taste of the proprietor, Mr. John Jay Smith, that of Mount Auburn, in Cambridge, of Greenwood, New York, and the cemetery in Cincinnati, have afforded fine specimens of rare trees, though, from the nature of their purposes, picturesque effect could not be reached, except so far as aided by irregularity of surface. And here we would remark, in connection with this subject, that one regulation of the Cincinnati cemetery is worthy of imitation. No arbitrary railings or ill-kept hedges bound the individual lots; all is open, and the visitor, as he drives through the grounds, is charmed by the effect, — a park studded with monuments: the social distinctions, which, perhaps, necessarily separated in life, have disappeared in death.

In connection with landscape-gardening, one American name stands conspicuous, — the name of one who, if not, in point of time, the first teacher of the art in this country, has at least done more than any other to direct attention to it, — to exhibit defects, suggest improvements, create beauties, and invest his subject with such a charm and interest as to captivate many minds which might otherwise have been long insensible to the dormant beauty within their reach, or that which they themselves had the power to produce: we refer, of course, to the late Andrew J. Downing. With naturally fine artistic perceptions, his original occupation of a nurseryman gave direction to his subsequent pursuits. Under different circumstances, his taste might, perhaps, have been turned to painting, sculpture, or architecture: indeed, to the last he paid no inconsiderable attention; and as the result, many a rural homestead, which might otherwise have been a bleak house, is conspicuous as the abode of taste and elegance.

Among the prominent private arbore-tums in our country may be mentioned that of Mr. Sargent at Wodeneshe. Mr. Sargent, as may be seen by his supplement to Downing's "Landscape-Garden-ing," is an enthusiast in the culture of conifers; he is reputed to have made liberal importations, and the results of his attempts at acclimation, given to the public, have aided others in like endeavors. Judge Field, of Princeton, New Jersey, has a pinetum of much value; some of his specimens are of rare excellence. He, also, has been a diligent importer.

Though our sketch of the present state of horticulture among us is quite imperfect, affording but an indistinct glimpse of the ample field which invites our view, it would scarcely be pardonable, were we to overlook a branch of rural industry in which horticultural success is interested, and without which the practical pleasures and family-comfort of rural homes would be greatly abridged. We refer to garden-seed culture. It may be that the purchaser of a paper of seed for the kitchen-garden seldom stops to consider the minute care which has been required to secure its purity; most probably, in many cases, he makes the purchase as though it were the mere product of mechanical skill, which, after the machinery is perfected, and the steam-engine has been set in motion, turns out the finished article, of use or ornament, with scarcely an effort of mind to direct its movements. Not so in the production of seeds: many are the hours of watchful care to be bestowed upon it, and stern and unyielding are its demands on the skilled eye and the untiring hand. It is because in some cases the eye is not skilled, and the hand often tires, that so many seeds of more than doubtful worth are imposed upon the market, filling the village and cross-road shops with the germs of disappointment. The history of the seed-culture in the United States is not without interest to those who, like many readers of the "Atlantic," reside in the quiet country; to every family thus sit-

uated the certainty of obtaining seeds of trustworthy quality—certain to vegetate, and sure to prove true to name—is of more importance than can be appreciated by those who rely upon the city-market, and have at all times and seasons ample supplies of vegetables within easy reach. On looking round for some individual establishment which we may use as the representative of this branch of industry, we naturally turn to Bloomsdale, as the most prominent and widest-known of seed-farms; and if the reader will join us in a trip thither, we shall be pleased with his company, and perchance he may not wholly regret the time occupied in the excursion. The period we shall choose for the visit is the close of the month of June.

On a bright day we take our seats in the cars at Jersey City, provided with the talisman to insure an attentive reception. Onward we whirl through fertile fields and smiling villages; Newark, Brunswick, Princeton, are successively passed; shortly we reach the Delaware at Trenton; a run of a few miles through Penn's Manor, the garden-spot of the Proprietary Governor, brings us to Bristol, the station from which we most readily reach our destination. As we approach the grounds from the front, a prominent object meets the eye, a noble white pine of gigantic proportions, somewhat the worse for many a winter's storm, but which still stands in all its majestic grandeur, as it has stood whilst generations have come and passed away. On entering the premises, we find ourselves in the midst of a lawn of ten acres in the English style. To enumerate the various trees, in groups or single specimens, which most invite our notice, would interfere with the main object of our visit. We have come for a special purpose, and we can only allude to a very few of the species to which our attention may be supposed to be directed. A white spruce, in rich luxuriance, measuring, as the branches trail upon the sward, upwards of sixty feet in circumference; the Himalayan white pine, with its deep

fringe-like foliage, twenty-five feet in height; the Cephalonian fir, with leaves as pungent as an *Auricularia*, twenty feet high, and many specimens of the same kind of nearly equal magnitude; yews, of more than half a century's growth; a purple beech, of thirty feet in height, its branches as many in circumference, contrasting with the green around; numerous specimens of balm of Gilead, silver firs, and Norway spruces, unsurpassed in beauty of form, the last presenting every variety of habit in which it delights to sport: these are some of the gems of the lawn. But we must hurry onward to the practical business in view.

The harvest, which, in seed-culture, lasts for many consecutive weeks, has just commenced. The first important crop that ripens is the turnip, — which is now being cut. The work is performed by the use of grass-hooks or toothless sickles; stem after stem is cut, until the hand is full, when they are deposited in canvas sheets; as these are filled, boys stand ready to spread others; men follow to tie up those which have been filled; others succeed, driving teams, and loading wagons, with ample shelvings, with sheet-full piled on sheet-full, until the sturdy oxen are required to test their strength in drawing them to the drying-houses; arrived there, each sheet-full is separately removed by rope and tackle, and the contents deposited on the skeleton scaffolding within the building, there to remain until the seed is sufficiently cured and dry enough to thresh. These drying-houses are buildings of uniform character, two stories in height and fifty feet square, constructed so as to expose their contents to sun and air, and each provided with a carefully laid threshing-floor, extending through the building, with pent-house for movable engine. When the houses are full and the hulk in a fit state for threshing, the engine is started and the work begun. One man, relieved by others from time to time, (for the labor requires activity, and consequently is exhausting,) feeds the thresher, which, with its armed teeth, moves with such velocity as to ap-

pear like a solid cylinder. Here there is no stopping for horses to take breath and rest their weary limbs, — puff, puff, onward the work, — steam as great a triumph in threshing as in printing or spinning. Men and boys are stationed at the rear of the thresher to remove the straw, and roughly separate the seed from the shattered hulk, — others again being engaged in thrusting the dried crop from the scaffolds, and placing it in suitable position for the feeders. When one drying-house has thus been emptied, the engine is removed to another; the same process is pursued until the circuit of the buildings has been made, and thus the ceaseless round (ceaseless at least for a season) is continued. As soon as the crop in the first house has been threshed, the work of winnowing is commenced, and skilled hands thus engaged follow on in the track of the engine. As each crop is cleaned and put in merchantable order, it is placed in bags of two bushels each and carried to the storehouses and granaries, there to await a requisition from the city-warehouse.

We have just witnessed the process of saving the crop of turnip-seed. And how much may that reach? is a natural inquiry. Of all the varieties, including the *ruta-baga*, about one thousand bushels, is the response. We should have thought a thousand pounds would supply the entire Union; but we are reminded it is in part exported to far distant lands. And what is the crop so much like turnip, but still green, and apparently of more vigorous growth? That is one of the varieties of cabbage, of which several standard kinds are under cultivation. Another adjoining is radish; still another, beet; and thus we pass from kind to kind, until we have exhausted a long catalogue of sorts.

Let us stop our walk over the grounds for a few moments, taking seats under the shadow of a tree, and make some inquiries as to the place itself, its extent, the course of culture, the description of manures used, etc. Our cicerone assents to the proposal, and proceeds to

answer our general inquiries. Bloomsdale contains in round numbers four hundred acres; it has a frontage on the Delaware of upwards of a mile, is bounded on the west by the Delaware Canal, and is divided into two nearly equal parts by the Philadelphia and Trenton Railroad. The soil is a light loam, easily worked, suited to rapid percolation, admitting of labor immediately after heavy rain, and not liable to suffer by drought. The manures used are principally crude, obtained from the city, and landed on the premises from shallops continually plying, laden with the "sinews of farming." Street-scrapings are more used than stable-manure; bone-dust and guano enter largely into the account; and the aggregate annual expenditure foots up a sum almost equivalent to the fee-simple of an ordinary farm. The culture is that denominated drill; but of course much of it is simply straight lines drawn by the plough, in which the roots for seeding are planted by hand. The ground, with the exception of the lawn and a portion occupied from time to time by grass for home use, is divided by wagon-roads into squares and parallelograms; cross fences are not used; and each crop forms a distinct feature, accessible at any stage of growth. The several varieties of each kind, as, for instance, those of turnip, cabbage, beet, lettuce, are planted widely apart, to guard against possible admixture; but the chances of that result must be much less than is popularly supposed, efforts having been used experimentally to test its practicability, and that between kindred closely allied, without success. Although the extent of the grounds would

appear to be formidable, even for a farm conducted in the usual mode, it is insufficient for the demands on the proprietors, without diligent exertion and prompt recropping, — two crops in each year being exacted, only a small part of the land escaping double duty, the extent annually ploughed thus amounting to nearly twice the area of the farm. The heavy hauling is performed by oxen, the culture principally by mules, which are preferred to horses, as being less liable to injury, and better adapted to the narrow drill culture practised.

The seeds of Bloomsdale have attained a world-wide reputation, and, to quote an expression used in reference to them, "are almost as well known on the Ganges as on the Mississippi or Ohio." They are regularly exported to the British possessions in India, to the shores of the Pacific, throughout the West Indies, and occasionally to Australia. The drier atmosphere of this country ripens them better than the humid climate of England, adapting them to exportation; and it is no slight triumph to see them preferred by Englishmen on English soil. At home, thousands of hamlets, south and west of Philadelphia, until interrupted by the war, were supplied with Landreth's seeds. The business, founded nearly three-quarters of a century ago, is now conducted by the second and third generations of the family with which it originated. Thus has success been achieved through long and patient industry steadily directed to the same pursuit, and a reputation built up for American seeds, despite the want of national protection.

## THE EAST AND THE WEST.

[This poem was written by THEODORE WINTHROP seven years ago, and after his death was found among his unpublished papers.]

WE of the East spread our sails to the sea,  
 You of the West stride over the land;  
 Both are to scatter the hopes of the Free,  
 As the sower sheds golden grain from his hand.

'T is ours to circle the stormy bends  
 Of a continent, yours its ridge to cross;  
 We must double the capes where a long world ends,  
 Lone cliffs where two limitless oceans toss.

They meet and are baffled 'mid tempest and wrath,  
 Breezes are skirmishing, angry winds roar,  
 While poised on some desperate plunge of our path  
 We count up the blackening wrecks on the shore.

And you through dreary and thirsty ways,  
 Where rivers are sand and winds are dust,  
 Through sultry nights and feverish days,  
 Move westward still as the sunsets must:

Where the scorched air quivers along the slopes,  
 Where the slow-footed cattle lie down and die,  
 Where horizons draw backward till baffled hopes  
 Are weary of measureless waste and sky.

Yes, ours to battle relentless gales,  
 And yours the brave and the patient way;  
 But we hold the storms in our trusty sails,  
 And for you the life-giving fountains play.

There are stars above us, and stars for you, —  
 Rest on the path, and calm on the main:  
 Storms are but zephyrs, when hearts are true;  
 We are no weaklings, quick to complain,

When lightnings flash bivouac-fires into gloom,  
 And with crashing of forests the rains sheet down, —  
 Or when ships plunge onward where night-clouds loom,  
 Defiant of darkness and meeting its frown.

These are the days of motion and march;  
 Now we are ardent, and young, and brave:  
 Let them that come after us build the arch  
 Of our triumph, and plant with the laurel our grave.

Time enough to rear temples when heroes are dead,  
 Time enough to sing pæans after the fight:

Prophets urge onward the future's tread ;  
We, — *we* are to kindle its beacon-light.

Our sires lit torches of quenchless flame  
To illumine our darkness, if night should be ;  
But day is a friend to our standards, and shame  
Be ours, if we win not a victory !

Man is nobler than men have been,  
Souls are vaster than souls have dreamed ;  
There are broader oceans than eyes have seen,  
Noons more glowing than yet have beamed.

Creeping shadows cower low on our land ;  
These shall not dim our grander day :  
Stainless knights must be those who stand  
Full in the van of a world's array !

When shall we cease our meagre distrust ?  
When to each other' our true hearts yield ?  
To make this world an Eden, we must  
Fling away each weapon and shield,

And meet each man as a friend and mate,  
Trample and spurn and forget our pride,  
Glad to accept an equal fate,  
Laboring, conquering side by side.

---

## PERSONAL REMINISCENCES OF THE LATE HENRY THOMAS BUCKLE.

*Cairo, Egypt, February 6th, 1862.*  
I am afraid I repeat myself in talking about the beauty of the climate here, but to-day is so lovely that I cannot refrain from recurring to the subject. While you are shivering under the blasts of winter, we have a genuine June morning : the air soft and pure, the atmosphere clear, innumerable birds chirping in the trees opposite the windows, (for the Arabs never interfere with birds,) and the aspect of things from our balcony overlooking the Esbekieh, or public square, as pleasant as one could wish. The beautiful weather, too, is constant.

But I must tell you of my dining yes-

terday with Mrs. R., to meet Mr. Buckle, the author of the *History of Civilization*, who has just returned from his two or three months' voyage upon the Nile, in which he pushed as far as Nubia. He is now staying for a little while in Cairo, or rather in his *dahabieh*, or boat, (which he says is more comfortable than any hotel,) moored in the river at Boolak, the port of the town. Mrs. R., the daughter of Lady Duff Gordon, and granddaughter of Mrs. Austin, is a most attractive and accomplished young lady ; her husband is the manager in Egypt of the great banking-house of Briggs and Company, in which he is a partner. Their

usual residence is at Alexandria; but at this season "all the world" of Egypt comes to Cairo, to enjoy the beautiful weather here, while it is raining incessantly in Alexandria, only a hundred and thirty miles distant. Mrs. R., in asking Mr. Thayer, our Consul-General, to meet Mr. Buckle, with very great kindness included me in the invitation. The only other lady present was Miss P., a niece of the late Countess of Blessington, herself the author of several pleasant stories, and of a poem which gained a prize in competition with one by Mrs. Browning and another by Owen Meredith: she is spending the winter with Mrs. R. There were also present C., who conducts the house of Briggs and Company in Cairo; O., another banker; and Hekekyan Bey, an Armenian, a well-read and intelligent man, formerly Minister of Public Instruction under Mehemet Ali, and still, I believe, in receipt of a pension from the Viceroy's government, in consideration of his public services, which have been valuable.

The dinner was at an hotel called the Restaurant d'Auric. We assembled in Mrs. R.'s drawing-room, an apartment in the banking-house at a little distance, and walked to the hotel. The company fell into two groups, each lighted by a swarthy *boab* or lackey carrying a *mashal* or lantern; and I happened to walk with Mr. Buckle, so that I had a brief talk with him in the street, before the general conversation began at the table. He remarked upon the extraordinary devotion exhibited by Delane of the London Times to the interests and politics of Lord Palmerston. Becoming interested in our conversation, we strayed away from the rest, and were walking about a quarter of a mile down the *bazaar*, when (are you surprised to hear?) Mr. Buckle was missed, the two *boabs* came running after us, and we were cited to the dinner-table.

Buckle, of course, was the card. He talked with a velocity and fulness of facts that was wonderful. The rest of us could do little but listen and ask ques-

tions. And yet he did not seem to be lecturing us; the stream of his conversation flowed along easily and naturally. Nor was it didactic; Buckle's range of reading has covered everything in elegant literature, as well as the ponderous works whose titles make so formidable a list at the beginning of his History, and, as he remembers everything he has read, he can produce his stores upon the moment for the illustration of whatever subject happens to come up.

In the first place, let me say how delightful it was to discover his cordial interest in our own country. He expresses a strong hope that England will take no part against us, and do nothing to break the blockade. He is going to write about America; indeed, his next volume, besides containing a complete view of the German philosophy, will treat of the United States. But he will visit us before he writes. Although appreciating the great work of De Tocqueville, he complains of the general inadequacy of European criticism upon America. Gasparin's books, by the way, he has not seen. For his own part, he considers the subject too vast, he says, and the testimony too conflicting, to permit him to write upon it before he has seen the country; and meanwhile he scrupulously refrains from forming any conclusive opinions.

Subject to this reservation of judgment, however, he remarked that he was inclined to think that George III. forced us prematurely into democracy, although the natural tendency of things both in America and England was towards it; and he thought that perhaps we had established a political democracy without having yet achieved an intellectual democracy: the two ought to go hand in hand together. The common people in England, he said, are by far the most useful class of society. He had been especially pleased by the numerous letters he had received from working-men who had read his book. These letters often surprised him by the acuteness and capacity displayed by their writers. The

nobility would perish utterly, if it were not constantly recruited from commoners. Lord Brougham was the first member of the secular peerage who continued after his elevation to sign his name in full, "H. Brougham," which he did to show his continued sympathy with the class from which he sprang. Buckle remarked that the history of the peasantry of no European country has ever been written, or ever can be written, and without it the record of the doings of kings and nobles is mere chaff. Surnames were not introduced until the eleventh century, and it is only since that period that genealogy has become possible.

Another very pleasant thing is Mr. Buckle's cordial appreciation of young men. He repeated the story, which I believe is in his book, that, when Harvey announced to the world his great discovery of the circulation of the blood, among the physicians who received it was none above the age of forty. Mr. Thayer described to Buckle some of our friends who have read his book with especial satisfaction. He evidently took pleasure in this proof of appreciation, and said that this was the class of readers he sought. "In fact, the young men," he said, "are the only readers of much value; it is they who shape the future." He said that Thackeray and Delane had told him he would find Boston very like England. He knows but few Bostonians. He had corresponded with Theodore Parker, whom he considered a remarkable man; he had preserved but one of his letters, which he returned to Mrs. Parker, in answer to her request for materials to aid her in preparing the memoir of her late husband. Buckle says that he does not generally preserve other than business-letters.

Mr. Buckle gave an amusing account of the origin of the wigs which the lawyers wear in England, and which, by the way, struck me as infinitely ludicrous when I saw them on the heads of the judges and counsel in Westminster Hall. Originally the clergy were forbidden to practise law, and, as they were the best

lawyers, the wig was worn to conceal the tonsure. He had anecdotes to tell of Johnson, Lamb, Macaulay, Voltaire, Talleyrand, etc., and quoted passages from Burke and from Junius at length in the exact words. Junius he considers proved to be Sir Philip Francis. He told a good story against Wordsworth, contained in a letter from Lamb to Talfourd, which the latter showed to Buckle, but had considered among the things too personal to be published. Wordsworth was decrying Shakspeare. "Pooh!" he said, "it is all very easy: I could write like Shakspeare myself, if I had a mind to!" "Precisely so," rejoined Lamb,—*"if you had a mind to."*

Mr. Buckle does not think much of the ancient Egyptian civilization, differing in this respect *toto cælo* from Hekekyan Bey, who finds in the monuments proofs of the existence of an expansive popular government. Buckle declares that the machines, as figured in the hieroglyphics, are of the most primitive kind,—and that the learning, by all accounts, was confined to the priests, and covered a very narrow range, exhibiting no traces of acquaintance with the higher useful arts. He says it is a fallacy to suppose that savages are bodily superior to civilized men. Captain Cook found that his sailors could outwork the islanders. I remarked, in confirmation, that our Harvard boat-clubs won the prizes in rowing-matches against all comers. Buckle seemed interested, and asked for a more particular account, which, of course, I took great pleasure in giving. C., like a true Englishman, doubted the general fact, and said the Thames watermen out-rowed their university-clubs.

For Turkish civilization Mr. Buckle has not the slightest respect,—said he could write the whole of it on the back of his hand; and here Hekekyan Bey cordially agreed with him. Buckle is very fond of chess, and can play two games at once blindfold. He inquired very particularly about a native here who it is said can play four or six in this manner, and said he should like to try a

game with him. He had seen Paulsen, but not Morphy.

Mr. Thayer asked him if in England he had been subjected to personal hostility for his opinions, or to anything like social ostracism. He said, generally not. A letter from a clergyman to an acquaintance in England, expressing intense antipathy to him, although he had never seen the writer, was the only evidence of this kind of opposition. "In fact," said he, naively, "the people of England have such an admiration of any kind of *intellectual splendor* that they will forgive for its sake the most objectionable doctrines." He told us that the portion of his book which relates to Spain, although by no means complimentary to that country, has been translated and published separately there. T. remarked that to this circumstance, no doubt, we may ascribe some part of the modern regeneration of Spain, the leading statesmen being persuaded to a more liberal policy; but this view Buckle disclaimed with an eagerness seeming to be something more than the offspring of modesty.

After dinner we returned to Mrs. R.'s apartments, where we had tea. Buckle and Hekeleyan now got into an animated discussion upon the ancient Egyptian civilization, which scarcely gave the rest of us a chance to put in a single word. It was, however, exceedingly interesting to sit and listen. Indeed, although there was nothing awful about Buckle, one felt a little abashed to intrude his own remarks in such a presence. You will be amused to hear that Mrs. R., who had seen me but once before, told T. that she did not think I seemed to have much to say for myself. Pray tell this in circles where they accuse me of monopolizing the conversation. We stayed until nearly midnight, and then, taking our leave, Buckle accompanied T. and myself as far as the door of our hotel. Buckle received most kindly all suggestions made to him of books to be read upon American affairs, and people to be seen in the United States.

*February 7th.* To-day we made a

party to drive to see the Howling Dervishes, who howl on Fridays. Friday is sometimes called "the Mahometan Sunday," which is a correct phrase, if the especial celebration of religious services is meant; but it is not at all a day of rest: we found the people continuing their various avocations as usual. At the mosque we met Mr. Buckle, a little careless in his dress, — in this respect affording a not disagreeable contrast to the studied jauntiness which Englishmen are apt to affect in their travelling-gear. Nobody is allowed to press the floor of the mosque with shoes upon the feet. T. and I, warned by our former experience, had brought pieces of cotton cloth to tie over our shoes; and some cloth slippers of a bright orange color, such as the Arabs are fond of using, had been provided, which Miss P. slipped directly over her walking-boots. Buckle, with careless indifference, pulled off his shoes and walked in in his stocking feet. His figure is tall and slender, although he is a large man; he stoops a little in standing; his head, well-shaped, is partly bald; and although his features are not striking in themselves, they are rendered so by his animated expression. The photograph which I have seen is a wretched caricature.

The performances of the Dervishes were precisely the same as those which I witnessed in the same place a fortnight ago, and may be found most exactly described by Mr. Trollope (who saw them two or three years since) in his admirable novel of "The Bertrams," Chapter 38. If I desired to tell you what we saw, I could not do better than to adopt Mr. Trollope's language without alteration. This will prove to you the sameness of this singular religious rite. Driving back, Miss P. helped us to recall some of the incidents of the dinner of the preceding day. She used to see almost all the distinguished literary characters at the house of her aunt; but she told us that she never met anybody whose conversation could bear comparison with that of Buckle, excepting Lord Brougham and Alexander Du-

mas. The latter disgusts by his insufferable egotism. Miss P. also gave us a very entertaining account of an Arab wedding which she attended a day or two ago in company with Mrs. R. As soon as they were inside the house they were separated from their escort, and were admitted to the apartment where the bride was obliged to sit in state for three days, covered with jewelry, clusters of diamonds literally plastered upon her cheeks and forehead.

*February 10th.* Yesterday Mr. Thayer entertained Mr. Buckle at dinner. The party included Mrs. R. and some of the guests whom we had met at her table. We had hoped also for the presence of Mr. R., who was expected to come up from Alexandria; but the train failed to bring him. Mr. Thayer also invited Sir James Outram, but he is too unwell to come, although expressing himself pleased with the invitation. The landlord of the hotel where the consul-general is staying (Hotel des Ambassadeurs) was very proud of the occasion, and the entertainment, although simple, was elegant. An oval table was found of exactly the right size to seat eight. Buckle was in excellent spirits, and, as before, was the life of the party. We had been terribly afraid lest he and Hekekyan should get into another long disputation, for the excellent Bey has fortified himself with new materials; but the ladies were taken into our confidence to aid in turning the conversation, if it should be necessary, all of which made a great deal of entertainment; but there proved to be no occasion for anything of the sort.

Buckle told some capital stories: among them, one against Alison, almost too good to be true, namely, that in the first edition of his *History* he mentioned among the causes of the French Revolution "the timber-duty," because he had read in a French pamphlet that there were popular discontents about the *droits de timbre*.\*

\* It is fair to say that an examination of the chapter on the causes of the French Revolution, in several editions of Alison's *History*, including the first, gives this story no support.

Alison's *History*, he said, is the very worst that ever was written. He cited a good definition, (Addison's, I believe,) that "fine writing is that which is true without being obvious." In the course of the conversation, in which, as before, Buckle touched points in the whole circle of literature and science, giving us quotations even in Hebrew from the Talmud and the Bible, he made a very pretty compliment to our host, introduced as adroitly as from the lips of a professed courtier, but evidently spoken on the moment. It was something in this way. Hekekyan and Buckle were in an argument, and Buckle said, "Ah, you mistake a necessary condition for the cause." "What is cause but necessary condition?" asked Hekekyan. "Very different: two men can't fight a duel without meeting, but every two men who meet don't fight a duel." "But they could n't fight a duel without meeting," persisted Hekekyan. "Yes," rejoined Buckle; "but the meeting is n't the cause of the duel. Why, there could not be a dinner-party, unless the company met; but our meeting here to-day is n't the cause of the dinner: the cause of the dinner is the kindness of our host." "Or rather, of the landlord," said N. "Oh, no! of the American government," said C. "Ah," said Buckle, "those things are not the cause: the cause of our good dinner, I maintain, is only the charming hospitality of the consul-general." Is not this metaphysics made easy, and prettily employed?

After dinner we had tea and coffee; the ladies, in Egypt, could scarcely do less than allow tobacco, and Mr. Buckle particularly enjoyed some choice cigars which T. was able to offer him. The party did not break up until nearly midnight, when all the guests retired together.

*February 11th.* To my pleasure, the train from Alexandria yesterday afternoon brought Mr. B., of New York, and his very agreeable family, with whom I crossed the Atlantic in the Persia last October. They went at first to another

hotel, but to-day they have determined to come to that at which we are staying. I called upon them on their arrival, and asked the gentlemen to join us at dinner, and afterwards in going, in company with Mr. Buckle, whom Mr. Thayer had previously invited, to attend a *fantasia*, or exhibition of singing and dancing, by Arab professionals, at the house of Mr. Savallan, a wealthy French banker, who has lived a long time in the Levant and has in some degree adopted Oriental customs. He has lately sold to the Viceroy a tooth-brush, comb, and hair-brush, for the handsome price of fourteen thousand dollars. They were doubtless richly set with jewels; but the profit on these transactions is immense. Mr. B. accepted the invitation for dinner, and Mr. W. joined us afterwards.

At dinner I was seated next to Mr. Buckle, and thus had an opportunity for private conversation. He asked about American books, and told me his opinion of those he had read. He said that Quincy's History of Harvard University was the latest book on America he received before leaving England. He preferred Kent's exposition of the United States Constitution to Story's, although this also he had consulted and used. He had not seen Mr. Charles Francis Adams's complete edition of the works of his grandfather, nor Parton's Life of Jackson, both of which I begged him to read, particularly the chapters in the former in which are traced the steps in the progress of making the American Constitutions. He told me about his library in London, which is surpassed (among private libraries) only by that belonging to Mr. Van de Weyer, the Belgian Minister, whose wife is the daughter of our Bostonian Mr. Bates, of Barings. Buckle, has twenty-two thousand volumes, all selected by himself; and he takes great pleasure in them. He spends eight or nine hundred pounds a year upon his library. He owns copies of all the books referred to in his History; some of them are very old and rare. He also possesses a considerable collec-

tion, made likewise by himself, of curiosities in natural history; he has added largely to it in Egypt, where, in fact, he has been buying with open hands. He said he could not be perfectly happy in leaving the country, if obliged to go away without a crocodile's egg, a trophy which as yet he has been unable to obtain.

He told me his plan of travel in America. He will not set out until our domestic troubles are composed, for he desires to see the practical working of our institutions in their normal state, not confused and disturbed by the excitements of war. He would go first to Boston and New York, the intellectual and commercial heads (as he said) of the republic,—and to Washington, the political capital. He would then like to pass from the Northern into the Southern States, but asked if he could travel safely in the latter, in view of his extreme opinions in detestation of slavery. I assured him that nobody would dare to molest one so well known, even if our war did not abate forever the nuisance of lynching, to say nothing of its probable effect in promoting the extinction of slavery. From the Southern States he said he would wish to pass into Mexico, thence to Peru and to Chili; then to cross the Pacific Ocean to Japan, to China, to India, and so back by the overland route to England. This magnificent scheme he has seriously resolved upon, and proposes to devote to it two or three years. He undertakes it partly for information and partly for relaxation of his mental faculties, which he has injured by overwork, and which imperatively demand repose. He asked many questions with regard to matters of detail,—whether he would find conveyance by steamers in the Pacific, and of what sort would be the accommodations in them and in sailing-vessels. He asked at what season he had best arrive in the United States, and whether he had better land at New York or at Boston. Boston he said he regarded as “the intellectual head of the country, and New York, you know, for trade.” I answered his questions as well

as I could, and told him he must not omit seeing our Western country, and some of the new cities, like Chicago. He asked me if I knew "a Mrs. Child," who had written him a letter and sent him her book about the history of religion. I knew of course that he meant "The Progress of Religious Ideas," by Mrs. L. Maria Child. He had been pleased with the letter and with the book.

The conversation becoming general, Mr. B., of New York, told a story of an old Congressional debate in which John Randolph derisively compared Edward Everett to Richelieu: Buckle at once said he should regard it as a compliment of the very highest kind to be compared to Richelieu. You will smile, perhaps, if I tell you that I could not resist asking Buckle if he had read Dumas's historical novels, and he said he had not, although he had felt an inclination to do so. He asked one or two questions about them, and gave a rapid generalization of the history of France at that time.

This conversation at the dinner-table of course was by far the pleasantest part of the evening, for the *fantasia* did not amount to much, although the house was a fine one, the host most cordial, and the novelty of the entertainment was enjoyable.

*February 12th.* Mr. Buckle called upon T. and myself in the afternoon, and sat talking between two and three hours. I wish I could give you a full report of all that he said. He told us of the only lecture he ever delivered; it was before the Royal Institution, March 19, 1858, and was printed in "Fraser's Magazine" for April, just afterwards. It may be found reprinted in America in "Littell's Living Age," No. 734. The subject was "The Influence of Women on the Progress of Knowledge." Murchison, Owen, and Faraday told him afterwards, separately, that they were perfectly satisfied with it, which is certainly a strong combination of authority. He told us all about his education, which is interesting, for he has been most truly self-

taught. When he was a boy, he was so delicate that it was thought he could not live; the celebrated Dr. Abernethy, who was a particular friend of his father, saw how important it was to keep him from mental excitement, and begged that he might not be troubled by lessons. Accordingly, he was never sent to school at any time, except for a brief period to a clergyman who had directions not to make him study; and he was never regularly taught anything. Until eight years of age he hardly knew his letters. At the age of fifteen he found out Shakespeare and read it with great zest. At seventeen he conceived the plan of his book, and resolved to do two things to make himself fit to write it: first, he resolved to devote four hours a day to the study of physical science, in order that he might be able fully to understand and to unfold its relations with history; secondly, he resolved to devote an equal portion of each day to the study of English composition and practice in writing, in order that he might be able to set forth his opinions with force and perspicuity. To these resolutions he adhered for twelve years. Every day, after breakfast, he shut himself up for four hours with his experiments and his investigations; and afterwards devoted four hours to analyzing the style of the best English authors, inquiring (as he said) "where it was that I wrote worse than they." He studied not only in England, but in Germany and other European countries. He learned all the languages which he knows (and he knows nearly all I ever heard of) without the aid of a master in any, excepting German, in which he began with a master, but soon dismissed him, because he hindered more than he helped. He read Hebrew with a Jewish rabbi, but that was after he had learned the language. He considers the knowledge of languages valuable only as the stepping-stone to other learning, and spoke with contempt of a person in Egypt who was mentioned to him as speaking eight languages familiarly.

"Has he done anything?"

"No."

"Then he is only fit to be a courier."

Buckle is not a university-man, although both his father and grandfather were educated at Cambridge.

He has long since abandoned the practice of writing at night, and now does not put pen to paper after three o'clock in the afternoon. When at home, in London, he walks every day, for about an hour and a half, at noon; frequently dines out, and reads perhaps an hour after coming home. He goes exclusively to dinner-parties, because they take less time than others. When he is engaged in composition, he walks about the room, sometimes excitedly, his mind engrossed with his subject, until he has composed an entire paragraph, when he sits down and writes it, never retouching, nor composing sentence by sentence, which he thinks has a tendency to give an abrupt and jerky effect to what is written. Traces of this, he thinks, may be found in Macaulay's style.

Mr. Thayer showed him the little stock of books he happened to have with him at Cairo. Mr. Buckle looked them over with interest, expressing his opinions upon them. One of them, Mr. Bayle St. John's little book on the Turkish question, he borrowed, although he said that he denied himself all reading on this journey, undertaken for mental rest, and had brought no books with him. We got upon the inevitable subject of international copyright, which he discussed in a spirit of remarkable candor. His own experience was this: that the Messrs. Appleton reprinted his first volume without compensation, asking him to furnish materials for a prefatory memoir, of which request he took no notice; afterwards, when the second volume was published, they sent him something, I believe fifty pounds. In due course of time, receiving a request from Theodore Parker to that effect, he wrote a letter to aid him in the preparation of a memoir for the Messrs. Appleton's Cyclopædia.\*

\* In this memoir it is stated that Mr. Buckle was born at Lee, November 24, 1822.

I pointed out to Mr. Buckle the very important distinction between *copyright for the British author* and *monopoly for the British publisher*. I told him that the American people and their representatives in Congress would not have the least objection to paying a trifling addition to the cost of books, which would make, upon the immense editions sold of the popular books, a handsome compensation to the foreign authors,—but that they have very decided objections to the English system of enormously high prices for books. I instanced to him several books which can be bought in the United States for a quarter or half a dollar, while in England they cannot be purchased for less than a guinea and a half, that is, for seven or eight dollars,—although the author gains very little by these high prices, which, indeed, would be absolutely prohibitory of the circulation of the books in the United States. And since the great literary market of the United States has been created at the public expense, by the maintenance of the system of universal education, it is perhaps not unreasonable that our legislators should insist upon preserving, by the competition among publishers, the advantages of low prices of books, in pursuance of a policy which looks to a wide circulation. In Great Britain the publishers follow a different policy, and insist on selling books at high prices to a comparatively small circle of readers.

Mr. Buckle was kind enough to listen attentively to this sort of reasoning, and had the candor to admit that it is entitled to some degree of weight. Indeed, he said at once that he had earnestly wished to bring out a cheap edition of

If this date be correct, his age, at the time of his death at Damascus, May 29, 1862, fell short of forty years by five days less than six months. In conversation, however, at this time, February, 1862, he spoke of his age as thirty-eight, notwithstanding the surprise that was expressed, for he appeared several years older. Mr. Glennie, in his letter describing the circumstances of Mr. Buckle's death, mentions his age as thirty-nine.

his own book in England, omitting the notes and references, for the use of the working-classes, of whose appreciation, as I have previously mentioned, he had received many gratifying proofs; he had made his arrangements for this purpose, but was prevented from carrying them out by the opposition of his publishers, who objected that such an edition would injure *their* interest in the more costly edition. But Mr. Buckle freely declared that he would, in his circumstances, rather forego the profit on the sale of his book than restrict its circulation.

I may, perhaps, be permitted to mention that another English author related to me his home experience, precisely to the same effect, in which the vested interests of his publishers thwarted him in his wish to publish an edition of his writings at a low price for general circulation. It is quite certain that the British public must themselves be disenthralled from the tyranny of high prices with which they are now burdened, before they can ask to bring another land under the dominion of their exclusive system in literature.

This conversation led to a description of the reading public in America, — of the intelligence and independence of our working-people, — of their habits of life and of thought, — about which Buckle manifested great interest, asking many intelligent questions.

Mr. Buckle is in easy circumstances, and attends personally to the management of his money. He finds no difficulty in letting it upon first-class mortgages, at five per cent., and does not expect a higher rate of interest.

*February 13th.* To-night there was a religious celebration, including an illumination, in the mosque at the Citadel. We had expected to go and see it; and Mr. T. had invited Mr. B. and his party, as well as Mr. Buckle, and the two lads by whom he is accompanied in his journeyings, to go with us. These young gentlemen are sons of a dear friend of Mr. Buckle's, no longer living.

But at the last moment before dinner

the advice was strongly given on all sides that we should not go, lest some bigoted Mussulmans should take offence, and there might be a disturbance. Not long ago, a party of Englishmen behaved very badly in the mosque on a similar occasion, from which has resulted a disturbed state of feeling. It of course cannot be pleasant to people of any religious belief to have their ceremonies made a spectacle for curiosity; and although the *moulier* (mayor of the city) promised ample protection, the plan was given up, and the company being gathered, we had a pleasant evening together. The presence of the ladies of Mr. B.'s party gave the opportunity to see Mr. Buckle again under the inspiration of ladies' society, which he especially enjoys, and in the lighter conversation suited to which he shines with not less distinction than when conversing upon abstruse topics.

In the course of the evening, in the midst of conversation in which he was taking an animated part, Mr. Buckle exhibited symptoms of faintness. Fresh air was at once admitted to the room, which was full of cigar-smoke; water and more powerful restoratives were brought, but these he declined. After a few minutes' repose upon the divan, he declared that he was perfectly recovered, and half an hour afterwards took his leave with the boys. We were quite anxious until we heard that he had safely reached his boat, in which he is still living.

*February 14th.* Returning from the Turkish bath, I found a valentine in the shape of a telegraphic despatch only thirteen days from Boston, — thirty-six hours from Liverpool. It was dated at Boston the 1st, forwarded from Liverpool at 10 A. M. of the 13th, and reached Alexandria at 11.55 A. M. of the 14th, whence it was transmitted to Cairo without delay. This is almost equal to the Arabian Nights. The distance travelled by the despatch is about six thousand miles.

*February 15th.* This day we had an excursion to the Petrified Forest. It was

got up partly to give us all a taste of camel-riding, and it was originally expected that everybody would go on camels; then it was agreed that half should go on camels, and "ride-and-tie." In this view, one camel and one donkey were ordered for T. and myself. But Mr. B. was subsequently persuaded that with four horses he could have a carriage dragged through the desert to the forest, which would be more comfortable for the ladies; and he made that arrangement in his own and their behalf. Freddy B. is a first-rate horseman, and an Arab steed was ordered for him. Mr. Buckle was determined to go in a thing called a *mazetta*, a sort of huge bedstead with curtains, borne on the back of a camel, big enough to carry a small family, in which he expected to find room for himself and the two boys travelling with him. Besides these, the party included the Reverend Mr. Lansing, the excellent head of the American mission here, the Honorable W. S., a young Englishman, and his tutor, the Reverend Mr. S., whose agreeable company had been bespoken when the camel-project was in full strength.

On looking down from the balcony at the transportation-train marshalled for the occasion, amid the admiring gaze of all the idlers of Cairo, I was at first a little chagrined to find, as the final result of the various arrangements, that, besides the camels, the *mazetta*, the carriage-and-four, and the proud-stepping horse, there appeared but one donkey, that selected for me. But I was, in truth, very well off. To begin with, it was not thought prudent that Mr. Buckle should use the *mazetta* until the procession had got beyond the narrow streets of Cairo, lest the camel bearing it should take fright and knock the whole thing to pieces against the wall of a house. Accordingly, he and his charges took donkeys, and I rode off with them, at the head of the column. By-and-by Mr. Buckle changed to the conveyance originally proposed, but a very short experiment (literally, I suspect) sickened him of the

*mazetta*, whose motion is precisely that of a ship in a storm, and he sent back to the town for donkeys. At the next halt the ladies took him into the carriage, where he found himself, as he said, "in clover," and that was the end of his greatness in camel-riding. This remark, by the way, suggested a name ("Clover") for our boat in our voyage up the Nile just afterwards; but patriotism prevailed, and we named her "Union." It pretty soon appeared that the camel which T. was riding was young and frisky; the animal was accordingly pronounced unsafe, and T. changed to a donkey which had fortunately been brought along for a reserve. The Honorable W. S.'s camel, from the saddle becoming unfastened, pitched rider and saddle to the ground, a fall of five or six feet: fortunately no harm was done, and he bravely mounted again. The saddle upon the camel which the Reverend Mr. S. rode split in two, and the seat must have been a torture; but he bore it like a martyr, never flinching. But camel-stock had so far depreciated, and donkeys gone up, that I was able to try as much as I liked of camel-riding now and then, at the same time obliging a friend by the use of my donkey meanwhile. Riding a camel at a walk is the same sort of thing as riding a very hard-trotting horse without stirrups, and with no chance to grasp the animal fairly to hold your seat. When the camel trots, you may imagine yourself on a treadmill.

The journey to the forest, about ten miles, was safely accomplished. We found the petrifications duly wonderful. An excellent luncheon was laid out, after which we had an hour and a half of very entertaining conversation, in which Mr. Buckle and Rev. Mr. S. held the leading parts,—all around us as desolate and silent as one could imagine. It was interesting to observe the manner in which Buckle estimated eminent names, grouping them in some instances by threes, a favorite conceit with him. John Stuart Mill, of all living men, he considers as possessing the greatest mind in the

world. Aristotle, Newton, and Shakspeare are the greatest the world has produced in past times. Homer, Dante, and Shakspeare are the only three great poets. Johnson, Gibbon, and Parr are the three writers who have done the greatest harm to the English language. Of Hallam he has a strong admiration. He spoke of Sydney Smith as the greatest English wit, and of Selwyn as next to him, and described Macaulay's memory as unequalled in conversation.

For the return-trip, the donkeys generally were preferred. Miss B., with spirit, tried camel-riding for a while, and so did Master F. We stopped to look at the tombs of the Caliphs, and reached the hotel at nightfall, somewhat fatigued, but satisfied with the day's expedition.

*February 16th.* The morning was gratefully devoted to rest. In the afternoon, attended service at the Mission, where Rev. Mr. S. preached an interesting discourse from John xv. 1-4. On the way home met Mr. Buckle, who came in, and was persuaded to stay to dinner. In speaking of religion, he said that there is no doctrine or truth in Christianity that had not been announced before, but that Christianity is by far the noblest religion in existence. The chief point of its superiority is the prominence it gives to the humane and philanthropic element; and in giving this prominence lies its originality. He believes in a Great First Cause, but does not arrive at his belief by any process of reasoning satisfactory to himself. Paley's argument, from the evidence of design, he regards as futile: if the beauty of this world indicates a creating cause, the beauty of that great cause would suggest another, and so on. He believes in a future state, and declared most impressively that life would be insupportable to him, if he thought he were forever to be separated from one person, — alluding, it is probable, to his mother, to whose memory he dedicates the second volume of his book.\* He has no doubt

\* The words he uses are, — "To the memory of my mother I consecrate this volume."

that in the future state we shall recognize one another; whether we shall have the same bodies he has no opinion, although he regards matter as indestructible. He declares himself unable to form any judgment as to the mode of future existence. Religion, he says, is on the increase in the world, but theology is declining.

Mr. Buckle characterized as the sublimest passage in Shakspeare the lines in the "Merchant of Venice," —

"Look how the floor of heaven  
Is thick inlaid with patines of bright gold!  
There 's not the smallest orb which thou  
behold'st  
But in his motion like an angel sings,  
Still quiring to the young-eyed cherubims:  
Such harmony is in immortal souls!  
But whilst this muddy vesture of decay  
Doth grossly close it in, we cannot hear it."

Mr. Thayer suggested the similarity between the closing part of this passage, about our deafness to the music of the stars, owing to the "muddy vesture," and the sonnet of Blanco White which speaks of the starry splendors to which our eyes are blinded by the light of day: —

"Mysterious Night! when our first parent  
knew  
Thee, from report divine, and heard thy  
name,  
Did he not tremble for this lovely frame,  
This glorious canopy of light and blue?  
Yet 'neath the curtain of translucent dew,  
Bathed in the rays of the great setting  
flame,  
Hesperus with the host of heaven came,  
And lo! creation widened in man's view.  
Who could have thought such darkness lay  
concealed  
Within thy beams, O Sun? or who could  
find,  
Whilst fly and leaf and insect stood re-  
vealed,  
That to such countless orbs thou mad'st us  
blind?  
Why do we, then, shun Death with anxious  
strife?  
If Light can thus deceive, wherefore not  
Life?"

Mr. Buckle seemed to be struck by the comparison. He proceeded to speak

of Blanco White's memoirs as painfully interesting, and said that he had always liked Archbishop Whately for adhering to White after the desertion of the latter by old friends on account of his change of belief.

The next few days were occupied in preparations for the voyage up the Nile in company with my New York friends. Mr. Buckle had very kindly taken great interest in our plans, and had earnestly advised me to go. "You will do very wrong indeed," he said, "if you do not go." On the 19th of February we embarked; and as we saluted his boat, lying just below us in the Nile, while our own shoved off, I little thought that I should never see him again,—that his brilliant career was so shortly to come to an untimely end. The serious conversation just recorded was the last in which I took part with him.

Mr. Buckle remained in Cairo until the beginning of March, when he set out with the two boys, and Mr. J. S. Stuart Glennie, across the Desert, for Sinai and Petra. Greatly improved in health by the six weeks in the Desert, (according to Mr. Glennie's letter,) he undertook the more fatiguing travelling on horseback through Palestine. He fell ill on the 27th of April, but recovered his health, as it seemed, to such an extent that Mr. Glennie parted from him on the 21st of May. On the 29th of May, at Damascus, Mr. Buckle died. Among the incoherent utterances of his illness, it was possible to distinguish the exclamation, "Oh, my book, my book, I shall never finish my book!"

And beyond the grief felt in the loss of the kind friend and agreeable companion, our plaint, in common with the whole world, ever must be, that he did not live to finish his book.

---

### CAVALRY SONG.

THE squadron is forming, the war-bugles play.  
To saddle, brave comrades, stout hearts' for a fray!  
Our captain is mounted, — strike spurs, and away!

No breeze shakes the blossoms or tosses the grain;  
But the wind of our speed floats the galloper's mane,  
As he feels the bold rider's firm hand on the rein.

Lo, dim in the starlight their white tents appear!  
Ride softly! ride slowly! the onset is near!  
More slowly! more softly! the sentry may hear!

Now fall on the Rebel — a tempest of flame!  
Strike down the false banner whose triumph were shame!  
Strike, strike for the true flag, for freedom and fame!

Hurrah! sheathe your swords! the carnage is done.  
All red with our valor, we welcome the sun.  
Up, up with the stars! we have won! we have won!

## NO FAILURE FOR THE NORTH.

WE have reached a point in the history of our national troubles where it seems desirable to examine our present position, and to consider whether we ought to surrender ourselves to despair, or congratulate ourselves on decided success, — whether we should abandon all attempts to restore the Union, assert the dignity of the Constitution, and punish treason, or nerve ourselves to new effort, and determine to persevere in a righteous cause so long as a single able-bodied man remains or a dollar of available property is unexpended.

It may be, it must be, conceded that we commenced the contest with very crude and inadequate notions of what war really is. We proposed to decide the issue by appealing to the census and the tax-list, — tribunals naturally enough occurring to a mercantile and manufacturing community, — but how if the enemy prefer cannon and cold steel? Our first campaign was in the field of statistics, and we found the results highly satisfactory. Our great numerical superiority, aided by our immense material resources, gave us an early and an easy victory. We outnumbered the enemy everywhere, defeated them in every pitched battle, starved them by a vigilant blockade, secured meanwhile the sympathy and support of the whole civilized world by the holiness of our cause, and commanded its respect by the display of our material power and our military capacity, — and in a few short months crushed the Rebellion, restored the Union, vindicated the Constitution, hung the arch-traitors, and saw peace in all our borders. This was our campaign — on paper. But war is something more than a sum in arithmetic. A campaign cannot be decided by the rule of three. No finite power can control every contingency, and have all the chances in its favor.

A Moorish legend, given to us in the graceful narrative of Washington Irving,

relates, that an Arabian astrologer constructed for the pacific Aben Hafuz, King of Granada, a magical mode of repulsing all invaders without risking the lives of his subjects or diminishing the contents of the royal treasury. He caused a tower to be built, in the upper part of which was a circular hall with windows looking towards every point of the compass, and before each window a table supporting a mimic army of horse and foot. On the top of the tower was a bronze figure of a Moorish horseman, fixed on a pivot, with elevated lance. Whenever a foe was at hand, the figure would turn in that direction, and level his lance as if for action. No sooner was it reported to the vigilant monarch that the magic horseman indicated the approach of an enemy, than His Majesty hastened to the circular hall, selected the table at the point of the compass indicated by the horseman's spear, touched with the point of a magic lance some of the pigmy effigies before him, and belabored others with the butt-end. A scene of confusion at once ensued in the mimic army. Part fell dead, and the rest, turning their weapons upon each other, fought with the utmost fury. The same scene was repeated in the ranks of the advancing enemy. Each renewed attempt at invasion was foiled by this easy and economical expedient, until the King enjoyed rest even from rumors of wars.

Now this is a pleasing fiction, and highly creditable to the light and airy fancy of the Moors. It almost makes one sigh that an astrologer so fertile in resources is not still extant. It is difficult to conceive, indeed, of a more felicitous arrangement for a monarch devoted to his ease, and proof against all temptations to military glory, or for a people wedded to peaceful pursuits, and ambitious only of material prosperity. But no such fascinating substitute for fields of carnage is available in our degenerate

days, — "*C'est charmant, mais ce n'est pas la guerre.*"

Nor yet is any useful example furnished by the warlike qualities of the army raised by Peter Stuyvesant for the reduction of Fort Casimir: not even when we remember that it included "the Van Higginbottoms, a race of schoolmasters, armed with ferules and birchen rods, — the Van Bummels, renowned for feats of the trenches, — the Van Bunschotens, who were the first that did kick with the left foot," — with many other warriors equally fierce and formidable. We must, however reluctantly, leave such romantic legends and facetious chronicles, and learn more practical lessons from the sober and instructive page of history. We shall there find that war means alternate success and defeat, alternate hope and disappointment, great suffering in the field, many vacant chairs at many firesides, immense expenditures with little apparent result, "the best-laid schemes" foiled by a thousand unexpected contingencies, lamentable indecision in the cabinet, glaring blunders in the field, stagnation of industry, and heavy taxation.

"War is a game, which, were the nations wise,

Kings would not play at."

But nations are not always wise, and war often becomes a necessity. When, then, the necessity arises, it should be met manfully. The question once deliberately decided that peace is no longer consistent with national honor or national safety, the dread alternative must be accepted with all its hazards and all its horrors. To organize only in anticipation of certain and speedy success, to despise and underrate the enemy, to inquire with how small an army and how limited an expenditure the war can be carried on, is as unstatesmanlike as it is in flat defiance of all historical teaching. But if we carry our folly still farther in the same direction, — if we fail to take into grave account the most obvious and inevitable incidents of actual warfare, — if in our overweening confidence we neglect discipline, underrate the prime im-

portance of promptness and decision in action, certainty and celerity in movement, and energy and activity in pursuit, — if, in a word, we expect that the defences of the enemy are to fall into our hands by means as unwarlike as those that decided the fate of Jericho, or dream that because our cause is just every precedent in history and every principle in human nature will be overruled in our favor, — then we deserve to be outgeneralled, and are fortunate, if we escape final and disastrous defeat.

Now has not this been precisely our cardinal and capital error, and are we not to-day suffering its natural consequences? To the blind and unreasoning confidence with which we began this war has succeeded a reaction running into the very opposite extreme. We are given over to a despondency quite as unwarrantable as the extravagance of our early hopes. We demanded and expected impossibilities. Forgetting that the age of miracles has passed, many are now bitterly complaining that nothing has been accomplished, and predicting that all future efforts will terminate in similar failure. Two years have not elapsed since the first gun was fired at Fort Sumter; and yet we are amazed and mortified that our forces have not overrun the whole South, that victory has not crowned our arms in every battle, and that our flag does not float triumphant over every acre of every State once called Confederate. Whether this most desirable result could have been accomplished, if this or that policy had been adopted at the outset, is one of those problems that will never be solved; nor is the inquiry at present pertinent or profitable. Let us rather ask whether, in view of the means actually employed, our discontent with the existing condition of affairs is not unmanly and unreasonable. We are to measure results, not by the efforts that we ought to have put forth, nor by those which we should put forth, if, with our dear-bought experience, we were called upon once more to undertake such a gigantic enter-

prise. We must recall the aspect of affairs when we first embarked on this perilous sea. We must remember how ignorant we were of all the danger before us, how imperfect was the chart by which our course was to be determined, how many shoals and sunken rocks and cross-currents we were to encounter, as yet unknown to any pilot on board our noble ship of state, how little we knew of navigation in such angry waters, under so stormy a sky.

Turn back the pages of history for two short years, and dwell a moment on the picture presented to our eyes. A nation, enjoying to the utmost the substantial benefits belonging to fifty years of profound peace and unexampled prosperity, enervated by those habits of luxury which wealth easily accumulated always fosters, with a standing army hardly large enough to protect our Western frontier from the incursions of hostile Indians, and a navy ludicrously small in proportion to the extent of our sea-coast and the value of our commerce, is suddenly plunged into a war covering such an extent of territory and calling for such an array of power by sea and land as to dwarf into insignificance all modern wars, hardly excepting the military operations of Napoleon I.

And it must be remembered that education and habit had trained us to an implicit reliance on the sufficiency of our laws and the competency of our Constitution to meet and decide every issue that could possibly be presented. We could conceive of no public wrongs which could not be redressed by an appeal to the ballot-box, and of no private injuries for which our statutes did not provide a suitable remedy.

We were not only a law-abiding, but a peace-loving people. The report of the revolver was not heard in our streets, nor was the glitter of the bowie-knife seen in our bar-rooms. We deprecated mob-violence, and disliked the summary proceedings of Judge Lynch. We took no pains to conceal our horror of unnecessary bloodshed, and shared the views of civilized Christendom about duelling.

Now and then, to be sure, a Southerner in one of his sportive moods would stab an inattentive waiter in some Northern hotel, or a chivalrous son of South Carolina, elegantly idling away a few years in a New-England university, would shoot some base-born tutor, or, as an episode in Congressional proceedings, the member from Arkansas would threaten to pull the nose, spit in the face, and gouge out the eyes of the (profane particeps) sneaking Yankee,—meaning thereby a quiet, inoffensive member from Massachusetts. But these incidents of Southern civilization were not frequent enough to become fashionable. We still clung to our plebeian prejudices against lawless violence, and persisted in believing that a swaggering bully could not be an ornament to cultivated and refined society. In fact, some excellent individuals at the North went so far as to seek to disseminate these old-fashioned notions among their Southern brethren, and made annual subscriptions to what was known (alas, that we must use the historic tense!) as the "Southern Aid Society," having for its praiseworthy object the support of ministers who should preach the gospel to our ardent and impulsive neighbors. What a sad and significant commentary is it upon the ingratitude of depraved human nature, that the condescending clergyman who whilom consented to collect the offerings of these discriminating philanthropists is now a chaplain in the Confederate army, and is invoking the most signal judgments of Heaven upon his former friends and fellow-laborers!

This, then, was our condition, and these were our habits, when we were rudely awakened from our dreams of peace by the roar of cannon and the clash of arms. What wonder that the startling summons found us all unready for such a crisis? What wonder that our early preparations to confront the issue thus forced upon us without note of warning were hasty, incomplete, and quite inadequate to the emergency? Is it discreditable to us that we were slow to appreciate the bitterness and intensity of

that hatred, which, long smouldering under the surface of Southern society, burst forth at once into a wide-spread conflagration, severing like flax all the ties of kindred, and all the bonds of individual friendship and national intercourse which had united us for half a century? Here was a section of our Union which had always enjoyed equal rights with us under the Constitution, and had known the Government only by its blessings,—nay, more, had actually, by the confession of its own statesmen, controlled the internal administration and dictated the foreign policy of the country since the adoption of the Constitution; which had no substantial grievance to complain of, and no fanciful injury which could not be readily redressed by legal and constitutional methods. Are we to be blamed because we could not easily bring ourselves to believe that an integral part of our nation, with such a history, could, under a pretence so bald as to insult the common sense of Christendom, rush headlong into a war which must close all its avenues of commerce, paralyze all its industry, threaten the existence of its cherished and peculiar institution,—in a word, whether successful or unsuccessful, inevitably result in its political suicide? At this very moment, accustomed as we have been for many sad and weary months to the daily development of Southern folly and madness, it is difficult, when we withdraw our minds from the present, to realize that the whole war is not a hideous nightmare.

In view of all this, I ask, is it strange that we did not at once comprehend all our danger, and did not enter the field with all our forces,—determined to fight with desperate energy until every trace of rebellion was crushed out? If, disturbed at midnight by footsteps in your chamber, you start up from sound slumber to see a truculent-looking vagabond prowling about your room with a lighted candle, do you not at once spring to your feet, collar the intruder, and shout lustily for help, if he prove too strong for you? Prompt and vigorous action in

such a case is simply the impulse of instinct. But how if you recognize in the untimely visitor a member of your own household? Will you seize and overpower him without asking a single question, or waiting for a word of explanation? Will you not pause for some overt act of hostility, some convincing proof of a fell purpose? Suppose it transpire that he really means mischief, and you lose an important advantage by your delay to strike. You may regret the result; but does it in the least tend to show that you were cowardly or careless? Now was not this our exact dilemma? Although the origin of the war and the circumstances attendant upon its commencement are a thrice-told tale, are we not in danger of overlooking their bearing upon all our subsequent action? And shall we not act wisely, if we recur to them again and again, during this momentous contest?

But, asks a timid Conservative,—from whose patient button the fingers of an ardent apostle of peace have recently and most reluctantly parted,—has not this war been shamefully mismanaged by the Administration? have not contractors grown rich while soldiers have suffered? have not incompetent generals been unjustly advanced, and skilful commanders been summarily shelved? have we gained any advantages at all commensurate with our loss of blood and our expenditure of money? would not a cessation of hostilities on any terms be better than such a war as we are now waging? If we might venture to suggest a word of caution to our desponding friend, before attempting a reply to his broadside of questions, we would say: Beware how you indulge in too much conversation with a certain class of our citizens, whose hearty loyalty has been more than doubted, and whose conversion to the beauties of peace and the horrors of war is so sudden as to be very suspicious. Examine their antecedents, and you will find, that, when “border ruffians” in Kansas threatened with fire and sword the inoffensive emigrants from

New England, these gentlemen saw nothing unusual in such proceedings, and answered all remonstrances with ridicule. Put them to the question to-day, and it will appear, that, from the very beginning of the struggle, all their sympathies have been with the South. They will tell you that Northern Abolitionists are alone responsible for the war; that the secession of the Southern States may have been unwise, but was not unreasonable; that they have always condemned coercion and advocated compromise; and that there is no safe and satisfactory way out of our existing difficulties but—*peace*. What do they mean by peace? Such peace as the highwayman, armed to the teeth, offers to the belated traveller! Such peace as Benedict Arnold sought to negotiate with the English general! They know that the South will accept no terms but the acknowledgment of her independence, or the abject and unconditional submission of the Free States. They reject the first alternative, because they dare not go before the North on such an issue. Disguise it as they may, they are willing to adopt the second. The party to which, without an exception, these men belong, is powerless without the coöperation of the South, and would consider no sacrifice of principle too great, and no humiliation of the North too degrading, if it promised the restoration of their political supremacy. Avoid all such men. Distrust their advice. That way dishonor lies, and national disgrace. If you are not “armed so strong in honesty” as to be proof against such treasonable talk, you will soon be aware of a softening of your backbone, and a lamentable loss of earnest, active patriotism. Take counsel rather of your own common sense. Looking at the question in its narrowest and most selfish bearings, you *know* that we can neither recede nor stand still. Submission is slavery. Disunion paves the way for endless secession, and eternal warfare between rising and rival republics.

But there are other symptoms of disloyalty besides this persistent demand for

peace. There are indications of a desire to array sections of the North against each other, and—Heaven save the mark!—by the very politicians who have been most bitter in their denunciation of “geographical parties.” Here comes a little Western lawyer, with unlimited resources of slang and slender capital of ideas, barely redeemed from being an absolute blackguard by the humanizing influences of a New England college, but showing fewer and fewer symptoms of civilization as he forgets the lessons of his collegiate life; and *he* delights an audience of New York “roughs,” adopted citizens of Celtic extraction, and lager-loving Germans, (do not cocks always crow longest and loudest on a dung-hill?) by the novel information, that “Puritanism is a reptile” and the cause of all our troubles, and that we shall never fulfil our national destiny until Puritanism has been crushed. Let us not elevate this nauseating nonsense into importance by attempting a reply. Such men must be left to follow out their inevitable instincts. They are not worth the trouble necessary to civilize them. Mr. Rarey succeeded in taming a zebra from the London Zoölogical Gardens; but a single lesson could not permanently reclaim the beast, and it soon relapsed into its native and normal ferocity. One experiment sufficed to show the power of the artist; no possible increase of value in the educated animal would have justified a prolonged and perfect training.

You ask if we have gained any advantages commensurate with our efforts, or with the high-sounding phrase of our declared purpose. Let us look at this a moment. Suppose we begin with a glance at the other side of the picture. Has all the boasting, have all the promises, been on the Federal side? Did we hear nothing of the Confederate flag floating over Faneuil Hall?—nothing of Washington falling into the hands of the enemy?—nothing of a festive winter in Philadelphia and a general distribution of spoils in New York?—noth-

ing of foreign intervention? — nothing of the cowardice of Northern Mudsills and the omnipotence of King Cotton? Decidedly, the Rebels began with a sufficiently startling programme. Let us see how far they have carried it out. As they were clearly the assailants, we have an undoubted right to ask what they have accomplished *aggressively*. We say, then, that, excepting in the case of one brief raid, the soil of a single Free State has never been polluted by the hostile tread of an invading force; that every battle-field has been within the limits of States claimed as Confederate; that, while the war has desolated whole States represented in the Confederate Congress, not an acre north of Mason and Dixon's line has suffered from the ravages of the Rebel armies. Was ever another scorpion more completely surrounded and shut in by a cordon of fire?

This is surely something, but it is by no means all. Have *we* accomplished nothing *aggressively*? We will call into court a witness from the enemy's camp. Hear the recent testimony of a leading journal, published in the Confederate capital: \* —

“It is not altogether an empty boast on the part of the Yankees, that they hold all that they have ever held, and that another year or two of such progress, as they have already made will find them masters of the Southern Confederacy. They who think independence is to be achieved by brilliant but inconsequential victories would do well to look at the magnitude of Yankee possessions in our country. Maryland, Kentucky, and Missouri are claimed as constituent parts of the Confederation: they are as much in the power of Lincoln as Maine and Minnesota. The pledge once deemed foolish by the South, that he would ‘hold, occupy, and possess’ all the forts belonging to the United States Government, has been redeemed almost to the letter by Lincoln. Forts Pickens, [Sumter?] and Morgan we still retain; but, with these exceptions, all the

\* *Richmond Examiner*, January 20th, 1863.

strongholds on the seaboard, from Fortress Monroe to the Rio Grande, are in the hands of the enemy. Very consoling and very easy to say that it was impossible to prevent all this, and that the occupation of the outer edge of the Republic amounts to nothing. Drowry's Bluff and Vicksburg give the lie to the first assertion; and the onward movement of Rosecrans towards Alabama, the presence of Grant in North Mississippi and of Curtis in Middle Arkansas, to say nothing of Banks at New Orleans and Baton Rouge, set at rest the silly dream that a thin strip of sea-coast only is in possession of our foes. The truth is, the Yankees are in great force in the very heart of the Confederacy; they swarm on all our borders; they threaten every important city yet belonging to us; and nearly two hundred thousand of them are within two days' march of the Confederate capital. This is no fiction. It is a fact so positive that no one can deny it.”

But this reluctant recital by no means exhausts the record of our successes. We have put into the field a volunteer force, fully armed and equipped, which, whether we consider its magnitude, the rapidity with which it has been raised, its fighting qualities, its patient endurance of unaccustomed hardships, or its intelligent appreciation of the principles involved in the contest, is without a counterpart in history. And yet more, from the invention and achievements of our iron-clads dates a new era in naval warfare, while in the value and variety of our ordnance we have taken the lead of all civilized nations. Can you find in all this nothing to quicken the pulse of your patriotism? Is here no ground for encouragement, no incitement to renewed effort?

But you complain of corruption among contractors, and of knavery among politicians. Will you point me to a single war, ever waged on the face of the earth, where all the rulers were above reproach and all their subordinates unselfish? But what will you do about it? Grant that many contractors have made dis-

honest fortunes out of the calamities of their country, and that there are office-holders with whom "Stand by the Constitution!" means, Stand by the public crib from which we are richly and regularly fed, and "Uphold the Administration!" should be translated, Give us our full four years' enjoyment of the loaves and fishes. What then? Shall a few worthless straws here, and a few heaps of offal there, arrest or check the onward march of a mighty army, the steady progression of a great principle? Away with such trumpery considerations! Punish with the utmost severity of the law every public plunderer whose crimes can be dragged into the light of day; send to the Coventry of universal contempt every lagging and lukewarm official; but, in the name of all that is holy in purpose and noble in action, *move on!* To hesitate is worse than folly; to delay is more than madness. The salvation of our country trembles in the balance. The fate of free institutions for— who shall say how long?— may hang upon the issue of the struggle.

Your catalogue of grievances, however, is still incomplete. You are dissatisfied with our generalship as displayed in the field, and with the wisdom of our policy as developed by the cabinet. Unquestionably you have a constitutional right to grumble to your heart's content; but are you not aware that such complaints are as old as the history of the human race? Do you believe this to be the first war that was ever mismanaged, and that our undoubted blunders are either novel or peculiar to Republics? There never was a greater mistake. If there were brave men before Agamemnon, and wise counsellors before Ulysses, there certainly have been incompetent commanders before Major-General A., and shallow statesmen before Secretary B. We do not monopolize executive imbecility, nor are our military blunders without parallel or precedent. To attribute our occasional reverses and our indecisive victories, our inaction in the field and our confusion in

the cabinet, to our peculiar form of government, is as inconsequential as it would be to trace all our disasters to the color of President Lincoln's hair or the number of General Halleck's children.

The enemies of free institutions, hardly yet recovered from their astonishment at beholding an army of volunteers, superior in number and quality to any the world ever saw, spring into existence with such marvellous rapidity as to eclipse, in sober fact, the fabulous birth of Minerva full-armed from the head of Jove, or their still greater surprise at seeing the immense expenses of so gigantic a war readily met without assistance from abroad, by large loans cheerfully made and heavy taxation patiently borne, are reduced to the necessity of exulting over what they term our "total want of military genius," and our "incapacity to conduct a campaign successfully."

It is useless to deny that we may have challenged criticism and provoked a smile by our large promise and our smaller performance. But are we the sole and exclusive proprietors of this experience? Where in the past or the present shall we find a great and powerful nation much addicted to modesty or self-depreciation? Least of all, should we have expected such venomous criticism and such unsparing ridicule from England. To be sure, we have long since ceased to look for sympathy or even justice at her hands. We have come to understand and appreciate the tone and temper of her ruling classes towards this country. In addition to their inherited antipathy to Republics, they believe in sober earnest what one of their greatest wits said jocosely, that "the great object for which the Anglo-Saxon race appears to have been created is the making of calico." And whatever interferes, or threatens to interfere, with this ennobling occupation is sure to incur their passive displeasure, if not their active hostility. We expect nothing, therefore, from their good-will; but we have a right to demand, as a matter of good

taste, that, in criticizing our campaigns, they shall not wholly ignore their own military blunders, especially those so recent as to be fresh in the recollection of every third-form school-boy in the kingdom. For, if campaigns carried on with the smallest possible result in proportion to the magnitude of the sacrifice of money and life,—if a succession of incompetent generals in command,—if critical military opportunities neglected and enormous strategic blunders committed,—if indecision, nepotism, and red tape at home, envy, want of unity, and incapacity among officers, and unnecessary and inexcusable hardship among the privates,—if all this declares the decadence of a Government, then was the sun of England hastening to its setting during the Crimean War.

We hear much said abroad about our indecisive battles, our barren victories, our failure to take advantage of the crippled condition of a defeated enemy, and our unaccountable disinclination to follow up a successful attack by a prompt pursuit. Now, not for the sake of excusing or palliating the numerous and grave errors into which we have fallen during our own unhappy struggle, nor yet to exonerate from censure any civil officers or military leaders who may be wholly or in part responsible for these errors, but simply to demonstrate that they are liable to occur under any form of government, and, indeed, have recently befallen the very Government whose rulers now hold us to the strictest account, and are most eager to convict us of extraordinary misconduct and incapacity, we propose, very briefly, and without further introduction, to examine the record of the English army during the Crimean War.

The first important battle fought on the Peninsula was that of the Alma. We will give, as concisely as possible, so much of the history of this engagement, compiled from authentic English sources, as will present a correct picture of the plans formed and the results accomplished.

“The 15th of August, 1854, was the date first fixed for the sailing of the allied forces from Varna to the Crimea. It was postponed until the 20th, then till the 22d, then the 26th,—then successively to the 1st, 2d, and 7th of September; that is, the French fleet left Varna on the 5th, and the English sailed from the neighboring port of Baltchik on the 7th.” It is admitted that “these delays hazarded not only the success, but even the practicability of the whole design, as between the 15th and 25th of September the great equinoctial gales sweep over the Black Sea, and lash it into tempests of the most destructive nature.”

The voyage, however, was accomplished in safety, and on the 14th of September the Allies arrived at the Crimea, off a place called the “Old Fort,” only about thirty miles north of Sebastopol. The whole army was composed of 27,000 English, 24,000 French, and 8,000 Turks. The landing occupied the 14th, 15th, and 16th of September. At nine o’clock, A. M., of September 19th, the army began the advance, and on the evening of the same day rested for the night within sight of the Russian forces, strongly intrenched on the banks of the Alma, about twelve miles distant from the “Old Fort.” Early in the afternoon of the following day the Allies attacked the stronghold of the enemy, and in less than three hours the Russian intrenchments were successfully stormed, and the Russian army was in full retreat. The English and French troops fought with determined and distinguished bravery, and their victory was complete. But what was decided by this bloody struggle? Bad generalship on the part of the Russians, certainly; but what else? Mr. Russell says,—“This great battle was not decisive, so far as the fate of Sebastopol was concerned, merely because we lacked either the means or the military genius to make it so.” The victory was not followed up, the retreating foe were not pursued, ample time was given to the enemy to reorganize and retrieve their

losses, and the evening of the eventful 20th of September found the allied forces no nearer the capture of Sebastopol than they were before the battle.

Did "the Alma" crown the allied generals with fresh and well-earned laurels? We appeal once more to Mr. Russell:—"I may inquire, Was there any generalship shown by any of the allied generals at the Alma? We have Lord Raglan painted by one of his staff, trotting in front of his army, amid a shower of balls, 'just as if he were riding down Rotten Row,' with a kind nod for every one, and leaving his generals to fight it out as best they could; riding across the stream through the French Riflemen, not knowing where he was going to, or where the enemy were, till fate led him to a little knoll, from which he saw some of the Russian guns on his flank; whereupon he sent an order to Turner's battery for guns, and seemed surprised that they could not be dragged across a stream and up a hill which presented some difficulties to an unencumbered horseman; then cantering off to join the Guards just ere they made their charge, and finding it all over while he was in a hollow of the ground." Lord Raglan, let it be remembered, was the Commander-in-Chief of the English forces. And again:—"The Light Division was strangely handled. Sir George Brown, whose sight was so indifferent that he had to get one of his officers to lead his horse across the river, seemed not to know where his division was. . . . If the conduct of a campaign be a succession of errors, the Crimean expedition was certainly carried on *secundum artem*." Once more, on the same point, and quoting from the same authority:—"All the Russian officers with whom I have conversed, all the testimony I have heard or read, coincide on these two points: first, that, if, on the 25th, we had moved to Bakschiserai in pursuit of the Russians, we should have found their army in a state of the most complete demoralization, and might have forced the great majority of them to surrender as prisoners of war, in a sort of

*cul-de-sac*, from which but few could have escaped; secondly, that, had we advanced directly against Sebastopol, the town would have surrendered, after some slight show of resistance to save the honor of the officers." Certainly, such generalship as this did not promise very well for the results of the campaign.

Let us follow the movements of the Allies a little farther. On the morning of September 25th, the combined forces took up their line of march southward. On the 26th, they reached and occupied the town of Balaklava, about six miles distant from Sebastopol. On the 28th of the same month, Lord Raglan wrote to the Duke of Newcastle, then Secretary of War, "We are busily engaged in disembarking our siege-train and provisions, and we are most desirous of undertaking the attack of Sebastopol *without the loss of a day*." And yet it is not until October 10th that the Allies commence digging their trenches before the town. Meanwhile the allied army was anxious and impatient. "'When will the siege commence?' was the constant inquiry of the wearied and expectant troops. 'To-morrow,' was the usual response, 'most probably to-morrow.' But day after day came and went, and the Allies still rusted in inaction, while the Russians worked day and night at strengthening their defences." "The time dragged heavily on; still the Russians worked with incredible industry, and still the cannon of the Allies had not yet opened their thunders upon Sebastopol." On the 17th of October, twenty-one days after the occupation of Balaklava, the allied forces commenced fire by land and sea on the stronghold of the enemy. The bombardment continued from half-past six, A. M., until nightfall, but is conceded to have been a complete and mortifying failure. From this time until the 5th of November, it will not be contended that any substantial advantage was gained by the invading forces, or that material progress was made towards the reduction of the Russian Gibraltar.

Then came the Battle of Inkerman, a gallant and desperate sortie of the Russians, bravely and successfully resisted by the besiegers. The loss of life on both sides was terrible. To what extent was *this* battle decisive? Mr. Russell shall give his own testimony on this point:—“We had nothing to rejoice over, and almost everything to deplore, in the Battle of Inkerman. We defeated the enemy, indeed, but had not advanced one step nearer the citadel of Sebastopol.” In other words, the Allies had repulsed the Russians, but had barely escaped annihilation, while, from having been the besiegers, they became the besieged, and remained so until largely reinforced from home. “A heavy responsibility,” says Mr. Russell, “rests on those whose neglect enabled the enemy to attack us where we were least prepared for it, and whose indifference led them to despise precautions which, taken in time, might have saved us many valuable lives, and have trebled the loss of the enemy.” The English not only committed the serious error of underrating the enemy, and neglecting the most ordinary precautions against surprise, but, during the whole of the desperate and bloody fight, they gave no proof whatever of generalship. The stubborn, unyielding bravery of the troops was the salvation of the army. “We owed the victory, such as it was, to strength, not to superior intelligence and foresight. It was a soldiers’ battle, in which we were saved by the muscle, nerve, and courage of our men.” Humanity shudders and the heart sickens over the sufferings of that gallant army of martyrs to cabinet incapacity and military imbecility during the long and dreary winter of 1854–55.

On the 9th of April, 1855, commenced the second grand bombardment of Sebastopol, which, though continuing for twelve days, resulted, like the first, in mortifying failure, no serious or irreparable injuries being caused to the main defences of the enemy. “The real strength of the place remained unimpaired. That which was injured during the day the

Russians repaired as if by magic during the night. The particulars of this twelve days’ bombardment are wearisome. The same wasted energy, the same night-skirmishes without effect, the same battering and repairing, the same unwearied exertions on the part of the Allies and wonderful endurance and resistance on the part of the Russians, together with, on each side, the same loss of life and frightful mutilations.”

Two months were passed in comparative inaction, the sad monotony being varied only by ineffective sorties and indecisive skirmishes. On the 18th of June, the first grand assault of the Malakhoff and Redan was attempted. The allied troops displayed the utmost gallantry, and did all that brave men could do under disgracefully incompetent commanders, but were repulsed with horrible slaughter. No one can read the details of the fruitless massacre, without fully confirming the indignant testimony of an intelligent eye-witness, writing from the camp:—

“I know not what may have been the feelings of your home public, on reading the telegraphic news of our defeat, (for I presume the scribes at head-quarters made no attempt to conceal the naked truth, that our repulse was neither more nor less than a defeat,) but here mingled shame and indignation were general throughout the camp. Officers and men alike felt that disgrace had been incurred, and that solely in consequence of the unredeemed mismanagement of their generals. Remembering the confusion which characterized the commencement of our movement, and coupling this with the murderous preparations made by the enemy, you will be at no loss to understand that success was most improbable. During the whole affair, Lord Raglan and Sir George Brown were ensconced within our eight-gun battery; but, though this afforded a good view of the scene of the struggle, and of the disorders which marked it, they appeared to be unable to give any efficient directions for the correction of our multiplied blun-

ders. When the whole sad scene was ended, our men straggled back to the camp in a state of dispirited confusion, well in keeping with the mob-like disorder in which they had been throughout the assault."

The final bombardment of Sebastopol took place on the 5th of September, followed on the 8th by the renewed assault of the French on the Malakhoff and of the English on the Redan. Skilful generalship, adequate forces, and desperate bravery gave victory to the French, and "the key to Sebastopol" remained in their hands. Meanwhile the English assault upon the Redan was repulsed with frightful sacrifice of life. It will not be contended that the French owed any part of their success to superior good-fortune. Indeed, all the extrinsic advantages were on the side of the English. The French were to lead off in the assault, and the tricolor waving over the captured fortification was to be the signal for the advance of the English. If the French succeeded, every sentiment of personal ambition and national pride would stimulate their allies to achieve an equal victory. If the French failed, the English had only to remain in their trenches.

Now let us examine the comparative generalship displayed in the two assaults. We are quite willing that English authority should draw the contrast. "The preparations of the French were actually scientific in their vigorous attention to every matter calculated to lead to victory: nothing appeared to have been forgotten, nothing neglected. Even the watches of the leading officers had been regulated, that there might not be the smallest error with regard to time. It is a painful reflection that this carefulness of preparation, and prescience with respect to probabilities, was not shown by the English general and his associates in arranging the mode of attack. When the orders were promulgated, on the 7th, many officers shook their heads doubtingly, and observed, in deprecating tones, 'This looks like another 18th of June.'

It was generally observed that the attacking columns were not strong enough, that they were too far behind, and that the trenches did not afford room for a sufficient number of men."

The signal for the French assault was given: thirty thousand men, weary of long inactivity, and burning to add new lustre to the bright record of their country's military glory, — drums and trumpets meanwhile sounding the charge, and the air resounding with shouts of "*Vive l'Empereur*," — darted from their trenches, swarmed up the embankments, dashed over the parapet, swept the enemy like chaff before them; and the Malakhoff was won. Hours of the fiercest fighting found the French still masters of the situation; at nightfall the Russian general sullenly drew off his defeated forces, and the victory was complete.

It is painful to turn from this brilliant picture to the sombre coloring and the dreary details of the attack on the Redan. To three thousand doomed men was assigned the perilous undertaking. Incredible as it may appear, in view of previous failure, there seems to have been no adequate preparation, no intelligible plan, no competent leader. It was simply brute force assailing brute force. The few men who actually entered the Redan neglected to spike the guns; no reinforcements came to their aid; everything was blind excitement, and headlong, undisciplined haste. "The men of the different regiments became mingled together in inextricable confusion. The Nineteenth men did not care for the officers of the Eighty-Eighth, nor did the soldiers of the Twenty-Third heed the command of an officer who did not belong to their regiment. The officers could not find their men, — the men lost sight of their officers." But why dwell on what soon became mere butchery? The loss of the storming party, in killed, wounded, and missing, was 2447!

Considered as a military movement, it would seem to be conceded that no grosser blunder could have been made than the selection of so small a force for

so desperate an undertaking. There was no chance of success but by attacking simultaneously both flanks and the salient of the Redan. The storming party was barely large enough for the assault of the salient, thus exposing the handful of men to a murderous and fatally destructive fire from the flanks. This was bad enough, certainly, but worse remains behind. English critics have most severely censured our generals for sometimes placing new recruits in posts of danger, requiring cool heads, steady nerves, and the habit of discipline. Perhaps they have forgotten the following incident. Among the picked men selected out of the entire British forces as this very storming party were raw recruits from the Ninety-Seventh Regiment, who were designated for this perilous service as a punishment for their cowardice in a recent skirmish!—and to make this punishment still more severe, they were ordered to *lead off* in the assault! An historian of the war says,—“The inexperience of some of these recruits seems almost incredible. One young fellow, who came to the field-hospital with a broken arm and a bullet in his shoulder, carried his firelock with him, but confessed that he had never fired it off, as *he was unable to do so*. The piece, upon being examined, was found to be in perfect order. Such poor undisciplined lads, fresh from the plough, ought never on any occasion to have been pitted against the well-drilled soldiers of Russia; but it was something worse than blundering to lead them on to the assault of a formidable work like the Redan. Such generalship recalls to our mind the remark of the Russian officer with regard to the military force of England, that ‘it was an army of lions led by donkeys.’” Mr. Russell states that many of these recruits “had only been enlisted a few days, and had never fired a rifle in their lives.”

Now will it be believed that General Codrington, to whom was committed the planning and directing of this ill-starred and disastrous enterprise, succeeded Sir

James Simpson as Commander-in-Chief of Her Majesty’s forces in the Crimea? How must the shade of Admiral Byng have haunted Her Majesty’s Government, unless it was a most forgiving ghost! If General Codrington’s promotion could have been delayed a little more than eighteen months, it might have occurred appropriately on the centennial anniversary of the death of that ill-fated naval commander, convicted by court-martial and shot for “not doing his utmost”!

On the evening of the 8th of September, the Russians blew up their magazines, fired the buildings, and evacuated the town. So fell Sebastopol, after a siege of three hundred and forty-five days. It has been considered by the English a bit of very choice pleasantry to allude to our oft-recurring statement, that “the decisive blow had been struck,” and that “the backbone of the Rebellion was broken.” It may not be impertinent to remind them, that the report, first circulated in France and England in the latter part of September, 1854, and fortified by minute details, that Sebastopol—the backbone of Russian resistance to the allied arms—had fallen, was repeated and reiterated from time to time during the war, until the phrase, “*Sebastopol est pris*,” passed into a by-word, and did good service in relieving the cruelly overworked Greek Kalends.

And now we come naturally to the consideration of another and an important inquiry. Did the beginning of the war find, or did its progress develop or create, a single English general of commanding military capacity, competent to handle in the field even so small an army as the British contingent in the Crimea? Of Lord Raglan Mr. Russell says, and without doubt says truly,—“That he was a great chief, or even a moderately able general, I have every reason to doubt, and I look in vain for any proof of it, whilst he commanded the English army in the Crimea.” Another authority says,—“The conviction that he was not a great general is universal and uncontradicted. He could perform the ordi-

nary duties of a general satisfactorily, but he was lamentably deficient in those qualities which constitute military genius. He possessed considerable professional experience, great application, and remarkable powers of endurance; but he lacked the energy, vehemence, and decision of character which are essential to the constitution of a successful military chieftain." To his hesitation in council, and his want of energy and promptness in action, have always been attributed, in large measure, the ruinous delays and the fearful suffering in the army which he commanded. Lord Raglan died in June, 1855, in his sixty-seventh year. General Simpson succeeded him. "It was believed at the time," writes Mr. Russell, "and now is almost notorious, that he opposed his own appointment, and bore testimony to his own incapacity." "He was slow and cautious in council, and it is no wonder that where Lord Raglan failed, General Simpson did not meet with success." The English press and people demanded his recall. His incompetency was everywhere acknowledged, and indeed he himself would have been the last man to deny it. In about three months from the date of General Simpson's appointment, "the Queen was graciously pleased to permit him to resign the command of the army." As we have already seen, his place was filled by General Codrington. This officer was as signally rewarded, because he had failed, as he could have been, if he had succeeded. Mr. Russell quotes approvingly the comment of a French officer upon this appointment:—"If General Codrington had taken the Redan, what more could you have done for him than to make him General, and to give him command of the army? But he did not take it, and he is made General and Commander-in-Chief." With equal discrimination, Sir James Simpson was created Field-Marshal! The remainder of the campaign gave General Codrington no further opportunity of displaying his qualities for command. No other important action occurred before the termination of hostilities.

Great credit is certainly due to Mr. Russell for fearlessly exposing the errors and incompetency of the three officers successively at the head of the English army, in spite of "much obloquy, vituperation, and injustice," and for bearing his invariable and eloquent testimony to the bravery, endurance, and patience of the British private soldier.

In this brief recital of English blunders during the Crimean War, we have made no mention of the desperate and disastrous "charge of the Light Brigade," the gross and culpable inefficiency of the Baltic fleet under Admiral Sir Charles Napier, and other instances of military incapacity no less monstrous. Enough, however, has been told to more than justify the very mild summing-up of Mr. Russell, that the "war had exposed the weakness of our military organization in the grave emergencies of a winter campaign, and the canker of a long peace was unmistakably manifested in our desolated camps and decimated battalions."

Why should we add to this dismal recital the appalling sufferings of the soldiers,—helpless victims to bad management at home and shameful neglect in the field,—the long, freezing nights of trench-work under a driving rain, "without warm or water-proof clothing,—the trenches two and three feet deep with mud, snow, and half-frozen slush, so that many, when they took off their shoes, were unable to get their swollen feet into them again, and might be seen bare-footed about the camp, the snow half a foot deep on the ground,"—creeping for shelter into "miserable tents pitched as it were at the bottom of a marsh, where twelve or fourteen unhappy creatures lay soaking without change of clothing" until they were called out again to their worse than slave-labor,—disease, brought on by exhaustion, exposure, overwork, and deficient food, sweeping the men off by thousands, and yet no sufficient supply of medical stores and no adequate number of medical attendants, not a soul seeming to care for their comfort or even for their lives,—so neglected and

ill-treated that "the wretched beggar who wandered about the streets of London led the life of a prince compared with the British soldiers who were fighting for their country, and who were complacently assured by the home authorities that they were the best-appointed army in Europe." The world knows the whole sad story by heart. And is it not written in the volumes of evidence sworn to before the Commission appointed by Parliament to inquire into the condition of the army?

Nor is it necessary to dwell upon the extent to which the home administration was responsible for the general mismanagement of the war, in its main features and its minute details,—nor the thoroughly English stolidity with which all complaints were received by every member of the Government, from the cabinet minister who dictated pompous and unmeaning despatches, down to the meanest official who measured red tape,—nor the intense and universal popular indignation which, after a year "full of horrors," compelled the resignation of the Aberdeen Ministry. Lord Derby did not, perhaps, overstate the verdict of the nation, when he said in the House of Lords,— "From the very first to the very last, there has been apparent in the course pursued by Her Majesty's Government a want of previous preparation,—a total want of prescience; and they have appeared to live from day to day providing for each successive exigency *after it arose, and not before it arose.* Too LATE have been the fatal words applicable to the whole conduct of Her Majesty's Government in the course of the war." The change in the Ministry, however, by no means cured all the evils which had existed; for, although the sufferings of the soldiers—thanks in large part to the providential appearance and heroic conduct of Florence Nightingale—were greatly diminished, still, as we have seen, the military blunders continued to the close of the war.

Now, if we do not greatly mistake, the lesson which this country should learn

from the mortifying experience of the English army in the Crimea is not one of exultation over its lamentable and unnecessary errors, but rather of indifference to the insulting criticism of a nation which can so ill afford to be critical, and of determination to profit in every possible way by those blunders which might have been avoided. The history of all wars, moreover, should teach us that now and then there comes a time when to hold the olive-branch in one hand and the sword in the other, especially if the olive-branch is kept in the foreground and the sword in the background, involves not only a sad waste of energy, but is mistaken kindness to our enemies.

Those who have read—and who has not?—the charming story of "Rab and his Friends" will remember the incident which, for the sake of brevity, we reluctantly condense. A small, thorough-bred terrier, after being rudely interrupted in his encounter with a large shepherd's-dog, darts off, fatally bent on mischief, to seek a new canine antagonist. He discovers him in the person of a huge mastiff, quietly sauntering along in a peaceful frame of mind, all unsuspecting of danger. The angry terrier makes straight at him, and fastens on his throat. The rest of the story shall be told in the graphic language of the author. "To our astonishment, the great creature does nothing but stand still, hold himself up, and roar,—yes, roar: a long, serious, remonstrative roar. How is this? *He is muzzled!* The bailies had proclaimed a general muzzling, and his master, studying strength and economy mainly, had encompassed his huge jaws in a home-made apparatus, constructed out of the leather of some ancient *breeching*. His mouth was open as far as it could; his lips curled up in rage,—a sort of terrible grin; his teeth gleaming, ready, from out the darkness; the strap across his mouth tense as a bowstring; his whole frame stiff with indignation and surprise; his roar asking us all round, 'Did you ever see the like of

this?' He looked a statue of anger and astonishment, done in Aberdeen granite. We soon had a crowd; the chicken held on. 'A knife!' cried Bob; and a cobbler gave him his knife: you know the kind of knife, worn away obliquely to a point, and always keen. I put its edge to the tense leather; it ran before it; and then!—one sudden jerk of that enormous head, a sort of dirty mist about his mouth, no noise,—and the bright and fierce little fellow is dropped, limp and dead."

If we draw a useful moral from this homely incident, it will not be the first time that the unerring sagacity of animals has been serviceable to man. A stealthy, cunning, unscrupulous, desperate, devilish foe has seized the nation by the throat and threatens its life. The Government is strong, courageous, determined, abundantly able to make a successful resistance, and even to kill the insolent enemy; but—*it is muzzled*: muzzled here by conservative counsels; and there by radical complaints,—by the over-cautious policy of one general, and the headlong haste of another,—by a too tender regard for slavery in some States, and by a too zealous anxiety for instant emancipation in others,—by fear of provoking opposition in one quarter, and by a blind defiance of all obstacles in another. Now what shall be done? Shall we hesitate, despond, despair? Never! *For Heaven's sake, take off the muzzle.* Use every weapon which the God of Battles has placed in our hands. Put forth all the power of the nation. Encourage and promote all fighting generals; cashier all officers who are determined to make war on peace principles; arm, equip, and discipline negroes, not to burn, plunder, and massacre, but to meet their

and our enemies in fair and open fight.\* Demonstrate to the world that we are terribly in earnest. Waste no time in discussing the chance of foreign intervention. Postpone Pacific railroads, international telegraphs, polygamy in Utah, African colonization, everything, to the engrossing and emergent crisis which now confronts the Government. Make the contest sharp, short, and decisive. Put down the Rebellion, vindicate the majesty of the Law, the sacredness of the Union, and the integrity of the Constitution. There will be time enough, after this is done, to discuss all minor questions and all collateral issues. One paramount duty lies directly before us. Let us perform this duty fearlessly, and leave the future with God.

\* The opposition to the employment of negro regiments, if made by traitors North or South, can be easily comprehended,—if made by loyal men, is wholly inexplicable. Your neighbor's house takes fire at night. The flames, long smouldering, make rapid progress, and threaten the comfort, certainly, if not the lives of his household, and the total destruction of his property. The alarm is given. An engine comes promptly to the rescue. It is just in season to save his dwelling. The firemen spring with ready alacrity to their places. But stop! He suddenly discovers the appalling fact that they are negroes! True, there is not a moment to be lost. No other engine is, or can be, within helping distance. The least delay means poverty and a houseless family. And yet he rudely dismisses the dusky firemen, folds his arms with Spartan stoicism, and, looking complacently on the burning building, says, "*Better this than to rely on the assistance of niggers!*" *Is it Spartan stoicism?* Is it not rather stark lunacy? And would you not take immediate measures to provide such a man with permanent quarters in a mad-house?

## REVIEWS AND LITERARY NOTICES.

*Roba di Roma.* By WILLIAM W. STORY.  
2 vols. 8vo. pp. 355, 369. London:  
Chapman & Hall. 1863.

THE father of the celebrated Mr. Jonathan Wild was in the habit of saying, that "travelling was travelling in one part of the world as well as another; it consisted in being such a time from home, and in traversing so many leagues; and he appealed to experience whether most of our travellers in France and Italy did not prove at their return that they might have been sent as profitably to Norway and Greenland." Fielding himself, the author of this sarcasm, was a very different kind of traveller, as his Lisbon journal shows; but we think he told no more than the truth in regard to the far greater part of those idle people who powder themselves with dust from the highways and blur their memories with a whirl through the galleries of Europe. They go out empty, to come home unprofitably full. They go abroad to escape themselves, and fail, as Goethe says they always must, in the attempt to jump away from their own shadows. And yet even the dullest man, if he went honestly about it, might bring home something worth having from the dullest place. If Ovid, instead of sentimentalizing in the "*Tristia*," had left behind him a treatise on the language of the Getæ which he learned, we should have thanked him for something more truly valuable than all his poems. Could men only learn how comfortably the world can get along without the various information which they bring home about themselves! Honest observation and report will long continue, we fear, to be one of the rarest of human things, so much more easily are spectacles to be had than eyes, so much cheaper is fine writing than exactness. Let any one who has sincerely endeavored to get anything like facts with regard to the battles of our civil war only consider how much more he has learned concerning the splendid emotions of the reporter than the events of the fight, (unless he has had the good luck of a peep into the correspondence of some pricelessly

uncultivated private,) and he will feel that narrative, simple as it seems, can be well done by two kinds of men only,—those of the highest genius and culture, and those wholly without either.

It gradually becomes clear to us that the easiest things can be done with ease only by the very fewest people, and those specially endowed to that end. The English language, for instance, can show but one sincere diarist, Pepys; and yet it would seem a simple matter enough to jot down the events of every day for one's self without thinking of Mrs. Posterity Grundy, who has a perverse way, as if she were a testatrix and not an heir, of forgetting precisely those who pay most assiduous court to her. One would think, too, that to travel and tell what you have seen should be tolerably easy; but in ninety-nine books out of a hundred does not the tourist bore us with the sensations he thinks he ought to have experienced, instead of letting us know what he saw and felt? If authors would only consider that the way to write an enlivening book is not by seeing and saying just what would be expected of them, but precisely the reverse, the public would be gainers. What tortures have we not seen the worthiest people go through in endeavoring to get up the appropriate emotion before some famous work in a foreign gallery, when the only sincere feeling they had was a praiseworthy desire to escape! If one does not like the Venus of Milo, let him not fret about it, for he may be sure she never will.

Montaigne felt obliged to separate himself from travelling-companions whose only notion of their function was that of putting so many leagues a day behind them. His theory was that of Ulysses, who was not content with seeing the cities of many men, but would learn their minds also. And this way of taking time enough, while we think it the best everywhere, is especially excellent in a country so much the reverse of *fast* as Italy, where impressions need to steep themselves in the sun and ripen slowly as peaches, and where *carpe diem* should be translated *take your*

own time. But is there any particular reason why everybody should go to Italy, or, having done so, should tell everybody else what he supposes he ought to have seen there? Surely, there must be some adequate cause for so constant an effect.

Boswell, in a letter to Sir Andrew Mitchell, says, that, if he could only see Rome, "it would give him talk for a lifetime." The utmost stretch of his longing is to pass "four months on classic ground," after which he will come back to Auchinleck *uti conviva satur*,—a condition in which we fear the poor fellow returned thither only too often, though unhappily in no metaphorical sense. We rather think, that, apart from the pleasure of saying he had been there, Boswell was really drawn to Italy by the fact that it was classic ground, and this not so much by its association with great events as with great men, for whom, with all his weaknesses, he had an invincible predilection. But Italy has a magnetic virtue quite peculiar to her, which compels alike steel and straw, finding something in men of the most diverse temperaments by which to draw them to herself. Like the Siren, she sings to every voyager a different song, that lays hold on the special weakness of his nature. The German goes thither because Winckelmann and Goethe went, and because he can find there a sausage stronger than his own; the Frenchman, that he may flavor his infidelity with a bitter dash of Ultramontanism, or find fresher zest in his chattering boulevard after the sombre loneliness of Rome; the Englishman, because the same Providence that hears the young ravens when they cry is careful to furnish prey to the courier also, and because his money will make him a *Milor in partibus*. But to the American, especially if he be of an imaginative temper, Italy has a deeper charm. She gives him cheaply what gold cannot buy for him at home, a Past at once legendary and authentic, and in which he has an equal claim with every other foreigner. In England he is a poor relation whose right in the entail of home traditions has been docked by revolution; of France his notions are purely English, and he can scarce help feeling something like contempt for a people who habitually conceal their meaning in French; but Rome is the mother-country of every boy who has devoured Plutarch or taken his daily doses

of Florus. Italy gives us antiquity with good roads, cheap living, and, above all, a sense of freedom from responsibility. For him who has escaped thither there is no longer any tyranny of public opinion; its fetters drop from his limbs when he touches that consecrated shore, and he rejoices in the recovery of his own individuality. He is no longer met at every turn with "Under which king, bezonian? Speak, or die!" He is not forced to take one side or the other about table-tipping, or the merits of General Blank, or the constitutionality of anarchy. He has found an Eden where he need not hide his natural self in the livery of any opinion, and may be as happy as Adam, if he be wise enough to keep clear of the apple of High Art. This may be very weak, but it is also very agreeable to certain temperaments; and to be weak is to be miserable only where it is a duty to be strong.

Coming from a country where everything seems shifting like a quicksand, where men shed their homes as snakes their skins, where you may meet a three-story house, or even a church, on the highway, bitten by the universal gad-fly of bettering its position, where we have known a tree to be cut down merely because "it had got to be so old," the sense of permanence, unchangeableness, and repose which Italy gives us is delightful. The oft-repeated *non è più come era prima* may be true enough of Rome politically, but it is not true of it in most other respects. To be sure, gas and railroads have got in at last; but one may still read by a *lucerna* and travel by *vettura*, if he like, using Alberti as a guide-book, and putting up at the Bear as a certain keen-eyed Gascon did three centuries ago.

Mr. Story has taken Italy with due deliberation, having lived there now some fifteen years. He has thus been enabled to let things come to him, instead of running after them; and his sensations have had time to ripen slowly toward the true moment of projection, without being shaken and hurried, or huddled one atop of the other. We doubt if the picturesque can be profitably done by the job, for in æsthetics the proverb that half a loaf is better than no bread does not hold. An Italian *fiesta*, we suspect, if you make it a matter of business, will turn its business-side to you, and you will go away without having been ad-

mitted to the delightful confidence of its innocent gayety and unpremeditated charm. Tourists must often have remarked, in making an excursion to a ruin or bit of picturesque scenery, that what chance threw in to boot was by far the best part of their bargain, for the most beautiful experiences come not by observation. The crumbling temple lured them forth, but it was only to see a sunset or to hear a nightingale.

What between winters in Rome and summers in one or the other mountain-town, with intervals of absence now at Florence and now at Siena, Mr. Story has had such opportunities as fall to the lot of very few foreigners. For, in studying the ways of a people, it is as with wild animals, — you must be long enough among them to get them *wonted*, so that you may catch them at unawares. His book is on the whole a delightful one, and would have been so without qualification, had he confined it to a relation of his own experiences. Where he narrates or describes, he is always lively and interesting; where he disserts or grows learned, he gives up his vantage-ground, and must consent to be dull like everybody else. Anybody can be learned, anybody except Dr. Holmes dull; but not everybody can be a poet and artist. The chapter on the Evil Eye is a marvel of misplaced erudition. The author has hunted all antiquity like a policeman, and arrested high and low on the least suspicion of a squint. Horace and Jodocus Damhouder, (to whose harmless Dam our impatience tempts us to add an *n*;) Tibullus and Johannes Wouwerus, St. Augustine and Turnebus, with a motley mob of Jews, Christians, Greeks, Romans, Arabians, and Lord-knows-whats, are all thrust into the dock cheek by jowl. For ourselves, we would have taken Mr. Story's word for it, without the attestation of these long-winded old monsters, who wrote about charms and enchantments in a style as potent in disenchantment as holy-water, and who bored their own generation too thoroughly to have any claim upon the button of ours. Every age is sure of its own fleas without poking over the rag-bag of the past; and of all things, a superstition has the least need of proving the antiquity of its pedigree, since its very etymology is better than the certificate of all the Heralds' Colleges put together. We are surprised that so

clever and lively a man as Mr. Story should not have seen that in such matters one live fact is better than fifty dead ones, and that even in history it is not so much the facts as what the historian has contrived to see in them that gives life to his work.

But learning makes a small part of Mr. Story's book; only, as the concluding chapter happens to bristle with quotations and references, thickly as the nave of St. Peter's on a festival with bayonets, this is the last taste left in the mouth. The really valuable parts of the book (and they make much the larger part of it) are those in which the author relates his own experiences. After so many volumes stuffed like a *chiffonnier's* basket with the shreds of ancient Rome, it is really refreshing to come upon a book which makes us feel that Italy is still inhabited by very human beings, and contains something more than the tombs of the Scipios, and inscriptions interesting only to people who think a dead Roman donkey better than a living Italian lion. The chapters on Street-Music in Rome, on Games, on Caffes and Theatres, on Villeggiatura and the Vintage, on the Ghetto, the Markets, and Summer in the City, are all of them delightful and new. They really teach us something, while the learning, we are sorry to say, does nothing of the kind. Several of these chapters our readers will remember enjoying in the "Atlantic." They are good for those who have been in Italy, for those who are going thither, and, above all, for those who must stay at home. They contain the most cheerful and picturesque descriptions of Italian life and scenery we have ever met with. And we cannot be too thankful to Mr. Story that he leaves a theme so poetical in itself to be poetical, without any officious help from himself, and that, though an artist, he does not enter on any of those disquisitions which would have made Sir Joshua shift his trumpet. On the whole, we are inclined to forgive him the polyglot lumber of his chapter on the Evil Eye in consideration of the scenery and galleries which he has spared us. We think we see symptoms that the Nature-mania which began with Rousseau is on the decline, and that men and their ways are getting into fashion again as worth study. The good time is perhaps coming when some gallant fellow

will out with it that he hates mountains, and will be greeted with a shout of delight from his emancipated brethren.

Mr. Story is a person of very remarkable endowments. An accomplished musician and poet, (we ought to have said before how remarkably good the translations in these volumes are,) a skilful draughtsman, the author of reputable law-books, he would seem to have been in danger of verifying the old saw, had he not proved himself so eminently a master in sculpture. We think the country is deeply indebted to Mr. Story for having won so complete a triumph at the London World's Fair with his Cleopatra and Libyan Sibyl, at a time when English statesmen and newspapers were assuring the world that America was relapsing into barbarism. Those statues, if we may trust the unvarying witness of judicious persons, are conceived and executed in a style altogether above the stone-cutting level of the day, and give proof of real imaginative power. Mr. Story's genius and culture, with the fresh spur of so marked a success, will, we are sure, produce other works to his own honor and that of his country. For we feel that we have a country still,—feel it the more deeply for our suffering, and our hope deferred,—and out of the darkness of to-day we have still faith to see a fairer America rising, a higher ideal of freedom, to warm the soul of the artist and nerve the arm of the soldier.

*Hand-Book of Universal Literature.* From the Latest and Best Authorities. By MRS. ANNE C. L. BOTTA. A New Edition. 12mo. Boston: Ticknor and Fields. 1862.

A THING once done assumes a magical simplicity. No matter what may have been the previous difficulty, or how much work may be involved in the result, yet, when the work is done, the problem solved, all the difficulty and labor promptly disappear from view, as if in dread of being led captive in triumphal procession after the Cæsar who has mastered them. Thus, it does not seem at all strange that we should have a book professing to guide us through all the intricacies of general literature; indeed, now that the work is

put into our hands, it seems so easy of accomplishment that the only marvel would appear to be that we have had none hitherto. Yet the conditions necessary to such a work are of the rarest to be found; not so rare, indeed, when each is considered separately, but rarely to be met with in combination.

In order even to attempt a work of this nature, its utility must first be fully appreciated; but, unfortunately, those whose need is the greatest, as being immediately present, would on that very account be incompetent to supply the need, while those who by dint of patient study have brought themselves up to the point of competency for the task no longer realize the want,—just as men who have become rich by industry forget the necessities of poverty, which were the earliest spurs upon their energy.

The great majority of readers, therefore, have good reason to thank Mrs. Botta, that, after having met a great educational need in her own experience, she has benevolently set about supplying the same need in the experience of others. The same motive which has led her to do this has also made her work, from the peculiar manner in which it is conducted, an important contribution toward a more perfect educational system than generally prevails; though we would not do her the injustice to imply that what she has done claims merit on this account alone or chiefly. It *does* claim merit in this way, and of a very high order, because it avoids a prominent fault that vitiates most works intended to promote the general diffusion of knowledge. The fault referred to is the same which De Quincey, in a note to his "Political Economy," has called the greatest vice of teaching,—namely, that the teacher does not readily enter into, as an inheritance, the difficulties of the pupil. Merely to have corrected this fault, to have met the popular mind half-way and upon its own ground, was to furnish an important condition hitherto lacking in the field chosen.

The extent of the work—embracing, as it does, the whole field of literature—imposes other and more difficult conditions. Originality, in any primary sense, was of course an impossibility; a single lifetime would not suffice even for the most cursory examination of original ma-

terials on so grand a scale. It was necessary, therefore, to select and make use of the best authorities, critical and historical, those whose researches have been most valuable and comprehensive, in each particular department of the field. These authorities were to be found, not in a single language, but in several; and even after they were found, and the various results of their investigations put at their just estimate, the important work of selection had then only just commenced. Here were the master-critics and antiquaries, —the Müllers, Champollions, and all. Some use must be made of each; but the compass, no less than the design, of the work demanded the exclusion of all secondary and unimportant matter, yet in such a manner that the ideal unity should not be at all disturbed. Here was required, not merely tact and discrimination, but a high degree of philosophical analysis; and since this was valueless except as it was followed by comprehensive synthesis, the power of artistic combination was no less requisite to the complete result.

From the foregoing remarks it must not be supposed that there has been throughout a remodelling of all the material used. On the contrary, it is one of the most important of the features which give value and interest to the work, that in frequent instances the material has been presented precisely as it came to hand; a felicitous or humorous turn of a sentence, a pointed antithesis, a happy grouping of historic incidents, or a vigorous clinching of manifold thoughts in a single expression, has been happily preserved where by others it might have been ejected, or marred in the changing, for the sake of giving to the work a factitious claim to an originality which, in such a field, is plainly the least desirable characteristic. Our most hearty thanks are due to Mrs. Botta that she has been willing to sacrifice what at the best would have been a spurious claim to the purely legitimate one, of having conquered almost insuperable difficulties, and, by the most conscientious fidelity, elaborated a really valuable treatise, where before there existed none at all.

So great as has been the need of this work, so great will be the appreciation of it at the hands of the reading public. A whole has been given where hitherto only

parts had existed, and those for the most part inaccessible to the general reader.

We have no space to enlarge upon the many particular excellences of the book. It is vivacious in style, having none of the tedium belonging to most works of this description. There is very much concerning ancient religion, and concerning the classification of languages, as well as respecting the peculiarities of each, that has never before been presented in a popular form. We have rarely, indeed, seen so much that was valuable, and so well digested, compressed within such limited bounds.

*The New American Cyclopædia; a Popular Dictionary of General Knowledge.* Edited by GEORGE RIPLEY and CHARLES A. DANA. 16 vols. royal 8vo. New York: D. Appleton & Co.

THE sixteenth and concluding volume of the "New American Cyclopædia" brings Messrs. Ripley and Dana to the end of one of the most laborious and important literary works ever undertaken in this country; and the voice of the public, we are sure, will be all but unanimous in congratulating them upon the generally satisfactory manner in which they have performed their task. The cost of the work, according to a New-York journal, has been over four hundred thousand dollars. Six years have been spent in its execution, and nearly five hundred writers have been employed to contribute to it. Naturally, the articles are of very unequal merit; but it is fair to remark that a high standard of scholarship and literary polish has evidently been aimed at, from the first volume to the last, and there is scarcely any point upon which the "New American Cyclopædia" may not safely challenge comparison with any work of similar pretensions in the English language.

Practically, none of the cyclopædias previously accessible in our language has now much value. Such works as "Rees's," the "Edinburgh," the "London," and the "Penny" Cyclopædias, the "Encyclopædia Metropolitana," and the excellent, though rather brief, "Encyclopædia Americana" of Dr. Francis Lieber, the only one, except the "New American," ever written in this country, however good in

their day, have long been entirely out of date. The "English Cyclopædia" of Charles Knight, and the eighth edition of the famous "Encyclopædia Britannica," were completed while the work of Messrs. Ripley and Dana was yet in progress; but they are so different from the latter in their scope and execution, and so much more costly, that they can hardly be said to rival it. The first-named is a revised issue of the old "Penny Cyclopædia" of the Society for the Diffusion of Useful Knowledge, and retains some of the best features of that excellent work. Its arrangement seems to us peculiarly inconvenient; but its most glaring defect is the lack of American subjects, and the slipshod, unsatisfactory, and inaccurate manner in which the few that are found in it have been treated. The "Encyclopædia Britannica" is open to the same objection. The first edition of this great work appeared over ninety years ago. It contained neither historical, biographical, nor geographical articles, and was rather a collection of treatises on the principal arts and sciences than a cyclopædia in the common acceptation of the term. It has since been five times almost remodelled, arranged alphabetically, and greatly enlarged; but it still preserves its old distinguishing feature of treating great scientific and historical subjects exhaustively under a single head: for instance, there are two elaborate historical articles on "Britain" and "England," but none on Charles I. or Charles II.; long articles on "Animal Kingdom" and "Mammalia,"—so long, in fact, that it is almost impossible to find anything in them without an index,—but none on the separate animals. For the scholar, this plan, perhaps, has its advantages; but, for the unlearned reader, who turns to his cyclopædia to find an intelligible account of the habits of some particular creature, without caring greatly what its precise place may be in the zoological kingdom, or looks for a name without knowing whether it belongs to a fish or a river, no book that professes to be a manual of reference could well be arranged on a more inconvenient principle. One of the chief duties of a cyclopædia is to save trouble,—to put one on the high-road to knowledge, without unnecessary delay in finding the guide-boards. But send a half-educated man to look for a scrap of

learning in an article of a hundred pages, and one might as well at once turn him loose into a library. And what is worse, the unwieldy dimensions of these great articles are out of all proportion to the information they contain. We venture to assert that the ponderous "Encyclopædia Britannica," with its twenty-two quarto volumes, will tell less, for instance, about the Horse, or about Louis XIV., than the much smaller work of Messrs. Ripley and Dana. In the "New American Cyclopædia" there are few articles over twenty pages long. The leading subjects in the sciences, such as "Anatomy," "Botany," "Physiology," etc., have from three to ten pages each,—enough to give an outline of the principles and history of the science. The great geographical and political divisions of the globe are treated at somewhat greater length. Every important plant, beast, bird, and fish, every large town, river, lake, province, and mountain, every notable monarch, and every great battle, (not forgetting "Bull Run" and the "Chickahominy Campaign,") is the subject of a separate article.

Next to this very convenient subdivision of topics, the most striking merit of the new cyclopædia is, perhaps, comprehensiveness. Among its faults, very few faults of omission can fairly be charged; and, indeed, it seems to us rather to err in giving too many articles, especially on American second-rate preachers, politicians, and literary men, all of whom are no doubt ticketed for immortality by a select circle of friends and admirers, but in whom the public at large take the faintest possible interest. On the other hand, the space given to such heroes is small; and so long as they do not exclude more valuable matter, but only add a little to the bulk of the volumes, they do no great harm, and may chance to be useful. In the department of natural history this work is much fuller than any other general dictionary. It is also especially complete in technology and law, (the latter department having been under the care of Professor Theophilus Parsons,) and sufficiently so in medicine, theology, and other branches of science.

Among the articles upon which its success and reputation will chiefly rest are those relating to technology. With scarcely an exception, they are plain,

practical, and full of common sense. Those on "Cotton" and "Wool" and their manufactures, the various metals and the ways of working them, (the article on "Zinc" is the best we have ever seen on that subject,) "Gas," "Ship," "Railroad," "Telegraph," "Sewing-Machine," "Steam," and "Sugar," are compact summaries of valuable knowledge, and will go far to commend the work to a class of persons who, except in our own country, are not much given to reading or book-buying. They vindicate the claims of the *Cyclopædia* to be a popular dictionary, not intended solely for the scholar's library, but directed to the wants of the artisan and man of business. It is not too much to say of many of them, — of "Ship," for instance, and "Telegraph," — that, apart from their value as records of industrial progress and invention, they are interesting enough to furnish a very pleasant hour's occupation to the desultory reader.

The other scientific articles are mostly written in a clear, unpretending style, with a sparing use of technical expressions; and so far as we have discovered, they do ample justice to all recent discoveries. The articles by Professor Bache on the "Tides," Professor Dalton on "Embryology," Professor J. D. Dana on "Crystallography," Dr. W. H. Draper on the "Nervous System," Professor James Hall on "Palæontology," Professor Henry, of the Smithsonian Institution, on "Magnetism" and "Meteorology," James T. Hodge on "Earth" and "Electricity," Frank H. Storer on "Chemistry" and kindred subjects, Dr. Reuben on "Heat," "Light," "Vision," "Winds," etc., and the philological contributions of Dr. Kraitsir and Professor Whitney, do the highest credit to the work in which they appear. The forbidding appearance of Dr. Kraitsir's articles will get more notice than their deep learning. We cannot but regret that such valuable papers as those on "Hieroglyphics," "Cuneiform Inscriptions," "Indian Languages," and we may add, though belonging to another class of subjects, "Brahma" and "Buddha," by the same author, should not have been dressed with a little more taste, and the naked deformity of barbarous paradigms covered with some of the ornaments of a readable style. It is the more a pity, be-

cause the articles are well worth any care that could be spent upon them.

The biographical articles are sufficiently numerous, and, though rigidly condensed, are full enough for all ordinary purposes. There are few such elaborate biographies as those contributed by Macaulay, De Quincey, and others, to the "*Encyclopædia Britannica*"; but Mr. Bancroft's "Jonathan Edwards," Mr. Everett's "Hallam," "Washington," and "Daniel Webster," President Felton's "Agassiz," Professor Lowell's "Dante," Professor Schaff's "Luther" and "Melancthon," Mr. Seward's "DeWitt Clinton," A. W. Thayer's "Beethoven," "Handel," "Haydn," and "Mozart," Richard Grant White's "Shakespeare," and the articles on "Patrick Henry," "Washington Irving," "Milton," "Southey," "Schiller," "Swift," and many others we might name, are admirable specimens of literary composition. Among miscellaneous articles that deserve particular praise are a well-written and elaborate history of the Jewish people and literature under the title "Hebrews"; a picturesque account of "London"; a summary of all that is known about "Japan"; excellent histories of "Newspapers" and "Periodical Literature"; a brilliant article on "Athens" by the late President Felton; a review of "Arctic Discovery"; valuable and exceedingly interesting papers on "Army," "Artillery," "Infantry," and "Cavalry," with one on "Gunnery" by Commodore Charles Henry Davis; "Painting"; "Sculpture"; "Serfs"; "Slavery"; "Hungary"; and the best published account of the "Mormons." The article on the "United States" fills one hundred and twenty pages, including thirty-three pages of fresh statistical tables, and gives an admirable summary of our history down to last September; it closes with a comprehensive survey of American literature. The Supplement gives a biography of nearly every general in the Union and Rebel armies.

The promises of the editors on the score of impartiality have been well kept. It would be too much to expect them to satisfy everybody, or never to be caught tripping; but in the great questions of religion and politics, they seem to have preserved a happy mean between the outspoken freedom of the partisan and the halting timidity of the man who never

commits himself because he never has an opinion. Their contributors represent nearly every Christian creed, every shade of politics, and every part of the English-speaking world, from Salt Lake City to London, and from Mobile to Montreal.

We have only to add that the *Cyclopædia* does fuller justice to our own country than she has ever received from such a book before; that the historical and statistical articles present the latest accessible information; and that, so far as our opportunities of examination permit us to judge, the book, though of course not free from errors, is accurate to a more than ordinary degree. The labor of the editors has been careful and conscientious; and they have produced a work which must long endure as a valuable contribution to American literature and a credit to American scholarship.

*Manual of Geology: treating of the Principles of the Science with Special Reference to American Geological History, etc.* By JAMES D. DANA. 8vo. Philadelphia: Theodore Bliss & Co. London: Trübner & Co.

No work on any science has yet been published in our language more exhaustive of facts, more clear in statement, or more philosophical in general character and arrangement, than Dana's "Mineralogy," as presented in its last and revised edition.

Of course, the announcement of a "Manual of Geology" by the same author could not fail to excite hopes that a long-felt want on the part of the American public was to be met, a void in our scientific literature to be filled. Nor are we disappointed in our expectations, now that the work has appeared and time has been given for its careful perusal. On the contrary, we feel a degree of satisfaction that might perhaps express itself too strongly in praise, if we were not withheld by the supposition that a proper notice of the contents of the volume would do more for its appreciation by the reader than any language of eulogy.

What, then, is the distinctive character of the work, and wherein do the contents so differ from previous publications as to claim our especial notice?

In the first place, we would state, that, while it is a manual of general geological knowledge concerning the history of the earth and of life on its surface, and full of information concerning the strata and geological phenomena of all parts of our globe, it is yet peculiar, inasmuch as it treats of the principles of the science with special reference to American Geological History. In this will be found its great value to American students; for who of them has not had his patience tried, and his enthusiasm often chilled, in vain attempts to solve the questions which have sometimes arisen in his mind concerning American geology, and has not sought their solution in the only way open to him,—a consultation of innumerable State Reports, and other publications, not half of which were accessible when required?

Another distinctive feature of the work is the prominence given to Historical Geology, or that portion which treats of the successive formation of the strata of the different periods, and of the development and characteristics of the life upon the surface. The whole treatment of this exhibits in a marked degree the extended research and philosophical ability of the author.

#### GENERAL CONTENTS AND DIVISIONS OF THE WORK.

*Physiographic Geology.*—This embraces a general survey of the earth's features: its continents, oceans, lakes, river-systems, oceanic and atmospheric currents, climates, distribution of forest-regions, deserts, etc.

*Lithological Geology.*—This treats of the rocks, and of their arrangement: the first embracing an account of all the important chemical elements that enter into their constitution, the minerals and organic materials that occur in their composition, and the kinds and distinguishing characteristics of those that make up the earth's surface; the second presenting the arrangement of rocks, stratified and unstratified,—the structure due to deposition and other agencies,—the dislocations of strata, and the consequent faults and distortions of fossils contained in them,—together with considerations upon the age and chronological division of all the strata of the earth's surface.

*Historical Geology.*—This third part of the volume, and that which peculiarly characterizes the work, opens with some general remarks upon the divisions in Geological History, and the announcement of certain important principles to be kept in view while considering the subject. The progress of life is then described as the basis of subdivision into Geological Ages; and the subdivisions of geological time are presented as follows:—

- I. Azoic Time or Age.
- II. Palæozoic Time.
  1. The Age of Mollusks, or Silurian.
  2. The Age of Fishes, or Devonian.
  3. The Age of Coal Plants, or Carboniferous.
- III. Mesozoic Time.
  4. The Age of Reptiles.
- IV. Cenozoic Time.
  5. The Age of Mammals.
  - V. Era of Mind.
    6. The Age of Man.

And in connection with this is given a table of the further subdivision of this history into Geological Periods, and a map showing the distribution of the rocks of each of these periods over the surface of the United States.

The great divisions above given are, as stated, essentially the same as proposed by Professor Agassiz, who, however, made the era of Fishes to embrace the first and second ages of Palæozoic Time, the Silurian and the Devonian, instead of restricting it, as now done, to the latter, and calling the former the Age of Mollusks.

Following these general considerations, each great division of geologic time is successively taken up, commencing with the Azoic. Each period of the several divisions is treated of in order; and the rocks of each epoch and their distribution described, first, as they exhibit themselves in America,—then, more briefly, as they appear in Europe. A full account of the life that manifested itself in each epoch, both vegetable and animal, is likewise given in the same order. The igneous and other disturbing agencies are then considered, and general remarks added upon the geography, the character of the surface, and various phenomena of the period.

The whole of this portion of the work is abundantly illustrated with well-exe-

cuted figures of all the characteristic species that distinguish the several periods, mostly drawn from American examples.

*Dynamical Geology.*—This particular branch of the subject is made less prominent than usual in geological works, but it will not be found lacking in any point.

The subject is presented in the following order:—

1. Life as an agent in protecting, destroying, and making rocks.
2. Cohesive Attraction.
3. The Atmosphere as a mechanical agent.
4. Water as a mechanical agent.
5. Heat as an agent in volcanic phenomena, igneous eruptions, metamorphism, veins, etc.
6. Movements of the earth's crust, pliation of strata, origin of mountains, earthquakes, etc.
7. Chemistry of Rocks.

Under the first head, we have much interesting matter concerning peat and coral formations, coral reefs and their origin, illustrated with figures.

Under the head of Water as an Agent, some plates are given, new to the general reader, of the remarkable *cañons* of the Colorado, which so well illustrate the powerful agency of this element in wearing away for itself deep channels in the strata. Under the same head is an interesting essay upon Glaciers, with figures, one of which is a reduced copy of a sketch in Agassiz's great work, representing the Glacier of Zermatt, in the Monte-Rosa region.

Under the head of Heat as an Agent, we have, as might be expected, interesting and valuable matter upon volcanic phenomena, and those of metamorphism.

We have thus briefly passed in review the contents of the work, and without criticism, too, for we would scarcely have a sentence in the book altered or omitted. Yet we do not always concur in all the views expressed or implied by the author. For instance, we consider the evidence of the Jurassic age of the Ichnolitic strata of the sandstone of the Connecticut River too strong to allow of their being any longer classed among the Triassic. We certainly differ from him in much that is said upon the subject of Man, as of one species. Yet we do not care to dwell upon these points,

especially the latter. Our author will not expect to find all readers agreeing with him upon such mooted questions.

We do not think that we overestimate the value of this work, when we express our belief that its publication will mark an era in our geological progress. By this we do not mean to imply that its character is such as to be of great service to those among us who are already learned in the geology and palæontology of our continent; but we do mean to affirm, that, by the efficient aid which this work will be to them, thousands and tens of thousands who have sought hitherto for information on its great subjects, when seeking was literally "groping in darkness," will be helped forward to a degree of knowledge respecting the history and life of our globe which they could not otherwise have attained.

*Elements of Military Art and History*: comprising the History and Tactics of the Separate Arms, the Combination of the Arms, and the Minor Operations of War. By EDWARD DE LA BARRE DUPARCO, Captain of Engineers in the Army of France, and Professor of the Military Art in the School of Saint-Cyr. Translated and edited by BRIGADIER-GENERAL GEORGE W. CULLUM, Chief of Staff of the General-in-Chief of the Armies of the United States. 8vo. New York: D. Van Nostrand.

WAR has its science and its art. There is a domain of general *principles*, which have their application in all the active operations of war; and military *science* is but the sum of these principles in their theory and practice. The *art* of war deals more directly with the details and practical direction of military affairs, and abounds in *rules* of action, organization, and administration. Military science and art are equally the results of experience in war. Principles of strategy have grown out of the exercise of the highest military mind in weighing the general features of campaigns, and from the perceptive and logical recognition of those elements essential to success. The art of war has grown up as a body of practices, traditions, and rules, naturally resulting from the immense sum of experience in mili-

tary life and action among all nations. It is, indeed, so inwoven with military history that the two should be studied in connection. Military art is more mature than military science; and in war, as in the practice of other professions and trades, definite and empirical rules for daily guidance, based mainly on practice, serve almost to exclude science and to keep it unprogressive. When, however, a Napoleonic mind becomes truly imbued with vital military principles, its most successful strokes may result from a bold disregard of rules under the lead of higher intelligence. But as military science is very imperfect, and as Hannibals, Fredericks, and Napoleons are not every-day products, it behooves lesser lights to study the art of war most conscientiously, in the hope of at least escaping the fatal category of blunders which crude officers are forever repeating.

The publication of a really good book on Military Art and History is, just now, a fortunate event, and its appearance two years since might have saved us much costly and mortifying experience. Enlightened men of all nations concede to the French school of soldiers and military authors a certain preëminence; due partly to the genius of the people and partly to the immense vital growth of war-craft under Napoleon. Barre Duparq is one of the most favorably known among recent military writers in France. As an engineer officer and Professor of Military Art in the famous school of Saint-Cyr, he has been led to study fortification, military history, army-organization, and the art of war with a methodical thoroughness, which, besides other highly valued works, has given us its ripe fruit in the volume before us. If not the very best, this is certainly among the best of the numerous volumes devoted to this topic; and General Cullum's judgment in selecting this work for translation is fully justified by the admirable system, clear and learned, but brief exposition, and entirely trustworthy quality, which even hasty readers must recognize. Could this book be put into the hands and heads of our numerous intelligent, but untrained officers, it would work a transformation supremely needed. It is lamentable to think how many precious lives and how much national honor have been thrown away from the lack of

just that portion of military instruction which is here offered in a single volume. Though no one book can make an accomplished officer, we may say that no officer can read Duparcq's Elements without positive advantage and real progress as a soldier. The topics treated, with constant illustration from history, are, the organization and functions of the four arms, infantry, cavalry, artillery, and engineers; organization of active armies; marches and battles; outposts; detachments; armed reconnoissances; passage of rivers; convoys; partisans; redoubts; barricades; heights; roads; farms or houses; forages; defiles; villages; and field hygiene.

General Cullum is well known as one of the most proficient students of military science and art in our service, and is amply qualified to prepare an original textbook on this subject. That he should have found time to translate Duparcq's work, amid his arduous and important services as General Halleck's chief of staff and chief engineer during the remarkable Western campaign, shows an industry only to be explained by his intense realization of the need of a book like this, as an antidote to that deficient military instruction which has been so replete with bad results. The translation is a faithful and lucid rendering of the original, and the technical words and expressions are generally satisfactory equivalents of the French terms.

We venture to express the hope that this painful war will lead to a fresh and successful study of military science and art in relation to American campaign-elements, so that future contingencies can be more creditably met than was that which Secession suddenly precipitated on us.

*Rejoinder to Mrs. Stowe's Reply to the Address of the Women of England.*

EMILY FAITHFUL, "printer and publisher in ordinary to Her Majesty," has issued from the "Victoria Press," in London, a small pamphlet with the above title, written at the request of a committee of British women by Miss Frances Power Cobbe, author of "Intuitive Morals." As Mrs. Stowe's "Reply" was first printed in this magazine, we here give the whole "Rejoinder."

"THE following Address has been written with the belief that it embodies the general sentiments of English women on the subject of Slavery. It has been decided to seek no signatures on the present occasion, rather than repeat the vast undertaking of obtaining any number which should adequately correspond with the half-million names appended to the former Address.

"MADAM, — You have asked of the women of England a solemn question. You have recalled the Address which half a million of us once sent you, appealing to our sisters in America to raise their voices against Slavery; and you demand, Where is now the spirit which dictated that appeal? You quote the evidence of our press and our public speakers, that the righteous indignation against Slavery which once kindled in all English hearts has waned, if it have not died out; and you allege that we have been wanting in generous faith and sympathy for the North in her great struggle, and have even descended to afford countenance, if not assistance, to the South. You challenge us to account for this dereliction from our former ardent sentiments, and you ask wherefore it is that *now*, when the conflict has assumed its most terrible form, and the peaceful persuasions of philanthropists have been superseded by the shock of contending armies spreading desolation through your land, — *now* we stand afar off, viewing coldly that awful contest, and sending, instead of cheering words of sympathy and faith, only doubts and lamentations over a 'fratricidal war,' and regrets partitioned with strange impartiality between the sufferers in the cause of free America, and those who have, in their own audacious words, 'founded their commonwealth on the institution of Slavery.' You retort our old appeal in the face of these things, and you say to us, 'Sisters, you have spoken well; we have heard you; we have heeded; we have striven in the cause, even unto death; we have sealed our devotion by desolate hearth and darkened homestead, — by the blood of sons, husbands, and brothers. In many of our dwellings the very light of our lives has gone out, and yet we accept the lifelong darkness as our own part in this great and awful expiation, by which the

bonds of wickedness shall be loosed, and abiding peace established on the foundation of righteousness. Sisters, what have you done, and what do you mean to do? In view of the decline of the noble anti-slavery fire in England, in view of all the facts and admissions recited from your own papers, we beg leave, in solemn sadness, to return to you your own words:—

“A common origin, a common faith, and, we sincerely believe, a common cause, urge us at the present moment to address you on the subject of the fearful encouragement and support which is being afforded by England to a slave-holding Confederacy. We appeal to you as sisters, as wives, as mothers, to raise your voices to your fellow-citizens, and your prayers to God, for the removal of this affliction and disgrace from the Christian world.”

“Madam, in answering this solemn appeal, we do not desire to detail the causes which may, in a measure, explain or palliate this failure in our national sympathy, whose existence (in so far as it is true) we profoundly deplore. Enough, and more than enough, debate has been already held on the complicated motives which have blended in your war, as in all other human concerns, and on the occasional acts of questionable spirit which must inevitably attend the public policy and sentiments of a nation engaged in deadliest conflict and bleeding at every pore. Somewhat you may perhaps forgive to those who have withheld their full sympathies, jealous that a most righteous cause should be maintained with any save the most untainted motives and the most unbending rectitude, and who have failed even yet to read in your policy the full *desire* to accomplish that end of universal emancipation whereto Providence is visibly directing the course of events. Somewhat, also, may be forgiven to those who have been misled by the misrepresentations of a portion of our press, and offended by the inimical spirit of your own. But, Madam, although many lips have been closed which ought to have spoken to you words of blessing, though the voice of England which has reached you has lacked that full tone of heartfelt sympathy you had justly anticipated, yet believe not that our nation is truly alienated from yours, or apostate to the great principles of freedom which were once our glory. The heart of

England is sound at the core: Slavery is now and ever an abomination in our eyes; nor has the dastard proposition to recognize the Confederate States failed to call forth indignant rejection, and that even with peculiar earnestness from those suffering operatives whose relief such a measure might have secured. It is to assure you of this, to vindicate ourselves from the shame of turning back in the hour of trial,—most foreign to our common Saxon race,—that we, the Women of England, offer you this response.

“We do not less abhor Slavery now than when your eloquent words called out an echo of feeling throughout Europe, such as no other appeal for the wronged or the miserable ever produced. We abhor Slavery, judging it simply as *human beings*, and because of all the agonies and tortures it has occasioned. We abhor it, judging it especially as *women*, because of all the unspeakable wrongs, the hideous degradation, it has inflicted on our sex. But we abhor it not only because of these its results, nor with a hatred which would be withdrawn, were they disputable now or remediable hereafter. We abhor Slavery for itself, and for its own enormous iniquity,—even the robbing from a human being of that freedom which it was the supreme gift of Omnipotence to bestow. We hold, that, were it in the power of the slaveholder to make his slaves absolutely happy, Slavery would not less be an injustice and a crime. Happiness is not to be measured against freedom, else would God have left us brutes, not men, and spared us all the sorrows of struggling humanity. And whereas it has been argued that the negro is of a race inferior to his master, and that therefore it is justifiable to enslave him, we reply, that the right to freedom is not founded on the equality of the holder to any other human being, else were every white man also lawfully to be enslaved by every other stronger or wiser than himself. But the right to freedom is founded simply and solely on the moral nature wherewith God has endowed every man and woman of the human race, enabling them, by its use, to attain to that virtue which is the end of their creation. And whereas others, again, have defended Slavery on the grounds of the supposed Divine sanction to be found for it in the Scriptures, we reply, that we deplore the condition of

those whose religion can lend itself to the task of seeking to appeal to God for the permission of an institution which the consciences He has made unequivocally loathe and condemn. Nor shall we hesitate to stigmatize such an appeal as hypocrisy, until the theologians who make it advance a step farther, and tell us that they are prepared to represent Jesus of Nazareth as one who, in fitting time and place, might have been a purchaser and a master of slaves. Thus, Madam, do we still condemn and abhor Slavery, as we have ever done, as in itself, and in its own nature, utterly evil and utterly indefensible; and we consider its vast and terrible results of cruelty and immorality to be only the natural fruit of so stupendous a wrong.

“We have not withheld from your nation either the tribute of admiration for the vast sacrifices you have made, or of sympathy for the bereavements and sufferings you have endured. But the expression of such admiration and sympathy from the truest hearts among us has been almost silenced by the solemn joy wherewith we have beheld your country purging herself, even through seas of blood, for her guilty participation in the crimes of the past, and preparing for herself the stainless future of ‘a land wherein dwelleth righteousness.’ We have rejoiced in the midst of sorrow to know that the doom of Slavery was written by a Divine Hand, even from the hour when its upholders dared to believe it possible in the face of Heaven to build up a State upon an injustice. We have looked with awe-struck consciences to this great revelation of the moral laws which govern the nations of the earth, and show to men who sought for God in the records of distant ages that the Living Lord still rules on high, and is working out even before our eyes the delivery of the captive and the punishment of the oppressor. The greatest national sin of Christian times has wrought the greatest national overthrow. The hidden evil of the land, which long smouldered underground, has blazed forth at last like a volcano, bursting in sunder the most solid of human institutions, and pouring the lava-streams of ruin and desolation even to the remotest shores where the spoil of guilt had been partaken. But while we behold with awe, in the present calamity, the manifestation of Supreme Justice,

we look with confident hope to the final issue to which it must lead. In whatever mode that end may be brought out, and through whatever struggles America may yet be doomed to pass, we are assured that only one termination can await a conflict between a nation which has abjured its complicity with crime and a confederation which exists but to perpetuate that crime forever. It is not now, in the presence of the events of the last three years, that we shall be tempted to fear that Wrong and Robbery, and the systematic degradation of woman, may possibly prove to be principles of stability, capable of producing the security and consolidation of a commonwealth! Your courage in this Titanic strife, — the lavish devotion with which the best blood of your land has been poured out on the field, and the tears of childless mothers shed in homes never before visited by the sorrows of war, — the patriotic generosity with which your treasures have been cast into the gulf opened suddenly in your busy and prosperous land, even as of old in the forum of ancient Rome, — these noble acts of yours inspire with confidence in you, no less than pride in the indomitable energies of our common race. But above your valor and your patriotism, we look with still higher hope to those moral laws whose vindication is involved in the issue of the conflict; and we feel assured, that, while for the Slave-Power the future can hold no possibility of enduring prosperity, for Free America it promises the regeneration of a higher and holier national existence, when the one great blot which marred the glory of the past shall have been expiated and effaced forever.

“This, Madam, is the belief and these are the hopes of thousands of Englishmen. They are, we are persuaded, even more universally the belief and hopes of the Women of England, whose hearts the complicated difficulties of politics and the miserable jealousies of national rivalry do not distract from the great principles underlying the contest. The failure of English sympathy whereof you complain is but partial at the most, and for that partial failure we deeply and sorrowfully grieve. But the nation at large is still true; and wherever it has been possible to learn the feelings of the great masses, no lack of ardent feeling has ever been found in England for the Northern cause. Though

senseless words and inhuman jests have been bandied across the Atlantic, yet we are assured that in the heart of both our nations survives unchanged that *kindred* regard and respect whose property it is, above other human feelings, to be indestructible. At this hour of your own greatest need and direful struggle,—at this hour, when a pirate from our ports is ravaging your shores, as you believe (albeit erroneously) with our guilty connivance,—at this very hour you have come forward with noblest generosity, and sent us the rich vessel which has brought food to our starving people. The *Griswold* has been your answer to the *Alabama*. It is a magnanimous, a sublime one; and English

hearts are not too cold to read it aright, or to cherish through all future time the memory thereof. Scorn and hate are transient and evanescent things; charity and love have in them the elements of immortality.

“Madam, we answer your Appeal by this rejoinder, and send this message through your honored hands to our sisters in America: Our hearts are with you in unchanged sympathy for your holy cause, in undying abhorrence of Slavery, in profound sorrow for your present afflictions, and in firmest faith in the final overthrow of that unjust Power whose corner-stone is an injustice and a crime.

“IN BEHALF OF

“THE WOMEN OF ENGLAND.”

CHARLES LAMB'S UNCOLLECTED WRITINGS.

I.

WHAT Southey says of Cottle's shop is true of the little bookstore in a certain old town of New England, which I used to frequent years ago, and where I got my first peep into Chaucer, and Spenser, and Fuller, and Sir Thomas Browne, and other renowned old authors, from whom I now derive so much pleasure and solacement. 'T was a place where sundry lovers of good books used to meet and descant eloquently and enthusiastically upon the merits and demerits of their favorite authors. I, then a young man, with a most praiseworthy desire of reading "books that are books," but with a most lamentable ignorance of even the names of the principal English authors, was both a pleased and a benefited listener to the conversations of these bookish men. Hawthorne says that to hear the old Inspector (whom he has immortalized in the quaint and genial introduction to the "Scarlet Letter") expatiate on fish, poultry, and butcher's-meat, and the most eligible methods of preparing the same for the

table, was as appetizing as a pickle or an oyster; and to hear these literary gourmands talk with such gusto of this writer's delightful style, or of that one's delicious humor, or t' other's brilliant wit and merciless satire, gave one a taste and a relish for the authors so lovingly and heartily commended. Certainly, after hearing the genial, scholarly, gentlemanly lawyer S—— sweetly discourse on the old English divines,—or bluff, burly, good-natured, wit-loving Master R—— declaim, in his loud, bold, enthusiastic manner, on the old English dramatists,—or queer, quaint, golden-hearted Dr. D—— mildly and modestly, yet most pertinently, express himself about Old Burton and Old Fuller,—or wise, thoughtful, ingenious Squire M—— ably, if not very eloquently, hold forth on Shakspeare and Milton, I had (who but a dunce or dunderhead would not have had?) a "greedy great desire" to look into the works of "Such famous men, such worthies of the earth."

And after listening to the stout, brawny, two-fisted, whole-souled, big-hearted, large-brained Parson A——, as he talked in his wise and winsome manner about Charles Lamb and his writings, I could not refrain from forthwith procuring and reading Elia's famous and immortal essays. Since then I have been a constant reader of Elia, and a most zealous admirer of Charles Lamb the author and Charles Lamb the man. Thackeray, you remember, somewhere mentions a youthful admirer of Dickens, who, when she is happy, reads "Nicholas Nickleby,"—when she is unhappy, reads "Nicholas Nickleby,"—when she is tired, reads "Nicholas Nickleby,"—when she is in bed, reads "Nicholas Nickleby,"—when she has nothing to do, reads "Nicholas Nickleby,"—and when she has finished the book, reads "Nicholas Nickleby": and so do I read and re-read the essays and letters of Charles Lamb; and the oftener I read them, the better I like them, the higher I value them. Indeed, I live upon the essays of Elia, as Hazlitt did upon "Tristram Shandy," as a sort of food that assimilates with my natural disposition.

And yet, despite all my love and admiration of Charles Lamb,—nay, rather in consequence of it,—I must blame him for what Mr. Barron Field was pleased to eulogize him for,—writing so little. Undoubtedly in most authors suppression in writing would be a virtue. In Lamb it was a fault. There are a score or two of subjects which he, "no less from the temerity than felicity of his pen," should have written upon,—subjects on which he had thought and ruminated for years, and which he, and none but he, could do justice to. He who loved and admired, as they were never loved and admired before or since, such sterling old writers as Burton, Browne, Fuller, and Walton, should have given us an article on each of those worthies and their inditings. Chaucer and Spenser, though proud and happy in having had such an appreciating

reader of their writings as Elia was, when a denizen of this earth, would, methinks, have given him a warmer, heartier, gladder welcome to heaven, if he had done for them what he did for Hogarth and the old dramatists,—pointed out to the world "with a finger of fire" the truth and beauty contained in their works. Instead of writing only two volumes of essays, Elia should have written a dozen. He had read, heard, thought, and seen enough to furnish matter for twice that number. He himself confesseth, in a letter written a year or two before his death, that he felt as if he had a thousand essays swelling within him. Oh that Elia, like Mr. Spectator, had printed himself out before he died!

But notwithstanding Lamb's fame and popularity, notwithstanding all readers of his inimitable essays lament that one who wrote so delightfully as Elia did should have written so little, there has not yet been published a complete collection of his writings. The standard edition of his works, edited by Talfourd, is far from being complete. Surely the author of "Ion" was unwise in not publishing all of Lamb's productions. Carlyle said he wanted to know all about Margaret Fuller, even to the color of her stockings. And the admirers of Elia want to possess every scrap and fragment of his inditing. They cannot let oblivion have the least "notelet" or "essaykin" of his. For, however inferior to his best productions these uncollected articles may be, they must contain more or less of Lamb's humor, sense, and observation. Somewhat of his delightful individuality must be stamped upon them. In brief, they cannot but contain much that would amuse and entertain all admirers of their author. For myself, I would rather read the poorest of these uncollected essays of Elia than the best productions of some of the most popular of modern authors. "The king's chaff is as good as other people's corn," saith the old proverb. "There is a pleasure arising

from the very bagatelles of men renowned for their knowledge and genius," says Goldsmith; "and we receive with veneration those pieces, after they are dead, which would lessen them in our estimation while living: sensible that we shall enjoy them no more, we treasure up, as precious relics, every saying and word that has escaped them; but their writings, of every kind, we deem inestimable."

For years I have been hopefully and patiently waiting for somebody to collect and publish these scattered and all but forgotten articles of Lamb's; but at last, seeing no likelihood of its being done at present, if ever in my day, and fearing that I might else never have an opportunity of perusing these strangely neglected writings of my favorite author, I commenced the task of searching out and discovering them myself for mine own delectation. And after a deal of fruitless and aimless labor, (for, unlike Johannes Scotus Eriugena, in his quest of a treatise of Aristotle, I had no oracle to consult,) after spending as many days in turning over the leaves of I know not how many volumes of old, dusty, musty, fusty periodicals as Mr. Vernon ran miles after a butterfly, I was amply rewarded for all my pains. For I not only found all of Lamb's uncollected writings that are spoken of in his "Life and Letters," but a goodly number of articles from his pen which neither he nor his biographer has ever alluded to. As I read these (to me) new essays of Elia, I could not but feel somewhat indignant that such excellent productions of such an excellent writer should have been "underkept and down suppressed" so long. I was as much ravished with these new-found essays of Lamb's as good old Nicholas Gerbelius (see Burton's "Anatomy of Melancholy," Partition II., Section 2, Member 4) was with a few Greek authors restored to light. If I had had one or two loving, enthusiastic admirers of Charles Lamb to enjoy with me the delight of perusing these uncollected Elia's, I

should have been "all felicity up to the brim." For with me, as with Michael de Montaigne and Hans Andersen, there is no pleasure without communication.

And therefore, partly to please myself, and partly to please the admirers of Charles Lamb, I herewith publish a part of Elia's uncollected essays and sketches. To ninety-nine hundredths of their author's readers they will be as good as MSS. And not only will they be new to most readers, but they will be found to be not wholly unworthy of him who wrote the immortal dissertation on "Roast Pig." Albeit not to be compared with Elia's best and most finished productions, these articles contain some of the best qualities and peculiarities of his genius. Without doubt, all genuine admirers, all true lovers of the gentle, genial, delightful Elia, will be mightily pleased with these productions of his inimitable pen.

Those who were so fortunate as to be personally acquainted with Charles Lamb are lavish in their praise of his conversational powers. Hazlitt says that no one ever stammered out such fine, piquant, deep, eloquent things in a half-dozen half-sentences as he did. "He always made the best pun and the best remark in the course of the evening." Lamb was undoubtedly "matchless as a fireside companion," inimitable as a table-talker, "great at the midnight hour." The "wit-combats" at his Wednesday-evening parties were waged with scarcely inferior skill and ability to those fought at the old Mermaid tavern between Shakspeare and Ben Jonson. Hazlitt, in his delightful essay intitled "Persons One would Wish to have Seen," gives a masterly report of the sayings and doings at one of these parties. It is to be regretted that he did not report the conversation at all of these weekly assemblages of wits, humorists, and good-fellows. He made a capital book out of the conversation of James Northcote: he could have made a better one out of the con-

versation of Charles Lamb. Indeed, Elia himself seems to have been conscious that many of his deepest, wisest, best thoughts and ideas, as well as wildest, wittiest, airiest fancies and conceits, were vented in conversation; and a few months before his death he noted down, for the entertainment of the readers of the London "Athenæum," a few specimens of his table-talk. Although these paragraphs of table-talk are not transcripts of their author's actual conversation, they doubtless contain the pith and substance of what he had really said in some of his familiar discourses with friends and acquaintances. They contain none of his "jests that scald like tears," none of his play upon words, none of his flashes of merriment that were wont to set the table on a roar, but some of his sweet, serious, beautiful thoughts and fancies.

Strange that Talfourd neglected to print "Table-Talk" in his edition of Lamb! He does not even mention it. It is certainly as good, if not a great deal better than some things of Lamb's which he saw fit to reprint. But the best way to praise Elia's "Table-Talk" is, as the "Tatler" says of South's wise and witty discourse on the "Pleasures of Religious Wisdom," to quote it; and therefore here followeth, without further comment or introduction,—

"TABLE-TALK. BY THE LATE ELIA.

"It is a desideratum in works that treat *de re culinariâ*, that we have no rationale of sauces, or theory of mixed flavors: as to show why cabbage is reprehensible with roast beef, laudable with bacon; why the haunch of mutton seeks the alliance of currant-jelly, the shoulder civilly declineth it; why loin of veal, (a pretty problem,) being itself unctuous, seeketh the adventitious lubricity of melted butter,—and why the same part in pork, not more oleaginous, abhorreth from it; why the French bean sympathizes with the flesh of deer; why salt fish points to parsnip, brawn makes a

dead-set at mustard; why cats prefer valerian to heart's-ease, old ladies *vice versâ*,—though this is rather travelling out of the road of the dietetics, and may be thought a question more curious than relevant; why salmon (a strong sapor *per se*) fortifieth its condition with the mighty lobster-sauce, whose embraces are fatal to the delicater relish of the turbot; why oysters in death rise up against the contamination of brown sugar, while they are posthumously amorous of vinegar; why the sour mango and the sweet jam by turns court and are accepted by the compliable mutton-hash,—she not yet decidedly declaring for either. We are as yet but in the empirical stage of cookery. We feed ignorantly, and want to be able to give a reason of the relish that is in us; so that, if Nature should furnish us with a new meat, or be prodigally pleased to restore the phoenix, upon a *given* flavor, we might be able to pronounce instantly, on philosophical principles, what the sauce to it should be,—what the curious adjuncts."

"The greatest pleasure I know is to do a good action by stealth and to have it found out by accident."

"'T is unpleasant to meet a beggar. It is painful to deny him; and if you relieve him, it is so much out of your pocket."

"Men marry for fortune, and sometimes to please their fancy; but, much oftener than is suspected, they consider what the world will say of it, how such a woman in their friends' eyes will look at the head of a table. Hence we see so many insipid beauties made wives of, that could not have struck the particular fancy of any man that had any fancy at all. These I call *furniture wives*; as men buy *furniture pictures*, because they suit this or that niche in their dining-parlors.

"Your universally cried-up beauties are the very last choice which a man

of taste would make. What pleases all cannot have that individual charm which makes this or that countenance engaging to you, and to you only perhaps, you know not why. What gained the fair Gunnings titled husbands, who, after all, turned out very sorry wives? Popular repute."

"It is a sore trial, when a daughter shall marry against her father's approbation. A little hard-heartedness, and aversion to a reconciliation, is almost pardonable. After all, Will Dockwray's way is, perhaps, the wisest. His best-loved daughter made a most imprudent match, — in fact, eloped with the last man in the world that her father would have wished her to marry. All the world said that he would never speak to her again. For months she durst not write to him, much less come near him. But, in a casual rencounter, he met her in the streets of Ware, — Ware, that will long remember the mild virtues of William Dockwray, Esq. What said the parent to his disobedient child, whose knees faltered under her at the sight of him? 'Ha, Sukey, is it you?' with that benevolent aspect with which he paced the streets of Ware, venerated as an angel, — 'come and dine with us on Sunday'; then turning away, and again turning back, as if he had forgotten something, he added, — 'and, Sukey, do you hear? bring your husband with you.' This was all the reproof she ever heard from him. Need it be added that the match turned out better for Susan than the world expected?"

"'We read the "Paradise Lost" as a task,' says Dr. Johnson. Nay, rather as a celestial recreation, of which the dullard mind is not at all hours alike recipient. 'Nobody ever wished it longer'; — nor the moon rounder, he might have added. Why, 'tis the perfectness and completeness of it which makes us imagine that not a line could be added to it, or diminished from it, with advantage. Would we have a cubit added

to the stature of the Medicean Venus? Do we wish her taller?"

"Amidst the complaints of the wide spread of infidelity among us, it is consolatory that a sect is sprung up in the heart of the metropolis, and is daily on the increase, of teachers of that healing doctrine which Pope upheld, and against which Voltaire directed his envenomed wit. We mean those practical preachers of Optimism, or the belief that *Whatever is is best*, the cads of omnibuses, who, from their little back pulpits, not once in three or four hours, as those proclaimers of 'God and His prophet' in Mussulman countries, but every minute, at the entry or exit of a brief passenger, are heard, in an almost prophetic tone, to exclaim, (Wisdom crying out, as it were, in the streets,) 'ALL 'S RIGHT!'"

"Advice is not so commonly thrown away as is imagined. We seek it in difficulties. But, in common speech, we are apt to confound with it *admonition*: as when a friend reminds one that drink is prejudicial to the health, etc. We do not care to be told of that which we know better than the good man that admonishes. M—— sent to his friend L——, who is no water-drinker, a twopenny tract 'Against the Use of Fermented Liquors.' L—— acknowledged the obligation, as far as to *twopence*. Penotier's advice was the safest, after all: —

"'I advised him' —

"But I must tell you. The dear, good-meaning, no-thinking creature had been dumbfounding a company of us with a detail of inextricable difficulties in which the circumstances of an acquaintance of his were involved. No clue of light offered itself. He grew more and more misty as he proceeded. We pitied his friend, and thought, — 'God help the man so wrapt in error's endless maze!'

when, suddenly brightening up his placid countenance, like one that had found

out a riddle, and looked to have the solution admired,—

“‘At last,’ said he, ‘I advised him’—

“Here he paused, and here we were again interminably thrown back. By no possible guess could any of us aim at the drift of the meaning he was about to be delivered of.

“‘I advised him,’ he repeated, ‘to have some *advice* upon the subject.’

“A general approbation followed; and it was unanimously agreed, that, under all the circumstances of the case, no sounder or more judicious counsel could have been given.”

“A laxity pervades the popular use of words.

“Parson W—— is not quite so continent as Diana, yet prettily dissembleth his frailty. Is Parson W—— therefore a *hypocrite*? I think not. Where the concealment of a vice is less pernicious than the barefaced publication of it would be, no additional delinquency is incurred in the secrecy. Parson W—— is simply an immoral clergyman. But if Parson W—— were to be forever haranguing on the opposite virtue,—choosing for his perpetual text, in preference to all other pulpit-topics, the remarkable resistance recorded in the 39th of Exodus [Genesis?],—dwelling, moreover, and dilating upon it,—then Parson W—— might be reasonably suspected of hypocrisy. But Parson W—— rarely diverteth into such line of argument, or toucheth it briefly. His ordinary topics are fetched from ‘obedience to the powers that are,’—‘submission to the civil magistrate in all commands that are not absolutely unlawful’; on which he can delight to expatiate with equal fervor and sincerity.

“Again. To *despise* a person is properly to *look down* upon him with none or the least possible emotion. But when Clementina, who has lately lost her lover, with bosom heaving, eyes flashing, and her whole frame in agitation, pro-

nounces with a peculiar emphasis that she ‘*despises* the fellow,’ depend upon it that he is not quite so despicable in her eyes as she would have us imagine.

“One more instance. If we must naturalize that portentous phrase, a *truism*, it were well that we limited the use of it. Every commonplace or trite observation is not a truism. For example: A good name helps a man on in the world. This is nothing but a simple truth, however hackneyed. It has a distinct subject and predicate. But when the thing predicated is involved in the term of the subject, and so necessarily involved that by no possible conception they can be separated, then it becomes a truism; as to say, A good name is a proof of a man’s estimation in the world. We seem to be saying something, when we say nothing. I was describing to F—— some knavish tricks of a mutual friend of ours. ‘If he did so and so,’ was the reply, ‘he cannot be an honest man.’ Here was a genuine truism, truth upon truth, inference and proposition identical,—or rather, a dictionary definition usurping the place of an inference.”

“We are ashamed at sight of a monkey,—somehow as we are shy of poor relations.”

“C—— imagined a Caledonian compartment in Hades, where there should be fire without sulphur.”

“Absurd images are sometimes irresistible. I will mention two. An elephant in a coach-office gravely coming to have his trunk booked;—a mermaid over a fish-kettle cooking her own tail.”

“It is the praise of Shakspeare, with reference to the playwrights, his contemporaries, that he has so few revolting characters. Yet he has one that is singularly mean and disagreeable,—the King in ‘Hamlet.’ Neither has he characters of insignificance, unless the phan-

tom that stalks over the stage as Julius Cæsar, in the play of that name, may be accounted one. Neither has he envious characters, excepting the short part of Don John, in 'Much Ado about Nothing.' Neither has he unentertaining characters, if we except Parolles, and the little that there is of the Clown, in 'All's Well that Ends Well.'

"It would settle the dispute as to whether Shakspeare intended Othello for a jealous character, to consider how differently we are affected towards him, and for Leontes in the 'Winter's Tale.' Leontes is that character. Othello's fault was simply credulity."

"Is it possible that Shakspeare should never have read Homer, in Chapman's version at least? If he had read it, could he mean to *travesty* it in the parts of those big boobies, Ajax and Achilles? Ulysses, Nestor, and Agamemnon are true to their parts in the 'Iliad': they are gentlemen at least. Thersites, though unamusing, is fairly deducible from it. Troilus and Cressida are a fine graft upon it. But those two big bulks" —

---

Disraeli wrote a book on the Quarrels of Authors. Somebody should write one on the Friendships of Literary Men. If such a work is ever written, Charles Lamb and Samuel Taylor Coleridge will be honorably mentioned therein. For among all the friendships celebrated in tale or history there is none more admirable than that which existed between these two eminent men. The "golden thread that tied their hearts together" was never broken. Their friendship was never "chipt or diminished"; but the longer they lived, the stronger it grew. Death could not destroy it.

Lamb, after Coleridge's death, as if weary of "this green earth," as if not caring if "sun, and sky, and breeze,

and solitary walks, and summer holidays, and the greenness of fields, and the delicious juices of meats and fishes, and society, and the cheerful glass, and candle-light, and fireside conversations, and innocent vanities, and jests, and irony itself," went out with life, willingly sought "Lavinian shores."

"Lamb," as Mr. John Foster says, in his beautiful tribute to his memory, "never fairly recovered the death of Coleridge. He thought of little else (his sister was but another portion of himself) until his own great spirit joined his friend. He had a habit of venting his melancholy in a sort of mirth. He would, with nothing graver than a pun, 'cleanse his bosom of the perilous stuff that weighed' upon it. In a jest, or a few light phrases, he would lay open the last recesses of his heart. So in respect of the death of Coleridge. Some old friends of his saw him two or three weeks ago, and remarked the constant turning and reference of his mind. He interrupted himself and them almost every instant with some play of affected wonder, or astonishment, or humorous melancholy, on the words, '*Coleridge is dead*.' Nothing could divert him from that, for the thought of it never left him. About the same time, we had written to him to request a few lines for the literary album of a gentleman who entertained a fitting admiration of his genius. It was the last request we were destined to make, the last kindness we were allowed to receive. He wrote in Mr. Keymer's volume,—and wrote of Coleridge."

And this is what he said of his friend: it would be, as Mr. Foster says, impertinence to offer one remark on it:—

"When I heard of the death of Coleridge, it was without grief. It seemed to me that he long had been on the confines of the next world,—that he had a hunger for eternity. I grieved then that I could not grieve. But since, I feel how great a part he was of me. His great and dear spirit haunts me.

I cannot think a thought, I cannot make a criticism on men or books, without an ineffectual turning and reference to him. He was the proof and touchstone of all my cogitations. He was a Grecian (or in the first form) at Christ's Hospital, where I was Deputy-Grecian; and the same subordination and deference to him I have preserved through a life-long acquaintance. Great in his writings, he was greatest in his conversation. In him was disproved that old maxim, that we should allow every one his share of talk. He would talk from morn to dewy eve, nor cease till far midnight; yet who ever would interrupt him? who would obstruct that continuous flow of converse, fetched from Helicon or Zion? He had the tact of making the unintelligible seem plain. Many who read the abstruser parts of his 'Friend' would complain that his works did not answer to his spoken wisdom. They were identical. But he had a tone in oral delivery which seemed to convey sense to those who were otherwise imperfect recipients. He was my fifty-years-old friend without a dissension. Never saw I his likeness, nor probably the world can see again. I seem to love the house he died at more passionately than when he lived. I love the faithful Gilmans more than while they exercised their virtues towards him living. What was his mansion is consecrated to me a chapel.

“CHS. LAMB.

“EDMONTON, November 21, 1834.”

Having seen what Charles Lamb says of Coleridge, perhaps the reader would like to see what Charles Lamb says of himself. For he, (though but few of his readers are aware of the fact,) like Lord Herbert of Cherbury, Gibbon, Franklin, and other eminent men, wrote an autobiography. It is certainly the briefest, and perhaps the Wittiest and most truthful autobiographical sketch in the language. It was

published in the “New Monthly Magazine” a few months after its author's death, with the following preface or introduction from the pen of some unknown admirer of Elia:—

“We have been favored, by the kindness of Mr. Upcott, with the following sketch, written in one of his manuscript collections, by Charles Lamb. It will be read with deep interest by all, but with the deepest interest by those who had the honor and the happiness of knowing the writer. It is so singularly characteristic, that we can scarcely persuade ourselves we do not hear it, as we read, spoken from his living lips. Slight as it is, it conveys the most exquisite and perfect notion of the personal manner and habits of our friend. For the intellectual rest, we lift the veil of its noble modesty, and can even here discern them. Mark its humor, crammed into a few thinking words,—its pathetic sensibility in the midst of contrast,—its wit, truth, and feeling,—and, above all, its fanciful retreat at the close under a phantom cloud of death.”

#### CHARLES LAMB'S AUTOBIOGRAPHY.

“CHARLES LAMB, born in the Inner Temple, 10th February, 1775; educated in Christ's Hospital; afterwards a clerk in the Accountants' Office, East-India House; pensioned off from that service, 1825, after thirty-three years' service; is now a gentleman at large;—can remember few specialties in his life worth noting, except that he once caught a swallow flying (*teste sua manu*). Below the middle stature; cast of face slightly Jewish, with no Judaic tinge in his complexional religion; stammers abominably, and is therefore more apt to discharge his occasional conversation in a quaint aphorism or a poor quibble than in set and edifying speeches; has consequently been libelled as a person always aiming at wit, which, as he told a dull fellow that charged him with it, is at least as good as aiming at dul-

ness. A small eater, but not drinker; confesses a partiality for the production of the juniper-berry; was a fierce smoker of tobacco, but may be resembled to a volcano burnt out, emitting only now and then a casual puff. Has been guilty of obtruding upon the public a tale in prose, called 'Rosamund Gray,'—a dramatic sketch, named 'John Woodvil,'—a 'Farewell Ode to Tobacco,'—with sundry other poems, and light prose matter, collected in two slight crown octavos, and pompously christened his works, though in fact they were his recreations, and his true works may be found on the shelves of Leadenhall Street, filling some hundred folios. He is also the true Elia, whose essays are extant in a little volume, published a year or two since, and rather better known from that name without a meaning than from anything he has done, or can hope to do, in his own. He also was the first to draw the public attention to the old English dramatists, in a work called 'Specimens of English Dramatic Writers who lived about the Time of Shakspeare,' published about fifteen years since. In short, all his merits and demerits to set forth would take to the end of Mr. Upcott's book, and then not be told truly.

"He died 18, much lamented.\*

"Witness his hand,

"CHARLES LAMB.

"18th April, 1827."

---

Lamb, if he did not find tongues in trees, books in the running brooks, and sermons in stones, found good in everything. The soul of goodness in things evil was visible to him. He had thought, felt, and suffered so much, that, as Leigh Hunt says, he literally had intolerance for nothing. Though he could see but little religion in many professing Christians, he nevertheless saw that the motley players, "made up

"\* *To Anybody.*—Please to fill up these blanks."

of mimic laughter and tears, passing from the extremes of joy or woe at the prompter's call," were not so godless and impious as the world believed them to be.

Writing to Bernard Barton in the spring of 1826, Lamb says, speaking of his literary projects,—"A little thing without name will also be printed on the Religion of the Actors, but it is out of your way; so I recommend you, with true author's hypocrisy, to skip it." I wonder if "good B. B." read the article, and, if he did, how he liked it. Quaker though he was, he could not but have been pleased with it. Should you like to read the "Religion of the Actors," reader? You will not find it in any edition of Charles Lamb's writings. Here it is.

#### "THE RELIGION OF ACTORS.

"THE world has hitherto so little troubled its head with the points of doctrine held by a community which contributes in other ways so largely to its amusement, that, before the late mischance of a celebrated tragic actor, it scarce condescended to look into the practice of any individual player, much less to inquire into the hidden and abscondite springs of his actions. Indeed, it is with some violence to the imagination that we conceive of an actor as belonging to the relations of private life, so closely do we identify these persons in our mind with the characters which they assume upon the stage. How oddly does it sound, when we are told that the late Miss Pope, for instance,—that is to say, in our notion of her, Mrs. Candor,—was a good daughter, an affectionate sister, and exemplary in all the parts of domestic life! With still greater difficulty can we carry our notions to church, and conceive of Liston kneeling upon a hassock, or Munden uttering a pious ejaculation, 'making mouths at the invisible event.' But the times are fast improving; and if the process of sanctity begun under the

happy auspices of the present licenser go on to its completion, it will be as necessary for a comedian to give an account of his faith as of his conduct. Fawcett must study the five points; and Dicky Suett, if he were alive, would have had to rub up his catechism. Already the effects of it begin to appear. A celebrated performer has thought fit to oblige the world with a confession of his faith,—or, Br——'s 'Religio Dramatici.' This gentleman, in his laudable attempt to shift from his person the obloquy of Judaism, with the forwardness of a new convert, in trying to prove too much, has, in the opinion of many, proved too little. A simple declaration of his Christianity was sufficient; but, strange to say, his apology has not a word about it. We are left to gather it from some expressions which imply that he is a Protestant; but we did not wish to inquire into the niceties of his orthodoxy. To his friends of the *old persuasion* the distinction was impertinent; for what cares Rabbi Ben Kimchi for the differences which have split our novelty? To the great body of Christians that hold the Pope's supremacy—that is to say, to the major part of the Christian world—his religion will appear as much to seek as ever. But perhaps he conceived that all Christians are Protestants, as children and the common people call all that are not animals Christians. The mistake was not very considerable in so young a proselyte. Or he might think the general (as logicians speak) involved in the particular. All Protestants are Christians; but I am a Protestant; *ergo*, etc.: as if a marmoset, contending to be a man, overleaping that term as too generic and vulgar, should at once roundly proclaim himself to be a gentleman. The argument would be, as we say, *ex abundantia*. From whichever cause this *excessus in terminis* proceeded, we can do no less than congratulate the general state of Christendom upon the accession of so extraordinary a convert. Who was the happy instrument of the

conversion we are yet to learn: it comes nearest to the attempt of the late pious Doctor Watts to Christianize the Psalms of the Old Testament. Something of the old Hebrew raciness is lost in the transfusion; but much of its asperity is softened and pared down in the adaptation.

"The appearance of so singular a treatise at this conjuncture has set us upon an inquiry into the present state of religion upon the stage generally. By the favor of the church-wardens of Saint Martin's in the Fields, and Saint Paul's, Covent Garden, who have very readily, and with great kindness, assisted our pursuit, we are enabled to lay before the public the following particulars. Strictly speaking, neither of the two great bodies is collectively a religious institution. We had expected to have found a chaplain among them, as at Saint Stephen's, and other Court establishments; and were the more surprised at the omission, as the last Mr. Bengough, at the one house, and Mr. Powell at the other, from a gravity of speech and demeanor, and the habit of wearing black at their first appearances in the beginning of *fifth* or the conclusion of *fourth acts*, so eminently pointed out their qualifications for such office. These corporations, then, being not properly congregational, we must seek the solution of our question in the tastes, attainments, accidental breeding, and education of the individual members of them. As we were prepared to expect, a majority at both houses adhere to the religion of the Church Established, only that at one of them a pretty strong leaven of Catholicism is suspected,—which, considering the notorious education of the manager at a foreign seminary, is not so much to be wondered at. Some have gone so far as to report that Mr. T——y, in particular, belongs to an order lately restored on the Continent. We can contradict this: that gentleman is a member of the Kirk of Scotland; and his name is to be found, much to his honor, in the list of seceders from the

congregation of Mr. Fletcher. While the generality, as we have said, are content to jog on in the safe trammels of national orthodoxy, symptoms of a sectarian spirit have broken out in quarters where we should least have looked for it. Some of the ladies at both houses are deep in controverted points. Miss F——e, we are credibly informed, is a *Sub-*, and Madame V——a *Supra-Lapsarian*. Mr. Pope is the last of the exploded sect of the Ranters. Mr. Sinclair has joined the Shakers. Mr. Grimaldi, Senior, after being long a Jumper, has lately fallen into some whimsical theories respecting the Fall of Man; which he understands, not of an allegorical, but a *real tumble*, by which the whole body of humanity became, as it were, lame to the performance of good works. Pride he will have to be nothing but a stiff neck; irresolution, the nerves shaken; an inclination to sinister paths, crookedness of the joints; spiritual deadness, a paralysis; want of charity, a contraction in the fingers; despising of government, a broken head; the plaster, a sermon; the lint to bind it up, the text; the probers, the preachers; a pair of crutches, the old and new law; a bandage, religious obligation: a fanciful mode of illustration, derived from the accidents and habits of his past calling *spiritualized*, rather than from any accurate acquaintance with the Hebrew text, in which report speaks him but a raw scholar. Mr. Elliston, from all that we can learn, has his religion yet to choose; though some think him a Muggletonian.”

---

Willis, in his “Pencilings by the Way,” describing his interview with Charles and Mary Lamb, says,—“Nothing could be more delightful than the kindness and affection between the brother and the sister, though Lamb was continually taking advantage of her deafness to mystify her with the most singular gravity upon every topic

that was started. ‘Poor Mary!’ said he, ‘she hears all of an epigram but the point.’ ‘What are you saying of me, Charles?’ she asked. ‘Mr. Willis,’ said he, raising his voice, ‘admires *your* “Confessions of a Drunkard” very much, and I was saying it was no merit of yours that you understood the subject.’ We had been speaking of this admirable essay (which is his own) half an hour before.”

That essay has been strangely and purposely misunderstood. Elia, albeit he loved the cheerful glass, was not a drunkard. The “poor nameless egotist” of the Confessions is not Charles Lamb. In printing the article in the “London Magazine,” (it was originally contributed to a collection of tracts published by Basil Montagu,) Elia introduced it to the readers of that periodical in the following explanatory paragraphs. They should be printed in all editions of Elia as a note to the article they explain and comment on. For many persons, like a writer in the London “Quarterly Review” for July, 1822, believe, or profess to believe, that this “fearful picture of the consequences of intemperance” is a true tale. “How far it was from actual truth,” says Talfourd, “the essays of Elia, the production of a later day, in which the maturity of his feeling, humor, and reason is exhibited, may sufficiently show.”

#### ELIA ON HIS “CONFESSIONS OF A DRUNKARD.”

“MANY are the sayings of Elia, painful and frequent his lucubrations, set forth for the most part (such his modesty!) without a name, scattered about in obscure periodicals and forgotten miscellanies. From the dust of some of these it is our intention occasionally to revive a tract or two that shall seem worthy of a better fate, especially at a time like the present, when the pen of our industrious contributor, engaged in a laborious digest of his recent Continental tour, may haply want the leisure to

expatiate in more miscellaneous speculations. We have been induced, in the first instance, to reprint a thing which he put forth in a friend's volume some years since, entitled 'The Confessions of a Drunkard,' seeing that Messieurs the Quarterly Reviewers have chosen to embellish their last dry pages with fruitful quotations therefrom; adding, from their peculiar brains, the gratuitous affirmation, that they have reason to believe that the describer (in his delineations of a drunkard, forsooth!) partly sat for his own picture. The truth is, that our friend had been reading among the essays of a contemporary, who has perversely been confounded with him, a paper in which Edax (or the Great Eater) humorously complaineth of an inordinate appetite; and it struck him that a better paper—of deeper interest, and wider usefulness—might be made out of the imagined experiences of a Great Drinker. Accordingly he set to work, and, with that mock fervor and counterfeit earnestness with which he is too apt to over-realize his descriptions, has given us a frightful picture indeed, but no more resembling the man Elia than the fictitious Edax may be supposed to identify itself with Mr. L., its author. It is, indeed, a compound extracted out of his long observations of the effects of drinking upon all the world about him; and this accumulated mass of misery he hath centred (as the custom is with judicious essayists) in a single figure. We deny not that a portion of his own experiences may have passed into the picture, (as who, that is not a washy fellow, but must at some times have felt the after-operation of a too generous cup?)—but then how heightened! how exaggerated! how little within the sense of the Review, where a part, in their slanderous usage, must be understood to stand for the whole! But it is useless to expostulate with this Quarterly slime, brood of Nilus, watery heads with hearts of jelly, spawned under the sign of Aquarius, incapable of Bacchus, and

therefore cold, washy, spiteful, bloodless. Elia shall string them up one day, and show their colors,—or rather, how colorless and vapid the whole fry,—when he putteth forth his long-promised, but unaccountably hitherto delayed, 'Confessions of a Water-Drinker.'

---

In turning over the leaves of divers old periodicals in search of the "Religion of Actors," I accidentally and unexpectedly found an article by Charles Lamb entitled, "On the Custom of Hissing at the Theatres, with some Account of a Club of Damned Authors."

Lamb, we know, was a great lover of the drama,—a true patron and admirer of playwrights and play-actors. He was, perhaps, the greatest theatrical critic that ever lived. Many of the happiest hours of his life were passed in reading the works of the old English dramatists, and in witnessing the performances of favorite actors. He once had hopes of being a successful dramatist himself, and to that end devoted many of his spare hours and odd moments to the composition of a tragedy, ("John Woodvil,") which John Kemble, "the stately manager of Drury Lane," refused to bring out. But not wholly discouraged by the ill success of his tragedy, he tried his hand at a farce, and produced "Mr. H.," which, to the author's exceeding great delight, was accepted by the manager of Drury-Lane Theatre.\*

To Manning, then sojourning among the Mandarins, he thus writes of "Mr. H.":—

"Now you 'd like to know the subject. The title is 'Mr. H.',—no more: how simple! how taking! A great H sprawling over the play-bill, and attracting eyes at every corner. The

\* Talfourd says that the acceptance of "Mr. H." gave Lamb some of the happiest moments he ever spent.

story is a coxcomb appearing at Bath, vastly rich, — all the ladies dying for him, all bursting to know who he is; but he goes by no other name than Mr. H.: a curiosity like that of the dames of Strasburg about the man with the great nose. But I won't tell you any more about it. Yes, I will; but I can't give you an idea how I have done it. I'll just tell you, that, after much vehement admiration, when his true name comes out, 'Hogsflesh,' all the women shun him, avoid him, and not one can be found to change their name for him: that's the idea: how flat it is here! but how whimsical in the farce! And only think how hard upon me it is, that the ship is despatched to-morrow, and my triumph cannot be ascertained till the Wednesday after; — but all China will ring of it by-and-by."

Would that Lamb's joyous and exultant anticipations of "Mr. H."s success had proved true! But, instead of being greeted with the applause of pit and gallery, which would have stood Elia instead of "the unheard voice of posterity," the piece was hissed and hooted from the stage.

In a letter to Manning, written early in 1808, he thus, half humorously, half pathetically, describes the reception the town gave "Mr. H.": —

"So I go creeping on since I was lamed with that cursed fall from off the top of Drury-Lane Theatre into the pit, something more than a year ago. However, I have been free of the house ever since, and the house was pretty free with me upon that occasion. Hang 'em, how they hissed! It was not a hiss neither, but a sort of a frantic yell, like a congregation of mad geese, with roaring sometimes like bears, mows and mops like apes, sometimes snakes, that hissed me into madness. 'T was like Saint Anthony's temptations. Mercy on us, that God should give his favorite children, men, mouths to speak with, to discourse rationally, to promise

smoothly, to flatter agreeably, to encourage warmly, to counsel wisely, to sing with, to drink with, and to kiss with, and that they should turn them into mouths of adders, bears, wolves, hyenas, and whistle like tempests, and emit breath through them like distillations of aspic poison, to asperse and vilify the innocent labors of their fellow-creatures who are desirous to please them! Heaven be pleased to make the teeth rot out of them all, therefore! Make them a reproach, and all that pass by them to loll out their tongue at them! Blind mouths! as Milton somewhere calls them."

If his farce had been — what "Gentleman Lewis," who was present on the night of its performance, said, if he had had it, he would have made it, by a few judicious curtailments — "the most popular little thing that had been brought out for some time," Lamb would not have written the following article.

"ON THE CUSTOM OF HISSING AT THE THEATRES, WITH SOME ACCOUNT OF A CLUB OF DAMNED AUTHORS.

"MR. REFLECTOR, — I am one of those persons whom the world has thought proper to designate by the title of Damned Authors. In that memorable season of dramatic failures, 1806-7, in which no fewer, I think, than two tragedies, four comedies, one opera, and three farces suffered at Drury-Lane Theatre, I was found guilty of constructing an afterpiece, and was *damned*.

"Against the decision of the public in such instances there can be no appeal. The Clerk of Chatham might as well have protested against the decision of Cade and his followers, who were then *the public*. Like him, I was condemned because I could write.

"Not but it did appear to some of us that the measures of the popular tribunal at that period savored a little of harshness and of the *summum jus*. The

public mouth was early in the season fleshed upon the 'Vindictive Man,' and some pieces of that nature, and it retained through the remainder of it a relish of blood. As Dr. Johnson would have said: Sir, there was a habit of sibilation in the house.

"Still less am I disposed to inquire into the reason of the comparative lenity, on the other hand, with which some pieces were treated, which, to indifferent judges, seemed at least as much deserving of condemnation as some of those which met with it. I am willing to put a favorable construction upon the votes that were given against us; I believe that there was no bribery or designed partiality in the case; — only 'our nonsense did not happen to suit their nonsense'; that was all.

"But against the *manner* in which the public on these occasions think fit to deliver their disapprobation I must and ever will protest.

"Sir, imagine — but you have been present at the damning of a piece, — those who never had that felicity, I beg them to imagine — a vast theatre, like that which Drury Lane was, before it was a heap of dust and ashes, (I insult not over its fallen greatness; let it recover itself when it can for me, let it lift up its towering head once more, and take in poor authors to write for it; *hic cæstus artemque repono*,) — a theatre like that, filled with all sorts of disgusting sounds, — shrieks, groans, hisses, but chiefly the last, like the noise of many waters, or that which Don Quixote heard from the fulling-mills, or that wilder combination of devilish sounds which Saint Anthony listened to in the wilderness.

"Oh, Mr. Reflector, is it not a pity, that the sweet human voice, which was given man to speak with, to sing with, to whisper tones of love in, to express compliance, to convey a favor, or to grant a suit, — that voice, which in a Siddons or a Braham rouses us, in a Siren Catalani charms and captivates us, — that the musical, expressive hu-

man voice should be converted into a rival of the noises of silly geese, and irrational, venomous snakes?

"I never shall forget the sounds on *my night*; I never before that time fully felt the reception which the Author of *All Ill* in the 'Paradise Lost' meets with from the critics in the *pit*, at the final close of his Tragedy upon the Human Race, — though that, alas! met with too much success: —

'from innumerable tongues,  
A dismal universal *hiss*, the sound  
Of public scorn. Dreadful was the din  
Of *hissing* through the hall, thick swarming  
, now

With complicated monsters, head and tail,  
Scorpion and asp, and Amphibæna dire,  
Cerastes horned, Hydrus, and Elops drear,  
And Dipsas.'

"For *hall* substitute *theatre*, and you have the very image of what takes place at what is called the *damnation* of a piece, — and properly so called; for here you see its origin plainly, whence the custom was derived, and what the first piece was that so suffered. After this none can doubt the propriety of the appellation.

"But, Sir, as to the justice of bestowing such appalling, heart-withering denunciations of the popular obloquy upon the venial mistake of a poor author who thought to please us in the act of filling his pockets, — for the sum of his demerits amounts to no more than that, — it does, I own, seem to me a species of retributive justice far too severe for the offence. A culprit in the pillory (bate the eggs) meets with no severer exprobration.

"Indeed, I have often wondered that some modest critic has not proposed that there should be a wooden machine to that effect erected in some convenient part of the *proscenium*, which an unsuccessful author should be required to mount, and stand his hour, exposed to the apples and oranges of the *pit*. This *amende honorable* would well suit with the meanness of some authors, who in their prologues fairly prostrate their

skulls to the audience, and seem to invite a pelting.

“Or why should they not have their pens publicly broke over their heads, as the swords of recreant knights in old times were, and an oath administered to them that they should never write again?”

“Seriously, *Messieurs the Public*, this outrageous way which you have got of expressing your displeasures is too much for the occasion. When I was deafening under the effects of it, I could not help asking what crime of great moral turpitude I had committed: for every man about me seemed to feel the offence as personal to himself, as something which public interest and private feelings alike called upon him in the strongest possible manner to stigmatize with infamy.

“The Romans, it is well known to you, Mr. Reflector, took a gentler method of marking their disapprobation of an author's work. They were a humane and equitable nation. They left the *furca* and the *patibulum*, the axe and the rods, to great offenders: for these minor and (if I may so term them) extra-moral offences the *bent thumb* was considered as a sufficient sign of disapprobation, — *vertere pollicem*; as the *pressed thumb*, *premere pollicem*, was a mark of approving.

“And really there seems to have been a sort of fitness in this method, a correspondency of sign in the punishment to the offence. For, as the action of writing is performed by bending the thumb forward, the retroversion or bending back of that joint did not unaptly point to the opposite of that action, implying that it was the will of the audience that the author should *write no more*: a much more significant, as well as more humane, way of expressing that desire, than our custom of hissing, which is altogether senseless and indefensible. Nor do we find that the Roman audiences deprived themselves, by this lenity, of any title of that supremacy which audiences in all ages have

thought themselves bound to maintain over such as have been candidates for their applause. On the contrary, by this method they seem to have had the author, as we should express it, completely *under finger and thumb*.

“The provocations to which a dramatic genius is exposed from the public are so much the more vexatious as they are removed from any possibility of retaliation, the hope of which sweetens most other injuries: for the public *never writes itself*. Not but something very like it took place at the time of the O.-P. differences. The placards which were nightly exhibited were, properly speaking, the composition of the public. The public wrote them, the public applauded them, and precious morceaux of wit and eloquence they were, — except some few, of a better quality, which it is well known were furnished by professed dramatic writers. After this specimen of what the public can do for itself, it should be a little slow in condemning what others do for it.

“As the degrees of malignancy vary in people according as they have more or less of the Old Serpent (the father of hisses) in their composition, I have sometimes amused myself with analyzing this many-headed hydra, which calls itself the public, into the component parts of which it is ‘complicated, head and tail,’ and seeing how many varieties of the snake kind it can afford.

“First, there is the Common English Snake. — This is that part of the auditory who are always the majority at damnations, but who, having no critical venom in themselves to sting them on, stay till they hear others hiss, and then join in for company.

“The Blind Worm is a species very nearly allied to the foregoing. Some naturalists have doubted whether they are not the same.

“The Rattle-Snake. — These are your obstreperous talking critics, — the impertinent guides of the pit, — who

will not give a plain man leave to enjoy an evening's entertainment, but, with their frothy jargon and incessant finding of faults, either drown his pleasure quite, or force him in his own defence to join in their clamorous censure. The hiss always originates with these. When this creature springs his *rattle*, you would think, from the noise it makes, there was something in it; but you have only to examine the instrument from which the noise proceeds, and you will find it typical of a critic's tongue, — a shallow membrane, empty, voluble, and seated in the most contemptible part of the creature's body.

"The Whip-Snake. — This is he that lashes the poor author the next day in the newspapers.

"The Deaf Adder, or *Surda Echidna* of Linnaeus. — Under this head may be classed all that portion of the spectators (for audience they properly are not) who, not finding the first act of a piece answer to their preconceived notions of what a first act should be, like Obstinate in John Bunyan, positively thrust their fingers in their ears, that they may not hear a word of what is coming, though perhaps the very next act may be composed in a style as different as possible, and be written quite to their own tastes. These Adders refuse to hear the voice of the charmer, because the tuning of his instrument gave them offence.

"I should weary you, and myself too, if I were to go through all the classes of the serpent kind. Two qualities are common to them all. They are creatures of remarkably cold digestions, and chiefly haunt *pits* and low grounds.

"I proceed with more pleasure to give you an account of a club to which I have the honor to belong. There are fourteen of us, who are all authors that have been once in our lives what is called *damned*. We meet on the anniversaries of our respective nights, and make ourselves merry at the expense

of the public. The chief tenets which distinguish our society, and which every man among us is bound to hold for gospel, are, —

"That the public, or mob, in all ages, have been a set of blind, deaf, obstinate, senseless, illiterate savages. That no man of genius, in his senses, would be ambitious of pleasing such a capricious, ungrateful rabble. That the only legitimate end of writing for them is to pick their pockets, and, that failing, we are at full liberty to vilify and abuse them as much as ever we think fit.

"That authors, by their affected pretences to humility, which they made use of as a cloak to insinuate their writings into the callous senses of the multitude, obtuse to everything but the grossest flattery, have by degrees made that great beast their master; as we may act submission to children till we are obliged to practise it in earnest. That authors are and ought to be considered the masters and preceptors of the public, and not *vice versa*. That it was so in the days of Orpheus, Linus, and Musæus, and would be so again, if it were not that writers prove traitors to themselves. That, in particular, in the days of the first of those three great authors just mentioned, audiences appear to have been perfect models of what audiences should be; for, though along with the trees and the rocks and the wild creatures, which he drew after him to listen to his strains, some serpents doubtless came to hear his music, it does not appear that any one among them ever lifted up a *dissentient voice*. They knew what was due to authors in those days. Now every stock and stone turns into a serpent, and has a voice.

"That the terms 'Courteous Reader' and 'Candid Auditors,' as having given rise to a false notion in those to whom they were applied, as if they conferred upon them some right, *which they cannot have*, of exercising their judgments, ought to be utterly banished and exploded.

"These are our distinguishing tenets. To keep up the memory of the cause in which we suffered, as the ancients sacrificed a goat, a supposed unhealthy animal, to Æsculapius, on our feast-nights we cut up a goose, an animal typical of the popular voice, to the deities of Candor and Patient Hearing. A zealous member of the society once proposed that we should revive the obsolete luxury of viper-broth; but the stomachs of some of the company rising at the proposition, we lost the benefit of that highly salutary and *antidotol dish*.

"The privilege of admission to our club is strictly limited to such as have been fairly *damned*. A piece that has met with ever so little applause, that has but languished its night or two, and

then gone out, will never entitle its author to a seat among us. An exception to our usual readiness in conferring this privilege is in the case of a writer who, having been once condemned, writes again, and becomes candidate for a second martyrdom. Simple damnation we hold to be a merit, but to be twice-damned we adjudge infamous. Such a one we utterly reject, and blackball without a hearing:—

*The common damned shun his society.*

"Hoping that your publication of our Regulations may be a means of inviting some more members into our society, I conclude this long letter.

"I am, Sir, yours,

"SEMEL-DAMNATUS."

---

## DARK WAYS.

"Tortured with winter's storms, and tossed with a tumultuous sea."

WHEN God's curse forsook my country, it fell on me. I had been young and heroic; I had fought well; what portion of the clock-work of Fate had been allotted me I had utterly performed. Twelve years ago I became a man and strove for my country's freedom; now she has attained her heights without me, and I—what am I? A shapeless hulk, that stays in the shadow, and that hates the world and the people of the world, and verily the God above the world!

"Fight!" whispered Father Anselmo, the young priest, to me, at my last shrift; and fight I did. For from Italy's bosom I had drawn the strength of sword-arm, hip, and thigh; and I vowed to lose that arm and life and all that made life dear toward the trampling of oppressors from the sacred place.

My sun rose in storm, it continued in storm,—why not so have set? Why

not have died when swords swept their lightnings about me, when the glorious thunders of battle rolled around and sulphurous blasts enveloped, when the air was full of the bray of bugle and beat of drum, of shout and shriek, exultation and agony? Why not have gone with the crowd of souls reeking with daring and desire? Why, oh, why thus left alone to wither? Why still hangs that sun above me, yet wrapt and veiled and utterly obscured in thick, murk mists of sorrow and despair?

Peace!—let me tell you my story.

Since Father Anselmo—like all youth, whether under cowl, cap, or crown—was a Liberal at heart, I had not wanted counsel; but when I had told him all my yearnings and aspirations, had bared to him the throbbings of my very thought, and he had replied in that one blessed word, I hastened away. There were none to whom I should say farewell; I

was alone in the world. This wild blood of my veins ran in no other veins; I knew thoroughly the wide freedom of solitude; the sins and the virtues of my race, whatever they were, had culminated in me. As I looked back, that morning, the castle, planted in a dimple of its demesnes, old and gray and watched by purple peaks of Apennine, seemed to hide its command only under the mask of silence. The wood through which I went, with its alluring depths, the moss verdant in everlasting spring beneath my eager feet, each bough I lifted, the blossoms that blew their gales after, the bearded grasses that shook in the wind, all gave me their secret sigh; all the sweet land around, the distant hill, the distant shore, said, "Redeem me from my chains!" I came across a sylvan statue, some faun nestled in the forest: the rains had stained, frosts cracked, suns blistered it; but what of those? A vine covered with thorns and stemmed with cords had wreathed about it and bound it closely in serpent-coils. I stayed and tore apart the fetters till my hands bled, cut away the twisting branches, and set the god free from his bonds. Triumph rose to my lips, for I said, "So will I free my country!" Ah, there was my error,—the shackling vines would grow again, and infold the marble image that had consecrated the forest-glooms; there is the flaw in all my work,—I have shorn, but have never uprooted an evil. Youth is a fool; the young Titans cannot scale heaven,—heaven, that, if what I live through be true, is ramparted round with tyrant lies! But is it true? Am I what I seem to myself? Did I fail in my purpose, in my will? Did Italy herself belie me? Did she, did she I loved, she I worshipped, she the woman to whom I gave all, for whom I sacrificed all, did she, too, forsake me? Ah, no! you will tell me Italy is free. But I did not free her! She waits only to put on in Venice her tiara. And for that other one, that fair Austrian woman, that devil whom I serve and adore, that yellow-haired witch who brewed her incanta-

tions in my holiest raptures,—she did not then play me foul, and falsely feign love to win me to disgrace? May all the woes in Heaven's hands fall on her!

God! what have I said? That I should live to ban her with a word! Did I say it? Oh, but it was vain! Woe for her? No, no! all blessings shower upon her, sunshine attend her, peace and gladness dwell about her! Traitor though she were, I must love her yet; I cannot unlove her; I would take her into my heart, and fold my arms about her.—Oh, I pray you do not look upon me with that mocking smile! Pity me, rather! pity this wretched heart that longs to curse God and die!—Nay, I want not your idle words. Can good destroy? Can love persecute? I was a worm that turned. What then? Why not have crushed me to annihilation? Oh, no, not that! He took me up and shook me before the world, clipped me, and let me fall. A derisive Deity,—why, the words give each other the lie!

Stop! Your sad eyes look as if you would go away, but for this infinite pity in you. What makes you pity me? Because I am shorn of my strength? because of all my fair proportions there is nothing left unshrivelled? because my body—such as it is—is racked with hourly and perpetual pain? because I die? For none of these? Truly, your judgments are inscrutable. For what then? Because,—yet, no, that cannot be,—because I bear a stubborn heart? because I will not bend my soul as He has bent my body? Partly,—but you are witless! What else? Because I toss off a shield and buckler, you say. Because I will not lean upon a tower of strength. Because I will not throw myself on the tide of divine love, and trust myself to its course. It was that divine love, then, that tower of strength, that shield and buckler, that made me this thing you see. Tarpeia was enough. Away with your generalities! Go, go, you slave of the past!

Yet no,—you have not gone? You believe what you say,—I know with

those eyes you cannot deceive. Ah, but I trusted her eyes once! Yet it gives you rest;—your sorrows are not like mine, — there is no rest for me. I cannot go and gather that balm of Gilead, — I have no legs. I have as good as none. This wheel-chair and that dog of a turnkey are not the equipage for such a journey.—Ah, do not turn from me now! My railing is worse than my cursing, you feel indeed. Well, stay with me at least, and if it is twelve years since you shrived me at first, perhaps you shall shrive me at last,—for I doubt if I am ever brought out to this sunshine again, if I do not die in the prison-damps to-night,—and you, with all your change, are Father Anselmo, I think.—Stay, I will confess to you, confess this. Man! man! this infinite pity of your soul for mine throws a light on my dark ways: God's curse has fallen on me through man's curse, why not God's love through man's love? Anselmo, though you became priest, and I went to become hero, we were children together; I was dear to you then; I am so still, it seems. In your love let me find the love of that Heaven I have defied.—Stay, friend, yet another word. If man's love can be so great, what can God's love be? That which I said I said in desperation; in very truth, that peace hangs like an unattainable city in the clouds before my soul's vision, that love like a broad river flowing through the lands, an atmosphere bathing the worlds, the subtle essence and ether of space in which the farthest star pursues its course,—why, then, should it escape me, the mote? Oh, when the world turned from me, I sought to flee thither! I sighed for the rest there! Wretched, alone, I have wept in the dark and in the light that I might go and fling myself at the heavenly feet. But, do you see? sin has broken down the bridge between God and me. Yet why, then, is sin in the world,—that scum that rises in the creation and fermentation of good,—why, but as a bridge on which to re-seek those shores from which we wander? Man, I do re-

pent me,—in loving you I find God. And you call that blasphemy!—Nay, go, indeed, my friend! So humble, you are not the man for me. I can talk to the winds: they, at least, do not visit me too roughly.

These are thy tears, Anselmo? Thou a priest, yet a man? Still with me? Yet thou wilt have to bear with wayward moods,—scorn now, quiet then. I am a tetchy man; I am an old man, too, though but just past thirty.—So! I thank God for thee, dear friend!

Anselmo, look out on this scene below us here, as we sit on our lofty battlement. Not on the turrets or the loopholes, the grates and spikes, or all the fortified horror,—but on the earth. It is fair earth, though not Italy; this is a mountain-fortress; here are all the lights and shadows that play over grand hill-countries, and yonder are fields of grain, where the winds and sunbeams play at storm, and a little hamlet's sheltered valley. Doubtless there are towers, besides, half hidden in the hills. It is Austria: slaves tread it, and tyrants drain it, it is true,—but the wild, free gypsies troop now and then across it, and though no fiction of law supports a claim they would scorn to make, they use it so that you would swear they own it. Do you see how this iron reticulation of social rule and custom and force makes a scaffolding on which this tameless race build up their lives? I watch them often. Each country has its compensations. Anselmo, this first made me tremble in my petty defiance,—I, an ephemera of May, defying the dominations of eternity!—Not so,—not too lowly; I also am, and each limitation of life is as well, a domination of eternity. But I saw that it was no purpose of God to have destroyed Italy; when men in weakness and wantonness suffered their liberties to be torn from them, suffered themselves to become enslaved, there was compensation in that their sons had chance for heroic growth; they might, in efforts for freedom, create virtues that, born to freedom, they would

never have known. I, too, had my field; I lost it; my enemy was myself. But when I think of her — Ay, there it is! Do not let me think of her! I become mad, when I think of her! — At least, allow me this: God's ways are dark. Not that? Not even that? I needed what I have? If my ambitions, my passions, my will, had ruled, my soul would have remained null? Ah, friend, and is that so much the worse? It is the soul that aches! — I am a man of the people, a man who acts, — I *was*, I mean, — not a man who thinks; and all your subtleties of word perchance entrap me. I am not wary when you come to logic. See! I surrender point after point. I shall be dead soon, you know; when this morning's sun shall have set, when the moon shall hold the night in fee, I shall depart, — wing up and away; — is it, that, my body already dead, my mind sickens and dies with it, bit after bit, and so I yield, and attest, that, without the agony of my life, death had failed to burst my soul's husk? Oh, for I was born of an earthy race, blood ran thick in our veins, we were sensuous and passionate, the breath and steam of pleasure stifled our brains, and our filmy eyes could not see heaven. Yes, yes, I needed it all; but, friend, it is pitiful.

I like to sit here in the sun. It is only a twelvemonth, of all my long years' imprisonment, that this has been allowed me. I like to sleep in it, like any wild creature, — the lizard, a mere reptile, — the bird, a hindered soul. To lie thus, weak as I am, but pillowed and warmed by the searching genial rays, seems such comfort, when I think of the bed I once had on the rack! This little slumber from which I wake revives me. I feared not to find you, and did not unclose my eyes at once. It was good in you to come, Anselmo; it must have been at risk of much.

You ask me to speak of my life since I went away on that morning of your command, — to reconcile the hostile acts, to gather the scattered reports. Hear it all!

You know my wealth was equal to my demand. I used it; before six months were over, I was the life and soul of those who must needs be conspirators. They saw that I was earnest, that my sacrifices were real; they trusted me. Soon the movement had become general; all the smothered elements of national life were convulsed and throbbing under the crust of tyranny.

How proud and glad was I that morning after our victory! I saw great Italy, beautiful Italy, once more put on her diadem; I beheld the future prospect of one broad, free land, barriered by Alps and set impregnably in summer seas, storied seas, keys of the West and East. We embraced each other as brothers of this glorious nation, ancient Rome risen from trance; as we walked the streets, we sang; Milan was turbulent with gladness; no gala-day was ever half so bright; the very spires appeared to spring in the white radiance of their flames up a deeper heaven; the sun stayed at perpetual dawn for us. Walking along, jubilant and daring, at length we paused in a square where a fountain dashed up its column of sunshine, and laved our hands. By Heaven! We forgot independence, Italy, freedom; we were crazed with success and hope; it seemed that the stream was Austrian blood! Then, in the midst of all, I looked up, — and on a balcony she stood. A fair woman, with hair like shredded light, her great blue eyes wide and full and of intense dye, her nostril distended with pride, and fear and hate of us, — but on the full lips, ripe with crimson bloom, juicy and young and fresh, on those Love lay. The others wound forward, — I with them, yet apart; and my eyes became fixed on hers. Then I lifted my cap with its tricolor. She did not return the courtesy, but stood as if spellbound, one hand threading back the straying hair, the lips a little parted; suddenly she turned to fly, that hand upraised to the casement's side, and still, as she looked back, the beautiful eyes on mine. My companions had preceded me; we were alone in the square; she wavered as she stood, then tore a

rose from her bosom, kissed it deep into its heart, and tossed it to me.

"Let all its petals be joys!" I said, and she vanished.

Oh, friend, the leaves have fallen, the rose is dead! Look! I have kept it through all, — sear leaf and withered spray!

That night we danced; and the Austrian girl was there. They told me she was exiled, and that she loved liberty; no one told me she was a spy. I saw her swim along the dance, the white satin of her raiment flashing perpetual interchange of lustrous and obscure, the warm air playing in the lace that fell like the spray of the fountain round her golden hair and over her pearly shoulder; grace swept in all her motions, beauty crowned her, she seemed the perfect pitch of womanhood.

Still she swims along the lazy line with indolent pleasure, still floats in dreamy waltz-circles perchance, still bends to the swaying tune as the hazel-branch bends to the hidden treasure, — but as for me, my dancing days are over.

By-and-by it was I with whom she danced, whose hand she touched, on whom she leaned. I wondered if there were any man so blest; I listened to her breath, I watched her cheek, our eyes met, and I loved her. The music grew deeper, more impassioned; we stood and listened to it, — for she danced then no more, — our hearts beat time to it, the wind wandering at the casement played in its measure; we said no words, but now and then each sought the other's glance, and, convicted there, turned in sudden shame away. When I bade her good-night, which I might never have done but that the revel broke, a great curl of her hair blew across my lips. I was bold, — I was heated, too, with this half-secret life of my heart, this warm blood that went leaping so riotously through my veins, and yet so silently, — I took my dagger from my belt and severed the curl. See, friend! will you look at it? It is like the little gold snakes of the Campagna, is it not? each thread, so fine and fair, a separate ray

of light: once it was part of her! See how it twists round my hand! Haste! haste! let me put it up, lest I go mad! — Where was I?

I busied myself again in the work to be done; because of our victory we must not rest; once more all went forward. I saw the Austrian woman only from a window, or in a church, or as she walked in the gardens, for many days. Then the times grew hotter; I left the place, and lived with stern alarms; and thither she also came. I never sought what sent her. She was with the wounded, with the dying. Then the need of her was past, and she and all the others took their way. At length that also came to an end.

We were in Rome, — and thither, some time previously, she had gone.

One night, our business for the day was over, our plans for the morrow laid, our messages received, our messengers despatched, and those who had been conspirators and now bade fair to be saviours were sleeping. Sleep seemed to fold the world; each bough and twig was silent in repose; the spectral moonlight itself slept as it bathed the air. I alone wandered and waked. With me there were too many cares for rest; work kept me on the alert; to court slumber at once was not easy after the nervous tension of duty. I was torn, too, with conflicting feelings: half my soul went one way in devotion to my country, half my soul swerved to the other as I thought of the Austrian woman. I grew tired of the streets and squares; something that should be fragrant and bowery attracted me. I mounted on the broken water-god of a dry bath and leaped a garden-wall.

No sooner was I there than I knew why I had come. This was her garden.

Heart of Heaven! how all things spoke of her! How the great white roses hung their doubly heavy heads and poured their perfume out to her! how the sprays shivered as I spoke the name she owned! how the nightingales ceased for a breath their warbling as she rustled down a fragrant path and met me! All her hair

was swept back in one great mass and held by an ivory comb; a white cloak wrapped her white array; she was jewelless and stripped of lustre; she was like pearl, milky as a shell, white as the moonlight that followed in her wake.

"You breathed my name,—I came," she said.

"Pardon!" I replied. "I heard the fountains dash and the nightingales sing, and I but came for rest under the spell."

"And have you found it?"

"I have found it."

We remained silent then, while floods of passion gathered and lay darkly still in our hearts. No, no! I know now that it was not so; yet I will tell it, tell it all, as I thought it then.

She did not stir; indeed, she had such capability of rest, that, had I not spoken, she would never have stirred, it may be. She knew that my glance was upon her; for herself, she looked at the broad lilies that grew at her feet, and listened to the melody that seemed to bubble from a thousand throats with interfluent sound upon the night. It was her repose that soothed me: moulded clay is not so calm, the marble rose of silence not half so beautifully folded to dreamful rest, so lovely and so still no garden-statue could have been; the cool, soft night infiltrated its tranquillity through all her being.

As we stood, the nightingales gave us capricious pause; one alone, distant and clear, fluted its faint piping like the phantom of the finished strain. Another sound broke the air and floated along on this too delicious accompaniment: music, fine and far. Some other lover sang to her his serenade. The voice in its golden sonority rose and crept toward her with persuading sweetness, winding through all the alleys and hovering over the plots of greenery with a tranquil strength, as if such song were but the natural spirit of the night, or as if the soul of the broad calm and silence itself had taken voice.

"Thy beauty, like a star  
Whose life is light,  
Shines on me from afar,  
And on the night.

"Each midnight blossom bends  
With sweetest weight,  
And to thy casement sends  
Its fragrant freight.

"Each air that faintly curls  
About thy nest  
Its daring pinion furls  
Within thy breast.

"The night is spread for thee,  
The heavens are wide,  
And the dark earth's mystery  
Is magnified.

"For thee the garden waits,  
The hours delay,  
The fountains toss their jets  
Of shimmering spray.

"Then leave thy dim delight  
In dreams above,  
Come forth, and crown the night  
With her I love!"

She listened, but did not lift her head or suffer the change of a fold; then there came the tinkle of the strings that embalmed the tune, and the singer's steps grew soundless as he left the street. A new phantasm crept upon me. What right had any other man to sing to her his love-songs? Did she not live, was not her beauty created, her soul given, for me? Did not the very breath she drew belong to me? My voice, hoarse and husky, disturbed the stillness, my eyes flamed on her.

"Do you love that man who sang?" I murmured.

"Signor, I love you," she said.

Then we were silent as before, but she stood no longer alone and opposite. One passionate step, an outstretched arm, and her head on my bosom, my lips bent to hers.

All the nightingales burst forth in choral redundance of song, all the low winds woke and fainted again through the balmy boughs, all the great stars bent out of heaven to shed their sweet influences upon us.

It seemed to me that in that old palace-garden life began, my memory went out in confused joy. I held her, she was mine! mine, mine, in life and for eter-

nity! Fool! it was I who was hers! Man, you are a priest, and must not love. I, too, was sworn a priest to my country. So we break oaths!

O moments of swift bliss, why are you torture to remember? Let me not think how the night slipped into dawn as we roamed, how pale gold filtered through the darkness and bleached the air, how bird after bird with distant chirrup and breaking tune announced the day. She left me, and as well it might be night. I wound a strange way home. I questioned if it were the dream of a fevered brain; I wondered, would she remember when next she saw me? None met with me that day; I forgot all. With the night I again waited in the garden. In vain I waited; she came no more. I waxed full of love's anger, I crushed the tendril and the vine, I wandered up and down the walks and cursed these thorns that tore my heart. As I went, an angle of the shrubbery allured; I turned, and lo! full radiance from open doors, and silvery sounds of sport. I leaned against the ilex, lost in shadow, and watched her as she stirred and floated there before me in the light. She seemed to carry with her an atmosphere of warmth and brilliance; all things were ordered as she moved; one throng melted before her, another followed. By-and-by she stood at the long casement to seek acquaintance with the night. Constantly I thought to meet her eye, and I would not reflect that she saw only dusk and vacancy. Then indignantly I stepped from the ilex and confronted her. A low, glad cry escapes her lips, she holds her arms toward me and would cross the sill, when a voice constrains her from within. It is he, the accursed Neapolitan.

"Signor," she says, "a vampire flitted past the dawn."

Dawn indeed was breaking. The man still stood there when she left him, and still looked out; his eyes lay on me, and irate and motionless I returned their gaze. One by one her guests departed; with a last threatening glance, he, too, withdrew. I plunged into the silent

places again, and waited now, assured that she would come. The constellations paled, and still I was alone. Then I wandered restlessly again, and, winding through thickets of leaf-distilled perfume, I came where just above a balcony, and almost beyond reach from it, a light burned dimly in one narrow window. I did not ask myself why I did it, but in another moment I had clambered to the place, and, standing there, I bent forward to my right, pulled away the tangle of ivy that filled half the niche, and was peering in.

"What is that?" said a voice I knew, with its silvery echo of the South, the accursed Neapolitan's.

"It is the owl that builds in the recess, and stirs the ivy," she replied.

"Haste!" said a third,—"the day breaks."

She was sitting at a low table, writing; Pia, the old nurse, stood behind her chair; the oil was richly scented that she burned; the single light illumined only her, and covered with her shadow the low ceiling,—a shadow that seemed to hang above her like a pall ready to fall from ghostly fingers and smother her in its folds; the others lounged about the room and waited on her pen, in gloom they, their faces gleaming from that dusk demoniacly. It was a concealed room, entered by secret ways, unknown to others than these.

When she had written, she sealed.

"There is no more to await. Adieu," she said.

"It is some transfer of property, some legal paper, some sale, some gift," I said to myself, as I watched them take it and depart. Then she was alone again. I saw her start up, pace the narrow spot,—saw her stand and pull down the masses, so interspersed with golden light, that crowned her head, and look at them wonderingly as they overlay her fingers,—then saw those fingers clasped across the eyes, and the lips part with a sigh that, prolonged and deepened, grew to be a groan,—while all the time that shadow on the ceiling hovered and fluttered and

grew still, till it seemed the cluster of Eumenides waiting to pounce on its prey. In another pause I had taken the perilous step, had hung by the crumbling rock, the rending vine, had entered and was beside her. A cold horror iced her face; she warned me away with her trembling hands.

"What have you seen?" she said.

"You, O my love, in grief."

"And no more?"

"I have seen you give a letter to the Neapolitan, who departs to-morrow with the little Viennois, — perhaps to your friends at home."

"And that is all?"

"That is all."

"I have no friends at home. To whom, then, could the letter be?"

"How should I divine?"

"It was for the Austrian Government! Now love me, if you dare!"

"And do you suppose I did not know it?"

"Then is your love for me but a shield and mask?"

As I gazed in reply, my steady eyes, the soul that kindled my smile, my open arms, all must have asseverated for me the truth of my devotion.

"Still?" she said. "Still? And you can keep your faith to me and to Italy?"

What was this doubt of me, this stain she would have cast upon my honor? That armor's polish was too intense to sustain it; it rolled off like a cloud from heaven. Italy's fortunes were *my* fortunes; it was impossible for me to betray them; this woman I would win to wed them. How long, how long my blood had felt this thing in her! how long my brain had rebelled! In a proud innocence, I stood with folded arms, and could afford to smile.

"Stay!" she said again, after our mute gaze, and laying her hand upon my arm. "You shall not love me in vain, you shall not trust me for nothing. Your cause is mine to-day. That is the last message I send to Vienna."

And then I believed her.

The light, slanting up, crept in and touched the brow of an ideal bust of Mithras which she had invested with her faintly-faded wreath of heliotropes; their fragrance falling through the place already made the atmosphere more rich than that of chest of almond-wood, — this perfume that is like the soul of the earth itself exhaled to the amorous air. Behind an alabaster shrine she lighted a holy-taper, slowly to waste and pale in the spreading day. We went to the window, where among the ivy-nooks day's life was just astir with gaudy wings.

"All will be seeking you, and yet you cannot go," she said.

"Why can I not go?"

"It is broad morning."

"And what of that?"

"One thing. You shall not compromise yourself, going from the house of an Austrian woman and worse!"

She was too winningly imperious to fail. I delayed, and together we looked out on the rosy sky.

"Come down," she said at last, "and on an arbor-moss the sun shall drowse you, the flower-scents be your opiates, the birds your lullaby, and I your guard."

We went, and, wandering again through the garden-paths, she brushed the dew with her trailing festal garments, and plucked the great blue convolvuli to crown her forehead. Soon, on a plot of Roman violets, screened by tall trees and trellises, we breakfasted. One might have said that the cloth was laid above giant mushroom-stems, the service acorn-cups and calices of milky blooms; golden was the honey-comb we broke, manna was our bread; she caught the water in her hand from the fountain and pledged me, and swift as sunshine I bent forward and prevented the thirsty lips. Then she laid my head on her shoulder, with her cool finger-tips she stroked the temples and soothed the lids, they fell and closed on the vision bending above me, — loveliness like painting, pallor that was waxen, yellow tresses wreathed with azure stars, eyes that caught the hue again and absorbed all Tyrian dyes.

The plash and bubble of waters swooned dreamily about my ears, and far off it seemed I heard the wild, sad songs of her native land, that now in tinkling tune, and now in long, slow rise and fall of mellow sound, swathed me with sweet satiety to dreamless rest.

The sun stole round and rose above the screen of trees at last and woke me. I was alone, the silent statues looked on me, the breath of the dark violets crushed by my weight rose in shrouding incense. I lifted myself and searched for her, and asked why I must needs believe each hour of joy a dream,—then went and cooled my brow in the lucent basin at hand, and waited till she came, in changed raiment, and gliding toward me as the Spirit of Noon might have come. She led me in, well refreshed, and in the cool north rooms of the palace the warm hours of the day slipped like beads from a leash. It scarcely seemed her fingers that touched the harp to tune, but as if some herald of sirocco, some faint, hot breeze, had brushed between the strings. It scarcely seemed her voice that talked to me, but something distant as the tone in a sad sea-shell. What I said I knew not; I was in a maze, bewildered with bliss; I only knew I loved her, I only felt my joy.

She told me many things: stories of her mountain-home, in distant view of the old fortress of Hellberg,—this is the fortress of Hellberg, Anselmo,—of her youth, her maidenhood, her life in Vienna, her lovers in Venice, her health, that had sent her finally there where we sat together.

"I thought it sad," she said at length, "when they exiled me, so to say, from Vienna and all my gay career there, because Venice, with its water-breaths, might heal my attainted health,—and sadder when the winter bade me leave night-tides and gondolas and repair to Rome. Now spring has come, and all the hills are blue with these deep violets, the very air is balm, the year is at flood, and life at what seems its height is perfected with you."

"But you love that land you left?" I replied, after a while, and lifting her face to meet my gaze.

"Love it? Oh, yes! You love your land as you love a person in whose veins and yours kindred blood runs, because it is hardly possible to do otherwise. The land gave me life, that is all; I never knew till lately that it was anything to be thankful for. It is not sufficiently a *country* to kindle enthusiasm; it has no national life, you know,—is an automaton put through its motions by paid and cunning mechanists. I thought it right to obey orders and serve it. But now *you* are my country,—I serve only you."

It was easy so to pass to my own hopes, to my own life, to my land, the land to which I had vowed the last drop of blood in my gift. Her eyes beamed upon me, smiles rippled over her face, she clasped me now and then and sealed my brow with kisses. Soon I left her side and strode from end to end of the long *salon*, speaking eagerly of the future that opened to Italy. I told her how the beautiful corpse lay waiting its resurrection, and how the Angel of Eternal Life hovered with spreading wings above, ready to sound his general trump. My pulses beat like trip-hammers, and as I passed a mirror I saw myself white with the excitement that fired me.

"You are wild with your joyous emotion," she said, coming forward and clinging round me. "Your eyes flame from depths of darkness. What, after all, is Italy to you, that your blood should boil in thinking of her wrongs? These people, for whom in your terrible magnanimity, I feel that you would sacrifice even me, to-morrow would turn and rend you!"

"No, no!" I answered. "All things but you! You, you, are before my country!"

The tears filled her large, serious eyes, her lips quivered in melancholy smile, as sunshine plays with shower over autumn woodlands. Was I not right? Right, though the universe declare me wrong! I would do it all again; if she loved me, she

had authority to be first of all in my care ; in love lie the highest duties of existence.

I had forgotten the subject on which we spoke ; I was thinking only of her, her beauty, her tenderness, and the debt of deathless devotion that I owed her. It was otherwise in her thought ; she had not dropped the old thread, but, looking up, resumed.

"It is, then, an idea that you serve ?"

Brought back from my reverie, "Could I serve a more worthy master ?" I asked.

"You do not particularly love your countrymen, nine-tenths of whom you have never seen ? You do not particularly hate the hostile race, nine-tenths of whom you have never seen ?"

"Abstractly, I hate them. Kindliness of heart prevents individual hatred, and without kindliness of heart in the first place there can be no pure patriotism."

"And for the other part. What do you care for these men who herd in the old tombs, raise a pittance of vetch, and live the life of brutes ? what for the lazzaroni of Naples, for the brigands of Romagna, the murderers of the Apennine ? Nay, nothing, indeed. It is, then, for the land that you care, the mere face of the country, because it entombs myriad ancestors, because it is familiar in its every aspect, because it overflows with abundant beauty. But is the land less fair when foreign sway domineers it ? do the blossoms cease to crowd the gorge, the mists to fill it with rolling color ? is the sea less purple around you, the sky less blue above, the hills, the fields, the forests, less lavishly lovely ?"

"Yes, the land is less fair," I said. "It is a fair slave. It loses beauty in the proportion of difference that exists between any two creatures, — the one a slave of supple symmetry and perfect passivity, the other a daring woman who stands nearer heaven by all the height of her freedom. And for these people of whom you speak, first I care for them because they *are* my countrymen, — and next, because the idea which I serve is a purpose to raise them into free and responsible agents."

"Each man does that for himself ; no one can do it for another."

"But any one may remove the obstacles from another's way, scatter the scales from the eyes of the blind, strip the dead coral from the reef."

She took yellow honeysuckles from a vase of massed amethyst and began to weave them in her yellow hair, — humming a tune, the while, that was full of the subtlest curves of sound. Soon she had finished, and finished the fresh thought as well.

"Do you know, my own," she said, "the men who begin as hierophants of an idea are apt to lose sight of the pure purpose, and to become the dogged, bigoted, inflexible, unreasoning adherents of a party ? All leaders of liberal movements should beware how far they commit themselves to party-organizations. Only that man is free. It is easier to be a partisan than a patriot."

I laughed.

"Lady, you are like all women who talk politics, however capable they may be of acting them. You immediately beg the question. We are speaking of patriotism, not of partisanship."

"You it was who forsook the subject. You know nothing about it ; you confess that it is with you merely a blind instinct ; you cannot tell me even what patriotism is."

"Stay !" I replied. "All love is instinct in the germ. Can you define the yearnings that the mother feels toward her child, the tie that binds son to father ? Then you can define the sentiment that attaches me to the land from whose breast I have drawn life. The love of country is more invisible, more imponderable, more inappreciable than the electricity that fills the air and flows with perpetual variation from pole to pole of the earth. It is as deep, as unsearchable, as ineffable as the power which sways me to you. It is the sublimation of other affection. A portion of you has always gone out into the material spot where you have been, a portion of that has entered you, your past life is

entwined with river and shore. You become the country, and the country becomes a part of God. Those who love their country, love the vast abstraction, can almost afford not to love God. She is a beneficence, she is a shield, something for which to do and die, something for worship, ideal, grand; and though the sky is their only roof, the earth their only bed, affluent are they who have a land! Passion rooted deeply as the foundations of the hills: a man may adore one woman, but in adoring his land the aggregation of all men's love for all other women overwhelms him and accentuates to a fuller emotion. It is unselfish, impersonal, sheer sentiment clarified at its white heat from all interest and deceit, the noblest joy, the noblest sorrow. Bold should they be, and pure as the priests who bore the ark, that dare to call themselves patriots. And those, Lenore, who live to see their country's hopeless ruin, plunge into a sadness at heart that no other loss can equal, no remaining blessing mitigate, — neither the devotion of a wife nor the perfection of a child. You have seen exiles from a lost land? Pride is dead in them, hope is dead, ambition is dead, joy is dead. Tell me, would you choose me to suffer the personal loss of love and you, a loss I could hide in my aching soul, or to bear those black marks of gall and melancholy which forever overshadow them in widest grief and gloom?"

She had sunk upon a seat, and was looking up at me with a pained unwavering glance, as if in my words she foresaw my fate.

"You are too intense!" she cried. "Your tones, your eyes, your gestures, make it an individual thing with you."

"And so it is!" I exclaimed. "I cannot sleep in peace, nor walk upon the ways, while these Austrian bayonets take my sunshine, these threatening approaching French banners hide the fair light of heaven!"

"Come," she said, rising. "Speak no more. I am tired of the burden of the ditty, dear; and it may do you such in-

jury yet that already I hate it. Come out again into our garden with me. Dismiss these cares, these burning pains and rankling wounds. Be soothed by the cool evening air, taste the gorgeous quiet of sunset, gather peace with the dew."

So we went. I trusted her the more that she differed from me, that then she promised to love Italy only because I loved it. I told her my secret schemes, I took her advice on points of my own responsibility, I learned the joy of help and confidence in one whom you deem devotedly true. Finally we remained without speech, stood long heart to heart while the night fell around us like a curtain; her eyes deepened from their azure noon-splendor and took the violet glooms of the hour, a great planet rose and painted itself within them; again and again I printed my soul on her lips ere I left her.

At first, when I was sure that I was once more alone in the streets, I could not shake from myself the sense of her presence. I could not escape from my happiness, I was able to bring my thought to no other consideration. I reached home mechanically, slept an hour, performed the routine of bath and refreshment, and sought my former duties. But how changed seemed all the world to me! what air I breathed! in what light I worked! Still I felt the thrilling pressure of those kisses on my lips, still those dear embraces!

So days passed on. I worked faithfully for the purpose to which I was so utterly committed that let that be lost and I was lost! We were victorious; after the banner fell in Lombardy to soar again in Venice and to sink, the Republic struggled to life; Rome rose once more on her seven hills, free and grand, child and mother of an idea, the idea of national unity, of independence and liberty from Tyrol to Sicily. My God! think of those dear people who for the first time said, "We have a country!"

Yet how could we have hoped then to continue? Such brief success dazzled us to the past. Piedmont had long since

struck the key-note of Italy's fortunes. As Charles Albert forsook Milan and suffered Austria once more to mouth the betrayed land and drip its blood from her heavy jaws, till in a baptism of red-dye he absolved himself from the sin,—so woe heaped on woe, all came to crisis, ruin, and loss,—the Republic fell, Rome fell, the French entered.

Our names had become too famous, our heroic defence too familiar, for us to escape unknown: the Vascello had not been the only place where youth fought as the lioness fights for her whelps. Many of us died. Some fled. Others, and I among them, remained impenetrably concealed in the midst of our enemies. Weeks then dragged away, and months. New schemes chipped their shell. Again the central glory of the land might rise revealed to the nations. We never lost courage; after each downfall we rose like Antæus with redoubled strength from contact with the beloved soil, for each fall plunged us farther into the masses of the people, into closer knowledge of them and kinder depths of their affection, and so, learning their capabilities and the warmth of their hearts and the strength of their endurance, we became convinced that freedom was yet to be theirs. Meanwhile, you know, our operations were shrouded in inscrutable secrecy; the French held Rome in frowning terror and subjection; the Pope trembled on his chair, and clutched it more frantically with his weak fingers: it was not even known that we, the leaders, were now in the city; all supposed us to be awaiting quietly the turn of events, in some other land. As if we ourselves were not events, and Italy did not hang on our motions! But, as I said, all this time we were at work; our emissaries gave us enough to do: we knew what spoil the robbers in the March had made, the decree issued in Vienna, the order of the day in Paris, the last word exchanged between the Cardinals, what whispers were sibilant in the Vatican; we mined deeper every day, and longed for the electric stroke

which should kindle the spark and send princes and principalities shivered widely into atoms. But, friend, this was not to be. We knew one thing more, too: we knew at last that we also were watched,—when men sang our songs in the echoing streets at night, and when each of us, and I, chief of all, renewed our ancient fame, and became the word in every one's mouth, so that old men blessed us in the way as we passed, wrapt, we had thought, in safe disguise, and crowds applauded. Thus again we changed our habits, our rendezvous, our quarters, and again we eluded suspicion.

There came breathing-space. I went to her to enjoy it, as I would have gone with some intoxicating blossom to share with her its perfume,—with any band of wandering harpers, that together our ears might be delighted. I went as when, utterly weary, I had always gone and rested awhile with her I loved in the sweet old palace-garden: I had my ways, undreamed of by army or police or populace. There had I lingered, soothed at noon by the hum of the bee, at night by that spirit that scatters the dew, by the tranquillity and charm of the place, ever rested by her presence, the repose of her manner, the curve of her drooping eyelid, so that looking on her face alone gave me pleasant dreams.

Now, as I entered, she threw down her work,—some handkerchief for her shoulders, perhaps, or yet a banner for those unrisen men of Rome, I said,—a white silk square on which she had wrought a hand with a gleaming sickle, reversed by tall wheat whose barbed grains bent full and ripe to the reaper, and round the margin, half-pictured, wound the wild hedge-roses of Pæstum. She threw it down and came toward me in haste, and drew me through an inner apartment.

"He has returned, they say," she said presently,—mentioning the Neapolitan,—“and it would be unfortunate, if you met.”

“Unfortunate for *him*, if we met here!”

"How fearless! Yet he is subtler than the snake in Eden. I fear him as I detest him."

"Why fear him?"

"That I cannot tell. Some secret sign, some unspeakable intuition, assures me of injury through him."

"Dearest, put it by. The strength of all these surrounding leagues with their swarm does not flow through his wrist, as it does through mine. He is more powerless than the mote in the air."

"You are so confident!" she said.

"How can I be anything else than confident? The very signs in the sky speak for us, and half the priests are ours, and the land itself is an oath. Look out, Lenore! Look down on these purple fields that so sweetly are taking night-fall; look on these rills that braid the landscape and sing toward the sea; see yonder the row of columns that have watched above the ruins of their temple for centuries, to wait this hour; behold the heaven, that, lucid as one dome of amethyst, darkens over us and blooms in star on star; — was ever such beauty? Ah, take this wandering wind, — was ever such sweetness? And since every inch of earth is historic, — since here rose glory to fill the world with wide renown, — since here the heroes walked, the gods came down, — since Oreads haunt the hill, and Nereïds seek the shore" —

"Whereabout do Nereïds seek the shore?" she archly asked.

"Why, if you must have data," I answered, laughing, "let us say Naples."

"What is that you have to say of Naples?" demanded a voice in the doorway, — and turning, I confronted the Neapolitan.

She had started back at the abrupt apparition, and before she could recover, stung by rage and surprise I had replied, —

"What have I to say of Naples? That its tyrant walks in blood to his knees!"

A man, I, with my hot furies, to be intrusted with the commonwealth!

"I will trouble you to repeat that sentence at some day," he said.

"Here and now, if you will!" I uttered, my hand on my hilt.

"Thanks. Not here and now. It will answer, if you remember it *then*. — I hope I see Her Highness well. Pardon this little *brusquerie*, I pray. The southern air is kind to loveliness: I regret to bring with me Her Highness's recall."

She replied in the same courteous air, inquired concerning her acquaintance, and ordered lights, — took the letter he brought, and held it, still sealed, in the taper's flame till it fell in ashes.

"Signor," she said, lifting the white atoms of dust and sifting them through her fingers, "you may carry back these as my reply."

"Nay, I do not return," he answered. "And, Signorina, many things are pardoned to one in — your condition. Recover your senses, and you will find this so among others."

Then, as coolly as if nothing had happened, he spoke of the affairs of the day, the tendency of measures, the feeling of the people, and finally rose, kissed her hand, and departed. He was joined without by the little Viennois, and the accursed couple sauntered down the street together. I should have gone then, — the place was no longer safe for me, — but something, the old spell, yet detained me.

Lenore did not speak, but threw open all the windows and doors that were closed.

"Let us be purified of his presence, at least!" she cried, when this was done.

"And you have ceased to fear this man whom you have dared so offend?" I asked.

"He is not offended," said Lenore. "Austria is not Naples. He will not transmit my reply till he is utterly past hope."

"Hope of what?"

"Of my hand."

"Lenore! Then put him beyond hope now! Become my wife!"

"Ah, — if it were less unwise" —

"If you loved me, Lenore, you would not think of that."

"And you doubt it? Why should I, then, say again that I love you, — I love you?"

Ah, friend, how can I repeat those words? Never have I given her endearments again to the air: sacred were they then, sacred now, however false. Ah, passionate words! oh, sweet *issimos!* tender intonations! how deeply, how deeply ye lie in my soul! Let me repeat but one sentence: it was the key to my destiny.

"Yes, yes," she said, rising from my arms, "already I do you injury. You think oftener of me than of Italy."

It was true. I sprang to my feet and began pacing the floor, as I sought to recall any instance in which I had done less than I might for my country. The cool evening-breeze, and the bell-notes sinking through the air from distant old campaniles, soothed my tumult, and, turning, I said, —

"My devotion to you sanctifies my devotion to her. And not only for her own sake do I work, but that you, you, Lenore, may have a land where no one is your master, and where your soul may develop and become perfect."

"And those who have not such object, why do they work?"

Then first I felt that I had fallen from the heights where my companions stood. This ardent patriotism of mine was sullied, a stain of selfishness rose and blotting out my glory, others should wear the conquering crowns of this grand civic game. Oh, friend! that was sad enough, but it was inevitable. Here is where the crime came in, — that, knowing this, I still continued as their leader, suffered them to call me Master and Saviour, and walked upon the palms they spread.

Lenore mistook my silence.

"You cannot tell me why they work?" she said. "From habit, from fear, because committed? It cannot be, then, that they are in earnest, that they are sincere, that they care a rush for this cause so holy to you. They have entered into it, as all this common people do, for the love of a new excitement, for the

pleasurable mystery of conspiracy, for the self-importance and gratulation. They will scatter at the signal of danger, like mischievous boys when a gendarme comes round the corner. They will betray you at the lifting of an Austrian finger. Leave them!"

This was too much to hear in silence, — to hear of these faithful comrades, who had endured everything, and were yet to overcome because they possessed their souls in patience, each of whom stood higher before God than I in unspotted public purity, and whose praise and love led me constantly to larger effort. At least I would make them the reparation of vindication.

"You mistrust them?" I exclaimed. "They whose souls have been tried in the furnace, who have the temper of fine steel, pliant as gold, but incorruptible as adamant, — heroes and saints, they stand so low in your favor? Come, then, come with me now, — for the bells have struck the hour, and shadows clothe the earth, — come to their conclave where discovery is death, and judge if they be idle prattlers, or men who carry their lives in their hands!"

Fool! Fool! Fool! Every sound in the air cries out that word to me: the bee that wings across the tower hums it in my ear; the booming alarm-bell rings it forth; my heart, my failing heart, beats it while I speak. I would have carried a snake to the sacred ibis-nest, and thenceforth hope was hollow as an egg-shell!

She ran from the room, but, pausing in the door-way, exclaimed, —

"Remember, if you take me there, that I am no Roman patriot, — I! I, who am of the House of Austria, that House that wears the crown of the Cæsars, those Cæsars who swayed the very imperial sceptre, who trailed the very imperial purple of old Rome! I endure the cause because it is yours. I beseech you to be faithful to it; because I should despise you, if for any woman you swerved from an object that had previously been with you holier than heaven!"

I stood there leaning from the lofty

window, and looking down over the wide, solitary fields. Recollections crowded upon me, hopes rose before me. One day, that yet lives in my heart, Anselmo, sprang up afresh, a day forever domed in memory. Fair rose the sun that day, and I walked on the nation's errands through the streets of a distant town,—a hoar and antique place, that sheltered me safely, so slight guard was it thought to need by our oppressors. It pleased that reverend arch-hypocrite to take at this hour his airing. Late events had given the people courage. It was a market-day, peasants from the country obstructed the ancient streets, the citizens were all abroad. Not few were the maledictions muttered over a column of French infantry that wound along as it returned to Rome from some movement of subjection, not low the curses showered on an officer who escorted ladies upon their drive. As I went, I considered what a day it would have been for *émeute*, and what mortal injury *émeute* would have done our cause. Italy, we said, like fools, but honest fools, must not be redeemed with blood. As if there were ever any sacred pact, any new order of things, that was not first sealed by blood! Therefore, when I, alone perhaps of all the throng, saw one man—a man in whose soul I knew the iron rankled—stealing behind the crowd, behind the monuments, and, as the coach of His Excellency rolled luxuriously along, levelling a glittering barrel,—it was but an instant's work to seize the advancing creatures, to hold them rearing,—and then a deadly flash,—while the ball whistled past me, grazed my hand, and pierced the leader's heart. In a twinkling the dead horse was cut away, and His Excellency, cowering in the bottom of the coach, galloped home more swiftly than the wind, without a word. But the populace appreciated the action, took it up with *vivas* long and loud, that rang after me when I had slipped away, and before nightfall had echoed in all ears through leagues of country round. I went that night to the theatre. The house was filled, and, as we

entered, a murmur went about, and then cries broke forth,—the multitude rose with cheers and bravos, calling my name, intoxicated with enthusiasm, and dazzled, not by a daring feat, but by the spirit that prompted it. Women tore off their jewels to twist them into a sling for my injured hand; men rose and made me a conqueror's ovation; the orchestra played the old Etrurian hymns of freedom; I was attended home with a more than Roman triumph of torch and song, stately men and beautiful women. But chameleons change their tint in the sunshine, and why should men always march under one color? Friend, not six months later there came another day, when triumph was shame,—plaudits, curses,—joyous tumult, scorching silence. Oh!— But I shall come to that in time. Now let me hasten; the hours are less tardy than I, and they bring with them my last.

Thought of this day—sole pageant defiling through memory—was startled again by the far, sweet sound of a bell, some bell ringing twilight out and evening in across the wide Campagna. I wondered what delayed Lenore. Did it take so long to toss off the cloudy back-falling veil, to wrap in any long cloak her gown of white damask and all the sheen of her milky pearl-clusters and fiery rubies? I thought with exultation then of what she was so soon to see,—of the route through sunken ruins, down wells forsaken of their pristine sources and hidden by masses of moss, winding with the faint light in our hands through the awful ways and avenues of the catacombs. The scene grew real to me, as I mused. Alone, what should I fear? These silent hosts encamped around would but have cheered their child. But with her, every murmur becomes a portent of danger, every current of air gives me fresh tremors; as we pass casual openings into the sky, the vault of air, the glint of stars, shall seem a malignant face; I fancy to hear impossible footsteps behind us, some bone that crumbling falls from its shelf makes my heart beat high, her dear hand trembles in my hold, and, full of a new and superstitious

awe, I half fear this ancient population of the graves will rise and surround us with phantom array. Now and then, a cold, lonely wind, blowing from no one knows where, rises and careers past us, piercing to the marrow. I think, too, of that underground space, half choked with rubbish, into which we are to emerge at last, once the hall of some old Roman revel. I see the troubled flashes flung from the flaring torch over our assembly. Alert and startled, I see Lenore listen to the names as if they summoned the wraiths and not the bodies of men whom she had supposed to be lost in the pampas of Paraguay, dead in the Papal prisons, sheltered in English homes, or tossing far away on the long voyages of the Pacific seas. I see myself at length taking the torch from its niche and restoring it, as a hundred times before, to Pietro da Valambo, while it glitters on some strange object looking in at the vine-clad opening above with its breaths of air, serpent or hare, or the large face and slow eyes of a browsing buffalo. And as I think, lo! an echo in the house, a dull tramp in the hall, a stealthy tread in the room, a heavy hand upon my shoulder,—I was arrested for high treason.

Do not think I surrendered then. Without a struggle I would be the prize of Pope nor King nor Kaiser! I shook the minions' grasp from my shoulder, I flashed my sword in their eyes; and not till the crescent of weapons encircled me in one blinding gleam, vain grew defence, vain honor, vain bravery. Of what use was my soul to me thenceforth? I became but carrion prey. I fell, and the world fell from me.

Sensation, emotion, awoke from their swooning lapse only in the light of day, the next or another, I knew not which. I was lifted from some conveyance, I saw blue reaches of curving bay and the great purifying priest of flame, and knew I was in the city guarded by its pillar of cloud by day, of fire by night. I had reason to know it, when, yet unfed, unrested, faint, smirched and smeared with blood and travel, loaded with chains, I was

brought to a tribunal where sat the sleek and subtle tyrant of Naples.

"Signor," said a bland voice from the king's side,—and looking in its direction, I encountered the Neapolitan,—“Signor, I lately said that at some day I would trouble you to repeat a brilliant sentence addressed to me. The day has arrived. I scarcely dared dream it would be so soon. Shall we listen?”

I was silent: not that I feared to say it; they could but finish their play.

Then I saw the beautifully cut lips of my judge part, that the voice might slide forth, and, taking a comfit, he uttered, with unchanging tint and sweetest tone, the three words, “Apply the question.”

Why should I endure that for a whim? Who courts torment? Already they drew near with the cunning instruments. Let me say it, and what then? Nothing worse than torture. Let me *not* say it, and certainly torture. Oh, I was weaker than a child! my body ruled my spirit with its exhaustion and pain. Yet there was a certain satisfaction in flinging the words in their faces. I waved back with my remaining arm the slaves who approached.

“You should allow a weary man the time to collect his thoughts,” I said, and then turned to my persecutors. “I have spoken with you many times, Signor,” I replied to the Neapolitan, “yet of all our words I can remember none but these, that you could care to hear with this auditory. I said,—that the tyrant of Naples walks in blood to his knees!”

The Neapolitan smiled. The king rose.

“Well said!” he murmured, in his silvery tones. “One that knows so much must know more. Exhaust his knowledge, I pray. Do not spare your courtesies; remember he is my guest. I leave him in your hands.”

He fixed me with his eye,—that darkly-glazed eye, devoid of life, of love, of joy, as if he were the thing of another element,—then bowed and passed away.

“The urbanity of His Majesty is too well known to suppose it possible that he

should prove you a liar," said the Neapolitan.

Truly, I was left in their hands! Shall I tell you of the charities I found there? Not I, friend! it would wring your heart as dry of tears as mine was wrung of groans. At last I was alone, it seemed, — on a wet stone floor, sweat pouring from every muscle, each fibre quivering; I was distorted and unjointed, I only hoped I was dying. But no, that was too good for me. Anselmo, how can I but be full of scoffs, when I remember those hours, those ages? The cold dampness of the place crept into my bones; I became swollen and teeming with intimate pain. But that was light, my body might have ached till the throbs stiffened into death-spasms, and yet the suffering had been nought, compared with that loathing and disgust in my soul. It had seemed that I was alone, I said. Alone as the corpse in unshrouded grave! I was in a charnel-house. Men who were sinless as you hung dead upon the wall, hung dying there. Darkness covered all things at a distance, sighs crept up from far corners, chains clanked, or imprecations or prayers uttered themselves, — bodiless voices in the night. I did not know what untold horror there might yet be hid. I heard the drip of water from the black vaults; I heard the short, fierce pants and deadly groans. Oh, worst infliction of Hell's armory it is to see another suffer! Why was it allowed, Anselmo? Did it come in the long train of a broken law? was it one of the dark places of Providence? or was it indeed the vile compost to mature some beautiful germ? Ah, then, is it possible that Heaven looks on us so in the mass?

But for me, after a while I lay torpid, and then perchance I slept, for finally I opened my eyes and found the white strong light; I lay on a bed, and a surgeon handled me. Too elastic was I to be long crushed, once the weight removed. Soon I breathed fresh air; and save that my frame had become in its distortion hideous, I was the same as before.

Then, indeed, began my torture, —

torture to which this had been idle jest. I was taken once more to the room of tribunal. Beside the Neapolitan a woman sat veiled and shrouded in masses of sable drapery. "A queen?" I thought, "or a slave?" But I had no further room for fancy; the same interrogatories as before were given me to answer, and then I felt why I had been nursed back to life. In the months that had elapsed, I could not know if Italy were saved or lost, if Naples tottered or remained impregnable. I stood only on my personal basis of right or wrong. I refused to open my lips. They wheeled forward a low bed that I knew well. Oh, the slow starting of the socket! Oh, the long wrench of tendon and nerve! A bed of steel and cords, rollers and levers, bound me there, and bent to their creaking toil. I was strong to endure; I had set my teeth and sworn myself to silence; no woman should hear me moan. Even in this misery I saw that she who sat there, shaking, fell.

The tyrant was lily-livered; seldom he witnessed what others died under; he intended nothing further then; — many men who faint at sight of blood can probe a soul to its utmost gasp. Now he motioned, and they paused. Then others lifted the woman and held her beside him, yet a little in advance.

"Keep your silence," said he, in a voice unrecognizable, and as if a wild beast, half-gluttled, should speak, "and I keep her! She is in my power. Mine, and you know what that means. Mine," and he bent toward me, "*body — and — soul*. To use, to blast, to destroy, to tear piecemeal, — as I will do, so help me God! unless you meet my condition." And extending his hand, he drew aside the black veil, and my eye lay on the face of Lenore, thin and white as the familiar faces of corpses, and utterly insensible in swoon.

Ah, that mortal horror stops my pulse! Was I wrong? Why not have borne that, too? Had she loved me, she had chosen it, chosen it rather. And death would have made all right! — God! why

not have seized some poignard lying there? why not have sprung upon her, have slain her? Then silence had been simply secure. Then I could have smiled in their frustrated faces, one keen, deep smile, and died. I was dissolved in pain, writhed with prolonged strokes that thrilled me from head to foot, pierced as with acute stabs, my heart seemed to forge thunderbolts to break upon my brain,—but this agony had been spared me. They unbound me, fed me with some stimulating cordial, gave me cold air, and I rose on my elbow a little.

“Swear!” I said, hoarsely. “But you do not keep oaths. God help you? Never! There must be a Hell to help you! Imprecate this, then, on yourself. May you in your smooth white body know the torture I have known, be racked till each bone in your skin changes place, hang festering in chains from the wall of a living grave, make fellowship with putridity, and lie in the pitiless dark to see all the dead who died under your hand rise, rise and accuse you before God! And may your little son know the deeds you have done, live the life those deeds merit, and die the death that I shall die,—if you do not keep your word!”

“What word?” he said.

“Promise, if I reveal all, and my revelations shall be true and thorough therefore,—promise that you will leave her in safe security and freedom to-day, untouched, unscathed, unharmed, and that so ever shall she remain. And false to this oath, may no priest shrive you, no land own you, God blight you and curse you and wither you from the face of the earth!”

And taking a crucifix, he swore the oath.

Then they busied themselves about Lenore, revived her, soothed her, gave her of the same cordial to drink, and placed her once more in her dais-seat. Her veil was thrown back, her wide blue eyes fixed on me in intense strain, her face and lips still blanched more bitterly beneath that hue, her features sharp as chisel-graven death. Ah, God! must

I endure that too? Was she to hear me,—she, not knowing why, never knowing why,—she in whom that look of aching passion and pity was to die out and freeze and fade in one of utter scorn?

They brought me some strange draught, as if one swallowed fire. The blood coursed richly through my shrunken veins; I felt filled with a different life. I arose and left that bed of torture, but came back to it as to my rest.

And lying there, I betrayed Italy.

Root and branch and spray and leaf, I uprooted all my memories; I forgot no name, I lost no fact; I was eagerer than they; I modified nothing, I abbreviated nothing; the past, the future, what had been, was to be, plan and scheme and supreme purpose, I never faltered, I told the whole!

I did not look at her, I kept my eyes on the tyrant; I wished I might have the evil eye,—but that gift was for him, the Neapolitan. Yet at length I heard a low moan trailing toward me; I turned, and saw her face, as I saw it last, Anselmo,—stonily quiet, frozen from indignant pain to icy apathy, and the words she would have said had hissed inarticulately through her ashen lips. Then they brought me the confession, and, as I could, I signed it.

“Madame,” said the tyrant, “your knowledge is coextensive with his. Does all this agree?”

“Sire, it does agree,” she answered, and they led her out.

“I have no authority over you,” said the tyrant then to me. “You might go freely now, but that, precious as Homer, seven cities claim you, Signor! My prisons also will now be full of rarer game. But as a crime of your commission places you within Austrian jurisdiction, I shall take pleasure in presenting you to my cousin and surrendering you to his mercy,” and he withdrew.

“You may not be aware,” said the courteous Neapolitan, “that on the night of your arrest your frantic sword-slashes had serious result. My friend the little Viennois fell at your hands.”

"God be praised," I answered, "that I do not die without one good work!"

"Well said! And worthy of a traitor both to his ancient blood and to his cause,—the betrayer of comrade and friend!"

I do not know what look was in my eye, or whether, with the savage ferocity taught me but now, I was about to leap and throttle him, and suck the life-blood from his veins. But suddenly he laughed, a feigned merriment, twirled his moustache, opened a door, looked back, uttering this one sentence:—

"You have simply corroborated her statement: you are not even the first in at the death: Lenore told all this more swiftly, with a better grace, and a something less sardonic mute-comment,"—closed the door and was gone. The breath of the bottomless pit had blown in my face.

They gave themselves time to swoop down and pounce on every man whose name I had given, and others; they prevented future trouble, they made terrible examples, they sated themselves with vengeance. But their feet were shod with velvet,—history will never record it; to the world I and those nameless ones pass as mere idle agitators, bubbles that blew out to sea,—but at my mention kings in their closet remember how their thrones trembled! Then they looked about them for one last morsel, and I was led to Rome.

O stormy days that I have to remember! O wild mornings of the cannonade, and of the sally! One noon blots ye all out in sullen darkness!

It was a gala-day, the day when I passed through; all the populace were out, my signed confession placarded the corners, Pasquin harvested my sins, Church and State made holiday. Cries of derision awaited me, ribald laughter, taunting jests, hisses and groans, gleaming stiletos, shining barrels, eyes of rage. But when I reached them, all was silence; silence closed up the ranks behind me. The shouting crowds grew noiseless, breathless. They each received

the terrible impress of him who passed,—his brow was branded as by doom; he went out Cain, and carried with him the curse of a ruined people. I gazed right and left,—on these men who had once hailed me, followed me, worshipped me; their hate melted as they met my eye; slowly a cloud of terror and pity gathered and hung above the city. I did not repent; I would have done it again: not for a universe of Italies would I have resigned *her* to that fate. But, O friend, this forgiveness of theirs was unmerciful! For hate they had cause; for this none: they knew nothing of my reason, they only knew that I had betrayed them. Each man had despised me; he thought that to save my limbs like a young god's, to keep my face that had been splendid in youth's beauty, to spare that shape of antique symmetry and grace, to win ease and rest and wealth and happiness, perhaps, I had done this. Each man, as I met his gaze, shrunken, dismembered, deformed, dishonored, held his breath, shook with indefinable fear, felt the neighborhood of agony and despair, and forgave, forgave:—oh! to live to be forgiven! But the women,—the women, Anselmo, were not so cruel. There were torrents of streamers, but all were black, pouring from window and roof,—there were sunny heads, and dark, fair faces, rosy cheeks, snowy shoulders, clustered in door and arch like bunches of poison-flowers,—and of all shrill sounds of hate, Anselmo, that can pierce and part red lips, the fiercest, shrillest, fell on me; and at last, from one lofty balcony, where erst I had seen her leaning forth in sunset to catch the evening winds, the evening bells, crowned, too, by the evening star, one woman, now centred in merciless midnoon, leaned, leaned and gazed down as into her grave: it was Lenore. It had been late spring when last I passed that way; all the hot, pestilential summer I had lain in the dungeons of Naples; now it was autumn, and the town was full. Full, but I saw no one; blank became the spaces on which I gazed; my gyves vanished, my guards; my brain swam

through dazzling rings of light, and I fell forward in the cart and hung by my chains among the hoofs of the trampling horses who dragged me. On that day I had taken my last step; I never set foot on the round earth again. But, with all, I smiled through my groans; for the shining, solid hoofs that did their work on me did their work as well on the man who walked by my side, — dashed dead the accursed Neapolitan.

They were not the surgeons of Naples who essayed to galvanize volition through my paralyzed limbs, but those who knew the utmost resources of their art. And so I lived, — lived, too, by reason of my inextinguishable vitality, by reason of this spark that will not quench, — and so I came to Hellberg. It would have been mockery to give this shapeless hulk to sentence, and then to headsman or hangman; perhaps, too, her haughty name had been involved; and so I was never brought to trial, and so I am at Hellberg.

And I have never set foot on the ground again. But, oh, to touch it for a moment, to sit anywhere on the summer mould, to pull down the sun-quivering, sun-steeped branches about me, to scent the fresh grass as it springs to the light! Oh, but to touch the sweet, kind earth, the warm earth, silent with ineffable tenderness and soothing, to feel it under my hand, to lay my cheek there for a moment, while it drew away pain and weariness with its absorbing, purifying power! Oh, but to lie once more where the blossoms grow! Soon, soon, they will grow above me! Soon the kind mother will cover me!

What had happened in the outer world I knew not till you came. I fancied Lenore returned, breathing Austrian air, and living under the same horizon that girds me in. Sometimes I have seen a distant cavalcade skimming over the vale, as once we careered over the Campagna, when she handled her steed as another woman handles her needle, and the sweet wind fanned peach-tints

to her cheeks and drew out unravelled braids of gold in lingering caress. She could have come to me, had she pleased, then: this old chief who rules the place was her father's friend and hers. — But look! but see! Who is it comes now, — sweeps round the donjon flank? Lean over the embrasure, and learn! Ah, man, are my eyes so old, my memories so treacherous, that I do not know day from night? They have gone on, — or did they enter, think you? Or yet, there is to be carousal, perhaps, in the halls beyond and below, and she comes to join the gay feast; she will drink healths in red wine, will listen to flattering dalliance with pleased eyes, will utter light laughs through the lips that once glowed to my kisses, and will forget that the same roof which shelters the revellers shelters also her lover dying in moans! Careless — Best so! best so! What cavalier whispered in her ear as she passed? Have years tarnished her beauty? Ah, God! this wind, that maddens me now, a moment since touched her!

Anselmo, I will go in. This vault of heaven with its spotless blue, this wide land that laughs in festive summer, these winds that lift my hair and come heavy with odors, — these do not fit with me, I burlesque the fair face of creation. O invisible airs, that softly sport-round the castle-towers, why do you not woo my soul forth and bear it and lose it in the flawless cope of sky?

Nay, why, any more than Ajax, should I die in the dark? Never again will I enter the cell, never again! The wide universe shall receive my breath. Lower the back of my chair, pull away the cushions, wrap my cloak round me, Anselmo. There! I will lie, and wait, and look up. Give me ghostly counsel, my friend, console me. You are not too weary with this long tale? Tell me I needed all the tears I have shed to quench the fiery defiance, the independence of heaven and tumult of earth in my being. If you could tell me that she had not been false, that she never feigned her passion

to decoy, that, Austrian though she were — Ah, but I had evidence! I had evidence! his words, that ate out my life like gangrene and rust. — Speak slower, Anselmo, slower. Can it be that I sinned most, when I held his words before hers, — his black damning falsehoods? — Mother of God! do you know what you say?

Tell me, then, that I am a fool, — that not through other loss than the loss of faith did the curse fall on me! Tell me, then, that these dark ways lead me out on a height! Needful the shadow and the groping. He anointed my eyes with the clay beneath his feet, — I was blind, but now I see God!

Repeat, Anselmo, repeat that she was true, though the knowledge blast me with self-consuming pangs. But, true or false, one thing she promised me: though other spheres, though other lives had come between us, she would be with me in my dying hour. Soon the bell will toll that hour, and toll my knell!

What is this, Anselmo, — this face that hangs between me and heaven, — this pitying, sorrowing countenance? — Ave Maria! — Never! Never! Still of the earth, this melting mouth, these violet eyes, this brow of snow, this fragrant bosom pillowing my head! Mirage of fainting fancy, — out, beautiful thing, away! Do not torment me with such a despairing lie! do not cheat me into death! let me at least look on the unobstructed sky, as I sink lower and lower to my eternal rest!

Still there? Still there? Still bending above me, smiling and weeping, sweet April face? Oh, were they truly thy lips that lay on mine, then, that stamped them with life's impress, that woke me? Are they truly thy fingers that pressed my throbless temples? These arms that

are wound about me, are thine? Thy heart beats for me, thy tears flow, thy perfect womanhood does not recoil in horror? Lenore! Lenore! is it thou?

Nay, nay, Sweet, ask me no question; I have wronged thee; he shall tell thee how. Yet best thou shouldst never hear it. Sin to thee greater than all treachery had been. Forgive, forgive! I go, — in meeting, leave thee; but be glad for me, — whether I sleep or whether I wake, know that a great curse will have fallen from me. Swathe my memory in thy love. Kiss me again, child! Rock me a little; stoop lower, and croon those old mountain-songs that once you sang when the sunshine soaked the sward and your hair was crowned with blue morning-glories.

Ah, your song drowns in tears! Yet you do not wish me to live, Lenore? O love, I can do nothing but die!

The sunlight fades from the hills, the air wavers and glimmers, and day is dim. Thy face is mistier than a vision of angels. There are faint, strange voices in my ear, swift rustlings, far harmonies; — has sense become so attenuated that I hear the blood in my failing pulses? Lenore, love, lower. Thy lips to mine, and breathe my life away. Twice would I die to save thee!

— Anselmo! man! where art thou? Come back ere I fall, — strength flares up like a dying flame. *Never tell her why I betrayed Italy!*

— Closer, dear love, closer! What old murmurs do I hear?

“The night is spread for thee,  
The heavens are wide,  
And the dark earth's mystery” —

So, — in thy arms, — from thee to God! O love, forever — kiss — forgive! — Lift me, that I confront eternity and Christ!

## AFTER "TAPS."

TRAMP! Tramp! Tramp! Tramp!  
 As I lay with my blanket on,  
 By the dim fire-light, in the moonlit night,  
 When the skirmishing fight was done.

The measured beat of the sentry's feet,  
 With the jingling scabbard's ring!  
 Tramp! Tramp! in my meadow-camp  
 By the Shenandoah's spring.

The moonlight seems to shed cold beams  
 On a row of pale gravestones:  
 Give the bugle breath, and that image of Death  
 Will fly from the reveille's tones.

By each tented roof, a charger's hoof  
 Makes the frosty hill-side ring:  
 Give the bugle breath, and a spirit of Death  
 To each horse's girth will spring.

Tramp! Tramp! Tramp! Tramp!  
 The sentry, before my tent,  
 Guards, in gloom, his chief, for whom  
 Its shelter to-night is lent.

I am not there. On the hill-side bare  
 I think of the ghost within;  
 Of the brave who died at my sword-hand side,  
 To-day, 'mid the horrible din

Of shot and shell and the infantry yell,  
 As we charged with the sabre drawn.  
 To my heart I said, "Who shall be the dead  
 In *my* tent, at another dawn?"

I thought of a blossoming almond-tree,  
 The stateliest tree that I know;  
 Of a golden bowl; of a parted soul;  
 And a lamp that is burning low.

Oh, thoughts that kill! I thought of the hill  
 In the far-off Jura chain;  
 Of the two, the three, o'er the wide salt sea,  
 Whose hearts would break with pain;

Of my pride and joy, — my eldest boy;  
 Of my darling, the second — in years;  
 Of *Willie*, whose face, with its pure, mild grace,  
 Melts memory into tears;

Of their mother, my bride, by the Alpine lake's side,  
 And the angel asleep in her arms;  
 Love, Beauty, and Truth, which she brought to my youth,  
 In that sweet April day of her charms.

"HALT! *Who comes there?*" The cold midnight air  
 And the challenging word chill me through.  
 The ghost of a fear whispers, close to my ear,  
 "Is peril, love, coming to you?"

The hoarse answer, "RELIEF," makes the shade of a grief  
 Die away, with the step on the sod.  
 A kiss melts in air, while a tear and a prayer  
 Confide my beloved to God.

Tramp! Tramp! Tramp! Tramp!  
 With a solemn, pendulum-swing!  
 Though *I* slumber all night, the fire burns bright,  
 And my sentinels' scabbards ring.

"Boot and saddle!" is sounding. Our pulses are bounding.  
 "To horse!" And I touch with my heel  
 Black Gray in the flanks, and ride down the ranks,  
 With my heart, like my sabre, of steel.

---

## THE HUMAN WHEEL, ITS SPOKES AND FELLOES.

THE starting-point of this paper was a desire to call attention to certain remarkable AMERICAN INVENTIONS, especially to one class of mechanical con-

trivances, which, at the present time, assumes a vast importance and interests great multitudes. The limbs of our friends and countrymen are a part of

the melancholy harvest which War is sweeping down with Dahlgren's mowing-machine and the patent reapers of Springfield and Hartford. The admirable contrivances of an American inventor, prized as they were in ordinary times, have risen into the character of great national blessings since the necessity for them has become so widely felt. While the weapons that have gone from Mr. Colt's armories have been carrying death to friend and foe, the beneficent and ingenious inventions of MR. PALMER have been repairing the losses inflicted by the implements of war.

The study of the artificial limbs which owe their perfection to his skill and long-continued labor has led us a little beyond its first object, and finds its natural prelude in some remarks on the natural limbs and their movements. Accident directed our attention, while engaged with this subject, to the efforts of another ingenious American to render the use of our lower extremities easier by shaping their artificial coverings more in accordance with their true form than is done by the empirical cordwainer, and thus *Dr. Plumer* must submit to the coupling of some mention of his praiseworthy efforts in the same pages with the striking achievements of his more aspiring compatriot.

We should not tell the whole truth, if we did not own that we have for a long time been lying in wait for a chance to say something about the mechanism of walking, because we thought we could add something to what is known about it from a new source, accessible only within the last few years, and never, so far as we know, employed for its elucidation, namely, the *instantaneous photograph*.

The two accomplishments common to all mankind are walking and talking. Simple as they seem, they are yet acquired with vast labor, and very rarely understood in any clear way by those who practise them with perfect ease and unconscious skill.

Talking seems the hardest to comprehend. Yet it has been clearly explained and successfully imitated by artificial contrivances. We know that the moist membranous edges of a narrow crevice (the glottis) vibrate as the reed of a clarinet vibrates, and thus produce the human *bleat*. We narrow or widen or check or stop the flow of this sound by the lips, the tongue, the teeth, and thus *articulate*, or break into joints, the even current of sound. The sound varies with the degree and kind of interruption, as the "babble" of the brook with the shape and size of its impediments,—pebbles, or rocks, or dams. To whisper is to articulate without *bleating*, or vocalizing; to *coo* as babies do is to *bleat* or vocalize without articulating. Machines are easily made that *bleat* not unlike human beings. A bit of India-rubber tube tied round a piece of glass tube is one of the simplest voice-uttering contrivances. To make a machine that *articulates* is not so easy; but we remember Maelzel's wooden children, which said, "Pa-pa" and "Ma-ma"; and more elaborate and successful speaking machines have, we believe, been since constructed.

But no man has been able to make a figure that can *walk*. Of all the automata imitating men or animals moving, there is not one in which the legs are the true sources of motion. So said the Webers\* more than twenty years ago, and it is as true now as then. These authors, after a profound experimental and mathematical investigation of the mechanism of animal locomotion, recognize the fact that our knowledge is not yet advanced enough to hope to succeed in making real walking machines. But they conceive that the time may come hereafter when colossal figures will be constructed whose giant strides will not be arrested by the obstacles which are impassable to wheeled conveyances.

\* *Traité de la Mécanique des Organes de la Locomotion*. Translated from the German in the *Encyclopédie Anatomique*. Paris, 1843.

We wish to give our readers as clear an idea as possible of that wonderful art of balanced vertical progression which they have practised, as M. Jourdain talked prose, for so many years, without knowing what a marvellous accomplishment they had mastered. We shall have to begin with a few simple anatomical data.

The foot is arched both longitudinally and transversely, so as to give it elasticity, and thus break the sudden shock when the weight of the body is thrown upon it. The ankle-joint is a loose hinge, and the great muscles of the calf can straighten the foot out so far that practised dancers walk on the tips of their toes. The knee is another hinge-joint, which allows the leg to bend freely, but not to be carried beyond a straight line in the other direction. Its further forward movement is checked by two very powerful cords in the interior of the joint, which cross each other like the letter X, and are hence called the *crucial ligaments*. The upper ends of the thigh-bones are almost globes, which are received into the deep cup-like cavities of the haunch-bones. They are tied to these last so loosely, that, if their ligaments alone held them, they would be half out of their sockets in many positions of the lower limbs. But here comes in a simple and admirable contrivance. The smooth, rounded head of the thigh-bone, moist with glairy fluid, fits so perfectly into the smooth, rounded cavity which receives it, that it holds firmly by *suction*, or atmospheric pressure. It takes a hard pull to draw it out after all the ligaments are cut, and then it comes with a smack like a tight cork from a bottle. Holding in this way by the close apposition of two polished surfaces, the lower extremity swings freely forward and backward like a *pendulum*, if we give it a chance, as is shown by standing on a chair upon the other limb, and moving the pendent one out of the vertical line. The force with which it swings depends upon its weight, and this is much greater than we might at first suppose; for our

limbs not only carry themselves, but our bodies also, with a sense of lightness rather than of weight, when we are in good condition. Accident sometimes makes us aware how heavy our limbs are. An officer, whose arm was shattered by a ball in one of our late battles, told us that the dead weight of the helpless member seemed to drag him down to the earth; he could hardly carry it; it "weighed a ton," to his feeling, as he said.

In *ordinary walking*, a man's lower extremity swings essentially by its own weight, requiring little muscular effort to help it. So heavy a body easily overcomes all impediments from clothing, even in the sex least favored in its costume. But if a man's legs are pendulums, then a short man's legs will swing quicker than a tall man's, and he will take more steps to a minute, other things being equal. Thus there is a natural rhythm to a man's walk, depending on the length of his legs, which beat more or less rapidly as they are longer or shorter, like metronomes differently adjusted, or the pendulums of different time-keepers. Commodore Nutt is to M. Bihin in this respect as a little, fast-ticking mantel-clock is to an old-fashioned, solemn-clicking, upright time-piece.

The mathematical formulæ in which the Messrs. Weber embody their results would hardly be instructive to most of our readers. The figures of their Atlas would serve our purpose better, had we not the means of coming nearer to the truth than even their careful studies enabled them to do. We have selected a number of instantaneous stereoscopic views of the streets and public places of Paris and of New York, each of them showing numerous walking figures, among which some may be found in every stage of the complex act we are studying. Mr. Darley has had the kindness to leave his higher tasks to transfer several of these to our pages, so that the reader may be sure that he looks upon an exact copy of real human individuals in the act of walking.

Fig. 1.

The first subject is caught with his legs stretched in a stride, the remarkable length of which arrests our attention. The sole of the right foot is almost vertical. By the action of the muscles of the calf it has *rolled off* from the ground like a portion of the tire of a wheel, the heel rising first, and thus the body, already advancing with all its acquired velocity, and inclined forward, has been pushed along, and, as it were, *tipped over*, so as to fall upon the other foot, now ready to receive its weight.

Fig. 2.

In the second figure, the right leg is

bending at the knee, so as to lift the foot from the ground, in order that it may swing forward.

Fig. 3.

The next stage of movement is shown in the *left* leg of figure 3. This leg is seen suspended in air, a little beyond the middle of the arc through which it swings, and before it has straightened itself, which it will presently do, as shown in the next figure.

Fig. 4.

The foot has now swung forward, and, tending to swing back again, the limb being straightened, and the body tipped

forward, the heel strikes the ground. The angle which the sole of the foot forms with the ground increases with the length of the stride; and as this last surprised us, so the extent of this angle astonishes us in many of the figures, in this among the rest.

The heel strikes the ground with great force, as the wear of our boots and shoes in that part shows us. But the projecting heel of the human foot is the arm of a lever, having the ankle-joint as its fulcrum, and, as it strikes the ground, brings the sole of the foot down flat upon it, as shown in figure 1. At the same time the weight of the limb and body is thrown upon the foot, by the joint effect of muscular action and acquired velocity, and the other foot is now ready to rise from the ground and repeat the process we have traced in its fellow.

No artist would have dared to draw a walking figure in attitudes like some of these. The swinging limb is so much shortened that the toe never by any accident scrapes the ground, if this is tolerably even. In cases of partial paralysis, the scraping of the toe, as the patient walks, is one of the characteristic marks of imperfect muscular action.

Walking, then, is a perpetual falling with a perpetual self-recovery. It is a most complex, violent, and perilous operation, which we divest of its extreme danger only by continual practice from a very early period of life. We find how complex it is when we attempt to analyze it, and we see that we never understood it thoroughly until the time of the instantaneous photograph. We learn how violent it is, when we walk against a post or a door in the dark. We discover how dangerous it is, when we slip or trip and come down, perhaps breaking or dislocating our limbs, or overlook the last step of a flight of stairs, and discover with what headlong violence we have been hurling ourselves forward.

Two curious facts are easily proved. First, a man is shorter when he is walking than when at rest. We have found a very simple way of showing this by

having a rod or yardstick placed horizontally, so as to touch the top of the head forcibly, as we stand under it. In walking rapidly beneath it, even if the eyes are shut, to avoid involuntary stooping, the top of the head will not even graze the rod. The other fact is, that one side of a man always tends to outwalk the other, so that no person can walk far in a straight line, if he is blindfolded.

The somewhat singular illustration at the head of our article carries out an idea which has only been partially alluded to by others. Man is a *wheel*, with two spokes, his legs, and two fragments of a tire, his feet. He *rolls* successively on each of these fragments from the heel to the toe. If he had spokes enough, he would go round and round as the boys do when they "make a wheel" with their four limbs for its spokes. But having only two available for ordinary locomotion, each of these has to be taken up as soon as it has been used, and carried forward to be used again, and so alternately with the pair. The peculiarity of biped-walking is, that the centre of gravity is shifted from one leg to the other, and the one not employed can shorten itself so as to swing forward, passing by that which supports the body.

This is just what no automaton can do. Many of our readers have, however, seen a young lady in the-shop-windows, or entertained her in their own nurseries, who professes to be this hitherto impossible walking automaton, and who calls herself by the Homeric-sounding epithet *Autoperipatetikos*. The golden-booted legs of this young lady remind us of Miss Kilmansegg, while their size assures us that she is not in any way related to Cinderella. On being wound up, as if she were a piece of machinery, and placed on a level surface, she proceeds to toddle off, taking very short steps like a child, holding herself very stiff and straight, with a little lifting at each step, and all this with a mighty inward whirring and buzzing of the enginery which constitutes her muscular system.

An autopsy of one of her family who fell

into our hands reveals the secret springs of her action. Wishing to spare her as a member of the defenceless sex, it pains us to say, that, ingenious as her counterfeit walking is, she is an impostor. Worse than this, — with all our reverence for her brazen crinoline, duty compels us to reveal a fact concerning her which will shock the feelings of those who have watched the stately rigidity of decorum with which she moves in the presence of admiring multitudes. *She is a quadruped!* Inside of her great golden boots, which represent one pair of feet, is another smaller pair, which move freely through these hollow casings.

Four *cams* or eccentric wheels impart motion to her four supports, by which she is carried forward, always resting on two of them, — the boot of one side, and the foot of the other. Her movement, then, is not walking; it is not skating, which it seems to resemble; it is more like that of a person walking with two crutches besides his two legs. The machinery is simple enough: a strong spiral spring, three or four cog-wheels and pinions, a fly to regulate the motion as in a musical box, and the *cams* before mentioned. As a toy, it or she is very taking to grown people as well as children. It is a literal fact, that the police requested one of our dealers to remove Miss Autoperipatetikos from his window, because the crowd she drew obstructed the sidewalk.

We see by our analysis of the process, and by the difficulty of imitating it, that walking is a much more delicate, perilous, complicated operation than we should

suppose, and well worth studying in a practical point of view, to see what can be done to make it easier and safer. Two Americans have applied themselves to this task: one laboring for those who possess their lower limbs and want to use them to advantage, the other for such as have had the misfortune to lose one or both of them.

*Dr. J. C. Plumer*, formerly of Portland, now of Boston, has devoted himself to the study of the foot, and to the construction of a last upon which a boot or shoe can be moulded which shall be adapted to its form and accommodated to its action.

Most persons know something of the cruel injustice to which the feet are subjected, and the extraordinary distortions and diseases to which they are liable in consequence. The foot's fingers are the slaves in the republic of the body. Their black leathern integument is only the mask of their servile condition. They bear the burdens, while the hands, their white masters, handle the money and wear the rings. They are crowded promiscuously in narrow prisons, while each of the hand's fingers claims its separate apartment, leading from the antechamber, in the dainty glove. As a natural consequence of all this, their faculties are cramped, they grow into ignoble shapes, they become callous by long abuse, and all their natural gifts are crushed and trodden out of them.

*Dr. Plumer* is the Garrison of these oppressed members of the body corporeal. He comes to break their chains, to lift their bowed figures, to strengthen their weakness, to restore them to the dignity of digits. To do this, he begins where every sensible man would, by contemplating the natural foot as it appears in infancy, unspoiled as yet by social corruptions, in adults fortunate enough to have escaped these destructive influences, in the grim skeleton aspect divested of its outward disguises. We will give the reader two views of the latter kind, illustrating the longitudinal and transverse arches before spoken of.

A man who walks on natural surfaces, with his feet unprotected by any artificial defences, calls the action of these arches into full play at every step. The longitudinal arch is the most strikingly marked of the two. In some races and in certain individuals it is much developed, so as to give the high instep which is prized as an evidence of good blood. The Arab says that a stream of water can flow under his foot without touching its sole. Under the conditions supposed, of a naked foot on a natural surface, the arches of the foot will commonly maintain their integrity, and give the noble savage or the barefooted Scotch lassie the elasticity of gait which we admire in the children of Nature.

But as a large portion of mankind tread on artificial hard surfaces, especially pavements, their feet are subjected to a very unnatural amount of wear and tear. How great this is the inhabitants of cities are apt to forget. After passing some months in the country, we have repeatedly found ourselves terribly lamed and shaken by our first walk on the pavement. A party of city-folk who landed on a beach upon Cape Cod complained greatly to one of the natives accompanying them of the difficulty of walking through the deep sand. "Ah," he answered, "it's nothing to the trouble I have walking on your city-sidewalks." To save the feet from the effects of violent percussion and uneven surfaces, they must be protected by thick soles, and thick soles require strong upper-leather. When the foot is wedged into one of these casings, a new boot, a struggle begins between them, which ends in a compromise. The foot becomes more

or less compressed or deformed, and the boot more or less stretched at the points where the counter-pressure takes place.

On the part of the foot, the effects of this warfare are liable to show themselves in thickening and inflammation of the integuments, in displacement of the toes, and occasionally in the breaking down of the transverse or longitudinal arches. On the part of the boot or shoe, there is a gradual accommodation which in time fits it to the foot almost as if it had been moulded upon it, so that a little before it is worn out it is invaluable, like other blessings brightening before they take their flight.

Now Mr. Plumer's improvements proceed from two series of data. *First*, certain theoretical inferences from the facts above named. Finding the arches liable to break down, he supports the transverse arch by making the inner surface of the sole corresponding to it *convex* instead of concave transversely; he makes the middle portion of the sole convex again in both directions to support the longitudinal arch, and for the same reason extends the heel of the boot or shoe forward, so as to support the anterior portion of the heel of the foot. *Secondly*, Mr. Plumer takes an old shoe that has done good service, and studies the reliefs and hollows which the foot has shaped on the inner surface of its sole. Comparing the empirical results of this examination with those based on the anatomical data above given, and finding a general coincidence in them, he constructs his last in accordance with their joint teachings. Theoretically, Mr. Plumer is on somewhat dangerous ground. If the arches of the foot are made to yield like elliptical springs, why support them? But we subject them to such unnatural conditions by pressure from above over the instep, by adding high heels to our boots and shoes, by taking away all yielding qualities from the soil on which we tread, that very probably they may want artificial support as much as the soles of the feet want artificial protection. If, now, we find that an old,

easy shoe has worked the inside surface of its sole into convexities which support the arches, we are safe in imitating that at any rate. We shall have a new shoe with some, at least, of the virtues of the old one.

This all sounds very well, and the next question is, whether it works well. We cannot but remember the coat made for Mr. Gulliver by the Laputan tailors, which, though projected from the most refined geometrical data and the most profound calculations, he found to be the worst fit he ever put on his back. We must ask those who have eaten the pudding how it tastes, and those who have worn the shoe how it wears. We have no satisfactory experience of our own, having only within a week or two, by mere accident, stumbled into a pair of Plumerian boots, and being thus led to look into a matter which seemed akin to the main subject of this paper. But the author of "Views Afoot," who ought to be a sovereign authority on all that interests pedestrians, confirms from his own experience the favorable opinions expressed by several of our most eminent physicians, from an examination of the principles of construction. We are informed that the Plumer last has been recently adopted for the use of the army. We add our own humble belief that Dr. Plumer deserves well of mankind for applying sound anatomical principles to the construction of coverings for the feet, and for contriving a last serving as a model for a boot or shoe which is adapted to the form of the foot from the first, instead of having to be broken in by a painful series of limping excursions, too often accompanied by impatient and even profane utterances.

It is not two years since the sight of a person who had lost one of his lower limbs was an infrequent occurrence. Now, alas! there are few of us who have not a cripple among our friends, if not in our own families. A mechanical art which provided for an occasional and exceptional want has become a great

and active branch of industry. War unmakes legs, and human skill must supply their places as it best may.

Our common idea of a wooden leg is realized in the "peg" of the Greenwich pensioner. This humble contrivance has done excellent service in its time, and may serve a good purpose still in some cases. A plain working-man, who has outlived his courting-days and need not sacrifice much to personal appearance, may find an honest, old-fashioned wooden leg, cheap, lasting, requiring no repairs, the best thing for his purpose. In higher social positions, and at an age when appearances are realities, in the condition of the Marquis of Anglesea, for instance, it becomes important to provide the cripple with a limb which shall be presentable in polite society, where misfortunes of a certain obtrusiveness may be pitied, but are never tolerated under the chandeliers.

The leg invented by Mr. Potts, and bearing the name of the "Anglesea leg," was long famous, and doubtless merited the reputation it acquired as superior to its predecessors. But legs cannot remain stationary while the march of improvement goes on around them, and they, too, have moved onward with the stride of progress.

A boy of ten years old, living in a New-Hampshire village, had one of his legs crushed so as to require amputation. The little fellow was furnished with a "peg," and stumped round upon it for ten years. We can imagine what he suffered as he grew into adolescence under the cross of this unsightly appendage. He was of comely aspect, tall, well-shaped, with well-marked, regular features. But just at the period when personal graces are most valued, when a good presence is a blank check on the Bank of Fortune, with Nature's signature at the bottom, he found himself made hideous by this fearful-looking counterfeit of a limb. It announced him at the threshold he reached with beating heart by a thump more energetic than the palpitation in his breast. It identified

him as far as the eye of jealousy could see his moving figure. The "peg" became intolerable, and he unstrapped it and threw himself on the tender mercies of the crutch.

But the crutch is at best an instrument of torture. It presses upon a great bundle of nerves; it distorts the figure; it stamps a character of its own upon the whole organism; it is even accused of distemp'ring the mind itself.

This young man, whose name was "B. FRANK. PALMER," (the abbreviations probably implying the name of a distinguished Boston philosopher of the last century, whose visit to Philadelphia is still remembered in that city,) set himself at work to contrive a limb which should take the place of the one he had lost, fulfilling its functions and counterfeiting its aspect so far as possible. The result was the "Palmer leg," one of the most unquestionable triumphs of American ingenuity. Its victorious march has been unimpeded by any serious obstacle since it first stepped into public notice. The inventor was introduced by the late Dr. John C. Warren, in 1846, to the Massachusetts General Hospital, which institution he has for many years supplied with his artificial limbs. He received medals from the American Institute, the Massachusetts Charitable Association, and the Great Exhibition in New York, and obtained an honorary mention from the Royal Commissioners of the World's Exhibition in London, — being the only maker of legs so distinguished. These are only a few of fifty honorary awards he has received at various times. The famous surgeons of London, the *Société de Chirurgie* of Paris, and the most celebrated practitioners of the United States have given him their hearty recommendations. So lately as last August, that shrewd and skilful surgeon, Dr. Henry J. Bigelow, who is as cautious in handling his epithets as he is bold in using the implements of his art, strongly advised Surgeon-General Hammond to adopt the Palmer leg, which, after a dozen years' experience, he had

found none to equal. We see it announced that the Board of Surgeons appointed by the Surgeon-General to select the best arm and leg to be procured by the Government for its crippled soldiers chose that of Mr. Palmer, and that Dr. Hammond approved their selection.

We have thought it proper to show that Mr. Palmer's invention did not stand in need of our commendation. Its merits, as we have seen, are conceded by the tribunals best fitted to judge, and we are therefore justified in selecting it as an illustration of American mechanical skill.

We give three views of the Palmer leg: an inside view when extended, a second when flexed, a third as it appears externally.

The Committee on Science and the Arts of the Franklin Institute of Pennsylvania thus stated the peculiarities of Mr. Palmer's invention :—

“*First.* An ingenious arrangement of springs and cords in the *inside* of the limb, by which, when the wearer is in the erect position, the limb is extended, and the foot flexed so as to present a natural appearance.

“*Second.* By a second arrangement of cords and springs in the inside of the limb, the foot and toes are gradually and easily extended, when the heel is placed in contact with the ground. In consequence of this arrangement, the limping gait, and the unpleasant noise made by the sudden stroke of the ball of the foot upon the ground in walking, which are so obvious in the ordinary leg, are avoided.

“*Third.* By a peculiar arrangement of the knee-joint, it is rendered little liable to wear, and all lateral or rotary motion is avoided. It is hardly necessary to remark that any such motion is undesirable in an artificial leg, as it renders its support unstable.”

Before reporting some of the facts which we have seen, or learned by personal inquiry, we must be allowed, for the sake of convenience, to exercise the privilege granted to all philosophical students, of enlarging the nomenclature applicable to the subject of which we are treating.

Man, according to the Sphinx, is successively a *quadruped*, a *biped*, and a *triped*. But circumstances may change his natural conditions. If he loses a leg, he becomes a *uniped*. If he loses both his legs, he becomes a *nulliped*. If art replaces the loss of one limb with a factitious substitute, he becomes a *ligniped*, or, if we wish to be very precise, a *uniligniped*; two wooden legs entitle him to be called a *biligniped*. Our terminology being accepted, we are ready to proceed.

To make ourselves more familiar with the working of the invention we are considering, we have visited Mr. Palmer's establishments in Philadelphia and Boston. The distinguished “Surgeon-Artist” is a man of fine person, as we have said. But if he has any personal vanity, it does not betray itself with regard to that portion of his organism which Nature furnished him. There is some reason to think that Mr. Palmer is a little ashamed of the lower limb which he brought into the world with him. At least, if he follows the common rule and puts that which he considers his best foot foremost, he evidently awards the preference to that which was born of his brain over the one which he owes to his mother. He walks as well as many do who have their natural limbs, though not so well as some of his own patients. Hé puts his vegetable leg through many of the movements which would seem to demand the contractile animal fibre. He goes up and down stairs with very tolerable ease and despatch. Only when he comes to *stand* upon the human limb, we begin to find that it is not in all respects equal to the divine one. For a certain number of seconds he can poise himself upon it; but Mr. Palmer, if he indulges in verse, would hardly fill the Horatian complement of lines in that attitude. In his anteroom were unipeds in different stages of their second learning to walk as lignipeds. At first they move with a good deal of awkwardness, but gradually the wooden limb seems to become, as it were, penetrated by the nerves, and the intelligence to run downwards

until it reaches the last joint of the member.

Mr. Palmer, as we have incidentally mentioned, has a branch establishment in Boston, to which also we have paid a visit, in order to learn some of the details of the manufacture to which we had not attended in our pleasant interview with the inventor. The antechamber here, too, was the nursery of immature lignipeds, ready to exhibit their growing accomplishments to the inquiring stranger. It almost seems as if the artificial leg were the scholar, rather than the person who wears it. The man does well enough, but the leg is stupid until practice has taught it just what is expected from its various parts.

The polite Boston partner, who, if he were in want of a customer, would almost persuade a man with two good legs to provide himself with a third, carried us to the back part of the building, where legs are organized.

The *willow*, which furnishes the charcoal for the gunpowder that blows off limbs, is the wood chosen to supply the loss it has helped to occasion. It is light, strong, does not warp or "check" so much as many other woods, and is, as the workmen say, *healthy*, that is, not irritating to the parts with which it is in contact. Whether the *salicine* it may contain enters the pores and invigorates the system may be a question for those who remember the drugs in the Sultan's bat-handle and the remarkable cure they wrought. This wood is kept in a dry-house with as much care as that intended for the manufacture of pianos. It is thoroughly steamed also, before using.

The wood comes in rudely shaped blocks, as lasts are sent to the factory, seeming to have been coarsely hewed out of the log. The shaping, as we found to our surprise, is all done by hand. We had expected to see great lathes, worked by steam-power, taking in a rough stick and turning out a finished limb. But it is shaped very much as a sculptor finishes his marble, with an eye to artistic effect,—not so much in the view

of the stranger, who does not look upon its naked loveliness, as in that of the wearer, who is seduced by its harmonious outlines into its purchase, and solaced with the consciousness that he carries so much beauty and symmetry about with him. The hollowing-out of the interior is done by wicked-looking blades and scoops at the end of long stems, suggesting the thought of dentists' instruments as they might have been in the days of the giants. The joints are most carefully made, more particularly at the knee, where a strong bolt of steel passes through the solid wood. Windows, oblong openings, are left in the sides of the limb, to insure a good supply of air to the extremity of the mutilated limb. Many persons are not aware that all parts of the surface *breathe* just as the lungs breathe, exhaling carbonic acid as well as water, and taking in more or less oxygen.

One of the workmen, a pleasant-looking young fellow, was himself, we were told, a ligniped. We begged him to give us a specimen of his walking. He arose and walked rather slowly across the room and back. "Once more," we said, not feeling quite sure which was Nature's leg and which Mr. Palmer's. So he walked up and down the room again, until we had satisfied ourselves which was the leg of willow and which that of flesh and bone. It is not, perhaps, to the credit of our eyes or observing powers, but it is a fact, that we deliberately selected the *wrong leg*. No victim of the thimble-rigger's trickery was ever more completely taken in than we were by the contrivance of the ingenious Surgeon-Artist.

Our freely expressed admiration led to the telling of wonderful stories about the doings of persons with artificial legs. One individual was mentioned who *skated* particularly well; another who *danced* with zeal and perseverance; and a third who must needs *swim* in his leg, which brought on a dropsical affection of the limb,—to which kind of complaint the willow has, of course, a constitutional tendency,—and for which it had to come to the in-

firmly where the diseases that wood is heir to are treated.

But the most wonderful monuments of the great restorer's skill are the patients who have lost both legs, — *nullipeds*, as presented to Mr. Palmer, *bilignipeds*, as they walk forth again before the admiring world, balanced upon their two new-born members. We have before us delineations of six of these hybrids between the animal and vegetable world. One of them was employed at a railway-station near this (Atlantic) city, where he was often seen by a member of our own household, whose testimony we are in the habit of considering superior in veracity to the naked truth as commonly delivered. He walked about, we are assured, a little slowly and stiffly, but in a way that hardly attracted attention.

The inventor of the leg has not been contented to stop there. He has worked for years upon the construction of an artificial *arm*, and has at length succeeded in arranging a mechanism, which, if it cannot serve a pianist or violinist, is yet equal to holding the reins in driving, receiving fees for professional services, and similar easy labors. Where Mr. Palmer means to stop in supplying bodily losses it would be premature to say. We suppose the accidents happening occasionally from the use of the guillotine are beyond his skill, and spare our readers the lively remark suggested by the contrary hypothesis.

It is one of the signs of our advancing American civilization, that the arts which preserve and restore the personal advantages necessary or favorable to cultivated social life should have reached such perfection among us. American dentists have achieved a reputation which has sent them into the palaces of Europe to open the mouths of sovereigns and princes as freely as the jockeys look into those of horses and colts. Bad teeth, too common among us, help to breed good dentists, no doubt; but besides this there is an absolute demand for a certain comeliness of person throughout all the de-

cent classes of our society. It is the same standard of propriety in appearances which lays us open to the reproach of caring too much for dress. If the national ear for music is not so acute as that of some other peoples, the national eye for the harmonics of form and color is better than we often find in older communities. We have a right to claim that our sculptors and painters prove so much as this for us. American taste was offended, outraged, by the odious "peg" which the Old-World soldier or beggar was proud to show. We owe the well-shaped, intelligent, docile limb, the half-reasoning willow of Mr. Palmer, to the same sense of beauty and fitness which moulded the soft outlines of the Indian Girl and the White Captive in the studio of his namesake at Albany.

As we wean ourselves from the Old World, and become more and more nationalized in our great struggle for existence as a free people, we shall carry this aptness for the production of beautiful forms more and more into common life, which demands first what is necessary and then what is pleasing. It is but a step from the painter's canvas to the weaver's loom, and the pictures which are leaving the easel to-day will show themselves in the patterns that sweep the untidy sidewalks to-morrow. The same plastic power which is showing itself in the triumphs of American sculpture will reach the forms of our household-utensils. The beans of Beverly shall yet be baked in vases that Etruria might have envied, and the clay pipe of the Americanized Milesian shall be a thing of beauty as well as a joy forever. We are already pushing the plastic arts farther than many persons have suspected. There is a small town not far from us where a million dollars' worth of gold is annually beaten into ornaments for the breasts, the fingers, the ears, the necks of women. Many a lady supposes she is buying Parisian adornments, when *Attleborough* could say to her proudly, like Cornelia, "These are my jewels." The workmen of this little town not only meet the tastes

of the less fastidious classes, to whom all that glisters is gold, but they shape the purest metal into artistic and effective patterns. When the Koh-i-noor — the Mountain of Light — was to be fashioned, it was found to be almost as formidable a task as that of Xerxes, when he undertook to hew Mount Athos to the shape of man. The great crystal was sent to Holland, as the only place where it could be properly cut. We have lately seen a brilliant which, if not a mountain of light, was yet a very respectable mound of radiance, valued at some ten or twelve thousand dollars, cut in this virgin settlement, and exposed in one of our shop-windows to tempt our frugal villagers.

Monsieur Trousseau, Professor in the Medical School of Paris, delivered a discursive lecture not long ago, in which he soared from the region of drugs, his well-known special province, into the thin atmosphere of æsthetics. It is the influence that surrounds his fortunate fellow-citizens, he declares, which alone preserves their intellectual supremacy. If a Parisian milliner, he says, remove to New York, she will so degenerate in the course of a couple of years that the squaw of a Choctaw chief would be ashamed to wear one of her bonnets.

Listen, O Parisian cockney, pecking among the brood most plethoric with conceit, of all the coop-fed citizens who tread the pavements of earth's many-chimneyed towns! America has made implements of husbandry which out-mow and out-reap the world. She has contrived man-slaying engines which kill people faster than any others. She has modelled the wave-slicing clipper which outsails all your argosies and armadas. She has revolutionized naval warfare once by the steamboat. She has revolutionized it a second time by planting towers of iron on the elephantine backs of the waves. She has invented the sewing-machine to save the dainty fingers of your virtuous grisettes from uncongenial toil, so that Fifi and Frétilion may have more leisure for self-development. She has taught you a whole new system

of labor in her machinery for making watches and rifles. She has bestowed upon you and all the world an anodyne which enables you to cut arms and legs off without hurting the patient; and when his leg is off, she has given you a true artist's limb for your cripple to walk upon, instead of the peg on which he has stumped from the days of Guy de Chau-liac to those of M. Nelaton. She has been contriving well-shaped boots and shoes for the very people who, if they were your countrymen, would be clumping about in wooden *sabots*. In works of scientific industry, hardly to be looked for among so new a people she has distanced your best artificers. The microscopes made at Canastota, in the backwoods of New York, look in vain for their rivals in Paris, and must challenge the best workmanship of London before they can be approached in excellence. The great eye that stares into the celestial spaces from its workshop in Cambridge dives deeper through their clouds of silvery dust than any instrument mounted in your observatory in face of the Luxembourg. Our artisans produce no Gobelin tapestries or Sèvres porcelain as yet; but when your mobs have looted the Tuileries, our shopkeepers have bought up enough specimens to serve them as patterns by-and-by.

All this is something for a nation which has hardly pulled up the stumps out of its city market-places. It is sad to reflect that milliners, like Burgundy, are spoiled by transportation to the headquarters of American fashion. But as the best bonnet of the Empress's own artist would be exploded with yells a couple of seasons after the time when it was the rage, the Icarian professor's flight into the regions of rhetoric has not led him to any very logical resting-place from which he can look down on the æsthetic possibilities of New York or other Western cities emerging from the semi-barbarous state.

We are not proud, of course, of any of the mechanical triumphs we have won; they are well enough, and show

— to borrow the words of a distinguished American, whom, during his too brief career, we held unrivalled by any experimenter in the Old World for the depth as well as the daring of his investigations — that some things can be done as well as others.

Our specialty is of somewhat larger scope. We profess to make men and women out of human beings better than any of the joint-stock companies called dynasties have done or can do it. We profess to make citizens out of men, — not *citoyens*, but persons educated to question all privileges asserted by others, and claim all rights belonging to themselves, — the only way in which the infinitely most important party to the compact between the governed and governing can avoid being cheated out of the best rights inherent in human nature, as an expe-

rience the world has seen almost enough of has proved. We are in trouble just now, on account of a neglected hereditary *melanosis*, as Monsieur Trousseau might call it. When we recover from the social and political convulsion it has produced, and eliminate the *materies morbi*, — and both these events are only matters of time, — perhaps we shall have leisure to breed our own milliners. If not, there will probably be refugees enough from the Old World, who have learned the fashions in courts, and will be glad to turn their knowledge to a profitable use for the benefit of their republican patronesses in New York and Boston.

We have run away from our subject farther than we intended at starting; but an essay on legs could hardly avoid the rambling tendency which naturally belongs to these organs.

---

## PAUL BLECKER.

### PART I.

“ Which serves life’s purpose best,  
To enjoy or to renounce ? ”

A THOROUGH American, who comprehends what America has to do, and means to help on with it, ought to choose to be born in New England, for the vitalized brain, finely-chorded nerves, steely self-control, — then to go West, for more live, muscular passion, succulent manhood, naked-handed grip of his work. But when he wants to die, by all means let him hunt out a town in the valley of Pennsylvania or Virginia: Nature and man there are so ineffably self-contained, content with that which is, shut in from the outer surge, putting forth their little peculiarities, as tranquil and glad to be alive as if they were pulseless sea-anemones, and after a while going back to the Being whence they came, just as tranquil and glad to be dead.

Paul Blecker had some such fancy as this, that last evening before the regiment of which he was surgeon started for Harper’s Ferry, while he and the Captain were coming from camp by the hill-road into the village (or burgh: there are no villages in Pennsylvania). Nothing was lost on Blecker; his wide, nervous eyes took all in: the age and complacent quiet of this nook of the world, the full-blooded Nature asleep in the yellow June sunset; why! she had been asleep there since the beginning, he knew. The very Indians in these hills must have been a fishing, drowsy crew; their names and graves yet dreamily haunted the farms and creek-shores. The Covenanters who came after them never had roused themselves enough to shake them off.

Covenanters: the Doctor began joking to himself, as he walked along, humming some tune, about how the spirit of every sect came out, always alike, in the temperament, the very cut of the face, or whim of accent. These descendants of the Covenanters, now, — Presbyterian elders and their wives, — going down to camp to bid their boys good-bye, devoted them to death with just as stern integrity, as partial a view of the right, as their ancestors did theirs at Naseby or Drumclog: their religion loved its friends and hated its enemies just as bitterly as when it scowled at Monmouth; the "boys," no doubt, would call themselves Roundheads, as they had done in the three months' service. Paul Blecker, who had seen a good many sides of the world, laughed to himself: the very Captain here, good, anxious, innocent as a baby, as he was, looked at the world exactly through Balfour of Burley's dead eyes, was going to cure the disease of it by the old pill of intolerance and bigotry. No wonder Paul laughed.

The sobered Quaker evening was making ready for night: the yellow warmth overhead thinning into tintless space; the low hills drawing farther off in the melancholy light; the sky sinking nearer; clouds, unsteady all day, softened at last into a thoughtful purple, and couching themselves slowly in the hollows of the horizon; the sweep of cornfields and woods and distant farms growing dim, — daguerreotype-like; the tinkle of the sheep-bells on the meadows, the shouts of the boys in camp yonder, the bass drone of the frogs in the swamp dulling down into the remoteness of sleep. The Doctor slackened his sharp, jerking stride, and fell into the monotonous gait of his companion, glancing up to him. McKinstry, he thought, was going out to battle to-morrow with just as cool phlegm and childlike content as he would set out to buy his merino ewes; but he would receive no pay, — meant to transfer it to his men. And he would be in the thickest of the fight, — you might bet on that. Umph! his quick eyes darting over the

big, leisurely frame, the neat yellow hair, and the blue eyes mildly peering through spectacles. Then, having satisfactorily anatomized McKinstry, he turned to the evening again with open senses, the sensitive pulsing of his wide nostrils telling that even the milky scent of the full-uddered cows gave him keen enjoyment. The cows were going home from pasture, up shady barn-lanes, into the grayer shadows about the houses on either side of the road, in whose windows lights were beginning to glimmer. Solid old homesteads they were, stone or brick, never wood. Out in these Western settlements, a hundred years ago, they built durable homes, curiously enough, more than in the Northern States; planted oaks about them, that bore the strength of the earth up to heaven in sturdy arms, shaming the graceful, uncertain elm of shallower soils. Just such old farm-houses as those, Blecker thought, would turn out such old-time moulded men as McKinstry: houses whose orchards still held on to the Waldower and Smoke-house apples; their gardens gay with hollyhocks and crimson prince's-feather; on the book-shelves the "Spectator" and "Gentleman's Magazine." The women of them kept up the old-fashioned knitting-parties, and a donation-visit to the pastor once a year; and the men were all gone to the war, to keep the Union as it was in their fathers' time, and would doubtless vote the conservative ticket next election because their fathers did, which would make the war a horrible farce. The town, Blecker thought, had rooted itself in between the hills with as solid a persistence as the prejudices of its builders. Obstinate steep streets, shaded by gnarled locust-trees; houses drawn back from the sidewalks, in surly dread of all new-comers; the very smoke, vaporing through the sky, had defiance in it of the outer barbarous world and its vulgar newness. Yet the town had an honest country heart in it, if it was a bit gray and crusty with age. Blecker, knowing it as he did, did not wonder the boys who left it named a village for it out in Kansas, trying to fancy

themselves at home,—or that one old beggar in it asked to be buried in the middle of the street, “So ’s I kin hear the stages a-comin’ in, an’ know if the old place is a-gittin’ on.”

There seemed to be a migration from it to-night: they met, every minute, buggies, old-fashioned carriages, horsemen.

“Going out to camp,” McKinstry said; “the boys all have some one to bid them good-bye.”

What a lonely, reserved voice the man had! Blecker had the curiosity of all sensitive men to know the soul-history of people; he glanced again keenly in McKinstry’s face. Pshaw! one might as well ask their story from the deaf and dumb. But that they were dumb,—there was hint of a tragedy in that!

Everybody stopped to speak to the Doctor. He had been but a few months in the place; but the old church-goers had found him out as a passionate, free-and-easy, honorable fellow, full of joke and anecdote,—shrewd, too. They “fellowshipped” with him heartily, and were glad when he got the post of surgeon with their sons. If there were anything more astringent below this, any more real self in the man, held back, belonging to a world outside of theirs, they did not see it. They knew him better, they thought, than they did Daniel McKinstry, who had grown up among them, just as mild and silent when he was a tow-haired boy as now, a man of forty-five. He touched his hat to them now, and went on, while Blecker leaned on the carriage-doors, his brown face aglow with fun, his uneasy fingers drumming boyishly on the panel. Not knowing that through the changeful face, and fierce, pitiful eyes of the boy, the man Paul Blecker looked coolly out, testing, labelling them. The boy in him, that they saw, Nature had made; but years of a hand-to-hand fight with starvation came after, crime, and society, whose work is later than Nature’s, and sometimes better done.

“Fine girl!” said the Doctor, touching his hat to Miss Mallard, as she cantered past. “Got a head of her own,

too. Made a deused good speech, when she presented the flag to-day.”

Miss Mallard overheard him, as he intended she should, and blushed a visible acknowledgment. All of her character was visible, well-developed as her body: her timidity showed itself in the unceasing dropping of her eyelid; her arch simplicity in the pouting lips; a coy reserve—well, that everywhere, to the very rosette on her retreating slipper; and her patriotism was quite palpable in the color of her Balmoral. She rode Squire Mallard’s gray.

“And very well they turn out,” sneered Blecker.

“She is a woman,” said the Captain, blushing,—differently from the lady, however.

“And if she is?” turning suddenly. “She has the nature of a Bowery rough. Pah, McKinstry! Sexes stand alike with me. If a woman’s flesh is weaker-grained a bit, what of that? Whoever would earn esteem must work for it.”

The Captain said nothing, stammered a little, then, hoisting his foot on a stump, tied his shoe nervously.

Blecker smiled, a queer, sorrowful smile, as if, oddly enough, he felt sorry for himself.

“I’d like to think of women as you do, Mac,” he said. “You never knew many?”

“Only two, until now,—my mother and little Sarah. They’re gone now.”

Sarah? The Doctor was silent a moment, thinking. He had heard of a sister of McKinstry’s, sick for years with some terrible disease, whom he had nursed until the end. She was Sarah, most likely. Well, that was what *his* life had been given up for, was it? There was a twitching about McKinstry’s wide mouth: Paul looked away from him a moment, and then, glancing furtively back, began again.

“No, I never knew my mother or sister, Mac. The great discovery of this age is woman, old fellow! I’ve been knocked about too much not to have lost all delusions about them. It did well

enough for the crusading times to hold them as angels in theory, and in practice as idiots; but in these rough-and-tumble days we 'd better give 'em their places as flesh and blood, with exactly such wants and passions as men."

The Captain never argued.

"I don't know," he said, dryly.

After that he joggled on in silence, glancing askance at the masculine, self-assertant figure of his companion, — at the face, acrid, unyielding, beneath its surface-heat: ruminating mildly to himself on what a good thing it was for him never to have known any but old-fashioned women. This Blecker, now, had been made by intercourse with such women as those he talked of: he came from the North. The Captain looked at him with a vague, moony compassion: the usual Western vision of a Yankee female in his head, — Bloomer-clad, hatchet-faced, capable of anything, from courting a husband to commanding a ship. (It is all your fault, genuine women of New England! Why don't you come among us, and know your country, and let your country know you? Better learn the meaning of Chicago than of Venice, for your own sakes, believe me.)

They were near the town now, the road crossing a railroad-track, where the hill, chopped apart for the grade, left bare the black stratum of coal, tinged here and there with a bloody brown and whitish shale.

"Hillo! this means iron," said the Doctor, climbing up the bank, cat-like, to break off a bit; "and here 's an odd formation, Mac. Take it in to old Gurney."

The Captain cleaned his spectacles with a piece of chamois-leather, put them on, folded the leather and replaced it in its especial place in his pocket, before he took the bit of rock.

"All that finical ceremony he would go through in the face of the enemy," thought Blecker, jumping down on the track.

"Give it to old Gurney, Mac. It will insure you a welcome."

"It is curious, Doctor Blecker. But you" —

"I never care to gratify anybody. Besides, the old gentleman and I inter-despised. Our instincts cried out, 'Ware dog!' the first day You are a friend of his, eh, Mac?"

The Captain's face grew red, like a bashful woman's. He thought Blecker had divined his secret, would haul it out roughly in another moment. If this slang-talking Yankee should take little Lizzy's name into his mouth! But the Doctor was silent, even looked away until the heat on the poor old bachelor's face had died out. He knew McKinstry's thought of that little girl well enough, but he held the child-hearted man's secret tenderly and charily in his hand. Paul Blecker did talk slang and assert himself; but every impulse in him was clean, delicate, liberal. So, Paul remaining silent, the Captain took heart of grace, going down the street, and ventured back to the Gurney question.

"I thought I would accompany you there, Doctor Blecker. They might only think it seemly in me to bid farewell. I" —

Blecker nodded. The man had not been able to hide an harassed frown that day under his usual vigor of speech and look. It became more palpable after this; his voice, when he did speak, was fretful, irritable, — his lips compressed; he stopped at a village-well to drink, as though his mouth were parched.

"How old is that house, — the Gurneys'?" he asked, affecting carelessness, to baffle the curious inspection of McKinstry.

"The Fort? We call it the Fort because it was used for one in Indian times," McKinstry began, chafing his lean whiskers delightedly.

Old houses were his hobby, especially this which they approached, — a narrow, long building of unhewn stone, facing on the street, the lintels and doors worm-eaten, and green with moss.

"Built by Bradford, the new part, — Bradford, of the Whiskey Insurrection,

you know? Carvings on the walls brought over the mountains, when to bring them by panels was a two-months' journey. There 's queer stories hang about these old Pennsylvania homesteads."

"Bradford? The Gurneys are a new family here, then?"

"Came here but a few years back, from a country farther up the mountains. They 're different from us."

"How, different?" with a keen, surprised glance. "I see they are a newer people than the others; but I thought the village accepted them with shut eyes."

The Captain stammered again.

"Old Father Gurney, as we call him, taught school when they first came, but he gave that up. This section is a good geological field, and he wished to devote himself to that," he went on, evading the question. "They live off of those acres at the back of the house since that. You see? Corn, potatoes, buckwheat,—good yield."

"Who oversees the planting?" sharply.

McKinstry wondered vaguely at the little Doctor's curious interest in the Gurneys, but went on with his torpid, slow answers.

"That eldest girl, I believe, Grey. Cow there, you see, and ducks. He 's popular, old Father Gurney. People have a liking for his queer ways, help him collect specimens for his cabinet; the boys bring him birds to stuff, and snakes. If it had n't been for the troubles breaking out, he was on the eve of a most important discovery,—the crater of an exhausted volcano in Virginia." McKinstry lowered his voice cautiously. "Fact, Sir. In Mercer County. But the guerrillas interfered with his researches."

"I think it probable. So he stuffs birds, does he?" Blecker's lips closing tighter.

"And keeps the snakes in alcohol. There are shelves in Miss Lizzy's room quite full of them. That lower room it was, but Joseph has taken it for a study.

She has the upper one for her flowers and her father's birds."

"And Grey, and the twins, and the four boys bedaubed with molasses, and the dog, and the cooking?"

"Stowed away somewhere," the Captain mildly responded.

Dr. Blecker was testy.

"You know Joseph, her brother? I mean our candidate for Congress next term?"

"Yes. Democratic. J. Schuyler Gurney,—give him his name, Mac. Republican last winter. Joseph trims to wind and tide well. I heard him crow like a barn-yard fowl on the Capitol-steps at Washington when Lincoln called for the seventy-five thousand: now, he hashes up Breckinridge's conservative speech for your hickory-backed farmers. Does he support the family, Mac?"

"His election-expenses are heavy."

"Brandy-slings. I know his proclivities."

McKinstry colored. Dr. Blecker was coarse, an ill-bred man, he suspected,—noting, too, the angry repression in his eyes, as he stood leaning on the gate, looking in at the Fort, for they had reached it by this time. The Captain looked in, too, through the dusky clumps of altheas and plum-trees, at the old stone house, dyed tawny-gray in the evening light, and talked on, the words falling unconscious and simple as a stream of milk. The old plodder was no longer dumb. Blecker had hit on the one valve of the shut-up nature, the obstinate point of self-reliant volition in a life that had been one long drift of circumstance. This old stone house, shaggy with vines, its bloody script of Indian warfare hushed down and covered with modern fruit-trees and sunflowers,—this fort, and the Gurneys within it, stood out in the bare swamped stretch of the man's years, their solitary bit of enchantment. They were bare years,—the forty he had known: Fate had drained them tolerably dry before she flung them to him to accomplish duty in;—the duty was done now. McKinstry, a mild, common-faced

man, had gone through it for nearly half a century, pleasantly, — never called it heroism. It was done. He had time now to stretch his nerves of body and soul with a great sigh of relief, — to see that Duty was, after all, a lean, meagre-faced angel, that Christ sends first, but never meant should be nearest and best. Faith, love, and so, happiness, these were words of more pregnant meaning in the gospel the Helper left us. So McKinstry stood straight up, for the first time in his life, and looked about him. A man, with an adult's blood, muscles, needs; an idle soul which his cramped creed did not fill, hungry domestic instincts, narrow and patient habit; — he claimed work and happiness, his right. Of course it came, and tangibly. Into every life God sends an actual messenger to widen and lift it above itself: puerile or selfish the messenger often is, but so straight from Him that the divine radiance clings about it, and all that it touches. We call that *love*, you remember. A secular affair, according to McKinstry's education, as much as marketing. So when he found that the tawny old house and the quiet little girl in there with the curious voice, which people came for miles to hear, were gaining an undue weight in his life, held, to be plain, all the fairy-land of which his childhood had been cheated, all fierce beauty, aspiration, passionate strength to insult Fate, which his life had never known, he kept the knowledge to himself. It was boyish weakness. He choked it out of thought on Sundays as sacrilege: how could he talk of the Gurney house and Lizzy to that almighty, infinite Vagueness he worshipped? Stalking to and fro, in the outskirts of the churchyard, he used to watch the flutter of the little girl's white dress, as she passed by to "meeting." He could not help it that his great limbs trembled, if the dress touched them, or that he had a mad longing to catch the tired-looking child up to his brawny breast and hold her there forever. But he felt guilty and ashamed that it was so; not knowing that Christ, seeing the pure thrill in his heart, smiled

just as he did long ago when Mary brought the beloved disciple to him.

He never had told little Lizzy that he loved her, — hardly told himself. Why, he was forty-five, — and a year or two ago she was sledding down the street with her brothers, a mere yellow-haired baby. He remembered the first time he had noticed her, — one Christmas eve; his mother and Sarah were alive then. There was an Italian woman came to the village with a broken hand-organ, a filthy, starving wretch, and Gurney's little girl went with her from house to house in the snow, singing Christmas carols, and handing the tambourine. Everybody said, "Why, you little tot!" and gave her handfuls of silver. Such a wonderful voice she had even then, and looked so chubby and pretty in her little blue cloak and hood; and going about with the woman was such a pure-hearted thing to do. She danced once or twice that day, striking the tambourine, he remembered; the sound of it seemed to put her in a sort of ecstasy, laughing till her eyes were full of tears, and her tangled hair fell all about her red cheeks. She could not help but do it, he believed, for at other times she was shy, terrified, if one spoke to her; but he wished he had not seen her dance then, though she was only a child: dancing, he thought, was as foul and effective a snare as ever came from hell. After that day she used often to come to the farm to see his mother and Sarah. They tried to teach her to sew, but she was a lazy little thing, he remembered, with an indulgent smile. And he was "Uncle Dan." So now she was grown up, quite a woman: in those years, when she had been with her kinsfolk in New York, she had been taught to sing. Well, well! McKinstry reckoned music as about as useful as the crackling of thorns under a pot; so he never cared to know, what was the fact, that this youngest daughter of Gurney's had one of the purest contralto voices in the States. She came home, grown, but just as shy; only tired, needing care: no one could look in Lizzy Gurney's face without wishing to com-

fort and help the child. The Gurneys were so wretchedly poor, that might be the cause of her look. She was a woman now. Well, and then? Why, nothing then. He was Uncle Dan still, of whom she was less afraid than of any other living creature: that was all. Thinking, as he stood with Paul Blecker, leaning over the gate, of how she had brought him a badly-made havelock that morning. "You're always so kind to me," she said. "So I am kind to her," he thought, his quiet blue eyes growing duller behind their spectacles; "so I will be."

The Doctor opened the gate, and went in, turning into the shrubbery, and seating himself under a sycamore.

"Don't wait for me, McKinstry," he said. "I'll sit here and smoke a bit. Here comes the aforesaid Joseph."

He did not light his cigar, however, when the other left him; took off his hat to let the wind blow through his hair, the petulant heat dying out of his face, giving place to a rigid settling, at last, of the fickle features.

A flabby, red-faced man in fine broadcloth and jaunty beaver came down the path, fumbling his seals, and met the Captain with a puffing snort of salutation. To Blecker, whose fancy was made sultry to-night by some passion we know nothing of, he looked like a bloated spider coming out of the cell where his victims were. "Gorging himself, while they and the country suffer the loss," he muttered. But Paul was a hot-brained young man. We should only have seen a vulgar, commonplace trickster in politics, such as the people make pets of. "Such men as Schuyler Gurney get the fattest offices. God send us a monarchy soon!" he hissed under his breath, as the gate closed after the politician. By which you will perceive that Dr. Blecker, like most men fighting their way up, was too near-sighted for any abstract theories. Liberty, he thought, was a very poetic, Millennium-like idea for stump-speeches and college-cubs, but he grappled with the time the States were too chaotic, untaught a mass for self-government; he cursed seces-

sion as anarchy, and the government at Washington for those equally anarchical, drunken whims of tyranny; he would like to see an iron heel put on the whole concern, for wholesome discipline. The Doctor was born in one of the Border States; men there, it is said, have a sort of hand-to-mouth politics; their daily bread of rights is all they care for; so Paul seldom looked into to-morrow for anything. In other ways, too, his birth had curdled his blood into a sensuous languor. To-night, after McKinstry had entered the house, and he was left alone, the quaint old garden quiet, the air about him clean, pure, unperfumed, the stars distant and lonely, his limbs bedded in the clinging moss, he was rested for the moment, happy like a child, with no subtle-sensed questionings why. The sounds of the village could not penetrate there; the content, the listless hush of the night was with him; the delicious shimmer of the trees in the starlight, the low call of the pigeon to its mate, even the fall of the catalpa-blossoms upon his hand, thrilled him with unreasoning pleasure: a dull consciousness that the earth was alive and well, and he was glad to live with the rest.

Something in Blecker's nature came into close *rapport* with the higher animal life. If he had been born with money, and lived here in these stagnating hills, or down yonder on some lazy cotton-plantation, he would have settled down before this into a genial, child-loving, arbitrary husband and master, fond of pictures and horses, his house in decent taste, his land pleasure-giving, his wines good. By this time he would have been Judge Blecker, with a portly voice, flushed face, and thick eyelids. But he had scuffled and edged his way in the thin air of Connecticut as errand-boy, dagguerreotypist, teacher, doctor; — so he came into the Gurney garden that night, shrewd, defiant, priding himself on detecting shams. His waistcoat and trousers were of coarser stuff than suited his temperament; a taint of vulgarity in his talk, his whiskers untrimmed, the mean-

ing of his face compacted, sharpened. It was many a year since a tear had come into his black eyes; yet tears belonged there, as much as to a woman's.

Only for a few moments, therefore, he was contented to sit quiet in the soft gloaming: then he puffed his cigar impatiently, watching the house. Waiting for some one: with no fancies about the old fort, like McKinstry. An over-full house, with an unordered, slipshod life, hungry, clinging desperately in its poverty to an old prestige of rank, one worker inside patiently bearing the whole selfish burden. Well, there was the history of the anxious, struggling, middle class of America: why need he have been goaded so intolerably by this instance? Paul's eyes were jaundiced: he sat moodily watching the lighted window off in the darkness, through which he could catch glimpses of the family-room within: he called it a pitiful tragedy going on there; yet it seemed to be a cheerful and hearty life. This girl Grey, whom he looked on as one might on some victim from whose lungs the breath was drawn slowly, was fresh, careless, light-hearted enough. Going to and fro in the room, now carrying one of the children, she sang it to sleep with no doleful ditty, such as young women fresh from boarding-school affect, but with a ringing, cheery song. You might be sure that Baby would wake laughing to-morrow morning after it. He could see her shadow pass and re-pass the windows; she would be out presently; she was used to come out always after the hot day's flurry, — to say her prayers, he believed; and he chose to see her there in the dark and coolness to bid her good-bye. He waited, not patiently.

Grey, trotting up and down, holding by the chubby legs and wriggling arms of Master Pen, sang herself out of breath with "Roy's Wife," and stopped short.

"I'm sure, Pen, I don't know what to do with you," — half ready to cry.

"'Dixie,' now, Sis."

Pen was three years old, but he was the baby when his mother died; so Sis walked him to sleep every night: all

tender memories of her who was gone clinging about the little fat lump of mischief in his white night-gown. A wiry voice spoke out of some corner, —

"Yer 'd hev a thumpin' good warm-in', Mars' Penrose, ef ole Oth hed his will o' yer! It 'ud be a special 'pensation ob de Lord fur dat chile!"

Pen prospected his sister's face with the corner of one blue eye. There was a line about the freckled cheeks and baby-mouth of "Sis" that sometimes agreed with Oth on the subject of dispensations, but it was not there to-night.

"No, no, uncle. Not the last thing before he goes to bed. I always try, myself, to see something bright and pretty for the last thing, and then shut my eyes, quick, — just as Pen will do now: quick! there 's my sonny boy!"

Nobody ever called Grey Gurney pretty; but Pen took an immense delight in her now; shook and kicked her for his pony, but could not make her step less firm or light; thrust his hands about her white throat; pulled the fine reddish hair down; put his dumpling face to hers. A thin, uncertain face, but Pen knew nothing of that; he did know, though, that the skin was fresh and dewy as his own, the soft lips very ready for kisses, and the pale hazel eyes just as straightforward-looking as a baby's. Children and dogs believe in women like Grey Gurney. Finally, from pure exhaustion, Pen cuddled up and went to sleep.

It was a long, narrow room where Grey and the children were, covered with rag-carpet, (she and the boys and old Oth had made the balls for it last winter): well lighted, for Father Gurney had his desk in there to-night. He was working at his catalogue of Sauroidichnites in Pennsylvania. A tall, lean man, with hook-nose, and peering, protruding, blue eyes. Captain McKinstry sat by him, turning over Brongniart; his brain, if one might judge from the frequency with which he blew his nose, evidently the worse from the wear since he came in; glancing with an irresolute awe from the book to the bony frame

of the old man in his red dressing-gown, and then to the bony carcasses of the birds on the wall in their dusty plumage.

"Like enough each to t' other," old Oth used to mutter; "on'y dem birds done forgot to eat, an' Mars' Gurney neber will, gorry knows dat!"

"If you could, Captain McKinstry,"—it was the old man who spoke now, with a sort of whiffle through his teeth,— "if you could? A chip of shale next to this you brought this evening would satisfy me. This is evidently an original fossil foot-mark: no work of Indians. I'll go with you,"—gathering his dressing-gown about his lank legs.

"No," said the Captain, some sudden thought bringing gravity and self-reliance into his face. "My little girl is going with Uncle Dan. It's the last walk I can take with her. Go, child, and bring your bonnet."

Little Lizzy (people generally called her that) got up from the door-step where she sat, and ran up-stairs. She was one of those women who look as if they ought to be ordered and taken care of. Grey put a light shawl over her shoulders as she passed her. Grey thought of Lizzy always very much as a piece of fine porcelain among some earthen crocks, she being a very rough crock herself. Did not she have to make a companion in some ways of old Oth? When she had no potatoes for dinner, or could get no sewing to pay for Lizzy's shoes, (*Lizzy was hard on her shoes, poor thing!*) she found herself talking it over with Oth. The others did not care for such things, and it would be mean to worry them, but Oth liked a misery, and it was such a relief to tell things sometimes! The old negro had been a slave of her grandfather's until he was of age; he was quite helpless now, having a disease of the spine. But Grey had brought him to town with them, "because, you know, uncle, I could n't keep house without you, at all,—I really could n't." So he had his chair covered with sheepskin in the sunniest corner always, and Grey made over her father's old clothes for

him on the machine. Oth had learned to knit, and made "hissself s'ficiently independent, heelin' an' ribbin' der boys' socks, an' keepin' der young debbils in order," he said.

It was but a cheap machine Grey had, but a sturdy little chap; the steel band of it, even the wheel, flashed back a jolly laugh at her as she passed it, slowly hushing Pen, as if it would like to say, "I'll put you through, Sis!" and looked quite contemptuously at the heaps of white muslin piled up beside it. The boys' shirts, you know,—but was n't it a mercy she had made enough to buy them before muslin went up? There were three of the boys asleep now, legs and arms adrift over the floor, pockets gorged with half-apples, bits of twine instead of suspenders, other surreptitious bits under their trousers for straps. There were the twins, girls of ten, hungering for beaux, pickles, and photographic albums. They were gone to a party in the village. "Sis" had done up their white dresses; and such fun as they had with her, putting them on to hide the darns! She made it so comical that they laughed more than they did the whole evening.

Grey had saved some money to buy them ribbon for sashes, but Joseph had taken it from her work-basket that morning to buy cigars. One of the girls had cried, and even Grey's lips grew scarlet; her Welsh blood maddened. This woman was neither an angel nor an idiot, Paul Blecker. Then—it was such a trifle! Poor Joseph! he had been her mother's favorite, was spoiled a little. So she hurried to his chamber-door with his shaving-water, calling, "Brother!" Grey had a low, always pleasant voice, I remember; you looked in her eyes, when you heard it, to see her laughing. The ex-Congressman was friendly, but dignified, when he took the water. Grey presumed on her usefulness; women seldom did know their place.

There was yet another girl busy now, convoying the lubberly hulks of boys to bed,—a solid, Dutch-built little clipper,

Loo by name. Loo looked upon Grey secretly as rather silly; (she did all the counting for her; Grey hardly knew the multiplication-table;) she always, however, kept her opinions to herself. Tugging the boys after her in the manner of a tow-boat, she thumped past her father and "that gype, McKinstry, colloging over their bits of rock," indignation in every twist of her square shoulders.

"Fresh air," she said to Grey, jerking her head emphatically toward the open door.

"I will, Looley."

"Looley! Pish!"

It was no admiring glance she bestowed on the slight figure that came down the stairs, and stood timidly waiting for McKinstry.

"You 're going, Captain?" the old man's nose and mind starting suddenly up from his folio. "Lizzy, — eh? Here 's the bit of rock. In the coal formation, you say? Impossible, then, to be as old as the batrachian track that" —

A sudden howl brought him back to the present era. Loo was arguing her charge up to bed by a syllogism applied at the right time in the right place. The old man held his hands to his ears with a patient smile, until McKinstry was out of hearing.

"It is hard to devote the mind pure to a search for truth here, my daughter," looking over Grey's head as usual, with pensive, benevolent eyes. "But I do what I can, — I do what I can."

"I know, father," — stroking his hair as she might a child's, trimming the lamp, and bringing his slippers while he held out his feet for her to put them on, — "I know."

Then, when he took up the pen, she went out into the cool night.

"I do what I can," said he, earnestly, looking at the catalogue, with his head to one side.

It was Oth's time, — now or never.

"Debbil de bit yer do! Ef yer did what yer could, Mars' Si, dar 'ud be more 'n one side o' sparerib in de cellar fur ten hungry mouths. We 've

gone done eat dat pig o' Miss Grey's from head ter tail. An' pigs in June 's a disgrace ter Christians, let alone Presbyterians like us uns."

The old man glanced at him. Oth's spine gave his tongue free license.

"I 'll discharge him," faintly.

"'Scharge yerself," growled Oth, under his breath.

So the old man went back to his batrachians, and Oth ribbed Pen's sock in silence: the old fort stood at last as quiet in the moonlight as if it were thinking over all of its long-ago Indian sieges.

Grey's step was noiseless, going down the tan-bark path. She drew long breaths, her lungs being choked with the day's work, and threw back the hair from her forehead and throat. There was a latent dewiness in the air that made the clear moonlight as fresh and invigorating as a winter's morning. Grey stretched out her arms in it, with a laugh, as a child might. You would know, to look at her hair, that there was a strong poetic capacity in that girl below her simple Quaker character; as it lay in curly masses where the child had pulled it down, there was no shine, but clear depth of color in it: her eyes the same; not soggy, black, flashing as women's are who effuse their experience every day for the benefit of by-standers; this girl's were pale hazel, clear, meaningless at times, but when her soul did force itself to the light they gave it fit utterance. Women with hair and eyes like those, with passionate lips and strong muscles like Grey Gurney's, are children, single-natured all their lives, until some day God's test comes: then they live tragedies, unconscious of their deed.

The night was singularly clear, in its quiet: only a few dreamy trails of gray mist, asleep about the moon: far off on the crest of the closing hills, she fancied she could see the wind-stir in the trees that made a feathered shadow about the horizon. She leaned on the stile, looking over the sweep of silent meadows and hills, and slow-creeping watercourses.

The whole earth waited, she fancied, with newer life and beauty than by day: going back, it might be, in the pure moonlight, to remember that dawn when God said, "Let there be light." The girl comprehended the meaning of the night better, perhaps, because of the house she had left. Every night she came out there. She left the clothes and spare-ribs behind her, and a Something, a Grey Gurney that might have been, came back to her in the coolness and rest, the nearer she drew to the pure old earth. She never went down into those mossy hollows, or among the shivering pines, with a soiled, tawdry dress; she wore always the clear, primitive colors, or white, — Grey: it was the girl's only bit of self-development. This night she could see McKinstry's figure, as he went down the path through the rye-field. He was stooping, leading Lizzy by the hand, as a nurse might an infant. Grey thrust the currant-bushes aside eagerly; she could catch a glimpse of the girl's face in the colorless light. It always had a livid tinge, but she fancied it was red now with healthy blushes; her eyes were on the ground: in the house they looked out from under their heavy brows on their daily life with a tired coldness that made silly Grey ashamed of her own light-heartedness. The man's common face was ennobled with such infinite tenderness and pain, Grey thought the help that lay therein would content her sister. It was time for the girl's rest to come; she was sick of herself and of life. So the tears came to Grey's eyes, though to the very bottom of her heart she was thankful and glad.

"She has found home at last!"—she said; and, maybe, because something in the thought clung to her as she sauntered slowly down the garden-alleys, her lips kept moving in a childish fashion of hers. "A home at last, at last!"—that was what she said.

Paul Blecker, too, waiting back yonder among the trees, saw McKinstry and his companion, and read the same story that Grey did, but in a different fashion.

"The girl loves him." There were possibilities, however, in that woman's curious traits, that Blecker, being a physician and a little of a soul-fancier, saw: nothing in McKinstry's formal, orthodox nature ran parallel with them; therefore he never would know them. As they passed Blecker's outlook through the trees, his half-shut eye ran over her, — the despondent step, the lithe, nervous limbs, the manner in which she clung for protection to his horny hand. "Poor child!" the Doctor thought. There was something more, in the girl's face, that people called gentle and shy: a weak, uncertain chin; thin lips, never still an instant, opening and shutting like a starving animal's; gray eyes, dead, opaque, such as Blecker had noted in the spiritual mediums in New England.

"I'm glad it is McKinstry she loves, and not I," he said.

He turned, and forgot her, watching Grey coming nearer to him. The garden sloped down to the borders of the creek, and she stood on its edge now, looking at the uneasy crusting of the black water and the pearly glint of moonlight. Thinking of Lizzy, and the strong love that held her; feeling a little lonely, maybe, and quiet, she did not know why; trying to wrench her thoughts back to the house, and the clothes, and the spare-ribs. Why! he could read her thoughts on her face as if it were a baby's! A homely, silly girl they called her. He thanked God nobody had found her out before him. Look at the dewy freshness of her skin! how pure she was! how the world would knock her about, if he did not keep his hold on her! But he would do that; to-night he meant to lay his hand upon her life, and never take it off, absorb it in his own. She moved forward into the clear light: that was right. There was a broken boll of a beech-tree covered with lichen: she should sit on that, presently, her face in open light, he in the shadow, while he told her. Watching her with hot breath where she stood, then going down to her:—

"Is Grey waiting to bid her friend good-bye?"

She put her hand in his, — her very lips trembling with the sudden heat, her untrained eyes wandering restlessly.

"I thought you would come to me, Doctor Blecker."

"Call me Paul," roughly. "I was coarser born and bred than you. I want to think that matters nothing to you."

She looked up proudly.

"You know it matters nothing. I am not vulgar."

"No, Grey. But — it is curious, but no one ever called me Paul, as boy or man. It is a sign of equality; and I've always had, in the *mêlée*, the underneath taint about me. You are not vulgar enough to care for it. Yours is the highest and purest nature I ever knew. Yet I know it is right for you to call me Paul. Your soul and mine stand on a plane before God."

The childish flush left her face; the timid woman-look was in it now. He bent nearer.

"They stand there alone, Grey."

She drew back from him, her hands nervously catching in the thick curls.

"You do not believe that?" his breath clogged and hot. "It is a fancy of mine? not true?"

"It is true."

He caught the whisper, his face growing pale, his eyes flashing.

"Then you are mine, child! What is the meaning of these paltry contradictions? Why do you evade me from day to day?"

"You promised me not to speak of this again," — weakly.

"Pah! You have a man's straightforward, frank instinct, Grey; and this is cowardly, — paltry, as I said before. I will speak of it again. To-night is all that is left to me."

He seated her upon the beech-trunk. One could tell by the very touch and glance of the man how the image of this woman stood solitary in his coarser thoughts, delicate, pure; a disciple would

have laid just such reverential fingers on the robe of the Madonna. Then he stood off from her, looking straight into her hazel eyes. Grey, with all her innocent timidity, was the cooler, stronger, maybe, of the two: the poor Doctor's passionate nature, buffeted from one anger and cheat to another in the world, brought very little quiet or tact or aptitude in language for this one hour. Yet, standing there, his man's sturdy heart throbbing slow as an hysteric woman's, his eyeballs burning, it seemed to him that all his life had been but the weak preface to these words he was going to speak.

"It angers me," he muttered, abruptly, "that, when I come to you with the thought that a man's or a woman's soul can hold but once in life, you put me aside with the silly whims of a school-girl. It is not worthy of you, Grey. You are not as other women."

What was this that he had touched? She looked up at him steadily, her hands clasped about her knees, the childlike rose-glow and light banished from her face.

"I am not like other women. You speak truer than you know. You call me a silly, happy child. Maybe I am; but, Paul, once in my life God punished me. I don't know for what," — getting up, and stretching out her groping arms, blindly.

There was a sudden silence. This was not the cheery, healthful Grey Gurney of a moment before, this woman with the cold terror creeping out in her face. He caught her hands and held them.

"I don't know for what," she moaned. "He did it. He is good."

He watched the slow change in her face: it made his hands tremble as they held hers. No longer a child, but a woman whose soul the curse had touched. Miriam, leprous from God's hand, might have thus looked up to Him without the camp. Blecker drew her closer. Was she not his own? He would defend her against even this God, for whom he cared but little.

"What has been done to you, child?"

She shook herself free, speaking in a fast, husky whisper.

"Do not touch me, Dr. Blecker. It was no school-girl's whim that kept me from you. I am not like other women. I am not worthy of any man's love."

"I think I know what you mean," he said, gravely. "I know your story, Grey. They made you live a foul lie once. I know it all. You were a child then."

She had gone still farther from him, holding by the trunk of a dead tree, her face turned towards the water. The black, sough of wind from it lifted her hair, and dampened her forehead. The man's brain grew clearer, stronger, somehow, as he looked at her; as thought does in the few electric moments of life when sham and conventionality crumble down like ashes, and souls stand bare, face to face. For the every-day, cheery, unselfish Grey of the coarse life in yonder he cared but little; it was but the husk that held the woman whose nature grappled with his own, that some day would take it with her to the Devil or to God. He knew that. It was this woman that stood before him now: looking back, out of the inbred force and purity within her, the indignant man's sense of honor that she had, on the lie they had made her live: daring to face the truth, that God had suffered this thing, yet clinging, like a simple child, to her old faith in Him. That childish faith, that worked itself out in her common life, Paul Blecker set aside, in loving her. She was ignorant: he knew the world, and, he thought, very plainly saw that the Power who had charge of it suffered unneeded ills, was a traitor to the Good his own common sense and kindly feeling could conceive; which is the honest belief of most of the half-thinkers in America.

"You were but a child," he said again. "It matters nothing to me, Grey. It left no taint upon you."

"It did," she cried, passionately. "I carry the marks of it to my grave. I never shall be pure again."

"Why did your God let you go down

into such foulness, then?"—the words broke from his lips irrepressibly. "It was He who put you in the hands of a selfish woman; it was He who gave you a weak will. It is He who suffers marriages as false as yours. Why, child! you call it crime, the vow that bound you for that year to a man you loathed; yet the world celebrates such vows daily in every church in Christendom."

"I know that";—her voice had gone down into its quiet sob, like a little child's.

She sat down on the ground, now, the long shore-grass swelling up around her, thrusting her fingers into the pools of eddying water, with a far-off sense of quiet and justice and cold beneath there.

"I don't understand," she said. "The world's wrong somehow. I don't think God does it. There's thousands of young girls married as I was. Maybe, if I'd told Him about it, it would n't have ended as it did. I did not think He cared for such things."

Blecker was silent. What did he care for questions like this now? He sat by her on the broken trunk, his elbows on his knees, his sultry eyes devouring her face and body. What did it matter, if once she had been sold to another man? She was free now: he was dead. He only knew that here was the only creature in earth or heaven that he loved: there was not a breath in her lungs, a tint of her flesh, that was not dear to him, allied by some fierce passion to his own sense: there was that in her soul which he needed, starved for: his life balked blank here, demanding it,—her,—he knew not what: but that gained, a broader freedom opened behind, unknown possibilities of honor and truth and deed. He would take no other step, live no farther, until he gained her. Holding, too, the sense of her youth, her rare beauty, as it seemed to him; loving it with keener passion because he alone developed it, drawing her soul to the light! how like a baby she was: how dainty the dimpling white flesh of her

arms, the soft limbs crouching there! So pure, the man never came near her without a dull loathing of himself, a sudden remembrance of places where he had been tainted, made unfit to touch her,—rows in Bowery dance-houses, waltzes with musk-scented fine ladies: when this girl put her cool little hand in his sometimes, he felt tears coming to his eyes, as if the far-off God or the dead mother had blessed him. She sat there, now, going back to that blot in her life, her eyes turned every moment up to the Power beyond in whom she trusted, to know why it had been. He had seen little children, struck by their mother's hand, turn on them a look just so grieved and so appealing.

"It was no one's fault altogether, Paul," she said. "My mother was not selfish, more than other women. There were very many mouths to feed: it is so in most families like ours."

"I know."

"I am very dull about books,—stupid, they say. I could not teach; and they would not let me sew for money, because of the disgrace. These are the only ways a woman has. If I had been a boy"—

"I understand."

"No man can understand,"—her voice growing shrill with pain. "It's not easy to eat the bread needed for other mouths day after day, with your hands tied, idle and helpless. A boy can go out and work, in a hundred ways: a girl must marry; it's her only chance for a livelihood, or a home, or anything to fill her heart with. Don't blame my mother, Paul. She had ten of us to work for. From the time I could comprehend, I knew her only hope was, to live long enough to see her boys educated, and her daughters in homes of their own. It was the old story, Doctor Blecker,"—with a shivering laugh more pitiful than a cry. "I've noticed it since in a thousand other houses. Young girls like me in these poor-genteel families,—there are none of God's creatures more helpless or goaded, starving at their souls. I could n't teach. I had no talent; but if I had, a woman's a woman: she wants something

else in her life than dog-eared school-books and her wages year after year."

Blecker could hardly repress a smile.

"You are coming to political economy by a woman's road, Grey."

"I don't know what that is. I know what my life was then. I was only a child; but when that man came and held out his hand to take me, I was willing when they gave me to him,—when they sold me, Doctor Blecker. It was like leaving some choking pit, where air was given to me from other lungs, to go out and find it for my own. What marriage was or ought to be I did not know; but I wanted, as every human being does want, a place for my own feet to stand on, not to look forward to the life of an old maid, living on sufferance, always the one too many in the house."

"That is weak and vulgar argument, child. It should not touch a true woman, Grey. Any young girl can find work and honorable place for herself in the world, without the defilement of a false marriage."

"I know that now. But young girls are not taught that. I was only a child, not strong-willed. And now, when I'm free,"—a curious clearness coming to her eye,— "I'm glad to think of it all. I never blame other women. Because, you see,"—looking up with the flickering smile,— "a woman's so hungry for something of her own to love, for some one to be kind to her, for a little house and parlor and kitchen of her own; and if she marries the first man who says he loves her, out of that first instinct of escape from dependence, and hunger for love, she does not know she is selling herself, until it's too late. The world's all wrong, somehow."

She stopped, her troubled face still upturned to his.

"But you,—you are free now?"

"He is dead."

She slowly rose as she spoke, her voice hardening.

"He was my cousin, you know,—the same name as mine. Only a year he was with me. Then he went to Cuba,

where he died. He is dead. But I am not free,"—lifting her hands fiercely, as she spoke. "Nothing can wipe the stain of that year off of me."

"You know what man he was," said the Doctor, with a natural thrill of pleasure that he could say it honestly. "I know, poor child! A vapid, cruel tyrant, weak, foul. You hated him, Grey? There's a strength of hatred in your blood. Answer me. You dare speak truth to me."

"He's dead now,"—with a long, choking breath. "We will not speak of him."

She stood a moment, looking down the stretch of curdling black water,—then, turning with a sudden gesture, as though she flung something from her, looked at him with a pitiful effort to smile.

"I don't often think of that time. I cannot bear pain very well. I like to be happy. When I'm busy now, or playing with little Pen, I hardly believe I am the woman who was John Gurney's wife. I was so old then! I was like a hard, tigerish soul, tried and tempted day by day. He made me that."

She could not bear pain, he saw: remembrance of it, alone, made the flesh about her lips blue, unsteadied her brain; the well-accented face grew vacant, dreary; neither nerves nor will of this woman were tough. Her family were not the stuff out of which voluntary heroes are made. He saw, too, she was thrusting it back,—out of thought: it was her temperament to do that.

"So, now, Grey," he said, cheerfully, "the story's told. Shall we lay that ghost of the old life, and see what these healthful new years have for us?"

Paul Blecker's voice was never so strong or pure: whatever of coarseness had clung to him fell off then, as he came nearer to the weak woman whom God had given to him to care for; whatever of latent manhood, of chivalry, slept beneath, some day to make him an earnest husband and father, and helpful servant of the True Man, came out in his eager face and eye, now. He took her

two hands in his: how strong his muscles were! how the man's full pulse throbbed healthfully against her own! She looked up with a sudden blush and smile. A minute ago she thought herself so strong to renounce! She meant, this weak, incomplete woman, to keep to the shame of that foul old lie of hers, accepting that as her portion for life. There is a chance comes to some few women, once in their lives, to escape into the full development of their natures by contact with the one soul made in the same mould as their own. It came to this woman to-night. Grey was no theorist about it: all that she knew was, that, when Paul Blecker stood near her, for the first time in her life she was not alone,—that, when he spoke, his words were but more forcible utterances of her own thought,—that, when she thought of leaving him, it was like drawing the soul from her living body, to leave it pulseless, dead. Yet she would do it.

"I am not fit to be any man's wife. If you had come to me when I was a child, it might have been,—it ought to have been,"—with an effort to draw her hands from him.

Blecker only smiled, and seated her gently on the mossy boll of the beech-tree.

"Stay. Listen to me," he whispered.

And Grey, being a woman and no philosopher, sat motionless, her hands folded, nerveless, where he had let them fall, her face upturned, like that of the dead maiden waiting the touch of infinite love to tremble and glow back into beautiful life. He did not speak, did not touch her, only bent nearer. It seemed to him, as the pure moonlight then held them close in its silent bound, the great world hushed without, the light air scarce daring to touch her fair, waiting face, the slow-heaving breast, the kindling glow in her dark hair, that all the dead and impure years fell from them, and in a fresh new-born life they stood alone, with the great Power of strength and love for company. What need was there of words? She knew it all: in the

promise and question of his face waited for her the hope and vigor the time gone had never known: her woman's nature drooped and leaned on his, content: the languid hazel eye followed his with such intent, one would have fancied that her soul in that silence had found its rest and home forever.

He took her hand, and drew from it the old ring that yet bound one of her fingers, the sign of a lie long dead, and without a word dropped it in the current below them. The girl looked up suddenly, as it fell: her eyes were wet: the woman whom Christ loosed from her infirmity of eighteen years might have thanked him with such a look as Grey's that night. Then she looked back to her earthly master.

"It is dead now, child, the past,—never to live again. Grey holds a new life in her hands to-night." He stopped: the words came weak, paltry, for his meaning. "Is there nothing with which she cares to fill it? no touch that will make it dear, holy for her?"

There was a heavy silence. Nature rose impatient in the crimson blood that dyed her lips and cheek, in the brilliance of her eye; but she forced back the words that would have come, and sat timid and trembling.

"None, Grey? You are strong and cool. I know. The lie dead and gone from your life, you can control the years alone, with your religion and cheery strength. Is that what you would say?"—bitterly.

She did not answer. The color began to fade, the eyes to dim.

"You have told me your story; let me tell you mine,"—throwing himself on the grass beside her. "Look at me, Grey. Other women have despised me, as rough, callous, uncouth: you never have. I've had no hot-house usage in the world; the sun and rain hardly fell on me unpaid. I've earned every inch of this flesh and muscle, worked for it as it grew; the knowledge that I have, scanty enough, but whatever thought I do have of God or life, I've had to grapple and struggle

for. Other men grow, inhale their being, like yonder tree God planted and watered. I think sometimes He forgot me,"—with a curious woman's tremor in his voice, gone in an instant. "I scrambled up like that scraggy parasite, without a root. Do you know now why I am sharp, wary, suspicious, doubt if there be a God? Grey," turning fiercely, "I am tired of this. God did make me. I want rest. I want love, peace, religion, in my life."

She said nothing. She forgot herself, her timid shyness now, and looked into his eyes, a noble, helpful woman, sounding the depths of the turbid soul laid bare for her.

He laid his big, ill-jointed hand on her knee.

"I thought," he said,—great drops of sweat coming out on his fallow lips,— "God meant you to help me. There is my life, little girl. You may do what you will with it. It does not value much to me."

And Grey, woman-like, gathered up the despised hand and life, and sobbed a little as she pressed them to her heart. An hour after, they went together up the old porch-steps, halting a moment where the grape-vines clustered thickest about the shingled wall. The house was silent; even the village slept in the moonlight: no sound of life in the great sweep of dusky hill and valley, save the wreaths of mist over the watercourses, foaming and drifting together silently: before morning they would stretch from base to base of the hills like a Dead Sea, ashy and motionless. They stood silent a moment, until the chirp of some robin, frightened by their steps in its nest overhead, had hummed drowsily down into sleep.

"It is not good-night, but good-bye, that I must bid you, Grey," he said, stooping to see her face.

"I know. But you will come again. God tells me that."

"I will come. Remember, Grey, I am going to save life, not to take it. Corrupt as I am, my hands are clean of this butchery for the sake of interest."

Grey's eyes wandered. She knows nothing about the war, to be candid: only that it is like a cold pain at her heart, day and night, — sorry that the slaves are slaves, wondering if they could be worse off than the free negroes swarming in the back-alleys yonder, — as sorry, being unpatriotic, for the homeless women in Virginia as for the stolen horses of Chambersburg. Grey's principles, though mixed, are sound, as far as they go, you see. Just then thinking only of herself.

"You will come back to me?" clinging to his arm.

"Why, I must come back," cheerfully, choking back whatever stopped his breath, pushing back the curling hair from her forehead with a half-reverential touch. "I have so much to do, little girl! There is a farm over yonder I mean to earn enough to buy, where you and I shall rest and study and grow, — stronger and healthier, more helpful every day. We 'll find our work and place in the world yet, poor child! You shall show me what a pure, earnest life is, Grey, and above us — what there is there," lowering his voice. "And I, — how much I have to do with this bit of humanity here on my hands!" — playfully. "An unhewn stone, with the beautiful statue lying *perdu* within. Did you know you were that, Grey? and I the sculptor?" She looked up bewildered.

"It is true," passing his fingers over the low, broad, curiously moulded forehead. "My girl does not know what powers and subtle forces lie asleep beneath this white skin? I know. I know lights and words and dramas of meaning these childish eyes hold latent: that I will set free. I will teach your very silent lips a new language. You never guessed how like a prison your life has been, how unfinished you are; but I thank God for it, Grey. You would not have loved me, if it had been different; I can grow with you now, grow to your height, if — He helps me."

He took off his hat, and stood, looking silently into the deep blue above, —

for the first time in his life coming to his Friend with a manly, humble look. His eyes were not clear when he spoke again, his voice very quiet.

"Good bye, Grey! I'm going to try to be a better man than I've ever been. You are my wife now in His eyes. I need you so: for life and for eternity, I think. You will remember that?"

And so, holding her to his heart a moment or two, and kissing her lips passionately once or twice, he left her, trying to smile as he went down the path, but with a strange clogging weight in his breast, as if his heart would not beat.

Going in, Grey found the old negro asleep over his knitting, the candle with a flaring black crust beside him.

"He waited for me," she said; and as she stroked the skinny old hand, the tears came at the thought of it. Everybody was so kind to her! The world was so full of love! God was so good to her to-night!

Oth, waking fully as she helped him to his room-door, looked anxiously in her face.

"Er' ye well to-night, chile?" he said. "Yer look as yer did when yer wor a little baby. Peart an' purty yer wor, dat's true. Der good Lord loved yer, I think."

"He loves me now," she said, softly, to herself, as in her own room she knelt down and thanked Him, and then, undressed, crept into the white trundle-bed beside little Pen; and when he woke, and, putting his little arms about her neck, drew her head close to his to kiss her good-night, she cried quietly to herself, and fell asleep with the tears upon her cheek.

Her sister, in the next room to hers, with the same new dream in her heart, did not creep into any baby's arms for sympathy. Lizzy Gurney never had a pet, dog or child. She sat by the window waiting, her shawl about her head in the very folds McKinsty had wrapped it, motionless, as was her wont. But for the convulsive movement of her lips now and then, no gutta-percha doll could be more utterly still. As the night wore

down into the intenser sleep of the hours after midnight, her watch grew more breathless. The moon sank far enough in the west to throw the beams directly across her into the dark chamber behind. She was a small-moulded woman, you could see now: her limbs, like those of a cat, or animals of that tribe, from their idea of trance-like quiet, gave you the idea of an intense vitality: a gentle face, — pretty, the villagers called it, from its waxy tint and faint coloring, — you wished to do something for her, seeing it. Paul Blecker never did: the woman never spoke to him; but he noted often the sudden relaxed droop of the eyelids, when she sat alone, as if some nerve had grown weary: he had seen that peculiarity in some women before, and knew all it meant. He had nothing for her; her hunger lay out of his ken.

It grew later: the moon hung now so low that deep shadows lay heavy over the whole valley; not a breath broke the sleep of the night; even the long melancholy howl of the dog down in camp was hushed long since. When the clock struck two, she got up and went noiselessly out into the open air. There was no droop in her eyelids now; they were straight, nerved, the eyes glowing with a light never seen by day beneath them. Down the long path into the cornfield, slowly, pausing at some places, while her lips moved as though she repeated words once heard there. What folly was this? Was this woman's life so bare, so empty of its true food, that she must needs go back and drag again into life a few poor, happy moments? distil them slowly, to drink them again drop by drop? I have seen children so live over in their play the one great holiday of their lives. Down through the field to the creek-ford, where the stones lay for crossing, slippery with moss: she could feel the strong grasp of the hand that had led her over there that night; and so, with slow and yet slower step, where the path had been rocky, and she had needed cautious help. Into the thicket of lilacs, with the old scent of the spring blossoms yet hanging on their

boughs; along the bank, where her foot had sunk deep into plushy moss, where he had gathered a cluster of fern and put it into her hand. Its pale feathery green was not more quaint or pure than the delicate love in the uncouth man beside her, — not nearer kin to Nature. Did she know that? Had it been like the breath of God coming into her nostrils to be so loved, appreciated, called home, as she had been to-night? Was she going back to feel that breath again? Neither pain nor pleasure was on her face: her breath came heavy and short, her eyes shone, that was all. Out now into the open road, stopping and glancing around with every broken twig, being a cowardly creature, yet never leaving the track of the footsteps in the dust, where she had gone before. Coming at last to the old-fashioned gabled house, where she had gone when she was a child, set in among stiff rows of evergreens. A breathless quiet always hung about the place: a pure, wholesome atmosphere, because pure and earnest people had acted out their souls there, and gone home to God. He had led her through the gate here, given her to drink of the well at the side of the house. "My mother never would taste any water but this, do you remember, Lizzy?" They had gone through the rooms, whispering, if they spoke, as though it were a church. Here was the pure dead sister's face looking down from the wall; there his mother's worn wicker work-stand. Her work was in it still. "The needle just where she placed it, Lizzy." The strong man was weak as a little child with the memory of the old mother who had nursed and loved him as no other could love. He stood beside her chair irresolute; forty years ago he had stood there, a little child bringing all his troubles to be healed: since she died no hand had touched it. "Will you sit there, Lizzy? You are dearer to me than she. When I come back, will you take their place here? Only you are pure as they, and dearer, Lizzy. We will go home to them hand in hand." She sat in the dead woman's chair. *She.* Looking in

at her own heart as she did it. Yet her love for him would make her fit to sit there: she believed that. He had not kissed her,—she was too sacred to the simple-hearted man for that,—had only taken her little hand in both his, saying, “God bless you, little Lizzy!” in an unsteady voice.

“He may never say it again,” the girl said, when she crept home from her midnight pilgrimage. “I’ll come here every day and live it all over again. It will keep me quiet until he comes. Maybe he’ll never come,”—catching her breast, and tearing it until it grew black. She was so tired of herself, this child! She would have torn that nerve in her heart out that sometimes made her sick, if she could. Her life was so cramped, and selfish, too, and she knew it. Pass-

ing by the door of Grey’s room, she saw her asleep with Pen in her arms,—some other little nightcapped heads in the larger beds. *She* slept alone. “They tire me so!” she said; “yet I think,” her eye growing fiercer, “if I had anything all my own, if I had a little baby to make pure and good, I’d be a better girl. Maybe—*he* will make me better.”

Paul Blecker, heart-anatomist, laughed when this woman, with the aching brain and the gnawing hunger at heart, seized on the single, Christ-like love of McKinstry, a common, bigoted man, and made it her master and helper. Her instinct was wiser than he, being drifted by God’s under-currents of eternal order. That One who knows when the sparrow is ready for death knows well what things are needed for a tired girl’s soul.

---

## UP THE THAMES.

THE upper portion of Greenwich (where my last article left me loitering) is a cheerful, comely, old-fashioned town, the peculiarities of which, if there be any, have passed out of my remembrance. As you descend towards the Thames, the streets get meaner, and the shabby and sunken houses, elbowing one another for frontage, bear the sign-boards of beer-shops and eating-rooms, with especial promises of whitebait and other delicacies in the fishing line. You observe, also, a frequent announcement of “Tea Gardens” in the rear; although, estimating the capacity of the premises by their external compass, the entire sylvan charm and shadowy seclusion of such blissful resorts must be limited within a small back-yard. These places of cheap sustenance and recreation depend for support upon the innumerable pleasure-parties who come from London Bridge by steamer, at a fare of a few pence, and

who get as enjoyable a meal for a shilling a head as the Ship Hotel would afford a gentleman for a guinea.

The steamers, which are constantly smoking their pipes up and down the Thames, offer much the most agreeable mode of getting to London. At least, it might be exceedingly agreeable, except for the myriad floating particles of soot from the stove-pipe, and the heavy heat of midsummer sunshine on the unsheltered deck, or the chill, misty air-draught of a cloudy day, and the spiteful little showers of rain that may spatter down upon you at any moment, whatever the promise of the sky; besides which there is some slight inconvenience from the inexhaustible throng of passengers, who scarcely allow you standing-room, nor so much as a breath of unappropriated air, and never a chance to sit down. If these difficulties weigh little with you, the panorama along the shores

of the memorable river, and the incidents and shows of passing life upon its bosom, render the trip far preferable to the brief, yet tiresome shoot along the railway-track. On one such voyage, a regatta of wherries raced past us, and at once involved every soul on board our steamer in the tremendous excitement of the struggle. The spectacle was but a moment within our view, and presented nothing more than a few light skiffs, in each of which sat a single rower, bare-armed, and with little apparel, save a shirt and drawers, pale, anxious, with every muscle on the stretch, and plying his oars in such fashion that the boat skimmed along with the aerial celerity of a swallow. I wondered at myself for so immediately catching an interest in the affair, which seemed to contain no very exalted rivalry of manhood; but, whatever the kind of battle or the prize of victory, it stirs one's sympathy immensely, and is even awful, to behold the rare sight of a man thoroughly in earnest, doing his best, putting forth all there is in him, and staking his very soul (as these rowers appeared willing to do) on the issue of the contest. It was the seventy-fourth annual regatta of the Free Watermen of Greenwich, and announced itself as under the patronage of the Lord Mayor and other distinguished individuals, at whose expense, I suppose, a prize-boat was offered to the conqueror, and some small amounts of money to the inferior competitors.

The aspect of London along the Thames, below Bridge, as it is called, is by no means so impressive as it ought to be, considering what peculiar advantages are offered for the display of grand and stately architecture by the passage of a river through the midst of a great city. It seems, indeed, as if the heart of London had been cleft open for the mere purpose of showing how rotten and drearily mean it had become. The shore is lined with the shabbiest, blackest, and ugliest buildings that can be imagined, decayed warehouses with blind windows, and wharves that look ruinous; insomuch

that, had I known nothing more of the world's metropolis, I might have fancied that it had already experienced the downfall which I have heard commercial and financial prophets predict for it, within the century. And the muddy tide of the Thames, reflecting nothing, and hiding a million of unclean secrets within its breast,—a sort of guilty conscience, as it were, unwholesome with the rivulets of sin that constantly flow into it,—is just the dismal stream to glide by such a city. The surface, to be sure, displays no lack of activity, being fretted by the passage of a hundred steamers and covered with a good deal of shipping, but mostly of a clumsier build than I had been accustomed to see in the Mersey: a fact which I complacently attributed to the smaller number of American clipper ships in the Thames, and the less prevalent influence of American example in refining away the broad-bottomed capacity of the old Dutch or English models.

About midway between Greenwich and London Bridge, at a rude landing-place on the left bank of the river, the steamer rings its bell and makes a momentary pause in front of a large circular structure, where it may be worth our while to scramble ashore. It indicates the locality of one of those prodigious practical blunders that would supply John Bull with a topic of inexhaustible ridicule, if his cousin Jonathan had committed them, but of which he himself perpetrates two to our one in the mere wantonness of wealth that lacks better employment. The circular building covers the entrance to the Thames Tunnel, and is surmounted by a dome of glass, so as to throw daylight down into the great depth at which the passage of the river commences. Descending a wearisome succession of staircases, we at last find ourselves, still in the broad noon, standing before a closed door, on opening which we behold the vista of an arched corridor that extends into everlasting midnight. In these days, when glass has been applied to so many new purposes, it is a pity that the architect had not thought of arching portions

of his abortive tunnel with immense blocks of the lucid substance, over which the dusky Thames would have flowed like a cloud, making the sub-fluvial avenue only a little gloomier than a street of upper London. At present, it is illuminated at regular intervals by jets of gas, not very brilliantly, yet with lustre enough to show the damp plaster of the ceiling and walls, and the massive stone pavement, the crevices of which are oozy with moisture, not from the incumbent river, but from hidden springs in the earth's deeper heart. There are two parallel corridors, with a wall between, for the separate accommodation of the double throng of foot-passengers, equestrians, and vehicles of all kinds, which was expected to roll and reverberate continually through the Tunnel. Only one of them has ever been opened, and its echoes are but feebly awakened by infrequent footfalls.

Yet there seem to be people who spend their lives here, and who probably blink like owls, when, once or twice a year, perhaps, they happen to climb into the sunshine. All along the corridor, which I believe to be a mile in extent, we see stalls or shops in little alcoves, kept principally by women; they were of a ripe age, I was glad to observe, and certainly robbed England of none of its very moderate supply of feminine loveliness by their deeper than tomb-like interment. As you approach, (and they are so accustomed to the dusky gas-light that they read all your characteristics afar off,) they assail you with hungry entreaties to buy some of their merchandise, holding forth views of the Tunnel put up in cases of Derbyshire spar, with a magnifying-glass at one end to make the vista more effective. They offer you, besides, cheap jewelry, sunny topazes and resplendent emeralds for sixpence, and diamonds as big as the Koh-i-noor at a not much heavier cost, together with a multifarious trumpery which has died out of the upper world to reappear in this Tartarean bazaar. That you may fancy yourself still in the realms of the living, they urge you to partake of cakes, candy, ginger-beer,

and such small refreshment, more suitable, however, for the shadowy appetite of ghosts than for the sturdy stomachs of Englishmen. The most capacious of the shops contains a dioramic exhibition of cities and scenes in the daylight-world, with a dreary glimmer of gas among them all; so that they serve well enough to represent the dim, unsatisfactory remembrances that dead people might be supposed to retain from their past lives, mixing them up with the ghastliness of their unsubstantial state. I dwell the more upon these trifles, and do my best to give them a mockery of importance, because, if these are nothing, then all this elaborate contrivance and mighty piece of work has been wrought in vain. The Englishman has burrowed under the bed of his great river, and set ships of two or three thousand tons a-rolling over his head, only to provide new sites for a few old women to sell cakes and ginger-beer!

Yet the conception was a grand one; and though it has proved an absolute failure, swallowing an immensity of toil and money, with annual returns hardly sufficient to keep the pavement free from the ooze of subterranean springs, yet it needs, I presume, only an expenditure three or four (or, for aught I know, twenty) times as large, to make the enterprise brilliantly successful. The descent is so great from the bank of the river to its surface, and the Tunnel dips so profoundly under the river's bed, that the approaches on either side must commence a long way off, in order to render the entrance accessible to horsemen or vehicles; so that the larger part of the cost of the whole affair should have been expended on its margins. It has turned out a sublime piece of folly; and when the New Zealander of distant ages shall have moralized sufficiently among the ruins of London Bridge, he will bethink himself that somewhere thereabout was the marvellous Tunnel, the very existence of which will seem to him as incredible as that of the hanging-gardens of Babylon. But the Thames will long ago have broken through the massive arch, and choked

up the corridors with mud and sand and with the large stones of the structure itself, intermixed with skeletons of drowned people, the rusty iron-work of sunken vessels, and a great many such precious and curious things as a river always contrives to hide in its bosom; the entrance will have been obliterated, and its very site forgotten beyond the memory of twenty generations of men, and the whole neighborhood be held a dangerous spot on account of the malaria; insomuch that the traveller will make but a brief and careless inquiry for the traces of the old wonder, and will stake his credit before the public, in some *Pacific Monthly* of that day, that the story of it is but a myth, though enriched with a spiritual profundity which he will proceed to unfold.

Yet it is impossible (for a Yankee, at least) to see so much magnificent ingenuity thrown away, without trying to endow the unfortunate result with some kind of usefulness, though perhaps widely different from the purpose of its original conception. In former ages, the mile-long corridors, with their numerous alcoves, might have been utilized as a series of dungeons, the fittest of all possible receptacles for prisoners of state. Dethroned monarchs and fallen statesmen would not have needed to remonstrate against a domicile so spacious, so deeply secluded from the world's scorn, and so admirably in accordance with their thenceforward sunless fortunes. An alcove here might have suited Sir Walter Raleigh better than that darksome hiding-place communicating with the great chamber in the Tower, pacing from end to end of which he meditated upon his "History of the World." His track would here have been straight and narrow, indeed, and would therefore have lacked somewhat of the freedom that his intellect demanded; and yet the length to which his footsteps might have travelled forth and retraced themselves would partly have harmonized his physical movement with the grand curves and planetary returns of his thought, through cycles of ma-

jestic periods. Having it in his mind to compose the world's history, methinks he could have asked no better retirement than such a cloister as this, insulated from all the seductions of mankind and womankind, deep beneath their mysteries and motives, down into the heart of things, full of personal reminiscences in order to the comprehensive measurement and verification of historic records, seeing into the secrets of human nature,—secrets that daylight never yet revealed to mortal,—but detecting their whole scope and purport with the infallible eyes of unbroken solitude and night. And then the shades of the old mighty men might have risen from their still profounder abodes and joined him in the dim corridor, treading beside him with an antique stateliness of mien, telling him in melancholy tones, grand, but always melancholy, of the greater ideas and purposes that were so poorly embodied in their most renowned performances. As Raleigh was a navigator, Noah would have explained to him the peculiarities of construction that made the ark so seaworthy; as Raleigh was a statesman, Moses would have discussed with him the principles of laws and government; as Raleigh was a soldier, Cæsar and Hannibal would have held debate in his presence, with this martial student for their umpire; as Raleigh was a poet, David, or whatever most illustrious bard he might call up, would have touched his harp, and made manifest all the true significance of the past by means of song and the subtle intelligences of music.

Meanwhile, I had forgotten that Sir Walter Raleigh's century knew nothing of gas-light, and that it would require a prodigious and wasteful expenditure of tallow-candles to illuminate the Tunnel sufficiently to discern even a ghost. On this account, however, it would be all the more suitable place of confinement for a metaphysician, to keep him from bewildering mankind with his shadowy speculations; and, being shut off from external converse, the dark corridor would help him to make rich discoveries in those cav-

ernous regions and mysterious by-paths of the intellect, which he had so long accustomed himself to explore. But how would every successive age rejoice in so secure a habitation for its reformers, and especially for each best and wisest man that happened to be then alive! He seeks to burn up our whole system of society, under pretence of purifying it from its abuses! Away with him into the Tunnel, and let him begin by setting the Thames on fire, if he is able!

If not precisely these, yet akin to these were some of the fantasies that haunted me as I passed under the river: for the place is suggestive of such idle and irresponsible stuff by its own abortive character, its lack of whereabouts on upper earth, or any solid foundation of realities. Could I have looked forward a few years, I might have regretted that American enterprise had not provided a similar tunnel, under the Hudson or the Potomac, for the convenience of our National Government in times hardly yet gone by. It would be delightful to clap up all the enemies of our peace and Union in the dark together, and there let them abide, listening to the monotonous roll of the river above their heads, or perhaps in a state of miraculously suspended animation, until, — be it after months, years, or centuries, — when the turmoil shall be all over, the Wrong washed away in blood, (since that must needs be the cleansing fluid,) and the Right firmly rooted in the soil which that blood will have enriched, they might crawl forth again and catch a single glimpse at their redeemed country, and feel it to be a better land than they deserve, and die!

I was not sorry when the daylight reached me after a much briefer abode in the nether regions than, I fear, would await the troublesome personages just hinted at. Emerging on the Surrey side of the Thames, I found myself in Rotherhithe, a neighborhood not unfamiliar to the readers of old books of maritime adventure. There being a ferry hard by the mouth of the Tunnel, I recrossed the river in the primitive fashion of an open

boat, which the conflict of wind and tide, together with the swash and swell of the passing steamers, tossed high and low rather tumultuously. This inquietude of our frail skiff (which, indeed, bobbed up and down like a cork) so much alarmed an old lady, the only other passenger, that the boatmen essayed to comfort her. "Never fear, mother!" grumbled one of them, "we'll make the river as smooth as we can for you. We'll get a plane and plane down the waves!" The joke may not read very brilliantly; but I make bold to record it as the only specimen that reached my ears of the old, rough water-wit for which the Thames used to be so celebrated. Passing directly along the line of the sunken Tunnel, we landed in Wapping, which I should have presupposed to be the most tarry and pitchy spot on earth, swarming with old salts, and full of warm, bustling, coarse, homely, and cheerful life. Nevertheless, it turned out to be a cold and torpid neighborhood, mean, shabby, and unpicturesque, both as to its buildings and inhabitants: the latter comprising (so far as was visible to me) not a single unmistakable sailor, though plenty of land-sharks, who get a half dishonest livelihood by business connected with the sea. Ale-and-spirit vaults (as petty drinking-establishments are styled in England, pretending to contain vast cellars full of liquor within the compass of ten feet square above-ground) were particularly abundant, together with apples, oranges, and oysters, the stalls of fishmongers and butchers, and slop-shops, where blue jackets and duck trousers swung and capered before the doors. Everything was on the poorest scale, and the place bore an aspect of unredeemable decay. From this remote point of London, I strolled leisurely towards the heart of the city; while the streets, at first but thinly occupied by man or vehicle, got more and more thronged with foot-passengers, carts, drays, cabs, and the all-pervading and all-accommodating omnibus. But I lack courage, and feel that I should lack perseverance, as the gentlest reader would

lack patience, to undertake a descriptive stroll through London streets; more especially as there would be a volume ready for the printer before we could reach a midway resting-place at Charing Cross. It will be the easier course to step aboard another passing steamer, and continue our trip up the Thames.

The next notable group of objects is an assemblage of ancient walls, battlements, and turrets, out of the midst of which rises prominently one great square tower, of a grayish hue, bordered with white stone, and having a small turret at each corner of the roof. This central structure is the White Tower, and the whole circuit of ramparts and inclosed edifices constitutes what is known in English history, and still more widely and impressively in English poetry, as the Tower. A crowd of rivercraft are generally moored in front of it; but if we look sharply at the right moment under the base of the rampart, we may catch a glimpse of an arched water-entrance, half submerged, past which the Thames glides as indifferently as if it were the mouth of a city-kennel. Nevertheless, it is the Traitor's Gate, a dreary kind of triumphal passage-way, (now supposed to be shut up and barred forever,) through which a multitude of noble and illustrious personages have entered the Tower, and found it a brief resting-place on their way to heaven. Passing it many times, I never observed that anybody glanced at this shadowy and ominous trap-door, save myself. It is well that America exists, if it were only that her vagrant children may be impressed and affected by the historical monuments of England in a degree of which the native inhabitants are evidently incapable. These matters are too familiar, too real, and too hopelessly built in amongst and mixed up with the common objects and affairs of life, to be easily susceptible of imaginative coloring in their minds; and even their poets and romancers feel it a toil, and almost a delusion, to extract poetic material out of what seems embodied poetry itself to an American. An Englishman cares nothing about the Tower,

which to us is a haunted castle in dreamland. That honest and excellent gentleman, the late Mr. G. P. R. James, (whose mechanical ability, one might have supposed, would nourish itself by devouring every old stone of such a structure,) once assured me that he had never in his life set eyes upon the Tower, though for years an historic novelist in London.

Not to spend a whole summer's day upon the voyage, we will suppose ourselves to have reached London Bridge, and thence to have taken another steamer for a farther passage up the river. But here the memorable objects succeed each other so rapidly that I can spare but a single sentence even for the great Dome, though I deem it more picturesque, in that dusky atmosphere, than St. Peter's in its clear blue sky. I must mention, however, (since everything connected with royalty is especially interesting to my dear countrymen,) that I once saw a large and beautiful barge, splendidly gilded and ornamented, and overspread with a rich covering, lying at the pier nearest to St. Paul's Cathedral; it had the royal banner of Great Britain displayed, besides being decorated with a number of other flags; and many footmen (who are universally the grandest and gaudiest objects to be seen in England at this day, and these were regal ones, in a bright scarlet livery bedizened with gold-lace, and white silk stockings) were in attendance. I know not what festive or ceremonial occasion may have drawn out this pageant; after all, it might have been merely a city-spectacle, appertaining to the Lord Mayor; but the sight had its value in bringing vividly before me the grand old times when the sovereign and nobles were accustomed to use the Thames as the high street of the metropolis, and join in pompous processions upon it; whereas, the desuetude of such customs, nowadays, has caused the whole show of river-life to consist in a multitude of smoke-begrimed steamers. An analogous change has taken place in the streets, where cabs and the omnibus have crowded out a rich variety of vehicles;

and thus life gets more monotonous in hue from age to age, and appears to seize every opportunity to strip off a bit of its gold-lace among the wealthier classes, and to make itself decent in the lower ones.

Yonder is Whitefriars, the old rowdy Alsatia, now wearing as decorous a face as any other portion of London; and, adjoining it, the avenues and brick squares of the Temple, with that historic garden, close upon the river-side, and still rich in shrubbery and flowers, where the partisans of York and Lancaster plucked the fatal roses, and scattered their pale and bloody petals over so many English battle-fields. Hard by, we see the long white front or rear of Somerset House, and, farther on, rise the two new Houses of Parliament, with a huge unfinished tower already hiding its imperfect summit in the smoky canopy,—the whole vast and cumbrous edifice a specimen of the best that modern architecture can effect, elaborately imitating the masterpieces of those simple ages when men “built better than they knew.” Close by it, we have a glimpse of the roof and upper towers of the holy Abbey; while that gray, ancestral pile on the opposite side of the river is Lambeth Palace, a venerable group of halls and turrets, chiefly built of brick, but with at least one large tower of stone. In our course, we have passed beneath half a dozen bridges, and, emerging out of the black heart of London, shall, soon reach a cleanly suburb, where old Father Thames, if I remember, begins to put on an aspect of unpoluted innocence. And now we look back upon the mass of innumerable roofs, out of which rise steeples, towers, columns, and the great crowning Dome,—look back, in short, upon that mystery of the world’s proudest city, amid which a man so longs and loves to be: not, perhaps, because it contains much that is positively admirable and enjoyable, but because, at all events, the world has nothing better. The cream of external life is there; and whatever merely intellectual or material good we fail to find perfect in Lon-

don, we may as well content ourselves to seek that unattainable thing no farther on this earth.

The steamer terminates its trip at Chelsea, an old town endowed with a prodigious number of pot-houses, and some famous gardens, called the Cremorne, for public amusement. The most noticeable thing, however, is Chelsea Hospital, which, like that of Greenwich, was founded, I believe, by Charles II., (whose bronze statue, in the guise of an old Roman, stands in the centre of the quadrangle,) and appropriated as a home for aged and infirm soldiers of the British army. The edifices are of three stories with windows in the high roofs, and are built of dark, sombre brick, with stone edgings and facings. The effect is by no means that of grandeur, (which is somewhat disagreeably an attribute of Greenwich Hospital,) but a quiet and venerable neatness. At each extremity of the street-front there is a spacious and hospitably open gateway, lounging about which I saw some gray veterans in long scarlet coats of an antique fashion, and the cocked hats of a century ago, or occasionally a modern foraging-cap. Almost all of them moved with a rheumatic gait, two or three stumped on wooden legs, and here and there an arm was missing. Inquiring of one of these fragmentary heroes whether a stranger could be admitted to see the establishment, he replied most cordially, “Oh, yes, Sir,—anywhere! Walk in, and go where you please,—up-stairs, or anywhere!” So I entered, and, passing along the inner side of the quadrangle, came to the door of the chapel, which forms a part of the contiguity of edifices next the street. Here another pensioner, an old warrior of exceedingly peaceable and Christian demeanor, touched his three-cornered hat and asked if I wished to see the interior; to which I assenting, he unlocked the door, and we went in.

The chapel consists of a great hall with a vaulted roof, and over the altar is a large painting in fresco, the subject of which I did not trouble myself to make

out. More appropriate adornments of the place, dedicated as well to martial reminiscences as religious worship, are the long ranges of dusty and tattered banners that hang from their staves all round the ceiling of the chapel. They are trophies of battles fought and won in every quarter of the world, comprising the captured flags of all the nations with whom the British lion has waged war since James II.'s time,—French, Dutch, East-Indian, Prussian, Russian, Chinese, and American,—collected together in this consecrated spot, not to symbolize that there shall be no more discord upon earth, but drooping over the aisle in sullen, though peaceable humiliation. Yes, I said “American” among the rest; for the good old pensioner mistook me for an Englishman, and failed not to point out (and, methought, with an especial emphasis of triumph) some flags that had been taken at Bladensburg and Washington. I fancied, indeed, that they hung a little higher and drooped a little lower than any of their companions in disgrace. It is a comfort, however, that their proud devices are already indistinguishable, or nearly so, owing to dust and tatters and the kind offices of the moths, and that they will soon rot from the banner-staves and be swept out in unrecognized fragments from the chapel-door.

It is a good method of teaching a man how imperfectly cosmopolitan he is, to show him his country's flag occupying a position of dishonor in a foreign land. But, in truth, the whole system of a people crowing over its military triumphs had far better be dispensed with, both on account of the ill-blood that it helps to keep fermenting among the nations, and because it operates as an accumulative inducement to future generations to aim at a kind of glory, the gain of which has generally proved more ruinous than its loss. I heartily wish that every trophy of victory might crumble away, and that every reminiscence or tradition of a hero, from the beginning of the world to this day, could pass out of all men's memories at once and for-

ever. I might feel very differently, to be sure, if we Northerners had anything especially valuable to lose by the fading of those illuminated names.

I gave the pensioner (but I am afraid there may have been a little affectation in it) a magnificent guerdon of all the silver I had in my pocket, to requite him for having unintentionally stirred up my patriotic susceptibilities. He was a meek-looking, kindly old man, with a humble freedom and affability of manner that made it pleasant to converse with him. Old soldiers, I know not why, seem to be more accostable than old sailors. One is apt to hear a growl beneath the smoothest courtesy of the latter. The mild veteran, with his peaceful voice, and gentle, reverend aspect, told me that he had fought at a cannon all through the Battle of Waterloo, and escaped unhurt; he had now been in the hospital four or five years, and was married, but necessarily underwent a separation from his wife, who lived outside of the gates. To my inquiry whether his fellow-pensioners were comfortable and happy, he answered, with great alacrity, “Oh, yes, Sir!” qualifying his evidence, after a moment's consideration, by saying, in an undertone, “There are some people, your Honor knows, who could not be comfortable anywhere.” I did know it, and fear that the system of Chelsea Hospital allows too little of that wholesome care and regulation of their own occupations and interests which might assuage the sting of life to those naturally uncomfortable individuals by giving them something external to think about. But my old friend here was happy in the hospital, and by this time, very likely, is happy in heaven, in spite of the bloodshed that he may have caused by touching off a cannon at Waterloo.

Crossing Battersea Bridge, in the neighborhood of Chelsea, I remember seeing a distant gleam of the Crystal Palace, glimmering afar in the afternoon sunshine like an imaginary structure,—an air-castle by chance descended upon earth, and resting there one instant be-

fore it vanished, as we sometimes see a soap-bubble touch unharmed on the carpet, — a thing of only momentary visibility and no substance, destined to be overburdened and crushed down by the first cloud-shadow that might fall upon that spot. Even as I looked, it disappeared. Shall I attempt a picture of this exhalation of modern ingenuity, or what else shall I try to paint? Everything in London and its vicinity has been depicted innumerable times, but never once translated into intelligible images; it is an "old, old story," never yet told, nor to be told. While writing these reminiscences, I am continually impressed with the futility of the effort to give any creative truth to my sketch, so that it might produce such pictures in the reader's mind as would cause the original scenes to appear familiar when afterwards beheld. Nor have other writers often been more successful in representing definite objects prophetically to my own mind. In truth, I believe that the chief delight and advantage of this kind of literature is not for any real information that it supplies to untravelled people, but for reviving the recollections and reawakening the emotions of persons already acquainted with the scenes described. Thus I found an exquisite pleasure, the other day, in reading Mr. Tuckerman's "Month in England," — a fine example of the way in which a refined and cultivated American looks at the Old Country, the things that he naturally seeks there, and the modes of feeling and reflection which they excite. Correct outlines avail little or nothing, though truth of coloring may be somewhat more efficacious. Impressions, however, states of mind produced by interesting and remarkable objects, these, if truthfully and vividly recorded, may work a genuine effect, and, though but the result of what we see, go farther towards representing the actual scene than any direct effort to paint it. Give the emotions that cluster about it, and, without being able to analyze the spell by which it is summoned up, you get

something like a simulachre of the object in the midst of them. From some of the above reflections I draw the comfortable inference, that, the longer and better known a thing may be, so much the more eligible is it as the subject of a descriptive sketch.

On a Sunday afternoon, I passed through a side-entrance in the time-blackened wall of a place of worship, and found myself among a congregation assembled in one of the transepts and the immediately contiguous portion of the nave. It was a vast old edifice, spacious enough, within the extent covered by its pillared roof and overspread by its stone pavement, to accommodate the whole of church-going London, and with a far wider and loftier concave than any human power of lungs could fill with audible prayer. Oaken benches were arranged in the transept, on one of which I seated myself, and joined, as well as I knew how, in the sacred business that was going forward. But when it came to the sermon, the voice of the preacher was puny, and so were his thoughts, and both seemed impertinent at such a time and place, where he and all of us were bodily included within a sublime act of religion which could be seen above and around us and felt beneath our feet. The structure itself was the worship of the devout men of long ago, miraculously preserved in stone without losing an atom of its fragrance and fervor; it was a kind of anthem-strain that they had sung and poured out of the organ in centuries gone by; and being so grand and sweet, the Divine benevolence had willed it to be prolonged for the behoof of auditors unborn. I therefore came to the conclusion, that, in my individual case, it would be better and more reverent to let my eyes wander about the edifice than to fasten them and my thoughts on the evidently uninspired mortal who was venturing — and felt it no venture at all — to speak here above his breath.

The interior of Westminster Abbey (for the reader recognized it, no doubt,

the moment we entered) is built of rich brown stone; and the whole of it — the lofty roof, the tall, clustered pillars, and the pointed arches — appears to be in consummate repair. At all points where decay has laid its finger, the structure is clamped with iron, or otherwise carefully protected; and being thus watched over, — whether as a place of ancient sanctity, a noble specimen of Gothic art, or an object of national interest and pride, — it may reasonably be expected to survive for as many ages as have passed over it already. It was sweet to feel its venerable quietude, its long-enduring peace, and yet to observe how kindly and even cheerfully it received the sunshine of to-day, which fell from the great windows into the fretted aisles and arches that laid aside somewhat of their aged gloom to welcome it. Sunshine always seems friendly to old abbeys, churches, and castles, kissing them, as it were, with a more affectionate, though still reverential familiarity, than it accords to edifices of later date. A square of golden light lay on the sombre pavement afar off, falling through the grand western entrance, the folding leaves of which were wide open, and afforded glimpses of people passing to and fro in the outer world, while we sat dimly enveloped in the solemnity of antique devotion. In the south transept, separated from us by the full breadth of the minster, there were painted glass windows, of which the uppermost appeared to be a great orb of many-colored radiance, being, indeed, a cluster of saints and angels whose glorified bodies formed the rays of an aureole emanating from a cross in the midst. These windows are modern, but combine softness with wonderful brilliancy of effect. Through the pillars and arches, I saw that the walls in that distant region of the edifice were almost wholly incrustated with marble, now grown yellow with time, no blank, unlettered slabs, but memorials of such men as their respective generations deemed wisest and bravest. Some of them were commemorated merely by inscriptions on mural

tablets, others by sculptured bas-reliefs, others (once famous, but now forgotten generals or admirals, these) by ponderous tombs that aspired towards the roof of the aisle, or partly curtained the immense arch of a window. These mountains of marble were peopled with the sisterhood of Allegory, winged trumpeters, and classic figures in full-bottomed wigs; but it was strange to observe how the old Abbey melted all such absurdities into the breadth of its own grandeur, even magnifying itself by what would elsewhere have been ridiculous. Methinks it is the test of Gothic sublimity to overpower the ridiculous without deigning to hide it; and these grotesque monuments of the last century answer a similar purpose with the grinning faces which the old architects scattered among their most solemn conceptions.

From these distant wanderings, (it was my first visit to Westminster Abbey, and I would gladly have taken it all in at a glance,) my eyes came back and began to investigate what was immediately about me in the transept. Close at my elbow was the pedestal of Canning's statue. Next beyond it was a massive tomb, on the spacious tablet of which reposed the full-length figures of a marble lord and lady, whom an inscription announced to be the Duke and Duchess of Newcastle, — the historic Duke of Charles I.'s time, and the fantastic Duchess, traditionally remembered by her poems and plays. She was of a family, as the record on her tomb proudly informed us, of which all the brothers had been valiant and all the sisters virtuous. A recent statue of Sir John Malcom, the new marble as white as snow, held the next place; and near by was a mural monument and bust of Sir Peter Warren. The round visage of this old British admiral has a certain interest for a New-Englander, because it was by no merit of his own, (though he took care to assume it as such,) but by the valor and warlike enterprise of our colonial forefathers, especially the stout men of Massachusetts, that he won rank and re-

noun, and a tomb in Westminster Abbey. Lord Mansfield, a huge mass of marble done into the guise of a judicial gown and wig, with a stern face in the midst of the latter, sat on the other side of the transept; and on the pedestal beside him was a figure of Justice, holding forth, instead of the customary grocer's scales, an actual pair of brass steelyards. It is an ancient and classic instrument, undoubtedly; but I had supposed that Portia (when Shylock's pound of flesh was to be weighed) was the only judge that ever really called for it in a court of justice. Pitt and Fox were in the same distinguished company; and John Kemble, in Roman costume, stood not far off, but strangely shorn of the dignity that is said to have enveloped him like a mantle in his lifetime. Perhaps the evanescent majesty of the stage is incompatible with the long endurance of marble and the solemn reality of the tomb; though, on the other hand, almost every illustrious personage here represented has been invested with more or less of stage-trickery by his sculptor. In truth, the artist (unless there be a divine efficacy in his touch, making evident a heretofore hidden dignity in the actual form) feels it an imperious law, to remove his subject as far from the aspect of ordinary life as may be possible without sacrificing every trace of resemblance. The absurd effect of the contrary course is very remarkable in the statue of Mr. Wilberforce, whose actual self, save for the lack of color, I seemed to behold, seated just across the aisle.

This excellent man appears to have sunk into himself in a sitting posture, with a thin leg crossed over his knee, a book in one hand, and a finger of the other under his chin, I believe, or applied to the side of his nose, or to some equally familiar purpose; while his exceedingly homely and wrinkled face, held a little on one side, twinkles at you with the shrewdest complacency, as if he were looking right into your eyes, and twiggled something there which you had half a mind to conceal from him. He keeps

this look so pertinaciously that you feel it to be insufferably impertinent, and bethink yourself what common ground there may be between yourself and a stone image, enabling you to resent it. I have no doubt that the statue is as like Mr. Wilberforce as one pea to another, and you might fancy, that, at some ordinary moment, when he least expected it, and before he had time to smooth away his knowing complication of wrinkles, he had seen the Gorgon's head, and whitened into marble, — not only his personal self, but his coat and small-clothes, down to a button and the minutest crease of the cloth. The ludicrous result marks the impropriety of bestowing the age-long duration of marble upon small, characteristic individualities, such as might come within the province of waxen imagery. The sculptor should give permanence to the figure of a great man in his mood of broad and grand composure, which would obliterate all mean peculiarities; for, if the original were unaccustomed to such a mood, or if his features were incapable of assuming the guise, it seems questionable whether he could really have been entitled to a marble immortality. In point of fact, however, the English face and form are seldom statuesque, however illustrious the individual.

It ill becomes me, perhaps, to have lapsed into this mood of half-jocose criticism in describing my first visit to Westminster Abbey, a spot which I had dreamed about more reverentially, from my childhood upward, than any other in the world, and which I then beheld, and now look back upon, with profound gratitude to the men who built it, and a kindly interest, I may add, in the humble personage that has contributed his little all to its impressiveness, by depositing his dust or his memory there. But it is a characteristic of this grand edifice that it permits you to smile as freely under the roof of its central nave as if you stood beneath the yet grander canopy of heaven. Break into laughter, if you feel inclined, provided the vergers do

not hear it echoing among the arches. In an ordinary church, you would keep your countenance for fear of disturbing the sanctities or proprieties of the place; but you need leave no honest and decorous portion of your human nature outside of these benign and truly hospitable walls. Their mild awfulness will take care of itself. Thus it does no harm to the general impression, when you come to be sensible that many of the monuments are ridiculous, and commemorate a mob of people who are mostly forgotten in their graves, and few of whom ever deserved any better boon from posterity. You acknowledge the force of Sir Godfrey Kneller's objection to being buried in Westminster Abbey, because "they do bury fools there!" Nevertheless, these grotesque carvings of marble, that break out in dingy-white blotches on the old freestone of the interior walls, have come there by as natural a process as might cause mosses and ivy to cluster about the external edifice; for they are the historical and biographical record of each successive age, written with its own hand, and all the truer for the inevitable mistakes, and none the less solemn for the occasional absurdity. Though you entered the Abbey expecting to see the tombs only of the illustrious, you are content, at last, to read many names, both in literature and history, that have now lost the reverence of mankind, if, indeed, they ever really possessed it. Let these men rest in peace. Even if you miss a name or two that you hoped to find there, they may well be spared. It matters little a few more or less, or whether Westminster Abbey contains or lacks any one man's grave, so long as the Centuries, each with the crowd of personages that it deemed memorable, have chosen it as their place of honored sepulture, and laid themselves down under its pavement. The inscriptions and devices on the walls are rich with evidences of the fluctuating tastes, fashions, manners, opinions, prejudices, follies, wisdoms of the past, and thus they combine into a more truthful memorial of their dead

times than any individual epitaph-maker ever meant to write.

When the services were over, many of the audience seemed inclined to linger in the nave or wander away among the mysterious aisles; for there is nothing in this world so fascinating as a Gothic minster, which always invites you deeper and deeper into its heart both by vast revelations and shadowy concealments. Through the open-work screen that divides the nave from the chancel and choir, we could discern the gleam of a marvellous window, but were debarred from entrance into that more sacred precinct of the Abbey by the vergers. These vigilant officials (doing their duty all the more strenuously because no fees could be exacted from Sunday visitors) flourished their staves, and drove us towards the grand entrance like a flock of sheep. Lingered through one of the aisles, I happened to look down, and found my foot upon a stone inscribed with this familiar exclamation, "*O rare Ben Jonson!*" and remembered the story of stout old Ben's burial in that spot, standing upright, — not, I presume, on account of any unseemly reluctance on his part to lie down in the dust, like other men, but because standing-room was all that could reasonably be demanded for a poet among the slumberous notabilities of his age. It made me weary to think of it! — such a prodigious length of time to keep one's feet! — apart from the honor of the thing, it would certainly have been better for Ben to stretch himself at ease in some country-churchyard. To this day, however, I fancy that there is a contemptuous alloy mixed up with the admiration which the higher classes of English society profess for their literary men.

Another day — in truth, many other days — I sought out Poets' Corner, and found a sign-board and pointed finger, directing the visitor to it, on the corner house of a little lane leading towards the rear of the Abbey. The entrance is at the southeastern end of the south transept, and it is used, on ordinary occasions, as the only free mode of access to the

building. It is no spacious arch, but a small, lowly door, passing through which, and pushing aside an inner screen that partly keeps out an exceedingly chill wind, you find yourself in a dim nook of the Abbey, with the busts of poets gazing at you from the otherwise bare stonework of the walls. Great poets, too; for Ben Jonson is right behind the door, and Spenser's tablet is next, and Butler's on the same side of the transept, and Milton's (whose bust you know at once by its resemblance to one of his portraits, though older, more wrinkled, and sadder than that) is close by, and a profile-medallion of Gray beneath it. A window high aloft sheds down a dusky daylight on these and many other sculptured marbles, now as yellow as old parchment, that cover the three walls of the nook up to an elevation of about twenty feet above the pavement. It seemed to me that I had always been familiar with the spot. Enjoying a humble intimacy — and how much of my life had else been a dreary solitude! — with many of its inhabitants, I could not feel myself a stranger there. It was delightful to be among them. There was a genial awe, mingled with a sense of kind and friendly presences about me; and I was glad, moreover, at finding so many of them there together, in fit companionship, mutually recognized and duly honored, all reconciled now, whatever distant generations, whatever personal hostility or other miserable impediment, had divided them far asunder while they lived. I have never felt a similar interest in any other tombstones, nor have I ever been deeply moved by the imaginary presence of other famous dead people. A poet's ghost is the only one that survives for his fellow-mortals, after his bones are in the dust, — and he not ghostly, but cherishing many hearts with his own warmth in the chilliest atmosphere of life. What other fame is worth aspiring for? Or, let me speak it more boldly, what other long-enduring fame can exist? We neither remember nor care anything for the past, except as the poet has made it intelligibly noble and sublime to our com-

prehension. The shades of the mighty have no substance; they flit ineffectually about the darkened stage where they performed their momentary parts, save when the poet has thrown his own creative soul into them, and imparted a more vivid life than ever they were able to manifest to mankind while they dwelt in the body. And therefore — though he cunningly disguises himself in their armor, their robes of state, or kingly purple — it is not the statesman, the warrior, or the monarch that survives, but the despised poet, whom they may have fed with their crumbs, and to whom they owe all that they now are or have, — a name!

In the foregoing paragraph I seem to have been betrayed into a flight above or beyond the customary level that best agrees with me; but it represents fairly enough the emotions with which I passed from Poets' Corner into the chapels, which contain the sepulchres of kings and great people. They are magnificent even now, and must have been inconceivably so when the marble slabs and pillars wore their new polish, and the statues retained the brilliant colors with which they were originally painted, and the shrines their rich gilding, of which the sunlight still shows a glimmer or a streak, though the sunbeam itself looks tarnished with antique dust. Yet this recondite portion of the Abbey presents few memorials of personages whom we care to remember. The shrine of Edward the Confessor has a certain interest, because it was so long held in religious reverence, and because the very dust that settled upon it was formerly worth gold. The helmet and war-saddle of Henry V., worn at Agincourt, and now suspended above his tomb, are memorable objects, but more for Shakspeare's sake than the victor's own. Rank has been the general passport to admission here. Noble and regal dust is as cheap as dirt under the pavement. I am glad to recollect, indeed, (and it is too characteristic of the right English spirit not to be mentioned) one or two gigantic statues of great mechanicians, who con-

tributed largely to the material welfare of England, sitting familiarly in their marble chairs among forgotten kings and queens. Otherwise, the quaintness of the earlier monuments, and the antique beauty of some of them, are what chiefly gives them value. Nevertheless, Addison is buried among the men of rank; not on the plea of his literary fame, however, but because he was connected with nobility by marriage, and had been a Secretary of State. His gravestone is inscribed with a resounding verse from Tickell's lines to his memory, the only lines by which Tickell himself is now remembered, and which (as I discovered a little while ago) he mainly filched from an obscure versifier of somewhat earlier date.

Returning to Poets' Corner, I looked again at the walls, and wondered how the requisite hospitality can be shown to poets of our own and the succeeding ages. There is hardly a foot of space left, although room has lately been found for a bust of Southey and a full-length statue of Campbell. At best, only a little portion of the Abbey is dedicated to poets, literary men, musical composers, and others of the gentle artist-breed, and even into that small nook of sanctity men of other pursuits have thought it decent to intrude themselves. Methinks the tuneful throng, being at home here, should recollect how they were treated in their lifetime, and turn the cold shoulder, looking askance at nobles and official personages, however worthy of honorable interment elsewhere. Yet it shows aptly and truly enough what portion of the world's regard and honor has heretofore been awarded to literary eminence in comparison with other modes of greatness, — this dimly lighted corner (nor even that quietly to themselves) in the vast minster, the walls of which are sheathed and hidden under marble that has been wasted upon the illustrious obscure. Nevertheless, it may not be worth while to quarrel with the world on this account; for, to confess the very truth, their own little nook contains more than one poet

whose memory is kept alive by his monument, instead of imbuing the senseless stone with a spiritual immortality, — men of whom you do not ask, "Where is he?" but "Why is he here?" I estimate that all the literary people who really make an essential part of one's inner life, including the period since English literature first existed, might have ample elbow-room to sit down and quaff their draughts of Castaly round Chaucer's broad, horizontal tombstone. These divinest poets consecrate the spot, and throw a reflected glory over the humblest of their companions. And as for the latter, it is to be hoped that they may have long outgrown the characteristic jealousies and morbid sensibilities of their craft, and have found out the little value (probably not amounting to sixpence in immortal currency) of the posthumous renown which they once aspired to win. It would be a poor compliment to a dead poet to fancy him leaning out of the sky and snuffing up the impure breath of earthly praise.

Yet we cannot easily rid ourselves of the notion that those who have bequeathed us the inheritance of an undying song would fain be conscious of its endless reverberations in the hearts of mankind, and would delight, among sublimer enjoyments, to see their names emblazoned in such a treasure-place of great memories as Westminster Abbey. There are some men, at all events, — true and tender poets, moreover, and fully deserving of the honor, — whose spirits, I feel certain, would linger a little while about Poets' Corner for the sake of witnessing their own apotheosis among their kindred. They have had a strong natural yearning, not so much for applause as sympathy, which the cold fortune of their lifetime did but scantily supply; so that this unsatisfied appetite may make itself felt upon sensibilities at once so delicate and retentive, even a step or two beyond the grave. Leigh Hunt, for example, would be pleased, even now, if he could learn that his bust had been repositied in the midst of the old poets whom he ad-

mired and loved; though there is hardly a man among the authors of to-day and yesterday whom the judgment of Englishmen would be less likely to place there. He deserves it, however, if not for his verse, (the value of which I do not estimate, never having been able to read it,) yet for his delightful prose, his unmeasured poetry, the inscrutable happiness of his touch, working soft miracles by a life-process like the growth of grass and flowers. As with all such gentle writers, his page sometimes betrayed a vestige of affectation, but, the next moment, a rich, natural luxuriance overgrew and buried it out of sight. I knew him a little, and (since, Heaven be praised, few English celebrities whom I chanced to meet have enfranchised my pen by their decease, and as I assume no liberties with living men) I will conclude this rambling article by sketching my first interview with Leigh Hunt.

He was then at Hammersmith, occupying a very plain and shabby little house, in a contiguous range of others like it, with no prospect but that of an ugly village-street, and certainly nothing to gratify his craving for a tasteful environment, inside or out. A slatternly maid-servant opened the door for us, and he himself stood in the entry, a beautiful and venerable old man, buttoned to the chin in a black dress-coat, tall and slender, with a countenance quietly alive all over, and the gentlest and most naturally courteous manner. He ushered us into his little study, or parlor, or both, — a very forlorn room, with poor paper-hangings and carpet, few books, no pictures that I remember, and an awful lack of upholstery. I touch distinctly upon these external blemishes and this nudity of adornment, not that they would be worth mentioning in a sketch of other remarkable persons, but because Leigh Hunt was born with such a faculty of enjoying all beautiful things that it seemed as if Fortune did him as much wrong in not supplying them as in withholding a sufficiency of vital breath from ordinary men. All kinds of mild magnificence, tempered by his taste, would

have become him well; but he had not the grim dignity that assumes nakedness as the better robe.

I have said that he was a beautiful old man. In truth, I never saw a finer countenance, either as to the mould of features or the expression, nor any that showed the play of feeling so perfectly without the slightest theatrical emphasis. It was like a child's face in this respect. At my first glimpse of him, when he met us in the entry, I discerned that he was old, his long hair being white and his wrinkles many; it was an aged visage, in short, such as I had not at all expected to see, in spite of dates, because his books talk to the reader with the tender vivacity of youth. But when he began to speak, and as he grew more earnest in conversation, I ceased to be sensible of his age; sometimes, indeed, its dusky shadow darkened through the gleam which his sprightly thoughts diffused about his face, but then another flash of youth came out of his eyes and made an illumination again. I never witnessed such a wonderfully illusive transformation, before or since; and, to this day, trusting only to my recollection, I should find it difficult to decide which was his genuine and stable predicament, — youth or age. I have met no Englishman whose manners seemed to me so agreeable, soft, rather than polished, wholly unconventional, the natural growth of a kindly and sensitive disposition without any reference to rule, or else obedient to some rule so subtle that the nicest observer could not detect the application of it.

His eyes were dark and very fine, and his delightful voice accompanied their visible language like music. He appeared to be exceedingly appreciative of whatever was passing among those who surrounded him, and especially of the vicissitudes in the consciousness of the person to whom he happened to be addressing himself at the moment. I felt that no effect upon my mind of what he uttered, no emotion, however transitory, in myself, escaped his notice, though not

from any positive vigilance on his part, but because his faculty of observation was so penetrative and delicate; and to say the truth, it a little confused me to discern always a ripple on his mobile face, responsive to any slightest breeze that passed over the inner reservoir of my sentiments, and seemed thence to extend to a similar reservoir within himself. On matters of feeling, and within a certain depth, you might spare yourself the trouble of utterance, because he already knew what you wanted to say, and perhaps a little more than you would have spoken. His figure was full of gentle movement, though, somehow, without disturbing its quietude; and as he talked, he kept folding his hands nervously, and betokened in many ways a fine and immediate sensibility, quick to feel pleasure or pain, though scarcely capable, I should imagine, of a passionate experience in either direction. There was not an English trait in him from head to foot, morally, intellectually, or physically. Beef, ale, or stout, brandy, or port-wine, entered not at all into his composition. In his earlier life, he appears to have given evidences of courage and sturdy principle, and of a tendency to fling himself into the rough struggle of humanity on the liberal side. It would be taking too much upon myself to affirm that this was merely a projection of his fancy-world into the actual, and that he never could have hit a downright blow, and was altogether an unsuitable person to receive one. I beheld him not in his armor, but in his peacefullest robes. Nevertheless, drawing my conclusion merely from what I saw, it would have occurred to me that his main deficiency was a lack of grit. Though anything but a timid man, the combative and defensive elements were not prominently developed in his character, and could have been made available only when he put an unnatural force upon his instincts. It was on this account, and also because of the fineness of his nature generally, that the English appreciated him no better, and left this sweet and deli-

cate poet poor, and with scanty laurels in his declining age.

It was not, I think, from his American blood that Leigh Hunt derived either his amiability or his peaceful inclinations; at least, I do not see how we can reasonably claim the former quality as a national characteristic, though the latter might have been fairly inherited from his ancestors on the mother's side, who were Pennsylvania Quakers. But the kind of excellence that distinguished him — his fineness, subtilty, and grace — was that which the richest cultivation has heretofore tended to develop in the happier examples of American genius, and which (though I say it a little reluctantly) is perhaps what our future intellectual advancement may make general among us. His person, at all events, was thoroughly American, and of the best type, as were likewise his manners; for we are the best — as well as the worst-mannered people in the world.

Leigh Hunt loved dearly to be praised. That is to say, he desired sympathy as a flower seeks sunshine, and perhaps profited by it as much in the richer depth of coloring that it imparted to his ideas. In response to all that we ventured to express about his writings, (and, for my part, I went quite to the extent of my conscience, which was a long way, and there left the matter to a lady and a young girl, who happily were with me,) his face shone, and he manifested great delight, with a perfect, and yet delicate, frankness for which I loved him. He could not tell us, he said, the happiness that such appreciation gave him; it always took him by surprise, he remarked, for — perhaps because he cleaned his own boots, and performed other little ordinary offices for himself — he never had been conscious of anything wonderful in his own person. And then he smiled, making himself and all the poor little parlor about him beautiful thereby. It is usually the hardest thing in the world to praise a man to his face; but Leigh Hunt received the incense with such gracious satisfaction, (feeling it to be

sympathy, not vulgar praise,) that the only difficulty was to keep the enthusiasm of the moment within the limit of permanent opinion. A storm had suddenly come up while we were talking; the rain poured, the lightning flashed, and the thunder broke; but I hope, and have great pleasure in believing, that it was a sunny hour for Leigh Hunt. Nevertheless, it was not to my voice that he most favorably inclined his ear, but to those of my companions. Women are the fit ministers at such a shrine.

He must have suffered keenly in his lifetime, and enjoyed keenly, keeping his emotions so much upon the surface as he seemed to do, and convenient for everybody to play upon. Being of a cheerful temperament, happiness had probably the upperhand. His was a light, mildly joyous nature, gentle, graceful, yet seldom attaining to that deepest grace which results from power; for beauty, like woman, its human representative, dallies with the gentle, but yields its consummate favor only to the strong. I imagine that Leigh Hunt may have been more beautiful when I met him, both in person and character, than in his earlier days. As a young man, I could conceive of his being finical in certain moods, but not now, when the gravity of age shed a venerable grace about him. I rejoiced to hear him say that he was favored with most confident and cheering anticipations in respect to a future life; and there were abundant proofs, throughout our interview, of an unrepining spirit, resignation, quiet relinquishment of the worldly benefits that were denied him, thankful enjoyment of

whatever he had to enjoy, and piety, and hope shining onward into the dusk, — all of which gave a reverential cast to the feeling with which we parted from him. I wish that he could have had one full draught of prosperity before he died. As a matter of artistic propriety, it would have been delightful to see him inhabiting a beautiful house of his own, in an Italian climate, with all sorts of elaborate upholstery and minute elegancies about him, and a succession of tender and lovely women to praise his sweet poetry from morning to night. I hardly know whether it is my fault, or the effect of a weakness in Leigh Hunt's character, that I should be sensible of a regret of this nature, when, at the same time, I sincerely believe that he has found an infinity of better things in the world whither he has gone.

At our leave-taking, he grasped me warmly by both hands, and seemed as much interested in our whole party as if he had known us for years. All this was genuine feeling, a quick, luxuriant growth out of his heart, which was a soil for flower-seeds of rich and rare varieties, not acorns, but a true heart, nevertheless. Several years afterwards I met him for the last time at a London dinner-party, looking sadly broken down by infirmities; and my final recollection of the beautiful old man presents him arm in arm with, nay, partly embraced and supported by, if I mistake not, another beloved and honored poet, whose minstrel-name, since he has a week-day one for his personal occasions, I will venture to speak. It was Barry Cornwall, whose kind introduction had first made me known to Leigh Hunt.

## THE FERN FORESTS OF THE CARBONIFEROUS PERIOD.

DRAW two lines on your map, the upper one running from the mouth of the St. Lawrence westward nearly to St. Paul on the Mississippi, and the lower one from the neighborhood of St. John's in Newfoundland running southwesterly about to the point where the Wisconsin joins the Mississippi, but jutting down to form an extensive peninsula comprising part of the States of Indiana and Illinois, and you include between them all of the United States which existed at the close of the Devonian period. The upper line rests against the granite hills dividing the Silurian and Devonian deposits of the British Possessions to the north from those of the United States to the south, Canada itself consisting, in great part, of the granite ridge.

How far the early deposits extended to the north of the Laurentian Hills, as well as the outline of that portion of the continent in those times, remains still very problematical; but the investigations thus far undertaken in those regions would lead to the supposition that the same granite upheaval which raised Canada stretched northward in a broad, low ridge of land, widening in its upper part and extending to the neighborhood of Bathurst Inlet and King William's Island, while on either side of it to the east and west the Silurian and Devonian deposits extended far toward the present outlines of the continent.

Indeed, our geological surveys, as well as the information otherwise obtained concerning the primitive condition of North America and the gradual accessions it has received in more recent periods, point to a very early circumscription of the area which, in the course of time, was to become the continent we now inhabit, with its modern features.\*

\* It would be impossible to encumber the pages of the *Atlantic Monthly* with references to all the authorities on which such geological results rest. They are drawn from the

Not only from the geology of America, but from that of Europe also, it would seem that the position of the continents was sketched out very early in the progressive development of the physical constitution of our earth. It is true that in the present state of our knowledge such wide generalizations must be taken with caution, and held in abeyance to the additional facts which future investigations may develop. But thus far the results certainly do not sustain the theories which have lately found favor among geologists, of entire changes in the relative distribution of land and sea and in the connection of continents with one another; on the contrary, it would appear, that, in accordance with the laws of all organic progress, arising from a fixed starting-point and proceeding through regular changes toward a well-defined end, the continents have grown steadily and consistently from the beginning, through successive accessions in a definite direction, to their present form and organic correlations. If, indeed, there is any meaning in the remarkably symmetrical combinations of the double twin continents in the Eastern Hemisphere, so closely soldered in their northern half, as contrasted with the single pair in the Western Hemisphere, isolated in their position, but so strikingly similar in their outlines, they must be the result of a progressive and predetermined growth already hinted at in the relative position and gradual increase of the first lands raised above the level of the ocean.

However this may be, there can be no doubt that we now know with tolerable accuracy the limits of the land raised above the water at that period in the present United States. Let us see, then, what we inclose between our two lines. We have Newfoundland and Nova

various State Surveys, including that of the mineral lands of Lake Superior, and other more general works on American geology.

Scotia, the greater part of New England, the whole of New York, a narrow strip along the north of Ohio, a great part of Indiana and Illinois, and nearly the whole of Michigan and Wisconsin.

Within this region lie all the Great Lakes. The origin of these large troughs, holding such immense sheets of fresh water, remains still the subject of discussion and investigation among geologists. It has been supposed that in the primitive configuration of the globe, when the formation of those depressions at the poles in which the Arctic seas are accumulated gave rise to a corresponding protrusion at the equator, the curve thus produced throughout the North Temperate Zone may have forced up the Canada granite, and have caused, at the same time, those rents in the earth's surface now filled by the Canada lakes; and this view is sustained by the fact that there is a belt of lakes, among which, however, the Canada lakes are far the largest, all around the world in that latitude. The geological phenomena connected with all these lakes have not, however, been investigated with sufficient accuracy and detail, nor has there been any comparison of them extensive and comprehensive enough to justify the adoption of any theory respecting their origin. In an excursion to Lake Superior, some years since, I satisfied myself that the position and outline of that particular lake had their immediate cause in several distinct systems of dikes which intersect its northern shore, and have probably cut up the whole tract of rock over the space now filled by that wonderful sheet of fresh water in such a way as to destroy its continuity, to produce depressions, and gradually create the excavation which now forms the basin of the lake. How far the same causes have been effectual in producing the other large lakes I am unable to say, never having had the opportunity of studying their formation with the same care.

The existence of the numerous smaller lakes running north and south in the State of New York, as the Canandaigua,

Seneca, Cayuga, etc., is more easily accounted for. Slow and gradual as was the process by which all that region was lifted above the ocean, it was, nevertheless, accompanied by powerful dislocations of the stratified deposits, as we shall see when we examine them with reference to the local phenomena connected with them. To these dislocations of the strata we owe the transverse cracks across the central part of New York, which needed only the addition of the fresh water poured into them by the rains to transform them into lakes.

I shall not attempt any account of the differences between the animals of the Devonian period and those of the Silurian period, because they consist of structural details difficult to present in a popular form and uninteresting to all but the professional naturalist. Suffice it to say, that, though the organic world had the same general character in these two closely allied periods, yet its representatives in each were specifically distinct, and their differences, however slight, are as constant and as definitely marked as those between more widely separated creations.

At the close of the Devonian period, several upheavals occurred of great significance for the future history of America. One in Ohio raised the elevated ground on which Cincinnati now stands; another hill lifted its granite crest in Missouri, raising with it an extensive tract of Silurian and Devonian deposits; while a smaller one, which does not seem, however, to have disturbed the beds about it, so powerfully, broke through in Arkansas. At the same time, elevations took place toward the East,—the first links, few and detached, in the great Alleghany chain which now raises its rocky wall from New England to Alabama.

In the Ohio hill, the granite did not break through, though the force of the upheaval was such as to rend asunder the Devonian deposits, for we find them lying torn and broken about the base of the hill; while the Silurian beds, which

should underlie them in their natural position, form its centre and summit. This accounts for the great profusion of Silurian organic remains in that neighborhood. Indeed, there is no locality which forces upon the observer more strongly the conviction of the profusion and richness of the early creation; for one may actually collect the remains of Silurian Shells and Crustacea by cart-loads around the city of Cincinnati. A naturalist would find it difficult to gather along any modern sea-shore, even on tropical coasts, where marine life is more abundant than elsewhere, so rich a harvest, in the same time, as he will bring home from an hour's ramble in the environs of that city.

These elevations naturally gave rise to depressions between themselves and the land on either side of them, and caused also so many counter-slopes dipping toward the uniform southern slope already formed at the north. Thus between the several new upheavals, as well as between them all and the land to the north of them, wide basins or troughs were formed, inclosed on the south, west, and east by low hills, (for these more recent eruptions were, like all the early upheavals, insignificant in height,) and bounded on the north by the more ancient shores of the preceding ages.

These were the inland seas of the Carboniferous period. Here, again, we must infer the successive stages of a history which we can read only in its results. Shut out from the ocean, these shallow sea-basins were gradually changed by the rains to fresh-water lakes; the lakes, in their turn, underwent a transformation, becoming filled, in the course of centuries, with the materials worn away from their shores, with the *débris* of the animals which lived and died in their waters, as well as with the decaying matter from aquatic plants, till at last they were changed to spreading marshes, and on these marshes arose the gigantic fern-vegetation of which the first forests chiefly consisted. Such are the

separate chapters in the history of the coal-basins of Illinois, Missouri, Pennsylvania, New England, and Nova Scotia. First inland seas, then fresh-water lakes, then spreading marshes, then gigantic forests, and lastly vast storehouses of coal for the human race.

Although coal-beds are by no means peculiar to the Carboniferous period, since such deposits must be formed wherever the decay of vegetation is going on extensively, yet it would seem that coal-making was the great work in that age of the world's physical history. The atmospheric conditions, so far as we can understand them, were then especially favorable to this result. Though the existence of such an extensive terrestrial vegetation shows conclusively that an atmosphere must have been already established, with all the attendant phenomena of light, heat, air, moisture, etc., yet it is probable that this atmosphere differed from ours in being very largely charged with carbonic acid.

We should infer this from the nature of the animals characteristic of the period; for, though land-animals were introduced, and the organic world was no longer exclusively marine, there were as yet none of the higher beings in whom respiration is an active process. In all warm-blooded animals the breathing is quick, requiring a large proportion of oxygen in the surrounding air, and indicating by its rapidity the animation of the whole system; while the slow-breathing, cold-blooded animals can live in an air that is heavily loaded with carbon. It is well known, however, that, though carbon is so deadly to higher animal life, plants require it in great quantities; and it would seem that one of the chief offices of the early forests was to purify the atmosphere of its undue proportion of carbonic acid, by absorbing the carbon into their own substance, and eventually depositing it as coal in the soil.

Another very important agent in the process of purifying the atmosphere, and adapting it to the maintenance of a higher organic life, is found in the deposits of

lime. My readers will excuse me, if I introduce here a very elementary chemical fact to explain this statement. Limestone is carbonate of calcium. Calcium is a metal, fusible as such, and, forming a part of the melted masses within the earth, it was thrown out with the eruptions of Plutonic rocks. Brought to the air, it would appropriate a certain amount of oxygen, and by that process would become oxide of calcium, in which condition it combines very readily with carbonic acid. Thus it becomes carbonate of lime; and all lime deposits played an important part in establishing the atmospheric proportions essential to the existence of the warm-blooded animals.

Such facts remind us how far more comprehensive the results of science will become when the different branches of scientific investigation are pursued in connection with each other. When chemists have brought their knowledge out of their special laboratories into the laboratory of the world, where chemical combinations are and have been through all time going on in such vast proportions,—when physicists study the laws of moisture, of clouds and storms, in past periods as well as in the present,—when, in short, geologists and zoölogists are chemists and physicists, and *vice versâ*,—then we shall learn more of the changes the world has undergone than is possible now that they are separately studied.

It may be asked, how any clue can be found to phenomena so evanescent as those of clouds and moisture. But do we not trace in the old deposits the rain-storms of past times? The heavy drops of a passing shower, the thick, crowded tread of a splashing rain, or the small pin-pricks of a close and fine one,—all the story, in short, of the rising vapors, the gathering clouds, the storms and showers of ancient days, we find recorded for us in the fossil rain-drops; and when we add to this the possibility of analyzing the chemical elements which have been absorbed into the soil, but which once made part of the atmosphere, it is not too much to hope that we shall learn

something hereafter of the meteorology even of the earliest geological ages.

The peculiar character of the vegetable tissue in the trees of the Carboniferous period, containing, as it did, a large supply of resin drawn from the surrounding elements, confirms the view of the atmospheric conditions above stated; and this fact, as well as the damp, soggy soil in which the first forests must have grown, accounts for the formation of coal in greater quantity and more combustible in quality than is found in the more recent deposits. But stately as were those fern forests, where plants which creep low at our feet to-day, or are known to us chiefly as underbrush, or as rushes and grasses in swampy grounds, grew to the height of lofty trees, yet the vegetation was of an inferior kind.

There has been a gradation in time for the vegetable as well as the animal world. With the marine population of the more ancient geological ages we find nothing but sea-weeds,—of great variety, it is true, and, as it would seem, from some remains of the marine Cryptogams in early times, of immense size, as compared with modern sea-weeds. But in the Carboniferous period, the plants, though still requiring a soaked and marshy soil, were aerial or atmospheric plants: they were covered with leaves; they breathed; their fructification was like that which now characterizes the ferns, the club-mosses, and the so-called “horse-tail plants,” (*Equisetaceæ*,) those grasses of low, damp grounds remarkable for the strongly marked articulations of the stem.

These were the lords of the forests all over the world in the Carboniferous period. Wherever the Carboniferous deposits have been traced, in the United States, in Canada, in England, France, Belgium, Germany, in New Holland, at the Cape of Good Hope, and in South America, the general aspect of the vegetation has been found to be the same, though characterized in the different localities by specific differences of the same nature as those by which the various floræ are distinguished now in different parts

of the same zone. For instance, the Temperate Zone throughout the world is characterized by certain families of trees: by Oaks, Maples, Beeches, Birches, Pines, etc.; but the Oaks, Maples, Beeches, Birches, and the like, of the American flora in that latitude differ in species from the corresponding European flora. So in the Carboniferous period, when more uniform climatic conditions prevailed throughout the world, the character of the vegetation showed a general unity of structure everywhere; but it was nevertheless broken up into distinct botanical provinces by specific differences of the same kind as those which now give such diversity of appearance to the vegetation of the Temperate Zone in Europe as compared with that of America, or to the forests of South America as compared with those of Africa.

There can be no doubt as to the true nature of the Carboniferous forests; for the structural character of the trees is as strongly marked in their fossil remains as in any living plants of the same character. We distinguish the Ferns not only by the peculiar form of their leaves, often perfectly preserved, but also by the fructification on the lower surface of the leaves, and by the distinct marks made on the stem at their point of juncture with it. The leaf of the Fern, when falling, leaves a scar on the stem varying in shape and size according to the kind of Fern, so that the botanist readily distinguishes any particular species of Fern by this means,—a birth-mark, as it were, by which he detects the parentage of the individual. Another indication, equally significant, is found in the tubular structure of the wood in Ferns. On a vertical section of any well-preserved Fern-trunk from the old forests the little tubes may be seen very distinctly running up its length; or, if it be cut through transversely, they may be traced by the little pores like dots on the surface. Trees of this description are found in the Carboniferous marshes, standing erect and perfectly preserved, with trunks a foot and a half in diameter, rising to

a height of many feet. Plants so strongly bituminous as the Ferns, when they equalled in size many of our present forest-trees, naturally made coal deposits of the most combustible quality. It is true that we find the anthracite coal of the same period with comparatively little bituminous matter; but this is where the bitumen has been destroyed by the action of the internal heat of the earth.

Next to the Ferns, the Club-Mosses (*Lycopodiaceæ*) seem to have contributed most largely to the marsh-forests. They were characterized, then, as now, by the small size of the leaves growing close against the stem, so that the stem itself, though covered with leaves, looks almost naked, like the stem of the Cactus. Beside these, there are the tree-like *Equiseta*, in which we find the articulations on the trunk corresponding exactly to those now so characteristic of those marsh-grasses which are the modern representatives of this family of plants, with cone-like fructifications on the summit of the stem.

I would merely touch here upon a subject which does not belong to my own branch of Natural History, but is of the greatest interest in botanical research, namely, the gradation of plants in the geological ages, and the combination of characters in some of the earlier vegetable forms, corresponding to that already noticed in the ancient animal types. For instance, in the Carboniferous period we have only Cryptogams, Ferns, *Lycopodiaceæ*, and *Equisetaceæ*. In the middle geological ages, *Coniferæ* are introduced, the first flowering plant known on earth, but in which the flower is very imperfect as compared with those of the higher groups. The *Coniferæ* were chiefly represented in the middle periods by the *Cycadæ*, that peculiar group of *Coniferæ*, resembling Pines in their structure, but recalling the Ferns by their external appearance. The stem is round and short, its surface being covered with scars similar to those of the Ferns; while on the summit are ten or more leaves, fan-like and spreading when their growth is com-

plete, but rolled up at first, like Fern-leaves before they expand. Their fruit resembles somewhat the Pine-Apple.

The mode of growth of the Coniferae recalls a feature of the Equisetaceae also, in the tufts of little leaves which appear in whorls at regular intervals along the length of the stem in proportion as it elongates, reminding one of the articulations on the stem of the Equisetaceae. The first cone also appears on the summit of the stem, like the terminal cone in the Equisetaceae and the Club-Mosses. Thus in certain types of the vegetable, as well as the animal creation of earlier times, there was a continuation of features, afterwards divided and presented in separate groups. In the present times, no one of these families of plants overlaps the others, but each has a distinct individual character of its own.

At the close of the middle geological ages and the opening of the Tertiary periods, the Monocotyledons become abundant, the first plants with flower and inclosed seed, though with no true floral envelope; but not until the two last epochs of the Tertiary age do we find in any number the Dicotyledonous plants, in which flower and fruit rise to their highest perfection. Thus there has been a procession of plants from their earliest introduction to the present day, corresponding to their botanical rank as they now exist, so that the series of gradation in the Vegetable Kingdom, as well as the Animal Kingdom, is the same, whether founded upon succession in time or upon comparative structural rank.

Some attempt has been made to reproduce under an artistic form the aspect of the world in the different geological ages, and to present in single connected pictures the animal and vegetable world of each period. Professor F. Unger, of Vienna, has prepared a collection of fourteen such sketches, entitled, "*Tableaux Physionomiques de la Végétation des Diverses Périodes du Monde Primitif.*"

First, we have the Devonian shores, with spreading fields of sea-weed and

numbers of the club-shaped Algæ of gigantic size. He has ventured, also, to represent a few trees, with scanty foliage; but I believe their existence at so early a period to be very problematical.

Next comes the Carboniferous forest, with still pools of water lying between the Fern-trees, which, much as they affect damp, swampy grounds, seem scarcely able to find foothold on the dripping earth. Their trunks, as well as those of the Club-Moss trees which make the foreground of the picture, stand up free from any branches for many feet above the ground, giving one a glimpse between them into the dim recesses of this quiet, watery wood, where the silence was unbroken by the song of birds or the hum of insects. We shall find, it is true, when we give a glance at the animals of this time, that certain insects made their appearance with the first terrestrial vegetation; but they were few in number and of a peculiar kind, such as thrive now in low, wet lands.

Upon this follow a number of sketches introducing us to the middle periods, where the land is higher and more extensive, covered chiefly with Pine forests, beneath which grows a thick carpet of underbrush, consisting mostly of Grasses, Rushes, and Ferns. Here and there one of the gigantic reptiles of the time may be seen sunning himself on the shore. One of these sketches shows us such a creature hungrily inspecting a pool where Crinoids, with their long stems, large, closely-coiled Chambered Shells, and Brachiopods, the Oysters and Clams of those days, offer him a tempting repast. Here and there a Pterodactyl, the curious winged reptile of the later middle periods, stretches its long neck from the water, and birds also begin to make their appearance.

After these come the Tertiary periods: the Eocene first, where the landscape is already broken up by hills and mountains, clothed with a varied vegetation of comparatively modern character. Lily-pads are floating on the stream which makes the central part of the picture;

large herds of the Palæotherium, the ancient Pachyderm, reconstructed with such accuracy by Cuvier, are feeding along its banks; and a tall bird of the Heron or Pelican kind stands watching by the water's edge. In the Miocene the vegetation looks still more familiar, though the Elephants roaming about in regions of the Temperate Zone, and the huge Salamanders crawling out of the water, remind us that we are still far removed from present times. Lastly, we have the ice period, with the glaciers coming down to the borders of a river where large troops of Buffalo are drinking, while on the shore some Bears are feasting on the remains of a huge carcass.

It is, however, with the Carboniferous age that we have to do at present, and I will not anticipate the coming chapters of my story by dwelling now on the aspect of the later periods. To return, then, to the period of the coal, it would seem that extensive freshets frequently overflowed the marshes, and that even after many successive forests had sprung up and decayed upon their soil, they were still subject to submergence by heavy floods. These freshets, at certain intervals, are not difficult to understand, when we remember, that, beside the occasional influx of violent rains, the earth was constantly undergoing changes of level, and that a subsidence or upheaval in the neighborhood would disturb the equilibrium of the waters, causing them to overflow and pour over the surface of the country, thus inundating the marshes anew.

That such was the case we can hardly doubt, after the facts revealed by recent investigations of the Carboniferous deposits. In some of the deeper coal-beds there is a regular alternation between layers of coal and layers of sand or clay; in certain localities, as many as ten, twelve, and even fifteen coal-beds have been found alternating with as many deposits of clay or mud or sand; and in some instances, where the trunks of the trees are hollow and have been left standing erect, they are filled to the brim, or to the height of the next

layer of deposits, with the materials that have been swept over them. Upon this set of deposits comes a new bed of coal with the remains of a new forest, and above this again a layer of materials left by a second freshet, and so on through a number of alternate strata. It is evident from these facts that there have been a succession of forests, one above another, but that in the intervals of their growth great floods have poured over the marshes, bringing with them all kinds of loose materials, such as sand, pebbles, clay, mud, lime, etc., which, as the freshets subsided, settled down over the coal, filling not only the spaces between such trees as remained standing, but even the hollow trunks of the trees themselves.

Let us give a glance now at the animals which inhabited the waters of this period. In the Radiates we shall not find great changes; the three classes are continued, though with new representatives, and the Polyp Corals are increasing, while the Acalephian Corals, the Rugosa and Tabulata, are diminishing. The Crinoids were still the most prominent representatives of the class of Echinoderms, though some resembling the Ophiurans and Echinoids (Sea-Urchins) began to make their appearance. The adjoining wood-cut represents a characteristic Crinoid of the Carboniferous age.

Among the Mollusks, Brachiopods are still prominent, one new genus among

them, the *Productus*, being very remarkable on account of the manner in which one valve rises above the other. The wood-cut below represents such a shell, looked

at from the side of the flat valve, showing the straight cut of the line of juncture between the valves and the rising curve of the opposite one, which looks like a hooked beak when seen in profile.

Other species of Bivalves were also introduced, approaching more nearly our Clams and Oysters, or, as they are called in scientific nomenclature, the Lamelli-branchiates. They differ from the Brachiopods chiefly in the higher character of their breathing-apparatus; for they have free gills, instead of the net-work of vessels on the lining skin which serves as the organ of respiration in the Brachiopods. We shall always find, that, in proportion as the functions are distinct, and, as it were, individualized by having special organs appropriated to them, animals rise in the scale of structure. The next class of Mollusks, the Gasteropods, or Univalves, with spiral shells, were numerous, but, from their brittle character, are seldom found in a good state of preservation.

The Chambered Shells, or the Cephalopods, represented chiefly in the earlier periods by the straight *Orthoceratites* described in a previous article, are now curled in a close coil, and the internal structure of their chambers has become more complicated. The subjoined wood-

cut represents a characteristic Chambered Shell of the Carboniferous age. *Goniatites* is the scientific name of these later forms. If we had looked for them in the Devonian period, we should have found many with looser coils than these, and some only slightly curved in the shape of a horn. These, as well as the perfectly straight forms, still exist in the coal period, but the *Goniatites* with close whorls are the more numerous and more characteristic.

The Articulates have gained their missing class since the close of the Devonian period, for Insects have come in, and that division of the Animal Kingdom is therefore complete, and represented by three classes, as it is at present. Of the Worms little can be said; their traces are found as before, but they are very imperfectly preserved. There are still Trilobites, but they are very few in number, and other groups of Crustacea have been added.

One of the most prominent of these new types bears a striking resemblance to the Horse-Shoe Crab of present times.

I here present one of our common Horse-Shoe Crabs above one of these old-world Crustaceans, and it will be seen, that, while the latter preserves some of the Trilobitic characters, such as the marked articulations on the posterior part of the body and their division into three lobes, yet in the prominence of its anterior shield, its more elongated form, and tapering extremity, it resembles its modern representative. In some of them, however, there is no such sharp point as is here figured, and the body terminates bluntly. There were a large number of these Entomostraca in the Carboniferous period, a group which is chiefly represented among living Crustacea by an exceedingly minute kind of Shrimp; but in those days they were of the size of our Crabs and Lobsters, or even larger, and the Horse-Shoe Crab still maintains their claim to a place among the larger and more conspicuous members of the class.

The Insects were few, and, as I have said above, of a kind which seeks a moist atmosphere, or whose larvæ live altogether in water. They are not usually well preserved, as will be seen from the broken character of the one here repre-

sented, although the wood-cut is made from a better specimen than is often found. We have, however, remains enough to establish unquestionably the fact of their existence in the Carboniferous period, and to show us that the type of Articulates was already represented by all its classes.

Not so with the Vertebrates. Fishes abound, but their class still consists, as

before, of the Ganoids, those fishes of the earlier periods built on the Gar-Pike and Sturgeon pattern, and the Selachians, represented now by Sharks and Skates. In the Carboniferous period we begin to find perfectly preserved specimens of the Ganoids, and the adjoining wood-cut rep-

resents such a one. Of the old type of Selachians we have again one lingering representative in our own times to give us the clue to its ancestors,—as the Gar-Pike explains the old Ganoids, and the Chambered Nautilus helps us to understand the Chambered Shells of past times. The so-called Port-Jackson Shark has features which were very characteristic of the Carboniferous Sharks and are lost in the modern ones, so that it affords us a sort of link, as it were, and a measure of comparison, between those now living and the more ancient forms. It is an interesting fact that this only living representative of the Carboniferous Shark should be found in New Holland, because it is there, in that isolated continent, left apart, as it would seem, for a special purpose, that we find reproduced for us most fully the character of the Animal Kingdom in earlier creations.

The first Mammalia in the world were pouched animals, having that extraordinary attachment to the mother after birth which characterizes the Kangaroo. In New Holland almost all the Mammalia are pouched, and have also the imperfect organization of the brain, as compared with the other Mammalia, which accompanies that peculiar structural feature; and although the American Opossum makes an exception to the rule, it is nevertheless true that this type of the Animal Kingdom is now confined almost exclusively to New Holland. Whether

this living picture of old creations in modern garb was meant to be educational for man or not, it is at least well that we should take advantage of it in learning all it has to teach us of the relations between the organic world of past and present times.

There were a great variety of the Selachians in the Carboniferous period. The wood-cuts below represent a tooth and

a spine from one of the most characteristic groups, but I have not thought it worth while to enumerate or to figure others here, for there are no perfect specimens, and their structural differences consist chiefly in the various form and appearance of the teeth, scales, and spines, and would be uninteresting to most of my readers. I would refer the more scientific ones, who may care to know something of these details, to my investigations on Fossil Fishes, published many

years since under the title of "*Recherches sur les Poissons Fossiles.*"

Although the Vertebrate division of the Animal Kingdom still waited for its higher classes, yet it had received one important addition since the Silurian and Devonian periods. The Carboniferous marshes were not without their reptilian inhabitants; but they were Reptiles of the lowest class, the so-called Amphibians, those which are hatched from the egg in an immature condition, undergoing metamorphosis after birth. They have no hard scales, and lay a large number of eggs. I am unable to present any figure of one of these ancient Reptiles, as they are found in so imperfect a state of preservation that no plates have been made from them. I would add in connection with this subject that I believe a large number of animals found in the Carboniferous deposits, and referred to the class of Reptiles, to be Fishes allied to Saurians.

Before leaving the Carboniferous period, let us see what territory the United States has conquered from the Ocean during that time. All its central portion, from Canada to Alabama, and from Western Iowa, Missouri, and Arkansas to Eastern Virginia, was raised above the water. But as yet the Alleghanies and the Rocky Mountains did not exist; a great gulf ran up to the mouth of the Ohio, for the Mississippi had not yet accumulated the soil for the fertile valley through which it was to take its southern course; the Coral-Builders had still their work to do in constructing the peninsula of Florida; and, indeed, all the borders of the continent of North America, as well as a large part of its Western territory, were still to be added. But although its central portion held its ground and was never submerged again, yet the continent was slowly subsiding during the middle geological periods, so that, instead of enlarging gradually by the increase of deposits, its limits remained much the same.

This accounts for the very scanty traces to be found in America of the secondary deposits; for the Permian, Triassic, and

Jurassic beds, instead of being raised to form successive shores, along which their deposits could be accumulated in regular sequence, as had been the case with the Azoic, Silurian, and Devonian deposits in the northern part of the United States, were constantly sinking, so that the Triassic settled above the Permian, the Jurassic above the Triassic, and so on, each set of strata thus covering over and concealing the preceding one. Though we find the stratified rocks of these periods cropping out here and there, where some violent disturbance or the abrading action of water has torn asunder or worn

away the overlying strata, yet we never find them consecutively over any extensive region; and it is not till the Cretaceous and earlier Tertiary periods that we find again a regular succession of deposits around the shores of the continent, marking its present outlines. It is, then, in Europe, where the sequence of their beds is most complete, that we must seek to decipher the history of the middle geological ages; and therefore, when I meet my readers again, it will be in the Old World of civilization, though more recent in its physical features than the one we leave.

---

TO E. W.

I KNOW not, Time and Space so intervene,  
 Whether, still waiting with a trust serene,  
 Thou bearest up thy fourscore years and ten,  
 Or, called at last, art now Heaven's citizen;  
 But, here or there, a pleasant thought of thee,  
 Like an old friend, all day has been with me.  
 The shy, still boy, for whom thy kindly hand  
 Smoothed his hard pathway to the wonder-land  
 Of thought and fancy, in gray manhood yet  
 Keeps green the memory of his early debt.  
 To-day, when truth and falsehood speak their words  
 Through hot-lipped cannon and the teeth of swords,  
 Listening with quickened heart and ear intent,  
 To each sharp clause of that stern argument,  
 I still can hear at times a softer note  
 Of the old pastoral music round me float,  
 While through the hot gleam of our civil strife  
 Looms the green mirage of a simpler life.  
 As, at his alien post, the sentinel  
 Drops the old bucket in the homestead well,  
 And hears old voices in the winds that toss  
 Above his head the live-oak's beard of moss,  
 So, in our trial-time, and under skies  
 Shadowed by swords like Islam's paradise,  
 I wait and watch, and let my fancy stray  
 To milder scenes and youth's Arcadian day;  
 And howsoe'er the pencil dipped in dreams  
 Shades the brown woods or tints the sunset streams,  
 The country doctor in the foreground seems,

Whose ancient sulky down the village lanes  
 Dragged, like a war-car, captive ills and pains.  
 I could not paint the scenery of my song,  
 Mindless of one who looked thereon so long ;  
 Who, night and day, on duty's lonely round,  
 Made friends o' th' woods and rocks, and knew the sound  
 Of each small brook, and what the hill-side trees  
 Said to the winds that touched their leafy keys ;  
 Who saw so keenly and so well could paint  
 The village-folk, with all their humors quaint, —  
 The parson ambling on his wall-eyed roan,  
 Grave and erect, with white hair backward blown, —  
 The tough old boatman, half amphibious grown, —  
 The muttering witch-wife of the gossip's tale,  
 And the loud straggler levying his black mail, —  
 Old customs, habits, superstitions, fears,  
 All that lies buried under fifty years.  
 To thee, as is most fit, I bring my lay,  
 And, grateful, own the debt I cannot pay.

---

THE COUNTESS.

OVER the wooded northern ridge,  
 Between its houses brown,  
 To the dark tunnel of the bridge  
 The street comes straggling down.

You catch a glimpse through birch and pine  
 Of gable, roof, and porch,  
 The tavern with its swinging sign,  
 The sharp horn of the church.

The river's steel-blue crescent curves  
 To meet, in ebb and flow,  
 The single broken wharf that serves  
 For sloop and gundelow.

With salt sea-scents along its shores  
 The heavy hay-boats crawl,  
 The long antennæ of their oars  
 In lazy rise and fall.

Along the gray abutment's wall  
 The idle shad-net dries ;  
 The toll-man in his cobbler's stall  
 Sits smoking with closed eyes.

You hear the pier's low undertone  
 Of waves that chafe and gnaw ;  
 You start, — a skipper's horn is blown  
 To raise the creaking draw.

At times a blacksmith's anvil sounds  
 With slow and sluggish beat,  
 Or stage-coach on its dusty rounds  
 Wakes up the staring street.

A place for idle eyes and ears,  
 A cobwebbed nook of dreams ;  
 Left by the stream whose waves are years  
 The stranded village seems.

And there, like other moss and rust,  
 The native dweller clings,  
 And keeps, in uninquiring trust,  
 The old, dull round of things.

The fisher drops his patient lines,  
 The farmer sows his grain,  
 Content to hear the murmuring pines  
 Instead of railroad-train.

Go where, along the tangled steep  
 That slopes against the west,  
 The hamlet's buried idlers sleep  
 In still profounder rest.

Throw back the locust's flowery plume,  
 The birch's pale-green scarf,  
 And break the web of brier and bloom  
 From name and epitaph.

A simple muster-roll of death,  
 Of pomp and romance shorn,  
 The dry, old names that common breath  
 Has cheapened and outworn.

Yet pause by one low mound and part  
 The wild vines o'er it laced,  
 And read the words by rustic art  
 Upon its headstone traced.

Haply yon white-haired villager  
 Of fourscore years can say  
 What means the noble name of her  
 Who sleeps with common clay.

An exile from the Gascon land  
 Found refuge here and rest,  
 And loved, of all the village band,  
 Its fairest and its best.

He knelt with her on Sabbath morns,  
 He worshipped through her eyes,  
 And on the pride that doubts and scorns  
 Stole in her faith's surprise.

Her simple daily life he saw  
 By homeliest duties tried,  
 In all things by an untaught law  
 Of fitness justified.

For her his rank aside he laid ;  
 He took the hue and tone  
 Of lowly life and toil, and made  
 Her simple ways his own.

Yet still, in gay and careless ease,  
 To harvest-field or dance  
 He brought the gentle courtesies,  
 The nameless grace of France.

And she who taught him love not less  
 From him she loved in turn  
 Caught in her sweet unconsciousness  
 What love is quick to learn.

Each grew to each in pleased accord,  
 Nor knew the gazing town  
 If she looked upward to her lord  
 Or he to her looked down.

How sweet, when summer's day was o'er,  
 His violin's mirth and wail,  
 The walk on pleasant Newbury's shore,  
 The river's moonlit sail !

Ah ! life is brief, though love be long .  
 The altar and the bier,  
 The burial hymn and bridal song,  
 Were both in one short year !

Her rest is quiet on the hill  
 Beneath the locust's bloom ;  
 Far off her lover sleeps as still  
 Within his scutcheon'd tomb.

The Gascon lord, the village maid  
 In death still clasp their hands ;  
 The love that levels rank and grade  
 Unites their severed lands.

What matter whose the hill-side grave,  
 Or whose the blazoned stone ?  
 Forever to her western wave  
 Shall whisper blue Garonne !

O Love !—so hallowing every soil  
 That gives thy sweet flower room,  
 Wherever, nursed by ease or toil,  
 The human heart takes bloom !—

Plant of lost Eden, from the sod  
Of sinful earth unriven,  
White blossom of the trees of God  
Dropped down to us from heaven ! —

This tangled waste of mound and stone  
Is holy for thy sake ;  
A sweetness which is all thy own  
Breathes out from fern and brake.

And while ancestral pride shall twine  
The Gascon's tomb with flowers,  
Fall sweetly here, O song of mine,  
With summer's bloom and showers !

And let the lines that severed seem  
Unite again in thee,  
As western wave and Gallic stream  
Are mingled in one sea !

## GALA-DAYS.

### I.

ONCE there was a great noise in our house, — a thumping and battering and grating. It was my own self dragging my big trunk down from the garret. I did it myself because I wanted it done. If I had said, "Halicarnassus, will you fetch my trunk down?" he would have asked me what trunk? and what did I want of it? and would not the other one be better? and could n't I wait till after dinner? — and so the trunk would probably have had a three-days' journey from garret to basement. Now I am strong in the wrists and weak in the temper; therefore I used the one and spared the other, and got the trunk down-stairs myself. Halicarnassus heard the uproar. He must have been deaf not to hear it; for the old ark banged and bounced, and scraped the paint off the stairs, and pitched head-foremost into the wall, and gouged out the plastering, and dented the mop-board, and was the most stupid, awkward, uncompromising, unmanage-

able thing I ever got hold of in my life.

By the time I had zigzagged it into the back chamber, Halicarnassus loomed up the back stairs. I stood hot and panting, with the inside of my fingers tortured into burning leather, the skin rasped off three knuckles, and a bruise on the back of my right hand, where the trunk had crushed it against a sharp edge of the door-way.

"Now, then?" said Halicarnassus interrogatively.

"To be sure," I replied affirmatively.

He said no more, but went and looked up the garret-stairs. They bore traces of a severe encounter, that must be confessed.

"Do you want me to give you a bit of advice?" he asked.

"No!" I answered promptly.

"Well, then, here it is. The next time you design to bring a trunk down-stairs, you would better cut away the un-

derpinning, and knock out the beams, and let the garret down into the cellar. It will make less uproar, and not take so much to repair damages."

He intended to be severe. His words passed by me as the idle wind. I perched on my trunk, took a pasteboard box-cover and fanned myself. I was very warm. Halicarnassus sat down on the lowest stair and remained silent several minutes, expecting a meek explanation, but, not getting it, swallowed a bountiful piece of what is called in homely talk "humble-pie," and said,—

"I should like to know what 's in the wind now."

I make it a principle always to resent an insult and to welcome repentance with equal alacrity. If people thrust out their horns at me wantonly, they very soon run against a stone wall; but the moment they show signs of contrition, I soften. It is the best way. Don't insist that people shall grovel at your feet before you accept their apology. That is not magnanimous. Let mercy temper justice. It is a hard thing at best for human nature to go down into the Valley of Humiliation; and although, when circumstances arise which make it the only fit place for a person, I insist upon his going, still, no sooner does he actually begin the descent than my sense of justice is appeased, my natural sweetness of disposition resumes sway, and I trip along by his side chatting as gayly as if I did not perceive it was the Valley of Humiliation at all, but fancied it the Dlectable Mountains. So, upon the first symptoms of placability, I answered cordially,—

"Halicarnassus, it has been the ambition of my life to write a book of travels. But to write a book of travels, one must first have travelled."

"Not at all," he responded. "With an atlas and an encyclopædia one can travel around the world in his arm-chair."

"But one cannot have personal adventures," I said. "You can, indeed, sit in your arm-chair and describe the crater of Vesuvius; but you cannot tumble

into the crater of Vesuvius from your arm-chair."

"I have never heard that it was necessary to tumble in, in order to have a good view of the mountain."

"But it is necessary to do it, if one would make a readable book."

"Then I should let the book slide,—rather than slide myself."

"If you would do me the honor to listen," I said, scornful of his paltry attempt at wit, "you would see that the book is the object of my travelling. I travel to write. I do not write because I have travelled. I am not going to subordinate my book to my adventures. My adventures are going to be arranged beforehand with a view to my book."

"A most original way of getting up a book!"

"Not in the least. It is the most common thing in the world. Look at our dear British cousins."

"And see them make guys of themselves. They visit a magnificent country that is trying the experiment of the world, and write about their shaving-soap and their babies' nurses."

"Just where they are right. Just why I like the race, from Trollope down. They give you something to take hold of. I tell you, Halicarnassus, it is the personality of the writer, and not the nature of the scenery or of the institutions, that makes the interest. It stands to reason. If it were not so, one book would be all that ever need be written, and that book would be a census report. For a republic is a republic, and Niagara is Niagara forever; but tell how you stood on the chain-bridge at Niagara—if there is one there—and bought a cake of shaving-soap from a tribe of Indians at a fabulous price, or how your baby jumped from the arms of the careless nurse into the Falls, and immediately your own individuality is thrown around the scenery, and it acquires a human interest. It is always five miles from one place to another, but that is mere almanac and statistics. Let a poet walk the five miles, and narrate his experience

with birds and bees and flowers and grasses and water and sky, and it becomes literature. And let me tell you further, Sir, a book of travels is just as interesting as the person who writes it is interesting. It is not the countries, but the persons, that are 'shown up.' You go to France and write a dull book. I go to France and write a lively book. But France is the same. The difference is in ourselves."

Halicarnassus glowered at me. I think I am not using strained or extravagant language when I say that he glowered at me. Then he growled out, —

"So your book of travels is just to put yourself into pickle."

"Say rather," I answered, with sweet humility, — "say rather it is to shrine myself in amber. As the insignificant fly, encompassed with molten glory, passes into a crystallized immortality, his own littleness uplifted into loveliness by the beauty in which he is imprisoned, so I, wrapped around by the glory of my land, may find myself niched into a fame which my unattended and naked merit could never have claimed."

Halicarnassus was a little stunned, but, presently recovering himself, suggested that I had travelled enough already to make out quite a sizable book.

"Travelled!" I said, looking him steadily in the face, — "travelled! I have been up to Tudiz huckleberrying; and once, when there was a freshet, you took a superannuated broom and paddled me around the orchard in a leaky pig's trough!"

He could not deny it; so he laughed and said, —

"Ah, well! — ah, well! Suit yourself. Take your trunk and pitch into Vesuvius, if you like. I won't stand in your way."

His acquiescence was ungraciously, and I believe I may say ambiguously, expressed; but it mattered little, for in three days from that time I took my trunk, Halicarnassus his cane, and we started on our travels. An evil omen met us at the beginning. Just as I was stepping into the

car, I observed a violent smoke issuing from under it. I started back in alarm.

"They are only getting up steam," said Halicarnassus. "Always do, when they start."

"I know better!" I answered briskly, for there was no time to be circumlocutional. "They don't get up steam under the cars."

"Why not? Bet a sixpence you could n't get Uncle Cain's dobbin out of his jog-trot without building a fire under him."

"I know that wheel is on fire," I said, not to be turned from the direct and certain line of assertion into the winding ways of argument.

"No matter," replied Halicarnassus, conceding everything, "we are insured."

Upon the strength of which consolatory information I went in. By-and-by a man entered and took a seat in front of us. "The box is all afire," chuckled he to his neighbor, as if it were a fine joke. By-and-by several people who had been looking out of the windows drew in their heads, rose, and went into the next car.

"What do you suppose they did that for?" I asked Halicarnassus.

"More aristocratical. Belong to old families. This is a new car, don't you see? We are *parvenus*."

"Nothing of the sort," I rejoined. "This car is on fire, and they have gone into the next one so as not to be burned up."

"They are not going to write books, and can afford to run away from adventures."

"But suppose I am burned up in my adventure?"

"Obviously, then, your book will end in smoke."

I ceased to talk, for I was provoked at his indifference. I leave every impartial mind to judge for itself whether the circumstances were such as to warrant composure. To be sure, somebody said the car was to be left at Jeru; but Jeru was eight miles away, and any quantity of mischief might be done before we reached it, — if, indeed, we were not prevented

from reaching it altogether. It was a mere question of dynamics. Would dry wood be able to hold its own against a raging fire for half an hour? Of course the conductor thought it would; but even conductors are not infallible; and you may imagine how comfortable it was to sit and know that a fire was in full blast beneath you, and to look down every few minutes expecting to see the flames forking up under your feet. I confess I was not without something like a hope that one tongue of the devouring element would flare up far enough to give Halicarnassus a start; but it did not. No casualty occurred. We reached Jeru in safety; but that does not prove that there was no danger, or that indifference was anything but the most foolish hardihood. If our burning car had been in mid-ocean, serenity would have been sublimity, but to stay in the midst of peril when two steps would take one out of it is idiocy. And that there was peril is conclusively shown by the fact that the very next day the Eastern Railroad Depot took fire and was burned to the ground. I have in my own mind no doubt that it was a continuation of the same fire, and if we had stayed in the car much longer, we should have shared the same fate.

We found Jeru to be a pleasant city, with only one fault: the inhabitants will crowd into a car before passengers can get out; consequently the heads of the two columns collide near the car-door, and there is a general choke. Otherwise Jeru is a delightful city. It is famous for its beautiful women. Its railroad-station is a magnificent piece of architecture. Its men are retired East-India merchants. Everybody in Jeru is rich and has real estate. The houses in Jeru are three stories high and face on the Common. People in Jeru are well-dressed and well-bred, and they all came over in the Mayflower.

We stopped in Jeru five minutes.

When we were ready to continue our travels Halicarnassus seceded into the smoking-car, and while the engine was shrieking off its inertia, a small boy, la-

boring under great agitation, hurried in, darted up to me, and, thrusting a pinch-beck ring with a pink glass in it into my face, exclaimed, in a hoarse whisper,—

“A beautiful ring, Ma’am! I’ve just picked it up. Can’t stop to find the owner. Worth a dollar, Ma’am; but if you’ll give me fifty cents” —

“Boy!”

I rose fiercely, convulsively, in my seat, drew one long breath, but whether he thought I was going to kill him,—I dare say I looked it,—or whether he saw a sheriff behind, or a phantom gallows before, I know not; but without waiting for the thunderbolt to strike, he rushed from the car as precipitately as he had rushed in. I was angry,—not because I was to have been cheated, for I have been repeatedly and atrociously cheated and only smiled, but because the rascal dared attempt on me such a threadbare, ragged, shoddy trick as that. Do I look like a rough-hewn, unseasoned backwoodsman? Have I the air of never having read a newspaper? Is there a patent innocence of eye-teeth in my demeanor? Oh, Jeru! Jeru! Somewhere in your virtuous bosom you are nourishing a viper, for I have felt his fangs. Woe unto you, if you do not strangle him before he develops into mature anacondaism! In point of natural history I am not sure that vipers do grow up anacondas, but for the purposes of moral philosophy the development theory answers perfectly well.

In Boston a dreadful thing happened to me,—a thing too horrible to relate. I have no reason to suppose that the outrage was intentional; but if I were absolute monarch of all I survey, there is one house in one street in Boston which I would have razed to the ground; and tobacco I would banish forever from the haunts of civilization.

In Boston we had three hours to spare; so we sent our luggage,—that is, my trunk—to the Worcester Depot, and walked leisurely ourselves. I had a little shopping to do, to complete my outfit for the journey,—a very little shopping,—only a

nightcap or two. Ordinarily such a thing is a matter of small moment, but in my case the subject had swollen into unnatural dimensions. Nightcaps are not generally considered healthy, — at least not by physicians. Nature has given to the head its sufficient and appropriate covering, the hair. Anything more than this injures the head, by confining the heat, preventing the soothing, cooling contact of air, and so deranging the circulation of the blood. Therefore I have always heeded the dictates of Nature, which I have supposed to be to brush out the hair thoroughly at night and let it fly. But there are serious disadvantages connected with this course. For Nature will be sure to whisk the hair away from your ears where you want it, and into your eyes where you don't want it, besides crowning you with magnificent disorder in the morning. But as I have always believed that no evil exists without its remedy, I had long been exercising my inventive genius in attempts to produce a head-gear which should at once protect the ears, confine the hair, and let the skull alone. I regret to say that my experiments were an utter failure, notwithstanding the amount of science and skill brought to bear upon them. One idea lay at the basis of all my endeavors. Every combination, however elaborate or intricate, resolved into its simplest elements, consisted of a pair of rosettes laterally to keep the ears warm, a bag posteriorly to put the hair into, and some kind of a string somewhere to hold the machine together. Every possible shape into which lace or muslin or sheeting could be cut or plaited or sewed or twisted, into which crewel or cord could be crocheted or netted or tatted, I make bold to declare was essayed, until things came to such a pass that every odd bit of dry goods lying around the house was, in the absence of any positive testimony on the subject, assumed to be one of my nightcaps, — an utterly baseless assumption, because my achievements never went so far as concrete capuality, but stopped short in the later stages of abstract ideal-

ism. However, prejudice is stronger than truth; and, as I said, every fragment of every fabric that could not give an account of itself was charged with being a nightcap till it was proved to be a dish-cloth or a cart-rop. I at length surrendered at discretion, and remembered that somewhere in my reading I had met with exquisite lace caps, and I did not know but that from the combined fineness and strength of their material they might answer the purpose, even if in form they should not be everything that was desirable, — and I determined to ascertain, if possible, whether such things existed anywhere out of poetry.

As you perceive, therefore, my Boston shopping was not every-day trading. It was to mark the abandonment of an old and the inauguration of a new line of policy. Thus it was with no ordinary interest that I looked carefully at all the shops, and when I found one that seemed to hold out a possibility of nightcaps, I went in. Halicarnassus obeyed the hint which I pricked into him with the point of my parasol, and stopped outside. The one place in the world where a man has no business to be is the inside of a dry-goods shop. He never looks and never is so big and bungling as there. A woman skips from silk to muslin, from muslin to ribbons, from ribbons to table-cloths with the grace and agility of a bird. She glides in and out among crowds of her sex, steers sweepingly clear of all obstacles, and emerges triumphant. A man enters and immediately becomes all boots and elbows. He needs as much room to turn round in as the English iron-clad Warrior, and it takes him about as long. He treads on all the flounces, runs against all the clerks, knocks over all the children, and is generally under-foot. If he gets an idea into his head, a Nims's battery cannot dislodge it. You thought of buying a shawl; but a thousand considerations in the shape of raglans, cloaks, talmas, pea-jackets, induce you to modify your views. He stands by you. He hears all your inquiries and all the clerk's suggestions. The whole process of your rea-

soning is visible to his naked eye. He sees the sack, or visite, or cape put upon your shoulders and you walking off in it, and when you are half-way home, he will mutter, in idiotic amazement, "I thought you were going to buy a shawl!" It is enough to drive one wild.

No! Halicarnassus is absurd and mulish in many things, but he knows I will not be hampered with him when I am shopping, and he obeys the smallest hint and stops outside.

To be sure, he puts my temper on the rack by standing with his hands in his pockets, or by looking meek, or, likely as not, peering into the shop-door after me with great staring eyes and parted lips; and this is the most provoking of all. If there is anything vulgar, slipshod, and shiftless, it is a man lounging about with his hands in his pockets. If you have paws, stow them away; but if you are endowed with hands, learn to carry them properly, or else cut them off. Nor can I abide a man's looking as if he were under control. I want him to *be* submissive, but I don't want him to look so. I want him to do just as he is bidden, but I want him to carry himself like the man and monarch he was made to be. I want him to stay where he is put, yet not as if he were put there, but as if he had taken his position deliberately. But, of all things, to have a man act as if he were a clod just emerged for the first time from his own barnyard! Upon this occasion, however, I was too much absorbed in my errand to note anybody's demeanor, and I threaded straightway the crowd of customers, went up to the counter, and inquired in a clear voice, —

"Have you lace nightcaps?"

The clerk looked at me with a troubled, bewildered glance, and made no reply. I supposed he had not understood me, and repeated the question. Then he answered, dubiously, —

"We have breakfast-caps."

It was my turn to look bewildered. What had I to do with breakfast-caps? What connection was there between my question and his answer? What field

was there for any further inquiry? "Have you ox-bows?" imagine a farmer to ask. "We have rainbows," says the shopman. "Have you cameo-pins?" inquires the elegant Mrs. Jenkins. "We have linc-pins." "Have you young apple-trees?" asks the nursery-man. "We have whiffle-trees." If I had wanted breakfast-caps, should n't I have asked for breakfast-caps? Or do the Boston people take their breakfast at one o'clock in the morning? I concluded that the man was de-mented, and marched out of the shop. When I laid the matter before Halicarnassus, the following interesting colloquy took place.

I. "What do you suppose it meant?"

H. "He took you for a North American Indian."

I. "What do you mean?"

H. "He did not understand your *patois*."

I. "What *patois*?"

H. "Your squaw dialect. You should have asked for a *bonnet de nuit*."

I. "Why?"

H. "People never talk about night-caps in good society."

I. "Oh!"

I was very warm, and Halicarnassus said he was tired; so we went into a restaurant and ordered strawberries, — that luscious fruit, quivering on the border-land of ambrosia and nectar.

"Doubtless," says honest, quaint, delightful Isaac, — and he never spoke a truer word, — "doubtless, God might have made a better berry than a strawberry, but, doubtless, God never did."

The bill of fare rated their excellence at fifteen cents.

"Not unreasonable," I pantomimed.

"Not if I pay for them," replied Halicarnassus.

Then we sat and amused ourselves after the usual brilliant fashion of people who are waiting in hotel parlors, railroad-stations, and restaurants. We surveyed the gilding and the carpet and the mirrors and the curtains. We hazarded profound conjectures touching the peo-

ple assembled. We studied the bill of fare as if it contained the secret of our army's delay upon the Potomac, and had just concluded that the first crop of strawberries was exhausted and they were waiting for the second crop to grow, when Hebe hove in sight with her nec-tared ambrosia in a pair of cracked, brownly-white saucers, with brownly-green silver spoons. I poured out what professed to be cream, but proved very low-spirited milk, in which a few disheartened strawberries appeared *rari nantes*. I looked at them in dismay. Then curiosity smote me, and I counted them. Just fifteen.

"Cent apiece," said Halicarnassus.

I was not thinking of the cent, but I had promised myself a feast; and what is a feast, susceptible of enumeration? Cleopatra was right. "That love" — and the same is true of strawberries — "is beggarly which can be reckoned." Infinity alone is glory.

"Perhaps the quality will atone for the quantity," said Halicarnassus, scooping up at least half of his at one "arm-sweep."

"How do they taste?" I asked.

"Rather coppery," he answered.

"It is the spoons!" I exclaimed, in a fright. "They are German silver! You will be poisoned!" — and knocked his out of his hand with such instinctive, sudden violence that it flew to the other side of the room, where an old gentleman sat over his newspaper and dinner.

He started, dropped his newspaper, and looked around in a maze. Halicarnassus behaved beautifully, — I will give him the credit of it. He went on with my spoon and his strawberries as unconcernedly as if nothing had happened. I was conscious that I blushed, but my face was in the shade, and nobody else knew it; and to this day I have no doubt the old gentleman would have marvelled what sent that mysterious spoon rattling against his table and whizzing between his boots, had not Halicarnassus, when the uproar was over, conceived it his duty to go and pick up the spoon and apolo-

gize for the accident, lest the gentleman should fancy it an intentional rudeness. Partly to reward him for his good behavior, partly because I never did think it worth while to make two bites of a cherry, and partly because I did not fancy being poisoned, I gave my fifteen berries to him. He devoured them with evident relish.

"Does my spoon taste as badly as yours?" I asked.

"My spoon?" inquired he, innocently.

"Yes. You said before that they tasted coppery."

"I don't think," replied this unprincipled man, — "I don't think it was the flavor of the spoon so much as of the coin which each berry represented."

I could have boxed his ears.

I never made a more unsatisfactory investment in my life than the one I made in that restaurant. I felt as if I had been swindled, and I said so to Halicarnassus. He remarked that there was plenty of cream and sugar. I answered curtly, that the cream was chiefly water, and the sugar chiefly flour; but if they had been Simon Pure himself, was it anything but an aggravation of the offence to have them with nothing to eat them on?

"You might do as they do in France, — carry away what you don't eat, seeing you pay for it."

"A pocketful of milk and water would be both delightful and serviceable; but I might take the sugar," I added, with a sudden thought, upsetting the sugar-bowl into a "Boston Journal" which we had bought in the train. "I can never use it, but it will be a consolation to reflect on."

Halicarnassus, who, though fertile in evil conceptions, lacks nerve to put them into execution, was somewhat startled at this sudden change of base. He had no idea that I should really act upon his suggestion, but I did. I bundled the sugar into my pocket with a grim satisfaction; and Halicarnassus paid his thirty cents, looking — and feeling, as he af-

terwards told me — as if a policeman's gripe were on his shoulders. If any restaurant in Boston recollects having been astonished at any time during the summer of 1862 by an unaccountably empty sugar-bowl, I take this occasion to explain the phenomenon. I gave the sugar afterwards to a little beggar-girl, with a dime for a brace of lemons, and shook off the dust of my feet against Boston at the "B. & W. R. R. D."

Boston is a beautiful city, situated on a peninsula at the head of Massachusetts Bay. It has three streets: Cornhill, Washington, and Beacon Streets. It has a Common and a Frog-Pond, and many sprightly squirrels. Its streets are straight and cross each other like lines on a chess-board. It has a State-House which is the finest edifice in the world or out of it. It has one church, the Old South, which was built, as its name indicates, before the Proclamation of Emancipation was issued. It has one bookstore, a lofty and imposing pile, of the Egyptian style (and date) of architecture, on the corner of Washington and School Streets. It has one magazine, the "Atlantic Monthly," one daily newspaper, the "Boston Journal," one religious weekly, the "Congregationalist," and one orator, whose name is Train, a model of chaste, compact, and classic elegance. In politics, it was a Webster Whig, till Whig and Webster both went down, when it fell apart and waited for something to turn up, — which proved to be drafting. Boston is called the Athens of America. Its men are solid. Its women wear their bonnets to bed, their nightcaps to breakfast, and talk Greek at dinner. I spent two hours and a half in Boston, and I know.

We had a royal progress from Boston to Fontdale. Summer lay on the shining hills and scattered benedictions. Plenty smiled up from a thousand fertile fields. Patient oxen, with their soft, deep eyes, trod heavily over mines of greater than Indian wealth. Kindly cows stood in the grateful shade of cathedral elms, and gave thanks to God in

their dumb, fumbling way. Motherly, sleepy, stupid sheep lay on the plains, little lambs rollicked out their short-lived youth around them, and no premonition floated over from the adjoining pea-patch, nor any misgiving of approaching mutton marred their happy heyday. Straight through the piny forests, straight past the vocal orchards, right in among the robins and the jays and the startled thrushes, we dashed inexorable, and made harsh dissonance in the wild-wood orchestra; but not for that was the music hushed, nor did one color fade. Brooks leaped in headlong chase down the furrowed sides of gray old rocks, and glided whispering beneath the sorrowful willows. Old trees renewed their youth in the slight tenacious grasp of many a tremulous tendril, and, leaping lightly above their topmost heights, vine laughed to vine, swaying dreamily in the summer air; and not a vine nor brook nor hill nor forest but sent up a sweet-smelling incense to its Maker. Not an ox or cow or lamb or bird living its own dim life but lent its charm of unconscious grace to the great picture that unfolded itself, mile after mile, in ever fresher loveliness to ever unsated eyes. Well might the morning stars sing together, and all the sons of God shout for joy, when first this grand and perfect world swung free from its moorings, flung out its spotless banner, and sailed majestic down the thronging skies. Yet, though but once God spoke the world to life, the miracle of creation is still incomplete. New every spring-time, fresh every summer, the earth comes forth as a bride adorned for her husband. Not only in the gray dawn of our history, but now in the full brightness of its noon-day, may we hear the voice of the Lord walking in the garden. I look out upon the gray degraded fields left naked of the kindly snow, and inwardly ask: Can these dry bones live again? And while the question is yet trembling on my lips, lo! a Spirit breathes upon the earth, and beauty thrills into bloom. Who shall lack faith

in man's redemption, when every year the earth is redeemed by unseen hands, and death is lost in resurrection?

To Fontdale sitting among her beautiful meadows we are borne swiftly on. There we must tarry for the night, for I will not travel in the dark when I can help it. I love it. There is no solitude in the world, or at least I have never felt any, like standing alone in the door-way of the rear car on a dark night, and rushing on through the darkness,—darkness, darkness everywhere, and if one could only be sure of rushing on till daylight doth appear! But with the frightful and not remote possibility of bringing up in a crash and being buried under a general huddle, one prefers daylight. You may not be able to get out of the huddle even by daylight; but you will at least know where you are, if there is anything of you left. So at Fontdale Halicarnassus branches off temporarily on a business errand, and I stop for the night a-cousining.

You object to this? Some people do. For my part, I like it. You say you don't want to turn your own house or your friend's house into a hotel. If people want to see you, let them come and make a visit; if you want to see them, you will go and make them one; but this touch and go,—what is it worth? O foolish Galatians! much every way. For don't you see, supposing the people are people you don't like, how much better it is to have them come and sleep or dine and be gone than to have them before your face and eyes for a week? An ill that is temporary is tolerable. You could entertain the Evil One himself, if you were sure he would go away after dinner. The trouble about him is not so much that he comes as that he won't go. He hangs around. If you once open your door to him, there is no getting rid of him; and some of his followers, it must be confessed, are just like him. You must resist them both, or they will never flee. But if they do flee after a day's tarry, do not complain. You protest against turning your house into a hotel.

Why, the hotelry is the least irksome part of the whole business, when your guests are uninteresting. It is not the supper or the bed that costs, but keeping people going after supper is over and before bed-time is come. Never complain, if you have nothing worse to do than to feed or house your guests for a day or an hour.

On the other hand, if they are people you like, how much better to have them come so than not to come at all! People cannot often make long visits,—people that are worth anything,—people who use life; and they are the only ones that are worth anything. And if you cannot get your good things in the lump, are you going to refuse them altogether? By no means. You are going to take them by driblets, and if you will only be sensible and not pout, but keep your tin pan right side up, you will find that golden showers will drizzle through all your life. So, with never a nugget in your chest, you shall die rich. If you can stop over-night with your friend, you have no sand-grain, but a very respectable boulder. For a night is infinite. Daytime is well enough for business, but it is little worth for happiness. You sit down to a book, to a picture, to a friend, and the first you know it is time to get dinner, or time to eat it, or time for the train, or you must put out your dried apples, or set the bread to rising, or something breaks in impertinently and chokes you off at flood-tide. But the night has no end. Everything is done but that which you would be forever doing. The curtains are drawn, the lamp is lighted and veiled into exquisite soft shadowiness. All the world is far off. All its din and dole strike into the bank of darkness that envelops you and are lost to your tranced sense. In all the world are only your friend and you, and then you strike out your oars, silver-sounding, into the shoreless night.

But the night comes to an end, you say. No, it does not. It is you that come to an end. You grow sleepy, clod that you are. But as you don't think,

when you begin, that you ever shall grow sleepy, it is just the same as if you never did. For you have no foreshadow of an inevitable termination to your rapture, and so practically your night has no limit. It is fastened at one end to the sunset, but the other end floats off into eternity. And there really is no abrupt termination. You roll down the inclined plane of your social happiness into the bosom of another happiness,—sleep. Sleep for the sleepy is bliss just as truly as society to the lonely. What in the distance would have seemed Purgatory, once reached, is Paradise, and your happiness is continuous. Just as it is in mending. Short-sighted, superficial, unreflecting people have a way—which in time fossilizes into a principle—of mending everything as soon as it comes up from the wash, a very unthrifty, uneconomical habit, if you use the words thrift and economy in the only way in which they ought to be used, namely, as applied to what is worth economizing. Time, happiness, life, these are the only things to be thrifty about. But I see people working and worrying over quince-marmalade and tucked petticoats and embroidered chair-covers, things that perish with the using and leave the user worse than they found him. This I call waste and wicked prodigality. Life is too short to permit us to fret about matters of no importance. Where these things can minister to the mind and heart, they are a part of the soul's furniture; but where they only pamper the appetite or the vanity or any foolish and hurtful lust, they are foolish and hurtful. Be thrifty of comfort. Never allow an opportunity for cheer, for pleasure, for intelligence, for benevolence, for any kind of good, to go unimproved. Consider seriously whether the sirup of your preserves or the juices of your own soul will do the most to serve your race. It may be that they are compatible,—that the concoction of the one shall provide the ascending sap of the other; but if it is not so, if one must be sacrificed, do not hesitate a moment as to which it shall be. If a peach

does not become sweetmeat, it will become something, it will not stay a withered, unsightly peach; but for souls there is no transmigration out of fables. Once a soul, forever a soul,—mean or mighty, shrivelled or full, it is for you to say. Money, land, luxury, so far as they are money, land, and luxury, are worthless. It is only as fast and as far as they are turned into life that they acquire value.

So you are thriftless when you eagerly seize the first opportunity to fritter away your time over old clothes. You precipitate yourself unnecessarily against a disagreeable thing. For you are not going to put your stockings on. Perhaps you will not need your buttons for a week, and in a week you may have passed beyond the jurisdiction of buttons. But even if you should not, ~~let~~ the buttons and the holes alone all the same. For, first, the pleasant and profitable thing which you will do instead is a funded capital which will roll you up a perpetual interest; and secondly, the disagreeable duty is forever abolished. I say forever, because, when you have gone without the button awhile, the inconvenience it occasions will reconcile you to the necessity of sewing it on,—will even go farther, and make it a positive relief amounting to positive pleasure. Besides, every time you use it, for a long while after you will have a delicious sense of satisfaction, such as accompanies the sudden complete cessation of a dull, continuous pain. Thus what was at best characterless routine, and most likely an exasperation, is turned into actual delight, and adds to the sum of life. This is thrift. This is economy. But, alas! few people understand the art of living. They strive after system, wholeness, buttons, and neglect the weightier matters of the higher law.

—I wonder how I got here, or how I am to get back again. I started for Fontdale, and I find myself in a mending-basket. As I know no good in tracing the same road back, we may as well strike a bee-line and begin new at Fontdale.

We stopped at Fontdale a-cousining.

I have a veil, a beautiful — *have*, did I say? Alas! *Troy was*. But I must not anticipate — a beautiful veil of brown tissue, none of your woolly, gruff fabrics, fit only for penance, but a silken gossamery cloud, soft as a baby's cheek. Yet everybody fleers at it. Everybody has a joke about it. Everybody looks at it, and holds it out at arms' length, and shakes it, and makes great eyes at it, and says, "What in the world" —, and ends with a huge, bouncing laugh. Why? One is ashamed of human nature at being forced to confess. Because, to use a Gulliverism, it is longer by the breadth of my nail than any of its contemporaries. In fact, it is two yards long. That is all. Halicarnassus fired the first gun at it by saying that its length was to enable one end of it to remain at home while the other end went with me, so that neither of us should get lost. This is an allusion to a habit which I and my property have of finding ourselves individually and collectively left in the lurch. After this initial shot, everybody considered himself at liberty to let off his rusty old blunderbuss, and there was a constant peppering. But my veil never lowered its colors nor curtailed its resources. Alas! what ridicule and contumely failed to effect, destiny accomplished. Softness and plentitude are no shields against the shafts of fate.

I went into the station waiting-room to write a note. I laid my bonnet, my veil, my packages upon the table. I wrote my note. I went away. The next morning, when I would have arrayed myself to resume my journey, there was no veil. I remembered that I had taken it into the station the night before, and that I had not taken it out. At the station we inquired of the waiting-woman concerning it. It is as much as your life is worth to ask these people about lost articles. They take it for granted at the first blush that you mean to accuse them of stealing. "Have you seen a brown veil lying about anywhere?" asked Crene, her sweet bird-voice warbling out from her sweet rose-lips. "No; I

'a'n't seen nothin' of it," says Gnome, with magnificent indifference.

"It was lost here last night," continues Crene, in a soliloquizing undertone, pushing investigating glances beneath the so-fas.

"I do' know nothin' about it. 'I 'a'n't took it"; and the Gnome tosses her head back defiantly. "I seen the lady when she was a-writin' of her letter, and when she went out ther' wa'n't nothin' left on the table but a hangkerchuf, and that wa'n't hern. I do' know nothin' about it, nor I 'a'n't seen nothin' of it."

Oh, no, my Gnome, you knew nothing of it; you did not take it. But since no one accused you or even suspected you, why could you not have been less aggressive and more sympathetic in your assertions? But we will plough no longer in that field. The ploughshare has struck against a rock and grits, denting its edge in vain. My veil is gone, — my ample, historic, heroic veil. There is a woman in Fontdale who breathes air filtered through — I will not say *stolen* tissue, but certainly through tissue which was obtained without rendering its owner any fair equivalent. Does not every breeze that softly stirs its fluttering folds say to her, "O friend, this veil is not yours, not yours," and still sighingly, "not yours! Up among the northern hills, yonder towards the sunset, sits the owner, sorrowful, weeping, wailing"? I believe I am wading out into the Sally Waters of Mother Goosery; but, prose or poetry, somewhere a woman, — and because nobody of taste could surreptitiously possess herself of my veil, I have no doubt that she cut it incontinently into two equal parts, and gave one to her sister, and that there are two women, — nay, since niggardly souls have no sense of grandeur and will shave down to microscopic dimensions, it is every way probable that she divided it into three unequal parts, and took three quarters of a yard for herself, three quarters for her sister, and gave the remaining half-yard to her daughter, and that at this very moment there are two women and a little girl taking their walks abroad

under the silken shadows of my veil! And yet there are people who profess to disbelieve in total depravity.

Nor did the veil walk away alone. My trunk became imbued with the spirit of adventure, and branched off on its own account up somewhere into Vermont. I suppose it would have kept on and reached perhaps the North Pole by this time, had not Crene's dark eyes—so pretty to look at that one instinctively feels they ought not to be good for anything, if a just impartiality is to be maintained, but they are—Crene's dark eyes seen it tilting up into a baggage-crate and trundling off towards the Green Mountains, but too late. Of course there was a formidable hitch in the programme. A court of justice was improvised on the car-steps. I was the plaintiff, Crene chief evidence, baggage-master both defendant and examining-counsel. The case did not admit of a doubt. There was the little insurmountable check whose brazen lips could speak no lie.

"Keep hold of that," whispered Crene, and a yoke of oxen could not have drawn it from me.

"You are sure you had it marked for Fontdale," says Mr. Baggage-master.

I hold the impracticable check before his eyes in silence.

"Yes, well, it must have gone on to Albany."

"But it went away on that track," says Crene.

"Could n't have gone on that track. Of course they would n't have carried it away over there just to make it go wrong."

For me, I am easily persuaded and dissuaded. If he had told me that it must have gone in such a direction, that it was a moral and mental impossibility it should have gone in any other, and have said it times enough, with a certain confidence and contempt of any other contingency, I should gradually have lost faith in my own eyes, and said, "Well, I suppose it did." But Crene is not to be asserted into yielding one inch, and insists that the trunk went to Vermont and

not to New York, and is thoroughly unmanageable. Then the baggage-master, in anguish of soul, trots out his subordinates, one after another, —

"Is this the man that wheeled the trunk away? Is this? Is this?"

The brawny-armed fellows hang back, and scowl, and muffle words in a very suspicious manner, and protest they won't be got into a scrape. But Crene has no scrape for them. She cannot swear to their identity. She had eyes only for the trunk.

"Well," says Baggage, at his wits' end, "you let me take your check, and I'll send the trunk on by express, when it comes."

I pity him, and relax my clutch.

"No," whispers Crene; "as long as you have your check, you as good as have your trunk; but when you give that up, you have nothing. Keep that till you see your trunk."

My clutch re-tightens.

"At any rate, you can wait till the next train, and see if it does n't come back. You'll get to your journey's end just as soon."

"Shall I? Well, I will," compliant as usual.

"No," interposes my good genius again. "Men are always saying that a woman never goes when she engages to go. She is always a train later or a train earlier, and you can't meet her."

Pliant to the last touch I say aloud, —

"No, I must go in this train"; and so I go trunkless and crest-fallen to meet Halicarnassus.

It is a dismal day, and Crene, to comfort me, puts into my hands two books as companions by the way. They are Coventry Patmore's "Angel in the House," "The Espousals and the Betrothal." I do not approve of reading in the cars; but without is a dense, white, unvarying fog, and within my heart it is not clear sunshine. So I turn to my books.

Did any one ever read them before? Somebody wrote a vile review of them once, and gave the idea of a very puerile, ridiculous, apron-stringy attempt at poetry. Whoever wrote that notice ought

to be shot, for the books are charming pure and homely and householdly, yet not effeminate. Critics may sneer as much as they choose: it is such love as Vaughan's that Honorias value. Because a woman's nature is not proof against deterioration, because a large and long-continued infusion of gross blood, and perhaps even the monotonous pressure of rough, pitiless, degrading circumstances, may displace, eat out, rub off the delicacy of a soul, may change its texture to unnatural coarseness and scatter ashes for beauty, women do exist, victims rather than culprits, coarse against their nature, hard, material, grasping, the saddest sight humanity can see. Such a woman can accept coarse men. They may come courting on all fours, and she will not be shocked. But women in the natural state want men to stand god-like erect, to tread majestically, and live delicately. Women do not often make an ado about this. They talk it over among themselves, and take men as they are. They quietly soften them down, and smooth them out, and polish them up, and make the best of them, and simply and sedulously shut their eyes and make believe there is n't any worst, or reason it away, — a great deal more than I should think they would. But if you want to see the qualities that a woman spontaneously loves, the expression, the tone, the bearing that thoroughly satisfies her self-respect, that not only secures her acquiescence, but arouses her enthusiasm and commands her abdication, crucify the flesh, and read Coventry Patmore. Not that he is the world's great poet, nor Arthur Vaughan the ideal man; but this I do mean: that the delicacy, the spirituality of his love, the scrupulous respectfulness of his demeanor, his unfeigned inward humility, as far removed from servility on the one side as from assumption on the other, and less the opponent than the offspring of self-respect, his thorough gentleness, guilelessness, deference, his manly, unselfish homage, are such qualities, and such alone, as lead womanhood captive. Listen to me, you rattling, roar-

ing, rollicking Ralph Roister Doisters, you calm, inevitable Gradgrinds, as smooth, as sharp, as bright as steel, and as soulless, and you men, whoever, whatever, and wherever you are, with fibres of rope and nerves of wire, there is many and many a woman who tolerates you because she finds you, but there is nothing in her that ever goes out to seek you. Be not deceived by her placability. "Here he is," she says to herself, "and something must be done about it. Buried under Ossa and Pelion somewhere he must be supposed to have a soul, and the sooner he is dug into, the sooner it will be exhumed." So she digs. She would never have made you, nor of her own free-will elected you; but being made, such as you are, and on her hands in one way or another, she carves and chisels, and strives to evoke from the block a breathing statue. She may succeed so far as that you shall become her Frankenstein, a great, sad, monstrous, incessant, inevitable caricature of her ideal, the monument at once of her success and her failure, the object of her compassion, the intimate sorrow of her soul, a vast and dreadful form into which her creative power can breathe the breath of life, but not of sympathy. Perhaps she loves you with a remorseful, pitying, protesting love, and carries you on her shuddering shoulders to the grave. Probably, as she is good and wise, you will never find it out. A limpid brook ripples in beauty and bloom by the side of your muddy, stagnant self-complacence, and you discern no essential difference. "Water 's water," you say, with your broad, stupid generalization, and go oozing along contentedly through peat-bogs and meadow-ditches, mounting, perhaps, in moments of inspiration, to the moderate sublimity of a cranberry-meadow, but subsiding with entire satisfaction into a muck-puddle; and all the while the little brook that you patronize when you are full-fed, and snub when you are hungry, and look down upon always, — the little brook is singing its own melody through grove and orchard and sweet

wild-wood, — singing with the birds and the blooms songs that you cannot hear; but they are heard by the silent stars, singing on and on into a broader and deeper destiny, till it pours, one day, its last earthly note, and becomes forevermore the unutterable sea.

And you are nothing but a ditch.

No, my friend, Lucy will drive with you, and talk to you, and sing your songs; she will take care of you, and pray for you, and cry when you go to the war; if she is not your daughter or your sister, she will, perhaps, in a moment of weakness or insanity, marry you; she will be a faithful wife, and float you to the end; but if you wish to be her love, her hero, her ideal, her delight, her spontaneity, her utter rest and ultimatum, you must attune your soul to fine issues, — you must bring out the angel in you, and keep the brute under. It is not that you shall stop making shoes, and begin to write poetry. That is just as much discrimination as you have. Tell you to be gentle, and you think we want you to dissolve into milk-and-water; tell you to be polite, and you infer hypocrisy; to be neat, and you leap over into dandyism, fancying all the while that bluster is manliness. No, Sir. You may make shoes, you may run engines, you may carry coals; you may blow the huntsman's horn, hurl the base-ball, follow the plough, smite the anvil; your face may be brown, your veins knotted, your hands grimed; and yet you may be a hero. And, on the other hand, you may write verses and be a clown. It is not necessary to feed on ambrosia in order to become divine; nor shall one be accursed, though he drink

of the ninefold Styx. The Israelites ate angels' food in the wilderness, and remained stiff-necked and uncircumcised in heart and ears. The white water-lily feeds on slime, and unfolds a heavenly glory. Come as the June morning comes. It has not picked its way daintily, passing only among the roses. It has breathed up the whole earth. It has blown through the fields and the barn-yards and all the common places of the land. It has shrunk from nothing. Its purity has breasted and overborne all things, and so mingled and harmonized all that it sweeps around your forehead and sinks into your heart as soft and sweet and pure as the fragrant of Paradise. So come you, rough from the world's rough work, with all out-door airs blowing around you, and all your earth-smells clinging to you, but with a fine inward grace, so strong, so sweet, so salubrious that it meets and masters all things, blending every faintest or foulest odor of earthliness into the grateful incense of a pure and lofty life.

Thus I read and mused in the soft summer fog, and the first I knew the cars had stopped, I was standing on the platform, and Coventry and his knight were — where? Wandering up and down somewhere among the Berkshire hills. At some junction of roads, I suppose, I left them on the cushion, for I have never beheld them since. Tell me, O ye daughters of Berkshire, have you seen them, — a princely pair, sore weary in your mountain-land, but regal still, through all their travel-stain? I pray you, entreat them hospitably, for their mission is "not of an age, but for all time."

## GIVE.

“The vine shall give her fruit, and the ground shall give her increase, and the heavens shall give their dew.”

THE fire of Freedom burns,  
 March to her altar now:  
 Bear on the sacred urns  
 Where all her sons must bow.

Woman of nerve and thought,  
 Bring in the urn your power!  
 By you is manhood taught  
 To meet this supreme hour.

Come with your sunlit life,  
 Maiden of gentle eye!  
 Bring to the gloom of strife  
 Light by which heroes die.

Give, rich men, proud and free,  
 Your children's costliest gem!  
 For Liberty shall be  
 Your heritage to them.

O friend, with heavy urn,  
 What offering bear you on?  
 The figure did not turn;  
 I heard a voice, “My son.”

The fire of Freedom burns,  
 Her flame shall reach the heaven:  
 Heap up our sacred urns,  
 Though life for life be given!

## ONLY AN IRISH GIRL!

“Oh, it's only an Irish girl!”

I flamed into a wrath far too intense for restraint. My whole soul rose up and cried out against the Deacon's wife. I answered,—

“True. A small thing! But are lies and murder small things, Mrs. Adams? Murderers, and whosoever loveth and maketh a lie, are to be left outside of the

heavenly city. And, Mrs. Adams, suppose it should appear that a woman of high respectability, moving in the best society, and a most excellent housekeeper, has both those two tickets for hell? Do you remember the others that make up that horrible company in the last chapter of Revelation? Mrs. Adams, *the girl is DEAD!*

The Deacon's wife's hard face had blazed instantly into passionate scarlet. But I cared not for her, nor for man nor woman. For the words *said themselves*, and thrilled and sounded fearful to me also; they hurt me; they burnt from my tongue as melted iron might; and, scarcely knowing it, I rose up and emphasized with my forefinger. And her face, at those last four words, turned stony and whity-gray, like a corpse. I thought she would die. Oh, it was awful to think so, and to feel that she deserved it! For I did. I do now. For, reason as I will, I cannot help feeling as if a tinge of the poor helpless child's blood was upon my own garments. I do well to be angry. It is not that I desire any personal revenge. But I have a feeling, — not pleasure, it is almost all pity and pain, — but yet a feeling that sudden death or lingering death would be small satisfaction of justice upon her for what she rendered to another.

Her strong, hard, cruel nature fought tigerishly up again from the horrible blow of my news. She was frightened almost to swooning at the thing that I told and my denunciation, and the deep answering stab of her own conscience. But her angry iron will rallied with an effort which must have been an agony; her face became human again, and, looking straight and defiantly at me, she said, yet with difficulty, —

“Ah! I'll see if my husband'll hev sech things said to me! That's all!”

And she turned and went straightway out of my house, erect and steady as ever.

It may seem a trifling story, and its lesson a trifling one. But it is not so, — neither trifling nor needless.

It is a rare thing, indeed, for a woman in this America to long and love to have children. The only two women whom I know in this large town who do are Mrs. O'Reilly, the mother of poor Bridget, and — one more.

Poor old Mrs. O'Reilly! She came to me this morning, and sat in my kitchen,

and cried so bitterly, and talked in her strong Corkonian brogue, and rocked herself backwards and forwards, and shook abroad the great lambent banners of her cap-border, — a grotesque old woman, but sacred in her tender motherhood and her great grief. Her first coming was to peddle blackberries in the summer. I asked her if she picked them herself.

“Och thin and shure I've the childher to do that saam,” said she. And what wonderful music must the voice of her youth have been! It was deep of intonation and heartfelt, — rich and smooth and thrilling yet, after fifty years of poverty and toil. “And id's enough of thim that's in id!” she added, with a curious air of satisfaction and reflectiveness.

“How many children have you?” I inquired.

She laughed and blushed, old woman though she was; and pride and deep delight and love shone in her large, clear, gray eyes.

“I've fourteen darlins, thank God for ivery wan of thim! And it's a purrty parthy they are!”

“Fourteen!” I exclaimed, — “how lovely!” I stopped short and blushed. My heart had spoken. “But how” — I stopped again.

The old blackberry-woman answered me with tears and smiles. What a deep, rich, loving heart was covered out of sight in her squalid life! It makes me proud that I felt my heart and my love in some measure like hers; and she saw it, too.

“An' it's yerself, Ma'm, that has the mother's own heart in yez, to be sure! An' I can see it in your eyes, Ma'm! But it's the thruth it's mighty scarce intirely! I do be seein' the ladies that's not glad at all for the dear childher that's sint 'em, and sure it's sthrange, Ma'm! Indade, it was with the joy I did be cryin' over ivery wan o' me babies; and I could aisy laugh at the pain, Ma'm! And sure now it's cryin' I am betimes because I'll have no more!”

The dear, beautiful, dirty old woman! I cried and laughed with her, and I bought ten times as many blackberries

as I wanted; and Mrs. O'Reilly and I were fast friends.

She and hers, her "ould man," her sons and her daughters, were thenceforth our ready and devoted retainers, dexterous and efficient in all manner of service, generous in acknowledging any return that we could make them; respectful and self-respectful; true men and women in their place, not unfit for a higher, and showing the same by their demeanor in a low one.

They came in and went out among us for a long time, in casual employments, until, with elaborate prefaces and doubtful apologetic circumlocutions, shyly and hesitatingly, Mrs. O'Reilly managed to prefer her petition that her youngest girl, Bridget, by name, — there were a few junior boys, — might be taken into my family as a servant. I asked the old woman a few questions about her daughter's experiences and attainments in the household graces and economies; could not remember her; thought I had seen all the "childher"; found that she had been living with Mrs. Deacon Adams, and had not been at my house. It was only for form's sake that I catechized; Bridget came, of course.

She was such a maiden as her mother must have been, one of Nature's own ladies, but more refined in type, texture, and form, as the American atmosphere and food and life always refine the children of European stock, — slenderer, more delicate, finer of complexion, and with a soft, exquisite sweetness of voice, more thrilling than her mother's, larger and more robust heartfelnness of tone, — and with the same, but shyer ways, and swift blushes and smiles. In one thing she differed: she was a silent, reticent girl; her tears were not so quick as her mother's, nor her words; she hid her thoughts. She had learned it of us secretive Americans, or had inherited it of her father, a silent, though cheery man.

Her glossy wealth of dark-brown hair, her great brown eyes, long eyelashes, sensitive, delicately cut, mobile red lips, oval face, beautifully formed arms and

hands, and lithe, graceful, lady-like movements, were a sweet household picture, sunshiny with unfailing good-will, and of a dexterous neat-handedness very rare in her people. My husband was looking at her one day, and as she tripped away on some errand he observed, —

"She is a graceful little saint. All her attitudes are beatitudes."

Bridget was pure and devout enough for the compliment; and I had not been married so long but that I could excuse the evidence of his observation of another, for the sake of the neatness of his phrase. I should have thought the unconscious child incongruously lovely amongst brooms and dust-pans, pots and kettles, suds and slops and dishwater, had I not been about as much concerned among them myself.

Bridget had been with me only a day or two, when a friend and fellow-matron, in the course of an afternoon call, apprised me that there were reports that Bridget O'Reilly was a thief, — in fact, that she had been turned away by Mrs. Adams for that very offence, which she told me "out of kindness, and with no desire to injure the girl; but there is so much wickedness among these Irish!" She had heard this tale, through only one person, from Mrs. Adams herself.

This troubled me; yet I should have quickly forgotten it. I met the same story in several other directions within a few days; and now it troubled me more. Women are suspicious creatures. I don't like to confess it, but it is true. Besides, servants do sometimes steal. And little foreign blood of the oppressed nationalities has truth in it, or honesty. Why should it? Why should the subjugated Irish, any more than the Southern slaves, beaten down for centuries by brutal strength, seeking to exterminate their religion and their speech, to terrify them out of intelligence and independence, to crush them into permanent poverty and ignorance, — why should they tell the truth or respect property? Falsehood and theft are that cunning which is the natural and necessary weapon of weak-

ness. Their falsehood is their resistance, in the only form that weakness can use, evasion instead of force. Their theft is the taking of what is instinctively felt to be due; their gratification of an instinct after justice; done secretly because they have not the strength to demand openly. Such things are unnecessary in America, no doubt. But habits survive emigration. They are to be deplored, charitably and hopefully and tenderly cured as diseases, not attacked and furiously struck and thrust at as wild beasts. Thus it might be with Bridget, notwithstanding her great, clear, innocent eyes, and open, honest ways. If she had grown up to think such doings harmless, she would have no conscience about it. Conscience is very pliant to education. It troubles no man for what he is trained to do.

So I felt these stories. I could not find it in my heart to talk to poor Bridget about it. I could not tell her large-hearted old mother. This reluctance was entirely involuntary, an instinct. I wish I had felt it more clearly and obeyed it altogether! There is some fatal cloud of human circumstance that covers up from our sight our just instinctive perceptions, — makes us drive them out before the mechanical conclusions of mere reason; and when our reason, our special human pride, has failed us, we say in our sorrow, I see now; if I had only trusted my first impulse! — What is this cloud? Is it original sin? I asked my husband. He was writing his sermon. He stopped and told me with serious interest, — “This cloud is that original or inbred sin which we receive from Adam; obscuring and vitiating the free exercise of the originally perfect faculties; wilting them down, as it were, from a high native assimilation to the operative methods of the Divine Mind, to the painful, creeping, mechanical procedures of the comparing and judging reason. And this lost power is to be restored, we may expect, by the regenerating force of conversion.”

I know I've got this right; because, after Henry had thanked me for my question, he said I was a good preaching-

stock, — that the inquiry “joggled up” his mind, and suggested just what fayed in with his sermon; and afterwards I heard him preach it; and now I have copied it out of his manuscript, and have it all correct and satisfactory. What will he do to me, if he should see this in print? But I can't help it. And what is more, I don't believe his theological stuff. If it were true, there would not so many good people be such geese.

But whatever this cloud is, it now blinded and misguided me. I quietly, very quietly, put away some little moneys that lay about, — locked up nearly all my small stock of silver and my scanty jewelry, — locked my bureau-drawers, — counted unobtrusively the weekly proceeds of the washing, — and was extremely watchful against the least alteration of my manner towards my poor pretty maid.

It might have been a week after this, when my husband said one morning that Bridget's eyes were heavy, and she had moved with a start several times, as though she were half-asleep. Now that he spoke, I saw it, and wondered that I had not seen it before; but I think some men notice things more quickly than women. I asked the child if she were well.

“Yes, Ma'am,” she said, spiritlessly, “but my head aches.”

I observed her; and she dragged herself about with difficulty, and was painfully slow about her dishes. At tea-time I made her lie down in my little back parlor and got the meal myself, and made her a nice cup of tea. She slept a little, but grew flushed. Next morning she was not fit to get up, but insisted that she was, and would not remain in bed. But she ate nothing, — indeed, for a day or two she had not eaten, — and after breakfast she grew faint, and then more flushed than ever; seemed likely to have a hard run of fever; and I sent for my doctor, — a homeopath.

He came, saw, queried, and prescribed. Doctor-like, he evaded my inquiry what was the matter, so that I saw it was

a serious case. On my intimating as much, he said, with sudden decision, —

“I’ll tell you what, Madam. She may be better by night. If not, you’d better send for Bagford. He might do better for her than I.”

I was extremely surprised, for Bagford is a vigorous allopath of the old school, drastic, bloody,—and an uncompromising enemy of “that quack,” as he called my grave young friend. I said as much. Doctor Nash smiled.

“Oh, I don’t mind it, so long as the patients come to me. I can very well afford to send him one now and then. The fact is, the Irish must *feel* their medicine. It’s quite often that a raking dose will cure ’em, not because it’s the right thing, but because it takes their imagination with it. The Irish imagination goes with Bagford and against me; and the wrong medicine with the imagination is better than the right one against it. I care more about curing this child than I do about him. Besides,”—and he grew grave, — “it may be no great favor to him.”

I obliged him to tell me that he feared the attack would develop into brain-fever; and he said something was on the girl’s mind. As soon as he was gone, I ran up to poor Bridget, whose sweet face and great brown eyes were kindled, in her increasing fever, into a hot, fearful beauty; and now I could see a steady, mournful, pained look contracting her mouth and lifting the delicate lines of her eyebrows. Poor little girl! I felt the same deep yearning sorrow which we have at the sufferings of a little child, who seems to look in scared wonder at us, as if to ask, What is this? and Why do you not help? When a child suffers, we feel a sense of injustice done. Bridget’s lips were dry. Her skin was so hot, her whole frame so restless! And the silent misery of her eyes ate into my very heart. I smoothed her pillow and bathed her head, and would fain have comforted her, as if she had been my own little sister. But I could plainly see that my help was not welcome. When, how-

ever, I had done all that I could for her, I quietly told her that she was sick, and that I wanted to have her get well,—that I saw something was troubling her, and she must tell me what it was. I don’t think the silent, enduring thing would have spoken even then, if she had not seen that I was crying. Her own tears came, too; and she briefly said, —

“You all think I’m a thief.”

I assured her most earnestly to the contrary.

She turned her restless head over towards me again, and her great eyes, all glittering with fever and pain, searched solemnly into mine; and she replied, —

“You all think I’m a thief. Yis, I saw you had locked up the money and the silver. I saw you count the clean clothes that was washed in the house. Would n’t I be after seein’ it? And they says so in the town.”

It went to my heart to have done those things. All that I could say was utterly in vain. She evidently *felt* nothing of it to be true. She had received a deep and cruel hurt; and the poor, wild, half-civilized, shy, silent soul had not wherewith to reason on it. She only endured, and held her peace, and let the fire burn; and her sensitive nerves had allowed pain of mind to become severe physical disease. My words she scarcely heard; my tears were to her only sympathy. She knew what she had seen. Besides, her disease increased upon her. Almost from minute to minute she grew more restless, and her increasing inattention to what I said frightened as well as hurt me. The medicines of Dr. Nash were useless. Before noon I sent for Dr. Bagford, who said it was decidedly brain-fever,—that she must be leeches, and have ice at her head, and so forth.

Ah, it was useless. She grew worse and worse; passed through one or two long terrible days of frantic misery, crying and protesting against false accusations with a lamenting voice that made us all cry, too; then lay long in a stupid state, until the doctor said that now it would be better for her to die, because,

after such an attack, a brain so sensitive would be disorganized,—she would be an idiot.

Her poor mother came and helped us wait on her. But neither care nor medicine availed. Bridget died; and the funeral was from our house. I was surprised by the lofty demeanor of Father MacMullen, the Irish priest, the first I had ever met: a tall, gaunt, bony, black-haired, hollow-eyed man, of inscrutable and guarded demeanor, who received with absolute haughtiness the courtesies of my husband and the reverences of his own flock. A few of his expressions might indicate a consciousness that we had endeavored to deal kindly with poor little Bridget. But he did not think so; or at least we know that he has so handled the matter that we meet ill feeling on account of it.

The griefs for any such misfortune were, however, obscure and shallow in comparison with my sorrow for the untimely quenching of Bridget's young life, and my sympathy with her poor old mother. When I reasoned about the affair, I could see that I had done nothing which would not be commended by careful housekeepers. I could see it, but, in spite of me, I could not feel it. I was tormented by vain wishes that I had done otherwise. I could not help feeling as if her people charged me with her blood,—as if I had been in some sense aiding in her death. Nor do I even now escape obscure returns of the same inexpressibly sad pain.

The garnishing of sepulchres is an employment which by no means went out with the Scribes and Pharisees. Under the circumstances, the death of my pretty young maid, although she was only an Irish girl, produced a deep impression in the village. Very soon, now that it

could do no good, it was generally agreed that the imputations against her were wholly unfounded. It was pretty distinctly whispered that they had arisen out of things said by Mrs. Deacon Adams, in her wrath, because Bridget had left her service to enter mine; and I now ascertained that this Mrs. Adams was a woman of bitter tongue, and enduring, hot, and unscrupulous in anger and in revengefulness. I have inquired sufficiently; I know it is true. The vulgar malice of a hard woman has murdered a fair and good maiden with the invisible arrows of her wicked words.

But she begins already to be punished, coarse cast-iron as she is. People do not exactly like to talk with her. She is growing thin. She has been ill,—a thing, I am told, never dreamed of before. Of course she reported to her husband the reproaches with which I had surprised her on the very day of Bridget's death. She had called in by chance, and had not even heard of her illness; had herself begun to retail to me the kind of talk with which she had poisoned the village, not knowing that her evil work was finished; and it was the scornful carelessness of her reply to my first reproof that stung me to answer her so bitterly. It was two weeks before good, white-haired, old Deacon Adams came to the house of his pastor. His face looked careworn enough. He stayed long in the study with my husband, and went away sadly. I happened to pass through our little hall just as the Deacon opened the study-door to depart; and I caught his last words, very sorrowful in tone, —

“She might git well, ef she could stop dreamin' on 't, and git the weight off 'm her mind. But words that 's once spoken can't be called back as you call the cows home at night.”

## SHALL WE COMPROMISE?

IN that period of remote antiquity when all birds of the air and beasts of the field were able to talk, it befell that a certain shepherd suffered many losses through the constant depredations of a wolf. Fearing at length that his means of subsistence would be quite taken away, he devised a powerful trap for the creature, and set it with wonderful cunning. He could hardly sleep that night for thinking of the matter, and early next morning took a stout club in his hand, and set forth to learn of his success; when, lo! on drawing near the spot, there he saw the wolf, sure enough, a huge savage, fast held in the trap.

"Ah," cried he, with triumph, "now I have got you!"

The wolf held his peace until the other was quite near, and then in a tone of the severest moral rebuke, and with a voice that was made quite low and grave with its weight of judicial reprehension, said,—

"Is it you, then? Can it be one wearing the form of a man, who has laid this wicked plot against the peace, nay, as I infer from that club, against the very life, of an innocent creature? Behold what I suffer, and how unjustly!—I, of all animals, whose life,—the sad state I am now in constrains me against modesty to say it,—whose life is notoriously a pattern of all the virtues;—I, too, ungrateful biped, who have watched your flock through so many sleepless nights, lest some ill-disposed dog might do harm to the helpless sheep and lambs!"

The shepherd, one of the simplest souls that ever lived, was utterly confounded by this reproof, and hung his head with shame, unable, for a season, to utter a word in his own defence. At length he managed to stammer,—

"I pray your pardon, brother, but—but in truth I have lost a great many lambs lately, and began to think my little ones at home would starve."

"How harder than stone is the heart

of man!" murmured the wolf, as if to himself.

Then, raising his voice, he went on to say,—

"I despair of reaching your conscience; nevertheless I will speak as if I had hope. You never paid me anything for protecting your flock; it was on my part a pure labor of love; and yet, because I cannot quite succeed in guarding it against all the bad dogs that are about, you would take my life!"

And the creature put on such a look of meek suffering innocence that the shepherd was touched to the very heart, and felt more guilty and abashed than ever. He therefore said at once,—

"Brother, I fear that I have done you wrong; and if you will swear to mind your own affairs, and not prey upon my flock, I will at once set you free."

"My character ought to be a sufficient guaranty," answered the quadruped, with much dignity; "but I submit, since I must, to your unjust suspicions, and promise as you require."

So, lifting up his paw, he swore solemnly, by all the gods that wolves worship, to keep his pledge. Thereupon the other set him free, with many apologies and professions of confidence and friendship. Only a few days, however, had passed before the shepherd, happening to mount a knoll, saw at a little distance the self-same wolf eagerly devouring the warm remains of a lamb.

"Villain! villain!" he shouted, in great wrath, "is this the way you keep your oath? Did not you swear to mind your own business?"

"I am minding it," said the wolf, with a grin; "it is my business to eat lambs; it should be yours not to believe in wolves' promises."

So saying, he seized upon the last fragment of the lamb, and ran away as fast as his legs would carry him.

*Moral.*—Shepherds who make com-

promises with wolves sell their mutton at an exceedingly cheap market.

Now just such short-witted shepherds are we, the people of these free American States, invited by numbers of citizens to become. Just such, do I say? A thousand times more silly than such. Our national wolf meets us with jaws that drip blood and eyes that glare hunger for more. Instead of professing sanctity and innocence, it only howls immitigable hate and steadfast resolution to devour. "Give me," it howls, "half the pasture and flock for my own, with, of course, a supervision over the rest, and a child or two when I am dainty; and I will be content, — until I want more!"

In speaking of our "national wolf," we are using no mere rhetoric, but are, in truth, getting at the very heart of the matter. This war, in its final relations to human history, is an encounter between opposing tendencies in man, — between the beast-of-prey that is in him and is always seeking brute domination, on the one hand, and the rational and moral elements of manhood, which ever urge toward the lawful supremacy, on the other. This is a conflict as old as the world, and perhaps one that, in some shape, will continue while the world lasts; and I have tried in vain to think of a single recorded instance wherein the issue was more simple, or the collision more direct, than in our own country to-day.

That principle in nature which makes the tiger tiger passes obviously into man in virtue of the fact that he is on one side, on the side of body and temperament, cousin to the tiger, as comparative anatomy shows. This presence in man of a tiger-principle does not occur by a mistake, for it is an admirable fuel or fire, an admirable generator of force, which the higher powers may first master and then use. But at first it assumes place in man wholly untamed and seemingly tameless, indisposed for aught but sovereignty. Of course, having place in man, it passes, and in the same crude state, into society. And thus it happens, that, when the unconquerable affinities

of men bring them together, this principle arises in its brutal might, and strives to make itself central and supreme.

But what is highest in man has its own inevitable urgency, as well as what is lowest. It can never be left out of the account. Gravitation is powerful and perpetual; but the pine pushes up in opposition to it nevertheless. The forces of the inorganic realm strive with might to keep their own; but organic life *will* exist on the planet in their despite, and will conquer from the earth what material it needs. And, in like manner, no sooner do men aggregate than there begin to play back and forth between them ideal or ascending forces, mediations of reason, conscience, soul; and the ever growing interpretations of these appear as courtesies, laws, moralities, worships, — as all the noble communities which constitute a high social state. In fine, there is that in man which seeks perpetually, for it seeks necessarily, to give the position of centrality in society to the ideal principle of justice and to the great charities of the human soul.

Hence a contest. Two antagonistic principles leap forth from the bosom of man, so soon as men come together, seeking severally to establish the law of social relationship. One of these is predaceous, brutal; the other ideal, humane. One says, "Might makes Right"; the other, "Might should serve Right." One looks upon mankind at large as a harvest to be gathered for the behoof of a few, who are confederate only for that purpose, even as wolves hunt in packs; the other regards humanity as a growth to be fostered for its own sake and worth, and affirms that superiority of strength is given for service, not for spoil. One makes the *ego* supreme; the other makes rational right supreme. One seeks private gratification at any expense to higher values, even as the tiger would, were it possible, draw and drink the blood of the universe as soon as the blood of a cow; the other establishes an ideal estimate of values, and places private gratification low on the scale. But the deepest difference

between them, the root of separation, remains to be stated. It is the opposite estimate they have of man in the pure simplicity of his being. The predaceous principle says, — "Man is in and of himself valueless; he attains value only by position, by subduing the will of others to his own; and in subjecting others he destroys nothing of worth, since those who are weak enough to fall are by that very fact proved to be worthless." The humane or socializing principle, on the contrary, says, — "Manhood is value; the essence of all value is found in the individual soul; and therefore the final use of the world, of society, of action, of all that man does and of all that surrounds him, is to develop intelligence, to bring forth the mind and soul into power, — in fine, to realize in each the spiritual possibilities of man."

True socialization now exists only as this nobler principle is victorious. It exists only in proportion as force is lent to ideal relations, relations prescribed by reason, conscience, and reverence for the being of man, — only in proportion, therefore, as the total force of the state kneels before each individual soul, and, without foolish intermeddlings, or confusions of order, proffers protection, service, succor. Here is a socialization flowing, self-poised, fertilizing; it is full of gracious invitation to all, yet regulates all; it makes liberty by making law; it produces and distributes privilege. Here there is not only *community*, that is, the unity of many in the enjoyment of common privilege, but there is more, there is positive fructification, there is a wide, manifold, infinitely precious evocation of intelligence, of moral power, and of all spiritual worth.

As, on the contrary, the baser principle triumphs, there is no genuine socialization, but only a brute aggregation of subjection beneath and a brute dominance of egotism above. Society is mocked and travestied, not established, in proportion as force is lent to egotism. If anywhere the power which we call *state* set its heel on an innocent soul, — if anywhere it sup-

press, instead of uniting intelligence, — if anywhere it deny, though only to one individual, the privilege of becoming human, — to such an extent it wars against society and civilization, to such extent sets its face against the divine uses of the world.

Now the contest between these opposing principles is that which is raging in our country this day. Of course, any broad territorial representation of this must be of a very mixed quality. Our best civilizations are badly mottled with stains of barbarism. In no state or city can egotism, either of the hot-blooded or cold-blooded kind, — and the latter is far the more virulent, — be far to seek. On the other hand, no social system, thank God, can quite reverse the better instincts of humanity; and it may be freely granted that even American slavery shades off, here and there, into quite tender modifications. Yet not in all the world could there possibly be found an antagonism so deep and intense as exists here. The Old World seems to have thrown upon the shores of the New its utmost extremes, its Oriental barbarisms and its orient and auroras of hope and belief; so that here coexist what Asia was three thousand years ago, and what Europe may be one thousand years hence. Let us consider the actual *status*.

In certain localities of Southern Africa there is a remarkable fly, the Tsetse fly. In the ordinary course of satisfying its hunger, this insect punctures the skin of a horse, and the animal dies in consequence. A fly makes a lunch, and a horse's life pays the price of the meal. This has ever seemed to me to represent the beast-of-prey principle in Nature more vigorously than any other fact. But in that system whose fangs are now red with the blood of our brave there is an expression of this principle not less enormous. It is the very Tsetse fly of civilization. That a small minority of Southern men may make money without earning it, — that a few thousand individuals may monopolize the cotton-market of the world, — what a suppression and

destruction of intelligence it perpetrates! what consuming of spiritual possibilities! what mental wreck and waste! Whites, too, suffer equally with blacks. Less oppressed, they are perhaps even more demoralized. No parallel example does the earth exhibit of the sacrifice of transcendent values for pitiful ends.

In attempting to destroy free government and rational socialization in America, this system is treading no new road, it is only proceeding on the old. Its central law is that of destroying any value, however great, for the sake of any gratification, however small. Accustomed to batten on the hopes of humanity, — accustomed to taking stock in human degradation, and declaring dividends upon enforced ignorance and crime, — existing only while every canon of the common law is annulled, and every precept of morals and civilization set at naught, — could it be expected to pause just when, or rather just *because*, it had apparently found the richest possible prey? Could it be expected to withhold its fang for no other reason than that its fang was allured by a more opulent artery than ever before? The simple truth is — and he knows nothing about this controversy who fails to perceive such truth — that the system whose hands are now armed against us has always borne these arms in its heart; that the fang which is now bared has hitherto been only concealed, not wanting; that the tree which is today in bloody blossom is the same tree it ever was, and carried these blossoms in its sap long ere spreading them upon its boughs.

To this predaceous system what do we oppose? We oppose a socialization that has features, — I will say no more, — has *features* of generous breadth and promise, that are the best fruition of many countries and centuries. Faults and drawbacks it has enough and to spare; conspicuous among which may be named the vulgar and disgusting “negrophobia,” — a mark of under-breeding which one hopes may not disgrace us always. But let us be carried away by no mania for

self-criticism. Two claims for ourselves may be made. First, a higher grade of laws nowhere exists with a less amount of coercive application, — exists, that is, by the rational and constant choice of the whole people. Secondly, it may be questioned whether anywhere in the world the development of intelligence and moral force in the whole people is to a greater extent a national aim. But abandoning all comparison with other peoples, this we may say with no doubtful voice: We stand for the best ideas of the Old World in the New; we stand for orderly freedom and true socialization in America; we stand for these, and with us these must here stand or fall.

Now, of course, we are not about to become the offscouring of the earth by yielding these up to destruction. Of course, we shall not convert ourselves into a nation of Iscariots, and give over civilization to the bowie-knife, with the mere hope of so making money out of Southern trade, — which we should not do, — and with the certainty of a gibbet in history, to mention no greater penalty.

But refusing this perfidy, could we have avoided this war? No; for it was simply our refusal of such perfidy which, so far as we are concerned, brought the war on. The South, having ever since the Mexican War stood with its sword half out of the scabbard, perpetually threatening to give its edge, — having made it the chief problem of our politics, by what gift or concession to purchase exemption from that dreaded blade, — at last reached its ultimate demand. “Will you,” it said to the North, “abdicate the privileges of equal citizenship? Will you give up this continent, territory, Free States and all, to our predaceous, blood-eating system? Will you sell into slavery the elective franchise itself? Will you sell the elective franchise itself into slavery, and take for pay barely the poltroon’s price, that of being scornfully spared by the sword we stand ready to draw?” The North excused itself politely. In the softest voice, but with a soft-

voicedness that did not wholly conceal an iron thread of resolution, it declined to comply with that most modest demand. Then the sword came out and struck at our life. Was it matter of choice with us whether we would fight? Not unless it were also matter of choice whether we would become the very sweepings and blemish of creation.

"But we might have permitted secession." No, we could not. It was clearly impracticable. "But why not?" *Because that would have been to surrender the whole under the guise of giving up half.* Such a concession could have meant to the people of the rebellious States, and, in the existing state of national belief, could have meant to our very selves, nothing other than this: — "We submit; do what you will; we are shopkeepers and cowards; we must have your trade; and besides, though expert in the use of yardsticks, we have not the nerve for handling guns." From that moment we should have lost all authority on this continent, and all respect on the other.

The English papers have blamed us for fighting; but had we failed to fight, not one of these censoring mouths but would have hissed at us like an adder with contempt. Nay, we ourselves should, as it were, soon have lost the musical speech and high carriage of men, and fallen to a proneness and a hissing, degraded in our own eyes even more than in those of our neighbors. Of course, from this state we should have risen; but it would have been to see the redness of war on our own fields and its flames wrapping our own households. We should have risen, but through a contest to which this war, gigantic though it be, is but a quarrel of school-boys.

By sheer necessity we began to fight; by the same we must fight it out. Compromise is, in the nature of the case, impossible. It can mean only *surrender*. Had there been an inch more of ground for us to yield without total submission, the war would have been, for the present, staved off. We turned to bay only when driven back to the vital principle

of our polity and the vital facts of our socialization.

Politically, what was the immediate grievance of the South? Simply that Northern freemen went to the polls as freemen; simply that they there expressed, under constitutional forms, their lawful preference. How can we compromise here, even to the breadth of a hair? How compromise without stipulating that all Northern electors shall henceforth go to the polls in charge of an armed police, and there deposit such ballot as the slave-masters of the Secession States shall direct?

Again, in our social state what is it that gives umbrage to our antagonists? They have answered the question for us; they have stated it repeatedly in the plainest English. It is simply the fact that we are free States; that we have, and honor, free labor; that we have schools for the people; that we teach the duty of each to all and of all to each; that we respect the human principle, the spiritual possibility, in man; in fine, that ours is a human socialization, whose fundamental principles are the venerableness of man's nature and the superiority of reason and right to any individual will. So far as we are base bargainers and unbelievers, they can tolerate us, even though they despise; just where our praise begins, begin their detestation and animosity.

It is, by the pointed confession of Southern spokesmen, what we are, rather than what we have done, which makes them Secessionists; and any man of sense might, indeed must, see this fact, were the confession withheld. In action we have conformed to Southern wishes, as if conformity could not be in excess. We have conformed to an extent that — to mention nothing of more importance — had nearly ruined us in the estimation of mankind. One chief reason, indeed, why the sympathy of Europe did not immediately go with us was that a disgust toward us had been created by the football passivity, as it seemed abroad, with which we had submitted to be kicked to and

fro. The rebellion was deemed to be on our side, not on theirs. We, born servitors and underlings, it was thought, had forgotten our proper places,—nay, had presumed to strike back, when our masters chastised us. Of course, we should soon be whipped to our knees again. And when we were again submissive and abject, Europe must so have demeaned itself as still to be on good terms with the conquerors. As for us, our final opinion of their demeanor, so they deemed, mattered very little. The ill opinion of the servants can be borne; but one must needs be on friendly terms with the master of the house. The conduct of Europe toward us at the outbreak of this war is to be thus explained, more than in any other way. According to European understanding, we had before written ourselves down menials; therefore, on rising to the attitude of men, we were scorned as upstarts.

The world has now discovered that there was less cowardice and more comity in this yielding than had been supposed. Yet in candor one must confess that it was barely not carried to a fatal extent. One step more in that direction, and we had gone over the brink and into the abyss. Only when the last test arrived, and we must decide once and forever whether we would be the champions or the apostates of civilization, did we show to the foe not the dastard back, but the dauntless front. And the proposal to “compromise” is simply and exactly a proposal to us to reverse that decision.

Again, we can propose no compromise, such as would stay the war, without confessing that there was no occasion for beginning it. And if, indeed, we began it without occasion, without an occasion absolutely imperative, then does the whole mountain-weight of its guilt lie on our hearts. Then in every man that has fallen on either side we are assassins. The proposal to bring back the seceded States by submission to their demands is neither more nor less than a proposal to write “Murderer” on the

brow of every soldier in our armies, and “Twice Murderer” over the grave of every one of our slain. If such submission be due now, not less was it due before the war began. To say that it was then due, and then withheld, is, I repeat, merely to brand with the blackness of assassination the whole patriotic service of the United States, both civil and military, for the last two years.

If, now, such be, in very deed, our guilt, let us lose no moment in confessing the fact,—nor afterwards lose a moment in creeping to the gallows, that, must, in that case, be hungering for us. But if no such guilt be ours, then why should not our courage be as good as our cause? If not only by the warrant, but by the imperative bidding of Heaven, we have taken up arms, then why should we not, as under the banner of Heaven, bear them to the end?

In this course, no *real* failure can await us. Obeying the necessity which is laid upon us, and simply conducting ourselves as men of humanity, courage, and honor, we shall surely vindicate the principles of civilization and orderly society, within our own States, whether we immediately succeed in impressing them on South Carolina and her evil sisterhood or not. Let us but vindicate their existence on any part of this continent, and that alone will insure their final prevalence on the continent as a whole. Let us now but make them inexpugnable, and they will make themselves universal. This law of necessary prevalence, in a socialization whose vital principle is reverence for the nature of man, was clearly seen by the masters, or rather, one should say, by the subjects, of the slave system; and this war signifies their immediate purpose to build up between it and themselves a Chinese excluding wall, and their ulterior purpose to starve and trample it out of this hemisphere.

Finally, just that which teaches us charity toward the slaveholders teaches us also, forbearing all thought of base and demoralizing compositions, to press

the hand steadily upon the hilt it has grasped, until war's work is done. These servants of a predaceous principle are nearly, if not quite, its earliest prey. Enemies to us, they are twice enemies to themselves. They are driven helplessly on, and will be so until we slay the tyrant that wrings from them their evil services. During that fatal month's *siesta* at Yorktown, the country was horror-stricken to hear that the enemy were forcing negroes at the point of the bayonet to work those pieces of ordnance from which the whites, in terror of our sharpshooters, had fled away. But behind the whites themselves, behind the whole disloyal South, had long been another bayonet goading heart and brain, and pricking them on to aggression after aggression, till aggression found its goal, where we trust it will find its grave, in civil war. Poor wretches! Who does not pity them? Who that pities them wisely would not all the more firmly grasp that sword which alone can deliver them?

Nor has the slave-system been any worse than it must be, in pushing us and them to the present pass. So bad it must be, or cease to be at all. All things obey their nature. Hydrophobia will bite, small-pox infect, plague enter upon life and depart upon death, hyenas scent

the new-made graves, and predaceous systems of society open their mouths ever and ever for prey. What else *can* they do? Even would the Secessionists consent to partial compositions, as they will not, they must inevitably break faith, as ever before. They are slaves to the slave-system. As wise were it to covenant with the dust not to fly, or with the sea not to foam, when the hurricane blows, as to bargain with these that they shall resist that despotic impetus which compels them. They are slaves. And their master is one whose law is to devour. Only he who might meditate letting go a Bengal tiger on its parole of honor, or binding over a pestilence to keep the peace, should so-much as dream for a moment of civil compositions with this system. Its action is inevitable. And therefore our only wisdom will be to make our way by the straightest path to this, which is our chief, and in the last analysis our only enemy, and cut it through and through. This only will be a final preservation to ourselves; this only the noblest amity to the South; this, deliverance to the captivity of two continents, Africa and America: so that here principle and policy are for once so obviously, as ever they are really, one and the same, that no man of sense should fail to perceive their unity.

## WEAK LUNGS, AND HOW TO MAKE THEM STRONG.

THE highest medical authorities of this century have expressed the opinion that tubercular disease of the various tissues is justly chargeable with one-third of the deaths among the youth and adults of the civilized world. The seat of this tubercular disease is, in great part, in the lungs.

Before the taint is localized, it is comparatively easy to remove it. If in regard to most other maladies it may be said that "an ounce of prevention is worth a pound of cure," in reference to tubercular consumption it may be truly declared that an ounce of prevention is worth tons of cure.

Had the talent and time which have been given to the treatment of consumption been bestowed upon its causes and prevention, the percentage of mortality from this dreaded disease would have been greatly reduced.

### NATURE OF CONSUMPTION.

GENUINE consumption does not originate in a cold, an inflammation, or a hemorrhage, but in tubercles. And these

tubercles are only secondary causes. The primary cause is a certain morbid condition of the organism, known as the tubercular or scrofulous diathesis. This morbid condition of the general system is sometimes hereditary, but much more frequently the result of unphysiological habits. Those cases to which our own errors give rise may be prevented, and a large proportion of those who have inherited consumptive taint may by wise hygiene be saved.

### *Consumption is not a Local Disease.*—

It is thought to be a malady of the lungs. This notion has led to most of the mistakes in its treatment.

Salt rheum appears on the hand. Some ignorant physician says, "It is a disease of the skin." An ointment is applied; the eruption disappears. Soon, perchance, the same scrofulous taint appears in the lungs in the form of tubercles. The doctor cannot get at it there with his ointment, and resorts to inhalation. He is still determined to apply his drug to the local manifestation.

Salt rheum is not a disease of the skin. It is a disease of the system, showing it-

self at the skin. Consumption is not a disease of the lungs. It is a disease of the system, showing itself in the lungs.

A ship's crew is seized with some fearful malady. They hang out a flag of distress. Another ship passes near the infected vessel. Its captain discovers the flag of distress. A boat's crew is sent to cut it down. The captain turns to his passengers with the triumphant exclamation, "We have saved them! All signs of distress have disappeared!"

A human body is diseased in every part. A flag of distress is hung out in the form of some malady at the surface. Some physician whose thinking is on the surface of things applies an ointment, which compels the malady to go back within the body again. Then he cries, "I have cured him; see, it is all gone!"

It may be said, that, when the disease attacks the lungs, it must be driven from that vital organ at any sacrifice. I reply, if the drug vapors which are inhaled could disperse the tuberculous deposit,—which is impossible,—the tubercle could not be transferred to any other internal organ where it would do less harm. No other internal organ can bear tuberculous deposit or ulceration with less danger to life.

In 1847, two brothers, bank-officers, afflicted with chronic inflammation of the eyes, came under my care. I repeatedly prescribed for them, but their eyes got no better. Indeed, they had little hope of relief; for, during their years of suffering, many physicians had treated them without avail. At length I told them there was no hope but in absence from their business, and such recreation as would elevate the general tone. A few months of hunting, fishing, and enjoyment in the country sufficed to remove the redness and weakness from their eyes. As I have argued, the disease was not one of the eyes, but of the entire system, which had assumed a local expression.

This dependence of particular upon general disease is a common idea with the people. A young man begins business with a large capital. He falls into

dissipation. In ten years it exhausts his fortune. When at last we see him begging for bread, we do not say this exhibition of his poverty is his financial disease. His financial *constitution* has been ruined. The begging is only an unpleasant exhibition of that ruin. During this course of dissipation, the young man, in addition to the exhaustion of his fortune, ruins his health. His lungs fall into consumption. Some doctor may tell you it is disease of the lungs. But it is no more disease of the lungs than was begging the man's financial malady. In either case, the apparent disease is only an exhibition of the constitutional malady.

In brief, a local disease is an impossibility. Every disease must be systemic before it can assume any local expression. Or, in other words, every local pathological manifestation is an expression of systemic pathological conditions.

Now what is the practical value of this argument? I reply: So long as people believe bronchitis to be a disease of the throat, or consumption a disease of the lungs, so long will they labor under the hallucination that a cure is to be found in applications to these parts. But when they are convinced that these diseases are local expressions of morbid conditions pervading the whole organism, then whatever will invigorate their general health, as Nature's hygienic agents, will receive their constant and earnest attention.

#### CAUSES OF CONSUMPTION.

SIR JAMES CLARKE says,—“It may be fairly questioned whether the proportion of cures of confirmed consumption is greater at the present day than in the time of Hippocrates: and although the public may continue to be the dupes of boasting charlatans, I am persuaded that no essential progress has been made or *can be made* in the cure of consumption, until the disease has been treated upon different principles from what it hitherto has been. If the labor and ingenuity which have been misapplied in fruitless

efforts to cure an irremediable condition of the lungs had been rightly directed to the investigation of the causes and nature of tuberculous disease, the subject of our inquiry would have been regarded in a very different light from that in which it is at the present period."

While I shall not attempt a discussion of all the causes of *phthisis pulmonalis*, I shall, in a brief and familiar way, consider the more obvious sources of this terrible malady, and particularly those which all classes may remove or avoid.

*Impure Air a Cause of Consumption.*

— In discussing the causes of a disease whose principal expression is in the lungs, nothing can be more legitimate than a consideration of the air we breathe. In full respiration, it penetrates every one of the many millions of air-cells.

*Dust.*— Every species of dust must prove injurious. Workers in those factories where tools are ground and polished soon die of pulmonary disease. The dust of cotton and woollen factories, that of the street, and that which is constantly rising from our carpets, are all mischievous. M. Benoiston found among cotton-spinners the annual mortality from consumption to be 18 in a thousand; among coal-men, 41; among those breathing an atmosphere charged with mineral dust, 30, and with dust from animal matter, as hair, wool, bristles, feathers, 54 per thousand: of these last the greatest mortality was among workers in feathers; least among workers in wool. The average liability to consumption among persons breathing the kinds of dust named was 24 per thousand, or 2.40 per cent. In a community where many flints were made, there was great mortality from consumption, the average length of life being only 19 years.

*Gases.*— Among the poisonous gases which infest our atmosphere, carbonic acid deserves special consideration. The principal result of all respiration and combustion, it exists in minute quantities everywhere, but when it accumulates to the extent of one or two per cent. it seriously compromises health. I have

seen the last half of an eloquent sermon entirely lost upon the congregation; carbonic acid had so accumulated that it operated like a moderate dose of opium. No peroration would arouse them. Nothing but open windows could start life's currents. In lectures before lyceums, I often have a quarrel with the managers about ventilation. There is, even among the more intelligent, a strange indifference to the subject.

The following fact graphically illustrates the influence of carbonic acid on human life.

A young Frenchman, M. Deal, finding his hopes of cutting a figure in the world rather dubious, resolved to commit suicide; but that he might not leave the world without producing a sensation and flourishing in the newspapers, he resolved to kill himself with carbonic acid. So, shutting himself up in a close room, he succeeded in his purpose, leaving to the world the following account, which was found near his dead body the next morning.

"I have thought it useful, in the interest of science, to make known the effects of charcoal upon man. I place a lamp, a candle, and a watch on my table, and commence the ceremony.

"It is a quarter past ten. I have just lighted the stove; the charcoal burns feebly.

"Twenty minutes past ten. The pulse is calm, and beats at its usual rate.

"Thirty minutes past ten. A thick vapor gradually fills the room; the candle is nearly extinguished; I begin to feel a violent headache; my eyes fill with tears; I feel a general sense of discomfort; the pulse is agitated.

"Forty minutes past ten. My candle has gone out; the lamp still burns; the veins at my temple throb as if they would burst; I feel very sleepy; I suffer horribly in the stomach; my pulse is at eighty.

"Fifty minutes past ten. I am almost stifled; strange ideas assail me. . . . I can scarcely breathe. . . . I shall not go far. . . . There are symptoms of madness. . . .

"Eleven o'clock. I can scarcely write. . . . My sight is troubled. . . . My lamp is going out. . . . I did not think it would be such agony to die. . . . Ten . . . ."

Here followed some quite illegible characters. Life had ebbed. The following morning he was found on the floor.

The steamer Londonderry left Liverpool for Sligo, on Friday, December 2d, 1848, with two hundred passengers, mostly emigrants. A storm soon came on. The captain ordered the passengers into the steerage cabin, which was eighteen feet long, eleven wide, and seven high. The hatches were closed, and a tarpaulin fastened over this only entrance to the cabin.

The poor creatures were now condemned to breathe the same air over and over again. Then followed a dreadful scene. The groans of the dying, the curses and shrieks of those not yet in the agonies of death, must have been inconceivably horrible. The struggling mass at length burst open the hatches, and the mate was called to gaze at the fearful spectacle. Seventy-two were already dead, many were dying, their bodies convulsed, the blood starting from their nostrils, eyes, and ears.

It does not appear that the captain designed to suffocate his passengers, but that he was simply ignorant of the fact that air which has passed to and fro in the lungs becomes a deadly poison.

The victims of the Black Hole in Calcutta and of the Steamer Londonderry, with the thousand other instances in which immediate death has resulted from carbonic acid, are terrible examples in the history of human suffering; but these cases are all as nothing, compared with those of the millions who nightly sleep in unventilated rooms, from which they escape with life, but not without serious injury. As a medical man, I have visited thousands of sick persons, and have not found one hundred of them in a pure atmosphere. I have often returned from church seriously doubting whether I had not committed a sin in exposing myself to its poi-

sonous air. There are in our great cities churches costing fifty thousand dollars, in the construction of which not fifty dollars were expended in providing means for ventilation. Ten thousand dollars for ornament, but not ten dollars for pure air! Parlors with furnace-heat and a number of gas-burners (each of which consumes as much oxygen as several men) are made as close as possible, and a party of ladies and gentlemen spend half the night in them. In 1861 I visited a legislative hall. The legislature was in session. I remained half an hour in the most impure air I ever attempted to breathe. If the laws which emanated from such an atmosphere were good, it is a remarkable instance of the mental and moral rising above a depraved physical. Our school-houses are, some of them, so vile in this respect that I would prefer to have my son remain in utter ignorance of books, rather than breathe, during six hours of every day, so poisonous an atmosphere. Theatres and concert-rooms are so foul that only reckless people can continue to visit them. Twelve hours in a railway-car exhausts one, not because of the sitting, but because of the devitalized air. While crossing the ocean in the Cunard steamer Africa, and again in the Collins steamer Baltic, I was constantly amazed that men who knew enough to construct such noble ships did not know enough to furnish air to the passengers. The distresses of sea-sickness are greatly intensified by the sickening atmosphere which pervades the ship. Were carbonic acid black, what a contrast would be presented between the air of our hotels and their elaborate ornamentation!

It is hardly necessary to say that every place I have mentioned might be cheaply and completely ventilated.

Consumption originates in the tubercular diathesis. This diathesis is produced by those agencies which deprave the blood and waste vitality. Of these agencies none is so universal and potent as impure air. When we consider, that, besides mingling momentarily with the

blood of the entire system, it is in direct and constant contact with every part of the lungs, we cannot fail to infer that foul air must play a most important part in that local expression of the tubercular taint known as pulmonary consumption.

The author of an excellent work on consumption declares, —

“Wholesome air is equally essential with wholesome food; hence it is that crowding individuals together in close, ill-ventilated apartments, as is often the case in boarding-schools, manufactories, and work-houses, is extremely prejudicial, both as a predisposing and exciting cause of tubercular disease.”

The great Baudeloque considers impure air the only real cause of scrofula, other causes assisting. He thinks that no scrofula could be developed without this cause, whatever others might be in operation.

An English writer who was physician to the Princess Victoria says, — “There can be no doubt that the confined air of gloomy alleys, manufactories, work-houses, and schools, and of our nurseries and very sitting-rooms, is a powerful means of augmenting the hereditary predisposition to scrofula, and of inducing such a disposition *de novo*.”

To drink from the same tumbler, to eat from the same plate, to wear the same under-clothes, to wash in the same water, even with the cleanest of friends, would offend most people. But these are as alabaster whiteness and absolute purity, compared with the common practice of crowding into unventilated rooms, and thus sucking into the innermost parts of our vital organs the foulest secretions from each other's skins and lungs. I wish it were possible for these vile exhalations to be imbued with some dark color, if but temporarily. Then decency would join with reason in demanding a pure atmosphere.

#### NIGHT AIR.

CONSUMPTIVES, and all invalids, and indeed persons in health, are cautioned

to avoid the night air. Do those who offer this advice forget that there is no other air at night but “night air”? Certainly we cannot breathe day air during the night. Do they mean that we should shut ourselves up in air-tight rooms, and breathe over and over again, through half the twenty-four hours, the atmosphere we have already poisoned? We have only the choice between night air pure and night air poisoned with the exhalations from our skins and lungs, perhaps from lungs already diseased. A writer pertinently speaks on this point after the following fashion:—

“Man acts strangely. Although a current of fresh air is the very life of his lungs, he seems indefatigable in the exercise of his inventive powers to deprive himself of this heavenly blessing. Thus, he carefully closes his bed-chamber against its entrance, and prefers that his lungs should receive the mixed effluvia from his cellar and larder, and from a patent little modern aquarius, in lieu of it. Why should man be so terrified at the admission of night air into any of his apartments? It is Nature's ever-flowing current, and never carries the destroying angel with it. See how soundly the delicate little wren and tender robin sleep under its full and immediate influence, and how fresh and vigorous and joyous they rise amid the surrounding dew-drops of the morning. Although exposed all night long to the heaven, their lungs are never out of order; and this we know by daily repetition of the song. Look at the new-born hare, without any nest to go to. It lives and thrives and becomes strong and playful under the unmitigated inclemency of the falling dews of night. I have a turkey full eight years old that has not passed a single night in shelter. He roosts in a cherry-tree, and is in primest health the year through. Three fowls, preferring this to the warm perches in the hen-house, took up their quarters with him early in October, and have never gone to any other roosting-place. The cow and the horse sleep safely on the ground, and the roebuck lies down

to rest on the dewy mountain-top. I myself can sleep all night long, bareheaded, under the full moon's watery beams, without any fear of danger, and pass the day in wet shoes without catching cold. Coughs and colds are generally caught in the transition from an over-heated room to a cold apartment; but there would be no danger in this movement, if ventilation were properly attended to,—a precaution little thought of nowadays."

Dr. James Blake advises the consumptive to join with several friends, procure horses and wagons, and set off upon a long journey, sleeping in the open air, no matter what the weather. He seems to think this the only way in which it is possible to induce the consumptive to sleep in the fresh air. Doctor Jackson gives the case of a consumptive young man (he does not state the condition of his lungs) who was cured by sleeping in the open air on a hay-stack. This advice and experience do not quite harmonize with the common terror of night air.

But while I believe that breathing the pure out-door air all night is an important curative means in this disease, I do not believe that sleeping in the open fields of a stormy night is the *best means* for securing pure night air, in the case of a feeble woman; on the contrary, I think it might be more pleasantly, and quite as effectually, secured in a comfortable house, with open windows and an open fire.

No doubt the lives of thousands would be saved by destroying their houses, and compelling them to sleep in the open air;—not because houses are inevitable evils, but because they are so badly used. Windows are barred and closed, as if to keep out assassins; draughts defended against, as if they were bomb-shells; and the furnace heat still more corrupts the air, which has done duty already—to how many lungs, for how many hours?

Let the consumptive thank God for the blessing of a house; but let him use it wisely. How my heart has ached, to see the consumptive patient put away in a bed, behind curtains, in an unventi-

lated room, the doors and windows carefully closed, to shut out the very food for which his lungs and system were famishing!

I do not wonder that Blake, Jackson, and many others have advised an out-door life of the wildest and most exposed sort, to invalids of this class,—but I do wonder that they have not equally insisted upon abundance of air for them, as pure as that of the fields and mountains, in their own homes, and in the midst of friends and comforts.

#### MOISTURE IN THE ATMOSPHERE.

It is the common belief that a dry atmosphere is most favorable to the consumptive. Many medical authors have advanced this assumption. It is, nevertheless, an error. In the British Isles and in France, outside the cities and manufactories, the mortality from pulmonary diseases is much less than among the agricultural classes of this country. And on the western shores of this continent consumption is comparatively unknown.

Our disadvantage in this comparison is attributable, in considerable part, to the lack of humidity in our atmosphere. Without the evidence of facts, we might, *a priori*, argue, that excessive dryness of the air would produce dryness and irritability of the air-passages. From time immemorial, watery vapor has been used as a remedy in irritation and inflammation of the respiratory organs.

A hundred times have my consumptive patients expressed surprise that the wet weather, in which I have insisted they should go out as usual, has not injured them,—that they even breathe more freely than on pleasant days. Of course, I tell them, if the body is well protected, the more moist the air, the more grateful to your lungs.

There is no possible weather which can excuse the consumptive for keeping indoors. Give him sufficient clothing, protect his feet carefully, and he may go out freely in rain, sleet, snow, and wind.

Ignorance of this fact has killed thousands.

That point of temperature at which the moisture of the air first becomes visible is known as the dew-point. According to one authority, the mean dew-point of England, from the first of November to the last of March, is about  $35^{\circ}$ ; that of our Northern States about  $16^{\circ}$ . Now suppose a house in England is kept at a temperature of  $70^{\circ}$ , the drying power would there be represented by 35. A house with the same temperature in Albany, for example, would possess a drying power of 54. This great contrast in the atmosphere of the two countries is strikingly illustrated by the difference between the plump body and smooth skin of the Englishman, and the lean, juiceless body, and dry, cracked skin of the Yankee. It is also shown by the well-known difference in the influence of house-heat upon furniture. Our chairs and sofas and wood-work warp and shrink, while nothing of the sort occurs in England.

As we cannot increase the amount of moisture in the atmosphere of our continent, we must limit our practical efforts to the air of our houses. If we use a stove, its entire upper surface may be made a reservoir for water; ornamental work, of but little cost, may be used to conceal it. The furnace may be made to send up, with its heat, many gallons of water daily, in the form of vapor. In justice to stoves and furnaces, I must say here, that, in the opportunity to do this, they possess one advantage over open fire-places.

By adding artificial moisture in this way to the air of our houses, we not only save our furniture from drying and shrinking, but protect our skin, eyes, nose, throat, and lungs from undue dryness, and from the affections to which it would give rise. It is found necessary, in our cloth-manufactories, to maintain a moist atmosphere in order to successful spinning. Intelligent managers have assured me that coughs and throat difficulties are comparatively rare in the spinning department.

We must all have observed, that, while the air of a hot kitchen is comfortable, that of a parlor at the same heat, from an air-tight stove, is almost suffocating. The kitchen has a hot stove, but the steam of its boiling kettles moistens the air.

Your country aunt, who has lived over her cooking-stove for years without serious inconvenience, after spending an afternoon in your parlor, heated by a stove or furnace, returns home "glad to get out of that hot, stifling air." And yet the thermometer may have indicated that the kitchen was ten degrees warmer than the parlor. The dry heat of the parlor produced headache, irritability, and perhaps a sense of stricture in the chest. If we would avoid these, a dry chapped skin, an irritable nervous system, and a dry hacking cough, we must add the needed humidity by artificial means.

#### CLIMATE.

THE influence of climate in the production of tuberculosis was formerly much exaggerated. Removal to a warm latitude, so generally prescribed some years ago, is now rarely advised. Although the bland atmosphere and out-of-door life of the tropics may often check the progress of the malady, yet the constitution is generally so enervated that the return to home and friends involves often not only a return of the malady, but its more rapid progress. At present, a winter at Lake Superior, or other region where the cold is intense and uniform, is the popular prescription. I do not doubt the value of the expedient in many cases. But the consumptive who can afford a winter neither in the Mediterranean nor at the frigid North may comfort himself that the value of such trips has been greatly overrated. Advice to the phthisical to spend a season a thousand miles from home is, to a large majority of them, not unlike that of the whimsical London doctor to the rag-picker he found coughing in the streets:—"That's a bad cough, a bad

cough, you have. I advise you to make a journey on the Continent; and, in order to secure all the advantages, you had better travel in your own carriage." Happily for those with short purses, health in this, as in most other cases, is more easily found at home.

I do not believe that the prejudice against our New-England climate, entertained by consumptives, is well-founded. The slight percentage of difference against us, as compared with the people of other parts of the country, in the number of deaths from consumption, is to be traced, I believe, not so much to our climate as to our manufactories. New England contains nearly all the great factories, labor in which is so prejudicial to health, — as well as a greater number of furnaces, air-tight stoves, and close houses.

I do not believe that the sudden changes of the New-England climate are disastrous to the consumptive who is well protected. While it is true that our climate provokes a greater number of colds than that of Florida, it is not less true that our atmosphere is more invigorating.

"The Climate of the United States," by Dr. Samuel Forry, of the United States Army, one of the best works of the kind ever published, gives a great number of facts, interesting in this connection. His statistics are gathered exclusively from the army. The men of the army are, in great part, of the same age, from the same rank in life, of the same habits, and have the same clothing, food, and labor, and when sick the same treatment. The influence of climate upon human health may, therefore, be ascertained with more accuracy from careful observations among this class of men than from any other source. In comparing the populations of New York and New Orleans, for instance, it is almost impossible to make accurate allowance for the manifold differences in habits, diet, occupation, etc.

Dr. Forry shows conclusively, that, while colds and influenzas are more common in the northern branches of the regular army, as 552 to 271, consumption is more common in the southern, in the

proportion of 10½ to 7¾. In the southern divisions there are 708 cases of fever of various sorts to 192 in the northern "We may safely infer," he says, "that whatever tends to impair the constitution, as fevers, tends to develop consumption in every class which is predisposed, and in all climates and countries." Dr. Forry's tables present some curious facts. One which will most impress the general reader is, that rheumatism is more common at Key West than on the coast of New England. But it will not surprise the reflecting, that a change of 5° at Key West is felt as much as one of 20° at Boston. The slight changes, however, do not equally purify the atmosphere and invigorate the body.

#### DRESS.

No subject is so intimately connected with the health of the respiratory apparatus as dress. And, as bearing upon pulmonary consumption, there are certain errors in the dress of children which must be noticed. I believe I echo the voice of my profession, when I declare that the seeds of consumption are planted in thousands by these mistakes in dress during infancy and childhood. To correct these, permit me a few practical suggestions.

The skirt-bands must be left very loose. If you would give the baby's lungs and heart the best chance for development, the dress about the chest and waist should be so loose, that, if the child be held up by the shoulders, its entire dress, except as sustained by the shoulders, will fall to the floor. With such a dress the blood is so much sooner oxygenated, that, other things being equal, the characteristic dark red color of the skin will disappear much sooner than with a close dress.

The bones surrounding the small, feeble lungs, now for the first time beginning to move, are so soft and pliable, that, under the slightest pressure, they will yield, and the capacity of the lungs be reduced. Yet I have seen the nurse

use the entire strength of her fingers in the first application of the skirt-bands. No thoughtful person, acquainted with the anatomy of the thorax in a new-born babe, can escape the conclusion that its vitality is seriously compromised by this pressure upon the principal organs of that vitality. In many instances I have seen the character of the little one's respiration and pulse decidedly affected by enlarging the skirt-bands.

Mothers, if you think all this pressure necessary to give your babes a form, as I have heard some of you say, you forget that the Creator of your child has all wisdom and skill, and that any changes in the baby's form and proportions must prove only mischievous. And perhaps you may not feel your pride hurt by the suggestion, that His taste is quite equal to yours. That a corset or other machine is needed to give a human being a form, as is so often suggested, is an imputation on the Creator which no thoughtful and conscientious person can indulge.

*Dress of Children's Arms.*—Prominent among the errors in the dress of children is the custom of leaving their arms nude.

I speak of the dress for the damp and cold seasons. It should be added, that during the cool summer evenings too much care cannot be exercised in protecting the baby's arms and shoulders. If the mother desires to exhibit her darling's beautiful skin, let her cut out a bit of the dress near its heart, and when the neighbors come in, let her show the skin thus exposed to the company. This is so near the central furnace of the body that it has no chance to get cold; but in the case of the arms and legs, we have parts far removed from the furnace, and such parts require special protection.

Take the glass tube of the thermometer out of the frame, and put the bulb in your baby's mouth. The mercury rises to 98°. Now, on a cool evening, place the same bulb in its little hand; (I am supposing it has naked arms;) the mercury will sink to 60° or less. Need

I say that all the blood which has to make its way through the diminutive and tortuous vessels of those cold arms must become nearly as cold as the arms and hands themselves? And need I add, that, as the cold currents of blood come from both arms back into the vital organs, they play the mischief there?

If you would preserve your child from croup, pneumonia, and a score of other grave affections, you should keep its arms warm. Thick woollen sleeves, fitting the little dimpled arms down to the hands, at least, constitute the true covering.

A distinguished physician of Paris declared just before his death,—"I believe that during the twenty-six years that I have practised my profession in this city, twenty thousand children have been borne to the cemeteries, a sacrifice to the absurd custom of naked arms."

When in Harvard College, many years ago, I heard the eminent Dr. Warren say,—"Boston sacrifices hundreds of babes every year by not clothing their arms."

What has been said of the dress of children is none the less applicable to the dress of adults. One of the gravest mistakes in the dress of women is the very thin covering of their arms and legs. A young lady once asked me what she could do for her very thin arms. She said she was ashamed of them. I felt of them through the thin lace covering, and found them freezing cold. I asked her what she supposed would make muscles grow? Exercise, she replied. Certainly,—but exercise makes them grow only by giving them more blood. Six months of vigorous exercise will do less to give those cold, naked arms circulation than would a single month, were they warmly clad.

The value of exercise depends upon the temperature of the muscles. A cold gymnasium is unprofitable. Its temperature should be between sixty and seventy, or the limbs should be warmly clothed. I know our servant-girls and blacksmiths, by constant and vigorous exercise, acquire large, fine arms, in spite

of their nakedness; and if our young ladies will labor as hard from morning till night as do these useful classes, they may have as fine arms; but even then it is doubtful if they would get rid of their congestions in the head, lungs, and stomach, without more dress upon the arms and legs.

Perfect health depends upon perfect circulation. Every living thing that has the latter has the former. Put your hand under your dress upon your body. Now place it upon your arm. If you find the temperature of the body over 90° and that of your arm under 60°, you have lost the equilibrium of circulation. The head has too much blood, producing headache; or the chest too much, producing cough, rapid breathing, pain in the side, or palpitation of the heart; or the stomach too much, producing indigestion. Any or all these difficulties are temporarily relieved by immersion of the hands or feet in hot water, and permanently relieved by such dress and exercise of the extremities as will make the derivation permanent.

The most earnest efforts looking towards dress-reform have had reference to the length of the skirt. I think it is one of woman's first duties to make herself beautiful. The long skirt, the trail even, is in fine taste. Among the dress-features of the stage none is so beautiful. The artist is ever delighted to introduce it in his pictures of woman. For the drawing-room, it is superb. When we meet on dress occasions, I cannot see why we may not introduce this exquisite feature. If it is said that expense and inconvenience are involved, I reply, so they are in paintings and statuary.

For church and afternoon-sittings, skirts that nearly touch the floor seem to me in good taste; but for the street, when snowy or muddy, for the active duties of house-keeping, for the gymnasium, and for mountain-trips, it need not be argued, with those whose brains are not befogged by fashion, that the skirts should fall to about the knee.

Dr. Clarke says,—"Since the free

expansion of the chest, or, in other words, the unimpeded action of the respiratory organs, is essential to health, the employment of tight stays and those forms of dress which interfere with these natural actions must be injurious, and cannot therefore be too strongly censured."

The celebrated Dr. James Johnson declares,—“The growth of the whole body and the freedom of all its functions so much depend upon perfect digestion, that every impediment to that digestion, such as compression of the middle of the body, must inevitably derange the whole constitution. Although the evils of tight lacing are as patent as the sun at noonday, I have never known its commission to be acknowledged by any fair dame. It is considered essential to a fine figure, yet I never could discover any marks of stays in the statues of the Medicean Venus, or the Apollo. And I venture to aver that the Cyprian goddess was not in the habit of drawing her zone as tight as the modern fair ones, else the sculptor would have recorded the cincture in marble. The comfort and motions of the foot are not more abridged and cramped by the Chinese shoe than are respiration and digestion by the stay.” Thus wrote the physician to the father of the present queen of England.

A former professor of the theory and practice of medicine in the university of Vermont says,—“Undue confinement of the chest must at all periods of life be prejudicial; hence the practice of tight lacing we almost always find classed among the causes of phthisis, as well as of numerous other ills.” And he adds,—“It is surely an erroneous notion that women need the support of stays.”

#### BEST MATERIAL FOR DRESS.

IN all seasons of the year, and in all climates, the best material for dress, for old and young, for strong and weak, is woollen. It is the poorest conductor of heat, and therefore secures the most equitable temperature. This is the principal object of dress. The superiority of wool-

len clothing for babes is even greater in July than in January. In the warmest days a single thickness of soft flannel will suffice. But if linen or cotton be worn, the garment is soon moistened by perspiration, and two or three additional thicknesses are needed to protect the child against the ill-effects of a draught.

In warm weather we find it necessary to wear woollen garments in the gymnasium, as a protection against a chill from draughts while perspiring. Our soldiers in the South find flannel their best friend, securing them against the extremes and exposures of their camp and field life. Blacksmiths, glass-blowers, furnace-men, and others exposed to the highest temperatures, find woollen indispensable.

Few practices will do so much to secure the comfort and protect the health of young children as dressing them in flannel night and day, the year round. It may be objected that flannel irritates a delicate skin. This is often so, as the skin is now treated. But there is no baby's skin so thin and delicate that daily bathing and faithful friction may not remove this extreme susceptibility. And as the skin is the organ upon which the outer world makes its impressions, nothing is more important than that all morbid susceptibility should be removed.

An additional advantage in the use of flannel is, that it serves by its mechanical effect to keep up a healthy surface circulation, which is one of the vital conditions of health. The skin and the lungs act and react upon each other more directly, if possible, than any other two organs of the body. Children born with a predisposition to consumption especially need a vigorous treatment of the skin.

Professor Dunglison says, — "The best clothing to protect us from external heat or cold is one that is a bad conductor of caloric, or one that does not permit heat to pass readily through it. This is the case with woollen. The Spaniard and the Oriental throw woollen mantles over them when they expose themselves to the sun.

Londe asserts that "the use of woollen

next the skin is one of the most precious means possessed by therapeutics. Its use on children does much to prevent bowel-affections, and with it we can bear with impunity the vicissitudes of weather."

Brocchi ascribes the immunity of sheep which feed night and day in the Campagna di Roma "to the protection afforded them by their wool."

Patissier affirms that woollen clothing has been found effectual in preserving the health of laborers working in marshy grounds, canals, and drains.

Captain Murray, of the English service, after two years spent among the icebergs on the coast of Labrador, sailed, immediately upon his return to England, for the West Indies, where he remained some months, and while other officers lost many men, he returned to England without the loss of a man, which he ascribed in considerable part to the use of flannel. So important did he regard this hygienic measure that he had every man examined daily to ascertain that he had not thrown off his flannels.

A distinguished author writes that the aged, infirm, rheumatic, and those liable to pulmonary disease, are greatly benefited by the use of flannel.

Dr. Willich says, — "Wool recommends itself to us, because it is the covering of those animals most resembling man in structure."

Count Rumford says he is convinced of the utility of flannel in all seasons, that he was relieved by its use from a pain in the breast, to which he was much subject, and had never since known an hour's illness.

The celebrated Hufeland says it is a desirable dress for the nervous, those subject to colds, catarrhs, influenzas, and, in fact, for all invalids.

Another writer says that desperate diseases would be prevented, and many valuable lives saved, by its more universal use.

A distinguished American physician says that flannel next the skin is of service to the consumptive by the irritation

it produces, as well as the defence it affords against the cold.

An English authority says, — "Experience has so fully evinced the utility of covering the skin with flannel, that no person habituated to its use, in our damp climate, can be persuaded to dispense with it at any season of the year."

#### EXERCISE.

MOTION is the great law of the universe. It is the first instinct of animal life. When it ceases, life ceases. The degree of life may be measured by the amount of normal motion. When the life-forces run low, the natural and most effectual method of invigorating those forces is found in motion.

The popular education of our children is a lamentable violation of this law. The young child, left in freedom, keeps its nurse on the *qui vive* during every waking hour by its uncontrollable activity. The effort which our school-system makes to crush out this instinct, by compelling children to sit on hard chairs, bent over desks, motionless six hours a day, is, considered in its influence upon the vitality of the nation, the saddest of all possible mistakes.

A radical change in this respect is imperatively demanded by the growing intelligence of the people. The Germans, — God bless them! — having given more faithful study to the various problems of human development, have devised better modes. The Kindergarten, one of the many beautiful blossoms of the genius of that noble people, is being transplanted to this country. Wise parents, thank Heaven, and take heart. Miss Peabody's Kindergarten, in Boston, should be visited by the friends of education.

Nothing at this hour is so much needed in the development of the young as some system of physical training, which, under competent masters, may be introduced as a part of the daily drill into all our schools, public and private. The routine should be so arranged that study and physical exercise should alternate in

periods not longer than half an hour throughout the day. For example: the school opens at 9 o'clock. The first half hour is devoted to study and recitation. Let the second be given to vigorous training in the gymnasium under a drill-master, and to music. The third to study and recitation. The fourth to drill, in which those with weak stomachs form a class by themselves, with special exercises; those with weak chests another; those with weak spines still another: all classified and treated according to their several needs. The fifth half-hour to study and recitation. The sixth to declamation, singing, or culture of the vocal organs, in general and special ways. The seventh and eighth half-hours to study, conversation, etc. And again in the afternoon an alternation of intellectual and physical exercises, the latter so ordered as to bring into play every muscle, and thus secure the symmetrical development of the body. Who can doubt that under this system greater progress would be made in intellectual culture than at present? The mind would find more effective tools for its work. But, with an incredulous shake of the head, the people say, "Yes, this is all-very fine, but quite impracticable." If by this they mean that it is not practicable until the public conscience is better enlightened, I grant the force of the objection. But if they mean to say, that, with a due appreciation of physical culture, such a school is an impracticability, I am confident they are mistaken. The order I suggest could be introduced in a week in any existing school, did the parents and teachers so will. I am happy to be able to say that such a school as I have described, possessing all the best facilities for classical and scientific instruction, and under the management of eminent educators, will be opened in an American city within the present year. The school has been determined upon from the conviction that only in beginning with the rising generation can the results of physical culture, or the system combining both physical and intellectual culture, in their natural

relations, be thorough and satisfactory, and that the results of this experiment would do more than all that can be said or written to arouse public attention.

Sweetser says,—"Were I required to name the remedy which promises most aid in the onset of consumption, I should say, daily gentle and protracted exercise in a mild and equable atmosphere. . . . Exercise, moreover, determines the blood to the surface of the body, rendering the cutaneous functions more active and healthful, and may in this way also contribute to the advantage of the lungs."

Dr. Parrish says that "vigorous and free exposure to the air is by far the most efficient remedy in pulmonary consumption."

Dr. Pitcher states that "the consumptive Indians of the Osage tribe have their symptoms suspended during their semi-annual buffalo-hunts, but that these soon return on becoming again inactive in their towns."

Dr. Rush informs us that he saw three persons who had been cured of consumption by the hardships of military life in the Revolutionary War. The same distinguished authority affirms that "the remedy for consumption must be sought in those exercises and employments which give the greatest vigor to the constitution."

Dr. Chambers, physician to St. Mary's Hospital, says,—“If we examine the history of those who have lived longest with consumption, we shall not find them to have been those who have lived in-doors, hanging their lives on their thermometers.” He gives the case of a friend of his “who from his youth has had tubercular disease, but has kept hounds, contested elections, sat in Parliament, but never allows any one to doctor his chest.”

Lord Bacon asserted that “there was no disease among pupils that gymnastics and calisthenics could not cure.” And Galen declared “him to be the best physician who was the best teacher of gymnastics.” While Dryden, long ago, sang,—

“The wise for cure on *exercise* depend.”

Consumptives are advised to ride on horseback, to make long journeys in the saddle. This is doubtless one of the most valuable exercises. There are numerous well-authenticated instances of cures by its means, even in the advanced stages of the disease. But many persons cannot avail themselves of its advantages. In our cities, not one phthisical invalid in ten, especially among women, can command facilities for daily horseback-riding, still less can they take long journeys.

Hunting, fishing, and mountain-air are advised. But how can many who reside in towns and cities, and who most need muscular training, secure such recreations?

Walking is very generally prescribed, and is doubtless the most available of the exercises named. But in the case of women, the present mode of dress seriously interferes with the ease and physiological benefits of this exercise; and few would exchange the long skirt for the short one with pantalets or Turkish trousers. And yet this change is indispensable to the best results.

While I would encourage all out-door exercises and amusements, it is evident that exercises which can be introduced into every house, which may be practised by persons of both sexes, all ages and degrees of strength, and which possess such fascination as shall make them permanently attractive, are greatly to be desired, to meet wants not otherwise supplied.

Many exercises have been advised with reference to general health and strength. I submit a series possessing peculiar virtues for the consumptive. To him all exercises are not equally profitable. Ten movements of a sort adapted to his special needs are worth a hundred not so adapted. He has a narrow chest and drooping shoulders. This distortion results in displacement of the lungs. And yet he may have legs and hips comparatively vigorous. Ten movements concentrated upon those muscles whose deficiency permits the drooping of the shoul-

ders will be more valuable than a hundred for the legs. There are several hundred muscles in the human body. In every case of consumption certain groups of these muscles are defective. Restoration of the lost symmetry calls for those exercises which will develop the defective groups. Prescribing a walk for a patient whose legs are already vigorous, but whose arms and shoulders are contracted and weak, is like prescribing a medicine because it *is a medicine*, without regard to the nature of the malady.

A blister applied to the chest relieves pain within. It accomplishes this by drawing the blood to the surface, and thus subtracting from the congestion at the point of disease. If the blister were applied to the foot or leg, it would not sensibly relieve the congestion in the chest.

If, instead of applying a blister, we use exercise as the remedial measure, and by drawing blood into the muscles we would relieve the congestion within, the importance of subtracting from the vessels which bear the blood to the diseased part is not less than in the case of the blister. For the relief or cure of disease in any of the chest organs a few well-directed movements of those muscles about the chest which lack circulation will accomplish more than hours of walking.

The intelligent physician, in prescribing muscular training, will not say, simply and generally, "I advise you to exercise," but he will indicate the particular exercises applicable to the case. He will first thoughtfully ask, "What group of muscles is defective?" When he has answered this question accurately, he is prepared for a second,—"What exercises will bring into direct training the defective group?" When these points are settled, he can direct the training wisely. To recommend horseback-riding—good as it is—for *all* consumptives, is not a whit more discriminating than to prescribe a particular variety of food for all invalids. The medical man

who has a general formula for a certain class of patients is hardly more thoughtful than the vender of the "all-healing ointment."

Little or no attention has been given to the vital subject of exercise as a curative means. In many cases treated by Ling's methods, when skilfully applied, the results have been so marvellous that medical men who had not studied the philosophy of the Movement Cure have attributed the rapid improvement to Animal Magnetism. They could not conceive that muscular exercise alone could produce such wonderful results.

Symmetry of body and mind is vital to health. Its loss in the mind leads not unfrequently to insanity,—its loss in the body to numberless maladies. The great defect in our system of education lies just here. There is no discrimination between the members of a class, part of which needs one kind of culture to produce symmetry and health, while another part needs quite another. The gymnasium, where all perform the same exercises, may be charged with the same radical defect. In a school for thorough mental or physical training, pupils must be classified and trained with reference to their individual needs. This principle underlies the successful treatment of consumption. He who would contribute to its cure by exercise—the most efficient of all possible remedies—must not say to his patients simply, "Exercise, exercise, exercise," but he must distinctly mark out those exercises which are precisely adapted to the case of each.

As an additional reason for discrimination in prescribing physical exercises for consumptives, it may be mentioned that in almost every patient belonging to this class there are complications with other diseases each of which requires consideration.

#### EXERCISES POSSESSING PECULIAR VALUE FOR CONSUMPTIVES.

MOST consumptive invalids are indisposed to exercise, and particularly in-

disposed to employ their arms. Many attempt training of the shoulders and chest, and abandon it in disgust. But if in the systematic performance of the exercises other persons are interested, the patient cannot withdraw. Besides, those exercises in which others participate have social attractions, to which consumptives, as a class, are peculiarly susceptible.

For example, a consumptive young lady has brothers who assist her in certain prescribed exercises. These are to be executed twice a day, at hours when the brothers are at home. There is an affectionate interest in the group with reference to the pleasant duty. It is not forgotten. Suppose the brother is the patient, the sisters or mother will act as assistants. In every family such exercises are sure of the proper attention. I need scarcely say, that, if the patient undertake to exercise alone, with dumb-bells or some similar means, it will soon grow tiresome, and be abandoned.

Moreover, it is a matter of no small moment that other members of the family — who are not unlikely to be predisposed to the same malady — will thus secure a series of profitable exercises. I must add my conviction, that by no other variety of training can the efforts be so accurately directed to the muscles whose weakness permits the distortion of chest which is often the exciting cause of the malady.

With a good-sized room, and open windows, the air may be pure, while the exercise will prove the occasion of a thorough ventilation of the house.

I am indebted to Friedrich Robert Nietzsche of Dresden for the drawings of the accompanying cuts. His works are invaluable.

Fig. 1. Assistant, standing behind the patient, grasps his hands. Patient draws up the hands, as shown in the dotted lines, assistant resisting. Patient forces his hands back again to the first position, assistant resisting. Repeat five times.

In this, as in the other exercises ad-

Fig. 1.

vised, the resistance should be adapted to the patient's strength.

Fig. 2.

Fig. 2. Assistant, standing behind the patient, who is seated, grasps his uplifted hands. Patient draws down the hands, as shown by the dotted lines, assistant resisting. Patient forces the hands back to the first position, assistant resisting. Repeat three times.

the strength of the patient or the weakness of the assistant, it might prove more agreeable to employ two assistants.

Fig. 3.

Fig. 3 shows an improvement on Fig. 2 for those cases in which, either from

Fig. 4.

Fig. 5.

Figs. 4 and 5 represent an exercise which hardly needs description. The patient should exert the positive force in both directions, the assistants resisting.

Fig. 6.

Fig. 7.

Fig. 6 or 7 may be used next in order.

Fig 8.

Fig. 8 shows an exercise valuable in the treatment of drooping shoulders. When the patient has raised his arms, as in the dotted lines, he may bring them back to the horizontal in front, without the interference of the assistant.

Fig. 9 illustrates an exercise which may be used twenty or thirty times, if managed with gentleness.

I cannot here undertake to say how often these exercises should be employed, nor in what cases; they are given merely as suggestive. A complete series of "Mutual Help Exercises," adapted to the treatment of the consumptive, includes a large number, many of which are not only valuable, but cannot fail to deeply interest all concerned.

If to the Mutual Help Exercises it is desired to add those in which the health-

Fig. 9.

seeker can work alone, I would suggest the new exercises with the wooden dumb-bell, wand, and club, and the one hundred and seven exercises with Schreiber's Pangymnastikon.

Consumption — genuine tuberculous consumption — can be cured, even in the stage of softening or abscess. Dr. J. Hughes Bennett, Professor Calkins, Dr. Parrish, Dr. Carswell, Laënnec, Professor Lee, Dr. Abernethy, Sir James Clarke, and fifty other distinguished authors, declare their faith in its curability.

In not less than a thousand *post-mortem* examinations, the lungs have exhibited scars, concretions, or other indubitable evidences of recovery from genuine consumption. I have cured many cases with exercise and other hygienic agents.

## VIOLET-PLANTING.

THE heavy apple-trees  
 Are shaking off their snow in breezy play ;  
 The frail anemones  
 Have fallen, fading, from the lap of May ;  
 Lanterned with white the chestnut-branches wave,  
 And all the woods are gay.  
 Come, children, come away,  
 And we will make a flower-bed to-day  
 About our dear one's grave !  
 Oh, if we could but tell the wild-flowers where  
 Lies his dear head, gloried with sunny hair,  
 So noble and so fair,  
 How would they haste to bloom and weep above  
 The heart that loved them with so fond a love !

Come, children, come !  
 From the sweet, ferny meads,  
 Wherein he used to walk in days of yore, —  
 From the green path that leads,  
 Where the long dusty road seems wearisome,  
 Up to his father's door, —  
 Gather the tender shoots  
 Of budding promise, fragrance, and delight,  
 Fresh-sprouting violet-roots,  
 That, when the first June night  
 Shall draw about his bed its fragrant gloom,  
 This grave-mound may be bathed in balmy bloom,  
 With loving memories eloquently dumb.  
 Come, children, come !

No more, alas, alas !  
 O fairest blossoms which the wild bee sips,  
 Along your pleasant places shall he pass,  
 Ere from your freshened leaves the night-dew drips,  
 Culling your blooms in handfuls from the grass,  
 Pressing your tender faces to his lips, —  
 Ah, never any more !  
 Yet I recall, a little while before  
 He passed behind this mystery of death,  
 How, bringing home great handfuls, won away  
 From the dark wood-haunts where he loved to stray  
 Until his dewy garments were replete  
 With wafts of odorous breath,  
 With sods all mossy-sweet  
 And all awake and purple with new bloom  
 He filled and crowded every window-seat,  
 Until each pleasant room

Was fragrant with your mystical perfume :  
 Now vainly do I watch beside the door, —  
     Ah, never any more !

Alas, how could I know  
 That I so soon should strew  
 Your blossoms, warm with tears, above his head ?  
     That your wet roots would cling  
 About the hand that wears his bridal ring,  
 When he who placed it there lay cold and dead ?

O violets, live and grow,  
     That, ere the bright days go,  
 This turf may be with rarest beauty crowned ! —  
     Nay, shrink not from my touch,  
 For these are careful and most loving hands,  
     Fearing and hoping much,  
 Which thus disturb your fair and wondering bands,  
 But to transfer them to more holy ground.

Dear violets, bloom and live !  
     To this beloved tomb  
     Your beauty and your bloom  
 Are the most precious tribute we can give.  
 And, oh, if your sweet soul of odor goes,  
 Blended with the clear trills of singing-birds,  
     Farther than my poor speech  
     Or wailing cry can reach  
 Into that realm of shadowy repose  
     Toward which I blindly yearn,  
 Praying in silence, " Oh, my love, return !"  
 Yet dare not try to touch with groping words,  
     So far it seems, and sweet, —  
 That realm wherein I may not hope to be  
     Until my wayworn feet  
 Put off the shoes of this mortality, —  
     Oh, let your incense-breath,  
 Laden with all this weight of love and woe  
 For him who went away so long ago,  
     Bridge for me Time and Death !

Blow, violets, blow !  
 And tell him in your blooming, o'er and o'er  
 How in the places which he used to know  
 His name is still breathed fondly as of yore ;  
 Tell him how often, in the dear old ways  
     Where bloomed our yesterdays,  
 The radiant days which I shall find no more,  
     My lingering footsteps shake  
 The dew-drops from your leaves, for his dear sake.  
     Wake, blue eyes, wake !

The earliest breath of June  
 Blows the white tassels from the cherry-boughs,  
 And in the deepest shadow of the noon  
     The mild-eyed oxen browse.  
     How tranquilly he sleeps,  
 He, whom so bitterly we mourn as dead! —  
     Although the new month sweeps  
 The over-blossomed spring-flower from his bed,  
     Giving fresh buds therefor, —  
 Although beside him still Love waits and weeps,  
     And yonder goes the war.

Wake, violets, wake!  
 Open your blue eyes wide!  
 Watch faithfully his lonely pillow here;  
     Let no rude foot-fall break  
 Your slender stems, nor crush your leaves aside;  
     See that no harm comes near  
     The dust to me so dear; —  
     O violets, hear!  
 The clouds hang low and heavy with warm rain, —  
     And when I come again,  
 Lo, with your blossoms his loved grave shall be  
     Blue as the marvellous sea  
 Laving the borders of his Italy!

---

## PAUL BLECKER.

### PART II.

You do not like this Lizzy Gurney? I know. There are a dozen healthy girls in that country-town whose histories would have been pleasanter to write and to read. I chose hers purposely. I chose a bilious, morbid woman to talk to you of, because American women are bilious and morbid. Men all cling desperately to the old book-type of women, delicate, sunny, helpless. I confess to even a man's hungry partiality for them, — these roses of humanity, their genus and species emphasized by but the faintest differing pungency of temper and common sense, — mere crumpling of the rose-leaves. But how many of them do you meet on the street?

McKinstry (with most men) kept this

ideal in his brain, and bestowed it on every woman in a street-car possessed of soft eyes, gaiter-boots, and a blush. Dr. Blecker (with all women) saw through that mask, and knew them as they are. He knew there was no more purient sign of the age of groping and essay in which we live than the unrest and diseased brains of its women.

Lizzy Gurney was but like nine-tenths of the unmarried young girls of the Northern States; there was some inactive, dumb power within, — she called it genius; there was a consciousness that with a man's body she would have been more of a man than her brother; there was, stronger than all, the unconquerable

craving of Nature for a husband's and child's love,—she, powerless. So it found vent in this girl, as in the others, in perpetual self-analyzing, in an hysteric clinging to one creed after another,—in embracing the chimera of the Woman's-Rights prophets with her brain, and thrusting it aside with her heart: after a while, to lapse all into a marriage, made in heaven or hell, as the case might be.

Dr. Blecker used no delicate euphuism in talking of women, which, maybe, was as well. He knew, that, more than men, though quietly, they are facing the problem of their lives, their unused powers, their sham marriages, and speak of these things to their own souls with strong, plebeian words. So much his Northern education opened his eyes to see, but he stopped there; if he had been a clear-sighted truth-seeker, he would have known that some day the problem would be solved, and by no foul Free Love-ism. But Paul was enough Southerner by birth to shrink from all inquiry or disquiet in women. If there were any problem of life for them, Grey Gurney held it solved in her nature: that was all he cared to know. Did she?

After the regiment was gone, she went into the old work,—cooking, sewing, nursing Pen. Very little of her brain or heart was needed for that; the heavy surplus lay dormant. No matter; God knew. Jesus waited thirty years in a carpenter's shop before He began His work,—to teach us to wait: hardest lesson of all. Grey understood that well. Not only at night or morning, but through the day, at the machine, or singing songs to Pen, she used to tell her story over and over to this Jesus, her Elder Brother, as she loved to call Him: *He* would not be tired of hearing it, how happy she was,—she knew. She did not often speak of the war to Him,—knowing how stupid she was, near-sighted, apt to be prejudiced,—afraid to pray for one side or the other, there was such bitter wrong on both: she knew it all lay in His hand, though; so she was dumb, only saying, "*He* knows." But for herself, out of the need of her woman's

nature, she used to say, "I can do more than I do here. Give me room, Lord. Let me be Paul Blecker's wife, for I love him." She blushed, when even praying that silently in her heart. Then she used to sing gayer songs, and have a good romp with the children and Pen in the evenings, being so sure it would all come right. How, nobody could see: who could keep this house up, with the ten hungry mouths, if she were gone? But she only changed the song to an earnest hearty hymn, with the thought of that. It would come at last: *He* knew.

Was the problem solved in her?

It being so sure a thing to her that this was one day to be, she began in a shy way to prepare for it,—after the day's work was done to the last stitch, taking from the bottom of her work-basket certain pieces of muslin that fitted herself, and sewing on them in the quiet of her own room. She did not sing when she worked at these; her cheeks burned, though, and there was a happy shining in her eyes bright enough for tears.

Sitting, sewing there, when that July night came, she had no prescience that her trial day was at hand: for to stoop-shouldered women over machines, as well as to Job, a trial day does come, when Satan obtains leave in heaven to work his will on them, straining the fibre they are made of, that God may see what work they are fit for in the lives to come. This was the way it came to the girl. That morning, when she was stretching out some muslin to bleach in a light summer shower, there was a skirmish down yonder in among some of the low coal-hills along the Shenandoah, and half a dozen men were brought wounded in to Harper's Ferry. There was no hospital there then; one of the half-burnt Government offices was used for the purpose; and as the surgeon at that post, Dr. Blecker, was one of the wounded, young Dr. Nott came over from the next camp to see to them. His first cases: he had opened an office only for six months, out in Portage, Ohio, before he got into the army; in those six months he played chess principally, and

did the poetry for the weekly paper, — his tastes being innocent: the war has been a grand outlet into a career for doctors and chaplains of that calibre. Dr. Nott, coming into the low arsenal-room that night, stopped to brush the clay off his trousers before going his rounds, and to whisk the attar of rose from his handkerchief. "No fever? All wounds?" of the orderly who carried the flaring tallow candle.

All wounds: few of them, but those desperate. Even the vapid eyes of Nott grew grave before he was through, and he ceased tipping on his toes, and tittering: he was a good-hearted fellow, at bottom, growing silent altogether when he came to operate on the surgeon, who had waited until the last. "The ball is out, Dr. Blecker," — looking up at length, but not meeting the wounded man's eye.

"I know. Cross the bandage now. You'll send a despatch for me, Nott? There is some one I want to see, before — I'll hold out two or three days?"

"Pooh, pooh! Not so bad as that. We'll hope at least, Dr. Blecker, not so bad as that. I've paper and pencil here." So Dr. Blecker sent the despatch.

It was a hot July night, soon after the seven days' slaughter at Richmond. You remember how the air for weeks after that lay torpid with a suppressed heat, — as though the very earth held her breath to hear the sharp tidings of death. It never was fully told aloud, — whispered only, — and even that hoarse whisper soon died out. We were growing used to the taste of blood by that time, in North and South, like bulls in a Spanish arena. This night, and in one or two following it, the ashy sultriness overhead was hint of some latent storm. It is one of the vats of the world where storms are brewed, — Harper's Ferry: stagnant mountain-air shut in by circling peaks whose edges cut into the sky; the sun looking straight down with a torrid compelling eye into the water all the day long, until at evening it goes wearily up to him in a pale sigh of mist, lingering to rest and say

good-bye among the wooded sides of the hills. Our hill-storms are generally bred there: it was not without a certain meaning that the political cloud took its rise in this town, whose thunder has shaken the continent with its bruit.

Paul Blecker lay by a window: he could see the tempest gathering for days: it was a stimulus that pleased him well. Death, or that nearness to it which his wound had brought, fired his brain with a rare life, like some wine of the old gods. The earth-life cleared to him, so tired he grew then of paltry words and thoughts, standing closer to the inner real truth of things. So, when he had said to the only creature who cared for him, "They say I will not live, come and stay with me," he never had doubted, as a more vulgar man might have done, that she would come, — never doubted either, that, if it were true that he should die, she would come again after him some day, to work and love yonder with him, — his wife. Nature sends this calmness, quiet reliance on the real verities of life, down there into that border-ground of death, — kind, as is her wont to be. When the third day was near its close, he knew she would come that night; half smiling to himself, as he thought of what an ignorant, scared traveller she would be; wishing he could have seen her bear down all difficulties in that turbulent house with her child-like "He wants me, — I must go." How kind people would be to her on the road, hearing her uncertain timid voice! Why, that woman might pass through the whole army, even *Blenker's* division, unscathed: no roughness could touch her, remembering the loving trust in her little freckled face, and how innocently her soul looked out of her hazel eyes. He used to call her *Una* sometimes: it was the only pet name he gave her. She was in the Virginia mountains now. If he could but have been with her when she first saw them! She would understand there why God took his prophets up into the heights when He would talk to them.

So thinking vaguely, but always of her, not of the fate that waited him, if he should die. Literally, the woman was dearer to him than his own soul.

The room was low-ceiled, but broad, with windows opening on each side. Overhead the light broke in through broken chinks in the rafters,—the house being, in fact, but a ruin.

A dozen low cots were scattered about the bare floor: on one a man lay dead, ready for burial in the morning; on the others the men who were wounded with him, bearing trouble cheerfully enough, trying, some of them, to hum a chorus to "We 're marching along," which the sentry sang below.

The room was dark: he was glad of that; when she came, she could not see his altered face: only a dull sconce spattered at one end, under which an orderly nodded over a dirty game of solitaire.

Outside, he could see the reddish shadow of the sky on the mountains: a dark shadow, making the unending forests look like dusky battalions of giants scaling the heights. Below, the great tide of water swelled and frothed angrily, trying to bury and hide the traces of the battles fought on its shore: ruined bridges, masses of masonry, blackened beams of cars and engines. One might fancy that Nature, in her grand temperance, was ashamed of man's petty rage, and was striving to hide it even from himself. Laurel and sumach bushes were thrusting green foliage and maroon velvet flowers over the sand ledges on the rock where the Confederate cannon had been placed; and even over the great masses of burnt brick and granite that choked the valley, the delicate moss, undaunted and indefatigable, was beginning to work its veiling way. Near him he saw a small square building, uninjured,—the one in which John Brown had been held prisoner: the Federal troops used it as a guard-house now for captured Confederates.

One of these men, a guerrilla, being sick, had been brought in to the hospital, and lay in the bed next to Blecker's,—a raw-boned, wooden-faced man, with oiled

yellow whiskers, and cold, gray, sensual eye: complaining incessantly in a whining voice,—a treacherous humbug of a voice, Blecker fancied: it irritated him.

"Move that man's bed away from mine to-morrow," he said to the nurse that evening. "If I must die, let me hear something at the last that has grit in it."

He heard the man curse him; but even that was softly done.

The storm was gathering slowly. Low, sharp gusts of wind crept along the ground at intervals, curdling the surface of the water, shivering the grass: far-off moans in the mountain-passes, beyond the Maryland Heights, heard in the dead silence: abrupt frightened tremors in the near bushes and tree-tops, then the endless forests swaying with a sullen roar. The valley darkened quickly into night; a pale greenish light, faint and fierce, began to flash in the north.

"Thunder-storm coming," said the sleepy orderly, Sam, coming closer to fasten the window.

"Let it be open," said Blecker, trying nervously to rise on one arm. "It is ten o'clock. I must hear the train come in."

The man turned away, stopping by the bed of the prisoner to gossip awhile before going down to camp. He thought, as they talked in a desultory way, as men do, thrown together in the army, of who and what they had been, that the Yankee doctor listened attentively, starting forward, and throwing off the bed-clothes.

"But he was an uneasy chap always, always," thought Sam, "as my old woman would say,—in a kippage about somethin' or other. But darned ef this a'n't somethin' more 'n usual,"—catching a glimpse of Blecker's face turned toward the prisoner, a curious tigerish look in his half-closed eyes.

The whistle of the train was heard that moment far-off in the gorge. Blecker did not heed it, beckoning silently to the orderly.

"Go for the Colonel, for Sheppard," in a breathless way; "bring some men,

stout fellows that can lift. Quick, Sam, for God's sake!"

The man obeyed, glancing at the prisoner, who lay with his eyes closed as though asleep.

"Blecker glowers at him as though he were the Devil," — stopping outside to light a cigar at the oil-lamp. "That little doctor has murder writ in his face plain as print this minute."

Sam may not have been wrong. Paul Blecker was virulent in hates, loves, or opinions: in this sudden madness of a moment that possessed him, if his feet would have dragged him to that bed yonder, and his wrists been strong enough, he would have wrung the soul out of the man's body, and flung him from his way. Looking at the limbs stretched out under the sheet, the face, an obscene face, even with the eyes closed, as at a deadly something that had suddenly reared itself between him and his chance of heaven. The man was Grey Gurney's husband. She was coming: in a moment, it might be, would be here. She thought that man dead. She always should think him dead. He held back his breath in his clinched teeth: that was all the sign of passion; his brain was never cooler, more alert.

Sheppard, the colonel of the regiment, a thick-set, burly little fellow, with stubbly black whiskers and honest eyes, came stamping down the room.

"What is it, hey? Life and death, Blecker?"

"More, to me," with a smile. "Make your men remove that man Gurney into the lower ward. Don't stop to question, Colonel: I'll explain afterwards. I'm surgeon of this post."

"You're crotchety as a woman, Paul," laughed the other, as he gave the order.

"What d' ye mean to do, old fellow, with this wound of yours? Go under for it, as you said at first?"

"This morning I would have told you yes. I don't know now. I can't afford to leave the world just yet. I'll fight death to the last breath." Watching the

removal of the prisoner as he spoke; when the door closed on him, letting his head fall on the pillow with a sigh of relief. "Sheppard, there was another matter I wished to see you about. Your mother came to see me yesterday."

"Yes; was the soup good she sent this morning? We're famous for our broths on the farm, but old Nance is n't here, and" —

"Very good; — but there was another favor I wished to ask."

"Well?" — staring into the white-washed wall to avoid seeing how red poor crotchety Blecker's face grew.

"By the way, Paul, my mother desired me to bring that young lady you told her of home with me. She means to adopt her for the present, I believe."

The redness grew hotter.

"It was that I meant to ask of her, — you knew?"

"Yes, I knew. Bah, man, don't wring my fingers off. If the girl's good and pure enough to do this thing, my mother's the woman to appreciate it. She knows true blood in horses or men, mother. Not a better eye for mules in Kentucky than that little woman's. A Shelby, you know? Stock-raisers. By George, here she comes, with her charge in tow already!"

Blecker bit his parched lips: among the footsteps coming up the long hall, he heard only one, quick and light; it seemed to strike on his very brain, glancing to the yellow-pannelled door, behind which the prisoner lay. She thought that man dead. She always should think him dead. She should be his wife before God; if He had any punishment for that crime, he took it on his own soul, — now. And so turned with a smile to meet her.

"Don't mind Paul's face, if it is skin and bone," said the Colonel, hastily interposing his squat figure between it and the light. "Needs shaving, that's all. He'll be round in no time at all, with a bit of nursing; 's got no notion of dying."

"I knew he would n't die," she said, half to herself, not speaking to Paul, —

only he held both her hands in his, and looked in her eyes.

Sheppard, after the first glance over the little brown figure and the face under the Shaker hood, had stood, hat in hand, with something of the same home-trusty smile he gave his wife on his mouth. The little square-built body in black seeded silk and widow's cap, that had conveyed the girl in, touched the Colonel's elbow, and they turned their backs to the bed, — talking of hot coffee and sandwiches. Paul drew her down.

"My wife, Grey? *Mine?*" his breath thin and cold, — because no oath now could make that sure.

"Yes, Paul."

He shut his eyes. She wondered that he did not smile when she put her timorous fingers in his tangled hair. He thought he would die, maybe. He could not die. Her feet seemed to take firmer root into the ground. A clammy damp broke out over her body. He did not know how she had wrestled in prayer; he did not believe in prayer. He could not die. That which a believer asked of God, believing He would grant, was granted. She held him in life by her hand on Christ's arm.

"Were you afraid to travel alone, eh?"

Grey looked up. The little figure facing her had a body that somehow put you in mind of unraised dough: and there was nothing spongy or porous or delusive in the solid little soul either, inside of the body, — that was plain. She looked as if Kentucky had sent her out, a tight, right, compact drill-sergeant, an embodiment of Western reason, to try by herself at drum-head court-martial the whole rank and file of Northernisms, airy and intangible illusions. Nothing about her that did not summon you to stand and deliver common sense; the faint down on her upper-lip, the clogged shoes, the stiff dress, the rope of a gold watch-chain, the single pure diamond blazing on one chubby white hand, the general effect of a lager-bier keg, unmovable, self-poised, the round black eyes, the two black puffs of hair on each

temple, said with one voice, "No fooling now; no chance for humbug here." Why should there be? One of the Shelbys; well-built in bone and blood, honest, educated, — mule-raisers; courted by General Sheppard according to form, a modest, industrious girl, a dignified, eminently sensible wife, a blindly loving mother, a shrewd business-woman as a widow. Her son was a Christian, her slaves were fat and contented, her mules the best stock imported. She hated the Abolitionists, lank, uncombed, ill-bred fanatics; despised the Secessionists as disappointed Democrats; clung desperately to the Union, the Constitution, and the enforcement of the laws, not knowing she was holding to the most airy and illusive nothings of all. So she was here with Pratt, her son, at Harper's Ferry, nursing the sick, keeping a sharp eye on the stock her overseer sold to Government, — looking into the face of every Rebel prisoner brought in, with a very woman's sick heart, but colder growing eyes. For Buckner, you know, had induced Harry to go into the Southern army. Harry Clay, (they lived near Ashland,) — Harry was his mother's pet, before this, the youngest. If he was wounded, like to die, not all their guerrillas or pickets should keep her back; though, when he was well, she would leave him without a word. He had gone, like the prodigal son, to fill his belly with the husks the swine did eat, — and not until he came back, like the prodigal son, would she forgive him. But if he was wounded — If Grey had stopped one hour before coming to this man she loved, she would have despised her.

"Were you afraid to travel alone?"

"Yes; but I brought Pen for company, Paul. You did not see that I brought Pen."

But Pen shied from the outstretched hand, and had recourse to a vial of spirituous-looking liquorice-water.

It was raining now, heavily. By some occult influence, Mrs. Sheppard had caused a table to spring up beside the bed,

whereon a cozy round-stomached oil-lamp burned and flared in the wind, in a jolly, drunken fashion, and a coffee-pot sent out mellow whiffs of brown steam.

"It's Mocha, my dear, — not rye. I mean to support my Government, and I'll not shirk the duty when it comes to taxes on coffee. So you were afraid? It's the great glory of our country that a woman can travel unprotected from one end to — Well. But you are young and silly yet."

And she handed Grey a cup with a relaxing mouth, which showed, that, though she were a woman herself, capable of swallowing pills without jelly, she did not hope for as much from weaker human nature.

Paul Blecker had not heard the thunder the first hour Grey was there, nor seen the livid flashes lighting up those savagest heights in the mountains: his eye was fixed on that yellow door yonder in the flickering darkness of the room, and on the possibility that lay beyond it.

Now, while Grey, growing used to her new home, talked to Pen and her hostess, Paul's thoughts came in cheerier and warmer: noting how the rain plashed like a wide sweep of loneliness outside, forcing all brightness and comfort in, — how the red lamp-light glowed, how even the pale faces of the men, in the cold beds yonder, grew less dour and rigid, looking at them; hearing the low chirp of Grey's voice now and then, — her eyes turned always on him, watchful, still. It was like home, that broad, half-burnt arsenal-room. Even the comfortable little black figure, sturdily clicking steel needles through an uncompromising pair of gray socks, fitted well and with meaning into the picture, and burly Pratt Sheppard holding little Pen on his knee, his grizzly black brows knitted. Because Mary, down at home there, was nursing his baby boy now, most likely, just as he held this one. His baby was only a few months old: he had never seen it: perhaps he might never see it.

"She looks like Mary, a bit, mother,

eh?" — nodding to Grey, and steadying one foot on the rung of his chair.

Mrs. Sheppard shot a sharp glance.

"About the nose? Mary's is sharper."

"The forehead, I think. Hair has the same curly twist."

Grey, hearing the whisper, colored, and laughed, and presently took off the Shaker hood.

"'Pon my soul, mother, it's a remarkable likeness. — You're *not* related to the Furnesses, Miss Gurney, — Furnesses of Tennessee?"

"Pratt sees his wife in every woman he meets," said his mother, toeing off her sock.

She had not much patience with Pratt's wife-worship: some of these days he'd be sold to those Furnesses, soul and body. They were a mawkish, "genteel" set: from genteel people might the Lord deliver her!

"Does the boy look like this one at all, mother? — I never saw my boy, Miss Gurney," — explaining. "Fellows are shirking so now, I won't ask for a fur-lough."

"The child's a Shelby, out and out," — angrily enough. "Look here, Dr. Blecker," — pulling up her skirt, to come at an enormous pocket in her petticoat. "Here's the daguerreotype, taken when he was just four weeks old, and there's Pratt's eyes and chin to a T. D'ye see? Pratt *was* a fine child, — weighed fourteen pounds. But he was colicky to the last degree. And as for croup — Does your Pen have croup, Miss Grey? Sit here. These men won't care to hear our talk."

They did care to hear it. It was not altogether because Blecker was weakened by sickness that he lay there listening and talking so earnestly about their home and Grey's, the boy and Mary, — telling trifles, too, which he remembered, of his own childhood. It was such a new, cordial, heartsome life which this bit of innocent gossip opened to him. What a happy fellow old Pratt was, with his wife and child! Good fighter, too. Well, some day, maybe, he, too —

They were all quiet that night, coming closer together, maybe because they heard the rain rushing down the gorges, and knew what ruin and grief and slaughter waited without. Looking back at that night often through the vacancy of coming days, Paul used to say, "I was at home then," and after that try to whistle its thought off in a tune. He never had been at home before.

So, after that night, the summer days crept on, and out of sight: the sea of air in which the earth lay coloring and massing the sunlight down into its thin ether, until it ebbed slowly away again in yellow glows, tintured with smells of harvest-fields and forests, clear and pungent, more rare than that of flowers. Here and there a harvest-field in the States was made foul with powder, mud, — the grain flat under broken artillery-wheels, canteens, out of which oozed the few drops of whiskey, torn rags of flesh, and beyond, heaped in some unploughed furrow, a dozen, a hundred, thousands, it may be, of useless bodies, dead to no end. Up yonder in New England, or down in some sugar-plantation, or along the Lakes, some woman's heart let the fresh life slip out of it, to go down into the grave with that dead flesh, to grovel there, while she dragged her tired feet the rest of the way through the world. Her pain was blind; but that was all that was blind. The wind, touching the crimson moccasin-flower in the ditch, and the shining red drops beside it, said only, "It is the same color; God wills they shall be there," and went unsaddened on its appointed way. The white flesh, the curly hair, (every ring of that hair the woman yonder knew by heart,) gave back their color cheerily in the sunlight, and sank into the earth to begin their new work of roots and blossoming, and the soul passed as quietly into the next wider range of labor and of rest. And God's eternal laws of sequence and order worked calmly, and remained under all.

This world without the valley grew widely vague to Blecker, as he lay there

for weeks. These battles he read of every morning subserved no end: the cause stood motionless; only so many blue-coated machines rendered useless: but behind the machines — what? That was what touched him now: every hour some touch of Grey's, some word of the home-loving Kentuckians, even Pen's giant-stories, told as he sat perched on Blecker's bolster, made him think of this, when he read of a battle. So many thousand somethings dead, who pulled a trigger well or ill, for money or otherwise; so much brute force lost; behind that, a home somewhere, clinging little hands, a man's aspirations, millions of fears and hopes, religion, chances of a better foothold in the next life. It was that background, after all, the home-life, the notions of purity, honor, bravery absorbed there, that made the man a man in the battle-field.

So, lying on the straw mattress there, this man, who had been making himself from the first, got into the core of the matter at last, into his own soul-life, brought himself up face to face with God and the Devil, letting the outside world, the great war, drift out of sight for the time. His battle-field was here in this ruined plat of houses, prisoned by peaks that touched the sky. The issues of the great struggles without were not in his hands; this was. What should he do with this woman, with himself?

He gained strength day by day. They did not know it, he was so grave and still, not joining in the hearty, cheery life of the arsenal-room; for Mrs. Sheppard had swept the half-drunken Dutch nurses out of the hospital, and she and Grey took charge of the dozen wounded men (many dainty modiste-made ladies find that they are God-made women in this war). So the room had whitened and brightened every day; the red, unshaven faces slept sounder on their clean pillows; the men ate with a relish; and Grey, being the best of listeners, had carried from every bed a story of some home in Iowa or Georgia or the North. Only behind the yellow door yonder she never went. Blecker had ordered that,

and she obeyed like a child in everything.

So like a child, that Mrs. Sheppard, very tender of her, yet treated her with as much deference as she might a mild kitten. That girl was just as anxious that Bill Sanders's broth should be properly salted, and Pen's pinafore white, as she was to know Banks's position. Pish! Yet Mrs. Sheppard told Pen pages of "Mother Goose" in the evenings, that the girl might have time to read to Doctor Blecker. She loved him as well as if he were her husband; and a good wife she would be to him! Paul, looking at the two, as they sat by his bedside, knew better than she; saw clearly in which woman lay the spring of steel, that he never could bend, if her sense of right touched it. He used to hold her freckled little hands, growing yellow and rough with the hard work, in his, wondering what God meant him to do. If they both could lie dead together in that great grave-pit behind the Virginia Heights, it would have been relief to him. If he should let her go blindfold into whatever hell lay beyond death, it would be more merciful to her than to give her to her husband yonder. For himself— No, he would think only of her, how she could be pure and happy. Yet bigamy? No theory, no creed could put that word out of his brain, when he looked into her eyes. Never were eyes so genial or so pure. The man Gurney, he learned from Sheppard and Nott, recovered but slowly; yet there was no time to lose; a trivial accident might reveal all to her. Whatever struggle was in Blecker's mind came to an end at last; he would go through with what he purposed; if there were crime in it, he took it to his own soul's reckoning, as he said before.

It was a cool morning in early August, when the Doctor first crept out of bed; a nipping north-wind, with a breath of far-off frost in it, just enough to redden the protruding cheek of the round gum-trees on the mountain-ledges and make them burn and flame in among the swell-

ing green of the forests. He dragged himself slowly to the wooden steps and waited in the sunshine. The day would be short, but the great work of his life should be done in it.

"Sheppard!" he called, seeing the two square, black figures of the Colonel and his mother trotting across the sunny street.

"Hillo! you'll report yourself ready for service soon, at this rate, Doctor."

"In a week. That man Gurney. When can he be removed?"

"What interest can you have in that dirty log, Blecker? I've noticed the man since you asked of him. He's only a Northern rogue weakened into a Southern bully."

"I know. But his family are known to me. I have an order for his exchange: it came yesterday. He holds rank as captain in the other service, I believe?"

"Yes,—but he's in no hurry to leave his bed, Nott tells me."

"This order may quicken his recovery, eh?"

"Perhaps."

Sheppard laughed.

"You are anxious to restore him to his chances of promotion down yonder; yet I fancied I saw no especial love for him in your eyes, heh? Maybe you'd promote him to the front rank, as was done with Uriah,—what d'ye say, Paul?"

He went on laughing, without waiting for an answer.

"As was done with Uriah?" Pah, what folly was this? He took out his handkerchief, wiping his face and neck; he felt cold and damp,—from weakness, it might be.

"You will tell that man Gurney, Sam," beckoning to the orderly who was loitering near, "that an order for his exchange is made out, when he is able to avail himself of it."

"Won't you see him yerself, Doctor?" insinuated Sam. "He's a weak critter, an' 'll be monstrous thankful, I'm thinkin'."

Blecker shook his head and turned off,

waiting for Mrs. Sheppard. She was on the sidewalk, laying down the law to the chaplain, who, with his gilt-banded cap, looked amazingly like a footman. The lady's tones had the Kentucky, loud, mellow ring; her foot tapped, and her nervous fingers emphasized the words against her palm.

"Ill-bred," thought the young man; but he bowed, smiling suavely. "If I have been derelict in duty, Madam, I will be judged by a Higher Power."

"But it's my way, young Sir, to go to the root of the matter, when I see things rotting, — be it a potato-field or a church. We're plain-tongued in my State. And I think the Higher Power needs a mouth-piece just now."

And something nobler of mien than good-breeding gave to Sarah Sheppard's earnest, pearly little figure meaning just then, before which the flimsy student of the Thirty-Nine Articles stood silent.

"I'm an old woman, young man; you're a boy, and the white cravat about your neck gives me no more respect for you than the bit of down on your chin, so long as you are unworthy to wear either. We Virginians and Kentuckians may be shelled up yet in our old-fogy notions; it's likely, as you say. We don't understand the rights of man, maybe, or know just where Humanity has got to in its progress. But we've a grip on the old-fashioned Christianity, and we mean to make it new again. And when I see hundreds of young, penniless preachers, and old, placeless preachers, shoving into the army for the fat salaries, drinking, card-playing with the men, preaching murder instead of Christ's gospel of peace, I'll speak, though I am a woman. I'll call them the Devil's servants instead of the Lord's, and his best and helpfulest servants, too, nowadays. If there's a time when a man's soul cries out to get a clear sight of God, it's when he's standing up for what he thinks right, with his face to the foe, and his country behind him. And it's not the droning, slovenly prayers nor hashed-up political speeches of such men as you, that will

show Him to them. Oh, my son!" putting her hand on the young man's arm, her voice unsteady, choking a minute, "I wish you'd be earnest, a peace-teacher like your Master. It's no wonder the men complain of the Federal chaplains as shams and humbugs. I don't know how it is on the other side. I've a son there, — Harry. I'd like to think he'd hear some live words of great truth before he goes into battle. Not rapid gabbling over the stale, worn-out cant, nor abuse of the enemy. When he's lying there, the blood coming from his heart on the sod, life won't be stale to him, nor death, nor the helping blood of the cross. And for his enemy, when he lies dead there, my Harry, would God love his soul better because it came to Him filled with hate of his brother?"

She was half talking to herself now, and the young man drew his coat-sleeve out of her hold and slipped away. Afterwards he said that old lady was half-Secesh, because she had a son in the Rebel army; but I think her words left some meaning in his brain other than that.

She met Blecker, her face redder, her eyebrows blacker than usual.

"You up and out, Doctor Blecker? Very well! You'll pay for it in fever to-morrow. But every young man is wiser in his own conceit, to-day, than seven men that can render a reason. It was not so in my day. Young people knew their age. I never sat down before my mother without permission granted, nor had an opinion of my own."

She stood silent a moment, cooling.

"Pha, pha! I'm a foolish old body. Fretting and fuming to no purpose, likely. There's Pratt, now, laughing, down the street. 'Mother, if you're going to have one of your brigazoes with that young parson, I'm off,' he says. He says, — 'You're not in your own country, where the Shelbys rule the roast.' What if I'm not, Doctor Blecker? Truth's truth. I'm tired of cant, whether it belongs to the New-England new age of reason, their Humanity and Fou-

rierism and Broad-Church and Free-Love, or what not, or our own Southern hard-bit, tight-reined men's creeds. Not God's,—driving men headlong into one pit, all but a penned-up dozen. I'm going back of all churches to the words of Jesus. There 's my platform. But you said you wanted to speak with me. What 's *your* trouble?"

Blecker hesitated,—not knowing how this sturdy interpreter of the words of Jesus would look on his marriage with another man's wife, if she understood the matter clearly. He fumbled his cravat a minute, feeling alone, as if the earth and heaven were vacant,—no background for him to lean against. Men usually do stand thus solitary, when they are left to choose by God.

"You 're hard on the young fellow, Mrs. Sheppard. I wish for my own sake he was a better specimen of his cloth. There 's no one else here to marry me."

"Tut! no difference what *he* is,"—growing graver, as she spoke. "God's blessing comes pure, if the lips are not the cleanest that speak it. You are resolved, then, on your course, as you spoke to me last night?"

"Yes, I am, if Grey will listen to reason. You and the Colonel leave to-morrow?"

"Yes, and she cannot stay here behind me, to a certainty. Pratt is ordered off, and I must go see to my three-year-olds. Morgan will have them before I know what I 'm about. I 'll take the girl back to Wheeling, so far on her way home. As to this marriage"——

She stopped, with her fingers on her chin. The Doctor laughed to himself. She was deciding on Grey's fate and his, as if they were a pair of her three-year-olds that Government wanted to buy.

"It 's unseemly, when the child's father is not here. That 's how it seems to me, Dr. Blecker. As for love, and that, it will keep. Pha, pha! There 's one suggestion of weight in favor of it. If you were killed in battle, the girl would have some provision as your wid-

ow that she could not have now. D' ye see?"

Blecker laughed uneasily.

"I see; you come at the bone of the matter, certainly. I have concluded, Mrs. Sheppard, Grey must go with you; but she shall leave here as my wife. If there is any evil consequence, it shall come to me."

There was a moment's silence. He avoided the searching black eyes fixed on his face.

"It is not for me to judge in this matter," she said, with some reserve. "The girl is a good girl, however, and I will try and take the place of a mother to her. You have reasons for this haste unknown to me, probably. When do you wish the ceremony, and where, Doctor? The church up yonder," sliding into her easy, dogmatic tone again; "it 's one of the few whole roofs in the place. That is best,—yes. And for time, say sunset. That will suit me. I must go write to that do-nothing M'Key about the trousers for Pratt's men. They 're boxed up in New York yet: and then I 'ye to see to getting a supply of blue pills. If you 'll only give one to each man two nights before going into battle, just enough to stir their livers up, you 'll find it work like a charm in helping them to fight. Sundown,—yes. I cannot attend to it possibly before."

"It was the time I had fixed upon, if Grey consents."

"Pah! she 's a bit of linen rag, that child. You can turn her round your finger, and you know it. You will find her down on the shore, I think. I must go and tell my young parson he had better read over the ceremony once or twice to be posted up in it."

"To be sure, Pratt," she said, a few moments after, as she detailed the intended programme to the Colonel, farther down the street,—“to be sure, it 's too hasty. I have not had time to give it consideration as I ought. These war-times my brain is so thronged night and day. But I think it 's a good match. There 's an honest, downright vein in

young Blecker that 'll make a healthy life. Wants birth, to be sure. Girl 's got that. You need n't sneer, Pratt. It is only men and women that come of the old rooted families, bad or good, that are self-poised. Made men always have an unsteady flicker, a hitch in their brains somewhere, — like your Doctor, eh? Grey 's out of one of the solid old Pennsylvania stocks. Better blooded the mule, the easier goer, fast or not."

She shut her porte-monnaie with a click, and repinned her little veil that struck out behind her, stiff, pennant-wise, as she walked.

"Well, I 've no time now. I 'm going to drop in and see that Gurney, and tell him he 's exchanged. And the sooner he 's up and out, the better 'for him. Dyspepsia 's what ails *him*. I 'll get him out for a walk to-day. 'S cool and bracing."

It was a bracing day; the current of wind coming in between the Maryland Heights fresh and vigorous, driving rifts of gray cloud across the transparent blue overhead. A healthy, growing day, the farmers called it; one did fancy, too, that the late crops, sowed after the last skirmish about the town, did thrust out their green blades more hopefully to-day than before; the Indian corn fattened and yellowed under its tresses of soft sun-burnt silk. Grey, going with Pen that afternoon through a great field of it, caught the clean, damp perfume of its husk; it put her in mind of long ago, somehow, when she was no older than Pen. So she stopped to gather the scarlet poppies along the fence, to make "court-ladies" out of them for him, as she used to do for herself in those old times.

"Make me some shawls for them," said Pen, presenting her some lilac-leaves, which she proceeded to ornament by biting patterns with her teeth.

"Oth said, if I eat poppy-seeds, I 'd sleep, an' never waken again. Is that true, Sis?"

"I believe it is. I don't know."

Death and eternal sleeps were dim, far-off matters to Grey always, — very triv-

ial to-day. She was a healthy, strong-nerved woman, loving God and her kin with every breath of her body, not likely to trouble herself about death, or ever to take her life as a mean, stingy makeshift and cheat, a mere rotten bridge to carry her over to something better, as more spiritually-minded women do. It was altogether good and great; every minute she wanted a firmer hold on it, to wring more work and pleasure out of it. She was so glad to live. God was in this world. Sure. She knew that, every moment she prayed. In the other? Yes; but then that was shadowy, and there were no shadows nor affinity for them in Grey. This was a certainty, — here. And to-day — So content to be alive to-day, that a something dumb in her brown eyes made Pen, looking up, laugh out loud.

"Kiss me, Sis. You 're a mighty good old Sis to-day. Let 's go down to the river."

They went down by the upper road, leaving the town behind them. The road was only a wide, rutted cow-path on the side of the hill. Here and there a broken artillery-wheel, or bomb-shell, or a ragged soldier's jacket lay among the purple iron-weed. She would not see them — to-day. Instead, she saw how dark the maple-leaves were growing, — it was nearly time for them to turn now; the air was clear and strong this morning, as if it brought a new lease of life into the world; on the hill-banks, brown and ash-colored lichen, and every shade of green, from pale apple-tint to the blackish shadows like moss in October, caught the sunshine, in the cheeriest fashion. Yellow butterflies chased each other about the grass, tipsily; the underbrush was full of birds, chattering, chirping calls, stopping now and then to thrill the air up to heaven with a sudden shiver of delight, — so glad even they were to be alive. Mere flecks of birds, some of them, bits of shining blue and scarlet and brown, trembling in and out of the bushes: chippeys, for instance, — you know? — so contemptibly little; it was

ridiculous, in these sad times, to see how much joy they made their small bodies hold. But it is n't their fault that they only have instinct, and not reason. I 'm afraid Grey, with most women, was very near their predicament. That day was so healthy, though, that the very bees got out of their drowsiness, and made a sort of song of their everlasting hum; and that old coffin-maker of a wood-pecker in the hollow beech down by the bridge set to work at his funereal "thud, thud," with such sudden vigor, it sounded like a heartsome drum, actually, beating the reveille. Not much need of that: Grey thought the whole world was quite awake: looking up to the mountains, she did not feel their awful significance of rest, as Paul Blecker might have done. They only looked to her like the arms this world had to lift up to heaven its forests and flowers,—to say, "See how glad and beautiful I am!" Why, up there in those barest peaks above the clouds she had seen delicate little lakes nestling, brimming with light and lilies.

They came to the river, she and Pen, where it bends through the gorge, and sat down there under a ledge of sandstone, one groping finger of the sunshine coming in to hold her freckled cheek and soft reddish hair. They say the sun does shine the same on just and unjust; but he likes best to linger, I know, on things wholesome and pure like this girl. When Pen began to play "jacks" with the smooth stones on the shore, she spread out her skirt for him to sit on,—to keep him close, hugging him now and then, with the tears coming to her eyes: because she had seen Paul an hour before, and promised all he asked. And Pen was the only thing there of home, you know. And on this her wedding-day she loved them all with a hungry pain, somehow, as never before. She was going back to-morrow; she could work and help them just as before; and yet a gulf seemed opening between them forever. She had been selfish and petulant,—she saw that now; sometimes impatient with her old father's trumpy rocks, or Lizzy's

discontent; in a rage, often, at Joseph. Now she saw how hardly life had dealt with them, how poor and bare their lives were. *She* might have made them warmer and softer, if she had chosen. Please God, she would try, when she went home again,—wiping the hot tears off, and kissing Pen's dismal face, until he rebelled. The shadows were lengthening, the rock above her threw a jagged, black boundary about her feet. When the sun was behind yon farthest hill she was going back, up to the little church, with Pen; then she would give herself to her master, forever.

Whatever feeling this brought into her soul, she kept it there silent, not coming to her face as the other had done in blushes or tears. She waited, her hands clutched together, watching the slow sinking of the sun. Not even to Paul had she said what this hour was to her. She had come a long journey; this was the end.

"I would like to be alone until the time comes," she had said, and had left him. He did not know what he was to the girl; she loved him, moderately, he thought, with a temperate appreciation that taunted his hot passion. She did not choose that even he should know with what desperate abandonment of self she had absorbed his life into hers. She chose to be alone, shrinking, with a sort of hatred, from the vulgar or strange eyes that would follow her into the church. In this beginning of her new life she wanted to be alone with God and this soul, only kinsman of her own. If they could but go, Paul and she, up into one of these mountain-peaks, with Him that made them very near, and there give themselves to each other, before God, forever!

She sat, her hands clasped about her knees, looking into the gurgling water. The cool, ashen hue that precedes sunset in the mountains began to creep through the air. The child had crouched down at her feet, and fallen into a half doze. It was so still that she heard far down the path a man's footsteps crushing the sand, coming close. She did not turn

her head, -- only the sudden blood dyed her face and neck.

"Paul!"

She knew he was coming for her. No answer. She stood up then, and looked around. It was the prisoner Gurney, leaning against the rock, motionless, only that he twisted a silk handkerchief nervously in his hand, looking down at it, and crunching tobacco vehemently in his teeth.

"I've met you at last, Grey. I knew you were at the Ferry."

The girl said nothing. Sudden death, or a mortal thrust of Fate, like this, brings only dumb astonishment at first: no pain. She put her fingers to her throat: there was a lump in it, choking her. He laughed, uneasily.

"It's a devilish cool welcome, considering you are my wife."

Pen woke and began to cry. She patted his shoulder in a dazed way, her eyes never leaving the man's face; then she went close, and caught him by the arm.

"It is flesh and blood," — shaking her off. "I'm not dead. You thought I was dead, did you? I got that letter written from Cuba," — toying with his whiskers, with a complacent smirk. "That was the sharpest dodge of my life, Grey. Fact is, I was damnably in debt, and tied up with your people, and I cut loose. So, eh? What d'ye think of it, Puss?" putting his hand on her arm. "*Wife*, eh?"

She drew back against the sandstone with a hoarse whisper of a cry such as can leave a woman's lips but once or twice in a lifetime: an animal tortured near its death utters something like it, trying to speak.

"Well, well, I don't want to incommodate you," — shifting his feet uncertainly. "I — it's not my will I came across you. Single life suits me. And you too, heh? I've been rollicking round these four years, — Tom Crane and I: you don't know Tom, though. Plains, — Valparaiso, — New Orleans. Well, I'm going to see this shindy out in the States now.

Tom's in it, head-devil of a guerrilla-band. I keep safe. Let Jack Gurney alone for keeping a whole skin! But, eh, Grey?" — mounting a pair of gold-rimmed eye-glasses over his thick nose. "You've grown. Different woman, by George! Nothing but a puling, gawky girl, when I went away. Your eyes and skin have got color, — luscious-looking: why, your eyes flash like a young bison's we trapped out in Nevada. Come, kiss me, Grey. Eh?" — looking in the brown eyes that met his, and stopping short in his approach.

Of the man and woman standing there face to face the woman's soul was the more guilty, it may be, in God's eyes, that minute. She loathed him with such intensity of hatred. The leer in his eyes was that of a fiend, to her. In which she was wrong. There are no thoroughbred villains, out of novels: even Judas had a redeeming trait (out of which he hanged himself). This man Gurney had a weak, incomplete brain, strong sensual instincts, and thick blood thirsty for excitement, — all, probably, you could justly say of Nero. He did not care especially to torment the woman, — would rather she were happy than not, — unless, indeed, he needed her pain. So he stopped, regarding her. Enough of a true voluptuary, too, to shun turmoil.

"There! hush! For God's sake don't begin to cry out. I'm weak yet; can't bear noise."

"I'm not going to cry," her voice so low he had to stoop to hear. Something, too, in her heart that made her push Pen from her, when he fumbled to unclasp her clinched hands, — some feeling she knew to be so foul she dared not touch him.

"Do you mean to claim me as your wife, John?"

He did not reply immediately; leisurely inspecting her from head to foot, as she stood bent, her eyes lying like a dead weight on his, patting and curling his yellow whiskers meanwhile.

"Wife, heh? I don't know. Your face is getting gray. Where's that pretty

color gone you had a bit ago, Puss? By George!" — laughing, — "I don't think it would need much more temptation to make a murderer out of you. I did not expect you to remember the old days so well. I was hard on you then," — stopping, with a look of half admiration, half fear, to criticize her again. "Well, well, I 'll be serious. Will I claim you again? N—o. On the whole, I believe not. I 'll be candid, Grey, — I always was a candid man, you know. I 'd like well enough to have the taming of you. It would keep a man alive to play Petruchio to such a Kate, 'pon honor! But I do hate the trammels, — I 've cut loose so long, you see. You 're not enough to tempt a fellow to hang out as family man again. It 's the cursedest slavery! So I think," poisoning his ringed fingers on his chin, thoughtfully, "we 'd best settle it this way. I 'll take my exchange and go South, and we 'll keep our own counsel. Nobody 's wiser. If it suits you to say I 'm dead, why, I 'm dead at your service. I won't trouble you again. Or if you would rather, you can sue out a divorce in some of the States, — wilful desertion, etc. I 'm willing."

She shook her head.

"In any case you are free."

She wrung her hands.

"I am never free again! never again!" — sobs coming now, shaking her body. She crouched down on the ground, burying her head out of sight.

"Tut! tut! A scene, after all! I tell you, girl, I 'll do what you wish."

She raised her head.

"If you were *dead*, John Gurney! That is all. I was going to be a pure, good, happy woman, and now" —

Her eyes closed, her head fell slowly on her breast, her hands and face gray with the mottled blood blued under the eyes.

"Oh, damn it! Poor th'ng She won't know anything for a bit," said Gurney, laying her head back against the sandstone. "I 'll be off. What a devil she is, to be sure! Boy, you 'd best put some water on your sister's face in a minute or two," — to the whimpering Pen. "If I was safe out of this scrape, and off from the Ferry" —

And thrusting his eye-glass into his pocket, he went up the hill, still chafing his whiskers. Near the town he met Paul Blecker. The sun was nearly down. The Doctor stopped short, looking at the man's face fixedly. He found nothing there but a vapid self-complacency.

"He has not seen her," said Paul, hurrying on. "Another hour, and I am safe."

But Gurney had a keen twinkle in his eye.

"It 's not the first time that fellow has looked as if he would like to see my throat cut," he muttered. "I begin to understand, eh? If he has a mind to the girl, I 'm not safe. Jack Gurney, you 'd best vamose this ranch to-night. Sheppard will parole me to head-quarters, and then for an exchange."

## THE HANCOCK HOUSE AND ITS FOUNDER.

"Every man's proper mansion-house and home, being the Theater of his hospitality, the seat of self-fruit, the comfortablest part of his own life, the noblest of his sonne's inheritance, a kind of private principedome, nay, to the possessors thereof, an epitome of the whole world, may well deserve, by these attributes, according to the degree of the master, to be decently and delightfully adorned."—SIR HENRY WORTON.

IN the year of grace 1722, Captain John Bonner, *Ætatis suæ* 60, took it upon himself to publish a plan of "The Town of BOSTON in New-England. Engraven and printed by Fra: Dewing and Sold by Capt. Bonner and Will<sup>m</sup>. Price, against y<sup>e</sup> Town House." From the explanation given on the margin, it appears that the town then contained "Streets 42, Lanes 36, Alleys 22, Houses near 3000, 1000 Brick rest Timber, near 12,000 people." The area of the Common shows the Powder-House, the Watch-House, and the Great Elm, venerable even then in its solitary grandeur,—the Rope-Walks line the distant road to Cambridge Ferry, and far to the west of houses and settlements rises the conical peak of Beacon Hill,—a lonely pasture for the cattle of the thrifty and growing settlement.

Fifteen years later, a great improvement began to be visible in this hitherto neglected suburb. The whole southerly slope of the hill had been purchased in 1735 by a citizen of renown, and soon a fair stone mansion began to show its elegant proportions on the most eligible spot near its centre. By this time, as we have it, on the authority of no less reputable a chronicler than Mr. John Oldmixon, "the Conversation of the Town of Boston is as polite as in most of the Cities and Towns of England; many of their merchants having traded into Europe, and those that stayed at home having the Advantage of Society with travellers" (including, of course, Mr. Oldmixon himself). "So that a gentleman from London would almost think himself at home at Boston," (this is in Mr. Anthony Trollope's own vein,) "when he observes the numbers of people, their houses, their fur-

niture, their tables, their dress and conversation, which perhaps is as splendid and showy as that of the most considerable tradesman in London." *Primus inter pares*, however, stood the builder of the house on Beacon Hill, and there seems to be little doubt that Mr. Hancock's doings on his fine estate created a great stir of admiration, and that the new stone house was thought to be a very grand and famous affair in the infant metropolis of New England, in the year 1737.

The precise period which brought Mr. Hancock to undertake the building of the house in Beacon Street was one in which it might not have been altogether uninteresting to have lived. The affairs of the mother country had been carried on for nearly twenty years of comparative peace, under the dexterous guidance of Sir Robert Walpole,—that cleverest, if not most scrupulous, minister of the British crown,—while my Lord Bolingbroke—permitted to return from France, but living under a qualified attainder, and closely watched by the keen-sighted minister—was occupying himself in writing his bitter and uncompromising pamphlets against the government of the House of Hanover. The minister's son Horace, an elegant, indolent youth, fresh from Cambridge, was travelling on the Continent in company with a shy and sensitive man of letters, not much known at the time,—by the name of Gray. This gentleman gained no small credit, however, some ten or twelve years afterwards, by the publication of "An Elegy written in a Country Churchyard,"—a piece which, notwithstanding the remote date of its appearance, it is possible that some of our readers may have chanced to come across in the course of their liter-

ary researches. Giddiness, loss of memory, and other alarming symptoms of mental disorder had begun to attack the great intellect of Dr. Swift, and forced him to lay aside the pen which for nearly half a century had been alternately the scourge and the support of the perplexed cabinets of the time. His friend Mr. Pope, however, was living quite snug and comfortable, on the profits of his translations, at his pretty villa at Twickenham, and adding to his fame and means by the publication of his "Correspondence" and his "Universal Prayer." The learned Rector of Broughton, Dr. Warburton, encouraged by the advice of friends, had just brought out his first volume of "The Divine Legation of Moses"; the Bishop of Bristol had carried his great "Analogy of Religion" through the press the year before; Dr. Watts was getting old and infirm, but still engaged in his thirty years' visit to his friend Sir Thomas Abney, Knight and Alderman, of Abney Park, Stoke Newington. That remarkable young Scotchman, David Hume, was paying his respects to the sensational philosophy of Locke in a series of essays which "spread consternation through every region of existing speculation"; Adam Smith was a promising pupil under Hutcheson, — the father of Scotch metaphysics, — at the University of Glasgow. General Fielding's son Henry — but just married — was spending his charming young wife's portion of fifteen hundred pounds in the careless hospitality of his Derbyshire house-keeping, — three years' experience of which, however, reduced him to the necessity of undertaking his first novel for the booksellers, in the story of "Joseph Andrews." Captain Cook, at the age of thirteen, was a restless apprentice to a haberdasher near Whitby. And although "the age of steam" had certainly not then arrived, it must yet be allowed — in the words of the Highland vagrant to Cameron of Lochiel, not long after — that already

"Coming events cast their shadows before," — since we find that there lay in his nurs-

ery, in the family of Town Councillor Watt, the Bailie of Greenock, in the spring of the year 1736, a quiet, delicate, little Scotch baby, complacently sucking the tiny fist destined in after years to grasp and imprison that fearful vapory demon whose struggle for escape from his life-long captivity now furnishes the motive-power for the most mighty undertakings of man throughout the civilized world. It would surely have been something, we think, — the opportunity to have seen all these, from Bolingbroke in his library to James Watt in his cradle.

Turning to affairs somewhat nearer home, perhaps a slight glance at "ye conversation and way of living" of the good people of Boston, during the years that Mr. Hancock was carrying on his building and getting himself gradually settled in its comforts, may help us to conceive a better idea of the form and pressure of the age. Well, — Mr. Peter Faneuil was just then laboring to persuade the town that it might not be the worst thing they could do to accept the gift of a handsome new Town-Hall which he was very desirous to build for them, — an opinion so furiously combated and opposed by the conservatives and practical men of that day, that Mr. Faneuil succeeded in carrying his revolutionary measure, at last, in the open town-meeting, by a majority of only seven votes (a much larger majority, however, it is but fair to observe, than that which adopted a decent City-Hall for the same municipality only last year). Whitefield was preaching on the Common, in front of Mr. Hancock's premises, to audiences of twenty thousand people, "as some compute," "poor deluded souls," says the unemotional Dr. Douglass, writing at the period, "whose time is their only Estate; called off to these exhortations, to the private detriment of their families, and great Damage to the Public: *thus perhaps every such exhortation of his was about £1000 damage to Boston.*" Governor Belcher, who came home from England with the same instructions as Governor which he was sent out to oppose as envoy, had been

superseded in his high office by "William Shirley, Esquire, — esteemed for his gentlemanly deportment." Watchmen were required "in a moderate tone to cry the time o' night, and give an Account of the Weather as they walk't their rounds after twelve o'clock." The men that had been raised in town for the ill-starred expedition to Carthagena were being drilled on the Common, — and Hancock, writing to a friend, tells him, "We have the pleasure of Seeing 'em Disciplin'd every Day from 5 in morning to 8, & from 5 afternoon 'till night, before our house, — many Gentle" & others Daily fill y<sup>e</sup> Common, — & wee have not y<sup>e</sup> Less Company for it, but a quicker draft for Wine & Cider." Annually, on the Fifth of November, Guy Fawkes, the Pope, the Devil, and the Pretender were burned on the Common, amidst much noise and rioting, often degenerating into the tapping of claret and solid cracking of crowns between the North End and South End champions, — who made this always their field-day, *par excellence*, — to the great worriment of the Town Constables, and the infinite wrath and disgust of the Select Men. And, finally, we remark, "the goodness of the pavement in Boston might compare with most in London, for to gallop a Horse on it is three Shillings and foupence Forfeit!"

Such were the curious and simple, but, withal, rather cozy and jolly old years in which the Hancock House was planned and built and first occupied. Always a really fine residence, it is now the sole relic of the family mansions of the *old* Town of Boston, as in many respects it has long been the most noted and interesting of them all. One hundred and twenty-seven years have passed away since its erection, and old Captain Bonner's map now requires a pretty close study to enable our modern eyes to recognize any clue to its present locality. It stands, in fact, a solitary monumental pillar in the stream of time, — a link to connect the present with the eventful past; and the prospect of its

expected removal — though not, we trust, of its demolition — may render the present a fitting opportunity to call up some few of the quaint old reminiscences with which it is connected.

We have now before us, as we write, the original Contract or Indenture for the freestone work of the venerable structure. It is a document certainly not without a curious interest to those of us who have passed and repassed so often in our daily walks the gray old relic of New England's antiquity, to the very inception of which this faded paper reverts. It is an agreement made between Mr. Thomas Hancock and one "Thomas Johnson of Middleton in the County of Hartford and Colony of Connecticut In New-England, Stone-Cutter." By this instrument the Connecticut brown-stone man of that day binds himself to "Supply and Furnish the said Thomas Hancock with as much Connecticut Stone as Shall be Sufficient to Beatify and build Four Corners, One Large Front Door, Nine Front Windows and a Facie for the Front and back Part Over the Lower Story Windows of a certain Stone House which the Said Thomas Hancock is about to Erect on a Certain Piece of Land Situate near Beacon Hill in Boston aforesaid; as also So much of said Connecticut Stone as shall be Sufficient to make a water Table round the Said House, which Said Stone the Said Johnson Covenants and Agrees shall be well Cut, fitted and polished, workmanlike and According to the Rules of Art every way Agreeable, & to the Liking and Satisfaction of Mr. Hancock." The stone is to be delivered to Mr. Hancock's order at Boston, all "In Good Order and Condition, not Touched with the Salt Water, and at the proper Cost, Charge and Risque of the s<sup>d</sup> Johnson." The consideration paid to Johnson is fixed at "the Sum of three hundred Pounds *in Goods* as the Said Stone Cutter's work is Carried on." The latter stipulation as to the payment would be curious enough at the present day, though it appears to have been not

uncommon at the time this contract was executed. The perusal of Mr. Thomas Hancock's letter-book, however, now also lying before us, will not leave one in any need of this additional proof of the old Boston merchant's keen eye always to a business profit.

The Indenture is written in a clear, round, mercantile hand, — evidently Mr. Hancock's own, but his *best*, by comparison with the letter-book, — the leading words of the principal paragraphs being garnished with masterly flourishes, and the top of the paper "indented" by cutting with a knife so as to fit or "tally," after the fashion of those days, with the corresponding copy delivered to Johnson. It has been indorsed and filed away with evident care, and is consequently now in a state of absolute and perfect preservation. With the exception, however, of that little matter of the *store-pay*, and of the wording of the date of its execution, which is given as the "Tenth Year of the Reign of our Sovereign Lord George the Second, by the Grace of God of Great Britain, France, and Ireland, King, Defender of the Faith, &c.," the document differs but little in its phraseology — so conservative is the letter of the law of real estate — from those in use for precisely such contracts in the year 1863.

"Thomas Hancock, of Boston in the County of Suffolk and Province of the Massachusetts Bay in New England, Merchant," as he is named and described in the paper before us, was the founder of the fortunes of the family, and a man of the most considerable note and importance in his day. He was the son of the Reverend Mr. John Hancock, of Lexington, in which town he was born on the 13th of July, 1703. He was sent to Boston early in life to learn the business of a stationer, — with which calling those of bookseller and bookbinder were then combined, — and served his time accordingly with the leading provincial bibliopole of the day, "the enterprising Bookseller Henschman," who died in 1761. Quick, active, thrifty, young Han-

cock soon made his way in the world, — his famous bookstore in Ann Street was known as the "Stationers' Arms" as early as 1729; the industrious apprentice in due course married his master's fair daughter Lydia; and so our Thomas Hancock went on his way to credit and fortune, and last and best of all to house-building after his own mind, "the comfortablest part of his own life," with strides quite as easy and certain as did his contemporary, the Worshipful Francis Goodchild, Esq., of London, — whose career was, at that very time, so impressing itself upon the notice of that eminent hand, Mr. William Hogarth, of Leicester Fields in the Parish of St. Martin's, as to lead him to depict its events in the remarkable series of prints, "Industry and Idleness," in which they are now handed down for the admiration of posterity. And what the great painter tells us of his hero is equally true of ours, — that, "by taking good courses, and pursuing those points for which he was put apprentice, he became a valuable man, and an ornament to his country."

The pursuits connected with book-making were not, however, without their trials and troubles, even at that early day. From some of Hancock's letters for the year 1736, we find that one Cox was a sad thorn in his side, a grievous lion in his daily path. His chief correspondent among the booksellers in London at this period was Mr. Thomas Longman, — the founder of the renowned house of Longmans of our own time, — and to him Hancock often pours out his trials and grievances in the quaint and pointed style of the business letters of "The Spectator's" own day. Under date of April 10, 1736, for instance, he writes, — "I cannot Think of Doing much more in the Book way at present, unless Cox Recalls his Agent, which I am Certain He never will if you give up this point," (*i. e.* of making larger consignments to Hancock on his own account,) "as I can Improve my Money In other Goods from Great Brittan to so much better Advantage." Yet, he continues, "I am unwilling Quite to Quit

The Book branch of Trade, and you Can't but be Senceable that it was my Regard to you has Occasioned it's being forced from me in this way."

About the month of May, 1738, Cox appears to have become wellnigh intolerable. On the 24th of that month our bookseller writes to Longman,—“Cox has Sent some more Books here this Spring, & I Cannot Learn that he 's Called his man home Yet. I am a Great Sufferer by him, as well as you, having above £250 Sterling in Books by me, before what Came from you now.” Sometimes, however, Cox makes a slight mistake, and then our bookseller again takes heart of courage. Thus, under date of October 29, 1739, he again writes to Longman,—“Cox's man Came in Hall's ship about a month Agoe, brought Eight Trunks and a Box or two of Books, has opened his Shop, but makes no Great Figure & is but little taken Notice off, *which is a Good Syntom of a bad Sortment*,—his Return here was Surprising to me; truly I did not Expect it. At present I don't know how to Govern myself as to the Book Trade, *but am willing to do the Needful to Discountenance him*, and will write you again in little Time.” But, alas! by the 10th of December following, Cox had rallied bravely, and, accordingly, Hancock again writes in despair,—“I know not how to Conduct my Affairs as to the Book Trade. Cox's Shop is opened, & he has a pretty Good Collection of Books. He brought with him 8 Trunks, & 4 Came in y<sup>e</sup> next Ship. His Coming is A Great Damage to me, having many Books by me unsold for Years past, & most all which I had of you this Year. I am Ready Sometimes to Give up that part of my Business, & I think I should have done it ere now, were I not in hopes of Serving you in that Branch of Trade. *Could you propose any Schem to discountenance our Common Enemy I will Gladly Joyn you.* I fear he will have more Goods in the Next Ship. I have Nothing to Add at this time only that I am with Great Esteem Your Assur<sup>d</sup> Fr<sup>d</sup> &c. T. H.”

We may remark, that, if Longman were not by this time brought to be fully *Senceable* of the sacrifices which had been made here for his interest, it was assuredly through no fault of his Boston customer. In a letter dated April 30, 1736, Hancock had felt emboldened to inform him,—

“I have Occasion for Tillotson's Works, Rapine's History of England, Chamber's Dictionary & Burkitt on N. Testament for my own use, and as the Burthen of y<sup>e</sup> two Last years Sale of Books & Returns for them has mostly Laine on my Self, & as I have rec'd no Commitions, Some Debts yet outstanding, and many books by me now on Sold, which shall be glad to Sell for what I allowed you & now have paid for,—I say if you 'l please make a Present to me of y<sup>e</sup> above named, or any part of 'em They will be very Acceptable to me. My Last to you was of y<sup>e</sup> 10th & 14th Instent, which hope you have Rec'd ere This & I am

“Your obliged Humb. Serv.

“T. H.”

Once only, in the whole correspondence, are we able to find that this interlocking caitiff of Cox's was fairly circumvented. With what an inward glow of satisfaction must our Boston bookseller have found himself sufficiently master of the situation to be able to write to Longman (under date of May 10th, 1739),—

“Pr. this Conveyance Mess<sup>r</sup>. Joseph Paine & Son of London have Orders from this place to buy £50. Sterling worth of Books; I have Engaged Mr. Cushing, who writes to Paine to Order him to buy them of you, & that you would Use them well, which I Desire you to Doe; it will be ready money & I was Loth you should miss of it, (this is the Case,—*Cox's man* had Engaged to Send for them & let the Gentleman have 'em at the Sterling Cost,) but the Gentleman being my friend, I interposed, & So Strongly Solicited on your behalf that I fix't it right at last & you may Certainly depend on

the Comition, tho' it may be needful you See Mr. Paine as Soon as this Comes to hand. Pray procure me such a Bible as you think may suit me & Send when Opportunity offers.

"I am Sf. &c. &c. T. H."

Longman's next trunk brings a copy of Chambers's Dictionary, then just published, as a present to Mr. Hancock, and we might almost fancy it an acknowledgment of this letter about the *Comition* in more ways than one. We ought in justice to observe, however, that in those days, in the absence of any generally recognized and accepted standard of authority, gentlemen of the best condition in life appear to have felt at liberty to spell pretty much as they pleased, in New England. So far, at least, as Mr. Hancock's credit for orthography is concerned, it must be allowed, from his repeatedly spelling the same word in two or three different ways on the same page, that he probably gave the matter very little thought at any time,—taking as small pains as did Mr. Pepys, and really caring as little as Sir Thomas Browne for "the *βατραχομομαχία* and hot skirmish betwixt S and T in Lucian, or how grammarians hack and slash for the genitive case of Jupiter."\* That such spelling would hardly be admissible on India Wharf to-day, we freely admit,—nay, would even rush, were it necessary, to maintain,—but we must still claim for our favorite, that a century and a quarter ago he seems to have spelt about as well, on the whole, as the generality of his neighbors.

There is one most extraordinary *escapade* of his, however, in this line of performance, which we do not know how we can undertake wholly to defend. To Mr. John Rowe, a little doubtful about New-England Bills of Exchange, he writes,—"As to the £100 Draft of Mr. Faneuil's above mentioned, I doubt not but any merchant in London will take that Gentleman's Bill, when accepted, as Soon as a Bank Note,—he being the

\* *Religio Medici*, Part II., Sec. 3.

*Topinest* merchant in this Country, & I Gave 20 per Cent Extra' for it." If there be really a proper superlative of the adjective *topping*, our letter-writer, it must be confessed, has made a wide miss here of the mark he aimed at. "Priscian's a little scratch'd here,"—rather too much, indeed, even for 1739.

That the reader may not suspect Mr. Hancock of monopolizing all the cacography of his time, we give *verbatim* the following letter from Christopher Kilby,\* a letter among many of the same sort found with Mr. Hancock's papers.

"London, 15 February 1727.

"HONEST FR'ND. This not only advises you of my arrival but acknowledges the rec<sup>t</sup> of your favour. By your desire I waited upon Mr. Cox, & have told him and every body else, where it was necessary, as much as you desired, & account it part of my Felicity that I have so worthy a friend as Mr. Hancock. When you arrive here you'll find things vastly beyond your imagination,—I shall give you no other Character of England than this, that it is beyond expression, greater and finer than any thing I could ever form an Idea of. I wish you may arrive before I leave it, that you may with me, gaze and Wonder at a place that we can neither of us give a good Discription of. Pray present my Services to Mr.

\* Christopher Kilby was one of the Representatives of the Town in the General Court, (1739,) and was appointed by that body to go to England, as an agent for the Province. He soon after embarked for London, where he resided for several years. He was called the "Standing Agent" of the Province, and was likewise the Special Agent of the Town. Five years after this, we find a record of his election, at which he had 102 votes out of 109. When the General Court passed an act granting the King an excise on spirituous liquors, wines, limes, lemons, and oranges, the Town "voted unanimously to employ him to appear on behalf of the Town, and to use his utmost endeavour to prevent said Act's obtaining the Royal Assent," and likewise to be its agent in other matters. This action of the Town was June 3d, 1755.—See Drake's *History of Boston*, p. 606.

Wood, Mr. Cunnington, and if Mr. Leverett be not so engaged at the Annual meeting in Choosing Hogg Constables &c. that to mention it to him might be an interruption in so important affairs, my Service to him also,—but rather than he shou'd loose any part of his Pleasure while you take up his Time in doing it, I begg you 'l wait till a more leisure opportunity, when you may assure him that I am at his Service in anything but being Bread Weigher, Hogg Constable or any of those honourable posts of pleasure & profit. I have nothing more to add but Service to all friends, & assurance of my being

“Your sincere friend & very

“humble Servant,

“CHRIS. KILBY.”

There is a letter in another book—Mr. Hancock's letter-book from 1740 to 1744—in which poetical justice to the arch-disturber of his peace is feelingly recorded. Cox\* comes to grief at last,—surely, though late. Observe with what placid resignation Hancock regards his rival's mishap. The letter is to Longman, and bears date April 21st, 1742.

“— Thomas Cox has sent Orders to a Gentle<sup>n</sup> here to Receive from his man all his Effects,—the Shop is Accordingly Shutt up, & I am told his man is absconded & has Carried of all the money, I hear to the value of £500 Sterling; of Consequence a very bad Acco<sup>n</sup> must be rendered to his Master & no doubt 't will put a final Stop to his unjust proceedings & Trade to New-Eng<sup>d</sup>. I pray God it may have this long wished for Effect, the Good fruits of which, I hope you & we shall soon partake of.”

The correspondence with Longman is kept up with great activity through the

\* It would be interesting to know something more of Cox,—who he was, and what was his standing in the trade. Did he take rank with Tonson, Watts, Lintot, Strahan, Bathurst, and the rest,—publishers of Pope, Gay, Swift, etc.? or was he an Ishmaelite of the Row?—and did all the trade think so badly of him as Hancock did?

whole of the first third of the volume before us. Gradually, however, Hancock had been growing into a larger way of business, and his Bills of Exchange for £500 and £600, drawn generally by Mr. Peter Faneuil,\* begin to be of more frequent occurrence,—bills which he writes his London correspondents “are Certainly very Good, & will meet with Due Honour.” We read here and there of ventures to *Medara* and to *Surranam*, and of certain consignments of “Geese and Hogges to y<sup>e</sup> New Found Land.” “Be so Good,” he says, in a letter of May 17th, 1740, to a friend then staying in London, “as to Interist me in y<sup>e</sup> half

\* The following letter from Mr. Faneuil's own hand, found among Mr. Hancock's papers, is sufficiently curious to warrant its insertion here:—

“Boston, February 3<sup>d</sup>. 1738.

“CAPT. PETER BUCKLEY,

“SR,—Herewith you have Invoice of Six hh<sup>s</sup>. fish. & 8 Barrells of Alewives, amounting to £75. 9. 2—which when you arrive at Antiguas be pleased to Sell for my best advantage, & with the net produce of the Same purchase for me, for the use of my house, as likely a Strait limbed Negro lad as possible you can, about the Age of from 12 to fifteen years, & if to be done, one that has had the Small pox, who being for my Own service, I must request the fav<sup>r</sup>. you would let him be one of as tractable a disposition as you can find, w<sup>ch</sup>. I leave to your prudent care & management, desireing after you have purchased him you would send him to me by the first good Opportunity, recommending him to a Particular care from the Captain by whom you send him. Your care in this will be an Obligation,—I wish you a good Voynge, & am

“St. your humble Servant

“PETER FANEUIL.

“P. S. Should there not be En<sup>d</sup> to purchase the Boy desir'd be pleased to Add, & if any Overplus, to Lay it out for my Best Advantage in any thing you think proper. P. F.”

Truly, in confronting this ghost of departed manners, may we say with the Clown in “Twelfth Night,”—“Thus the whirligig of Time brings in his revenges.” The Hall which was the gift to the town of this merchant, who proposes to trade codfish and *alewives* for a slave, afterward became everywhere known to the world as the very “Cradle of Liberty.”

of 8 or 10 Ticketts when any Lottery's going on, you think may doe, and am obliged to you for mentioning your Kind intention herein. Please God y<sup>e</sup> Young Eagle, Philip Dumerisque Com<sup>r</sup> comes well home, and I believe I shall make no bad voyage." It is easy to see that the snug little business of the "Stationers' Arms" is soon to be given up, for what Drake \* describes as "the more extensive field of mercantile enterprise." † By this time, too, the signs of the French War began to loom alarmingly upon the horizon of the little colony, and Hancock rose with the occasion to the character of a man of large and grave affairs. Cox's man, and his Trunks and Sortments of Books, appear, after this, to have but little of his attention. There was need of raising troops, and of fitting out vessels; and when the famous expedition against Louisburg was determined on, Hancock had a large share in the matter of providing its munitions and equipment. His correspondence with Sir William Pepperell in these great affairs still lies preserved in good order in boxes in the attic of the old mansion.

Meanwhile, as he rose in the world, he had been laying out his grounds, and building and furnishing his house; his first letter from which is addressed to his "Dear Friend," Christopher Kilby, then in London, and is dated, rather grandly, "At my house in Beacon Street, Boston y<sup>e</sup> 22<sup>d</sup> Mar. 1739-40." Let us look back, then, a little over the yellow, time-

\* *History of Boston*, p. 681.

† Mr. Hancock, although a merchant "of the approved Gresham and Whittington pattern," appears, for some reason or other, to have judged no small degree of secrecy expedient in regard to some of his ventures. Thus, under date of October 22d, 1736, he writes to Captain John Checkering, then absent on a voyage on his account:—

"I hope ere this, you Safe arrived at Surranam, & your Cargo to a Good Market. I Press you make the best dispatch possible, & doe all you can to serve the Interist of y<sup>e</sup> concerned, & Closely observe when you come on our Coasts not to Speak with any Vessells, nor let any of your men write up to their wives, when you arrive at our light house."

stained record of the letter-book before us, and see what were the experiences of a gentleman, in building and planting in Beacon Street, so long before our grandfathers were born.

Under date of the 5th of July, 1736, Hancock writes to his friend and constant correspondent in London, "Mr. Francis Wilks Esq'," \* inclosing a letter to one James Glin at Stepney, with orders for some trees, concerning which he tells Wilks, "I am advised to have 'em bought, — but if you Can find any man Will Serve us Better I Leave it to your Pleasure." He must have thought it a great pity, from the sequel of this affair, that Mr. Wilks's Pleasure did not happen to lie in another direction. "I am Recommended by Mr. Tho<sup>s</sup>. Hubbard of This Town," runs the letter inclosed to Glin, "to you for A number of Fruit Trees, — be pleased to waite on Mr. Wilks for the Inv<sup>o</sup> of them & Let me have y<sup>e</sup> best Fruit, & pack't in y<sup>e</sup> best manner, & All numbered, with an Acco<sup>t</sup> of y<sup>e</sup> Same. I pray you be very Carefull That y<sup>e</sup> Trees be Took up in y<sup>e</sup> Right Season, and if these Answer my Expectations I shall want more, & 't will Ly in my way to Recommend Some Friends to you. I Intreat the Fruit may be the best of their Kind, the Trees handsome Stock, well Pack't, All N<sup>o</sup><sup>d</sup> & Tally'd, & particular Inv<sup>o</sup> of 'em. I am St. &c. &c. T. II."

This careful order was evidently duly executed by the nurseryman, and at first all appears to have gone smoothly enough, since, on the 20th of December following, (1736,) we find another letter to Glin, as follows:—

"SIR,—My Trees and Seeds pr. Capt. Bennett Came Safe to hand and I Like

\* "At length wearied with the altercation and persuaded of the justness of their cause," (in refusing to settle a fixed salary on Gov. Burnet,) "the House resolved to apply to his Majesty for redress, and Mr. Francis Wilkes, a New-England merchant, then resident in London, was selected as their agent."—*Barry's History of the Provincial Period of Massachusetts*, p. 126.

them very well. I Return you my hearty Thanks for the Plumb Tree & Tulip Roots you were pleased to make a Present off, which are very Acceptable to me. I have Sent my friend Mr. Wilks a mem<sup>o</sup> to procure for me 2 or 3 Doz. Yew Trees Some Hollys & Jessamin Vines & if you have any Particular Curious Things not of a high price will Beautifie a flower Garden, Send a Sample with the price or a Catalogue of 'em; pray Send me a Catalogue also of what Fruit you have that are Dwarf Trees and Espaliers. I shall want Some next Fall for a Garden I am Going to lay out next Spring. My Gardens all Lye on the South Side of a hill, with the most Beautifull Assent to the Top & it 's Allowed on all hands the Kingdom of England don't afford So Fine a Prospect as I have both of Land and water. Neither do I intend to Spare any Cost or Pains in making my Gardens Beautifull or Profitable. If you have any Knowledge of Sr John James he has been on the Spott & is perfectly acquainted with its Situation & I believe has as high an Opinion of it as myself & will give it as Great a Carrictor. Let me know also what you 'l Take for 100 Small Yew Trees in the Rough, which I 'd Frame up here to my own Fancy. If I can Do you any Service here I shall be Glad & be Assured I 'll not forgett your Favour, — which being y<sup>e</sup> needful Concludes,

“S<sup>r</sup>.

“Your most Ob<sup>ed</sup>t. Servant,

“THO<sup>s</sup>. HANCOCK.”

But neither Esquire Hancock nor Mr. Glin at Stepney could control the force of Nature, or persuade the delicate fruit-trees of Old England to blossom and flourish here, even on the south side of Beacon Hill. The maxim, “*L'homme propose, et le bon Dieu dispose,*” was found to be as inevitable in 1736 as it is in our later day and generation. It is true that no ancestral Downing was then at hand, with wise counsels of arboriculture, nor had any accidental progenitor of Sir Henry Stuart of Allanton as yet taught the

Edinboro' public of the Pretender's time the grand secrets of transplanting and induration. Esquire Hancock, therefore, was left to work out by himself his own woful, but natural disappointment. On the 24th of June, 1737, he writes to the unfortunate nurseryman in a strain of severe, and, as he doubtless thought, of most righteous indignation.

“SIR, — I Rec<sup>d</sup>. your Letter & your Baskett of flowers per. Capt. Morris, & have Desired Francis Wilks Esq<sup>r</sup> to pay you £26 for them *Though they are Every one Dead.* The Trees I Rec<sup>d</sup> Last Year are above half Dead too, — the Hollys all Dead but one, & worse than all is, the Garden Seeds and Flower Seeds which you Sold Mr. Wilks for me Charged at £6. 8<sup>s</sup>. 2<sup>d</sup>. Sterling were not worth one farthing. Not one of all the Seeds Came up Except the Asparrow Grass, So that my Garden is Lost to me for this Year. I Tryed the Seeds both in Town and Country & all proved alike bad. I Spared Mr. Hubbard part of them *and they All Serv'd him the Same.*” (Rather an unlucky blow this for poor Glin, as Mr. Hubbard had been his first sponsor and perhaps his only friend in New England.) “I think Sir, you have not done well by me in this thing, for me to send a 1000 Leagues and Lay out my money & be so used & Disappointed is very hard to Bare, & so I doubt not but you will Consider the matter & Send me over Some more of the Same Sort of Seeds that are Good & Charge me nothing for them, — if you don't I shall think you have imposed upon me very much, & 't will Discourage me from ever Sending again for Trees or Seeds from you. I Conclude,

“Your Humble Serv<sup>t</sup>.”

“T. H.

“P. S. *The Tulip Roots you were pleased to make a present off to me are all Dead as well.*”

The last paragraph is truly delicious, — a real Parthian arrow, of the keenest,

most penetrating kind. The ill-used gentleman is determined that poor Glin shall find no crumb of credit left, — not in the matter of the purchased wares alone, but even for the very presents that he had had the effrontery to send him.

After learning the opinion entertained by Mr. Hancock of his estate, its situation, prospect, and capacities, and understanding his intentions in regard to its improvement, as expressed in his first letter to Glin, — it may naturally be expected that we shall come upon some further allusions to the works he had thus taken in hand, in the antiquated volume before us. In this respect, as we turn over its remaining pages, we shall find that we are not to be disappointed. His letters on the subject, addressed to persons on the other side of the water, and particularly to the trusty Wilks, are, in fact, for the space of the next three or four years, most refreshingly abundant. Some of these are so minute, characteristic, and interesting, that we shall need no apology for transcribing them, most literally, here. On June 24th, 1737, he had written to Wilks, —

“This waites on you per Mr Francis Pelthro who has Taken this Voyage to Lond<sup>e</sup>. in order to be Cutt for y<sup>e</sup> Stone by Dr. Cheselden; \* he Is my Friend & a Very honest Gentleman. In case he needs your advise in any of his affairs & Calls on you for it, I beg y<sup>e</sup> fav<sup>r</sup> of you to do him what Service falls in your way, which Shall Take as done to my Self, and as he 's a Stranger, Should he have occasion for Ten Guineas please to Let him have it & Charge to my Acco<sup>t</sup>. I suppose he 's sofficeint with him—Except Some Extrordinary accident happen.

“I beg your particular Care about my Glass, that it be the best, and Every Square Cutt Exactly to the Size, & not to worp or wind in the Least, & Pack't up So that it may take no Damage on

\* “I'll do what Mead and Cheselden advise, To keep these limbs and to preserve these eyes.”

POPE, — *Epistle to Bolingbroke.*

the passage, — it 's for my Own Use & would have it Extrordinary. I am S<sup>r</sup>

“Your most oblid'gd obed. Sev<sup>t</sup>.”

“T. II.”

By one of those stupid accidents, — not, as we are sorry to record, altogether unknown to the business of house-building in our own day, — the memorandum previously sent for the glass turned out to be entirely incorrect. In less than a fortnight after, Mr. Hancock accordingly hastens to countermand his order, as follows: —

“Boston, N. E. July 5<sup>th</sup>. 1737.

“FRANCIS WILKS, ESQ<sup>r</sup>.”

“S<sup>r</sup>, — Sheperdson's Stay being Longer than Expected Brings me to the 5<sup>th</sup> of July, and if you have not bought my Glass According to the Demention per Capt. Morris I Pray you to have no regard to those, but the following viz.

“380 Squares of best London Crown Glass all Cutt Exactly 18 Inches Long & 11½ Inches wide of a Suitable Thickness to the Largness of the Glass free from Blisters and by all means be Carefull it don't wind or worp. —

“100 Squares Ditto 12 Inches Long 8½ wide of the Same Goodness as above.

“Our Friend Tylers Son William Comes per This Conveyance, I only add what Service's you doe him will Assuredly be Retaliated By his Father, & will Oblidge S<sup>r</sup>

“Your most Obedient Hum<sup>e</sup> Serv<sup>t</sup>”

“T. II.”

The window-glass being fairly off his mind, Mr. Hancock next turns his attention to the subject of wall-papers, on which head he comes out in the most strong and even amazing manner. We doubt if the documentary relics of the last century can show anything more truly *genre* than the following letter “To Mr. John Rowe, Stationer, London,” dated

“Boston, N. E. Jan. 23<sup>d</sup>. 1737-8.

“SIR, — Inclosed you have the Dimensions of a Room for a Shaded Hanging to be Done after the Same Pattern I have

Sent per Capt. Tanner, who will Deliver it to you. It 's for my own House, & In-treat the favour of you to Get it Done for me, to Come Early in the Spring, or as Soon as the nature of the Thing will admitt. The pattorn is all was Left of a Room Lately Come over here, & it takes much in y<sup>e</sup> Town & will be the only paper-hanging for Sale here wh. am of Opinion may Answer well. Therefore desire you by all means to Get mine well Done & as Cheap as Possible, & if they can make it more Beautifull by adding more Birds flying here & there, with Some Landskip at the Bottom should Like it well. Let the Ground be the Same Colour of the Pattorn. At the Top & Bottom was a narrow Border of about 2 Inches wide wh. would have to minc. About 3 or 4 Years ago my friend Francis Wilks Esq<sup>r</sup>. had a hanging Done in the Same manner but much handsomeer Sent over here for Mr Sam<sup>l</sup> Waldon of this place, made by one Dunbar in Aldermanbury, where no doubt he or Some of his Successors may be found. In the other parts of these Hangings are Great Variety of Different Sorts of Birds, Peacocks, Ma-coys, Squirril, Monkys, Fruit & Flowers &c, But a Greater Variety in the above mentioned of Mr. Waldon's & Should be fond of having mine done by the Same hand if to be mett with. I design if this pleases me to have two Rooms more done for myself. I Think they are handsomer & Better than Painted hangings Done in Oyle, so I Beg your particular Care in procuring this for me, & that the pattorns may be Taken Care off & Return'd with my Goods. Henry Atkins has Ordered Mr. Tho<sup>s</sup>. Pike of Pool\* to pay you £10 in Liew of the Bill you Returned Protested Drawn by Sam<sup>l</sup> Pike, which hope you 'l Receive. Inclosed you have also Crist<sup>o</sup> Kilby's Draft on King Gould Esq<sup>r</sup>. for £10 wh. will meet with Due Honour. Design to make you Some other Remittance in a Little Time. Interim Remain Sr. Your Assured Fr<sup>d</sup> & Hum<sup>c</sup>. Servt.

"T. H."

\* Liverpool.

There are certain other adornments about the Hancock House, besides the glass and the wall-papers, which were somewhat beyond the skill of New-England artificers of that time. Another of these exotic features is fully accounted for in the following extract from a letter to "Dear Kilby," dated

"22<sup>d</sup> Mar. 1739-40.

"I Pray the favour of you to Enquire what a pr. of Capitolls will Cost me to be Carved in London, of the Corinthian Order, 16½ Inches One Way and 9 y<sup>e</sup> Other, — to be well Done. Please to make my Compliments Acceptable to Mr. Wilks, & believe me to be

"Sr.

"Your assu<sup>d</sup>. Friend & very  
"Hum<sup>c</sup>. Sev<sup>t</sup>."

"T. H."

One more commission for the trusty Wilks remained. It was said of Mr. Hancock, long afterward, in one of the obituary notices called forth by his sudden demise, that "his house was the seat of hospitality, where all his numerous acquaintances and strangers of distinction met with an elegant reception." With a wise prevision, therefore, of the properties necessary to support the character and carry on the business of so bountiful a *cuisine*, we find him, under cover of a letter of May 24th, 1738, inclosing an order in these terms:—

"1 Middle Size Jack of 3 Guineas price, — Good works, with Iron Barrell, a wheel-fly & Spitt Chain to it."

Several other passages, scattered here and there in these letters, certainly go far to justify a reputation for the love of good cheer on the part of their writer. Throughout all of them, indeed, we are not without frequent indications of "a careful attention to and a laudable admiration of good, sound, hearty eating and drinking." Thus, in a postscript to one of his favors to Wilks, he adds, — "I Desire you also to send me a Chest of Lisbon Lemons for my own use." And again, in a letter to Captain Partington,

master of one of his vessels, then in Europe, he writes, — “When you come to any Fruit Country, Send or bring me 2 or 4 Chests of Lemmons, for myself & the Officers of this Port, & Take the Pay out of the Cargo.” Alas, that the Plantation Rum Punch of those days should now perforce be included among Mr. Phillips’s Lost Arts! He sends a consignment with an order “To Messers Walter & Robt. Scott,” as follows: — “I have the favour to ask of you, when please God the Merch’dse Comes to your hands, that I may have in return the best Sterling Medara Wines for my own use, — I don’t Stand for any Price, provided the Quality of the wine Answers to it. My view in Shipping now is only for an Oppertunity to procure the best wine for my own use, in which you will much oblige me.” And about the same time he orders from London “1 Box Double flint Glass ware. 6 Quart Decanters. 6 Pint do. 2 doz. handsome, new fash<sup>d</sup> wine Glasses, 6 pair Beakers, Sorted, all plain, 2 pr. pint Cans, 2 pr.  $\frac{1}{2}$  pint do. 6 Beer Glasses, 12 Water Glasses & 2 Doz. Jelly Glasses.” Well might he write to Kilby, not long after, “We live Pretty comfortable here now, on Beacon Hill.”

There is a graphic minuteness about all these trivial directions, which takes us more readily behind the curtain of Time than the most elaborate and dignified chronicles could possibly do. The Muse of History is no doubt a most stately and learned lady, — she looks very splendid in her royal attitudes on the ceilings of Blenheim and in the galleries of Windsor; but can her pompous old *stylus* bring back for us the every-day work and pleasure of these bygone days, — paint for us the things that come home so nearly “to men’s business and bosoms,” — or show us the inner life and the real action of these hearty, jolly old times, one-half so well as the simple homeliness of these careless letters? We seem to see in them the countenances of the people of those long buried years, and to catch the very echo of their voices, in

the daily walk of their pleasant and hearty lives. “The dialect and costume,” said Mr. Hazlitt, “the wars, the religion, and the politics of the sixteenth and seventeenth centuries” (and we may now venture to add for him, of the earlier half of the eighteenth) “give a charming and wholesome relief to the fastidious refinement and over-labored lassitude of modern readers. Antiquity, after a time, has the grace of novelty, as old fashions revived are mistaken for new ones.” In the present instance this seems to us to be, more than usually, the effect of Hancock’s quaint and downright style. All these letters of his, in fact, are remarkable for one thing, even beyond the general tenor of the epistolary writing of his time, and that is their *directness*. He is the very antipode to Don Adriano in “Love’s Labor’s Lost”; never could it be said of him that “he draweth out the thread of his verbosity finer than the staple of his argument.” He does not leave his correspondents to grope their way to his meaning by inferences, — *he comes to the point*. If he likes more “Macoys, Squirril & Monks” in his wallpaper than his neighbors, — if he thinks Cox’s man ought to be abated, or Glin to do the handsome thing by him, he says so, point-blank, and there’s an end.

— “He pours out all, as plain  
As downright Shippen, or as old Montaigne.”

Perhaps the particular phase of change which the language itself was going through at the time may assist in giving these letters, to us, something of their air of genuine force and originality. But after making due allowance for the freshness of a vocabulary as yet unimpeded by any cumbrous burden of euphemism, we are still convinced that we must recognize the source of much of the quality we have noted only in the *naïve* and outspoken nature of the writer. For, if ever there was a man who knew just what he wanted and just how he wanted it, it was the T. H. of the amusing correspondence before us.

Thus lived, for some quarter of a cen-

tury more, this cheery and prosperous gentleman, growing into a manly opulence, and enjoying to the full the pleasant "seate of self-fruition" which he had so carefully set up for himself on Beacon Hill. Not much addressing himself, indeed, to "looking abroad into universality," as Bacon calls it, but rather honestly and heartily "doing his duty in that state of life unto which it had pleased God to call him." He filled various posts of honor and dignity meanwhile, — always prominent, and even conspicuous, in the public eye, — and was "one of His Majesty's Council" at the commencement of the troubles which led to the War of the Revolution. The full development of this mighty drama, however, Thomas Hancock did not live to see. He died of an apoplexy, on the first day of August, 1764, about three of the clock in the afternoon, having been seized about noon of the same day, just as he was entering the Council Chamber. He was then in the sixty-second year of his age. By his will he gave one thousand pounds sterling for the founding of a professorship of the Oriental languages in Harvard College, one thousand pounds lawful money to the Society for Propagating the Gospel among the Indians, six hundred pounds to the town of Boston, towards an Insane Hospital, and two hundred pounds to the Society for carrying on the Linen Manufactory, — an enterprise from which much appears, just then, to have been expected. His property was valued, after his decease, at about eighty thousand pounds sterling, — a very much larger sum for that time than its precise money equivalent would represent at the present day. Having no issue of his own, he left the bulk of his estate to his nephew John, — a gentleman who, without a tithe of the nerve and pith and vigor of this our Thomas, has yet happened, from the circumstances of the time in which he bore up the family-fortunes, to have acquired a much more distinguished name and filled a much larger space in the tablets of History than has ever fallen to the share of his stout old uncle.

The Hancock estate, as we have been accustomed to see it of late years, is greatly reduced from its original dimensions, and shorn of much of its ancient glory.\* The property, in Mr. Thomas Hancock's time, extended on the east to the bend in Mount Vernon Street, including, of course, the whole of the grounds now occupied by the State House, † — on the west to Joy

\* In the "Massachusetts Magazine," Vol. I., No. 7, for July, 1789, there is "A Description of the Seat of His Excellency John Hancock Esq<sup>r</sup>. Boston [Illustrated by a Plate, giving a View of it from the *Hoy-Market*]." The print is very well executed for the time, by Samuel Hill, No. 50, Cornhill, — and the account of the estate is very curious and interesting. It describes the house as "situated upon an elevated ground fronting the south, and commanding a most beautiful prospect. The principal building is of hewn stone, finished not altogether in the modern stile, nor yet in the ancient Gothic taste. It is raised about 12 feet above the street, the ascent to which is through a neat flower garden bordered with small trees; but these do not impede the view of an elegant front, terminating in two lofty stories. The east wing forms a noble and spacious Hall. The west wing is appropriated to domestic purposes. On the west of that is the coach-house, and adjoining are the stables with other offices; the whole embracing an extent of 220 feet. Behind the mansion is a delightful garden, ascending gradually to a charming hill in the rear. This spot is handsomely laid out, embellished with glaxis, and adorned with a variety of excellent fruit trees. From the Summer House opens a capital prospect," etc.

"The respected character who now enjoys this earthly paradise, inherited it from his worthy uncle, the Hon. Thomas Hancock Esq: who selected the spot and completed the building, evincing a superiority of judgment and taste. . . . In a word, if purity of air, extensive prospects, elegance and convenience united, are allowed to have charms, this seat is scarcely surpassed by any in the Union. Here the severe blasts of winter are checked," etc.

† In this connection, the subjoined document — the original of which we have now at hand — may not be uninteresting, as showing the conditions on which the heirs of Governor John Hancock consented to sell so large a piece of the estate: —

"We the Subscribers, being a Committee of the town of Boston for the purpose of purchasing a piece of Land for the erection of

Street, called Hancock Street on the ancient plan of the estate now before us, — and in the rear about to what is now Derne Street, on the north side of Beacon Hill, and comprising on that side all the land through which Mount Vernon Street now runs, for the whole distance from Joy Street to Beacon-Hill Place. Thus was included a large part, too, of the site of the present reservoir on Derne Street, a portion of which, being the last of the estate sold up to the present year, was purchased by the city from the late John Hancock, Esq., some ten or twelve years ago. The two large wings of the house — the one on the east side containing an elegant ball-room, and that on the west side comprising the kitchen and other domestic offices — have long ago disappeared. The centre of the mansion, however, remains nearly intact, and with its antique furniture, stately old pictures, and the quaint, but comfortable appointments of the past century, still suffices to bring up to the mind of the visitor the most vivid and interesting reminiscences both of our Colonial and Revolutionary history.

The central and principal portion of the house, which remains entire, is a very perfect and interesting specimen of the stately kind of our provincial domestic architecture of the last century. There are several other houses of a similar design still standing in the more important sea-port towns of New England. The West House, on Essex Street, in Salem, has but lately disappeared; but another in that neighborhood, the Collins House in Danvers, (now the property of Mr. F. Peabody, of Salem,) the Dalton House, on State Street, Newburyport,

the Langdon House, (now the residence of the Reverend Dr. Charles Burroughs,) in Portsmouth, N. H., and the Gilman House, in Exeter, N. H., removed, not long since, to make way for the new Town Hall, were all almost identical with this in the leading features of their design. A broad front-door opening from a handsome flight of stone steps, and garnished with pillars and a highly ornamental door-head, a central window, also somewhat ornamented, over it, and four other windows in each story, two being on either side of the centre, a main roof-cornice enriched with carved modillions, a high and double-pitched or "gambrel" roof with bold projecting dormer-windows rising out of it, and a carved balcony-railing inclosing the upper or flatter portion of the roof, are features common to them all. The details of the Hancock House are all classical and correct; they were doubtless executed by the master-builder of the day with a scrupulous fidelity of adherence to the plates of some such work as "Ware's Compleat Body of Architecture," or "Swan's Architect," — books of high repute and rare value at the time, and contemporary copies of which are still sometimes to be found in ancient garrets. There is a very perfect specimen of the former in the Athenæum Library, and another at Cambridge, while of the latter an excellent copy is in the possession of the writer, — and it is not difficult to trace, in the soiled and well-thumbed condition of some of the plates, evidences of the bygone popularity of some peculiarly apposite or useful design.

The material of the walls is of squared and well-hammered granite ashlar, — probably obtained by splitting up boulders lying on the surface of the ground only, above the now extensive quarries in the town of Quincy. We incline to this conjecture, because it bears an exact resemblance to the stone of the King's Chapel, built in 1753, and which is known to have been obtained in that way. In fact, the wardens and vestry of the Chapel, in their report on the completion of the

public buildings, certify to all whom it may concern, that the Governor's pasture purchased by us, shall be conveyed to the Commonwealth for that use only, and that no private building shall be erected upon any part of said pasture. Witness our hands this 9th day of April, 1795.

building, congratulated themselves that they had had such good success in getting all the stone they needed for that building, as it was exceedingly doubtful, they remarked, whether the whole country could be made to furnish stone for another structure of equal extent.

The interior of the house is quite in keeping with the promise of its exterior. The dimensions of the plan are fifty-six feet front by thirty-eight feet in depth. A nobly panelled hall, containing a broad staircase with carved and twisted balusters, divides the house in the centre, and extends completely through on both stories from front to rear. On the landing, somewhat more than half-way up the staircase, is a circular headed window looking into the garden, and fitted with deep-panelled shutters, and with a broad and capacious window-seat, on which the active merchant of 1740 doubtless often sat down to cool himself in the draught, after some particularly vexatious morning's work with poor Glin's "Plumb Trees and Hollies." On this landing, too, stood formerly a famous eight-day clock, which has now disappeared, no one knows whither. But the order for its purchase is before us in the old letter-book, and will serve to give a very graphic idea of its unusual attractions. The order is addressed, as usual, to Mr. Wilks, and bears date December 20th, 1738. As the safe reception of the time-piece is acknowledged in a subsequent letter, there can be little doubt as to its identity.

"I Desire the favour of you to procure for me & Send with my Spring Goods, a Handsome Chiming Clock of the newest fashion,—the work neat & Good, with a Good black Walnutt Tree Case, Veneer'd work, with Dark, lively branches,—on the Top instead of Balls let be three handsome Carv'd figures, Gilt with burnished Gold. I'd have the Case without the figures to be 10 foot Long, the price 15 not to Exceed 20 Guineas, and as it's for my own use I beg your particular Care in buying of it at the Cheapest Rate. I'm advised to apply to one

Mr. Marmaduke Storr at the foot of Lond<sup>n</sup> Bridge, but as you are best Judge I leave it to you to purchase it where you think proper,—wh. being the needfull, Concludes

"Sir Your &c. T. H."

On the right of the hall, as you enter, is the fine old drawing-room, seventeen by twenty-five feet, also elaborately finished in moulded panels from floor to ceiling. In this room the founder of the Hancock name, as a man of note, and a merchant of established consequence, must often have received the Shirleys, the Olivers, the Pownalls, and the Hutchinsons of King George's colonial court; and here, too, some years later, his stately nephew John dispensed his elegant hospitalities to that serene Virginian, Mr. Washington, the Commander-in-Chief of the Army of the Revolution, and to the ardent young French Marquis who accompanied him. The room itself, hung with portraits from the honest, if not flattering hand of Smibert, and the more courtly and elegant pencil of Copley, still seems to bear witness in its very walls to the reality of such bygone scenes. We enter the close front-gate from the sunny and bustling promenade of Beacon Street, pass up the worn and gray terrace of the steps, and in a moment more closes behind us the door that seems to shut us out from the whirl and turmoil and strife of the present, and, almost mysteriously, to transport us to the grave shadows and the dignified silence of the past of American history.

Over the chimney-piece, in this room, hangs the portrait of John Hancock, by Copley,—masterly in drawing, and most characteristic in its expression. It was painted apparently about ten or twelve years earlier than the larger portrait in Faneuil Hall,—an excellent copy of which latter picture, but by another hand, occupies the centre of the wall at the end of the room opposite the windows. But by far the most interesting works of this great artist are the two pictures on the long side of the room oppo-

site the chimney, — the portraits of Thomas Hancock and his handsome wife Lydia Henchman, done in colored crayons or *pastel*, and which still retain every whit of their original freshness. These two pictures are believed to be unique specimens of their kind from the hand of Copley, — and equally curious are the miniature copies of them by himself, done in oil-color, and which hang in little oval frames over the mantel. That of the lady, in particular, is exquisitely lifelike and easy. On the same long side of the room with the pastel drawings are the portraits of Thomas Hancock's father and mother, — the minister of Lexington and his dignified-looking wife, — by Smibert. In one of the letters to "Dear Kilby," of which we have already made mention in this article, there is an allusion to this portrait of his father which shows in what high estimation it was always held by Mr. Hancock. "My Wife & I are Drinking your health this morning, 8 o' the Clock, in a Dish of Coffee and under the Shade of your Picture which I Rec'd not long Since of Mr. Smibert, in which am much Delighted, & have Suited it with a Frame of the fashion of my other Pictures, & fix'd it at the Right hand of all, in the Keeping-room. Every body that Sees it thinks it to be Exceedingly Like you, as it really is. I am of Opinion it's as Good a Piece as Mr. Smibert has done, and full as Like you as my Father's is Like him, which all mankind allows to be a Compleat Picture." It is to be regretted that the picture of Kilby has now disappeared from this collection. We have called the pastel portraits of Thomas Hancock and his wife unique specimens; we should add this qualification, however, that there is a *copy* of the former in this room, — also by Copley, but differing in the costume, and perhaps even more carefully finished than the one already mentioned.

The chamber overhead, too, has echoed, in days long gone by, to the footsteps of many an illustrious guest. Washing-

ton never slept here, though it is believed that he has several times been a temporary occupant of the room; but Lafayette often lodged in this apartment, while a visitor to John Hancock, during his earlier stay in America. Here Lord Percy — the same

"who, when a younger son,  
Fought for King George at Lexington,  
A Major of Dragoons" —

made himself as comfortable as he might, while "cooped up in Boston and panting for an airing," through all the memorable siege of the town. It was from the windows of this chamber, on the morning of the 5th of March, 1776, that the officers \* on the staff of Sir William Howe first beheld, through Thomas Hancock's old telescope, the intrenchments which had been thrown up the night before on the frozen ground of Dorchester Heights, — works of such a character and location as to satisfy them that thenceforth "neither Hell, Hull, nor Halifax could afford them worse shelter than Boston." And here, too, years after the advent of more peaceful times, the stately old Governor, racked with gout, and "swathed in flannel from head to foot," departed this life on the night of the 8th of October, 1793. As President of the Continental Congress of 1776, he left a name everywhere recognized as a household word among us; while his noble sign-manual to the document of gravest import in all our annals — that wonderful signature, so bold, defiant, and decided in its every line and curve — has become, almost of itself, his passport to the remembrance and his warrant to the admiration of posterity.

\* "Inclosed you have the dimensions of two Bed Chambers for each of which I want Wilton Carpets, — do let them be neat. The British Officers who possess'd my house totally defac'd & Ruined all my Carpets, & I must Submit." — *Extract from a Letter of John Hancock, dated Nov. 14, 1783, to Captain Scott, at Liverpool, — contained in Gov. Hancock's Letter-Book*

## WHY THOMAS WAS DISCHARGED.

BRANT BEACH is a long promontory of rock and sand, jutting out at an acute angle from a barren portion of the coast. Its farthest extremity is marked by a pile of many-colored, wave-washed boulders; its junction with the main-land is the site of the Brant House, a watering-place of excellent repute.

The attractions of this spot are not numerous. There is surf-bathing all along the outer side of the beach, and good swimming on the inner. The fishing is fair; and in still weather, yachting is rather a favorite amusement. Further than this, there is little to be said, save that the hotel is conducted upon liberal principles, and the society generally select.

But to the lover of Nature—and who has the courage to avow himself aught else?—the sea-shore can never be monotonous. The swirl and sweep of ever-shifting waters,—the flying mist of foam breaking away into a gray and ghostly distance down the beach,—the eternal drone of ocean, mingling itself with one's talk by day and with the light dance-music in the parlors by night,—all these are active sources of a passive pleasure. And to lie at length upon the tawny sand, watching, through half-closed eyes, the heaving waves, that mount against a dark-blue sky wherein great silvery masses of cloud float idly on, whiter than the sunlit sails that fade and grow and fade along the horizon, while some fair damsel sits close by, reading ancient ballads of a simple metre, or older legends of love and romance,—tell me, my eater of the fashionable lotos, is not this a diversion well worth your having?

There is an air of easy sociality among the guests at the Brant House, a disposition on the part of all to contribute to the general amusement, that makes a summer sojourn on the beach far more agreeable than in certain larger, more frequented watering-places, where one

is always in danger of discovering that the gentlemanly person with whom he has been fraternizing is a faro-dealer, or that the lady who has half fascinated him is Anonyma herself. Still, some consider the Brant rather slow, and many good folk were a trifle surprised when Mr. Edwin Salisbury and Mr. Charles Burnham arrived by the late stage from Wikahasset Station, with trunks enough for two first-class belles, and a most unexceptionable man-servant in gray livery, in charge of two beautiful setter-dogs.

These gentlemen seemed to have imagined that they were about visiting some backwoods wilderness, some savage tract of country, “remote, unfriended, melancholy, slow”; for they brought almost everything with them that men of elegant leisure could require, as if the hotel were but four walls and a roof, which they must furnish with their own chattels. I am sure it took Thomas, the man-servant, a whole day to unpack the awnings, the bootjacks, the game-bags, the cigar-boxes, the guns, the camp-stools, the liquor-cases, the bathing-suits, and other paraphernalia that these pleasure-seekers brought. It must be owned, however, that their room, a large one in the Bachelor's Quarter, facing the sea, wore a very comfortable, sportsmanlike look, when all was arranged.

Thus surrounded, the young men betook themselves to the deliberate pursuit of idle pleasures. They arose at nine and went down the shore, invariably returning at ten with one unfortunate snipe, which was preserved on ice, with much ceremony, till wanted. At this rate, it took them a week to shoot a breakfast; but to see them sally forth, splendid in velveteen and corduroy, with top-boots and a complete harness of green cord and patent-leather straps, you would have imagined that all game-birds were about to become extinct in that region.

Their dogs, even, recognized this great-cry-and-little-wool condition of things, and bounded off joyously at the start, but came home crestfallen, with an air of canine humiliation that would have aroused Mr. Mayhew's tenderest sympathies.

After breakfasting, usually in their room, the friends enjoyed a long and contemplative smoke upon the wide piazza in front of their windows, listlessly regarding the ever-varied marine view that lay before them in flashing breadth and beauty. Their next labor was to array themselves in wonderful morning-costumes of very shaggy English cloth, shiny flasks and field-glasses about their shoulders, and loiter down the beach, to the point and back, making much unnecessary effort over the walk, — a brief mile, — which they spoke of with importance, as their "constitutional." This killed time till bathing-hour, and then came another smoke on the piazza, and another toilet, for dinner. After dinner, a siesta: in the room, when the weather was fresh; when otherwise, in hammocks, hung from the rafters of the piazza. When they had been domiciled a few days, they found it expedient to send home for what they were pleased to term their "crabs" and "traps," and excited the envy of less fortunate guests by driving up and down the beach at a racing gait to dissipate the languor of the after-dinner sleep.

This was their regular routine for the day, — varied, occasionally, when the tide served, by a fishing-trip down the narrow bay inside the point. For such emergencies, they provided themselves with a sail-boat and skipper, hired for the whole season, and arrayed themselves in a highly nautical rig. The results were, large quantities of sardines and pale sherry consumed by the young men, and a reasonable number of sea-bass and black-fish caught by their skipper.

There were no regular "hops" at the Brant House, but dancing in a quiet way every evening, to a flute, violin, and violoncello, played by some of the waiters. For a time, Burnham and Salisbury did

not mingle much in these festivities, but loitered about the halls and piazzas, very elegantly dressed and barbered, (Thomas was an unrivalled *coiffeur*,) and apparently somewhat *ennuyé*.

That two well-made, full-grown, intelligent, and healthy young men should lead such a life as this for an entire summer might surprise one of a more active temperament. The aimlessness and vacancy of an existence devoted to no earthly purpose save one's own comfort must soon weary any man who knows what is the meaning of real, earnest life, — life with a battle to be fought and a victory to be won. But these elegant young gentlemen comprehended nothing of all that: they had been born with golden spoons in their mouths, and educated only to swallow the delicately insipid lotos-honey that flows inexhaustibly from such shining spoons. Clothes, complexions, polish of manner, and the avoidance of any sort of shock, were the simple objects of their solicitude.

I do not know that I have any serious quarrel with such fellows, after all. They have some strong virtues. They are always clean; and your rough diamond, though manly and courageous as *Cœur-de-Lion*, is not apt to be scrupulously nice in his habits. Affability is another virtue. The Salisbury and Burnham kind of man bears malice toward no one, and is disagreeable only when assailed by some hammer-and-tongs utilitarian. All he asks is to be permitted to idle away his pleasant life unmolested. Lastly, he is extremely ornamental. We all like to see pretty things; and I am sure that Charley Burnham, in his fresh white duck suit, with his fine, thorough-bred face — gentle as a girl's — shaded by a snowy Panama, his blonde moustache carefully pointed, his golden hair clustering in the most picturesque possible waves, his little red neck-ribbon — the only bit of color in his dress — tied in a studiously careless knot, and his pure, untainted gloves of pearl-gray or lavender, was, if I may be allowed the expression, just as pretty as a picture. And

Ned Salisbury was not less "a joy forever," according to the dictum of the late Mr. Keats. He was darker than Burnham, with very black hair, and a moustache worn in the manner the French call *triste*, which became him, and increased the air of pensive melancholy that distinguished his dark eyes, thoughtful attitudes, and slender figure. Not that he was in the least degree pensive or melancholy, or that he had cause to be; quite the contrary; but it was his style, and he did it well.

These two butterflies sat, one afternoon, upon the piazza, smoking very large cigars, lost, apparently, in profoundest meditation. Burnham, with his graceful head resting upon one delicate hand, his clear blue eyes full of a pleasant light, and his face warmed by a calm unconscious smile, might have been revolving some splendid scheme of universal philanthropy. The only utterance, however, forced from him by the sublime thoughts that permeated his soul, was the emission of a white rolling volume of fragrant smoke, accompanied by two words:

"Dooceè hot!"

Salisbury did not reply. He sat, leaning back, with his fingers interlaced behind his head, and his shadowy eyes downcast, as in sad remembrance of some long-lost love. So might a poet have looked, while steeped in mournfully rapturous day-dreams of remembered passion and severance. So might Tennyson's hero have mused, when he sang,—

"Oh, that 't were possible,  
After long grief and pain,  
To find the arms of my true love  
Round me once again!"

But the poetic lips opened not to such numbers. Salisbury gazed, long and earnestly, and finally gave vent to his emotions, indicating, with the amber tip of his cigar-tube, the setter that slept in the sunshine at his feet.

"Shocking place, this, for dogs!"—I regret to say he pronounced it "dawgs."—"Why, Carlo is as fat—as fat as—as a"—

His mind was unequal to a simile, even,

and he terminated the sentence in a murmur.

More silence; more smoke; more profound meditation. Directly, Charley Burnham looked around with some show of vitality.

"There comes the stage," said he.

The driver's bugle rang merrily among the drifted sand-hills that lay warm and glowing in the orange light of the setting sun. The young men leaned forward over the piazza-rail, and scrutinized the occupants of the vehicle, as it appeared.

"Old gentleman and lady, aw, and two children," said Ned Salisbury; "I hoped there would be some nice girls."

This, in a voice of ineffable tenderness and poetry, but with that odd, tired little drawl, so epidemic in some of our universities.

"Look there, by Jove!" cried Charley, with a real interest at last; "now that 's what I call the regular thing!"

The "regular thing" was a low, four-wheeled pony-chaise of basket-work, drawn by two jolly little fat ponies, black and shiny as vulcanite, which jogged rapidly in, just far enough behind the stage to avoid its dust.

This vehicle was driven by a young lady of decided beauty, with a spice of Amazonian spirit. She was rather slender and very straight, with a jaunty little hat and feather perched coquettishly above her dark brown hair, which was arranged in one heavy mass and confined in a silken net. Her complexion was clear, without brilliancy; her eyes blue as the ocean horizon, and spanned by sharp, characteristic brows; her mouth small and decisive; and her whole cast of features indicative of quick talent and independence.

Upon the seat beside her sat another damsel, leaning indolently back in the corner of the carriage. This one was a little fairer than the first, having one of those beautiful English complexions of mingled rose and snow, and a dash of gold-dust in her hair, where the sun touched it. Her eyes, however, were dark hazel, and full of fire, shaded and

intensified by their long, sweeping lashes. Her mouth was a rosebud, and her chin and throat faultless in the delicious curve of their lines. In a word, she was somewhat of the Venus-di-Milo type: her companion was more of a Diana. Both were neatly habited in plain travelling-dresses and cloaks of black and white plaid, and both seemed utterly unconscious of the battery of eyes and eyeglasses that enfiladed them from the whole length of the piazza, as they passed.

"Who are they?" asked Salisbury; "I don't know them."

"Nor I," said Burnham; "but they look like people to know. They must be somebody."

Half an hour later, the hotel-office was besieged by a score of young men, all anxious for a peep at the last names upon the register. It is needless to say that our friends were not in the crowd. Ned Salisbury was no more the man to exhibit curiosity than Charley Burnham was the man to join in a scramble for anything under the sun. They had educated their emotions clear down, out of sight, and piled upon them a mountain of well-bred inertia.

But, somehow or other, these fellows who take no trouble are always the first to gain the end. A special Providence seems to aid the poor, helpless creatures. So, while the crowd still pressed at the office-desk, Jerry Swayne, the head clerk, happened to pass directly by the piazza where the inert ones sat, and, raising a comical eye, saluted them.

"Heavy arrivals to-night. See the turn-out?"

"Y-e-s," murmured Ned.

"Old Chapman and family. His daughter drove the pony-phaeton, with her friend, a Miss Thurston. Regular nobby ones. Chapman's the steamship-man, you know. Worth thousands of millions! I'd like to be connected with his family—by marriage, say!"—and Jerry went off, rubbing his cropped head, and smiling all over, as was his wont.

"I know who they are now," said

Charley. "Met a cousin of theirs, Joe Faulkner, abroad, two years ago. Doo-cèd fine fellow. Army."

The manly art of wagoning is not pursued very vigorously at Brant Beach. The roads are too heavy back from the water, and the drive is confined to a narrow strip of wet sand along the shore; so carriages are few, and the pony-chaise became a distinguished element at once. Salisbury and Burnham whirled past it in their light trotting-wagons at a furious pace, and looked hard at the two young ladies in passing, but without eliciting even the smallest glance from them in return.

"Confounded *distingué*-looking girls, and all that," owned Ned; "but, aw, fearfully unconscious of a fellow!"

This condition of matters continued until the young men were actually driven to acknowledge to each other that they should not mind knowing the occupants of the pony-carriage. It was a great concession, and was rewarded duly. A bright, handsome boy of seventeen, Miss Thurston's brother, came to pass a few days at the seaside, and fraternized with everybody, but was especially delighted with Ned Salisbury, who took him out sailing and shooting, and, I am afraid, gave him cigars stealthily, when out of range of Miss Thurston's fine eyes. The result was, that the first time the lad walked on the beach with the two girls, and met the young men, introductions of an enthusiastic nature were instantly sprung upon them. An attempt at conversation followed.

"How do you like Brant Beach?" asked Ned.

"Oh, it is a pretty place," said Miss Chapman, "but not lively enough."

"Well, Burnham and I find it pleasant; aw, we have lots of fun."

"Indeed! Why, what do you do?"

"Oh, I don't know. Everything."

"Is the shooting good? I saw you with your guns, yesterday."

"Well, there is n't a great deal of game. There is some fishing, but we have n't caught much."

"How do you kill time, then?"

Salisbury looked puzzled.

"Aw — it is a first-rate air, you know. The table is good, and you can sleep like a top. And then, you see, I like to smoke around, and do nothing, on the sea-shore. It is real jolly to lie on the sand, aw, with all sorts of little bugs running over you, and listen to the water swashing about!"

"Let's try it!" cried vivacious Miss Chapman; and down she sat on the sand. The others followed her example, and in five minutes they were picking up pretty pebbles and chatting away as sociably as could be. The rumble of the warning gong surprised them.

At dinner, Burnham and Salisbury took seats opposite the ladies, and were honored with an introduction to papa and mamma, a very dignified, heavy, rosy, old-school couple, who ate a good deal, and said very little. That evening, when flute and viol wooed the lotos-eaters to agitate the light fantastic toe, these young gentlemen found themselves in dancing humor, and revolved themselves into a grievous condition of glow and wilt, in various mystic and intoxicating measures with their new-made friends.

On retiring, somewhat after midnight, Miss Thurston paused, while "doing her hair," and addressed Miss Chapman.

"Did you observe, Hattie, how very handsome those gentlemen are? Mr. Burnham looks like a prince of the *sang azur*, and Mr. Salisbury like his poet-laureate."

"Yes, dear," responded Hattie; "I have been considering those flowers of the field and lilies of the valley."

"Ned," said Charley; at about the same time, "we won't find anything nicer here, this season, I think."

"They're pretty well worth while," replied Ned; "and I'm rather pleased with them."

"Which do you like best?"

"Oh, bother! I have n't thought of that yet."

The next day the young men delayed their "constitutional" until the ladies were ready to walk, and the four strolled

off together, mamma and the children following in the pony-chaise. At the rocks on the end of the point, Ned got his feet very wet, fishing up specimens of sea-weed for the damsels; and Charley exerted himself superhumanly in assisting them to a ledge which they considered favorable for sketching-purposes.

In the afternoon a sail was arranged, and they took dinner on board the boat, with any amount of hilarity and a good deal of discomfort. In the evening, more dancing, and vigorous attentions to both the young ladies, but without a shadow of partiality being shown by either of the four.

This was very nearly the history of many days. It does not take long to get acquainted with people who are willing, especially at a watering-place; and in the course of a few weeks, these young folks were, to all intents and purposes, old friends, — calling each other by their given names, and conducting themselves with an easy familiarity quite charming to behold. Their amusements were mostly in common now. The light wagons were made to hold two each, instead of one, and the matinal snipe escaped death, and was happy over his early worm.

One day, however, Laura Thurston had a headache, and Hattie Chapman stayed at home to take care of her; so Burnham and Salisbury had to amuse themselves alone. They took their boat, and idled about the water, inside the point, dozing under an awning, smoking, gazing, and wishing that headaches were out of fashion, while the taciturn and tarry skipper instructed the dignified and urbane Thomas in the science of trolling for blue-fish.

At length Ned tossed his cigar-end overboard, and braced himself for an effort.

"I say, Charley," said he, "this sort of thing can't go on forever, you know. I've been thinking, lately."

"Phenomenon!" replied Charley; "and what have you been thinking about?"

"Those girls. We've got to choose."

"Why? Is n't it well enough as it is?"

"Yes, — so far. But I think, aw, that we don't quite do them justice. They're *grands partis*, you see. I hate to see clever girls wasting themselves on society, waiting and waiting,—and we fellows swimming about just like fish round a hook that is n't baited properly."

Charley raised himself upon his elbow.

"You don't mean to tell me, Ned, that you have matrimonial intentions?"

"Oh, no! Still, why not? We've all got to come to it, some day, I suppose."

"Not yet, though. It is a sacrifice we can escape for some years yet."

"Yes, — of course, — some years; but we may begin to look about us a bit. I'm, aw, I'm six-and-twenty, you know."

"And I'm very near that. I suppose a fellow can't put off the yoke too long. After thirty chances are n't so good. I don't know, by Jove! but what we ought to begin thinking of it."

"But it is a sacrifice. Society must lose a fellow, though, one time or another. And I don't believe we will ever do better than we can now."

"Hardly, I suspect."

"And we're keeping other fellows away, maybe. It is a shame!"

Thomas ran his line in rapidly, with nothing on the hook.

"Capt'n Hull," he said, gravely, "I had the biggest kind of a fish then, I'm sure; but d'rectly I went to pull him in, Sir, he took and let go."

"Yaäs," muttered the taciturn skipper, "the biggest fish allers falls back inter the warter."

"I've been thinking a little about this matter, too," said Charley, after a pause, "and I had about concluded we ought to pair off. But I'll be confounded, if I know which I like best! They're both nice girls."

"There is n't much choice," Ned replied. "If they were as different, now, as you and me, I'd take the blonde, of course; aw, and you'd take the

brunette. But Hattie Chapman's eyes are blue, and her hair is n't black, you know; so you can't call her dark, exactly."

"No more than Laura is exactly light. Her hair is brown, more than golden, and her eyes are hazel. Has n't she a lovely complexion, though? By Jove!"

"Better than Hattie's. Yet I don't know but Hattie's features are a little the best."

"They are. Now, honest, Ned, which do you prefer? Say either; I'll take the one you don't want. I have n't any choice."

"Neither have I."

"How will we settle?"

"Aw — throw for it?"

"Yes. Is n't there a backgammon board forward, in that locker, Thomas?"

The board was found, and the dice produced.

"The highest takes which?"

"Say, Laura Thurston."

"Very good; throw."

"You first."

"No. Go on."

Charley threw, with about the same amount of excitement he might have exhibited in a turkey-affle.

"Five-three," said he. "Now for your luck."

"Six-four! Laura's mine. Satisfied?"

"Perfectly, — if you are. If not, I don't mind exchanging."

"Oh, no. I'm satisfied."

Both reclined upon the deck once more, with a sigh of relief, and a long silence followed.

"I say," began Charley, after a time, "it is a comfort to have these little matters arranged without any trouble, eh?"

"Y-e-s."

"Do you know, I think I'll marry mine?"

"I will, if you will."

"Done! it is a bargain."

This "little matter" being arranged, a change gradually took place in the relations of the four. Ned Salisbury began to invite Laura Thurston out driv

ing and in bathing somewhat oftener than before, and Hattie Chapman somewhat less often; while Charley Burnham followed suit with the last-named young lady. As the line of demarcation became fixed, the damsels recognized it, and accepted with gracious readiness the cavaliers that Fate, through the agency of a chance-falling pair of dice, had allotted to them.

The other guests of the house remarked the new position of affairs, and passed whispers about, to the effect that the girls had at last succeeded in getting their fish on hooks instead of in a net. No suitors could have been more devoted than our friends. It seemed as if each now bestowed upon the chosen one all the attentions he had hitherto given to both; and whether they went boating, sketching, or strolling upon the sands, they were the very picture of a *partie carrée* of lovers.

Naturally enough, as the young men became more in earnest, with the reticence common to my sex, they spoke less freely and frequently on the subject. Once, however, after an unusually pleasant afternoon, Salisbury ventured a few words.

"I say, we 're a couple of lucky dogs! Who 'd have thought, now, aw, that our summèr was going to turn out so well? I 'm sure I did n't. How do you get along, Charley, boy?"

"Deliciously. Smooth sailing enough. Was n't it a good idea, though, to pair off? I 'm just as happy as a bee in clover. You seem to prosper, too, heh?"

"Could n't ask anything different. Nothing but devotion, and all that. I 'm delighted. I say, when are you going to pop?"

"Oh, I don't know. It is only a matter of form. Sooner the better, I suppose, and have it over."

"I was thinking of next week. What do you say to a quiet picnic down on the rocks, and a walk afterward? We can separate, you know, and do the thing up systematically."

"All right. I will, if you will."

"That 's another bargain. I notice there is n't much doubt about the result, though."

"Hardly!"

A close observer might have seen that the gentlemen increased their attention a little from that time. The objects of their devotion perceived it, and smiled more and more graciously upon them.

The day set for the picnic arrived duly, and was radiant. It pains me to confess that my heroes were a trifle nervous. Their apparel was more gorgeous and wonderful than ever, and Thomas, who was anxious to be off, courting Miss Chapman's lady's-maid, found his masters dreadfully exacting in the matter of hair-dressing. At length, however, the toilet was over, and "Solomon in all his glory" would have been vastly astonished at finding himself "arrayed as one of these."

The boat lay at the pier, receiving large quantities of supplies for the trip, stowed by Thomas, under the supervision of the grim and tarry skipper. When all was ready, the young men gingerly escorted their fair companions aboard, the lines were cast off, and the boat glided gently down the bay, leaving Thomas free to fly to the smart presence of Susan Jane, and to draw glowing pictures for her of a neat little porter-house in the city, wherein they should hold supreme sway, be happy with each other, and let rooms up-stairs for single gentlemen.

The brisk land-breeze, the swelling sail, the fluttering of the gay little flag at the gaff, the musical rippling of water under the counter, and the spirited motion of the boat, combined with the bland air and pleasant sunshine to inspire the party with much vivacity. They had not been many minutes afloat before the guitar-case was opened, and the girls' voices—Laura's soprano and Hattie's contralto—rang melodiously over the waves, mingled with feeble attempts at bass accompaniment from their gorgeous guardians.

Before these vocal exercises wearied,

the skipper hauled down his jib, let go his anchor, and brought the craft to, just off the rocks; and bringing the yawl alongside, unceremoniously plumped the girls down into it, without giving their cavaliers a chance for the least display of agile courtliness. Rowing ashore, this same tarry person left them huddled upon the beach with their hopes, their hampers, their emotions, and their baskets, and returned to the vessel to do a little private fishing on his own account till wanted.

The maidens gave vent to their high spirits by chasing each other among the rocks, gathering shells and sea-weed for the construction of those ephemeral little ornaments — fair, but frail — in which the sex delights, singing, laughing, quoting poetry, attitudinizing upon the peaks and ledges of the fine old boulders, — mossy and weedy and green with the wash of a thousand storms, worn into strange shapes, and stained with the multitudinous dyes of mineral oxidization, — and, in brief, behaved themselves with all the charming *abandon* that so well becomes young girls, set free, by the *entourage* of a holiday ramble, from the buckram and clear-starch of social etiquette.

Meanwhile Ned and Charley smoked the pensive cigar of preparation in a sheltered corner, and gazed out seaward, dreaming and seeing nothing.

Erelong the breeze and the romp gave the young ladies not only a splendid color and sparkling eyes, but excellent appetites also. The baskets and hampers were speedily unpacked, the table-cloth laid on a broad, flat stone, so used by generations of Brant-House picnickers, and the party fell to. Laura's beautiful hair, a little disordered, swept her blooming cheek, and cast a pearly shadow upon her neck. Her bright eyes glanced archly out from under her half-raised veil, and there was something inexpressibly *naïve* in the freedom with which she ate, taking a bird's wing in her little fingers, and boldly attacking it with teeth as white and even

as can be imagined. Notwithstanding all the mawkish nonsense that has been put forth by sentimentalists concerning feminine eating, I hold that it is one of the nicest things in the world to see a pretty woman enjoying the creature comforts; and Byron himself, had he been one of this picnic party, would have been unable to resist the admiration that filled the souls of Burnham and Salisbury. Hattie Chapman stormed a fortress of boned turkey with a gusto equal to that of Laura, and made highly successful raids upon certain outlying salads and jellies. The young men were not in a very ravenous condition; they were, as I have said, a little nervous, and bent their energies principally to admiring the ladies and coquetting with pickled oysters.

When the repast was over, with much accompanying chat and laughter, Ned glanced significantly at Charley, and proposed to Laura that they should walk up the beach to a place where, he said, there were "some pretty rocks and things, you know." She consented, and they marched off. Hattie also arose, and took her parasol, as if to follow, but Charley remained seated, tracing mysterious diagrams upon the table-cloth with his fork, and looking sublimely unconscious.

"Sha'n't we walk, too?" Hattie asked.

"Oh, why, the fact is," said he, hesitantly, "I — I sprained my ankle, getting out of that confounded boat; so I don't feel much like exercise just now."

The young girl's face expressed concern.

"That is too bad! Why did n't you tell us of it before? Is it painful? I'm so sorry!"

"N-no, — it does n't hurt much. I dare say it will be all right in a minute. And then — I'd just as soon stay here — with you — as to walk anywhere."

This, very tenderly, with a little sigh.

Hattie sat down again, and began to talk to this factitious cripple, in the pleas-

ant, purring way some damsels have, about the joys of the sea-shore, — the happy summer that was, alas! drawing to a close, — her own enjoyment of life, — and kindred topics, — till Charley saw an excellent opportunity to interrupt with some aspirations of his own, which, he averred, must be realized before his life could be considered a satisfactory success.

If you have ever been placed in analogous circumstances, you know, of course, just about the sort of thing that was being said by the two gentlemen at nearly the same moment: Ned, loitering slowly along the sands with Laura on his arm, — and Charley, stretched in indolent picturesqueness upon the rocks, with Hattie sitting beside him. If you do not know from experience, ask any candid friend who has been through the form and ceremony of an orthodox proposal.

When the pedestrians returned, the two couples looked very hard at each other. All were smiling and complacent, but devoid of any strange or unusual expression. Indeed, the countenance is subject to such severe education, in good society, that one almost always looks smiling and complacent. Demonstration is not fashionable, and a man must preserve the same demeanor over the loss of a wife or a glove-button, over the gift of a heart's whole devotion or a bundle of cigars. Under all these visitations, the complacent smile is in favor, as the neatest, most serviceable, and convenient form of non-committalism.

The sun was approaching the blue range of misty hills that bounded the main-land swamps, by this time; so the skipper was signalled, the dinner-paraphernalia gathered up, and the party were soon *en route* for home once more.

When the young ladies were safely in, Ned and Charley met in their room, and each caught the other looking at him, stealthily. Both smiled.

"Did I give you time, Charley?" asked Ned; "we came back rather soon."

"Oh, yes, — plenty of time."

"Did you — aw, did you pop?"

"Y-yes. Did you?"

"Well — yes."

"And you were" —

"Rejected, by Jove!"

"So was I!"

The day following this disastrous picnic, the baggage of Mr. Edwin Salisbury and Mr. Charles Burnham was sent to the depot at Wikahasset Station, and they presented themselves at the hotel-office with a request for their bill. As Jerry Swayne deposited their key upon its hook, he drew forth a small tri-cornered billet from the pigeon-hole beneath, and presented it.

"Left for you, this morning, gentlemen."

It was directed to both, and Charley read it over Ned's shoulder. It ran thus:—

"DEAR BOYS, — The next time you divert yourselves by throwing dice for two young ladies, we pray you not to do so in the presence of a valet who is upon terms of intimacy with the maid of one of them.

"With many sincere thanks for the amusement you have given us, — often when you least suspected it, — we bid you a lasting adieu, and remain, with the best wishes,

"Brant House, { HATTIE CHAPMAN  
"Wednesday. { LAURA THURSTON."

"It is all the fault of that, aw, that confounded Thomas!" said Ned.

So Thomas was discharged.

## LIGHT AND DARK.

## I.

STRAGGLING through the winter sky,  
What is this that begs the eye?  
More than pauper by its state,  
Less than prince its bashful gait.

'T is the soul in sun's disguise,  
Child of Reason's enterprise;  
Through earth's weather seeks its kin,  
Begs the sun-like take it in.

Thus from purpling heaven bid,  
Open flies the double lid;  
To the palace-steps repair  
Souls awakened, foul or fair;

Heavy with a maudlin sleep,  
Blithesome from a vision deep,  
Flying westward with the night,  
Eastward to renew their plight.

At this menace of the dawn  
Dreams the helm of Thought put on;  
All my heart its fresco high  
Paints against the morning sky.

## II.

Is the firmament of brass  
'Gainst my thoughts that seek to pass?  
Does the granite vault my brain,  
That the soul cannot attain?

Planets to my window roll;  
From the eye which is their goal  
Million miles are built of space,  
Web that glittering we trace.

Like a lens the winter sky  
Hurls its planets through the eye,  
But to thoughts a buckler dense,  
Baffling love and reverence.

Shivered lie the darts I throw,  
Vassal stars can farther go;  
Time and Space are drops of dew,  
When 't is Light would travel through.

Shining finds its own expanse,  
 Rolling suns make room to dance :  
 Earth unfasten from my brain,  
 Rid me of my ball and chain.

Through the window, through the world,  
 My untethered soul is hurled,  
 Finds an orbit nothing bars,  
 Sings its note with morning-stars.

## III.

Dearth of God, of Love a dearth,  
 Rolls my thought, a cloudy Earth,  
 Through the sullen noon that fears,  
 Yet expects the morning-spears.

Ere they glisten, ere they threat,  
 All my heart lies cold and wet,  
 Prisoned fog between the hills,  
 Cheerless pulse of midnight rills.

'T is the darkness that has crept  
 Where the purple life is kept ;  
 All the veins to thought supply  
 Murk from out the jealous sky.

Blood that makes the face a dawn,  
 Mother's breast to life, is gone :  
 Strikes my waste no hoof that 's bright  
 Into sparkles of delight.

Heavy freight of care and pain,  
 Want of friends, and God's disdain,  
 Loveless home, and meagre fate  
 In the midnight well may wait.

Well may such an Earth forlorn  
 Shudder on the brink of morn ;  
 But the great breath will not stay,  
 Strands me on the reefs of day.

## IV.

Belying Earth no anchor throws  
 Stouter than the breath that blows,  
 Night and Sorrow cling in vain,  
 It must toss in day again.

Hospital and battle-field,  
 Myriad spots where fate is sealed,  
 Brinks that crumble, sins that urge,  
 Plunge again into that surge.

How the purple breakers throw  
 Round me their insatiate glow,  
 Sweep my deck of hideous freight,  
 Pour through fastening and grate!

I awake from night's alarms  
 In the bliss of living arms :  
 Melted goes my leaden dream  
 Down the warmth of this Gulf-Stream.

'T is the trade-wind of my soul,  
 Wafting life to make it whole :  
 All the night it joyward blew,  
 Though I neither hoped nor knew.

Fresher blow me out to sea,  
 Morning-tost I fain would be,  
 Sweep my deck and pile it high  
 With the ingots of the sky.

Give me freight to carry round  
 To a place with night that 's drowned,  
 That the Gulf-Stream of the day  
 Glitter then my Milky-Way.

## WET-WEATHER WORK.

BY A FARMER.

### II.

SNOWING: the checkered fields below are traceable now only by the brown lines of fences and the sparse trees that mark the hedge-rows. The white of the houses and of the spires of the town is seen dimly through the snow, and seems to waver and shift position like the sails and spars of ships seen through fog. And straightway upon this image of ships and swaying spars I go sailing back to the farm-land of the past, and sharpen my pen for another day's work among *The Old Farm-Writers*.

I suspect Virgil was never a serious farmer. I am confident he never had one of those callosities upon the inner side of his right thumb which come of the lower thole of a scythe-snath, after a week's

mowing. But he had that quick poet's eye which sees at a glance what other men see only in a day. Not a shrub or a tree, not a bit of fallow ground or of nodding lentils escaped his observation; not a bird or a bee; not even the mosquitoes, which to this day hover pestiferously about the low-lying sedge-lands of Mantua.\* His first pastoral, little known now, and rarely printed with his works, is inscribed *Culex*.\*

Young Virgil appears to have been of a delicate constitution, and probably left the fever-bearing regions of the Mincio for the higher plain of Milan for sanitary reasons, as much as the other, — of studying, as men of his parts did study,

\* "*Lusimus: hæc propter Culicis sint carmina dicta.*"

Greek and philosophy. There is a story, indeed, that he studied and practised farriery, as his father had done before him; and Jethro Tull, in his crude onslaught upon what he calls the Virgilian husbandry, (chap. ix.) intimates that a farrier could be no way fit to lay down the rules for good farm-practice. But this story of his having been a horse-doctor rests, so far as I can discover, only on this flimsy tradition, — that the young poet, on his way to the South of Italy, after leaving Milan and Mantua, fell in at Rome with the master-of-horse to Octavianus, and gave such shrewd hints to that official in regard to the points and failings of certain favorite horses of the Roman Triumvir (for Octavianus had not as yet assumed the purple) as to gain a presentation to the future Augustus, and rich marks of his favor.

It is certain that the poet journeyed to the South, and that thenceforward the glorious sunshine of Baiæ and of the Neapolitan shores gave a color to his poems and to his life.

Yet his agricultural method was derived almost wholly from his observation in the North of Italy. He never forgot the marshy borders of the Mincio nor the shores of beautiful Benacus (Lago di Garda); who knows but he may some time have driven his flocks afield on the very battle-ground of Solferino?

But the ruralities of Virgil take a special interest from the period in which they were written. He followed upon the heel of long and desolating intestine wars, — a singing-bird in the wake of vultures. No wonder the voice seemed strangely sweet.

The eloquence of the Senate had long ago lost its traditionary power; the sword was every way keener. Who should listen to the best of speakers, when Pompey was in the forum, covered with the spoils of the East? Who should care for Cicero's periods, when the magnificent conqueror of Gaul is skirting the Umbrian Marshes, making straight for the Rubicon and Rome?

Then came Pharsalia, with its bloody

trail, from which Cæsar rises only to be slaughtered in the Senate-Chamber. Next comes the long duel between the Triumvirate and the palsied representatives of the Republican party. Philippi closes that interlude; and there is a new duel between Octavianus and Antony (Lepidus counting for nothing). The gallant lover of Cleopatra is pitted against a gallant general who is a nephew to the first Cæsar. The fight comes off at Actium, and the lover is the loser; the pretty Egyptian Jezebel, with her golden-prowed galleys, goes sweeping down, under a full press of wind, to swell the squadron of the conqueror. The winds will always carry the Jezebels to the conquering side.

Such, then, was the condition of Italy, — its families divided, its grain-fields trampled down by the Volscian cavalry, its houses red with fresh blood-stains, its homes beyond the Po parcelled out to lawless returning soldiers, its public security poised on the point of the sword of Augustus, — when Virgil's *Bucolics* appear: a pastoral thanksgiving for the patrimony that had been spared him, through court-favor.

There is a show of gross adulation that makes one blush for his manhood; but withal he is a most lithesome poet, whose words are like honeyed blossoms, and whose graceful measure is like a hedge of bloom that sways with spring breezes, and spends perfume as it sways.

The *Georgics* were said to have been written at the suggestion of Mæcenas, a cultivated friend of Augustus, who, like many another friend of the party in power, had made a great fortune out of the wars that desolated Italy. He made good use of it, however, in patronizing Virgil, and in bestowing a snug farm in the Sabine country upon Horace; where I had the pleasure of drinking goats' milk — "*dulci digne mero*" — in the spring of 184-.

There can be no doubt but Virgil had been an attentive reader of Xenophon, of Hesiod, of Cato, and of Varro; otherwise he certainly would have been un-

worthy of the task he had undertaken, — that of laying down the rules of good husbandry in a way that should insure the reading of them, and kindle a love for the pursuit.

I suspect that Virgil was not only a reader of all that had been written on the subject, but that he was also an insistent questioner of every sagacious landholder and every sturdy farmer that he fell in with, whether on the Campanian hills or at the house of Mæcenas. How else does a man accomplish himself for a didactic work relating to matters of fact? I suspect, moreover, that Virgil, during those half-dozen years in which he was engaged upon this task, lost no opportunity of inspecting every bee-hive that fell in his way, of measuring the points and graces of every pretty heifer he saw in the fields, and of noting with the eye of an artist the color of every furrow that glided from the plough. It is inconceivable that a man of his intellectual address should have given so much of literary toil to a work that was not in every essential fully up to the best practice of the day. Five years, it is said, were given to the accomplishment of this short poem. What say our poetasters to this? Fifteen hundred days, we will suppose, to less than twice as many lines; blocking out four or five for his morning's task, and all the evening — for he was a late worker — licking them into shape, as a bear licks her cubs.

But *zui bono?* what good is in it all? Simply as a work of art, it will be cherished through all time, — an earlier Titian, whose color can never fade. It was, besides, a most beguiling peace-note, following upon the rude blasts of war. It gave a new charm to forsaken homesteads. Under the Virgilian leadership, Monte Genaro and the heights of Tusculum beckon the Romans 'o the fields; the meadows by reedy Thrasymenus are made golden with doubled crops. The Tarentine sheep multiply around Benacus, and crop close those dark bits of herbage which have been fed by the blood of Roman citizens.

Thus much for the magic of the verse; but there is also sound farm-talk in Virgil. I am aware that Seneca, living a few years after him, invidiously objects that he was more careful of his language than of his doctrine, and that Columella quotes him charily, — that the collector of the "Geoponics" ignores him, and that Tull gives him clumsy raillery; but I have yet to see in what respect his system falls short of Columella, or how it differs materially, except in fulness, from the teachings of Crescenzi, who wrote a thousand years and more later. There is little in the poem, save its superstitions, from which a modern farmer can dissent.\*

We are hardly launched upon the first Georgic before we find a pretty suggestion of the theory of rotation, —

"Sic quoque mutatis requiescunt fœtibus arva."

Rolling and irrigation both glide into the verse a few lines later. He insists upon the choice of the best seed, advises to keep the drains clear, even upon holidays, (268,) and urges, in common with a great many shrewd New-England farmers, to cut light meadows while the dew is on, (288-9,) even though it involve night-work. Some, too, he says, whittle their torches by fire-light, of a winter's night; and the good wife, meantime, lifting a song of cheer, plies the shuttle merrily. The shuttle is certainly an archaism, whatever the good wife may be.

His theory of weather-signs, taken principally from Aratus, agrees in many respects with the late Marshal Bugeaud's observations, upon which the Marshal planted his faith so firmly that he is said to have ordered all his campaigns in Africa in accordance with them.

In the opening of the second book, Virgil insists, very wisely, upon proper adaptation of plantations of fruit-trees to different localities and exposures, — a matter which is far too little considered

\* Of course, I reckon the

"Exceptantque leves auras; et sæpe sine ullis," etc., (Lib. III. 274,) as among the superstitions.

by farmers of our day. His views in regard to propagation, whether by cuttings, layers, or seed, are in agreement with those of the best Scotch nurserymen; and in the matter of grafting or inoculation, he errs (?) only in declaring certain results possible, which even modern gardening has not accomplished. Dryden shall help us to the pretty falsehood:—

“The thin-leaved arbuté hazel-grafts receives,  
And planes huge apples bear, that bore but leaves.  
Thus mastful beech the bristly chestnut bears,  
And the wild ash is white with blooming pears,  
And greedy swine from grafted elms are fed  
With falling acorns, that on oaks are bred.”

It is curious how generally this belief in something like promiscuous grafting was entertained by the old writers. Palladius repeats it with great unction in his poem “De Insitione,” two or three centuries later; \* and in the tenth book of the “Geoponics,” a certain Damogeron-tis (whoever he may have been) says, (cap. lxxv.) “Some rustic writers allege that nut-trees and resinous trees (τὰ ῥητινήν ἔχοντα) cannot be successfully grafted; but,” he continues, “this is a mistake; I have myself grafted the pistache nut into the terebenthine.”

Is it remotely possible that these old gentlemen understood the physiology of plants better than we?

As I return to Virgil, and slip along the dulcet lines, I come upon this crackling laconism, in which is compacted as much wholesome advice as a loose farmer-writer would spread over a page:—

“Laudato ingentia rura,  
Exiguam colito.” †

The wisdom of the advice for these days of steam-engines, reapers, and high wages, is more than questionable; but it is in perfect agreement with the notions

\* The same writer, under Februarius, Tit. XVII., gives a very curious method of grafting the willow, so that it may bear peaches.

† Praise big farms; stick by little ones.

of a great many old-fashioned farmers who live nearer to the heathen past than they imagine.

The cattle of Virgil are certainly no prize-animals. Any good committee would vote them down incontinently:—

—“Cui turpe caput, cui plurima cervix,”

(iii. 52,) would not pass muster at any fair of the last century.

The horses are better; there is the dash of high venture in them; they have snuffed battle; their limbs are suppled to a bounding gallop,—as where in the Æneid,

“Quadrupedante putrem sonitu quatit ungula campum.”

The fourth book of the Georgics is full of the murmur of bees, showing how the poet had listened, and had loved to listen. After describing minutely how and where the homes of the honey-makers are to be placed, he offers them this delicate attention:—

“Then o’er the running stream or standing lake

A passage for thy weary people make;  
With osier floats the standing water strew.  
Of massy stones make bridges, if it flow:  
That basking in the sun thy bees may lie,  
And, resting there, their flaggy pinions dry.”

DRYDEN.

Who cannot see from this how tenderly the man had watched the buzzing yellow-jackets, as they circled and stooped in broad noon about some little pool in the rills that flow into the Lago di Garda? For hereabout, of a surety, the poet once sauntered through the noontides, while his flock cropped the “milk-giving cytissus,” upon the hills.

And charming hills they are, as my own eyes can witness: nay, my little note-book of travel shall itself tell the story. (The third shelf, upon the right, my boy.)

No matter how many years ago,—I was going from Milan, (to which place I had come by Piacenza and Lodi,) on my way to Verona by Brescia and Peschiera. At Desenzano, or thereabout, the blue lake of Benaco first appeared. A

few of the higher mountains that bounded the view were still capped with snow, though it was latter May. Through fragrant locusts and mulberry-trees, and between irregular hedges, we dashed down across the isthmus of Sermione, where the ruins of a Roman castle flout the sky.

Hedges and orchards and fragrant locusts still hem the way, as we touch the lake, and, rounding its southern skirt, come in sight of the grim bastions of Peschiera. A Hungarian sentinel, lithe and tall, I see pacing the rampart, against the blue of the sky. Women and girls come trooping into the narrow road, — for it is near sunset, — with their aprons full of mulberry-leaves. A bugle sounds somewhere within the fortress, and the mellow music swims the water, and beats with melodious echo — boom on boom — against Sermione and the farther shores.

The sun just dipping behind the western mountains, with a disk all golden, pours down a flood of yellow light, tinting the mulberry-orchards, the edges of the Roman castle, the edges of the waves where the lake stirs, and spreading out in a bay of gold where the lake lies still.

Virgil never saw a prettier sight there; and I was thinking of him, and of my old master beating off spondees and dactyls with a red ruler on his threadbare knee, when the sun sunk utterly, and the purple shadows dipped us all in twilight.

"È arrivato, Signore!" said the *veturino*. True enough, I was at the door of the inn of Peschiera, and snuffed the stew of an Italian supper.

Virgil closes the first book of the Georgics with a poetic forecast of the time when ploughmen should touch upon rusted war-weapons in their work, and turn out helmets empty, and bones of dead soldiers, — as indeed they might, and did. But how unlike a poem it will sound, when the schools are opened on the Rappahannock again, and the boy scans, — choking down his sobs, —

"Aut gravibus rastris galeas pulsabit inanes,  
Grandiaque effossis mirabitur ossa sepulcris,"  
and the master veils his eyes!

I fear that Virgil was harmed by the Georgican success, and became more than ever an adulator of the ruling powers. I can fancy him at a palace tea-drinking, where pretty court-lips give some witty turn to his "*Sic Vos, non Vobis*," and pretty court-eyes glance tenderly at Master Marius, who blushes, and asks some Sabina (not Poppæa) after Tibullus and his Delia. But a great deal is to be forgiven to a man who can turn compliments as Virgil turned them. What can be more exquisite than that allusion to the dead boy Marcellus, in the Sixth Book of the *Æneid*? He is reading it aloud before Augustus, at Rome. Mæcenas is there from his tall house upon the Esquiline; possibly Horace has driven over from the Sabine country, — for, alone of poets, he was jolly enough to listen to the reading of a poem not his own. Above all, the calm-faced Octavia, Cæsar's sister, and the rival of Cleopatra, is present. A sad match she has made of it with Antony; and her boy Marcellus is just now dead, — dying down at Baïæ, notwithstanding the care of that famous doctor, Antonius Musa, first of hydro-paths.

Virgil had read of the Sibyl, — of the entrance to Hades, — of the magic metallic bough that made Charon submissive, — of the dog Cerberus, and his sop, — of the Greeks who welcomed Æneas, — then of the father Anchises, who told the son what brave fate should belong to him and his, — warning him, meantime, with alliterative beauty, against the worst of wars, —

"Ne, pueri, ne tanta animis assuescite bella,  
Neu patriæ validas in viscera vertite vires,"—

too late, alas! There were those about Augustus who could sigh over this.

Virgil reads on: Anchises is pointing out to Æneas that old Marcellus who fought Hannibal; and beside him, full of beauty, strides a young hero about whom the attendants throng.

"And who is the young hero," demands Æneas, "over whose brow a dark fate is brooding?"

(The motherless Octavia is listening with a yearning heart.)

And Anchises, the tears starting to his eyes, says, —

“Seek not, O son, to fathom the sorrows of thy kindred. The Fates, that lend him, shall claim him; a jealous Heaven cannot spare such gifts to Rome. Then, what outcry of manly grief shall shake the battlements of the city! what a wealth of mourning shall Father Tiber see, as he sweeps past his new-made grave! Never a Trojan who carried hopes so high, nor ever the land of Romulus so gloried in a son.”

(Octavia is listening.)

“Ah, piety! alas for the ancient faith! alas for the right hand so stanch in battle! None, none could meet him, whether afoot or with reeking charger he pressed the foe. Ah, unhappy youth! If by any means thou canst break the harsh decrees of Fate, thou wilt be — Marcellus!”

It is Octavia's lost boy; and she is carried out fainting.

But Virgil receives a matter of ten thousand sesterces a line, — which, allowing for difference in exchange and value of gold, may (or may not) have been a matter of ten thousand dollars. With this bouncing bag of sesterces, Virgil shall go upon the shelf for to-day.

I must name Horace for the reason of his “*Procul beatus*,” etc., if I had no other; but the truth is, that, though he rarely wrote intentionally of country-matters, yet there was in him that fullness of rural taste which bubbled over — in grape-clusters, in images of rivers, in snowy Soracte, in shade of plane-trees; nay, he could not so much as touch an *amphora* but the purple juices of the hill-side stained his verse as they stained his lip. See, too, what a garden pungency there is in his garlic ode (III. 5); and the opening to Torquatus (Ode VII. Lib. 4) is the limning of one who has followed the changes of the bursting spring with his whole heart in his eyes: —

“Diffugere nives, redeunt jam gramina campis,” —

every school-boy knows it: but what every school-boy does not know, and but few of the masters, is this charming, jingling rendering of it into the Venetian dialect: —

“La neve xè andàda,  
Su i prài torna i fiori  
De cento colori,  
E a dosso de i àlbori  
La fogia è tornada  
A farli vestir.

“Che gusto e dilèto  
Che dà quèla tèra  
Cambiada de cièra,  
E i fiumi che placidi  
Sbassai nel so' lèto  
Va zòzo in te 'l mar!” \*

On my last wet-day, I spoke of the elder Pliny, and now the younger Pliny shall tell us something of one or two of his country-places. Pliny was a government-official, and was rich: whether these facts had any bearing on each other I know no more than I should know if he had lived in our times.

I know that he had a charming place down by the sea, near to Ostium. Two roads led thither: “both of them,” he says, “in some parts sandy, which makes it heavy and tedious, if you travel in a coach; but easy enough for those who ride. My villa” (he is writing to his friend Gallus, Epist. XX. Lib. 2) “is large enough for all convenience, and not expensive.” He describes the portico as affording a capital retreat in bad weather, not only for the reason that it is protected by windows, but because there is an extraordinary projection of the roof. “From the middle of this portico you pass into a charming inner court, and thence into a large hall which extends towards the sea, — so near, indeed, that under a west wind the waves ripple on the steps. On the left of this hall is a large lounging-room (*cubiculum*), and a lesser one be-

\* This, with other odes, is prettily turned by Sig. Pietro Bussolino, and given as an appendix to the *Serie degli Scritti in Dialecto Venez.*, by Bart. Gamba.

yond, with windows to the east and west. The angle which this lounging-room forms with the hall makes a pleasant lee, and a loitering-place for my family in the winter. Near this again is a crescent-shaped apartment, with windows which receive the sun all day, where I keep my favorite authors. From this, one passes to a bed-chamber by a raised passage, under which is a stove that communicates an agreeable warmth to the whole apartment. The other rooms in this portion of the villa are for the freedmen and slaves; but still are sufficiently well ordered (*tam mundis*) for my guests."

And he goes on to describe the bath-rooms, the cooling-rooms, the sweating-rooms, the tennis-court, "which lies open to the warmth of the afternoon sun." Adjoining this is a tower, with two apartments below and two above,—besides a supper-room, which commands a wide look-out along the sea, and over the villas that stud the shores. At the opposite end of the tennis-court is another tower, with its apartments opening upon a museum,—and below this the great dining-hall, whose windows look upon gardens, where are box-tree hedges, and rosemary, and bowers of vines. Figs and mulberries grow profusely in the garden; and walking under them, one approaches still another banqueting-hall, remote from the sea, and adjoining the kitchen-garden. Thence a grand portico (*cryptoporticus*) extends with a range of windows on either side, and before the portico is a terrace perfumed with violets. His favorite apartment, however, is a detached building, which he has himself erected in a retired part of the grounds. It has a warm winter-room, looking one way on the terrace, and another on the ocean; through its folding-doors may be seen an inner chamber, and within this again a sanctum, whose windows command three views totally separate and distinct,—the sea, the woods, or the villas along the shore.

"Tell me," he says, "if all this is not very charming, and if I shall not have

the honor of your company, to enjoy it with me?"

If Pliny regarded the seat at Ostium as only a convenient and inexpensive place, we may form some notion of his Tuscan property, which, as he says in his letter to his friend Apollinaris, (Lib. V. Epist. 6,) he prefers to all his others, whether of Tivoli, Tusculum, or Palestrina. There, at a distance of a hundred and fifty miles from Rome, in the midst of the richest corn-bearing and olive-bearing regions of Tuscany, he can enjoy country quietude. There is no need to be slipping on his toga; ceremony is left behind. The air is healthful; the scene is quiet. "*Stullis animum, venatu corpus exerceo.*" I will not follow him through the particularity of the description which he gives to his friend Apollinaris. There are the wide-reaching views of fruitful valleys and of empurpled hill-sides; there are the fresh winds sweeping from the distant Apennines; there is the *gestatio* with its clipped boxes, the embowered walks, the colonnades, the marble banquet-rooms, the baths, the Carystian columns, the soft, embracing air, and the violet sky. I leave Pliny seated upon a bench in a marble alcove of his Tuscan garden. From this bench, the water, gushing through several little pipes, as if it were pressed out by the weight of the persons reposing upon it, falls into a stone cistern underneath, whence it is received into a polished marble basin, so artfully contrived that it is always full, without ever overflowing. "When I sup here," he writes, "this basin serves for a table,—the larger dishes being placed round the margin, while the smaller ones swim about in the form of little vessels and water-fowl."

Such *al fresco* suppers the country-gentlemen of Italy ate in the first century of our era!

Palladius wrote somewhere about the middle of the fourth century. His work is arranged in the form of a calendar for the months, and closes with a poem which

is as inferior to the poems of the time of Augustus as the later emperors were inferior to the Cæsars. There is in his treatise no notable advance upon the teachings of Columella, whom he frequently quotes, — as well as certain Greek authorities of the Lower Empire. I find in his treatise a somewhat fuller list of vegetables, fruits, and field-crops than belongs to the earlier writers. I find more variety of treatment. I see a waning faith in the superstitions of the past: Bacchus and the Lares are less jubilant than they were; but the Christian civilization has not yet vivified the art of culture. The magnificent gardens of Nero and the horticultural experiences of the great Adrian at Tivoli have left no traces in the method or inspiration of Palladius.

I will not pass wholly from the classic period, without allusion to the recent book of Professor Daubeny on Roman husbandry. It is charming, and yet disappointing, — not for failure, on his part, to trace the traditions to their sources, not for lack of learning or skill, but for lack of that *afflatus* which should pour over and fill both subject and talker, where the talker is lover as well as master.

Daubeny's husbandry lacks the odor of fresh-turned ground, — lacks the imprint of loving familiarity. He is clearly no farmer: every man who has put his hand to the plough (*aratori crede*) sees it. Your blood does not tingle at his story of Boreas, nor a dreamy languor creep over you when he talks of sunny south-winds.

Had he written exclusively of bees, or trees, or flowers, there would have been a charming murmur, like the *susurrus* of the poets, — and a fragrance as of crushed heaps of lilies and jonquils. But Daubeny approaches farming as a good surgeon approaches a *cadaver*. He disarticulates the joints superbly; but there is no tremulous intensity. The bystanders do not feel the thrill with which they see a man bare his arm for a cap-

ital operation upon a live and palpitating body.

From the time of Palladius to the time of Pietro Crescenzi is a period of a thousand years, a period as dreary and impenetrable as the snow-cloud through which I see faintly a few spires staggering: so along the pages of Muratori's interminable annals gaunt figures come and go; but they are not the figures of farmers.

Goths, wars, famines, and plague succeed each other in ghastly procession. Boëthius lifts, indeed, a little rural plaint from out of the gloom, —

"Felix nimium prior ætas,  
Contenta fidelibus arvis,"\* —

but the dungeon closes over him; and there are outstanding orders of Charlemagne which look as if he had an eye to the crops of Italy, and to a good vegetable stew with his Transalpine dinners, — but for the most part the land is waste. I see some such monster as Eccelino reaping a harvest of blood. I see Lombards pouring down from the mountain-gates, with falcons on their thumbs, ready to pounce upon the purple *columbæ* that trace back their lineage to the doves Virgil may have fed in the streets of Mantua. I see torrents of people, the third of them women, driven mad by some fanatical outcry, sweeping over the whole breadth of Italy, and consuming all green things as a fire consumes stubble. Think of what the fine villa of Pliny would have been, with its box-wood bowers and floating dishes, under the press of such crusaders! It was a precarious time for agricultural investments: I know nothing that could match it, unless it may have been last summer's harvests in the valley of the Shenandoah.

Upon a parchment (*strumento*) of Ferrara, bearing date A. D. 1113, (Annals of Muratori,) I find a memorandum or contract which looks like reviving civilization. "*Terram autem illam quam ron-cabo, frui debeo per annos tres; postea reddam serraticum.*" The Latin is stiff,

\* *De Consol. Phil.* Lib. II.

but the sense is sound. "If I grub up wild land, I shall hold it three years for pay."

I shall make no apology for introducing next to the reader the "*Geoponica Geoponicorum*," — a somewhat extraordinary collection of agricultural opinions, usually attributed, in a loose way, to the Emperor Constantine Porphyrogenitus, who held the Byzantine throne about the middle of the tenth century. It was undoubtedly under the order of Constantine that the collection took its present shape; but whether a collection under the same name had not previously existed, and, if so, to whom is to be credited the authorship, are questions which have been discussed through a wilderness of Greek and Roman type, by the various editors.

The edition before me (that of Niclas, Leipsic) gives no less than a hundred pages of prolegomena, prefaces, introductory observations, with notes to each and all, interlacing the pages into a motley of patchwork; the whole preceded by two, and followed by five stately dedications. The weight of authority points to Cassianus Bassus, a Bithynian, as the real compiler, — notwithstanding his name is attached to particular chapters of the book, and notwithstanding he lived as early as the fifth century. Other critics attribute the collection to Dionysius Uticensis, who is cited by both Varro and Columella. The question is unsettled, and is not worth the settling.

My own opinion — in which, however, Niclas and Needham do not share — is, that the Emperor Porphyrogenitus, in addition to his historical and judicial labors,\* wishing to mass together the best agricultural opinions of the day, expressed that wish to some trusted Byzantine official (we may say his Commissioner of Patents). Whereupon the Byzantine official (commissioner) goes to some hungry agricultural friend, of the Chersonesus, and lays before him the plan, with promise of a round Byzantian stipend.

\* See Gibbon, — opening of Chapter LIII.

The agricultural friend goes lovingly to the work, and discovers some old compilation of Bassus or of Dionysius, into which he whips a few modern phrases, attributes a few chapters to the virtual compiler of the whole, makes one or two adroit allusions to local scenes, and carries the result to the Byzantine official (commissioner). The official (commissioner) has confidence in the opinions and virtues of his agricultural friend, and indorses the book, paying over the stipend, which it is found necessary to double, by reason of the unexpected cost of execution. The official (commissioner) presents the report to the Emperor, who receives it gratefully, — at the same time approving the bill of costs, which has grown into a quadruple of the original estimates.

This hypothesis will explain the paragraphs which so puzzle Niclas and Needham; it explains the evident interpolations, and the local allusions. The only extravagance in the hypothesis is its assumption that the officials of Byzantium were as rapacious as our own.

Thus far, I have imagined a certain analogy between the work in view and the "Patent Office Agricultural Reports." The analogy stops here: the "*Geoponica*" is a good book. It is in no sense to be regarded as a work of the tenth century, or as one strictly Byzantine: nearly half the authors named are of Western origin, and I find none dating later than the fifth century, — while many, as Apuleius, Florentinus, Africanus, and the poor brothers Quintilii, who died under the stab of Commodus, belong to a period preceding that of Palladius. Aratus and Democritus (of Abdera) again, who are cited, are veterans of the old Greek school, who might have contributed as well to the agriculture of Thrace or Macedonia in the days of Philip as in the days of the Porphyrogenitus.

The first book, of meteorologic phenomena, is nearly identical in its teachings with those of Aratus, Varro, and Virgil.

The subject of field-culture is opened

with the standard maxim, repeated by all the old writers, that the master's eye is invaluable.\* The doctrine of rotation, or frequent change of crops, is laid down with unmistakable precision. A steep for seed (hellebore) is recommended, to guard against the depredations of birds or mice.

In the second book, in certain chapters credited to Florentinus, I find, among other valuable manures mentioned, sea-weed and tide-drift, (*Τὰ ἐκ τῆς θαλάσσης δὲ ἐκβρασσόμενα βρωδῆ,*) which I do not recall in any other of the old writers. He also recommends the refuse of leather-dressers, and a mode of promoting putrefaction in the compost-heap, which would almost seem to be stolen from "Bommer's Method." He further urges the diversion of turbid rills, after rains, over grass lands, and altogether makes a better compend of this branch of the subject than can be found in the Roman writers proper.

Grain should be cut before it is fully ripe, as the meal is the sweeter. What correspondent of our agricultural papers, suggesting this as a novelty, could believe that it stood in Greek type as early as ever Greek types were set?

A farm foreman should be apt to rise early, should win the respect of his men, should fear to tell an untruth, regard religious observances, and not drink too hard.

Three or four books are devoted to a very full discussion of the vine, and of

\* As a curious illustration of the rhetoric of the different agronomes, I give the various wordings of this universal maxim.

The "Geonica" has,—"*Πολλῶ τὸν ἀγρὸν ἀμείνω ποιεῖ δεσπότης συνεχῆς παρουσία.*" Lib. II. Cap. i.

Columella says,—"*Ne ista quidem præsidia tantum pollutent, quantum vel una præsentia domini.*" I. i. 18.

Cato says,—"*Frons occipitio prior est.*" Cap. iv.

Palladius puts it,—"*Præsentia domini proventus est agri.*" I. vi.

And the elder Pliny writes,—"*Majores fertilissimum in agro oculum domini esse dixerunt.*"

wines,—not differing materially, however, from the Columellan advice. In discussing the moral aspects of the matter, this Geoponic author enumerates other things which will intoxicate as well as wine,—even some waters; also the wine made from barley and wheat, which barbarians drink. Old men, he says, are easily made drunk; women not easily, by reason of temperament; but by drinking enough they may come to it.

Where the discourse turns upon pears, (Lib. X. Cap. xxiii.,) it is urged, that, if you wish specially good fruit, you should bore a hole through the trunk at the ground, and drive in a plug of either oak or beech, and draw the earth over it. If it does not heal well, wash for a fortnight with the lees of old wine: in any event, the wine-lees will help the flavor of the fruit. Almost identical directions are to be found in Palladius, (Tit. XXV.,) but the above is credited to Diophanes, who lived in Asia Minor a full century before Christ.

Book XI. opens with flowers and evergreens, introduced (by a Latin translation) in a mellifluous roll of genitives:—"*plantationem rosarum, et liliorum, et violarum, et reliquorum florum odoratorum.*" Thereafter is given the pretty tradition, that red roses came of nectar spilled from heaven. Love, who bore the celestial vintage, tripped a wing, and overset the vase; and the nectar, spilling on the valleys of the earth, bubbled up in roses. Next we have this kindred story of the lilies. Jupiter wished to make his boy Hercules (born of a mortal) one of the gods; so he snatches him from the bosom of his earthly mother, Alcmena, and bears him to the bosom of the god-like Juno. The milk is spilled from the full-mouthed boy, as he traverses the sky, (making the Milky Way,) and what drops below stars and clouds, and touches earth, stains the ground with—lilies.

In the chapter upon pot-herbs are some of those allusions to the climate of Constantinople which may have served to accredit the work in the Byzantine court. I find no extraordinary methods

of kitchen-garden culture,—unless I except the treatment of musk-melon seeds to a steep of milk and honey, in order to improve the flavor of the fruit. (Cap. xx.) The remaining chapters relate to ordinary domestic animals, with diversions to stags, camels, hare, poisons, scorpions, and serpents. I can cheerfully commend the work to those who have a snowy day on their hands, good eyesight, and a love for the subject.

And now, while the snow lasts, let us take one look at Messer Pietro Crescenzi, a Bolognese of the fourteenth century. My copy of him is a little, fat, unctuous, parchment-bound book of 1534, bought upon a street stall under the walls of the University of Bologna.

Through whose hands may it not have passed since its printing! Sometimes I seem to snuff in it the taint of a dirty-handed friar, who loved his pot-herbs better than his breviary; and plotted his yearly garden on some shelf of the hills that look down on Castagnolo: other times I scent only the mould and the damp of some monastery shelf, that guarded it quietly and cleanly, while red-handed war raged around the walls.

Crescenzi was a man of good family in Bologna, being nephew of Crescenzi di Crescenzo, who died in 1268, an ambassador in Venice. Pietro was educated to the law, and, wearying of the civil commotions in his native town, accepted judicial positions in the independent cities of Italy,—Pisa and Asti among others; and after thirty years of absence, in which, as he says, he had read many authors,\* and seen many sorts of farming, he gives his book to the world.

Its arrangement is very similar to that of Palladius, to which he makes frequent reference. There is long and quaint talk of situations, breezes, cellar-digging, and wells; but in the matter of irrigation and pipe-laying he is clearly in advance of

\* “E molti libri d’ antichi e de’ novelli savi lessi e studiaï, e diverse e varie operazioni de’ coltivatori delle terre vidi e conobbi.”

the Roman writers. He discourses upon tiles, and gives a cement for making water-tight their junction,—“*Calcina viva intrisa con olio.*” (Lib. I. Cap. ix.) He adds good rules for mortar-making, and advises that the timber for house-building be cut in November or December in the old of the moon.

In matters of physiology he shows a near approach to modern views: he insists that food for plants must be in a liquid form.\*

He quotes Columella’s rule for twenty-four loads (*carrette*) of manure to hill-lands per acre, and eighteen to level land; and adds,—“Our people put the double of this,”—“*I nostri mettano più chel doppio.*”

But the book of our friend Crescenzi is interesting, not so much for its maxims of agronomic wisdom as for its association with one of the most eventful periods of Italian history. The new language of the Peninsula † was just now crystallizing into shape, and was presently to receive the stamp of currency from the hands of Dante and Boccaccio. A thriving commerce through the ports of Venice and Amalfi demanded all the products of the hill-sides. Milan, then having a population of two hundred thousand, had turned a great river into the fields, which to this day irrigates thousands of acres of rice-lands. Wheat was grown in profusion, at that time, on fields which are now desolated by the malaria, or by indolence. In the days of Crescenzi, gunpowder was burned for the first time in battle; and for the first time crops of grain were paid for in bills of exchange. All the Peninsula was vibrating with the throbs of a new and more splendid life. The art that had cropped out of the fashionable schools of Byzantium was fast putting them in eclipse; and before Crescenzi died, if he loved art on canvas as he loved art in gardens, he must have

\* “Il proprio cibo delle piante sara alcuno humido ben mischiato.” Cap. xiii.

† Crescenzi’s book was written in Latin, but was very shortly after (perhaps by himself) rendered into the street-tongue of Italy.

heard admiringly of Cimabue, and Giotto, and Orcagna.

In 1360 a certain Paganino Bonafede composed a poem called "Il Tesoro de' Rustici"; but I believe it was never published; and Tiraboschi calls it "*poco felice*." If we could only bar publicity to all the *poco felice* verses!

In the middle of the fifteenth century the Florentine Poggio says some good things in a rural way; and still later, that whimsical, disagreeable Politiano, who was a pet cub of Lorenzo de' Medici, published his "Rusticus." Roscoe says, with his usual strained hyperbole, that it is inferior in kind only to the Georgics. The fact is, it compares with the Georgics as the vilest of the Medici compare with the grandest of the Cæsars.

The young Michele Verini, of the same period, has given, in one of his few remaining letters, an eloquent description of the Cajano farm of Lorenzo de' Medici. It lay between Florence and Pistoia. The river Ombrone skirted its fields. It was so successfully irrigated, that three crops of grain grew in a year. Its barns had stone floors, walls with moat, and towers like a castle. The cows he kept there (for ewes were now superseded) were equal to the supply of the entire city of Florence. Hogs were fed upon the whey; and peacocks and pheasant innumerable roamed through the woods.

Politiano also touches upon the same theme; but the prose of young Verini is

better, because more explicit, than the verse of Politiano.

While I write, wandering in fancy to that fair plain where Florence sits a queen, with her girdle of shining rivers, and her garland of olive-bearing hills, — the snow is passing. The spires have staggered plainly and stiffly into sight. Again I can count them, one by one. I have brought as many authors to the front as there are spires staring at me from the snow.

Let me marshal them once more: — Verini, the young Florentine; Politiano,\* who cannot live in peace with the wife of his patron; Poggio, the Tuscan; Crescenzi, the magistrate and farmer joined; the half-score of dead men who lie between the covers of the "Geoponica"; the martyr Boëthius, who, under the consolations of a serene, perhaps Christian philosophy, cannot forget the charm of the fields; Palladius, who is more full than original; Pliny the Consul, and the friend of Tacitus; Horace, whose very laugh is brimming with the buxom cheer of the country; and last, — Virgil.

I hear no such sweet bugle-note as his along all the line!

Hark! —

"Claudite jam rivos, pueri, sat prata biberunt."

Even so: *Claudite jam libros, parvuli!* — Shut up the books, my little ones! Enough of this.

\* See Roscoe, *Life of Lorenzo de' Medici*, Chap. VIII.

## THE MEMBER FROM FOXDEN.

THE circumstances were a little peculiar, — it is in vain to deny it. No wonder that several friends of mine, who were struggling and stumbling up to position at the city bar, could never understand why I was selected, by a nearly unanimous vote, to represent Foxden at

the General Court. Though I had occupied an old farm-house of Colonel Prowley's during part of the summer, and had happened to be in it about the first of May to pay taxes, yet it was well known that my city office occupied by far the greater part of my time and

attention. And really, when you think of the "remarkable men" long identified with this ancient river-town, an outside selection seems quite unaccountable.

Chosen a member of the "Young Men's Gelasmiphilous Society" during my first visit to Foxden, of course I tried to be tolerably lively at the meetings. But my innocence of thereby attempting the acquisition of political capital I beg explicitly to declare. The joke of the thing was — But stop! — to tell just what it was, I must begin, after the Richardsonian style, with extracts from correspondence. For, as the reader may suspect, my friend Colonel Prowley was not inclined to slacken his epistolary attentions after the success of his little scheme, of which the particulars were given last April. And as my wife turned out to possess the feminine facility of letter-writing, and was good enough to assume the burden of replying to his voluminous productions, they became the delight of many Saturday evenings devoted to their perusal.

It was about the middle of September when an unusually bulky envelope from the Colonel inclosed a sealed note containing the following communication:—

"Rooms of the Young Men's  
Gelasmiphilous Society.

"SIR: You will herewith receive a copy of a resolution nominating you as the Young Men's candidate for the next Legislature. You are doubtless aware that it is the custom for all new candidates to deliver a lyceum-lecture in Foxden on the evening before the election. We have therefore engaged the Town Hall in your behalf on the P. M. of November fifth. Knowing something of the taste in lectures of those disposed to support you, I venture to recommend the selection of some light and humorous subject.

"I am fraternally yrs.,

"THADDEUS WASPY,

"Secretary Y. M. G. S.

"P. S. Dr. Howke, who was run last

year without success, is upon the opposition ticket. As the old-fogy element of the town will probably rally to his support, it is very important that you bring out the entire strength of Young Foxden. Thus you see the necessity of having your lecture lively and full of fun. If you feel equal to it, I am sure that a Comic Poem would be a great hit."

As illustrating this extraordinary mischievous, there is subjoined an extract from the accompanying epistle of my regular Foxden correspondent.

"I inclose what I am given to understand is a nomination to the Honorable Legislature, a distinction which, I need not say, gives the highest gratification to my sister and myself. You will be opposed in this noble emulation by one Howke, a physician of North Foxden, with whom our venerable and influential Dr. Dastick has much osseous sympathy. Dr. Howke (long leaning to the Root-and-Herb School of Medicine, and having wrought many notable cures with such simples as sage, savory, wormwood, sweet-marjoram, sassafras, liverwort, pine-cones, rosemary, poppy-leaves, not to speak of plasters of thyme, cowslips, rose-buds, fit to refresh the tired wings of Ariel) has latterly declared his conversion to the Indian system of physic. The celebrated Wigwam Family Pills, to the manufacture of which he at present devotes himself, are not unknown to city journals. As I am informed that Captain Strype, editor of the "Foxden Regulator," has a large interest in the sale of these alternative spherules, you will necessarily encounter the hostility of our county journal. I advise you of the full might of these adversaries, that you may come to fuller justification of your supporters in the lecture to be read before us on election-eve. Dr. Dastick, with some of the elder of this town, has little liking for this laic preaching of the lyceum, by reason of the slight and foolish matter too often dispensed, when in the mean time there be precious gems of

knowledge, the very onyx or sapphire to bedeck the mind, which the muck-rake of the lecturer never collects. I add for your consideration a few wholesome subjects: — Caleb Cheeschateamuck, the Indian Bachelor of Arts; A Monody on the Apostle Eliot; A Suggestion of Some New Claimant for the Honors of Junius; Mather's Four *Johannes in Ere-mo*, being Notable Facts in the Lives of John Cotton, John Norton, John Wilson, and John Davenport; The Great Obligations of Homer to the Illustrious Mr. Pope; "New England's Jonas cast up in London," Some Account of this Remarkable Work; Natootomakteakesuk, or the Day of Asking Questions, whether this Ancient Festival might be profitably Revived?—I should feel competent to give assistance in the treatment of any of these subjects you might select. If the Muse inspire you, why not try a descriptive poem, modelled, let us say, upon William Morrill's 'New England'? The silver ring of verse would be joyfully heard among us, and work strong persuasions in your behalf. . . . I must not forget to mention, that, on the day of your lecture, you will meet at dinner at my house my esteemed Western correspondent, Professor Owlsdarck, (his grandmother was a Sodkin,) whose great work upon Mummies is the admiration of the literary world. He has been invited to deliver an address upon some speciality of erudition before the trustees, parents, and pupils of the Wrexford Academy, and that upon the same evening you are to speak in Foxden. As the distance is only ten miles, I shall send him over in the carryall after an early tea. And now to share with you a little secret. The office of Principal of the Academy is vacant, and the well-known learning of Professor Owlsdarck gives his friends great hope in recommending him for the place. He formerly lived in Wrexford, where his early 'Essays on Cenotaphs,' published in the local paper of that town, were very popular. Indeed, I think the trustees have only to hear the weighty homily he

will provide for them to decide by acclamation in his favor. Thus you see my double interest in your visits next November; for, as I think, both my guests will come upon brave opportunities for fame and usefulness."

"And what shall you do about it?" asked my wife, after we had thoroughly read the documents which have been quoted.

"Stand," I replied, with emphasis. "I don't think there's any chance of an election; but Heaven knows I want the rough-hewing of a political campaign. If I could get a little of the stump-orator's brass into my composition, it would be worth five years of office-practice for putting me on in the profession."

"But you have always had such unwillingness to address an audience," faltered Kate.

"The more reason why an effort should now be made to get over it," I replied. "In short, I consider this nomination quite providential, for I could never have descended to the vulgar wire-pulling by which such distinctions are commonly gained; and I confess, it promises to be just the discipline I want. Of course I have no expectation of being chosen."

"But why should you not be chosen?" urged my wife. "You are tolerably well-known in Foxden; Colonel Prowley, an influential citizen, is your warm friend; and Mr. Waspy tells you how you may get the support of the active generation."

"Yes, — by playing literary Grimaldi an hour or so for their diversion! A very good recipe, were it not probable that the elder portion of the town would fail to see the humor of it."

"But you may be certain that everybody likes to laugh at a lyceum-lecture."

"Everybody but a clique of pseudo-wiseacres in Foxden perhaps may," I replied. "But our good friend, the Colonel, has so established his antiquarian dictatorship over his contemporaries, that I

believe nothing adapted to the present century could possibly please them."

"You may depend upon it," argued Kate, consolingly, "that all the lieges of Foxden will be so taken up with this Professor Owlsdarck, who is fortunately to be there at the same time, that they will give little thought to your deficiencies. At all events, there is nothing to be done but to try to please the Young Men who give you the nomination."

Of course I agreed in this view of the case, and began to cast about for some grotesque subject for my lecture. But regret at disappointing the expectations of my old friend caused me to dismiss such light topics as presented themselves, and after searching for half an hour, I declared myself as much at a loss as ever.

"I think I have it!" cried Kate, at length. "Both your correspondents say that a poem would be particularly acceptable, — and a poem it must be."

"Modelled on William Morrill's 'New England'?" I said, dubiously.

"Not at all; but a comic poem, such as the secretary asks for. The dear Colonel will be pleased at the pretension of verse, and your humorous passages may be passed off as poetic license."

"There is much in what you say," I replied; "and if I put something about New England into the title, it will go far to reconcile all difficulties."

"Why not call it 'The Whims of New England'?" suggested Kate.

"'The Whims of New England,'" I repeated. Let me think how it would look in print: — 'We understand that the brilliant, sparkling, and highly humorous poem, entitled "The Whims of New England," which convulsed the *elite* of Foxden on Friday evening last,' etc., etc. Yes, it sounds well! 'The Whims of New England,' it shall be!"

It was a great satisfaction to have decided upon the style and title; and I sat down at once and began to jot off lines of ten syllables. "What do you think of this for a beginning?" I presently asked: —

"Who shall subdue this headlong-dashing  
Time,  
And lead it fettered through a dance of  
rhyme?  
Where is the coming man who shall not  
shrink  
To lay the Ocean Telegraph — in ink?  
Who comes to give us in a form compact  
Essence of horse-car, caucus, song, and  
tract?"

"But why begin with all these questions?" inquired Kate.

"It is the custom, my dear," I replied, decisively. "It is the conventional 'Here we are' of the poetical clown."

"Well, you must remember to be funny enough," said my wife, with something like a sigh. "It is not the humorous side of her hero's character that a woman likes to contemplate; so give me credit for disinterestedness in the advice."

"'Motley's the only wear'!" I exclaimed, — "at least before the Young Men of the Gelasmiphilous Society. I have a stock of Yankee anecdotes that can be worked off in rhyme to the greatest advantage. In short, I mean to attempt one of those immensely popular productions that no library — that is, no circulating library — should be without."

Easier said than done. The evenings of several weeks were pretty diligently devoted to my poem. I determined to begin with a few moral reflections, and in these I think I succeeded in reaching the highest standard of edification and dulness. Not that I did not succeed in the revel of comicalities I afterward permitted myself; but the selection and polishing of these oddities cost me much more labor than I had expected. I was really touched at the way in which my wife sacrificed her feminine preference for the emotional and sentimental, and heard me read over my piquant periods in order that all the graces of declamation might give them full effect. And when my poem was at length finished, when my stories had been carefully arranged with their points bristling out in all directions, when every shade of emphasis had been studied, I think it might have been called a popu-

lar performance, — perhaps *too* popular; — but that is a matter of opinion.

I felt decidedly nervous, as the time approached when I should make my first appearance before an audience. And the receipt of long letters from Colonel Prowley, overflowing with hopes, expectations, and offers about my contemplated harangue, did not decrease my embarrassment.

“How shall I tell the old gentleman,” I exclaimed, one day, after reading one of his Pre-Adamite epistles, — “how shall I tell him, that, instead of the solid discourse he expects, I have nothing but a collection of trumpery rhymes?”

“Why tell him anything about it?” said Kate. “The committee have not asked you to announce a subject, or even to declare whether you intend to address them in prose or verse. Then say nothing; when you begin to speak, it will be time enough for people to find out what you are to speak about, and whether they like it or not.”

“A capital plan!” I cried; “for I know, that, if Prowley, Dastick, and the rest of them, can once hear the thing, and find out how popular it is with the audience, they will come round and talk about sugared verses, or something of the sort.”

So it was decided that no notice of what I was to say, or how I was to say it, should be given to any inhabitant of Foxden. The town, unprepared by the approaches of a regular literary siege, must be carried by a grand assault. At times I felt doubtful; but then I knew it was the distrust of modesty and inexperience.

## II.

A FINE, clear day, unusually warm for the season, was the important fifth of November. Devoting the early hours to tedious travelling by the railroad, we drove up to the Prowley homestead soon after eleven o'clock. The Colonel and his sister received us with the old enthusiasm of hospitality, — Miss Prowley carrying Kate up-stairs for some fresh mys-

tery of toilet, while her brother walked me up and down the piazza in a maze of inquiries and information.

I was glad to find that he cordially approved my resolution not to announce in advance the subject or manner of my evening performance. Professor Owlsdarck had said nothing of the particular theme of discourse selected for the trustees; and, indeed, it had often been the custom for the Foxden Lyceum to make no other announcement than the name of the lecturer. I was greatly relieved by this assurance, and was about to express as much, when my companion left me to greet a tall, ungainly-looking gentleman who came round the east corner of the house. This stranger was about forty years old, wore light-blue spectacles, and had a near-sighted, study-worn look about him that speedily suggested the essayist of cenotaphs. There was a gloomy rustiness in his countenance, a stiff protrusion of the head, and an apparent dryness about the joints, that made me feel, that, if he could be taken to pieces and thoroughly oiled, he would be much better for it.

“Let me have the pleasure of making two valued and dear friends of mine acquainted with each other!” exclaimed Colonel Prowley. “Professor Owlsdarck, permit me to” — and with flourishes of extravagant compliment the introduction was accomplished.

“Brother, brother, Captain Strype wants to see you a moment; he has gone into the back-parlor,” called the voice of Miss Prowley from a window above.

Our host seemed a little annoyed; muttered something about the necessity of conciliating opposition editors; excused himself with elaborate apologies; and hurried into the house, leaving his two guests to ripen in acquaintance as they best might.

“Fine day, Sir,” I remarked, after a deferential pause, to allow my companion to open the conversation, had he been so disposed.

“Fine for funerals,” was the dismal response of Professor Owlsdarck.

"On the contrary," said I, "it seems to me one of those days when we are least able to realize our mortality."

"Then you think superficially," rejoined the Professor. "A warm day at this time of year induces people to leave off their flannels; and that, in our climate, is as good as a death-warrant."

"I confess, I never looked at it in that light."

"No, because you look at picturesqueness, while I look at statistics. Are you interested in mummies?"

I signified that in that direction my enthusiasm was limited.

"So I supposed," said Professor Owlsdarck. "And yet how can a man be said to know anything, who has not mastered this alphabet of our race? The naturalist or botanist studies the remains of extinct life in the rock or the gravel-pit. But how can the crumbling remnants of bygone brutes and plants compare in interest with the characteristic physical organization of ancient men? Remember, too, those natural and original peculiarities which distinguish every human body from myriads of its fellows. No, Sir, depend upon it, if Pope was right in declaring the proper study of mankind to be man, we must begin with mummies."

"But in these days," I pleaded, "education has become so varied, that, if we began at the beginning to study down, no man's lifetime would suffice to bring him within speaking distance of ordinary affairs."

"Education, as you call it, has become varied, but only because it has become shallow. Education is everywhere, and learning is wellnigh gone. Men sharpen their vulgar wits with a smattering of trifles; but fields of sober intellectual labor are neglected. What is the gain of surface to the fatal loss of depth in our acquirements!"

"For my own part," I said, "I have generally striven to inform myself upon topics connected with our own country."

"And such subjects are most interesting," replied the Professor, "if only the

selection be proper and the study exhaustive. The *bones*," he continued, laying a pungent emphasis on the word, — "the bones of the Paugussetts, the Potatucks, and the Quinipiacs are beneath our feet. The language of these extinct tribes clings to river, lake, and mountain. Coming from the contemplation of a people historically older, I have been refreshed in the proximity of these native objects of research. Consider the mysterious mounds on either side of the Ohio. What better reward for a life of scrutiny than to catch the slightest glimpse of the secret they have so long guarded!"

After this manner talked Professor Owlsdarck. Our conversation continued long enough to show me his complete adaptation to the admiring friendship of Colonel Prowley. He had the desperate antiquarian dilettanteism of our host, with a really accurate knowledge in unpopular, and most people would think unprofitable, branches of learning. His love of what may be called the faded upholstery and tattered millinery of history was, indeed, remarkable. His imagination was decidedly less than that of Prowley, but his capacity for genuine rummaging in the dust of ages was vastly superior. Colonel Prowley (to borrow a happy illustration from Mr. Grant White) would much rather have had the pen with which Shakspeare wrote "Hamlet" than the wit to understand just what he meant by it. Owlsdarck, on the contrary, would have preferred to understand the anatomy and habits of life of the particular goose which furnished the quill, and the exact dimensions of the onions with which it was finally served. Yet, notwithstanding a quivering sensation produced by the mouldy nature of his contemplations, I found the Professor's conversation, within the narrow limits of his specialities, intelligent and profitable. He had none of the morbid horror of giving exact information sometimes encountered in more pretentious society; and I confess it is never disagreeable to me to meet a man whose objects of pursuit are not precisely those

of that commonplace, highly respectable citizen we all hope to become.

It must have been an hour before Colonel Prowley rejoined us, and when he returned it was easy to see that something annoying had happened.

"Ah, my dear friend," he began, "here has been a sad mistake! Your wife has shown your address to the chief leader of the party which opposes your election. Captain Strype, editor of the "Foxden Weekly Regulator," did not come here for nothing. He sent me out of the room to get some beans to illustrate the Athenian manner of voting, and then he managed to get a sight of your manuscript."

"I hope it is no very serious blunder," said Kate, who had followed the Colonel to the piazza. "It was thoughtless, I admit; but the gentleman told me that he was an editor, and that it was always the custom to give the press information withheld from the general public. And then, he promised secrecy; and, after all, he had the manuscript only about five minutes,—just long enough to get an idea of the subject and its style of treatment; so I hope there's no great harm done."

"I should have thought you would have remembered Strype's connection with Howke and his Indian quackery," said I, a little irritated. "But it can be no great matter, since it will only give him an hour or two more to prepare the adverse criticism with which he will honor my performance."

"It is of much more matter than you think," said Colonel Prowley, sadly. "For the 'Regulator,' which appears to-morrow, goes to press this afternoon. Strype don't like to have it known, as it lessens the interest of the 'Latest Intelligence' column; but I happened to find it out some time ago."

"Then we are worsted indeed," I cried. "His eagerness is well explained; for, of course, any strictures he might make, on hearing the exercises this evening, would be useless for his purpose."

"A *critique* of the performance, purporting to come from an impartial audi-

tor, will be printed in a thousand 'Regulators' before you open your lips in our Town Hall," said the Colonel, bitterly.

I knew for the first time that stinging indignation felt by all decent aspirants for public favor upon encountering the underhand knavery which dims the lustre of democratic politics. It is not the blunt, open abuse, my young republican, which you will find galling,—but the contemptible meanness of dastards who have not mettle enough to be charlatans. For an instant my blood ran fiery hot; I grasped my cane, and for a moment had an impulse to fly after Strype and favor him with an assault-and-battery case for his despicable journal. But the passion was speedily over; for, upon reflection, I saw that no real injury could be done me with those who witnessed the success I confidently expected. And—it is awkward to acknowledge it—I nearly regained my former complacency when my wife whispered that Strype had declared to her that Professor Owlsdarek had come upon a bootless errand; for the Wrexford Trustees would never provide their Academy with so dark and gloomy a Principal, though he carried the Astor Library in his head. Do not mistake the encouragement I derived from this announcement: there was in it not the slightest ill-will to the distinguished antiquary, but only a comfortable appreciation of my own sagacity in putting it out of the power of any mischievous person to oppose my election on similar grounds.

Soon after this I proposed to Kate to go to the arbor at the end of the garden, and hear, once more, the sensation-passages of my poem, to the end that I might be certain that all the proprieties of pause and emphasis we had agreed upon were fresh in my memory. It turned out that there was just time to do this satisfactorily before the bell rang for dinner. And I felt greatly relieved, when, upon reëntering the house, I closed the bothering production for the last time, and left it—where I could not fail to remem-

ber it—with my hat and gloves upon the entry-table

You are apt to catch people in their freshness at a one o'clock dinner. Full of the half-finished schemes of the morning, they have much more individuality than at six. For, the work of the day fairly over, the clergyman, the merchant, the lawyer, and the doctor subside to a level of decent humanity, and leave out the salient contrasts of breeding which are worth noting.

Again those massive chairs, strong enough to bear a century of future guests, as they had borne a century of past ones, were ranged about the table. The great brass andirons, sparkling with recent rubbing, nearly made up for the spiritual life of the wood-fire that the day was too warm to admit. Mr. Clifton, the clergyman, a gentleman whose liberal and generous disposition could at times catch in the antiquarian ruts of his chief parishioners, was, as usual, the representative guest from the town. Kate and I, being expected to talk only just enough to pay for our admission, listened with much profit while the political question pending the next day, and many matters relevant and irrelevant thereto, underwent discussion.

"They say Howke's pills are growing in esteem of late; the names of many reverend brothers of yours are to be read in his advertisements as certifying the cure of some New-England ailment," observed our host.

"So I see," said Mr. Clifton; "and I regret to think that a class of men, unjustly accused of dogmatizing in those spiritual things they assuredly know, should lay themselves open to the suspicion, by testifying in those material matters whereof they are mostly ignorant. Not that I disallow that hackneyed tenth of Juvenal, "*Orandum est ut sit mens sana*," and the rest of it. But rather would I follow the Apostle, who, to the end that every man might possess his vessel in-sanctification and honor, was content to prescribe temperance and chastity, — leaving the recommendation of plasters and sirups to

those who had made them their special study.

"Yet in ancient times," remarked Professor Owlsdarek, "the offices of priest and physician were most happily combined. Among those lost children of Asia whom our fathers met in New England, the Powwows were the doctors of the body as well as the soul."

"For all that, I cannot believe that Shakspeare meant to indorse Indian medicine, as Strype says he did," said the Colonel.

We all looked surprise and incredulity at this unexpected assertion.

"You can't have read the last 'Regulator,' then," said Prowley, in explanation. "You know that Howke and Strype have long been endeavoring to find some motto from the great dramatist to print upon the boxes containing the Wigwam Pills; but, somehow, they never could discover one which seemed quite appropriate."

"'Familiar in their mouths as household words,'" suggested Mr. Clifton.

"Well, that might have done, to be sure; but they happened to miss it. So for the last month Strype has been studying the works of numerous ingenious commentators to see whether some of their happy emendations to the text might not meet the difficulty."

"But it must require the insertion of some entire speech or paragraph to make Shakspeare give his testimony in favor of savage pharmacy," said I, innocently.

"Not in the least necessary; it merely requires the slightest possible change in a single letter, — aided, of course, by a little intelligent commentary."

As we all looked rather doubtful, Colonel Prowley sent for the last number of Strype's valuable publication, and read as follows: —

**IMPORTANT LITERARY DISCOVERY.** We learn by the last steamer from England that a certain distinguished Shakspearian Editor and Critic, who has already proved that the Mighty Bard was perfectly acquainted with the circulation of the blood, and distinctly proph-

sied iron-plated steamers and the potato-rot, has now discovered that the Swan of Avon fully comprehended the Indian System of Medicine, and urged its universal adoption. Our readers have doubtless puzzled over that exclamation in Macbeth which reads, in common editions of the poet, 'Throw physic to the dogs!' The slightest consideration of the circumstances shows the absurdity of this vulgar interpretation. Macbeth was deservedly disgusted with the practice of the regular family physician who confessed himself unable to relieve the case in hand. He would therefore request him to abandon his pretensions, not to the dogs, which is simply ridiculous, but in favor of some class of men more skilled in the potencies of medicine. The line, as it came from the pen of Shakspeare, undoubtedly read, 'Throw Physicke to the Powwows'; in other words, resign the healing art to the Indians, who alone are able to practise it with success. And now mark the perfectly simple method of accounting for the blunder. We have only to suppose that a careless copyist or tipsy type-setter managed to get one loop too many upon the 'P,'—thus transforming the passage into, 'Throw Physicke to the Bowwows.' The proof-reader, naturally taking this for an infantile expression for the canine race, changed the last word to 'dogs,' as it has ever since stood."

Mr. Clifton smiled, and said, "Even if the emendation and inference could be accepted, the testimony of any man off the speciality he studied would only imply, not that the new school was perfect, but that he realized some imperfection in the old one. And this conviction I have had occasion to act upon, when my church has been shaken by spiritualism, abolitionism, and the like; for I knew that what was truly effective in a rival ministry must show what was defective in my own."

"If you speak of modern spiritualism," said Professor Owlsdarck, "you must allow it to be lamentably inferior to the same mystery of old. For how compare the best ghostly doings of these days,

those at Stratford in Connecticut, for example, I will not say to the famous doings at Delphi and Dodona, but even to the Moodus Noises once heard at East Hadam in that State? The ancestors of some of these nervous media testify to roarings in the air, rumblings in the bowels of the mountain, explosions like volleys of musketry, the moving of heavy stones, and the violent shaking of houses. Ah, Sir, you should use effort to have put to type your reverend brother Bradley's memoir on this subject, whereof the sole copy is held by the Historical Society at Hartford."

"Every recent quackery is so overlaid with a veneering of science," said the clergyman, "that those who have not had sufficient training to know that they lack scientific methods of thought are often unable to draw the distinction between a fact and an inference. There is much practical shrewdness and intelligence here in Foxden; yet I am constantly surprised to see how few, in relation to any circumstance out of the daily routine of business-life, recognize the difference between possibility, probability, and demonstration. And, indeed, it is no easy matter to impart a sense of their deficiency to those who have only been accustomed to deal with the loose forms of ordinary language."

"If we may believe the Padre Clavigero," observed the Professor, "it will not be easy to find a language so fit for metaphysical subjects, and so abounding in abstract terms, as the ancient Mexican."

This remark seemed hardly to the purpose; for whatever the excellences of that tongue might have been, there were insuperable objections to its adoption as a vehicle of communication between Mr. Clifton and his parishioners. But the last-named gentleman, with generous tact, allowed the conversation to wander back to those primitive solidities whither it naturally tended. It did not take long to get to the Pharaohs, of whose domestic arrangements the Professor talked with the familiar air of a man who dined with

them once a week. From these venerable potentates we soon came upon their irrepressible mummies, and here Owlsdarek was as thoroughly at home as if he had been brought up in a catacomb. Indeed, this singular person appeared fairly alive only when he surrounded himself with the deadest antiquities of the dimmest past. His remarks, as I have before admitted, had that interest which must belong to the careful investigation of anything; but I could not help thinking into how much worthier channels his powers of accurate investigation and indefatigable research might have been directed.

Colonel Prowley was of course delighted, and declared that every syllable his friend delivered was worthy to be recorded in that golden ink known to the Greeks and Romans; for, as he assured us, there were extant ancient manuscripts, written with a pigment of the precious metals, of which the matter was of far less importance than that conveyed by the learned utterances we had been privileged to hear.

Mr. Clifton showed no disposition to dispute this assertion, but kindly assisted by asking many intelligent questions, none having reference to anything later than B. C. 500. After dinner we adjourned to the library, and passed the afternoon in looking over collections of autographs and relics. We were also shown some volumes possessing an interest quite apart from their rarity, and some very choice engravings. In short, the hours went so pleasantly that we were all astonished when our host, looking at his watch, declared that it was time to order Tom to bring the carryall for Wrexford. Accordingly, Miss Prowley having rung the bell, whispered in the gentlest manner to the maid who answered the summons. A shrill feminine shouting was presently heard from the rear of the house, followed by the voice of Tom gruffly responsive from the distant barn. At this juncture Mr. Clifton took his leave, and Professor Owlsdarek retired to his chamber to bedeck himself for the trustees, parents, and pupils of the Wrexford Academy.

## III.

TOM and the carryall at length appeared, and Professor Owlsdarek, in a new suit of black clothes, in which the lately folded creases were very perceptible, came forth a sort of musty bridegroom out of his chamber, and rejoiced as a strong statistician to run his appointed race. Kate and I thought it best to diminish the final bustle of departure by lingering on the piazza just before the open door, where we could easily add our parting good-wishes, when he succeeded in getting out of the house. For there seemed to be some trouble in putting the Professor, with as little "tumbling" as possible, into his narrow overcoat, and then in finding his lecture, which had dropped under the table during the operation, and then in recovering his spectacles from the depths of some obscure pocket. Although Colonel Prowley had wellnigh exhausted the language of jubilant enthusiasm, I managed, while helping Professor Owlsdarek into the carryall, to express a respectful interest in his success. Yet, while the words were on my lips, I could not but remember what Strype had said in the morning, and admit the great likelihood of its truth. And although beginning to feel pretty nervous as the time drew near for my own sacrifice, I congratulated myself upon a preparation in accordance with the modern demands of a lyceum audience. With a pleasant sense of superior sagacity to this far more learned candidate for popular favor, I proposed, instead of returning to the house, to take an hour's stroll by the river, and go thence to the Town Hall at the appointed time.

"The very thing I was going to suggest," said Kate, "for I don't feel like talking. My mind is so full of excitement about your poem that ordinary conversational proprieties are almost impossible."

Our host, with true courtesy, permitted us to do as we pleased, merely saying that he would reserve the seat next

him for my wife, so that we need not arrive till it was time to commence the performance.

"But you are going to forget your manuscript!" he pleasantly added. "See, it lies on the entry-table with your gloves and overcoat."

Of course there was no danger of doing anything of the sort, for a memorandum to take good care of *that* had printed itself in the largest capitals upon the tablets of memory. I did feel disagreeably, however, when my old friend, in handing it to me, looked wistfully at the neat case of polished leather in which it was securely tied. It was, indeed, painful to disappoint both in subject and style of composition the kind interest with which he waited my appearance before an audience of his townsmen. The only antidote to such regrets was the reflection that I had prepared what would be most likely to cause the ultimate satisfaction of all parties; for his mortification at my general unpopularity and consequent defeat would of course have been greater than any personal satisfaction he might have experienced in the dry and antique matter accordant with his peculiar taste. I essayed some cheerful remark, as the shining packet slipped into my breast-pocket, and I buttoned my coat securely across the chest, that I might be continually conscious that the important contents had not dropped out.

"Remember, I shall be on the second settee from the platform; for, I would not willingly lose the slightest word," was the farewell exclamation of Colonel Prowley.

"You are too good, Sir," I answered, as we turned from the house; "I may always count upon your kind indulgence, and perhaps more of it will be claimed this evening than your partiality leads you to suspect."

"And now," said I to Kate, when we were fairly out of hearing, "let us dismiss for the last hour this provoking poem, and forget that there are lyceum-lectures, Indian doctors, and General Courts in this beautiful world."

Of course I never suspected that we could do anything of the kind, but I thought an innocent hypocrisy to that effect might beguile the time yet before us. Kate acquiesced; and we walked along a wooded path where every stone and shrub was rich in associations with that first summer in Foxden when our acquaintance began. And soon our petty anxiety was merged in deeper feelings that flowed upon us, as the great event in our mortal existence was seen in the retrospect from the same pleasant places where it once loomed grandly before us. The sweet, fantastic anticipations that pronounced the "All Hail, Hereafter," to the great romance of life again started from familiar objects to breathe a freer atmosphere. The coming fact, which all natural things once called upon us to accept as the final resting-place of the soul, had passed by us, and we could look onward still. We saw that marriage was not the satisfaction of life, but a noble means whereby our selfish infirmities might be purified by divine light. Well for us that this Masque and Triumph of Nature should not always be seen as from the twentieth year! It is too cheap a way to idealize and ennoble self in the noontide sun of one marriage-day. Yet let the gauze and tinsel be removed when they may; for all earnest souls there are realities behind them that shall make the heavens and earth seem accidents. It once seems as if marriage would discolor the world with roseate tint; but it does better: it enlightens it. Thus, in imagination, did we sally backward and forward as the twilight thickened about us. In delicious sympathy of silence we watched quivering shadows in the water, and marked how the patient elms gathered in their strength to endure the storms of winter.

"It is not a lottery," I said, at last, unconsciously thinking aloud.

"No," responded Kate; "it was so christened of old, because our shrewd New-Englanders had not made possible a better simile. It is like one of the

great Gift Enterprises of these latter years, where everybody is sure of his money's worth in book or trinket, and is surprised by a present into the bargain. The majority, to be sure, get but their bit of soap or their penny-whistle, while a fortunate few are provided with gold watches and diamond breast-pins."

I thought this a good comparison; but I did not say so, for I was in the mood to rise for my analogy or allegory, instead of swooping to pick it out of Mr. Perham's advertisements.

"Nay, nay, my dear," I rejoined, at length; "let us, who have won genuine jewelry, exalt our gains by some nobler image. A stagnant puddle of water may reflect the blessed sun even better than this river that eddies by our feet, yet it is not there that one likes to look for it."

"Perhaps it is the farthest bound of reaction from transcendentalism, that causes us, when we do think a free thought, to look about for something grimly practical to fasten it upon," argued Kate, smilingly. "Yet I do not quite agree with the reason of my Aunt Patience for devoting herself to the roughest part of gardening. A taste for flowers, she contends, is legitimate only when it has perfected itself out of a taste for earth-worms. There are truly thoughts only to be symbolized by sunset colors and the song of birds, that are better than if mortared with logic and based as firmly as the Pyramids."

The fatal word "Pyramids" sent us flying through the ages till we reached the tombs of the Pharaohs, whence we came bounding back again through Grecian civilization, mediæval darkness, and modern enlightenment, till we naturally stopped at Professor Owlsdarek and the carryall, by this time nearing Wrexford. My own literary performance, so associated with that of the Professor, next occupied our attention, and we realized the fact that it was time to be moving slowly in the direction of the Town Hall.

"Don't let us get there till just the

hour for commencing," said I, endeavoring to restrain the quickened step of my companion.

And I quoted the ghastly merriment of the gentleman going to be hung, to the effect that there was sure to be no fun till he arrived.

We said nothing else, but indulged in a very definite sort of wandering by the river's bank, — I nervously looking at my watch, occasionally devouring a troche, and patting my manuscript pocket, or, to make assurance doubly sure, touching the polished surface of the case within.

We timed it to a minute. At exactly half-past seven o'clock, I proceeded up the broad aisle of the Town Hall, put my wife into the place reserved with the Prowley party upon settee number two from the platform, and mounted the steps of that awful elevation amid general applause.

The President of the Young Men's Gelsamiphilous Society, who occupied a chair at the right of the desk, came forward to receive me, and we shook hands with an affectation of the most perfect ease and naturalness. Here, a noisy satisfaction, as of boys in the gallery, accompanied by a much fainter enthusiasm among their elders below.

"You are just in time," whispered the President. "I was afraid you would be too late; we always like to begin punctually."

"I am all ready," said I, faintly; "you may announce me immediately."

I subsided into the orator's chair, and glanced, for the first time, at my audience. The Young Men, somehow or other, did not appear so numerous as I had hoped. On the other hand, Dr. Dastick, and a good many friends of eminently scientific character, loomed up with fearful distinctness. Even the malleable element of youth seemed to harden by the side of that implacable fibre of scholastic maturity which was bound to resist my most delicate manipulation. I withstood, with some effort, the stage-fright that was trying to creep over me, and hastily

snatched the manuscript from my pocket. Yes, I must have been confused, indeed; for here is the string round the case tied in a hard knot, and I could have taken my oath that I fastened it in a very loose bow! I picked at it, and pulled at it, and humored it in every possible way, but the plaguy thing was as fast as ever. At last—just as the President was approaching the conclusion of his remarks, and had got as far as, “*I shall now have the pleasure of introducing a gentleman who,*” etc., etc.—I bethought myself of a relief quite as near at hand as that key which Faithful held in his bosom during his confinement in Doubting Castle. My penknife was drawn to the rescue, and the string severed, while the President, retiring to his chair, politely waved me to the place he had occupied. Again great applause from the gallery, with tempered applause from below. With as much unconcern as I could conveniently assume, I advanced to the front, took a final survey of the audience, laid my manuscript on the desk, turned back the cover, and fixed my eyes upon the page before me.

How describe the nightmare horror that then broke upon my senses? Upon the first page, in large, writing-master’s hand, I had inscribed my title:—“**THE WHIMS OF NEW ENGLAND: A POEM.**” In its place, in still larger hand, in lank and grisly characters, stared this hideous substitute:—

“**THE OBSEQUIES OF CHEOPS:  
A LECTURE.**”

With that vivid rapidity with which varied and minute scenery is crowded into a moment of despair, I perceived the fatal blunder. Owlsdarck and I had changed manuscripts. Upon that entry-table where lay my poem, the hurry and bustle of departure had for a moment thrown his lecture. The cases being identical in appearance, he had taken up my unfortunate production, which, doubtless, at that very moment, he was opening before parents, trustees, and pupils connected with the Wrexford Academy. I

will not deny, that, in the midst of my own perplexity, a ghastly sense of the ridiculous came over me, as I thought of the bewilderment of the Professor. For an instant of time I actually knew a grim enjoyment in the fact that circumstances had perpetrated a much better joke than any in my poem. But my heart stopped beating as an impatient rumble of applause testified that the desires of the audience were awaiting gratification.

I glared upon the expectant faces before me; but they seemed to melt and fuse into one another, or to dance about quite independently of the bodies with which they should have been connected. I strove to murmur an apology; but the words stuck in my throat.

More applause, in which a slight whistling flavor was apparent. A kicking, as of cow-hide boots of juvenile proportions, audible from the gallery. A suspicion of cat-calling in a monad state of development about the door. Of course my prospects were ruined. My knees seemed disposed to deposit their burden upon the floor. Hope was utterly extinguished in my breast. There I stood, weak and contemptible, before the wretched populace whose votes I had come to solicit. Then it was, the resolution, or rather the *rage*, of despair inspired me. I determined to take a terrible vengeance upon my abandoned constituents. Quick as lightning the thought leaped to execution. I seized the insufferable composition before me, and began to fulminate its sentences at the democracy of Foxden.

“Fulminate” is expressive; but words like “roar” and “bellow” must be borrowed to give the reader an idea of the vocal power put into that performance. For it is a habit of our infirm natures to counteract embarrassment by some physical exaggeration, which, by absorbing our chief attention, leaves little to be occupied with the cause of distress. Persons of extreme diffidence are sometimes able to face society by behaving as if they were vulgarly at their ease, and men troubled with a morbid modesty of-

ten find relief in acting a character of overweening pride. Thus it was only by absorbing attention in the effort to produce a very sensational order of declamation that I could perform the task undertaken. Owlsdarek's handwriting was luckily large and legible; and I was able to storm and gesticulate without hinderance.

I ploughed through the tough old homily, tossing up the biggest size of words as if they were not worth thinking of. I went at the lamented Cheops with a fearful enthusiasm. The air seemed heavy with a miasma of information. It was not my fault, if every individual in the audience did not feel personally sticky with the glutinous drugs I lavished upon the embalment. I was as profuse with my myrrh, cassia, and aloes, as if those costly vegetable productions were as cheap as cabbages. I split up a sycamore-tree to make an external shell, as if it were as familiar a wood as birch or hemlock. At last, having got his case painted all over with appropriate emblems, and Cheops himself done up in his final wrapping, I struck a mighty blow upon the desk, which set the lamps ringing and flaring in majestic emphasis.

It was at this point that the presence of an audience was once more recalled to me. Enthusiastic applause, peal after peal, responded to my efforts. I ventured to look out into the hall before me. Dr. Dastick was thumping with energy upon the neighboring settee. The elders of Foxden were leading the approbation, and a wild tattoo was resonant from the gallery. The face of Colonel Prowley was aglow with satisfaction, and the dear old gentleman actually waved his handkerchief as he caught my eye. But my frightened, pale-faced Kate, — my first shudder returned again as I met her gaze. Again I felt the sinking, prickling sensation of being in for it. There was no resource but to charge at the Professor's manuscript as vigorously as ever.

I now went to pyramid-making with the same zeal with which I had acted as undertaker. Leeks, parsley, and gar-

lic, to the amount of one thousand and sixty talents, were lavished upon the workmen. Stuffed cats and sacred crocodiles were carried in procession to encourage them. Stones, thirty feet long, were heaved out of quarries, and hieroglyphics chopped into them with wonderful despatch. At last, after an hour and a half of laborious vociferation, I managed to get the pyramid done and Cheops put into it. A sort of dress-parade of authorities was finally called: Herodotus, Tacitus, Diodorus Siculus, Strabo, Pliny, Solinus, and many others, were fired in concluding volleys among the audience. I was conscious of a salvo of clapping, pounding, and stamping that thundered in reply. The last sentence had been uttered. Again the audience blurred and danced before my eyes; I staggered back, and sank confused and breathless into the orator's chair.

"Good, good," whispered the President. "It was a capital idea; ha, ha, very funny! To hear you hammering away at Egyptian antiquities as if you'd never thought of anything else! The elocution and gestures, too, were perfectly tall;—the Young Men of our Society were delighted;—I could see they were."

"Permit me to congratulate you, Sir," said Dr. Dastick, who had elbowed his way to the platform. "I confess myself most agreeably disappointed in your performance. There was in it a solidity of information and a curiosity of important research for which I was totally unprepared. Let me hope that such powers of oratory as we have heard this evening may soon plead the cause of good learning in the legislature of our State."

"A good subject, my dear young friend, and admirably developed," exclaimed Colonel Prowley. "You have already won the palm of victory, if I rightly read the faces of some who were too quick to endow you with the common levity and indiscretion of youth."

"You have had success with young and old," said the Reverend Mr. Clifton, kindly holding out his hand. "We have

rarely lecturers who seem to give such universal satisfaction."

After these congratulations, and others to the same purpose, the real state of the case could no longer be hidden. Instead of the mortification and defeat confidently expected, I had unwittingly made a ten-strike upon that erratic set of pins, the Foxden public. The Young Men, who knew me only as the *γελωτοποιός*, or laughter-maker, of their merry association, considered the sombre getting up and energetic delivery of the Cheops lecture the very best joke I had ever perpetrated. Some of the most influential citizens, as has been already seen, were personally gratified in the general dustiness of the subject; while others, perchance, were able to doze in the consciousness that the opinions of Cheops upon such disturbing topics as Temperance, Anti-Slavery, and Woman's Rights must necessarily be of a patriarchal and comforting character. But the glory of the unlooked-for triumph seemed strangely lessened by the reflection that I had no just claim to the funereal plumage with which I had so happily decked myself.

"Gentlemen," said I, "I ought to tell you that the address I have delivered this evening is—in fact—is not original."

"That's just why we like it," rejoined Dr. Dastick. "No young man should be original; it is a great impertinence, if he tries to be."

"I do not mean simply to acknowledge an indebtedness to the ancient authorities quoted in the lecture; but—but, the truth is, that the arrangement and composition cannot properly be called my own."

"Not the least consequence," said Colonel Prowley. "You showed a commendable modesty in seeking the aid of any discreet and learned person. You know I offered to give you what assistance was in my power; but you found—unexpectedly, at the last moment, perhaps—some wiser friend."

"Most unexpectedly,—at the very last moment," I murmured.

"As for originality," said the clergyman, pleasantly, "when you have come to my age, you will cease to trouble yourself much about it. No man can accomplish anything important without a large indebtedness to those who have lived, as well as to those who live. We know that the old fathers not only dared to lack originality, but even to consider times and peoples in their selection and treatment of topics. *Non quod sentiunt, sed quod necesse est dicunt*, may be said of them in no disparagement. For, not to mention others, I might quote Cyprian, Minutius, Lactantius, and Hilarius,"—

"Anything hilarious is as much out of place in a lecture as it would be in a sermon," interrupted Dr. Dastick, who had evidently missed the drift of his pastor's remarks. "And I rejoice that the success of our friend who has spoken this evening rebukes those vain and shallow witlings who have sometimes degraded the lyceum. I could send such fellows to make sport in the courts of luxurious princes, for they may well follow after jousts, tourneys, stage-plays, and like sugar-plums of Satan; as, indeed, we need them not in this Puritan commonwealth. But come, all of you, for an hour, to my house; for I am mistaken, if there be not in my cabinet many rare illustrations of the discourse we have just heard. I have several bones by me, which, if they belonged not to Cheops himself, may well be relics of his near relations. And as an offset to their dry and wasted estate, I have some luscious pears which are just now at full maturity."

Colonel Prowley and his party had small inclination to resist the Doctor's invitation, and it was speedily agreed that the lecturer (having, as we have seen, escaped consignment to European monarchs) should have the privilege of mingling in the social life of Foxden for the next hour or so.

"But you forget Professor Owlsdarek," I ventured to whisper to the Colonel. "I must see him the instant he returns. That is—I am very impatient to hear of his success. I cannot let him arrive

at your house, if I am not there to meet him."

My host stared a little at this impetuosity of interest, and then informed me that the carryall from Wrexford must necessarily pass Dastick's house, and that he himself would run out and stop it and bring in the Professor.

"No," I exclaimed, with energy; "promise that I may go out and receive Owlsdarek alone, or I cannot go to Dr. Dastick's."

"I doubt if there would be any precedent for this," argued the Colonel, gravely.

"Then we must make one," I asserted. "For surely nothing is more appropriate than that a lecturer, returning from his exercise, whether in triumph or defeat, should be first encountered by some brother of the craft who can have adequate sympathy with his feelings."

After some demur, Colonel Prowley consented to adopt this view of the case; and we passed out of the hot lecture-room into the still, fresh night. Here Kate took my arm and we managed for an instant to lag behind the crowd.

"I am not mad yet," I said, "though when I began that extraordinary lecture you must have thought me so."

"For a few moments," replied my wife, "I was utterly bewildered; but soon, of course, I guessed the explanation. You appeared before the Foxden audience with Professor Owlsdarek's lecture."

"And he appeared with my poem before the audience in Wrexford."

"Good Heavens!" exclaimed Kate, "I never thought of that part of it!"

"Yet that is *the* part of it of which it behooves us to think just at present," I replied. "To my utter amazement, there has been something, either in the Professor's wisdom or in my rendering of it, that has *taken* with the audience. Not knowing what Owlsdarek has done, or may wish to do, I have not explained the humiliating and ridiculous blunder, — though I have stoutly denied myself any

credit for the information or composition of the lecture."

"But the Professor could n't have read your poem at Wrexford?"

"Two hours ago I should have thought it so impossible, that only one thing in the world would have seemed to me more so, and that was that I should have read his lecture in Foxden. But, luckily, I have permission to stop the carryall on its way back, and so meet Owlsdarek before he comes into the house. Let us keep the secret for the present, and wait further developments."

As others of the party had begun to look back, and to linger for us to come up, there was no opportunity for further conference. And so we made an effort, and talked of everything but what we were thinking of, till we reached Dr. Dastick's house.

I was conscious of a sweet memory, while passing along the broad, low-roofed piazza where I first met my wife. And I marvelled that fate had so arranged matters, that, again in the moonlight, near that very spot, I was to have an important interview with another person with whom my destiny had become strangely entangled.

One sense was painfully acute while the relics and pears were being passed about during the remainder of the evening. At any period I could have heard the creak of the venerable carryall above the swarm of information which buzzed about the Doctor's parlor. I responded to the waggish raillery of the young men, talked *bones* with their seniors, disclaimed all originality in my lecture, thanked people for what they said about my spirited declamation, and — through it all — listened intently for the solemn rumble upon the Wrexford road. Time really seemed to stop and go backward, as if in compliment to the ancient fragments of gums, wrappages, and scarabæi that were produced for our inspection. The carryall, I thought, must have broken down; Wrexford had, perchance, been suddenly destroyed, like the Cities of the Plain; the Professor had been tarred and

feathered by the enraged inhabitants, or, perhaps, had been murdered upon the road;—there was no limit to the doleful hypotheses which suggested themselves.

And, in fact, it was now getting late to everybody. The last pear had vanished, and people began to look at the clock. Colonel Prowley was audibly wondering what could have detained the Professor, and Dr. Dastick was expressing his regret at not having the pleasure of seeing him, when, — no, — yes, a jerking trundle was heard in the distance, — it was not the wind this time! I seized my hat, rushed from the house, and paused not till I had stopped the carryall with the emphasis of a highwayman.

“I have come to ask you to get out, Professor Owlsdarck,” I exclaimed. “Tom can drive the horse home; we’re all at Dr. Dastick’s, and they’ve sent me to beg you to come in.”

The occupant of the vehicle, upon hearing my voice, made haste to alight. Tom gave an expressive “Hud up,” and rolled away into the moonlight.

“My dear Sir,” said I, “no apology,—no allusion to how it happened; we have both suffered quite enough. Only tell me what you managed to do with my poem, and what the people of Wrexford have done to you.”

“What did I do with your poem?” echoed the Professor,—there was an undertone of humorous satisfaction in his words that I had never before remarked,—“why, what could I do with it but read it to my audience? They thought it was capital, and — Well, I thought so, too. And if you want to know what the trustees did to me, you will find it in print in a day or two. The fact is, they called a meeting, after I finished, and unanimously elected me Principal of their Academy.”

I managed to get a few more particulars before entering the house, and these, with other circumstances afterwards ascertained, made the Professor’s adventure to unravel itself thus: Owlsdarck had discovered the change of manuscript about

five minutes before he was expected to speak. The audience had assembled, and (in view of the respect which should appertain to the office for which he was an aspirant) he saw the humiliation of disappointing the academic flock by a confession of his absurd position. He glanced at the first page of my verses, and, seeing that they commenced in a grave and solemn strain, determined to run for luck, and make the best of them. Accordingly he began by saying, that, instead of the usual literary address, he should read a new American poem, which he trusted would prove popular and to the purpose. It turned out to be very much to the purpose. The dismal Professor Owlsdarck, giving utterance to the Yankee quips and waggery which I had provided, took his audience by storm with amazement and delight. For the truth was, as Strype had intimated in the morning, a formidable opposition had arrayed itself against the Professor, which (while acknowledging the claims of his profound learning) contended that he lacked sympathy with the merry hearts of youth, a fatal defect in the character of a teacher. Of course the entertainment of the evening filled all such cavillers with shame and confusion. There was nothing to do but to own their mistake, and to support the many-sided Owlsdarck with all enthusiasm. Hence his unanimous election, and hence my infinite relief upon reëntering the Doctor’s house.

We determined to keep our own counsel, and thereupon ratified our unintentional exchange of productions. I presented my poem to Professor Owlsdarck, and he resigned in my favor all right, title, and interest in Cheops and his Obsequies. We both felt easier after this had been done, and walked arm-in-arm into Dr. Dastick’s parlor, conscious of a plethoric satisfaction strange to experience.

I need hardly allude to the indignation of the Foxden electors, when the “Regulator” appeared the next morning with a bitter *critique* of my performance in the Town Hall. There is notoriously a good deal of license allowed to opposition edit-

ors upon election-day. But to ridicule a serious and erudite lecture as "a flimsy and buffooning poem,"—there was, really, in this, a blindness of passion, a display of impotent malice, an utter contempt for the common sense of subscribers, to which the history of editorial vagaries seemed to furnish no parallel. Of course, a libel so gross and atrocious not only failed of its object, but drove off in disgust all decent remnants of the opposing party which the lecture of the previous evening had failed to conciliate.

And now I think it has been explained why I was chosen to represent Foxden, and how my vote came to be so nearly unanimous. Whether I made a good use of the lesson of that fifth of November it does not become me to say. But of the success of the Principal of the Wrexford Academy in the useful sphere of labor upon which he then entered I possess undoubted evidence.

"Old Owlsdarck's a pretty stiff man in school," exclaimed a chubby little fellow in whom I have some interest, when he lately returned from Wrexford to pass the summer vacation,— "Old Owlsdarck's a pretty stiff man in school; but when he

comes into the play-ground, you ought to hear him laugh and carry on with the boys!"

A few seasons ago the Professor consented to repeat his famous poem upon "The Whims of New England," and made the tour of the river-towns, and several hundred dollars. He wrote me that he had received tempting overtures for a Western excursion, which his numerous lyceum-engagements at home compelled him to decline.

I have since faced many audiences, and long conquered the maiden bashfulness of a first appearance. It is necessary to confess that my topics of discourse have generally been of too radical a character to maintain the unprecedented popularity of my first attempt. I don't mind mentioning, however, that the manuscript wherewith I delighted the people of Foxden is yet in my possession. And should there be among my readers members of the Inviting Committee of any neighboring Association, League, or Lyceum, they will please notice that I am open to offers for the repetition of a highly instructive *Lecture: Subject, The Obsequies of Cheops.*

## MOUNTAINS AND THEIR ORIGIN.

A CHAPTER on mountains will not be an inappropriate introduction to that part of the world's history on which we are now entering, when the great inequalities of the earth's surface began to make their appearance; and before giving any special account of the geological succession in Europe, I will say something of the formation of mountains in general, and of the men whose investigations first gave us the clue to the intricacies of their structure. It has been the work of the nineteenth century to decipher the history of the mountains, to smooth out these wrinkles in the crust of the earth,

to show that there was a time when they did not exist, to decide at least comparatively upon their age, and to detect the forces which have produced them.

But while I speak of the reconstructive labors of the geologist with so much confidence, because to my mind they reveal an intelligible coherence in the whole physical history of the world, yet I am well aware that there are many and wide gaps in our knowledge to be filled up. All the attempts to represent the appearance of the earth in past periods by means of geological maps are, of course, but approximations of the truth, and will com-

pare with those of future times, when the phenomena are better understood, much as our present geographical maps, the result of repeated surveys and of the most accurate measurements, compare with those of the ancients.

Homer's world was a flat expanse, surrounded by ocean, of which Greece was the centre. Asia Minor, the Ægean Islands, Egypt, part of Italy and Sicily, the Mediterranean and the Black Sea filled out and completed his map.

Herodotus, the Greek historian and geographer, who lived more than five hundred years before Christ, had not enlarged it much. He was, to be sure, a voyager on the Mediterranean, and had an idea of the extent of Italy. Acquaintance with Phœnician merchants also had enlarged his knowledge of the world; Sardinia, Corsica, and Spain were known to him; he was familiar with the Black and Red Seas; and though an indentation on his map in the neighborhood of the Caspian would seem to indicate that he was aware of the existence of this sea also, it is not otherwise marked.

Herodotus makes a considerable advance beyond his predecessors: the Caspian Sea has a place on his map; Asia is sketched out, including the Persian Gulf with the large rivers pouring into it; and the course of the Ganges is traced, though he makes it flow east and empty into the Pacific, instead of turning southward and emptying into the Indian Ocean.

Eratosthenes, two centuries before Christ, is the first geographer who makes some attempt to determine the trend of the land and water, presenting a suggestion that the earth is broader in one direction than in the other. In his map, he adds also the geographical results derived from the expeditions of Alexander the Great.

Ptolemy, who flourished in Alexandria in the reign of Hadrian, is the next geographer of eminence, and he shows us something of Africa; for, in his time, the Phœnicians, in their commercial expedi-

tions, had sailed far to the south, had reached the termination of Africa, with ocean lying all around it, and had seen the sun to the north of them. This last assertion, however, Ptolemy does not credit, and he is as skeptical of the open ocean surrounding the extremity of Africa as modern geographers and explorers have been of the existence of Kane's open Arctic Sea. He believes that what the Phœnician traders took to be the broad ocean must be part of an inland sea, corresponding to the Mediterranean, with which he was so familiar. His map includes also England, Ireland, and Scotland; and his Ultima Thule is, no doubt, the Hebrides of our days.

Our present notions of the past periods of the world's history probably bear about the same relation to the truth that these ancient geographical maps bear to the modern ones. But this should not discourage us, for, after all, those maps were in the main true as far as they went; and as the ancient geographers were laying the foundation for all our modern knowledge of the present conformation of the globe, so are the geologists of the nineteenth century preparing the ground for future investigators, whose work will be as far in advance of theirs as are the delineations of Carl Ritter, the great master of physical geography in our age, in advance of the map drawn by the old Alexandrian geographer. We shall have our geological explorers and discoverers in the lands and seas of past times, as we have had in the present, — our Columboes, our Captain Cooks, our Livingstones in geology, as we have had in geography. There are undiscovered continents and rivers and inland seas in the past world to exercise the ingenuity, courage, and perseverance of men, after they shall have solved all the problems, sounded all the depths, and scaled all the heights of the present surface of the earth.

What has been done thus far is chiefly to classify the inequalities of the earth's surface, and to detect the different causes which have produced them. Foldings

of the earth's crust, low hills, extensive plains, mountain-chains and narrow valleys, broad table-lands and wide valleys, local chimneys or volcanoes, river-beds, lake-basins, inland seas, — such are some of the phenomena which, disconnected as they seem at first glance, have nevertheless been brought under certain principles, and explained according to definite physical laws.

Formerly men looked upon the earth as a unit in time, as the result of one creative act, with all its outlines established from the beginning. It has been the work of modern science to show that its inequalities are not contemporaneous or simultaneous, but successive, including a law of growth, — that heat and cold, and the consequent expansion and contraction of its crust, have produced wrinkles and folds upon the surface, while constant oscillations, changes of level which are even now going on, have modified its conformation, and moulded its general outline through successive ages.

In thinking of the formation of the globe, we must at once free ourselves from the erroneous impression that the crust of the earth is a solid, steadfast foundation. So far from being immovable, it has been constantly heaving and falling; and if we are not impressed by its oscillations, it is because they are not so regular or so evident to our senses as the rise and fall of the sea. The disturbances of the ocean, and the periodical advance and retreat of its tides, are known to our daily experience; we have seen it tossed into great billows by storms, or placid as a lake when undisturbed. But the crust of the earth also has had its storms, to which the tempests of the sea are as nothing, — which have thrown up mountain waves twenty thousand feet high, and fixed them where they stand, perpetual memorials of the convulsions that upheaved them. Conceive an ocean wave that should roll up for twenty thousand feet, and be petrified at its greatest height: the mountains are but the gigantic waves raised on the surface of the land by the geological tempests of past

times. Besides these sudden storms of the earth's surface, there have been its gradual upheavals and depressions, going on now as steadily as ever, and which may be compared to the regular action of the tides. These, also, have had their share in determining the outlines of the continents, the height of the lands, and the depth of the seas.

Leaving aside the more general phenomena, let us look now at the formation of mountains especially. I have stated in a previous article that the relative position of the stratified and unstratified rocks gives us the key to their comparative age. To explain this I must enter into some details respecting the arrangement of stratified deposits on mountain-slopes and in mountain-chains, taking merely theoretical cases, however, to illustrate phenomena which we shall meet with repeatedly in actual facts, when studying special geological formations.

We have, for instance, in Figure 1, a

Fig. 1.

central granite mountain, with a succession of stratified beds sloping against its sides, while at its base are deposited a number of horizontal beds which have evidently never been disturbed from the position in which they were originally accumulated. The reader will at once perceive the method by which the geologist decides upon the age of such a mountain. He finds the strata upon its slopes in regular superposition, the uppermost belonging, we will suppose, to the Triassic period; at its base he finds undisturbed horizontal deposits, also in regular superposition, belonging to the Jurassic and Cretaceous periods. Therefore, he argues, this mountain must have been uplifted after the Triassic and all preceding deposits were formed, since it has broken its way through them, and forced them out of their natural position; and it

must have been previous to the Jurassic and Cretaceous deposits, since they have been accumulated peacefully at its base, and have undergone no such perturbations.

The task of the geologist would be an easy one, if all the problems he has to deal with were as simple as the case I have presented here; but the most cursory glance at the intricacies of mountain-structure will show us how difficult it is to trace the connection between the phenomena. We must not form an idea of ancient mountain-upheavals from existing active volcanoes, although the causes which produced them were, in a modified and limited sense, the same. Our present volcanic mountains are only chimneys, or narrow tunnels, as it were, pierced in the thickness of the earth's surface, through which the molten lava pours out, flowing over the edges and down the sides and hardening upon the slopes, so as to form conical elevations. The mountain-ranges upheaved by ancient eruptions, on the contrary, are folds of the earth's surface, produced by the cooling of a comparatively thin crust upon a hot mass. The first effect of this cooling process would be to cause contractions; the next, to produce corresponding protrusions, — for, wherever such a shrinking and subsidence of the crust occurred, the consequent pressure upon the melted materials beneath must displace them and force them upward. While the crust continued so thin that these results could go on without very violent dislocations, — the materials within easily finding an outlet, if displaced, or merely lifting the surface without breaking through it, — the effect would be moderate elevations divided by corresponding depressions. We have seen this kind of action, during the earlier geological epochs, in the upheaval of the low hills in the United States, leading to the formation of the coal-basins.

On our return to the study of the American continent, we shall find in the Alleghany chain, occurring at a later period, between the Carboniferous and Triassic

epochs, a good illustration of the same kind of phenomena, though the action of the Plutonic agents was then much more powerful, owing to the greater thickness of the crust and the consequent increase of resistance. The folds forced upward in this chain by the subsidence of the surface are higher than any preceding elevations; but they are nevertheless a succession of parallel folds divided by corresponding depressions, nor does it seem that the displacement of the materials within the crust was so violent as to fracture it extensively.

Even so late as the formation of the Jura mountains, between the Jurassic and Cretaceous periods, the character of the upheaval is the same, though there are more cracks at right angles with the general trend of the chain, and here and there the masses below have broken through. But the chain, as a whole consists of a succession of parallel folds, forming long domes or arches, divided by longitudinal valleys. The valleys represent the subsidences of the crust; the domes are the corresponding protrusions resulting from these subsidences. The lines of gentle undulation in this chain, so striking in contrast to the rugged and abrupt character of the Alps immediately opposite, are the result of this mode of formation.

After the crust of the earth had grown so thick, as it was, for instance, in the later Tertiary periods, when the Alps were uplifted, such an eruption could take place only by means of an immense force, and the extent of the fracture would be in proportion to the resistance opposed. It is hardly to be doubted, from the geological evidence already collected, that the whole mountain-range from Western Europe through the continent of Asia, including the Alps, the Caucasus, and the Himalayas, was raised at the same time. A convulsion that thus made a gigantic rent across two continents, giving egress to three such mountain-ranges, must have been accompanied by a thousand fractures and breaks in contrary directions. Such a

pressure along so extensive a tract could not be equal everywhere; the various thicknesses of the crust, the greater or less flexibility of the deposits, the direction of the pressure, would give rise to an infinite variety in the results; accordingly, instead of the long, even arches, such as characterize the earlier upheavals of the Alleghanies and the Jura, there are violent dislocations of the surface, cracks, rents, and fissures in all directions, transverse to the general trend of the upheaval, as well as parallel with it.

Leaving aside for the moment the more baffling and intricate problems of the later mountain-formations, I will first endeavor to explain the simpler phenomena of the earlier upheavals.

Suppose that the melted materials within the earth are forced up against a mass of stratified deposits, the direction of the pressure being perfectly vertical, as represented in Figure 2. Such a press-

Fig. 2.

ure, if not too violent, would simply lift the strata out of their horizontal position into an arch or dome, (as in Figure 3,) and if continued or repeated in

Fig. 3.

immediate sequence, it would produce a number of such domes, like long billows following each other, such as we have in the Jura. But though this is the prevailing character of the range, there are many instances even here where an unequal pressure has caused a rent at right angles with the general direction of the upheaval; and one may

trace the action of this unequal pressure, from the unbroken arch, where it has simply lifted the surface into a dome, to the granite crest, where the melted rock has forced its way out and crystallized between the broken beds that rest against its slopes.

In other instances, the upper beds alone may have been cracked, while the continuity of the lower ones remains unbroken. In this case we have a longitudinal valley on the top of a mountain-range, lying between the two sides of the broken arch (as in Figure 4). Suppose, now, that

Fig. 4.

there are also transverse cracks across such a longitudinal split, we have then a longitudinal valley with transverse valleys opening into it. There are many instances of this in the Alleghanies and in the Jura. Sometimes such transverse valleys are cut straight across, so that their openings face each other; but often the cracks have taken place at different points on the opposite sides, so that, in travelling through such a transverse valley, you turn to the right or left, as the case may be, where it enters the longitudinal valley, and follow that till you come to another transverse valley opening into it from the opposite side, through which you make your way out, thus crossing the chain in a zigzag course (as in Figure 5). Such valleys are often much

Fig. 5.

narrower at some points than at others. There are even places in the Jura where

a rent in the chain begins with a mere crack,—a slit but just wide enough to admit the blade of a knife; follow it for a while, and you may find it spreading gradually into a wider chasm, and finally expanding into a valley perhaps half a mile wide, or even wider.

By means of such cracks, rivers often pass through lofty mountain-chains, and when we come to the investigation of the glacial phenomena connected with the course of the Rhone, we shall find that river following the longitudinal valley which separates the northern and southern parts of the chain of the Alps till it comes to Martigny, where it takes a sharp turn to the right through a transverse crack, flowing northward between walls fourteen thousand feet high, till it enters the Lake of Geneva, through which it passes, issuing at the other end, where it takes a southern direction. For a long time mountains were supposed to be the limitations of rivers, and old maps represent them always as flowing along the valleys without ever passing through the mountain-chains that divide them; but geology is fast correcting the errors of geography, and a map which represents merely the external features of a country, without reference to their structural relations, is no longer of any scientific value.

It is not, however, by rents in mountain-chains alone, or by depressions between them, that valleys are produced; they are often due to the unequal hardness of the beds raised, and to their greater or less liability to be worn away and disintegrated by the action of the rains. This inequality in the hardness of the rocks forming a mountain-range not only adds very much to the picturesqueness of outline, but also renders the landscape more varied through the greater or less fertility of the soil. On the hard rocks, where little soil can gather, there are only pines, or a low, dwarfed growth; but on the rocks of softer materials, more easily acted upon by the rain, a richer soil gathers, and there, in the midst of mountain-scenery, may be found the most fer-

tile growth, the richest pasturage, the brightest flowers. Where such a patch of arable soil has a southern exposure on a mountain-side, we may have a most fertile vegetation at a great height and surrounded by the dark pine-forests. Many of the pastures on the Alps, to which from height to height the shepherds ascend with their flocks in the summer,—seeking the higher ones as the lower become dry and exhausted,—are due to such alternations in the character of the rocks.

In consequence of the influence of time, weather, atmospheric action of all kinds, the apparent relation of beds has often become so completely reversed that it is exceedingly difficult to trace their original relation. Take, for instance, the following case. An eruption has upheaved the strata over a given surface in such a manner as to lift them into a mountain, cracking open the upper beds, but leaving the lower ones unbroken. We have then a valley on a mountain-summit between two crests resembling the one already shown in Figure 4. Such a narrow passage between two crests may be changed in the course of time to a wide expansive valley by the action of the rains, frosts, and other disintegrating agents, and the relative position of the strata forming its walls may seem to be entirely changed.

Suppose, for example, that the two upper layers of the strata rent apart by the upheaval of the mountain are limestone and sandstone, while the third is clay and the fourth again limestone (as in Figure 6). Clay is soft, and yields very

Fig. 6.

readily to the action of rain. In such a valley the edges of the strata forming its walls are of course exposed, and the clay formation will be the first to give way under the action of external influences.

Gradually the rains wear away its substance till it is completely hollowed out. By the disintegration of the bed beneath them, the lime and sandstone layers above lose their support and crumble down, and this process goes on, the clay constantly wearing away, and the lime and sand above consequently falling in, till the upper beds have receded to a great distance, the valley has opened to a wide expanse instead of being inclosed between two walls, and the lowest limestone bed now occupies the highest position on the mountain. Figure 7 represents one of the crests shown in Figure 6, after such a levelling process has changed its outline.

Fig. 7.

But the phenomena of eruptions in mountain-chains are far more difficult to trace than the effects thus gradually produced. Plutonic action has, indeed, played the most fantastic tricks with the crust of the earth, which seems as plastic in the grasp of the fiery power hidden within it as does clay in the hands of the sculptor.

We have seen that an equal vertical pressure from below produces a regular dome, — or that, if the dome be broken through, a granite crest is formed, with stratified materials resting against its slopes. But the pressure has often been oblique instead of vertical, and then the slope of the mountain is uneven, with a gradual ascent on one side and an abrupt wall on the other; or in some instances the pressure has been so lateral that the mountain is overturned and lies upon its side, and there are still other cases where one mountain has been tilted over and has fallen upon an adjoining one.

Sometimes, when beds have been torn asunder, one side of them has been forced up above the other; and there are even instances where one side of a mountain has been forced under the surface of the

earth, while the other has remained above. Stratified beds of rock are even found which have been so completely capsized, that the layers, which were of course deposited horizontally, now stand on end, side by side, in vertical rows. I remember, after a lecture on some of these extravagances in mountain-formations, a friend said to me, not inaptly, — “One can hardly help thinking of these extraordinary contortions as a succession of frantic frolics: the mountains seem like a troop of rollicking boys, hunting one another in and out and up and down in a gigantic game of hide-and-seek.”

The width of the arch of a mountain depends in a great degree on the thickness and flexibility of the beds of which it is composed. There is not only a great difference in the consistency of stratified material, but every variety in the thickness of the layers, from an inch, and even less, to those measuring from ten or twenty to one hundred feet and more in depth, without marked separation of the successive beds. This is accounted for by the frequent alternations of subsidence and upheaval; the continents having tilted sometimes in one direction, sometimes in another, so that in certain localities there has been much water and large deposits, while elsewhere the water was shallow and the deposits consequently less. Thin and flexible strata have been readily lifted into a sharp, abrupt arch with narrow base, while the thick and rigid beds have been forced up more slowly in a wider arch with broader base.

Table-lands are only long unbroken folds of the earth's surface, raised uniformly and in one direction. It is the same pressure from below, which, when acting with more intense force in one direction, makes a narrow and more abrupt fold, forming a mountain-ridge, but, when acting over a wider surface with equal force, produces an extensive uniform elevation. If the pressure be strong enough, it will cause cracks and dislocations at the edges of such a gigantic fold, and then we have table-lands between two mountain-chains, like the

Gobi in Asia between the Altai Mountains and the Himalayas, or the table-land inclosed between the Rocky Mountains and the coast-range on the Pacific shore.

We do not think of table-lands as mountainous elevations, because their broad, flat surfaces remind us of the level tracts of the earth; but some of the table-lands are nevertheless higher than many mountain-chains, as, for instance, the Gobi, which is higher than the Alleghanies, or the Jura, or the Scandinavian Alps. One of Humboldt's masterly generalizations was his estimate of the average thickness of the different continents, supposing their heights to be levelled and their depressions filled up, and he found that upon such an estimate Asia would be much higher than America, notwithstanding the great mountain-chains of the latter. The extensive table-land of Asia, with the mountains adjoining it, outweighed the Alleghanies, the Rocky Mountains, the Coast-Chain, and the Andes.

When we compare the present state of our knowledge of geological phenomena with that which prevailed fifty years ago, it seems difficult to believe that so great and important a change can have been brought about in so short a time. It was on German soil and by German students that the foundation was laid for the modern science of systematic geology.

In the latter part of the eighteenth century, extensive mining operations in Saxony gave rise to an elaborate investigation of the soil for practical purposes. It was found that the rocks consisted of a succession of materials following each other in regular sequence, some of which were utterly worthless for industrial purposes, while others were exceedingly valuable. The *Muschel-Kalk* formation, so called from its innumerable remains of shells, and a number of strata underlying it, must be penetrated before the miners reached the rich veins of *Kupferschiefer* (copper slate), and below this came what was termed the *Todt-*

*liegende* (dead weight), so called because it contained no serviceable materials for the useful arts, and had to be removed before the valuable beds of coal lying beneath it, and making the base of the series, could be reached. But while the workmen wrought at these successive layers of rock to see what they would yield for practical purposes, a man was watching their operations who considered the crust of the earth from quite another point of view.

Abraham Gottlob Werner was born more than a century ago in Upper Lusatia. His very infancy seemed to shadow forth his future studies, for his playthings were the minerals he found in his father's forge. At a suitable age he was placed at the mining school of Freiberg in Saxony, and having, when only twenty-four years of age, attracted attention in the scientific world by the publication of an "Essay on the Characters of Minerals," he was soon after appointed to the professorship of mineralogy in Freiberg. His lot in life could not have fallen in a spot more advantageous for his special studies, and the enthusiasm with which he taught communicated itself to his pupils, many of whom became his devoted disciples, disseminating his views in their turn with a zeal which rivalled the master's ardor.

Werner took advantage of the mining operations going on in his neighborhood, the blasting, sinking of shafts, etc., to examine critically the composition of the rocks thus laid open, and the result of his analysis was the establishment of the Neptunic school of geology alluded to in a previous article, and so influential in science at the close of the eighteenth and the opening of the nineteenth century. From the general character of these rocks, as well as the number of marine shells contained in them, he convinced himself that the whole series, including the Coal, the *Todtliegende*, the *Kupferschiefer*, the *Zechstein*, the Red Sandstone, and the *Muschel-Kalk*, had been deposited under the agency of water, and were the work of the ocean.

Thus far he was right, with the exception that he did not include the local action of fresh water in depositing materials, afterwards traced by Cuvier and Brogniart in the Tertiary deposits about Paris. But from these data he went a step too far, and assumed that all rocks, except the modern lavas, must have been accumulated by the sea,—believing even the granites, porphyries, and basalts to have been deposited in the ocean and crystallized from the substances it contained in solution.

But, in the mean time, James Hutton, a Scotch geologist, was looking at phenomena of a like character from a very different point of view. In the neighborhood of Edinburgh, where he lived, was an extensive region of trap-rock,—that is, of igneous rock, which had forced itself through the stratified deposits, sometimes spreading in a continuous sheet over large tracts, or splitting them open and filling all the interstices and cracks so formed. Thus he saw igneous rocks not only covering or underlying stratified deposits, but penetrating deep into their structure, forming dikes at right angles with them, and presenting, in short, all the phenomena belonging to volcanic rocks in contact with stratified materials. He again pushed his theory too far, and, inferring from the phenomena immediately about him that heat had been the chief agent in the formation of the earth's crust, he was inclined to believe that the stratified materials also were in part at least due to this cause. I have alluded in a former number to the hot disputes and long-contested battles of geologists upon this point. It was a pupil of Werner's who at last set at rest this much vexed question.

At the age of sixteen, in the year 1790, Leopold von Buch was placed under Werner's care at the mining school of Freiberg. Werner found him a pupil after his own heart. Warmly adopting his teacher's theory, he pursued his geological studies with the greatest ardor, and continued for some time under the immediate influence and guidance of the

Freiberg professor. His university-studies over, however, he began to pursue his investigations independently, and his geological excursions led him into Italy, where his confidence in the truth of Werner's theory began to be shaken. A subsequent visit to the region of extinct volcanoes in Auvergne, in the South of France, convinced him that the aqueous theory was at least partially wrong, and that fire had been an active agent in the rock-formations of past times. This result did not change the convictions of his master, Werner, who was too old or too prejudiced to accept the later views, which were nevertheless the result of the stimulus he himself had given to geological investigations.

But Von Buch was indefatigable. For years he lived the life of an itinerant geologist. With a shirt and a pair of stockings in his pocket and a geological hammer in his hand he travelled all over Europe on foot. The results of his foot-journey to Scandinavia were among his most important contributions to geology. He went also to the Canary Islands; and it is in his extensive work on the geological formations of these islands that he showed conclusively not only the Plutonic character of all unstratified rocks, but also that to their action upon the stratified deposits the inequalities of the earth's surface are chiefly due. He first demonstrated that the melted masses within the earth had upheaved the materials deposited in layers upon its surface, and had thus formed the mountains.

No geologist has ever collected a larger amount of facts than Von Buch, and to him we owe a great reform not only in geological principles, but in methods of study also. An amusing anecdote is told of him, as illustrating his untiring devotion to his scientific pursuits. In studying the rocks, he had become engaged also in the investigation of the fossils contained in them. He was at one time especially interested in the *Terebratulæ* (fossil shells), and one evening in Berlin, where he was engaged in the study of these remains, he came across a notice

in a Swedish work of a particular species of that family which he could not readily identify without seeing the original specimens. The next morning Von Buch was missing, and as he had invited guests to dine with him, some anxiety was felt on account of his non-appearance. On inquiry, it was found that he was already far on his way to Sweden: he had started by daylight on a pilgrimage after the new, or rather the old, *Terebratula*. I tell the story as I heard it from one of the disappointed guests.

All great natural phenomena impressed him deeply. On one occasion it was my good fortune to make one of a party from the "Helvetic Association for the Advancement of Science" on an excursion to the eastern extremity of the Lake of Geneva. I well remember the expressive gesture of Von Buch, as he faced the deep gorge through which the Rhone issues from the interior of the Alps. While others were chatting and laughing about him, he stood for a moment absorbed in silent contemplation of the grandeur of the scene, then lifted his hat and bowed reverently before the mountains.

Next to Von Buch, no man has done more for modern geology than Elie de Beaumont, the great French geologist. Perhaps the most important of his generalizations is that by which he has given us the clue to the limitation of the different epochs in past times by connecting them with the great revolutions in the world's history. He has shown us that the great changes in the aspect of the globe, as well as in its successive sets of animals, coincide with the mountain-upheavals.

I might add a long list of names, American as well as European, which will be forever honored in the history of science for their contributions to geology in the last half-century. But I have intended only to close this chapter on mountains with a few words respecting the men who first investigated their intimate structural organization, and established methods of study in reference to them now generally adopted throughout the scientific world. In my next article I shall proceed to give some account of special geological formations in Europe, and the gradual growth of that continent.

---

### CAMILLA'S CONCERT.

I, WHO labor under the suspicion of not knowing the difference between "Old Hundred" and "Old Dan Tucker,"—I, whose every attempt at music, though only the humming of a simple household melody, has, from my earliest childhood, been regarded as a premonitory symptom of epilepsy, or, at the very least, hysterics, to be treated with cold water, the bellows, and an unmerciful beating between my shoulders,—I, who can but with much difficulty and many a retrogression make my way among the olden mazes of tenor, alto, treble, bass, and who stand "clean daft" in the resounding confusion of andante, soprano,

falsetto, palmetto, pianissimo, akimbo, l' allegro, and il penseroso,—I was bidden to Camilla's concert, and, like a sheep to the slaughter, I went.

He bears a great loss and sorrow who has "no ear for music." Into one great garden of delights he may not go. There needs no flaming sword to bar the way, since for him there is no gate called Beautiful which he should seek to enter. Blunted and stolid he stumps through life for whom its harp-strings vainly quiver. Yet, on the other hand, what does he not gain? He loses the concord of sweet sounds, but he is spared the discord of harsh noises. For the

surges of bewildering harmony and the depths of dissonant disgust, he stands on the levels of perpetual peace. You are distressed, because in yonder well-trained orchestra a single voice is pitched one-sixteenth of a note too high. For me, I lean out of my window on summer nights enraptured over the organ-man who turns poor lost Lilian Dale round and round with his inexorable crank. It does not disturb me that his organ wheezes and sputters and grunts. Indeed, there is for me absolutely no wheeze, no sputter, no grunt. I only see dark eyes of Italy, her olive face, and her gemmed and lustrous hair. You mutter maledictions on the infernal noise and caterwauling. I hear no caterwauling, but the river-god of Arno ripples soft songs in the summer-tide to the lilies that bend above him. It is the guitar of the cantatrice that murmurs through the scented, dewy air,—the cantatrice with the laurel yet green on her brow, gliding over the molten moonlit water-ways of Venice, and dreamily chiming her well-pleased lute with the splash of the oars of the gondolier. It is the chant of the flower-girl with large eyes shining under the palm-branches in the market-place of Milan; and with the distant echoing notes come the sweet breath of her violets and the unquenchable odors of her crushed geraniums borne on many a white sail from the glorified Adriatic. Bronzed cheek and swart brow under my window, I shall by-and-by throw you a paltry nickel cent for your tropical dreams; meanwhile tell me, did the sun of Dante's Florence give your blood its fierce flow and the tawny hue to your bared and brawny breast? Is it the rage of Tasso's madness that burns in your uplifted eyes? Do you take shelter from the fervid noon under the cypresses of Monte Mario? Will you meet queenly Marguerite with myrtle wreath and myrtle fragrance, as she wanders through the chestnut vales? Will you sleep to-night between the colonnades under the golden moon of Napoli? Go back, O child

of the Midland Sea! Go out from this cold shore, that yields but crabbed harvests for your threefold vintages of Italy. Go, suck the sunshine from Seville oranges under the elms of Posilippo. Go, watch the shadows of the vines swaying in the mulberry-trees from Epomeo's gales. Bind the ivy in a triple crown above Bianca's comely hair, and pipe not so wailingly to the Vikings of this frigid Norseland.

But Italy, remember, my frigid Norseland has a heart of fire in her bosom beneath its overlying snows, before which yours dies like the white sick hearth-flame before the noonday sun. Passion, but not compassion, is here "cooled a long age in the deep-delved earth." We lure our choristers with honeyed words and gentle ways: you lay your sweetest songsters on the gridiron. Our orchards ring with the full-throated happiness of a thousand birds: your pomegranate groves are silent, and your miserable cannibal kitchens would tell the reason why, if outraged spits could speak. Go away, therefore, from my window, Giuseppe; the air is growing damp and chilly, and I do not sleep in the shadows of broken temples.

Yet I love music: not as you love it, my friend, with intelligence, discrimination, and delicacy, but in a dull, woody way, as the "gouty oaks" loved it, when they felt in their fibrous frames the stir of Amphion's lyre, and "floundered into hornpipes"; as the gray, stupid rocks loved it, when they came rolling heavily to his feet to listen; in a great, coarse, clumsy, ichthyosaurian way, as the rivers loved sad Orpheus's wailing tones, stopping in their mighty courses, and the thick-hided hippopotamus dragged himself up from the unheeded pause of the waves, dimly thrilled with a vague ecstasy. The confession is sad, yet only in such beastly fashion come sweetest voices to me,—not in the fulness of all their vibrations, but sounding dimly through many an earthy layer. Music I do not so much hear as feel. All the exquisite nerves that bear

to your soul these tidings of heaven in me lie torpid or dead. No beatitude travels to my heart over that road. But as sometimes an invalid, unable through mortal sickness to swallow his needed nutriment, is yet kept alive many days by being immersed in a bath of wine and milk, which somehow, through unwonted courses, penetrates to the sources of vitality,—so I, though the natural avenues of sweet sounds have been hermetically sealed, do yet receive the fine flow of the musical ether. I feel the flood of harmony pouring around me. An inward, palpable, measured tremulousness of the subtle secret essence of life attests the presence of some sweet disturbing cause, and, borne on unseen wings, I mount to loftier heights and diviner airs.

So I was comforted for my waxed ears and Camilla's concert.

There is one other advantage in being possessed with a deaf-and-dumb devil, which, now that I am on the subject of compensation, I may as well mention. You are left out of the arena of fierce discussion and debate. You do not enter upon the lists wherefrom you would be sure to come off discomfited. Of all reputations, a musical reputation seems to me the most shifting and uncertain; and of all rivalries, musical rivalries are the most prolific of heart-burnings and discomfort. Now, if I should sing or play, I should wish to sing and play well. But what is well? Nancie in the village "singing-seats" stands head and shoulders above the rest, and wears her honors tranquilly, an authority at all rehearsals and serenades. But Anabella comes up from the town to spend Thanksgiving, and, without the least mitigation or remorse of voice, absolutely drowns out poor Nancie, who goes under, giving many signs. Yet she dies not unavenged, for Harriette sweeps down from the city, and immediately suspends the victorious Anabella from her aduncate nose, and carries all before her. Mysterious is the arrangement of the world. The last round of the ladder is not yet reached. To Madame Morlot, Harriette is a savage, *une bête*,

without cultivation. "Oh, the dismal little fright! a thousand years of study would be useless; go, scour the floors; she has positively no voice." No voice, Madame Morlot? Harriette, no voice,—who burst every ear-drum in the room last night with her howling and hooting, and made the stoutest heart tremble with fearful forebodings of what might come next? But Madame Morlot is not infallible, for Herr Driesbach sits shivering at the dreadful noises which Madame Morlot extorts from his sensitive and suffering piano, and at the necessity which lies upon him to go and congratulate her upon her performance. Ah! if his tortured conscience might but congratulate her and himself upon its close! And so the scale ascends. Hills on hills and Alps on Alps arise, and who shall mount the ultimate peak till all the world shall say, "Here reigns the Excellence"? I listen with pleasure to untutored Nancie till Anabella takes all the wind from her sails. I think the force of music can no farther go than Madame Morlot, and, behold, Herr Driesbach has knocked out her underpinning. I am bewildered, and I say, helplessly, "What shall I admire and be *à la mode*?" But if it is so disheartening to me, who am only a passive listener, what must be the agonies of the *dramatis personæ*? "Hang it!" says Charles Lamb, "how I like to be liked, and what I do to be liked!" And do Nancie, Harriette, and Herr Driesbach like it any less? What shall avenge them for their *spretæ injuria formæ*? What can repay the hapless performer, who has performed her very best, for learning by terrible, indisputable indications that her cherished and boasted Cremona is but a very second fiddle?

So, standing on the high ground of certain immunity from criticism and hostile judgment, I do not so much console myself as I do not stand in need of consolation. I rather give thanks for my mute and necessarily unoffending lips, and I shall go in great good-humor to Camilla's concert.

There are many different ways of go-

ing to a concert. You can be one of a party of fashionable people to whom music is a diversion, a pastime, an agreeable change from the assembly or the theatre. They applaud, they condemn, they criticise with perfect *au-faitism*. (No one need say there is no such word. I know there was not yesterday, and perhaps will not be to-morrow; but that there is such a one to-day, you have but to open your eyes and see.) Into such company as this, even I, whose poor old head is always getting itself wedged in where it has no business to be, have chanced to be thrown. This is torture. My cue is to turn into the Irishman's echo, which always returned for his "How d' ye do?" a "Pretty well, thank you." I cling to the skirts of that member of the party who is agreed to have the best taste and echo his responses an octave higher. If he sighs at the end of a song, I bring out my pocket-handkerchief. If he says "charming," I murmur "delicious." If he thinks it "exquisite," I pronounce it "enchanting." Where he is rapt in admiration, I go into a trance, and so shamble through the performances, miserable impostor that I am, and ten to one nobody finds out that I am a dunce, fit for treason, stratagem, and spoils. It is a great strain upon the mental powers, but it is wonderful to see how much may be accomplished and what skill may be attained by long practice.

It is not ingenuous? I am afraid not quite. The guilt rest with those who make me incur it! You cannot even read a book with any degree of pleasure, if you know an opinion is expected of you at the finis. You leave the popular novel till people have forgotten to ask, "How do you like it?" How can you enjoy anything, if you are not at liberty to give yourself wholly to it, but must be all the while making up a speech to deliver when it is over? Nothing is better than to be a passive listener, but nothing is worse than to be obliged to turn yourself into a sounding-board: and must I have both the suffering and the guilt?

Also one may go to a concert as a con-

ductor with a single musical friend. By conductor I do not mean escort, but a magnetic conductor, rapture conductor, a fit medium through which to convey away his delight, so that he shall not become surcharged and explode. He does not take you for your pleasure, nor for his own, but for use. He desires some one to whom he can from time to time express his opinions and his enthusiasms, sure of an attentive listener,—since nothing is so pleasant as to see one's views welcomed. Now you cannot pretend that in such a case your listening is thoroughly honest. You are receptive of theories, criticisms, and reminiscences; but you would not like to be obliged to pass an examination on them afterwards. You do, it must be confessed, sometimes, in the midst of eloquent dissertations, strike out into little flowery by-paths of your own, quite foreign to the grand paved-ways along which your friend supposes he is so kind as to be leading you. But however digressive your mind may be, do not suffer your eyes to digress. Whatever may be the intensity of your *ennui*, endeavor to preserve an animated expression, and your success is complete. This is all that is necessary. You will never be called upon for notes or comments. Your little escapades will never be detected. It is not your opinions that were sought, nor your education that was to be furthered. You were only an escape-pipe, and your mission ceased when the soul of song fled and the gas was turned off. This, too, is all that can justly be demanded. Minister, lecturer, singer, no one has any right to ask of his audience anything more than opportunity,—the externals of attention. All the rest is his own look-out. If you prepossess your mind with a theme, you do not give him an even chance. You must offer him in the beginning a *tabula rasa*,—a fair field,—and then it is his business to go in and win your attention; and if he cannot, let him pay the costs, for the fault is his own.

This also is torture, but its name is Zoar, a little one.

There is yet another way. You may

go with one or many who believe and practise the doctrine of *laissez-faireity*. Do not now proceed to dash your brains out against that word. I have just done it myself, and one such head as mine is ample sacrifice for any verbal crime. They go to the concert for love of music, — negatively for its rest and refreshment, positively for its embodied delights. They take you for your enjoyment, which they permit you to compass after your own fashion. They force from you no comment. They demand no criticism. They do not require censure as your certificate of taste. They do not trouble themselves with your demeanor. If you choose to talk in the pauses, they are receptive and cordial. If you choose to be silent, it is just as well. If you go to sleep, they will not mind, — unless, under the spell of the genius of the place, your sleep becomes vocal, and you involuntarily join the concert in the undesirable rôle of De Trop. If you go into raptures, it is all the same; you are not watched and made a note of. They leave you at the top of your bent. Whether you shall be amused, delighted, or disgusted, they respect your decisions and allow you to remain free.

How did I go to my concert? Can I tell for the eyes that made "a sunshine in the shady place"? Was I not veiled with the beautiful hair, and blinded with the lily's white splendor? So went I with the Fairy Queen in her golden coach drawn by six white mice, and, behold, I was in Camilla's concert-room.

It is to be a fiddle affair. Now I am free to say, if there is anything I hate, it is a fiddle. Hide it away under as many Italian coatings as you choose, — viol, violin, viola, violone, violoncello, violoncellettissimo, at bottom it is all one, a fiddle; in its best estate, a diddle, diddle, frivolous, rattling, Yankee-Doodle, country-tavern-ball whirligig, without dignity, sentiment, or power; and at worst a rubbing, rasping, squeaking, woolleny, noisy nuisance, that it sets my teeth on edge to think of. I shudder at the mere memory of the reluctant bow dragging its slow

length across the whining strings. And here I am, in my sober senses, come to hear a fiddle!

But it is Camilla's. Do you remember — I don't, but I should, if I had known it — a little girl who, a few years ago, became famous for her wonderful performance on the violin? At six years of age she went to a great concert, and of all the fine instruments there, the unseen spirit within her made choice, "Papa, I should like to learn the violin." So she learned it and loved it, and when ten years old delighted foreign and American audiences with her marvellous genius. It was the little Camilla who now, after ten years of silence, tuned her beloved instrument once more.

As she walks softly and quietly in, I am conscious of a disappointment. I had unwittingly framed for her an æsthetic violin, with the essential strings and bridge and bow indeed, but submerged and forgot in such Orient splendors as befit her glorious genius. Barbaric pearl and gold, finest carved work, flashing gems from Indian water-courses, the delicatest pink sea-shell, a bubble-prism caught and crystallized, — of all rare and curious substances wrought with dainty device, fantastic as a dream, and resplendent as the light, should her instrument be fashioned. Only in "something rich and strange" should the mystic soul lie sleeping for whom her lips shall break the spell of slumber, and her young fingers unbar the sacred gates. And, oh, me! it is, after all, the very same old red fiddle! Dee, dee!

But she neither glides nor trips nor treads, as heroines invariably do, but walks in like a good Christian woman. She steps upon the stage and faces the audience that gives her hearty greeting and waits the prelude. There is time for cool survey. I am angry still about the red fiddle, and I look scrutinizingly at her dress and think how ugly are hoops. The skirt is white silk, — a brocade, I believe, — at any rate, stiff, and, though probably full to overflowing in the hands of the seamstress, who must compress it

within prescribed limits about the waist, looks scanty and straight, because, like all other skirts in the world at this present writing, it is stretched over a barrel. Why could she not, she who comes before us to-night, not as a fashion, but an inspiration,—why could she not discard the mode, and assume that immortal classic drapery whose graceful falls and folds the sculptor vainly tries to imitate, the painter vainly seeks to limn? When Corinne tuned her lyre at the Capitol, when she knelt to be crowned with her laurel crown at the hands of a Roman senator, is it possible to conceive her swollen out with crinoline? And yet I remember, that, though *sa robe était blanche, et son costume était très pïtoresque*, it was *sans s'écarter cependant assez des usages reçus pour que l'on pût y trouver de l'affectation*; and I suppose, if one should now suddenly collapse from conventional rotundity to antique statuesqueness, the great “*on*” would very readily “*y trouver de l'affectation.*” Nevertheless, though one must dress in Rome as Romans do, and though the Roman way of dressing is, taking all things into the account, as good as any, and, if not more graceful, a thousand times more convenient, wholesome, comfortable, and manageable than Helen's, still it does seem, that, when one steps out of the ordinary area of Roman life and assumes an abnormal position, one might, without violence, assume temporarily an abnormal dress, and refresh our dilated eyes once more with flowing, wavy outlines. Music is one of the eternities: why should not its accessories be? Why should a discord disturb the eye, when only concord delight the ear?

But I lift my eyes from Camilla's unpliant drapery to the red red rose in her hair, and thence, naturally, to her silent face, and in that instant ugly dress and red red rose fade out of my sight. What is it that I see, with tearful tenderness and a nameless pain at the heart? A young face deepened and drawn with suffering; dark, large eyes, whose natural laughing light has been quenched

in tears, yet shining still with a distant gleam caught from the eternal fires. O still, pathetic face! A sterner form than Time has passed and left his vestige there. Happy little girl, playing among the flickering shadows of the Rhine-land, who could not foresee the darker shadows that should settle and never lift nor flicker from her heavy heart! Large, lambent eyes, that might have been sweet, but now are only steadfast,—that may yet be sweet, when they look to-night into a baby's cradle, but gazing now upon a waiting audience, are only steadfast. Ah! so it is. Life has such hard conditions, that every dear and precious gift, every rare virtue, every pleasant facility, every genial endowment, love, hope, joy, wit, sprightliness, benevolence, must sometimes be cast into the crucible to distil the one elixir, patience. Large, lambent eyes, in which days and nights of tears are petrified, steadfast eyes that are neither mournful nor hopeful nor anxious, but with such unvoiced sadness in their depths that the hot tears well up in my heart, what do you see in the waiting audience? Not censure, nor pity, nor forgiveness, for you do not need them,—but surely a warm human sympathy, since heart can speak to heart, though the thin, fixed lips have sealed their secret well. Sad mother, whose rose of life was crushed before it had budded, tender young lips that had drunk the cup of sorrow to the dregs, while their cup of bliss should hardly yet be brimmed for life's sweet spring-time, your crumbling fanes and broken arches and prostrate columns lie not among the ruins of Time. Be comforted of that. They bear witness of a more pitiless Destroyer, and by this token I know there shall dawn a brighter day. The God of the fatherless and the widow, of the worse than widowed and fatherless, the Avenger of the Slaughter of the Innocents, be with you, and shield and shelter and bless!

But the overture wavers to its close, and her soul hears far off the voice of the coming Spirit. A deeper light shines

in the strangely introverted eyes,—the look as of one listening intently to a distant melody which no one else can hear,—the look of one to whom the room and the people and the presence are but a dream, and past and future centre on the far-off song. Slowly she raises her instrument. I almost shudder to see the tawny wood touching her white shoulder; yet that cannot be common or unclean which she so loves and carries with almost a caress. Still intent, she raises the bow with a slow sweep, as if it were a wand of divination. Nearer and nearer comes the heavenly voice, pouring around her a flood of mystic melody. And now at last it breaks upon our ears,—softly at first, only a sweet faint echo from that other sphere, but deepening, strengthening, conquering,—now rising on the swells of a controlling passion, now sinking into the depths with its low wail of pain; exultant, scornful, furious, in the glad outburst of opening joy and the fierce onslaught of strength; crowned, sceptred, glorious in garland and singing-ropes, throned in the high realms of its inheritance, a kingdom of boundless scope and ever new delights: then sweeping down through the lower world with diminishing rapture, rapture lessening into astonishment, astonishment dying into despair, it gathers up the passion and the pain, the blight and woe and agony; all garnered joys are scattered. Evil supplants the good. Hope dies, love pales, and faith is faint and wan. But every death has its moaning ghost, pale spectre of vanished loves. Oh, fearful revenge of the outraged soul! The mysterious, uncomprehended, incomprehensible soul! The irrepressible, unquenchable, immortal soul, whose every mark is everlasting! Every secret sin committed against it cries out from the housetops. Cunning may strive to conceal, will may determine to smother, love may fondly whisper, “It does not hurt”; but the soul will not *be* outraged. Somewhere, somehow, when and where you least expect, unconscious, perhaps, to its owner, unrecognized by the many, visi-

ble only to the clear vision, somewhere, somehow, the soul bursts asunder its bonds. It is but a little song, a tripping of the fingers over the keys, a drawing of the bow across the strings,—only that? Only that! It is the protest of the wronged and ignored soul. It is the outburst of the pent and prisoned soul. All the ache and agony, all the secret wrong and silent endurance, all the rejected love and wounded trust and slighted truth, all the riches wasted, all the youth poisoned, all the hope trampled, all the light darkened,—all meet and mingle in a mad whirl of waters. They surge and lash and rage, a wild storm of harmony. Barriers are broken. Circumstance is not. The soul! the soul! the soul! the wronged and fettered soul! the freed and royal soul! It alone is king. Lift up your heads, O ye gates, and be ye lift up, ye everlasting doors, and the King of Glory shall come in! Tremble, O Tyrant, in your mountain-fastness! Tremble, Deceiver, in your cavern under the sea! Your victim is your accuser. Your sin has found you out. Your crime cries to Heaven. You have condemned and killed the just. You have murdered the innocent in secret places, and in the noon-day sun the voice of their blood crieth unto God from the ground. There is no speech nor language. There is no will nor design. The seal of silence is unbroken. But unconscious, entranced, uninspired, the god has lashed his Sibyl on. The vital instinct of the soul, its heaven-born, up-springing life, flings back the silver veil, and reveals the hidden things to him who hath eyes to see.

The storm sobs and soothes itself to silence. There is a hush, and then an enthusiasm of delight. The small head slightly bows, the still face scarcely smiles, the slight form disappears,—and after all, it was only a fiddle.

“When Music, heavenly maid, was young,” begins the ode; but Music, heavenly maid, seems to me still so young, so very young, as scarcely to have made her power felt. Her language is as yet unlearned. When a baby of a month is

hungry or in pain, he contrives to make the fact understood. If he is at peace with himself and his surroundings, he leaves no doubt on the subject. To precisely this degree of intelligibility has the Heavenly Maid attained among us. When Beethoven sat down to the composition of one of his grand harmonies, there was undoubtedly in his mind as distinct a conception of that which he wished to express, of that within him which clamored for expression, as ever rises before a painter's eye or sings in a poet's brain. Thought, emotion, passion, hope, fear, joy, sorrow, each had its life and law. The painter paints you this. This the poet sings you. You stand before a picture, and to your loving, searching gaze its truths unfold. You read the poem with the understanding, and catch its concealed meanings. But what do you know of what was in Beethoven's soul? Who grasps his conception? Who faithfully renders, who even thoroughly knows his idea? Here and there to some patient night-watcher the lofty gates are unbarred, "on golden hinges turning." But, for the greater part, the musician who would tell so much speaks to unheeding ears. We comprehend him but infinitesimally. It is the *Battle of Prague*. *Adrianus* sits down to the piano, and *Dion* stands by his side, music-sheet in hand, acting as showman. "The Cannon," says *Dion*, at the proper place, and you imagine you recognize reverberation. "Charge," continues *Dion*, and with a violent effort you fancy the ground trembles. "Groans of the wounded," and you are partly horror-struck and partly incredulous. But what lame representation is this! As if one should tie a paper around the ankle of the *Belvedere Apollo*, with the inscription, "This is the ankle." A collar declares, "This is the neck." A bandeau locates his "forehead." A bracelet indicates the "arm." Is the sculpture thus significant? Hardly more does our music yet signify to us. You hear an unfamiliar air. You like it or dislike it, or are indifferent. You can tell that it is

slow and plaintive, or brisk and lively, or perhaps even that it is defiant or stirring; but how insensible you are to the delicate shades of its meaning! How hidden is the song in the heart of the composer till he gives you the key! You hear as though you heard not. You hear the thunder, and the cataract, and the crash of the avalanche; but the song of the nightingale, the chirp of the katydid, the murmur of the waterfall never reach you. This cannot be the ultimatum. Music must hold in its own bosom its own interpretation, and man must have in his its corresponding susceptibilities. Music is language, and language implies a people who employ and understand it. But music, even by its professor, is as yet faintly understood. Its meanings go on crutches. They must be helped out by words. What does this piece say to you? Interpret it. You cannot. You must be taught much before you can know all. It must be translated from music into speech before you can entirely assimilate it. Musicians do not trust alone to notes for moods. Their light shines only through a glass darkly. But in some other sphere, in some happier time, in a world where gross wants shall have disappeared, and therefore the grossness of words shall be no longer necessary, where hunger and thirst and cold and care and passion have no more admittance, and only love and faith and hope and admiration and aspiration shall crave utterance, in that blessed unseen world, shall not music be the every-day speech, conveying meaning not only with a sweetness, but with an accuracy, delicacy, and distinctness, of which we have now but a faint conception? Here words are not only rough, but ambiguous. There harmonies shall be minutely intelligible. Speak with what directness we can, be as explanatory, repetitious, illustrative as we may, there are mistakes, misunderstandings, many and grievous, and consequent missteps, calamities, and catastrophes. But in that other world language shall be exactly coexistent with life; music shall be precisely adequate

to meaning. There shall be no hidden corners, no bungling incompatibilities, but the searching sound penetrates into the secret sources of the soul, all-pervading. Not a nook, not a crevice, no maze so intricate, but the sound floats in to gather up the fragrant aroma, to bear it yonder to another waiting soul, and deposit it as deftly by unerring magnetisms in the corresponding clefts.

Toot away, then, *fifer-fellow!* Turn your slow crank, inexorable Italian! Thrum your thrums, Miss Laura, for Signor Bernadotti! You are a long way off, but your foot-prints point the right way. With many a yawn and sigh subjective, with, I greatly fear me, many a malediction objective, you are "learning the language of another world." To us, huddled together in our little ant-hill, one is "*une bête*," and one is "*mon ange*"; but from that fixed star we are all so far as to have no parallax.

But I come down from the golden stars, for the white-robed one has raised her wand again, and we float away through the glowing gates of the sunrise, over the purple waves, over the vine-lands of sunny France, in among the shadows of the storied Pyrenees. Sorrow and sighing have fled away. Tragedy no longer "in sceptred pall comes sweeping by"; but young lambs leap in wild frolic, silken-fleeced sheep lie on the slopes of the hills, and shepherd calls to shepherd from his mountain-peak. Peaceful hamlets lie far down the valley, and every gentle height blooms with a happy home. Dark-eyed Basque girls dance through the fruitful orchards. I see the gleam of their scarlet scarfs wound in with their bold black hair. I hear their rich voices trilling the lays of their land, and ringing with happy laughter. But I mount higher and yet higher, till gleam and voice are lost. Here the freshening air sweeps down, and the low gurgle of living water purling out from cool, dark chasms mingles with the shepherd's flute. Here the young shepherd himself climbs, leaping from rock to rock, lithe, supple, strong, brave, and free as the soul of his race, —

the same iron in his sinews, and the same fire in his blood that dealt the "dolorous rout" to Charlemagne a thousand years ago. Sweetly across the path of Roncesvalles blow the evening gales, wafting tender messages to the listening girls below. Green grows the grass and gay the flowers that spring from the blood of princely paladins, the flower of chivalry. No bugle-blast can bring old Roland back, though it wind long and loud through the echoing woods. Lads and lasses, worthy scions of valiant stems, may sit on happy evenings in the shadow of the vines, or group themselves on the greensward in the pauses of the dance, and sing their songs of battle and victory, — the olden legends of their heroic sires; but the strain that floats down from the darkening slopes into their heart of hearts, the song that reddens in their glowing cheeks, and throbs in their throbbing breasts, and shines in their dewy eyes, is not the shock of deadly onset, glorious though it be. It is the sweet old song, — old, yet ever new, — whose burden is,

"Come live with me and be my love," —

old, yet always new, — sweet and tender, and not to be gainsaid, whether it be piped to a shepherdess in Arcadia, or whether a princess hears it from princely lips in her palace on the sea.

But the mountain shadows stretch down the valleys and wrap the meadows in twilight. Farther and farther the notes recede as the flutesman gathers his quiet flock along the winding paths. Smooth and far in the tranquil evening-air fall the receding notes, a clear, silvery sweetness; farther and farther in the hushed evening-air, lessening and lowering, as you bend to listen, till the vanishing strain just cleaves, a single thread of pearl-pure melody, finer, finer, finer, through the dewy twilight, and — you hear only your own heart-beats. It is not dead, but risen. It never ceased. It knew no pause. It has gone up the heights to mingle with the songs of the angels. You rouse yourself with a start, and gaze at

your neighbor half bewildered. What is it? Where are we? Oh, my remorseful heart! There is no shepherd, no mountain, no girl with scarlet ribbon and black braids bound on her beautiful temples. It was only a fiddle on a platform!

Now you need not tell me that. I know better. I have lived among fiddles all my life,—embryotic, Silurian fiddles, splintered from cornstalks, that blessed me in the golden afternoons of green summers waving in the sunshine of long ago,—sympathetic fiddles that did me yeomen's service once, when I fell off a bag of corn up garret and broke my head, and the frightened fiddles, not knowing what else to do, came and fiddled to me lying on the settee, with such boundless, extravagant flourish that nobody heard the doctor's gig rolling by, and so *sinciput* and *occiput* were left overnight to compose their own quarrels, whereby I was naturally all right before the doctor had a chance at me, suffering only the slight disadvantage of going broken-headed through life. What I might have been with a whole skull, I don't know; but I will say, that, even in fragments, my head is the best part of me.

Yes, I think I may dare affirm that whatever there is to know about a fiddle I know, and I can give my affidavit that it is no fiddle that takes you up on its broad wings, outstripping the "wondrous horse of brass," which required

"the space of a day natural,  
This is to sayn, four and twenty houres,  
Wher so you list, in drought or elles showres,  
To beren your body into every place  
To which your herte willetth for to pace,  
Withouten wemme of you, thurgh foule or  
faire,"—

since it bears you, "withouten" even so much as your "herte's" will, in a moment's time, over the seas and above the stars.

A fiddle, is it? Do not for one moment believe it.—A poet walked through Southern woods, and the Dryads opened their hearts to him. They unfolded the

secrets that dwell in the depths of forests. They sang to him under the starlight the songs of their green, rustling land. They whispered the loves of the trees sentient to poets:—

"The sayling pine; the cedar, proud and tall;  
The vine-propt elme; the poplar, never dry;  
The builder oake, sole king of forrests all;  
The aspine, good for staves; the cypresse  
funerall;  
The lawrell, meed of mightie conquerours  
And poets sage; the firre, that weepeth stille;  
The willow, worne of forlorne paramours;  
The eugh, obedient to the benders will;  
The birch, for shaftes; the sallow, for the  
mill;  
The mirrhe, sweete-bleeding in the bitter  
wounde;  
The warlike beech; the ash, for nothing ill;  
The fruitful olive; and the platane round;  
The carver holme; the maple, seldom in-  
ward sound."

They sang to him with their lutes. They danced before him with sunny, subtle grace, wreathing him with strange loveliness. They brought him honey and wine in the white cups of lilies, till his brain was drunk with delight; and they kept watch by his moss pillow, while he slept.

In the dew of the morning, he arose and felled the kindly tree that had sheltered him, not knowing it was the home of Arborine, fairest of the wood-nymphs. But he did it not for cruelty, but tenderness, to carve a memorial of his most memorable night, and so pulled down no thunders on his head. For Arborine loved him, and, like her sister Undine in the North, found her soul in loving him. Unseen, the beautiful nymph guided his hand as he fashioned the sounding viol, not knowing he was fashioning a palace for a soul new-born. He wrought skilfully, strung the intense chords, and smote them with the sympathetic bow. What burst of music flooded the still air! What new song trembled among the mermaid tresses of the oaks! What new presence quivered in every listening harebell and every fearful wind-flower? The forest felt a change, for tricky nymph had proved a mortal love, and put off her

fairly phantasms for the deep consciousness of humanity. The wood heard, bewildered. A shudder as of sorrow thrilled through it. A breeze that was almost sad swept down the shady aisles as the Poet passed out into the sunshine and the world.

But Nature knows no pain, though Arborines appear never more. A balm springs up in every wound. Over the hills, and far away beyond their utmost purple rim, and deep into the dying day the happy love-born one followed her love, happy to exchange her sylvan immortality for the spasm of mortal life, — happy, in her human self-abnegation, to lie close on his heart and whisper close in his ear, though he knew only the loving voice and never the loving lips. Through the world they passed, the Poet and his mystic viol. It gathered to itself the melodies that fluttered over sea and land, — songs of the mountains, and songs of the valleys, — murmurs of love, and the trumpet-tones of war, — bugle-blast of huntsman on the track of the chamois, and mother's lullaby to the baby at her breast. All that earth had of sweet-

ness the nymph drew into her viol-home, and poured it forth anew in strains of more than mortal harmony. The fire and fervor of human hearts, the quiet ripple of inland waters, the anthem of the stormy sea, the voices of the flowers and the birds lent their melody to the song of her who knew them all.

The Poet died. Died, too, sweet Arborine, swooning away in the fierce grasp of this stranger Sorrow, to enter by the black gate of death into the full presence and recognition of him by loving whom she had learned to be.

The viol passed into strange hands and wandered down the centuries, but its olden echoes linger still. Fragrance of Southern woods, coolness of shaded waters, inspiration of mountain-breezes, all the secret forces of Nature that the wood-nymph knew, and the joy, the passion, and the pain that throb only in a woman's heart, lie still, silent under the silent strings, but wakening into life at the touch of a royal hand.

Do you not believe my story? But I have seen the viol and the royal hand!

---

### SPRING AT THE CAPITAL.

The poplar drops beside the way  
 Its tasselled plumes of silver-gray;  
 The chestnut pouts its great brown buds, impatient for the laggard May.

The honeysuckles lace the wall;  
 The hyacinths grow fair and tall;  
 And mellow sun and pleasant wind and odorous bees are over all.

Down-looking in this snow-white bud,  
 How distant seems the war's red flood!  
 How far remote the streaming wounds, the sickening scent of human blood!

For Nature does not recognize  
 This strife that rends the earth and skies;  
 No war-dreams vex the winter sleep of clover-heads and daisy-eyes.

She holds her even way the same,  
Though navies sink or cities flame ;  
A snow-drop is a snow-drop still, despite the nation's joy or shame.

When blood her grassy altar wets,  
She sends the pitying violets  
To heal the outrage with their bloom, and cover it with soft regrets.

O crocuses with rain-wet eyes,  
O tender-lipped anemones,  
What do ye know of agony and death and blood-won victories ?

No shudder breaks your sunshine-trance,  
Though near you rolls, with slow advance,  
Clouding your shining leaves with dust, the anguish-laden ambulance.

Yonder a white encampment hums ;  
The clash of martial music comes ;  
And now your startled stems are all a-tremble with the jar of drums.

Whether it lessen or increase,  
Or whether trumpets shout or cease,  
Still deep within your tranquil hearts the happy bees are murmuring, "Peace!"

O flowers! the soul that faints or grieves  
New comfort from your lips receives ;  
Sweet confidence and patient faith are hidden in your healing leaves.

Help us to trust, still on and on,  
That this dark night will soon be gone,  
And that these battle-stains are but the blood-red trouble of the dawn,—

Dawn of a broader, whiter day  
Than ever blessed us with its ray,—  
A dawn beneath whose purer light all guilt and wrong shall fade away.

Then shall our nation break its bands,  
And, silencing the envious lands,  
Stand in the searching light unshamed, with spotless robe, and clean, white hands.

## THE HORRORS OF SAN DOMINGO.\*

[Concluding Chapter.]

THE subject which I hoped to present intelligibly in three or four articles has continually threatened to step out of the columns of a magazine and the patience of its readers. The material which is at hand for the service of the great points of the story, such as the Commercial Difficulty, the Mulatto Question, the State of Colonial Parties, the Effect of the French Revolution, the Imbroglío of Races, the Character of Toussaint l'Ouverture, the Present Condition of Hayti, and a Bibliography of the whole subject, is now detached for perhaps a more deliberate publication; and two or three points of immediate interest, such as the French Cruelties, Emancipation and the Slave Insurrection, and the Negroes as Soldiers, are grouped together for the purpose of this closing article.

## PLANTATION CRUELITIES.

THE social condition of the slaves cannot be fully understood without some reference to the revolting facts connected with plantation management. It is well to know what base and ingenious cruelties could be tolerated by public opinion, and endured by the slaves without exciting continual insurrections. Wonder at this sustained patience of the blacks passes into rage and indignation long before the student of this epoch reaches the eventual outbreaks of 1791: it seems as if a just instinct of manhood should have more promptly doomed these houses of iniquity, and handed them over to a midnight vengeance. And there results a kind of disappointment from the discovery, that, when the blacks finally began to burn and slaughter, they were not impelled by the desire of liberty or the recollection of great crimes, but were blind agents of a complicated situation.

\* See Numbers LVI., LVIII., LIX., and LXV. of this magazine.

It is only in the remote historical sense that Slavery provoked Insurrection. The first great night of horror in San Domingo rose from circumstances that were not explicitly chargeable to the absence of freedom or to the outrages of the slaveholder. But if these things had not fuelled the lighted torches and whetted the blades when grasped, it would have been strange and monstrous indeed. Stranger still would it have been, if the flames of that first night had not kindled in the nobler breasts among that unchained multitude a determination never to endure plantation ferocity again. The legitimate cause for rebelling then took the helm and guided the rest of the story into dignity.

The frequency of enfranchisement might mislead us into expecting that the colonial system of slavery was tempered with humanity. It was rather like that monarchy which the wit described as being "tempered by assassination." The mulatto was by no means a proof that mercy and justice regulated the plantation life. His enfranchisement reacted cruelly upon the negro. It seemed as if the recognition of one domestic sentiment hurt the master's feelings; the damage to his organization broke out against the lower race in anger. The connections between black and white offered no protection to the former, nor amelioration of her lot. Indeed, the overseer, who desired always to be on good terms with the agent or the proprietor of a plantation, was more severe towards the unhappy object of his passion than to the other women, for fear of incurring reproach or suspicion. When he became the owner of slaves, his emancipating humor was no guaranty that they would receive a salutary and benignant treatment.

When a Frenchman undertakes to be cruel, he acts with great *esprit*. There

is spectacular ingenuity in the atrocities which he invents, and even his ungovernable bursts of rage instinctively aim a *coup de théâtre* at his victim. The negro is sometimes bloodthirsty, and when he is excited he will quaff at the opened vein; but he never saves up a man for deliberate enjoyment of his sufferings. When the wild orgy becomes sated, and the cause of it has been once liquidated, there is no further danger from this disposition. But a French colonist, whether smiling or sombre, was always disposed to be tormenting. The ownership of slaves unmasked this tendency of a race which at home, in the streets of Paris and the court-yard of the Abbaye and La Force, proved its ferocity and simple thirst for blood. The story of the Princess Lamballe's death and disfiguration shows the broad Gallic fancy which the sight of blood can pique into action. But the every-day life of many plantations surpassed; in minuteness and striking refinement of tormenting, all that the *sans-culotte* ever dared or the savage ever dreamed.

Let a few cases be found sufficient to enlighten the reader upon this point. They are specimens from a list of horrors which eye-witnesses, inhabitants of the island, have preserved; and many of them, being found in more than one authority, French as well as colored, are to be regarded as current and unquestionable facts.

The ordinary brutalities of slaveholding were rendered more acute by this Creole temper. Whippings were carried to the point of death, for the slave-vessel was always at the wharf to furnish short lives upon long credit; starving was a common cure for obstinacy, brine and red-pepper were liberally sprinkled upon quivering backs. Economy was never a virtue of this profuse island. Lives were *sauce piquante* to luxury.

The incarceration of slaves who had marooned, stolen vegetables, or refused to work, had some features novel to the Bastille and the Inquisition. A man would be let down into a stone case or

cylinder just large enough to receive his body: potted in this way, he remained till the overseer considered that he had improved. Sometimes he was left too long, and was found spoiled; for this mode of punishment soon ended a man, because he could not move a limb or change his attitude. Dungeons were constructed with iron rings so disposed along the wall that a man was held in a sitting posture with nothing to sit upon but a sharpened stick: he was soon obliged to try it, and so oscillated between the two tortures. Other cells were furnished with cases, of the size of a man, that could be hermetically sealed: these were for suffocation. The floors of some were kept submerged with a foot or two of water: the negroes who came out of them were frequently crippled for life by the dampness and cold. Iron cages, collars, and iron masks, clogs, fetters, and thumb-screws were found upon numerous plantations, among the ruins of the dungeons.

The *quatre piquet* was a favorite style of flogging. Each limb of the victim was stretched to the stake of a frame which was capable of more or less distention; around the middle went an iron circle which prevented every motion. In this position he received his modicum of lashes, every muscle swollen and distended, till the blood dripped from the machine. After he was untied, the overseer dressed the wounds, according to fancy, with pickled pimento, pepper, hot coals, boiling oil or lard, sealing-wax, or gunpowder. Sometimes hot irons stanch the flow of blood.

M. Frossard\* is authority for the story of a planter who administered a hundred lashes to a negro who had broken a hoe-handle, then strewing gunpowder in the furrows of the flesh, amused himself with setting the trains on fire.

M. de Créveœur put a negro who had killed an inhuman overseer into an iron

\* *La Cause des Esclaves Nègres et des Habitans de la Guinée, portée au Tribunal de la Justice, de la Religion, de la Politique*: I. 335; II. 66.

age, so confined that the birds could have free access to him. They fed daily upon the unfortunate man; his eyes were carried off, his jaws laid bare, his arms torn to pieces, clouds of insects covered the lacerated body and regaled upon his blood.

Another planter, attests M. Frossard, after having lived several years with a negress, deserted her for another, and wished to force her to become the slave of her rival. Not being able to endure this humiliation, she besought him to sell her. But the irritated Frenchman, after inflicting various preparatory punishments, buried her alive, with her head above ground, which he kept wet with *eau sucrée* till the insects had destroyed her.

How piteous is the reflection that the slaves made a point of honor of preserving their backs free from scars, — so that the lash inflicted a double wound at every stroke!

There was a planter who kept an iron box pierced with holes, into which the slaves were put for trivial offences, and moved towards a hot fire, till the torment threatened to destroy life. He considered this punishment preferable to whipping, because it did not suspend the slave's labors for so long a time.

"What rascally sugar!" said Caradeux to his foreman; "the next time you turn out the like, I will have you buried alive; — you know me." The occasion came soon after, and the black was thrown into a dungeon. Caradeux, says Malenfant, did not really wish to lose his black, yet wished to preserve his character for severity. He invited a dozen ladies to dinner, and during the repast informed them that he meant to execute his foreman, and they should see the thing done. This was not an unusual sight for ladies to witness: the Roman women never were more eager for the agonies of the Coliseum. But on this occasion they demurred, and asked pardon for the black. "Very well," said Caradeux; "remain at table, and when you see me take out my handkerchief, run and solicit his life."

After the dessert, Caradeux repaired to the court, where the negro had been obliged to dig his own grave and to get into it, which he did with singing. The earth was thrown around him till the head only appeared. Caradeux pulls out his handkerchief; the ladies run, throw themselves at his feet; after much feigned reluctance, he exclaims, —

"I pardon you at the solicitation of these ladies."

The negro answered, —

"You will not be Caradeux, if you pardon me."

"What do you say?" cried the master, in a rage.

"If you do not kill me, I swear by my god-mother that I will kill you."

At this, Caradeux seized a huge stone, and hurled it at his head, and the other blacks hastened to put an end to his suffering.

Burning the negro alive was an occasional occurrence. Burying him alive was more frequent. A favorite pastime was to bury him up to his neck, and let the boys bowl at his head. Sometimes the head was covered with molasses, and left to the insects. Pitying comrades were found to stone the sufferer to death. One or two instances were known of planters who rolled the bodies of slaves, raw and bloody from a whipping, among the ant-hills. If a cattle-tender let a mule or ox come to harm, the animal was sometimes killed and the man sewed up in the carcass. This was done a few times in cases where the mule died of some epizoötic malady.

Hamstringing negroes had always been practised against marooning, theft, and other petty offences: an overseer seldom failed to bring down his negro with a well-aimed hatchet. *Coupe-jarret* was a phrase applied during the revolutionary intrigues to those who were hampering a movement which appeared to advance.

Cutting off the ears was a very common punishment. But M. Jouanneau, who lived at Grande-Rivière, nailed one of his slaves to the wall by the ears,

then released him by cutting them off with a razor, and closed the entertainment with compelling him to grill and eat them. There was one overseer who never went out without a hammer and nails in his pocket, for nailing negroes by the ear to a tree or post when the humor struck him.

Half a dozen cases of flaying women alive, inspired by jealousy, are upon record; also some cases of throwing negroes into the furnaces with the *bagasse* or waste of the sugar-cane. Pistol-practice at negroes' heads was very common; singeing them upon cassava plates, grinding them slowly through the sugar-mill, pitching them into the boiler, was an occasional pastime.

If a woman was fortunate enough to lose her babe, she was often thrown into a cell till she chose to have another. Madame Bailly had a wooden child made, which she fastened around the necks of her negroes, if their children died, until they chose to replace them. These punishments were devised to check infanticide, which was the natural relief of the slave-mother.

Venault de Charmilly, a planter of distinction, afterwards the accomplished agent of the emigrant-interest at the court of St. James, used to carry pincers in his pocket, to tear the ears or tongues of his unfortunate slaves, if they did not hear him call, or if their replies were unsatisfactory. He pulled teeth with the same instrument. This man threw his postilion to the horses, literally tying him in their stall till he was beaten by their hoofs to shreds. He was an able advocate of slavery, and did much to poison the English mind, and to create a party with the object of annexing San Domingo and restoring the colonial system.

Cocherel, a planter of Gonaïves, had a slave who played upon the violin. After terrible floggings, he would compel this man to play, as a punishment for having danced without music. He found it piquant to watch the contest of pain and sorrow with the native love of melody. The cases where French planters

watched curiously the characteristics of their various expedients for torture are so common that they furnish us with a trait of French Creolism. A poor cook, for instance, was one day thrown into an oven with a crackling heap of *bagasse*, because some article of food reached the table underdone. As the lips curled and shrivelled away from the teeth, his master, who was observing the effects of heat, exclaimed, — "The rascal laughs!"

But the most symbolical action, expressive of the colony's whole life, was performed by one Corbierre, who punished his slaves by blood-letting, and gave a humorous refinement to the sugar which he manufactured by using this blood to assist in clarifying it.

Let these instances suffice. The pen will not penetrate into the sorrows which befell the slave concubine and mother. The form of woman was never so mutilated and dishonored, the decencies of fetichism and savageism were never so outraged, as by these slaveholding idolaters of the Virgin and the Mother of God.

The special cruelties, together with the names of the perpetrators, which have been remembered and recorded, would form an appalling catalogue for the largest slaveholding community in the world. But this recorded cruelty, justly representative of similar acts which never came to the ears of men, was committed by only forty thousand whites of both sexes and all ages upon an area little larger than the State of Maine. There was agony enough racking the bosoms of that half-million of slaves to sate a hemisphere of slaveholding tyrants. But the public opinion of the little coterie of villains was never startled. It is literally true that not a single person was ever condemned to the penalties of the *Code Noir* for the commission of one of the crimes above mentioned. One would think that the close recurrence, in time and space, of these acts of crime would have beaten through even this Creole temperament into some soft spot that belonged to the mother-country of God,

if not of France. Occasionally a tender heart went back to Paris to record its sense of the necessity of some amelioration of these colonial ferocities; but the words of humanity were still spoken in the interest of slavery. It was for the sake of economy, and to secure a natural local increase of the slave population, that these vague reports of cruelty were suggested to the government. The planting interest procured the suppression of one of the mildest and most judicious of the books thus written, and had the author cast into prison. When the crack of the planter's lash sounded in the purlieus of the Tuileries itself, humanity had to wait till the Revolution had cleared out the Palace, the Church, and the Courts, before its clear protest could reverberate against the system of the colony. Then Grégoire, Lameth, Condorcet, Brissot, Lafayette, and others, assailed the planting interest, and uttered the bold generalization that either the colonies or the crimes must be abandoned; for the restraining provisions of the *Code Noir* were too feeble for the sugar exigency, and had long ago become obsolete. There was no police except for slaves, no inspectors of cultivation above the agents and the overseers. He was considered a *bon blanc*, and a person of benignity, whose slaves were seldom whipped to death. There could be neither opinion nor economy to check these things, when "*La côte d'Afrique est une bonne mère*" was the planter's daily consolation at the loss of an expensive negro.

Such slavery could not be improved; it might be abolished by law or drowned in blood. There is a crowd of pamphlets that have come down to us shrieking with the ineptitude of this period. It was popular to accuse the society of the *Amis des Noirs* of having ruined the colony by inspiring among the slaves a vague restlessness which blossomed into a desire for vengeance and liberty. But it is a sad fact that neither of those great impulses was stirring in those black forms, monoliths of scars and slave-brands. Not till their eyes had grown red at the sight

of blood shed at other suggestions, and their ears had devoured the crackling of the canes and country-seats of their masters, did the guiding spirit of Liberty emerge from the havoc, and respond with Toussaint to the call of French humanity, by fighting for the Republic and the Rights of Man. Suicide was the only insurrection that ever seemed to the slave to promise liberty; for during the space of a hundred years nothing more formidable than the two risings of Padre Jean and Makandal had thrilled the consciences of the planters. If the latter had preserved the unity of sentiment that belonged to the atrocious unity of their interest, and had waived their pride for their safety, they might have proclaimed decrees of emancipation with every morning's peal of the plantation-bell, and the negroes would have replied every morning, "*Vous maître.*"

There is but one other folly to match the accusation that the sentiment of French Abolitionism excited the slaves to rise: that is, the sentiment that a slave ought not to be excited to rise against such "Horrors of San Domingo" as we have just recorded. The men who are guilty of that sentimentality, while they snugly enjoy personal immunity and the dear delights of home, deserve to be sold to a Caradeux or a Legree. Let them be stretched upon the *quatre-piquet* of a great people in a war-humor, whose fathers once rose against the enemies that would have bled only their purses, and hamstrung only their material growth.

In the two decades between 1840 and 1860 the American Union was seldom saved by a Northern statesman without the help of San Domingo. People in cities, with a balance at the bank, stocks floating in the market, little children going to primary schools, a well-filled wood-shed, and a house that is not fire-proof, shudder when they hear that a great moral principle has devastated properties and sent peaceful homes up in the smoke of arson. Certainly the Union shall be preserved; at all events, the wood-shed must be. Nothing shall be

the midnight assassin of the country until slavery itself is ready for the job. So the Northern merchant kept his gold at par through dread of anti-slavery, and saved the Union just long enough to pay seventy-five per cent. for the luxury of the "Horrors." Did it ever once occur to him that his eminent Northern statesman was pretending something that the South itself knew to be false and never hypocritically urged against the anti-slavery men? Southern men of intelligence had the best of reasons for understanding the phenomena of San Domingo, and while the "Friends of the Black" were dripping with innocent French blood in Northern speeches, the embryo Secessionists at Nashville and Savannah strengthened their convictions with the proper rendering of the same history. Take, as a specimen of their tranquil frame of mind, the following view, which was intended to correct a vague popular dread that in all probability was inspired by Northern statesmen. It is from a wonderfully calm and judicious speech delivered before the Nashville Convention, a dozen years ago, by General Felix Huston of Mississippi.

"This insurrection [of San Domingo] having occurred so near to us, and being within the recollection of many persons living, who heard the exaggerated accounts of the day, has fastened itself on the public imagination, until it has become a subject of frequent reference, and even Southern twaddlers declaim about the Southern States being reduced to the condition of St. Domingo, and Abolitionists triumphantly point to it as a case where the negro race have asserted and maintained their freedom.

"Properly speaking, this was not a slave insurrection, although it assumed that form after the island was thrown into a revolutionary state.

"The island of St. Domingo, in 1791, contained about seven hundred and fifty thousand inhabitants, about fifty thousand of whom were whites, more than double that number of mulattoes and of mixed blood, and the balance were negroes.

"The French and Spanish planters had introduced a general system of concubinage, and the consequence was a numerous progeny of mulattoes, many of whom associated with the whites nearly on terms of equality, were educated at home or sent to Europe to be educated, and many of them were wealthy, having been freed by their parents and their property left to them. These things had lowered the character of the white proprietors, gradually bringing them down to the level of the mulattoes, and lessening the distance between them and the blacks; and in addition to this, there were a number of the white population who were poor and enervated, and rendered vicious by the low state of social morals and influence of the climate.

"In this state of affairs, when the French Revolution broke out, the wild spirit of liberty caught to the island and infected the mulattoes and the lower class of white population, and they sought to equalize themselves with the large proprietors. The foundations of society were broken up by this intermediate class, and in the course of the struggle they called in the blacks, and the two united, exceeding the whites in the proportion of twelve to one, expelled them from the island. Since that time a continual struggle has been going on between the mulattoes and the negroes, the latter having numbers and brute force, and the former sustaining themselves by superior intelligence.

"There never has been a formidable slave insurrection, considered purely as such; and a comparison of our situation with slavery as it has existed elsewhere ought to relieve the minds of the most timid from any apprehension of danger from our negroes, under any circumstances, in peace or war."

This generally truthful statement, which needs but little modification, shows that San Domingo was helping to destroy the Union at the South while it was trying to save it at the North. The words of the Secessionist were prophetic, and Slavery will continue to be the great un-

impaired war power of Southern institutions, till some color-bearer, white or black, in the name of law and order, shakes the stars of America over her inland fields.

AUGUST 22, 1791.

WHEN the French vessels, bringing news of the developing Revolution, touched the wharves of Cap Français, a spark seemed to leap forth into the colony, to run through all ranks and classes of men, setting the Creole hearts afire, till it fell dead against the *gros peau* and the *peau fin*\* of the black man. Three colonial parties vibrated with expectations that were radically discordant when the cannon of the people thundered against the Bastille. First in rank and assumption were the old planters and proprietors, two-thirds of whom were at the time absentees in France. They were, excepting a small minority, devoted royalists, but desired colonial independence in order to enjoy a perfect slaveholding authority. They were embittered by commercial restrictions, and longed to be set free from the mother-country, that San Domingo might be erected into a feudal kingdom with a court and gradation of nobility, whose parchments, indeed, would have been black and engrossed all over with despotism. They wanted the freedom of the seas and all the ports of the world, not from a generous motive, nor from a policy that looked beyond the single object of nourishing slavery at the cheapest rates, to carry its products to the best markets in exchange for flour, cloths, salted provisions, and all the necessaries of a plantation. The revolutionary spirit of France was hailed by them, because it seemed to give an opportunity to establish a government without a custom of Paris, to check enfranchisements and crush out the dangerous familiarity of the mulatto, to block with sugar-hogsheads the formidable movements in France and

\* *Gros peau*, thick skin, was the French term equivalent to *Bozal*: *peau fin* was the Creole negro.

England against the slave-trade. These men sometimes spoke as republicans from their desire to act as despots; they succeeded in getting their delegates admitted to seats in the National Assembly to mix their intrigues with the current of events. Their "*Club Massiac*" in Paris, so named from the proprietor at whose residence its meetings were held, was composed of wealthy, adroit, and unscrupulous men, who often showed what a subtle style of diplomacy a single interest will create. It must be hard for bugs of a cosmopolitan mind to circumvent the *formica leo*, whose sole object in lying still at the bottom of its slippery tunnel is to catch its daily meal.

If this great party of slave-owners had preserved unity upon all the questions which the Revolution excited, their descendants might to-day be the most troublesome enemies of our blockade. But history will not admit an If. The unity which is natural to the slaveholding American was impossible in San Domingo, owing to the existence of the mulattoes and the little whites.

A few intelligent proprietors had foreseen, many years previous to the Revolution, that the continuance of their privileges depended upon the good-will of the mulattoes and the restriction of enfranchisement. The class of mixed blood was becoming large and formidable: of mulattoes and free negroes there were nearly forty thousand. They were nominally free, and had all the rights of property. A number of them were wealthy owners of slaves. But they still bore upon their brows the shadow cast by servitude, from which many of the mixed blood had not yet emerged. The whites of all classes despised these men who reminded them of the color and condition of their mothers. If a mulatto struck or insulted a white man, he was subjected to severe penalties; no offices were open to him, no doors of society, no career except that of trade or agriculture. This was not well endured by a class which had inherited the fire and vanity of their French fathers, with intellectual qualities that caught pas-

sion and mobility from the drops of negro blood. Great numbers of them had been carefully educated in France, whither they sent their own children, if they could afford it, to catch the port and habits of free citizens. They were very proud, high-strung, and restless, sombre in the presence of contempt, lowering with some expectation. Frequent attempts had been made by them to extend the area of their rights, but they met with nothing but arrogant repulse. The guilty problem of the island was not destined to be relieved or modified by common sense. The planters should have lifted this social and political ostracism from the mulatto, who loved to make money and to own slaves, and whose passion for livid mistresses was as great as any Frenchman's. They were the natural allies of the proprietors, and should have been erected into an intermediate class, bound to the whites by intelligence and selfish interest, and drawn upon the mother's side to soften the condition of the slave. This policy was often pressed by French writers, and discussed with every essential detail; but the descendants of the buccaneers were bent upon playing out the island's tragedy.

The mulattoes were generally selfish, and did not care to have slavery disturbed. When their deputies went to Paris, to offer the Republic a splendid money-tribute of six million livres, and to plead their cause, one of their number, Vincent Ogé, dined with Clarkson at Lafayette's, and succeeded in convincing the great Abolitionist that he believed in emancipation. "The slave-trade," they said, "was the parent of all the miseries in St. Domingo, not only on account of the cruel treatment it occasioned to the slaves, but on account of the discord which it constantly kept up between the whites and people of color, in consequence of the hateful distinctions it introduced. These distinctions could never be obliterated while it lasted. They had it in their instructions, in case they should obtain a seat in the Assembly, to propose an immediate abolition of the slave-trade, and an immediate amelioration of the state of slavery

also, with a view to its abolition in fifteen years." \*

There is reason to doubt the entire sincerity of these representations, but they were sufficient to convert every proprietor into a bitter foe of mulatto recognition. The deputies were soon after admitted to the bar of the National Assembly, whose president told them that their claims were worthy of consideration. They said to Clarkson that this speech of the president "had roused all the white colonists in Paris. Some of these had openly insulted them. They had held also a meeting on the subject of this speech; at which they had worked themselves up so as to become quite furious. Nothing but intrigue was now going forward among them to put off the consideration of the claims of the free people of color." The deputies at length left Paris in despair. Ogé exclaimed, "If we are once forced to desperate measures, it will be in vain that thousands will be sent across the Atlantic to bring us back to our former state." Clarkson counselled patience; but he found "that there was a spirit of dissatisfaction in them, which nothing but a redress of their grievances could subdue,—and that, if the planters should persevere in their intrigues, and the National Assembly in delay, a fire would be lighted up in St. Domingo which could not easily be extinguished."—This was the position of the Mulatto party.

The third class, of Little Whites, comprised the mechanics and artisans of every description, but also included all whites whose number of slaves did not exceed twenty-four. This party likewise hailed the Revolution, because it hated the pride and privileges of the great proprietors. But it also hated the mulattoes so much that the obvious policy of making common cause with them never seemed to be suggested to it. Among the Little Whites were a goodly number of debtors, who hoped by separation from the mother-country to cancel the burdens incurred for slaves and plantation-neces-

\* Clarkson's *History of the Abolition of the Slave-Trade*, Vol. II. p. 134.

saries; but the majority did not favor colonial independence. Thus the name of Liberty was invoked by hostile cliques for selfish objects, and the whole colony trembled with the passion of its own elements. Beneath it all lay stretched the huge Enceladus, unconscious of the power which by a single movement might have forestalled eruption by ruin. But he gave no sign.

Several mulattoes had been already hung for various acts of sympathy with their class, when Ogé appeared upon the scene at the head of a handful of armed slaves and mulattoes, and attacked the National Guard of Cap Français. He was routed, after bravely fighting with partial success, fled into the Spanish quarter, whence he was reclaimed in the name of the king, and surrendered by the governor. Thirteen of his followers were condemned to the galleys, twenty-two were hung, and Ogé with his friend Chavannes was broken upon the wheel. A distinction of color was made at the moment of their death: the scaffold upon which they suffered was not allowed to be erected upon the same spot devoted to the execution of whites.

Now the National Guard in all the chief towns was divided into adherents of the mother-country and sympathizers with colonial independence. In a bloody street-fight which took place at Port-au-Prince, the latter were defeated. Then both factions sought to gain a momentary preponderance by allying themselves with the mulattoes: the latter joined the metropolitan party, which in this moment of extremity still thought of color, and served out to the volunteers *yellow pompons*, instead of the white ones which distinguished themselves. The mulattoes instantly broke up their ranks, and preserved neutrality.

It would be tedious to relate the disturbances, popular executions, and ferocious acts which took place in every quarter of the island. Murder was inaugurated by the colonists themselves: the provincial faction avenged their previous defeat, and were temporarily masters of the colony. On the 15th of May,

1791, the National Assembly had passed a decree, admitting, by a precise designation, all enfranchised of all colors who were born of free parents to the right of suffrage. When this reached the island, the whites were violently agitated, and many outrages were committed against the people of color. The decree was formally rejected, the mulattoes again flew to arms, and began to put themselves into a condition to demand the rights which had been solemnly conceded to them. In that decree not a word is said of the slaves: the *Amis des Noirs*, and the debates of the National Assembly, stretched out no hand towards that inarticulate and suffering mass. The colonists themselves had been for months shaking a scarlet rag, as if they deliberately meant to excite the first blind plunge of the brute from its harness.

The mulattoes now brought their slaves into headquarters at Croix-des-Bouquets, and armed them. The whites followed this example, and began to drill a body of slaves in Port-au-Prince. Amid this passionate preoccupation of all minds, the ordinary discipline of the plantations was relaxed, the labor languished, the negroes were ill-fed and began to escape to the *mornes*, the subtle earth-currents carried vague disquiet into the most solitary quarters. Then the negroes began to assemble at midnight to subject themselves to the frenzy of their priestesses, and to conduct the serpent-orgies. But it is not likely that the extensive revolt in the Plaine du Cap would have taken place, if an English negro, called Buckman, had not appeared upon the scene, to give a direction to all these restless hearts, and to pour his own clear indignation into them. No one can satisfactorily explain where he came from. One writer will prove to you that he was an emissary of the planting interest in Jamaica, which was willing to set the fatal example of insurrection for the sake of destroying a rival colony. Another pen is equally fertile with assurances that he was bought with the gold of Pitt to be a political instru-

ment of perfidious Albion. It is shown to be more probable that he was the agent of the Spanish governor, whose object was to effect a diversion in the interest of royalism. According to another statement, he belonged to the Cudjoe band of Jamaica maroons, which had forced a declaration of its independence from the governor of that island. Buckman was acquainted with Creole French, and was in full sympathy with the superstitious rites of his countrymen in San Domingo. Putting aside the conjectures of the times, one thing is certain beyond a doubt, that he was born of the moment, and sprang from the festering history which white neglect and criminality had spread, as naturally as the poisoned sting flutters from the swamps of summer. And he filled the night of vengeance, which was accorded to him by laws that cannot be repealed without making the whole life of the planet one sustained expression of the wrath of God.

A furious storm raged during the night of August 22: the blackness was rent by the lightning that is known only to the hurricane-regions of the earth. The negroes gathered upon the Morne Rouge, sacrificed a black heifer with frantic dances which the elements seemed to electrify, thunder emphasized the declaration of the priestess that the entrails were satisfactory, and the quarters were thrown into a huge brazier to be burned. At that moment a bird fell from the overhanging branch of a tree directly into the cooking spell, and terrible shouts of encouragement hailed the omen. Is it an old Pelasgic or a Thracian forest grown mænadic over some forgotten vengeance of the early days? It is the unalterable human nature, masked in the deeper colors of more fervid skies, gathering a mighty breath into its lacerated bosom for a rending of outrage and a lion's leap in the dark against its foe.

"Listen!" cried Buckman. "The good God conceals himself in a cloud, He mutters in the tempest. By the whites He commands crime, by us He commands benefits. But God, who is good, ordains

for us vengeance. Tear down the figure of the white man's God which brings the tears to your eyes. Hear! It is Liberty! It speaks to the hearts of us all."

The morning broke clear, but the tempest had dropped from the skies to earth. The costly habitations, whose cornerstones were dungeons, in whose courts the gay guests of the planter used to season their dessert with the punishments he had saved up for them, were carried off by exulting flames. The great fields of cane, which pumped the earth's sap and the negro's blood up for the slaveholder's caldron, went crackling away with the houses which they furnished. Rich garments, dainty upholstery, and the last fashions of Paris went parading on the negroes' backs, and hid the marks of the floggings which earned them. The dead women and children lay in the thickets where they had vainly implored mercy. There are long careers of guiltiness whose devilish nature becomes apparent only when innocence suffers with it. Then the cry of a babe upon a negro's pike is the voice of God's judgment against a century.

Will it be credited that the whites who witnessed the smoking plain from the roofs of Cap Français broke into the houses of the mulattoes, and murdered all they could find, — the paralytic old man in his bed, the daughters in the same room, the men in the street, — murdered and ravished during one long day? In this crisis of the colony, suspicion and prejudice of color were stronger than personal alarm. Every action of the whites was piqued by pride of color and the intoxication of caste. These vulgar mulatto-making pale-faces would hazard their safety sooner than grasp the hand of their own half-breeds and arm it with the weapon of unity. Color-blindness was at length the weakness through which violated laws revenged themselves: the French could not perceive which heart was black and which was white.

If Northern statesmen and glib editors of Tory sheets would derive a lesson from San Domingo for the guidance of the peo-

ple, let them find it in the horrors wrought by the white man's prejudice. It is the key to the history of the island. And it is by means of the black man that God perceives whether the Christianity of Church and State is skin-deep or not. Beneath those oxidated surfaces He has hidden metal for the tools and swords of a republic, and into our hands He puts the needle of the text, "God has made of one blood all nations," to agitate and attract us to our true safety and glory. The black man is the test of the white man's ability to be the citizen of a long-lived republic. It is as if God lighted His lamp and decked His altar behind those bronze doors, and waited for the incense and chant of Liberty to open them and enter His choir, instead of passing by. So long as America hates and degrades the black man, so long will she be deprived of four millions' worth of God. In so much of God a great deal of retribution must be slumbering, if the story of San Domingo was a fact, and not a hideous dream.

#### NEGRO SOLDIERS.\*

THE native tribes of Africa differ as much in combative propensity and abil-

\* *Anthropologie der Naturvölker*, von Dr. Theodor Waitz. Zweiter Theil: die Negervölker und ihre Verwandten. Leipzig, 1860. Very full, minute, and humane in tone, though telling all the facts about the manners and habits of native Africans.

*Mémoires pour servir à l'Histoire de la Révolution de Saint Domingue*. Par le Lieutenant-Général Baron Pamphile de La Croix. 2 Tom. Generally very fair to the negro soldier: himself a distinguished soldier.

*Le Système Colonial dévoilé*. Par le Baron de Vastey, mulatto. Terrible account of the plantation cruelties.

*Mémoires pour servir à l'Histoire d'Hayti*. Par l'Adjudant-Général Boisron - Tonnerre. Written to explain the defection of Dessalines from Toussaint, and the military movements of the former. The author was a mulatto.

*Des Colonies, et particulièrement de celle de Saint-Domingue; Mémoire Historique et Politique*. Par le Colonel Malenfant, Chevalier de la Légion d'Honneur, etc. A pretty impartial book, by a pro-slavery man.

ity for warlike enterprises as in their other traits. The people of Wadai are distinguished for bravery above all their neighbors. The men of Ashantee are great fighters, and have such a contempt for death that they will continue their attacks upon a European intrenchment in spite of appalling losses. A band that is overpowered will fight to the last man; for it is the custom of the kingdom to punish cowardice with death. They are almost the only negroes who will deliver battle in the open field, in regular bodies with closed ranks. In Dahomey war is a passion of the ruler and the people, and the year is divided between fighting and feasting. The king's body-guard of five thousand unmarried women preserves the tradition of bravery, as European regiments preserve their flags. The mild Mandingos become obstinate in fight; they have minstrels who accompany armies to war, and recite the deeds of former heroes; but they are not capable of discipline. On the contrary, the negroes of Fernando Po march and exercise with a great regard to order. In Ashantee and upon the Gold Coast the negroes make use of horn signals in war to transmit orders to a distance; and on the White Nile and in Kaffa drummers are stationed in trees to telegraph commands.

*L. F. Sonthonax à Bourdon de l'Oise*. Pamphlet. The vindication of Sonthonax for declaring emancipation.

*Colonies Étrangères et Haïti*. Par Victor Schoelcher. 2 Tom. Valuable, but leaning too much towards the negro against the mulatto.

*Histoire des Désastres de Saint-Domingue*. Paris, 1795. Journalistic, with the coloring of the day.

*Voyages d'un Naturaliste*. 3 Tom. Par Descourtilz. Pro-slavery, but filled with curious information.

*Expédition à St. Domingue*. Par A. Metral. Useful.

*The Empire of Hayti*. By Marcus Rainsford, Captain in West-Indian Regiment. Occasionally valuable.

Great circumspection is not universal; but the Veis maintain posts, and when they are threatened, a watch is kept night and day. The negroes of Akkra know the value of a ditched intrenchment.

The English praise the negro soldiers whom they have in Sierra Leone for good behavior, temperance, and discipline; and their Jolofs at the Gambia execute complicated manœuvres in a striking way. West-Indian troops have performed many distinguished services, and English officers say that they are as brave as Europeans; but in the heat of a fight they are apt to grow intractable and to behave wildly. The troops which Napoleon used in Calabria, drawn from the French Colonies, emulated the French soldiers, and arrived at great distinction.

D'Escayrac says that the native negro has eminent qualities for the making of a good soldier,—dependence upon a superior, unquestioning confidence in his sagacity, an enthusiastic courage which mounts to great audacity, passiveness, and capacity for waiting.

From this the Congos must be excepted. Large numbers of them deserted General Dessalines in San Domingo, and fled to the mountains, frightened at the daring of the French. Here, if brave, they might have been armed and officered by Spaniards to effect dangerous movements in his rear. But he knew their timidity, and gave himself no trouble about them. There is a genealogy which derives Toussaint from a Congo grandfather, a native prince of renown; but it was probably manufactured for him at the suggestion of his own achievements. The sullen-looking Congo is really gay, rollicking, disposed to idleness, careless and sensual, fatigued by the smallest act of reflection; Toussaint was grave, reticent, forecasting, tenacious, secretive, full of endurance and concentration, rapid and brave in war.\* What a confident and noble aspect he had, when he left his

\* The independent Congos in the interior are more active and courageous, expert and quarrelsome than those upon the coast, who have been subjected by the Portuguese.

guard and walked alone to the head of a column of old troops of his who had deserted to Desfourneaux, and were about to deliver their fire! "My children, will you fire upon your father?"—and down went four regiments upon their knees. The white officers tried to bring them under the fire of cannon, but it was too late. Here was a greater risk than Napoleon ran, after landing at Fréjus, on his march upon Paris.

Contempt for death is a universal trait of the native African.\* The slaveholder says it is in consequence of his affinity to the brute, which does not know how to estimate a danger, and whose nervous organization is too dull to be thrilled and daunted in its presence. It is really in consequence of his single-mindedness: the big necks lift the blood, which is two degrees warmer than a white man's, and drench the brain with an ecstasy of daring. If he can clearly see the probable manner of his death, the blood is up and not down at the sight.† The negro's nerves are very susceptible; in cool blood he is easily alarmed at anything unexpected or threatening. His fancy is peopled with odd fears; he shrinks at the prospect of a punishment more grotesque or refined than usual. And when he becomes a Creole negro, his fancy is always shooting timid glances beneath the yoke of Sla-

\* When the insurgents evacuated a fort near Port-au-Prince, upon the advance of the English, a negro was left in the powder-magazine with a lighted match, to wait till the place was occupied. Here he remained all night; but when the English came later than was expected, his match had burned out. Was that insensibility to all ideas, or devotion to one?

† Praloto was a distinguished Italian in the French artillery service. His battery of twenty field-pieces at Port-au-Prince held the whole neighborhood in check, till at length a young negro named Hyacinthe roused the slaves to attack it. In the next fight, they rushed upon this battery, insensible to its fire, embraced the guns and were bayoneted, still returned to them, stuffed the arms of their dead comrades into the muzzles, swarmed over them, and extinguished the fire. This was done against a supporting fire of French infantry. The blacks lost a thousand men, but captured the cannon, and drove the whole force into the city.

very. The negroes and mulattoes at San Domingo looked impassively at hanging, breaking upon the wheel, and quartering; but when the first guillotine was imported and set in action, they and the Creole whites shrank appalled to see the head disappear in the basket. It was too deft and sudden for their taste, and this mode of execution was abandoned for the more hearty and lacerating methods.

When a negro has a motive, his nerves grow firm, his imagination escapes before the rising passion, his contempt for death is not stolidity, but inspiration. In the smouldering surface lies an ember capable of white heat. That makes the negro soldier difficult to hold in hand or to call off. He has no fancy for grim sitting, like the Indian, to die by inches, though he can endure torture with tranquillity. He is too tropical for that; and after the exultation of a fight, in which he has been as savage as he can be, the process of torturing his foes seems tame, and he seldom does it, except by way of close reprisals to prevent the practice in his enemy. The French were invariably more cruel than the negroes.

Southern gentlemen think that the negro is incurably afraid of fire-arms, and too clumsy to use them with effect. It is a great mistake. White men who never touched a gun are equally clumsy and nervous. When the slavers began to furnish the native tribes with condemned muskets in exchange for slaves, many ludicrous scenes occurred. The Senegambians considered that the object was to get as much noise as possible out of the weapon. The people of Akkra planted the stock against their hips, shut both eyes and fired; they would not take aim, because it was their opinion that it brought certain death to see a falling enemy. Other tribes thought a musket was possessed, and at the moment of firing threw it violently away from them. When we consider the quality of the weapons furnished, this action will appear laudable. But as these superstitions disappeared, especially upon the Gold Coast and in Ashantee, negroes have learned to use the mus-

ket properly. Among the Gold-Coast negroes are good smiths, who have sometimes even made guns. In the West Indies, the Creole negro has become a sharpshooter, very formidable on the skirts of woods and in the defiles of the *mornes*. He learned to deliver volleys with precision, and to use the bayonet with great valor. The old soldiers of Le Clerc and Rochambeau, veterans of the Rhine and Italy, were never known to presume upon negro incapacity to use a musket. The number of their dead and wounded taught them what men who are determined to be free can do with the white man's weapons.

Rainsford, who was an English captain of a West-Indian regiment, describes a review of fifty thousand soldiers of Toussaint on the Plaine du Cap. "Of the grandeur of the scene I had not the smallest conception. Each general officer had a demi-brigade, which went through the manual exercise with a degree of expertness seldom witnessed, and performed equally well several manœuvres applicable to their method of fighting. At a whistle a whole brigade ran three or four hundred yards, then, separating, threw themselves flat on the ground, changing to their backs or sides, keeping up a strong fire the whole of the time, till they were recalled; they then formed again, in an instant, into their wonted regularity. This single manœuvre was executed with such facility and precision as totally to prevent cavalry from charging them in bushy and hilly countries. Such complete subordination, such promptitude and dexterity, prevailed the whole time, as would have astonished any European soldier."

These were the men whose previous lives had been spent at the hoe-handle, and in feeding canes to the cylinders of the sugar-mill.

Rainsford gives this general view of the operations of Toussaint's forces:—"Though formed into regular divisions, the soldiers of the one were trained to the duties of the other, and all understood the management of artillery with

the greatest accuracy. Their chief dexterity, however, was in the use of the bayonet. With that dreadful weapon fixed on muskets of extraordinary length in their hands, neither cavalry nor artillery could subdue infantry, although of unequal proportion; but when they were attacked in their defiles, no power could overcome them. Infinitely more skilful than the Maroons of Jamaica in their cock-pits, though not more favored by Nature, they found means to place whole lines in ambush, continuing sometimes from one post to another, and sometimes stretching from their camps in the form of a horse-shoe. With these lines artillery was not used, to prevent their being burdened or the chance of loss; but the surrounding heights of every camp were well fortified, according to the experience and judgment of different European engineers, with ordnance of the best kind, in proper directions. The protection afforded by these outworks encouraged the blacks to every exertion of skill or courage; while the alertness constantly displayed embarrassed the enemy, who, frequently irritated, or worn out with fatigue, flew in disorder to the attack, or retreated with difficulty. Sometimes a regular battle or skirmish ensued, to seduce the enemy to a confidence in their own superiority, when in a moment reinforcements arose from an ambush in the vicinity, and turned the fortune of the day. If black troops in the pay of the enemy were despatched to reconnoitre when an ambush was probable, and were discovered, not a man returned, from the hatred which their perfidy had inspired; nor could an officer venture beyond the lines with impunity."

The temporary successes enjoyed by the French General Le Clerc, which led to the surrender of Toussaint and his subsequent deportation to France, were owing to the defection of several black officers in command of important posts, who delivered up all their troops and munitions to the enemy. The whole of Toussaint's first line, protecting the Artibonite and the mountains, was thus un-

expectedly forced by the French, who plied the blacks with suave proclamations, deprecating the idea of a return to slavery. Money and promises of personal promotion were also freely used. The negro is vain and very fond of pomp. This is his weakest point. The Creole negro loved to make great expenditures, and to imitate the lavish style of the slaveholders. So did many of the mulattoes. Toussaint's officers were not all black, and the men of color proved accessible to French cajolery.

Take a single case to show how this change of sentiment was produced without bribery. When the French expedition under Le Clerc arrived, the mulatto General Maurepas commanded at Port-de-Paix. He had not yet learned whether Toussaint intended to rely upon the proclamation of Bonaparte and to deliver up the military posts. General Humbert was sent against him with a strong column, and demanded the surrender of the fort. Said Maurepas,—"I am under the orders of Toussaint, who is my chief; I cannot deliver the forts to you without his orders. Wait till I receive his instructions; it will be only a matter of four-and-twenty hours." Humbert, who knew that Toussaint was in full revolt, replied,—"I have orders to attack."

"Very well. I cannot surrender without an order from General Toussaint. If you attack me, I shall be obliged to defend myself."

"I also have my orders; I am forced to obey them."

Maurepas retired, and took his station alone upon a rampart of the works. Humbert's troops, numbering four thousand, opened fire. Maurepas remains awhile in the storm of bullets to reconnoitre, then coolly descends and opens his own fire. He had but seven hundred blacks and sixty whites. The French attacked four times and were four times repulsed, with the loss of fifteen hundred men. Humbert was obliged to retreat, before the reinforcement which had been despatched under General Debelle could reach him. Maurepas's orders were not

to attack, but to defend. So he instantly hastened to another post, which intercepted the route by which General Debelle was coming, met him, and fought him there, repulsed him, and took seven cannon.

This was not an encouraging commencement for these children of the French Revolution, who had beaten Suwarrow in Switzerland and blasted the Mameluke cavalry with rolling fire, who had debouched from the St. Bernard upon the plains of Piedmont in time to gather Austrian flags at Marengo, and who added the name of Hohenlinden to the glory of Moreau. Humbert himself, at the head of four thousand grenadiers, had restored the day which preceded the surrender of the Russians at Zürich.

Le Clerc was obliged to say that the First Consul never had the intention of restoring slavery. Humbert himself carried this proclamation to Maurepas, and with it gained admittance to the intrenchments which he could not storm. This single defection placed four thousand admirable troops, and the harbor of Port-de-Paix, in the hands of the French, and exposed Toussaint's flank at Gonaïves; and its moral effect was so great upon the blacks as to encourage Le Clerc to persist in his enterprise.

In the brief period of pacification which preceded this attempt of Bonaparte to reconquer the island, Toussaint was mainly occupied with the organization of agriculture. His army then consisted of only fifteen demi-brigades, numbering in all 22,500, a guard of honor of one thousand infantry, a regiment of cavalry, and an artillery corps. But the military department was in perfect order. There was an *État-Major*, consisting of a general of division with two aides-de-camp, a company of guides, one of dragoons, and two secretaries, — ten brigadier-generals with ten secretaries, ten aides-de-camp, and an escort, — and a board of health, composed of one chief inspector, six physicians, and six surgeons-general. The commissary and engineer-

ing departments were also thoroughly organized. The pay of the 22,500 men amounted to 7,838,400 francs; rations, 6,366,195; musicians, 239,112; uniforming, 1,887,682; officers' uniforms, 208,837. The pay of a non-commissioned officer and private was 55 centimes per day.

In this army there were one thousand mulattoes, and five or six hundred whites, recruited from the various artillery regiments which had been in the colony during the last ten years. Every cultivator was a member of the great reserve of this army, its spy and outpost and partisan.

The chief interest of the campaign against Le Clerc turns upon the obstinate defence of Crête-à-Pierrot. Here the best qualities of black troops were manifested. This was a simple oblong redoubt, thrown up by the English during their brief occupation of the western coast, and strengthened by the negroes. The Artibonite, which is the most important river of the colony, threading its way from the mountains of the interior through the *mornes*, which are not many miles from the sea, passed under this redoubt, which was placed to command the principal defile into the inaccessible region beyond. The rich central plains, the river, and the mountains belonged to whoever held this post. The Mirbalais quarter could raise potatoes enough to nourish sixty thousand men accustomed to that kind of food.

When Toussaint's plan was spoiled by defection and defeat, he transferred immense munitions to the mountains, and decided to concentrate, for the double purpose of holding the place, if possible, and of getting the French away from their supplies. It was a simple breastwork of Campeachy-wood faced with earth, and had a ditch fifteen feet deep. At a little distance was a small redoubt upon an eminence which overlooked the larger work. To the east the great scarp-ed rocks forbade an approach, and dense spinous undergrowth filled the surrounding forest. The defence of this place was given to Dessalines, a most audacious and able fighter. Toussaint intended to

harass the investing columns from the north, and Charles Belair was posted to the south, beyond and near the Artibonite. Toussaint would then be between the fortress and the French corps of observation which was left in the north, — a position which he turned to brilliant advantage. Four French columns, of more than twelve thousand men, commenced, from as many different directions, a slow and difficult movement upon this work. The first column which came within sight of it found a body of negroes drawn up, as if ready to give battle on the outside. It was the surplus of one or two thousand troops which the intrenchment would not hold. The French, expecting to rout them and enter the redoubt with them, charged with the bayonet; the blacks fled, and the French reached the glacis. Suddenly the blacks threw themselves into the ditch, thus exposing the French troops to a terrible fire, which was opened from the redoubt. General Debelle was severely wounded, and three or four hundred men were stretched upon the field.

The advance in another quarter was checked by a small redoubt that opened an unexpected fire. It was necessary to take it, and cannon had to be employed. When the balls began to reach them, the blacks danced and sang, and soon, issuing suddenly, with cries, "*En avant! Canons à nous,*" attempted to take the pieces with the bayonet. But the supporting fire was too strong, they were thrown into disorder, and the redoubt was entered by the French.

Early one morning the camp of the blacks was surprised by one of the columns, which had surmounted all the difficulties in its way. Notwithstanding the previous experience, the French thought this time to enter, and advanced precipitately. Many blacks entered the redoubt, the rest jumped into the ditch, and the same terrible fire vomited forth. Another column advanced to support the attack; but the first one was already crushed and in full retreat. The blacks swarmed to the parapets, threw planks

across the ditch, and attacked both columns with drums beating the charge. The French turned, and met just resistance enough to bring them again within range, the same fire broke forth, and the columns gave way, with a loss to the first of four hundred and eighty men, and two or three hundred to the latter.

Upon this retreat, the cultivators of the neighborhood exchanged shots with the flanking parties, and displayed great boldness.

It was plain to the French that this open redoubt would have to be invested; but before this was done, Dessalines had left the place with all the troops which could not be fed there, and cut his way across a column with the loss of a hundred men. The defence was committed to a quarteroon named Lamartinière.

While the French were completing the investment, the morning music of the black band floated the old strains of the Marseillaise within their lines. La Croix declares that it produced a painful sensation. The soldiers looked at each other, and recalled the great marches which carried victory to that music against the tyrants of Europe. "What!" they said, "are our barbarous enemies in the right? Are we no longer the soldiers of the Republic? Have we become the servile instruments of *la politique*?" No doubt of that; these children of the Marseillaise and adorers of Moreau had become *de trop* in the Old World, and had been sent to leave their bones in the defiles of *Pensez-y-bien*.\*

The investment of Crête-à-Pierrot was regularly made, by Bachelu, an engineer who had distinguished himself in Egypt. Batteries were established before the head of each division, a single mortar was got into position, and a battery of seven pieces played upon the little redoubt above. This is getting to be vastly more troublesome than the fort of Bard, which held in check these very

\* *Think twice before you try me*: the name of a *morne* of extraordinary difficulty, which had to be surmounted by one of the French columns.

officers and men upon their road to Marenngo.

Rochambeau thought he had extinguished the fire of the little redoubt, and would fain storm it. The blacks had protected it by an abatis ten feet deep and three in height, in which our gallant ally of the Revolution entangled himself, and was held there till he had lost three hundred men, and gained nothing.

"Thus the Crête-à-Pierrot, in which (and in the small redoubt) there were hardly twelve hundred men,\* had already cost us more than fifteen hundred in sheer loss. So we fell back upon the method which we should have tried in the beginning, a vigorous blockade and a sustained cannonade."

The fire was kept up night and day for three days without cessation. Descourtiz, a French naturalist, who had been forced to act as surgeon, was in the redoubt, and he describes the scenes of the interior. The enfilading fire shattered the timber-work, and the bombs set fire to the tents made of macaw-tree foliage, which the negroes threw flaming into the ditch. A cannoner sees a bomb falls close to a sick friend of his who is asleep; considering that sleep is very needful for him, he seizes the bomb, and cuts off the fuse with a knife. In a corner nods a grenadier overcome with fatigue; a bomb falls at his side; he wakes simultaneously with the explosion, to be blown to sleep again. The soldiers stand and watch the bright parabola, in dead silence; then comes the cry, "*Gare à la bombe!*" Hungry and thirsty men chew leaden balls for relief. Five hundred men have fallen. Some of the officers come for the surgeon's opium. They will not be taken alive. But the excitement of the scene is so great that opium fails of its wonted effect, and they complain of the tardiness of the dose. Other officers make their wills with *sang froid*, as if expecting a tranquil administration of their estates.

During the last night the little garrison evacuates the upper redoubt, and is

\* Negro authorities say 750.

seen coming towards the work. Down goes the drawbridge, the blacks issue to meet them, taking them for a storming party of the French. There is a mutual mistake, both parties of blacks deliver their fire, the sortie party retreats, and the garrison enters the redoubt with them. Here they discover the mistake, but their rage is so great that they exhaust their cartridges upon each other at four paces. Descourtiz takes advantage of the confusion to throw himself into the ditch, and escapes under a volley.

The place is no longer tenable, and must be evacuated. A scout apprises Toussaint of the necessity, and it is arranged that he shall attack from the north, while Lamartinière issues from the redoubt. During Toussaint's feint, the black garrison cut their way through the left of Rochambeau's division.

General Le Clerc cannot withhold his admiration. "The retreat which the commandant of Crête-à-Pierrot dared to conceive and execute is a remarkable feat of arms. We surrounded his post to the number of more than twelve thousand men; he saved himself, did not lose half his garrison, and left us only his dead and wounded. We found the baggage of Dessalines, a few white cannoners, the music of the guard of honor, a magazine of powder, a number of muskets, and fifteen cannon of great calibre."

Toussaint turned immediately towards the north, raised the cultivators, attacked the corps of observation, drove it into Cap Français, ravaged the plain, turned and defeated Hardy's division, which attempted to keep open the communications with Le Clerc, and would have taken the city, if fresh reinforcements from France had not at the same time arrived in the harbor.

After the arrest of Toussaint, Dessalines reorganized the resistance of the blacks, and attacked Rochambeau in the open field, driving him into the city, where Le Clerc had just died: in that infected atmosphere he kept the best troops of France besieged. "*Ah! ce*

*gaillard*," the French called the epidemic which came to complete the work of the blacks. Twenty thousand men reinforced Rochambeau, but he capitulated, after a terrible assault which Dessalines made with twenty-seven thousand men, on the 28th November, 1803.

One more touch of negro soldiery must suffice. There was an intrenchment, called Verdrière, occupied by the French, upon a hill overlooking the city. Dessalines sent a negro general, Capaix, with three demi-brigades to take it. "They recoiled," says Schoelcher, "horribly mutilated by the fire from the intrenchment. He rallied them: the grape tore them in pieces, and hurled them again to the bottom of the hill. Boiling with rage, Capaix goes to seek fresh troops, mounts a fiery horse, and rushes forward for the third time; but the thousand deaths which the fort delivers repulse his soldiers. He foams with anger, exhorts them, pricks them on, and leads them up a fourth time. A ball kills his horse, and he rolls over, but, soon extricating himself, he runs to the head of the troops. '*En avant! En avant!*' he repeats, with enthusiasm; at the same instant his plumed chapeau is swept from his head by a grape-shot, but he still throws himself forward to the assault. '*En avant! En avant!*'

"Then great shouts went up along the ramparts of the city: '*Bravo! bravo! vivat! vivat!*' cried Rochambeau and his staff, who were watching the assault. A drum-roll is heard, the fire of Verdrière pauses, an officer issues from the city, gallops to the very front of the surprised blacks, and saluting, says, — 'The Captain-General Rochambeau and the French army send their admiration to the general officer who has just covered himself with glory.' This magnificent message delivered, he turned his horse, reëntered the city, and the assault is renewed. Imagine if Capaix and his soldiers did new prodigies of valor. But the besieged were also electrified, would not be overcome, and Dessalines sent the order to retire. The next day a

groom led a richly caparisoned horse to the quarter-general of the blacks, which Rochambeau offered as a mark of his admiration, and to replace that which he regretted had been killed."

The valor and fighting qualities of the blacks in San Domingo were nourished by the wars which sprang from their own necessities. They were the native growths of the soil which had been long enriched by their innocent blood; more blood must be invested in it, if they would own it. Learning to fight was equivalent to learning to live. Their cause was neither represented nor championed by a single power on earth, and nothing but the hope of making enormous profits out of their despair led Anglo-American schooners to run English and French blockades, to land arms and powder in the little coves of the island. Will the negro fight as well, if the motive and the exigency are inferior?

We make a present to the Southern negro of an excellent chance for fighting, with our compliments. Some of us do it with our curses. The war does not spring for them out of enthusiasm and despair which seize their hearts at once, as they view a degradation from which they flee and a liberty to which they are all hurrying. They are asked to fight for us as well as for themselves, and this asking is, like emancipation, a military necessity. The motive lacks the perfect form and incandescence, like that of a star leaping from a molten sun, which lighted battle-ardors in the poor slaves of San Domingo. And we even hedge about this invitation to bleed for us with conditions which are evidently dictated by a suspicion that the motive is not great enough to make the negro depend upon himself. If the war does not entirely sweep away these poor beginnings and thrust white and black together into the arms of thrilling danger, we need not expect great fighting from him. He may not disgrace himself, but he will not ennoble the republic till his heart's core is the war's core, and the colors of two races run into one.

## REVIEWS AND LITERARY NOTICES.

*Sunshine in Thought.* By CHARLES GODFREY LELAND, Author of "Meister Karl's Sketch-Book," and Translator of "Heine's Pictures of Travel." New York: Charles T. Evans. 16mo.

WE do not exactly know how to characterize this jubilant volume. The author, not content to denounce generally the poets of sentimentality and the prophets of despair, has evidently a science of Joy latent in his mind, of which his rich, discursive, and somewhat rollicking sentences give but an imperfect exposition. He is in search of an ideal law of Cheerfulness, which neither history nor literature fully illustrates, but which he still seeks with an undoubting faith. Every transient glimpse of his law he eagerly seizes, whether indicated in events or in persons. And it must be admitted that he is not ignorant either of the great annals or the great writers of the world. He knows Herodotus as well as he knows Hume, Thucydides as intimately as Gibbon. Xenophon and Plutarch are as familiar to him as Michelet, Thiers, and Guizot. He has studied Aristænetus and Lucian as closely as Horace Walpole and Thackeray,—is as ready to quote from Plato as from Rabelais,—and throws the results of his wide study, with an occasional riotous disregard of prim literary proprieties, into a fierce defiance of everything which makes against his favorite theory, that there is nothing in pure theology, sound ethics, and healthy literature, nothing in the historic records of human life, which can justify the discontent of the sentimentalist or the scorn of the misanthrope.

Engaged thus in an almost Quixotic assault on the palpable miseries of human existence,—miseries which are as much acknowledged by Homer as by Euripides, by Ariosto as by Dante, by Shakspeare as by Milton, by Goethe as by Lamartine,—he has a difficult work to perform. Still he does not bate a jot of heart and hope. He discriminates, with the art of a true critic, between objective representations of human life and subjective protests against

human limitations, errors, miseries, and sins. As far as either representation embodies the human principle of Joy,—whether Greek or Roman, ancient or modern, Christian or Pagan,—he is content with the evidence. The moment a writer of either school insinuates a principle or sentiment of Despair, whether he be a dramatist or a sentimentalist, the author enters his earnest protest. Classical and Romantic poets, romancers and historians, when they slip into misery-mongers, are equally the objects of his denunciations. Keats and Tennyson fare nearly as ill as Byron and Heine. Mr. Leland feels assured that the human race is entitled to joy, and there is something almost comical in his passionate assault on the morbid genius of the world. He seems to say, "Why do you not accept the conditions of happiness? The conditions are simple, and nothing but your pestilent wilfulness prevents your compliance with them."

This "pestilent wilfulness" is really the key to the whole position. All objective as well as subjective writers have been impotent to provide the way by which the seeker after perfect and permanent content can attain and embody it. It has been sought through wit, humor, fancy, imagination, reason; but it has been sought in vain. Our author, who, after nearly exhausting all the concrete representatives of the philosophy of Joy, admits that nobody embodies his ideal of happiness, surrenders his ideal, as far as it has been practically expressed in life or thought. Rabelais dissatisfies him; Scarron dissatisfies him; Molière, Swift, Sterne, not to mention others, dissatisfy him. Every ally he brings forward to sustain his position is reduced by analysis into a partial enemy of his creed. But while we cannot concur in Mr. Leland's theory in his exclusive statement of it, and confess to a strong liking for many writers whom he considers effeminate, we cordially agree with him in his plea for "Sunshine in Thought," and sympathize in his vigorous and valorous assault on the morbid elements of our modern literature. We think that poets should be as cheerful as possible; whereas

some of them seem to think it is their duty to be as fretful as possible, and to make misery an invariable accompaniment of genius. The primary object of all good literature is to invigorate and to cheer, not to weaken and depress; it should communicate mental and moral life, as well as convey sentiments and ideas, — should brace and strengthen the mind, as well as fill it; and when it whimpers and wails, when it teaches despair as philosophy, especially when it uses the enchantments of imagination to weaken the active powers, its effect is mischievous. Woe, considered as a luxury, is the most expensive of all luxuries; and there is danger to the mental and moral health even in the pensive sadness which, to some readers, sheds such a charm over the meditations of that kind of genius which is rather thoughtful than full of thought. For the melodious miseries which mediocrity mimics, for the wretchedness which some fifth-rate rhymers assume in order to make themselves interesting, there can, of course, be no toleration. Mr. Leland pounds them as with the hammer of Thor, and would certainly beat out their brains, had not Nature fortunately neglected to put such perilous matter into craniums exposed to such ponderous blows.

Apart from the general theory and purpose of the book, there is a great deal of talent and learning exhibited in the illustrations of the subject. The remarks on Aristophanes, Rabelais, Swift, Sterne, and Heine, — half analysis, half picture, — are very striking; and there are, throughout the volume, continual flashes of suggestive thought and vivid portraiture, which both delight and detain the reader. The style is that of animated conversation, — the conversation of a man whose veins are as full of blood as his mind is of ideas, who is hilarious from abounding health, and whose occasional boisterousness of manner proceeds from the robustness of his make and the cheer of his soul. The whole volume tends to create in thought that "sunshine" which it so joyously recommends and celebrates. The reader is warmed by the ardor and earnestness with which propositions he may distrust are urged upon his attention, and closes the volume with that feeling of pleased excitement which always comes from contact with a fresh and original mind.

*The Gentleman.* By GEORGE H. CALVERT.  
Boston: Ticknor & Fields.

PARADOXICAL as it may appear, we believe there never was a time when the true and pure standard of gentlemanhood could be more impressively raised and upheld in this republic than now. The vast and keen civil conflict which so deeply agitates our political life has laid bare the groundwork and brought to the surface the latent elements of our social life, so that a new, an obvious, and a searching test is instinctively applied to character; as in all times of profound moral excitement, *shams* grow fantastic and contemptible, and *principles* of action and being rise to superlative worth. The question, What constitutes the Gentleman? suggested at first by the preposterous and exclusive claims thereto arrogantly put forth by a little community, in justification of profane and destructive violence to a nation's welfare, has come to be regarded as embracing all the obligations, responsibilities, and humanities that make up and certify Christian manhood and genuine patriotism; the wide and deep significance of a word too often confounded with mere manners is thus practically found to indicate the most vital elements of personal worth and social well-being. Accordingly, a comprehensive, philosophical definition and illustration of the Gentleman, in the ideal grace and greatness and in the real authority and use of that so much misunderstood and seldom achieved character, is doubly welcome at this hour, the strife and discussion whereof bring out in such strong relief the true *animus* and equipment of statesmen, soldiers, citizens, men and women, and force us to realize the poverty of soul, the inherent baseness, or the magnanimity and rectitude of our fellow-creatures, with a vividness never before experienced. How indispensable to the welfare of the State is a society based on higher motives than those of material ambition, and how impossible is the existence of such a society, except through individual probity and disinterestedness, is a lesson written in blood and tears before our eyes to-day; and thrice welcome, we repeat, is the clear and emphatic exposition of the Gentleman, as an incarnation of the justice, love, and honor, whereon, in the last analysis, rest the

hopes and welfare of the nation. No ethical or æsthetic treatise could be more reasonable than this of Mr. Calvert's. We regard it as the best lay-sermon thus far evoked by the moral exigencies of the hour; however appropriate it may also be and is to any and all times and readers of taste and thought, a superficial, merely dilettante essay on such a subject and at such a time would repel instead of alluring.

The charming little volume before us, while made genially attractive by occasional playfulness and anecdote, is yet pervaded by an earnestness born of strong conviction and deep sympathies. It analyzes the springs of character, traces conduct to its elemental source, and follows it to its ultimate influence. To a concise style it unites an expansive spirit; with a tone of rich and high culture it blends the vivacity and grace of the most genial colloquy. From the etymology of the word to the humanity of the character, a full, forcible, frank, and fervent discussion of the Gentleman is given, as he figures in history, in society, in domestic life, and in literature,—and as he lives, a grand and gracious ideal, in the consciousness of the author. Beginning with the meaning, origin, and use of the word Gentleman, Mr. Calvert gives a critical analysis of its historical personation. As a chevalier type, in such men as Sidney and Bayard. Its ethical and æsthetic meaning is finely exemplified in the contrast between Charles Lamb and George IV., Leicester and Hampden, Washington and Napoleon. The Gentleman in St. Paul is well illustrated. The relation of this character to antiquity is defined with a scholar's zest: whatever of its force and flavor is discernible in Socrates and Brutus is gracefully indicated; the deficiency of Homer's heroes, excepting Hector, therein, is ably demon-

strated. These and like illustrations so prolific a theme inevitably suggest episodes of argument, incidental, yet essential to the main question; and the judicious and benign remarks on the Duel, the Position of Women in Ancient and Modern Society, and the Influence of Christianity upon Manners, are striking in their scope and style, and breathe the lofty and tender spirit of that Faith which inculcates *disinterestedness* as the latent and lasting inspiration of the Gentleman. Perhaps the most delectable illustrations, which give both form and beauty to this essay, are those drawn from modern literature: they are choice specimens of criticism, and full of subtle discrimination in tracing the relation of literature to life. We would instance especially the chapters on Shakspeare's Gentleman; the recognition of the Gentleman in Sir Roger de Coverley, Uncle Toby, and Don Quixote; and the admirable distinction pointed out between the characters of Scott, Byron, Shelley, and Keats. There is no part of the volume more worthy attention than the remarks of a "high-bred tone in writing." The hollowness of Chesterfield's code is keenly exposed; Honor and Vulgarity are freshly and ably defined; Fashion, Pride, and Vanity, the conventional elements of the Gentleman, are treated with philosophical justice; the favorite characters of fiction, and the most renowned poets and heroes, beaux and braves, pass before us, and are subjected to the test of that Christian ideal of the Gentleman so clearly defined and firmly applied by the intrepid author; and many a disguised coxcomb is stripped of his borrowed plumes, imperial *parvenus* exposed as charlatans in manners as well as morals, and heroic, but modest souls, of whom the world's court-calendar gives no hint, stand forth exemplars of the highest, because the most soulful breeding.
